Consolidated Sustainability Statement

Executive Summary

Recognised internationally, Intesa Sanpaolo Group's commitment to ESG matters is built on the awareness of the major impact its actions have on the environmental and social framework in which it pursues its business. Sustainability is incorporated in all its dimensions into business strategies and in our model for creating sustainable value for all our stakeholders, in which performance and financial outcomes are strictly tied to the welfare of the Group's people, our customers, and the communities and local areas where we operate.

The introduction in the European Union of the new Corporate Sustainability Reporting Directive marks a giant leap forward on previous reporting models, allowing the extent to which the Group's commitments are incorporated into business strategies to be appreciated in terms of real outcomes. This Consolidated Sustainability Statement is our first disclosure based on the new directive. Replacing what was the consolidated non-financial statement, it has been included with the financial statements in the annual report, in a specific section of the Report on operations, to stress how sustainability is a fundamental and inseparable aspect of company performance, on par with our financials. The Statement is organised according to the specific topical standards outlined by the European Sustainability Reporting Standards (ESRS), which cover the three ESG dimensions of sustainability and provide a common, standardised framework to ensure the comparability and quality of disclosures.

The Group's commitment to ESG matters is underpinned by an expanded ESG governance system, which led to the transformation of the Risks Committee into the Risks and Sustainability Committee and the appointment of a Chief Sustainability Officer, with the creation of a relative governance area to steer Group sustainability strategies. In support of ESG efforts, in 2024 the ESG Control Room was expanded and tasked with strategically supporting the Steering Committee.

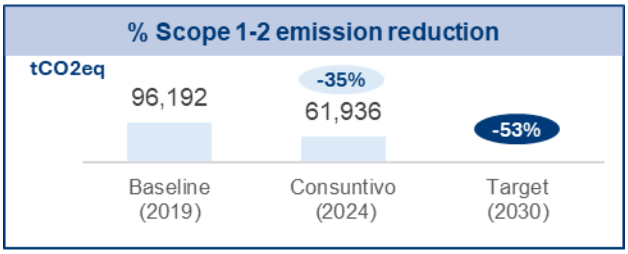
Finally, the Group places central importance on ESG perspectives in the incentive system through a dedicated KPI. Specifically, the ESG component is central in the variable remuneration of the Managing Director and CEO, making up 15% of the annual incentive system. Similarly, the Performance Share Plan (PSP) includes a composite ESG KPI that scales the accrued bonus according to three key components: 40% Environmental, 40% Social and 20% Governance.

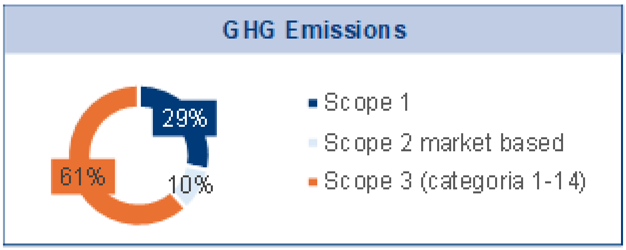
The identification of the sustainability topics most relevant to the Group, which form the framework of the Consolidated Sustainability Statement, was based on a double materiality assessment, which looks at the Group's impacts on the environment and society, on the one hand, and the risks and opportunities tied to sustainability topics that can affect its financial performance, on the other. The impacts, risks and opportunities considered cover the full length of the value chain. The specific policies, actions, targets and metrics adopted for their management and monitoring are outlined below.

E–Environmental

Climate Change

The Group pursues its ongoing commitment to furthering the transition toward a sustainable economy by setting concrete and ambitious emission reduction targets.
Within the scope of its own operations, the Group has set an Own Emissions Plan that aims to reduce scope 1 and 2 emissions by 53% by 2030, with respect to 2019 levels. At the end of 2024, emissions had fallen by as much as 35%. To achieve that target, the Group aims to purchase 100% renewable electricity by 2030. At the end of 2024, the percentage was 93%. Other decarbonisation levers identified include: (i) further actions to reduce both energy consumption and the fossil fuel dependency of Group buildings (such as the installation of heat pumps, photovoltaic panels and energy management and monitoring systems) and (ii) the transition to electric and hybrid vehicles in the company fleet, with the installation of recharging stations.





In relation to financed emissions, the Group is working towards a net-zero goal by 2050, with intermediate portfolio emission targets set for 2030 focusing on the biggest emission sectors (oil & gas, automotive, power generation, residential real estate, commercial real estate, agriculture – primary farming, aluminium, cement, iron & steel and coal mining, with the full phase-out of the latter by 2025). In addition, the Group followed up on the net-zero commitment outlined in the 2022–2025 Business Plan and submitted its targets to the SBTi in 2024, obtaining validation in January 2025.
The Group's "Sectoral Transition Plan" outlines for each sector the strategic actions to be implemented to achieve the targets set. Those actions include:

- the development of dedicated finance for initiatives that help reduce carbon emissions (such as loans for renewable energy, sustainable agriculture, electric mobility, carbon storage technology and green hydrogen);

- the consolidation of the commercial proposition for the Real Estate sector with products (such as Green–Mutuo Domus and Orizzonte Impresa–Transizione Energetica) for the purchase, construction or renovation of properties with a high energy performance or to improve the energy rating of buildings. The Group has set itself the target of providing 12 billion euro of Green Mortgages over the horizon of the business plan, for the development of high energy-efficiency real estate and for energy improvements to existing properties. Since 2022, 9 billion euro of Green Mortgages have been provided, of which 4.1 billion euro in 2024 alone;
- the creation of sustainability-linked loans, offering incentives for the delivery of decarbonisation objectives;
- the promotion of advisory services to assist customers in reducing their emissions and developing tailored decarbonisation strategies.

The Group has also adopted “ESG Risk Governance Guidelines” outlining a risk governance model based on materiality assessments of ESG factors in relation to the various risk categories (credit risk, market risk, operational risk, liquidity risk and reputational risk) and their incorporation into the various risk management areas.
With regard to lending operations, ongoing controls are in place for high emission-intensity sectors, with specific rules for lending to the oil & gas and coal sectors (with a phase-out deadline of 2025 for non-conventional oil & gas resources and coal mining).
The Group has set out an ESG/Climate Credit Framework for lending processes, organised on three levels:

- by sector, with an “ESG Sectoral Strategy – colour coding” scheme that takes into consideration risks and opportunities and creates a sectoral “heatmap” to identify the attractiveness of sectors and relative credit strategy;
- by counterparty, with the introduction of ESG scoring at the counterparty level, incorporated into credit strategies and the credit risk appetite (CRA);
- by transaction, involving an internal framework for classifying sustainable lending transactions and products.

The attention focused on climate change extends throughout the supply chain, with strict screening and monitoring criteria adopted by the Group, based on ESG principles. In 2024, the completion of an ESG questionnaire, aimed at mapping the sustainability profiles of suppliers on the environmental and social dimensions and setting improvement plans, became mandatory for suppliers to bid for contracts through the Group Supplier Portal. The Group’s objective is to complete the ESG mapping of all active suppliers by the end of 2025. At the end of 2024, 86% progress had been made in the activity.

Pollution, Biodiversity and the Circular Economy

Alongside climate change, the Group is similarly devoting great effort to other material environmental topics, such as pollution, biodiversity and the circular economy.

In 2024, the Group prepared “Rules on Biodiversity and Nature”, which were adopted in January 2025. The rules outline the approach to biodiversity and nature issues in relation to lending activities, wealth management & protection and direct impacts.
Applicable to all the Group, the rules also set out exclusion, heightened assessment and risk monitoring criteria for lending to new projects and counterparties. The exclusion criteria consider the location of projects and counterparties, their industry sector and certain categories of projects with a potentially negative impact on diversity and pollution. The rules additionally set out criteria for new lending, with the aim of promoting and protecting biodiversity and nature.

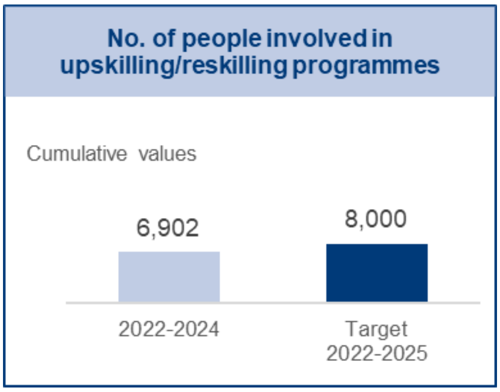
The ESG score incorporated into the credit framework, and used by the Group to assess the ESG profile of corporate customers, similarly considers components relating to biodiversity, natural resources and pollution.
The Group offers various financing solutions to support enterprises in their ecological transition, such as “S-Loan Progetti Green” and loans backed by SACE Green guarantees.

Finally, Intesa Sanpaolo Group continues to promote the circular economy with the Ellen MacArthur Foundation, as Strategic Partner since 2015, and with the contribution of the Intesa Sanpaolo Innovation Center (ISPIC), the Group’s innovation pioneer and competence centre for the circular economy. More specifically, the Group has incorporated principles into lending process that promote circular business models, earmarking 8 billion euro in support of the circular economy, in line with the green and circular economy criteria of the internal framework.

S–Social

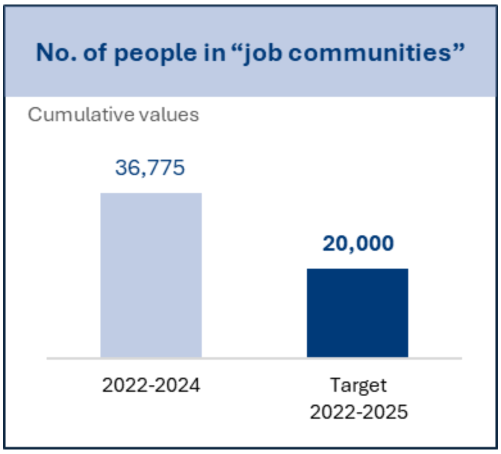
Own Workforce

One of the overriding goals of the Group is to invest in its people and ensure their constant growth and satisfaction. That includes promoting their protection and development, respect for human rights and diversity and inclusion, to create a unique pool of skills and abilities able to support the Bank’s future growth.
In this respect, the Group strives to promote respect for human rights and foster a corporate culture based on respect for the person and individual dignity by safeguarding the rights of employees, combating any direct or indirect form of forced or child labour and protecting the physical and moral integrity of all Group people.



The Group has adopted targeted policies to ensure the protection and development of its human capital. One example is the roll-out of a training plan for the upskilling and reskilling of people to enhance their key contribution to high value-added strategic activities, as envisaged by the 2022–2025 Business Plan. At the end of 2024, 6,902 people had been reached by programmes focused on digital skills, change management and sustainability.

The Group focuses special attention on diversity and inclusion issues, as set out in the Diversity, Equity and Inclusion (DE&I) Principles approved by the Board. One of the targets set by the 2022–2025 Business Plan for the Group is to achieve a gender balance (approx. 50% men and 50% women) in new appointments to senior positions – first and second reports to the CEO, with progress toward that goal monitored by the DE&I Control Room on a quarterly basis. On the basis of the organisational structure in place as at 31 December 2024, over the period 2022–2024 25 appointments were male and 25 appointments were female.
The development of female talent is encouraged through job rotation plans, shadowing programmes, training and female empowerment. Efforts also focus on disabilities, with the accessibility of IT systems guaranteed and awareness-raising promoted through training initiatives.
Finally, cooperation has been stepped up with ISPROUD, the first community bringing together LGBTQ+ people and allies in the Group.



Training and people development are a fundamental pillar in which the Group continues to invest, with a view to creating a unique pool of skills and abilities matched to future challenges. In this regard, the Group has further expanded delivery of mandatory training, with methods and user criteria governed by internal rules. All employees are required to complete mandatory training, so as to ensure the proper performance of their tasks, full knowledge of company procedures and processes and compliance with the requirements of supervisory authorities.

To support the development of a comprehensive approach to growing and enhancing the professional contribution people make, job communities have been created, grouping together professionals with like interests, skills and learning paths.
While the target set in the 2022–2025 Business Plan was to involve a total of 20,000 people in the initiative by December 2025, that goal was surpassed in 2024 with 36,775 people reached.

Another initiative through which the Group is working towards its objectives is the “Future Leaders” programme, which aims to develop a new generation of managers and leaders with a broad perspective and international mindset through personalised training paths. With a target of 1,000 people to be engaged in the programme over the horizon of the 2022–2025 Business Plan, to date 975 people have already been reached.

Growing importance continues to be attached to the health, safety and welfare of people. The Group has stepped up its monitoring of workplace safety and runs a health surveillance programme covering around 50,000 people. A counselling service is also available 24/7 for all Group people in Italy and abroad.

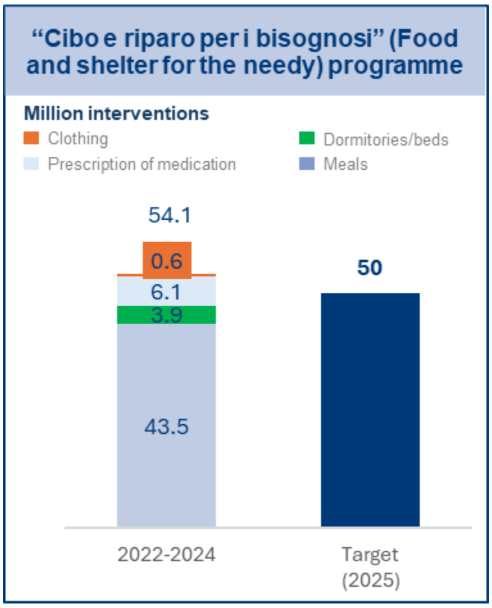
Finally, to promote and protect the welfare of Group people, a series of initiatives has been activated to improve the work-life balance of people. Examples include the adoption of a company welfare plan and new working arrangements, such as the “Next Way of Working” project, the short working week, initiatives in support of parenting responsibilities and the “Time Bank”.

Workers in the Value Chain

In line with Group principles, an ESG assessment system has been introduced to check that suppliers respect workers’ rights and ensure safe working conditions, as well as their compliance with Group policies. Those policies include the Code of Ethics, the Group’s Internal Code of Conduct, Anti-corruption Guidelines, the Diversity, Equity and Inclusion Principles, the Organisational, Management and Control Model in accordance with Legislative Decree 231/2001 and the General Conditions of Supply. Acknowledgement of the policies is an essential requirement for all suppliers registered on the Group Supplier Portal.

The Group additionally considers the ESG risks associated with the businesses of corporate customers, through the incorporation of ESG criteria in the loan approval process. The general exclusion criteria set forth in the ESG Risk Governance Guidelines excludes Group lending to companies and projects that may have an adverse material impact on society (such as companies that make use of forced or child labour).

Affected communities



The Group places great importance on projects that promote growth and social, educational, cultural and civic inclusion in the communities where it operates. The Group has a deep-rooted and active history of support for disadvantaged groups of people, young people, local communities and areas, and the promotion of Italy's artistic and cultural heritage. It is a commitment reflected also in the creation of the governance area of the Chief Social Impact Officer.

One initiative of particular importance adopted under the Social Action Plan is the "Food and shelter for the needy" programme. As the biggest plan ever to be activated by a private entity in Italy, it involves the widespread distribution of food, beds, medicines and clothing to people in need throughout national territory.
To do that, a variety of profit and non-profit partners have been engaged to reach as many beneficiaries as possible.
Overall, since the start of the Business Plan, the Group the Group has carried out 54.1 million interventions, of which 17.3 million interventions in 2024 alone.

A series of additional initiatives are in place to support people living in fragile socio-economic situations and foster greater social cohesion (such as social housing for students and families) and to promote the training and employment of people in vulnerable social or economic circumstances (such Youth & Work).

The Charity Allowance similarly works towards the social objectives set out in the Business Plan, providing support for people in fragile situations. In 2024, it provided around 23 million euro in funding for 814 projects pursued by non-profit organisations.
Finally, with a view to promoting art and culture in the local areas where it operates, the Group runs a "Culture Project" involving initiatives developed with public and private players and institutions for the promotion of artistic heritage.

Consumers and End-Users

The Group places a special focus on customer satisfaction and the promotion of responsible sales practices, adopting a strategy that combines service quality, transparency and continuous listening to consumers. One of the main tools used to gauge customer satisfaction levels is the Net Promoter Score (NPS), which measures the likelihood of customers recommending the Bank's products and services. In 2024, the NPS was based on more than 657,000 surveys.
In line with its goal of delivering a high quality of service, the Group has adopted specific guidelines for the management of customer complaints, ensuring a structured and transparent process that complies with regulations in force.

At the same time, the group has shored up its capacity to prevent and respond to cyber-attacks, reflecting a constant commitment to data protection, customer security and compliance with the General Data Protection Regulation (GDPR). Specifically, advanced machine learning and data analytics solutions have been implemented for the detection and proactive mitigation of threats, with mandatory training provided on data protection awareness.
Another measure to ensure operational security and resilience in 2024 was the creation of the governance area of the Chief Security Officer (CSeO), responsible for cybersecurity, business continuity and physical security. The new area ensures a strategic and integrated vision of protection for the Group by setting advanced operational policies and models to effectively address emerging challenges in the area of cybersecurity and business resilience.

In 2024, 271 data breaches occurred involving the loss or theft of data relating to Group customers. Assessments found no risk to the rights and freedoms of the data subjects in 252 of those cases, for which there was no need to notify data protection authorities. For the remaining 19 cases, notifications were made on a necessary or prudent basis to the Italian Data protection Authority or the relevant country authority.

The protection of consumer health and safety is another fundamental pillar of the sustainability strategy. Accordingly, the Group has joined with the Italian Banking Association and OSSIF under a memorandum of understanding for the prevention of bank crime, to protect banking institutions and their customers from crimes such financial fraud and robbery.

The Group also works extensively to support and further the social inclusion of vulnerable groups in the population, through actions aimed to expand fair access to financial services and support the economic fabric.
In this regard, a wide range of products has been developed, featuring solutions of great social impact. They include:
- Mutuo Giovani;
- Gamma Impact (in particular, "Per Merito" and "mamma@work");
- Business Gemma loans and microcredit;
- Personal loans and anti-usury mortgage loans;
- Credit for Community Development (CRE.S.Co).

Finally, ESG Workshops continued to be organised, providing a physical and virtual space in support of SMEs in their sustainable transition. The total number of workshops organised rose to 16 in 2024, surpassing the original target of 12 workshops by 2025.

G–Governance

Business conduct in the Group is underpinned by a sound governance system built on the principles of integrity, transparency and accountability. These values are formally enshrined in the Code of Ethics, which provides the fundamental framework for steering the strategies and conduct of people in the Group.

In line with the best international standards (such as the UN Global Compact), a cardinal principle of the Group is zero tolerance of corruption, as formalised in the Anti-corruption Guidelines and incorporated into the Organisational, Management and Control Model adopted in accordance with Legislative Decree 231/2001.

Another guarantee of transparency and accountability is the Group's whistleblowing system. Active 24/7, it ensures the confidentiality of reports and the protection of whistleblowers against any form of retaliation. The Chief Audit Officer is responsible for the management of the process. The attention focused on transparency extends throughout the supply chain, with strict screening and monitoring criteria adopted by the Group, based on ESG principles.

The Group also stands out for the transparent management of its dealings with institutions and responsible approach to advocacy. The funding of political parties is prohibited.

General disclosures

ESRS 2 – General disclosures

Basis for preparation and methodology

Reporting standards

This Sustainability Statement (the "Statement") has been prepared on a consolidated basis by the Intesa Sanpaolo Group (the "Group" or the "ISP Group") pursuant to Legislative Decree no. 125 of 6 September 2024 which implements Directive 2022/2464/EU on corporate sustainability reporting in national law, and in accordance with the European Sustainability Reporting Standards (the "ESRS"), referred to in Delegated Regulation (EU) 2023/2772. The Manager responsible for preparing the Company's financial reports, in collaboration with the Managing Director and CEO, certifies, with a specific report, that the Sustainability Statement included in the Report on operations has been prepared:

- in accordance with the above-mentioned reporting standards and Legislative Decree no. 125/2024;
- the specifications adopted pursuant to Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation).

The 2024 Consolidated Sustainability Statement is subject to a limited assurance engagement by the independent auditors EY S.p.A., which also carry out the statutory audit of the financial statements. In their report, the independent auditors express their conclusion as to the compliance with:

- the reporting standards adopted by the European Commission in accordance with Directive (EU) 2013/34/EU (European Sustainability Reporting Standards, hereinafter also "ESRS");
- Article 8 of Regulation (EU) No. 852 of 18 June 2020 (hereinafter also referred to as the "Taxonomy Regulation") of the information contained in the section "Reporting pursuant to the EU Taxonomy (Regulation (EU) 2020/852)" of the Consolidated Sustainability Statement 2024.

Reporting boundary

The consolidated financial statements are the basis of the 2024 Sustainability Statement. In the first year of application of the above-mentioned regulatory framework, the Group adopted an approach which assesses the significance of each subsidiary for the purposes of complete and representative disclosure, also based on the effort to retrieve information and the significance of the impact in terms of disclosure resulting from its inclusion.

Therefore, an analysis was conducted in order to identify the significance of the social and environmental impacts and risks of each entity, considering, in particular, the following variables:

- the type of business carried out by the companies;
- the number of full-time equivalent employees (FTE).

The analysis showed that 62 companies account for 99% of total assets and full-time equivalent employees of the ISP Group.

Given the limited significance of the subsidiaries not included in the 2024 Sustainability Statement, the reporting boundary is deemed adequate to ensure the provision of the information necessary to understand the Group's impact on sustainability matters, as well as how it affects the Group's performance, results and financial position.
The possible extension of the reporting boundary to other subsidiaries will be assessed annually in line with the evolution of the business and the profile of the risks to which the Group is exposed.

The subsidiaries making up the reporting boundary of the Consolidated Sustainability Statement are listed below.

Reporting boundary of the Consolidated Sustainability Statement at 31 December 2024	
Acantus S.p.A.	Intesa Sanpaolo Harbourmaster III S.A.
Banca Comerciala Eximbank S.A.	Intesa Sanpaolo House Luxembourg S.A.
Banca Intesa AD Beograd	Intesa Sanpaolo IMI Securities Corporation
Bank of Alexandria S.A.E.	Intesa Sanpaolo Innovation Center S.c.p.a.
Banka Intesa Sanpaolo D.D.	Intesa Sanpaolo Insurance Agency S.p.A.
CIB Bank Ltd.	Intesa Sanpaolo International Value Services D.O.O.
CIB Insurance Broker Ltd.	Intesa Sanpaolo Private Banking S.p.A.
CIB Leasing Group Ltd.	Intesa Sanpaolo Protezione S.p.A.
Epsilon SGR S.p.A.	Intesa Sanpaolo Rent Foryou S.p.A.
Eurizon Asset Management Croatia D.O.O.	Intesa Sanpaolo Romania S.A. Commercial Bank
Eurizon Asset Management Hungary Ltd.	Intesa Sanpaolo S.p.A.
Eurizon Asset Management Slovakia, správ.spol. A.S.	Intesa Sanpaolo Servitia S.A.
Eurizon Capital Real Asset SGR S.p.A.	Intesa Sanpaolo Wealth Management S.A.
Eurizon Capital S.A.	Isybank S.p.A.
Eurizon Capital SGR S.p.A.	Joint-Stock Company Banca Intesa
Exetra S.p.A.	Joint-Stock Company Intesa Leasing
Fideuram - Intesa Sanpaolo Private Banking S.p.A.	Pbz Card D.O.O.
Fideuram Asset Management (Ireland) DAC	Pbz Leasing D.O.O.
Fideuram Asset Management SGR S.p.A.	Porta Nuova Gioia
Fideuram Vita S.p.A.	Pravex Bank Joint-Stock Company
First Bank S.A.	Prestitalia S.p.A.
IMMIT - Immobili Italiani S.r.l.	Private Equity International S.A.
Immobiliare Cascina Rubina S.r.l.	Privredna Banka Zagreb D.D.
Insalute Servizi S.p.A.	REYL & Cie S.A.
Intesa Leasing D.O.O. Beograd	Reyl Finance (MEA) Ltd.
Intesa Sanpaolo Albania SH.A.	Risanamento S.p.A.
Intesa Sanpaolo Assicurazioni S.p.A.	SIREF Fiduciaria S.p.A.
Intesa Sanpaolo Bank Ireland Plc.	Eurizon Slj Capital Ltd.
Intesa Sanpaolo Bank Luxembourg S.A.	Vseobecna Uverova Banka A.S.
Intesa Sanpaolo Banka D.D. Bosna I Hercegovina	VUB Generali Dochodkova Spravcovska Spolocnost A.S.
Intesa Sanpaolo Brasil S.A. - Banco Multiplo	VUB Operating Leasing

Pursuant to Article 7 of Legislative Decree no. 125/2024, governing the rules of exemption form the preparation of individual sustainability statements, it is noted that the subsidiaries Intesa Sanpaolo Assicurazioni S.p.A. and Vseobecna Uverova Banka A.S. (both issuers of publicly traded securities) are required to prepare sub-consolidated sustainability statement as they do not meet the exemption criteria.

Reporting boundary

The Consolidated Sustainability Statement covers the following three macro-areas:
- Own operations;
- Upstream value chain, i.e. all Group's operating processes relating to the supply chain and the adopted procurement practices. The disclosure about the upstream value chain focuses, in particular, on risk management methods, including the reputational risks related to suppliers without control tools over sustainability matters[30];
- Downstream value chain, i.e. all the Group's business processes and their supporting processes, including business relationships. The disclosure about the downstream value chain focuses, in particular, on impact management methods and the risks associated with undertakings including financing and investment portfolios which may contribute negatively to sustainability matters due to their business sector or country[31].

Reporting on own operations includes policies, actions, goals and metrics related to sustainability matters which are deemed relevant to the outcomes of the Group's double materiality assessment, including organisation-specific disclosures.
In addition to the disclosure requirements of the ESRS for each topic, the ISP Group has identified entity-specific information, i.e. areas that are not comprehensively covered by the ESRS, but that need specific reporting in order to complete the description of the Group's sustainability impacts, risks and opportunities provided to all stakeholders. Entity-specific disclosure was identified and prepared in accordance with the principles set out in Appendix A to ESRS 1. It is included in the "Content index" section of this statement, in the final part of the Consolidated Sustainability Statement.

[30] For additional information, reference should be made to the "Double materiality assessment" section and the chapters covering specific sustainability matters.
[31] For additional information, reference should be made to the "Double materiality assessment" section and the chapters covering specific sustainability matters.

With respect to the Value chain, the disclosure provided in this Consolidated Sustainability Statement includes both qualitative information about the Group's policies, actions and targets to manage and monitor material sustainability matters for the upstream and downstream value chain, and quantitative information about greenhouse gas emissions ("GHG emissions[32]") and portfolio entity-specific metrics (downstream value chain).
Based on ESRS 1 transitional provisions, the Group opted not to apply the disclosure requirements that are being gradually introduced and that may be omitted in the first year of reporting pursuant to the ESRS.
In accordance with said transitional provisions, the Group disclosed information on the policies, actions and targets of its Value chain, using information already available in-house or publicly available information.

No information on intellectual property, know-how or classified as sensitive was omitted.

Time horizons

The Consolidated Sustainability Statement includes forward-looking information for which the Group decided to adopt a time horizon that is in line with that envisaged by other disclosure requirements, such as Pillar 3 or management disclosure. A five-year time horizon qualifies as medium term[33] and a time horizon ranging between five and 25 years qualifies as long term[34]. The definition of medium-term time horizon is in line with the Business Plan, while that of long-term time horizon matches the commitments arising from the Group's decision to adopt the 2050 Net Zero climate goals.

Use of estimates

Value chain

In preparing the Consolidated Sustainability Statement, the Intesa Sanpaolo Group used estimates and indirect sources to disclose the metrics of ESRS E1 – Climate change relating to:
- Scope 3 indirect greenhouse gas emissions[35] (disclosure requirement E1-6 related to the upstream and downstream Value chain). Scope 3 GHG emissions include the indirect greenhouse gas emissions generated along the undertaking's value chain, arising from indirectly held or controlled activities (e.g., waste disposal by third-party companies);
- the quantification of physical risk on portfolio exposure (disclosure requirement E1-9 on the Downstream value chain)[36].

The Group's ability to obtain the necessary upstream and downstream Value chain information may vary depending on various factors, such as the undertaking's contractual arrangements, the level of control that it exercises on the operations outside the consolidation scope and its buying power. Obtaining Value chain information could also be challenging in the case of counterparties that are not in the scope of the sustainability reporting required from time to time.
In accordance with ESRS 1, the ISP Group made every reasonable effort to collect the quantitative information concerning the Value chain. Where it was not possible to gather information about greenhouse gas emissions directly from actors in the Value chain, the Group's estimations were based on the information arising from sector-average data and other proxies.

The data sources and estimation methods used to calculate proxy values reflect the variety of cases and the counterparties involved. Generally speaking, the preparation of the above estimations is based on two main reference frameworks, i.e.:
- the GHG Protocol to calculate Scope 3 emissions on the upstream and downstream Value chain;
- the PCAF[37] to calculate Scope 3 emissions of the only category relating to financed emissions.

The method for estimating Scope 3 emissions from the Italian Banking Association's Sector guidelines were also considered.
Using nationally and internationally recognised calculation standards, as well as sector-specific approaches, limits the risk of data inaccuracy.

Finally, the Group constantly considers the possibility of increasing data accuracy, by directly engaging counterparties (companies in portfolio and suppliers) and via data providers specialised in the collection of third-party environmental data.
For additional information about calculation methodologies, estimations and the percentage share of Scope 3 emissions calculated on the basis of the official figures directly provided by the counterparty, reference should be made to the Metrics on greenhouse gas emissions section in ESRS E1 – Climate change.

The methodology used to quantify the physical risk on portfolio exposures is currently being developed within the Group and at sector level. Specifically, in order to identify the exposures subject to the climate change physical risk, the Group uses an external tool to map and measure the risks for each individual property by:
- mapping physical risks using long-term climate scenarios and subsequently allocating the climatological forecasts to high granularity grids with the calculation of hazard-specific indicators;
- calculating a high granularity synthetic physical risk indicator (SPRI) for each location based on the geo-localisation of offices and production sites for companies in portfolio, and of the building for properties provided as collateral, identifying and subsequently allocating the associated risk level. Following the assignment of the SPRI, the decision whether or not an exposure is subject to physical risk weather events is based on two criteria: maturity of the exposure and evolution of the severity of the estimated physical risk indicator.

[32] Greenhouse gas emissions.
[33] Section 6.4 of ESRS 1 defines the medium-term time horizon from the end of the reporting period up to five years.
[34] Section 6.4 of ESRS 1 defines the long-term time horizon as more than five years.
[35] For additional information about Scope 3 emissions, reference should be made to the Metrics on greenhouse gas emissions section in E1 – Climate change.
[36] The Group applies the transitional provisions that provide for the gradual implementation of the E1-9 disclosure requirement. In this statement, it only covers equivalent information, also presented in Pillar 3 disclosure.
[37] Partnership for Carbon Accounting Financials.

Own operations

The Intesa Sanpaolo Group used estimations also to calculate other metrics, such as E1-5 (energy consumption), E1-8 (portion of emissions covered by internal carbon pricing) and S1-14 (work-related accidents). For additional information about the calculation methodologies and the estimations made, reference should be made to the Metrics on energy consumption and the Metrics on greenhouse gas emissions section of ESRS E1 – Climate change and to the Metrics related to health and safety section of ESRS S1 – Own workforce.

Finally, no metrics were subject to assurance processes in addition to those carried out by the independent auditors on the Consolidated Sustainability Statement.

Comparative information

The Consolidated Sustainability Statement of the Intesa Sanpaolo Group is the first report drawn up in accordance with the ESRS, instead of the previous Consolidated Non-financial Statement prepared under the Global Reporting Initiative (GRI) standards. Consequently, the quantitative disclosure about metrics covers 2024 only as the Group opted to apply the ESRS transitional provisions (ESRS 1, par. 136).

Incorporation by reference

In 2024, the Group did not avail of the incorporation by reference option.

Statement on due diligence

The Intesa Sanpaolo Group identified due diligence processes that enable the identification and management of the negative impacts arising from own operations or from the upstream and downstream value chain. The due diligence actions carried out by the Group are embedded in the strategy and the current business model. After identifying negative impacts, the Group assesses and takes the actions necessary to manage and contain these impacts, including through its products and business relationships.
The following table shows the core elements of due diligence that are reflected in this Statement:

Core elements of due diligence	Sections of the Consolidated Sustainability Statement
Embedding due diligence in governance, strategy and business model	General disclosures: Strategy, business model and value chain General disclosures: Governance structure General disclosures: Double materiality assessment
Engaging with affected stakeholders in all key steps of the due diligence	General disclosures: Double materiality assessment
Identifying and assessing adverse impacts	General disclosures: Double materiality assessment Materiality process on impacts, risks and opportunities: E1 / E2 / E4 / E5 / S2 / S3 / G1
Taking actions to address those adverse impacts	E1 Climate change: Strategy to combat climate change at portfolio level E2 Pollution: Policies, targets and actions at portfolio level E4 Biodiversity and ecosystems: Policies, targets and actions at portfolio level E5 Resource use and circular economy: Policies, targets and actions at portfolio level S2 Workers in the value chain: Manage sustainability matters related to workers of portfolio companies S3 Affected communities: Affected communities by the undertakings included in the Group's portfolios G1 Business conduct: Policies, targets and actions related to business conduct
Tracking the effectiveness of these efforts and communicating	E1 Climate change: Strategy to combat climate change at portfolio level

With respect to ESRS E1 - Climate change, monitoring the identified negative impacts depends on the definition of specific targets at portfolio level. For the other matters whose impacts were identified and assessed in the downstream Value chain, the Group has not yet adopted measurable quantitative targets. However, through the policies and actions adopted, as described in the following chapters of this Statement, it has control tools that enable it to manage material impacts.

Strategy, business model and value chain

Strategy

The Intesa Sanpaolo Group's business model combines the generation of sustainable revenues focused on increasing fee and commission and revenues from services, high efficiency and a low risk profile. This configures a distinctive and diversified business model, both with respect to the business areas in which the Group operates and internationally. This model shows the Group as a wealth management and protection company, with a leading role in Italy and Europe.

The integration between product factories, covering portfolio management scheme, life and non-life insurance, and the Group's commercial networks, which ensure high synergies in terms of profitability and greater effectiveness and flexibility in defining the commercial offering, is another mainstay of the business model.

Furthermore, the strategy is based on the awareness that People are the Group's main resource and the enabling factor for its future success. At 31 December 2024, the Group's workforce numbered 93,539 people, of whom 71,174 based in Italy and the remaining 22,365 based abroad, with a significant share in Central/Eastern Europe. People's ongoing enhancement, growth and satisfaction are the fundamental objectives to be pursued by investing in talent, in order to create a single ecosystem of competencies that are appropriate to the evolution of the Group, in which employees are its key actors. The collection of ideas and suggestions from approximately 58,000 employees as part of the definition of the 2022-2025 Business Plan confirms the importance of people, as well as the identification of the key value pillars of the corporate mission.

The 2022-2025 Business Plan is based on a series of strategic initiatives grouped into four main action areas (the "pillars" of the Plan), which are pursued in accordance with the principles of integrity in corporate conduct and human rights along the entire value chain:

- structural risk reduction strategy - already launched with success in the previous Business Plan - positioning the Group among the best in Europe in terms of NPL ratios and stock (a Zero-NPL bank) and generating a sharp drop in the cost of risk;
- structural cost reduction, driven by technological innovation and various strategic initiatives aimed at improving operational efficiency, including the creation of the Isybank digital bank;
- increase in fee and commission by strengthening the Group's leadership in Wealth Management, Protection and Advisory through highly customised products and services, leveraging proprietary product factories, the international network, highly qualified specialists and dedicated technology tools and platforms;
- significant ESG commitment, with a worldwide leadership position in social impact and a strong focus on climate, reducing own emissions and supporting the energy transition in order to balance environmental and social needs.

The Intesa Sanpaolo Group's strategy is closely linked to sustainability matters as part of the fourth pillar, which is focused on ESG issues and whose specific objectives are discussed in the chapters covering the various standards. In this respect, the Group focuses on the following key topics:

- support to address social needs: donations and in-kind contributions, promotion of educational inclusion and youth employability, development of locally supported infrastructure and services, development of social housing for youth in Italy, and care facilities for the elderly;
- financial inclusion: contribution and credit access opportunities through the development of products dedicated to the most vulnerable social categories and contributing to the ability of customers to meet their primary needs;
- commitment to culture: promotion and development of culture (e.g. Gallerie d'Italia and Progetto Cultura activities that manage the Bank's art assets and archive collections) to promote the local area and share Italy's artistic and cultural heritage with institutions and citizens;
- promote innovation: target actions taken within the Group and with the support of companies as part of acceleration and innovation projects and the activities promoted by Intesa Sanpaolo Innovation Center (ISPIC)[38];
- accelerate on commitment to Net-Zero: pursue the Group's climate strategy in both own operations and the portfolios held. This strategy translates into the promotion of energy efficiency, the use of renewable energy within the organisation and participation in Net-Zero alliances, concurrently committing to reducing financed emissions for the main critical sectors;
- supporting customers in ESG/climate transition: disbursement of loans and financing for the sustainable transition to individuals and undertakings, enhancement of ESG proposition in Asset management and Insurance and customer assessment based on Intesa Sanpaolo proprietary ESG scoring.

The Group's commitment to sustainability goals is strengthened with its offering of products and services, thanks in part to the participation of all major business lines in their respective Net-Zero initiatives, in order to reduce emissions in the credit, investment and insurance segments.
Therefore, support to the ecological transition covers all types of customers:

- in the Retail customers and SMEs/Corporates sector, by offering sustainable lending;
- in the Asset Management sector, via sustainability-conscious investments;
- in the development of dedicated ESG advisory services for Fideuram;
- in the insurance sector, by offering ESG schemes for both the life and the non-life business.

With respect to Retail customers, mortgages and loans aimed at financing the redevelopment of the existing real estate assets (green mortgages) play a particularly important role in achieving the goals identified in the Business Plan. Again with respect to the disbursement of green loans, the 2022-2025 Plan also focuses on circular economy and supports undertakings with the dissemination and funding of this model, including in collaboration with the Ellen MacArthur Foundation.

Supporting financial inclusion through social lending engages categories of vulnerable undertakings and groups of people who may not have access to credit through traditional financial channels, such as, university students, working mothers, families affected by natural disasters, individuals or small businesses in difficulty and exposed to the risk of usury. To these categories, the Group offers a wide range of financial products and services that are constantly evolving, also thanks to market research and feedback received from customers, adapting the offering to their needs and preferences. The non-profit sector is a particular class of customers which is the target of specific offers, including, inter alia, a programme based on a crowdfunding platform. Services targeting the more disadvantaged customers are also provided by the Group's international subsidiary banks (part of the "International Banks Division" or "IBD"), via specific local initiatives.

Finally, the goals of the 2022-2025 Business Plan related to ESG topics and sustainability matters are closely related to some UN Agenda 2030 Sustainable Development Goals (SDGs). Reference should be made to the relevant report for additional information on the ISP Group's contribution to the SDGs.

[38] ISPIC is the Group company that explores future scenarios and trends, develops multidisciplinary applied research projects, supports start-ups, accelerates the business transformation of companies according to the criteria of open innovation and the circular economy, promotes the development of innovative ecosystems and spreads the culture of innovation, to make the Intesa Sanpaolo Group the driving force of a more aware, inclusive and sustainable economy

Business model

The Group's activities contribute to the creation of value for its customers and include the main processes underlying the provision of banking and financial services:
- management of financial resources: this includes managing the financial resources from external sources, such as customer deposits, funds raised on the financial markets and capital management. As a banking group, the Group manages these resources with the aim of maintaining adequate levels of liquidity and capital;
- provision of financial services: this includes all banking transactions such as, for example, opening and managing current accounts, disbursing loans and mortgages, providing financial advisory activities, private banking services, managing the portfolios of retail and institutional customers and business services;
- manage the distribution of services: this includes managing the distribution channels of financial services which include physical branches, online banking and mobile banking services and automated services, such as ATM branches. The Group is strongly committed to promoting digitalisation in order to increase the efficiency of customer services;
- sales and marketing: these include all promotional, advertising and branding activities that attract new customers and maintain existing relationships. The Group heavily invests in the development of customised offering for several customer categories, promoting products which include, inter alia, credit cards, insurance policies, investment funds and financial advisory services;
- after-sale services: these include management of customer relations and continuous support via several channels, such as call centres, online chat and customised support. The Intesa Sanpaolo Group focuses, in particular, on customer care services and on monitoring customer satisfaction.

The Group operates via six business Divisions:
- Banca dei Territori Division is the lynchpin of Italy's commercial operations targeting individuals, small and medium enterprises and non-profit organisations. Furthermore, it offers products such as industrial loans, leases and factoring arrangements, and includes the Group's digital bank (Isybank);
- IMI Corporate & Investment Banking Division is the global partner for enterprises, financial institutions and the public administration in a medium/long-term perspective, at domestic and international level in 24 countries. It offers commercial banking, transaction banking, investment banking, structured finance and capital markets services. Abroad, it offers corporate banking services via a specialised global network;
- the International Banks Division ensures a strategic international presence by offering commercial banking services in several countries in Central/Eastern Europe, in the Middle East and North Africa. This Division operates with the South-Eastern Europe HUB comprising Privredna Banka Zagreb in Croatia, Intesa Sanpaolo Banka Bosna i Hercegovina in Bosnia-Herzegovina and Intesa Sanpaolo Bank in Slovenia with the Danube HUB, made up of VUB Banka in Slovakia and the Czech Republic, Intesa Sanpaolo Bank Romania and First Bank in Romania, and with other banks: Intesa Sanpaolo Bank Albania, CIB Bank in Hungary, Banca Intesa Beograd in Serbia, Bank of Alexandria in Egypt, Pravex Bank in Ukraine and Eximbank in Moldova;
- the Divisions of the Wealth Management Divisions:
  - the Private Banking Division offers specific products and services for customers in the Private and High Net Worth Individuals segments; it includes Fideuram - Intesa Sanpaolo Private Banking, which is supported by 6,814 private bankers;
  - the Asset Management division operates through Eurizon, offering asset management solutions to Group customers, non-Group distribution networks and institutional customers;
  - the Insurance Division, headed by Intesa Sanpaolo Assicurazioni (and its subsidiaries) and Fideuram Vita, offers insurance and pension products.

The governance areas contribute to the efficiency and quality of business activities, ensuring that the Group has the resources necessary to operate successfully:
- company management: this includes all policy, management and control, strategic planning, risk management and compliance activities. The Group invests in a sound risk control and management structure in accordance with current regulations and to minimise operational risks;
- human resource management: this includes recruiting, training and developing personnel, focusing on digital skills and the ability to handle an increasingly demanding customer base. For the Group, company welfare, continuing education and initiatives dedicated to the well-being of the Group's people play a particularly important role;
- technological development: this includes innovation and the implementation of new technologies, by investing in digital platforms, artificial intelligence, blockchain and sophisticated data analytics tools. The Group is speeding up its digitalisation process in order to improve operating efficiency and customer experience;
- purchases: this covers purchases of goods and services necessary for the operations of the Group, including technologies, software, third-party consultancy and real estate management. Thanks to this support, the Group has the tools and the resources necessary to operate efficiently.

The Group raises the financial resources necessary to provide its products and services via a mix of internal and external sources. Specifically, the main methods used by Intesa Sanpaolo to raise financial resources include:
- customer deposits: these are the main source of liquidity and comprise current accounts and term deposits from Retail and Corporate customers;
- short-term funding: it is mainly comprised of repurchase agreements and CD (certificates of deposit)/CP (commercial paper) funding on wholesale markets;
- medium/long-term funding: it is mainly comprised of own emissions on wholesale markets;
- inter-bank loans: these include loans from other banks in the interbank market;
- European Central Bank (ECB) loans: these are refinancing operations carried out by the ECB which Intesa Sanpaolo can use under certain circumstances. These loans are granted at relatively low interest rates, especially during periods of economic downturn or to boost the economy;

- own equity instruments: these are different from the other forms of funding and are critical to Intesa Sanpaolo's financial strength and financing capacity. Indeed, they protect against any losses and support creditors' and investors' trust in its solvency.

The relationship between sources (financial resources raised) and lending (utilisation of those resources, such as loans and investments) is critical to ensuring the Bank's financial soundness and sustainability and that it can provide services to customers, even in adverse market conditions. Through liquidity management, interest rate risk control, regulatory capital, and the use of risk management tools, Intesa Sanpaolo maintains a sustainable balance between resources raised and lending.

As part of its operations, the Group does not operate directly in the following sectors: fossil fuel, chemicals production, controversial weapons, growing or producing tobacco.

Furthermore, exposures in the Group portfolios are subject to specific internal regulations that implement stringent exclusion criteria for counterparties that operate in ESG-sensitive business sectors, including:
- the coal and Oil&Gas sectors, for which the Intesa Sanpaolo Group formalised its rules for lending operations; for additional information on this topic, reference should be made to the chapter ESRS E1 – Climate change;
- with reference to the arms production and trading sector, the Group adopted "Rules governing transactions with subjects active in the armaments sector" which expressly prohibit to undertake any kind of banking or lending activity related to the production of and/or trade in controversial weapons and/or those banned by international treaties and in particular: nuclear, biological and chemical weapons; cluster and fragmentation bombs; weapons containing depleted uranium; and anti-personnel landmines.

Aware of the need to support national and European defence together with the allied countries in NATO, the Intesa Sanpaolo Group limits its banking and/or lending activity solely to operations that relate to the production and/or trade of military goods in countries belonging to the European Union and/or NATO. Operations in countries that do not belong to the European Union or NATO are also permitted but are submitted to an extraordinary approval process, subject to the existence of intergovernmental programmes with the Italian Republic. The other Group banks and companies are not authorised to undertake operations involving the production and/or trade of military goods, except in cases of specific and prior authorisations granted by the Parent Company to the Group's international subsidiary banks.
All the above documents are available on the Group's website.

Value chain

The Group's value chain consists of a set of activities carried out as part of interconnected processes, as detailed below.

With respect to the upstream value chain, the main expense categories subject to centralised sourcing include:
- information and communication technology: products and services in this category include computer hardware, maintenance thereof, and system licenses;
- real estate: goods and services in this category include lease costs, furniture and furnishings, building maintenance and cleaning contracts;
- advertising and other public relations expenses: products and services include internal and multimedia communication services, entertainment events and sponsorship of sports, religious, or non-profit-making organisations;
- physical safety: products and services include installation of safety systems, purchases of safes, alarm units and of surveillance equipment, security and surveillance services;
- office equipment: products and services include purchases of office equipment and machines, IT consumables, stationery and office supplies and purchases of audiovisual equipment;
- insurance: products and services include employee benefit insurance, property insurance and third-party liability insurance;

With respect to the downstream value chain, Intesa Sanpaolo Group's distribution model relies on a multi-channel approach which combines the physical network of branches with sophisticated digital tools, offering a wide range of banking and financial services and providing customers with a seamless experience. Specifically, the distribution model is structured as follows:
- Italy branch network: Intesa Sanpaolo has an extensive branch network which enables it to reach a wide range of customers. Thanks to its physical presence, the Bank can offer customised services and expert advice on site. Branches can meet the needs of several types of customers, including Retail (private and small undertakings), Businesses, Corporate (large undertakings) and Private (high net worth customers) customers;
- digital branches: these are real branches without a physical location, which are available only by phone and computer;
- internet and Mobile Banking: these tools enable customers to carry out banking transactions, such as transfers, payments, and to monitor current accounts and investments, directly from their phone or PC. These services were designed for customers who want to manage their finances independently. The Bank also offers specific remote services for Corporate and Business customers via an IT infrastructure which enables them to receive and send flows and documents with Group banks or other banks with which the Company has a banking relationship, both in Italy and abroad;
- Isybank: this is Intesa Sanpaolo's digital complementary bank which was set up to meet the needs of young, digital customers. At Isybank, the entire banking process takes place exclusively online, without the need to go to a branch or access traditional physical services. It offers a more streamlined and rapid banking experience, focusing on clarity, immediacy and reduced costs compared to traditional banking services;
- the Group's international network: this is a strategic distribution channel as it offers widespread coverage in several international markets. Through these entities, the Group provides a wide range of services, including traditional and sophisticated banking solutions that meet local needs. This channel assists corporate and retail customers abroad, facilitating international operations and consolidating its leading position in Europe and in other strategic areas around the world;
- product factories: the Group's product factories are entities specialised in the development of specific financial products, such as investment funds, insurance and pension solutions. In certain cases, these entities distribute their products directly to customers outside Intesa Sanpaolo's network, using third-party channels;

- partnerships and service integration: the distribution model includes a series of strategic partnerships that expand Intesa Sanpaolo's offerings. Thanks to these collaborations, the Bank can offer a full range of financial solutions, from the easiest to more complex products for sophisticated customers.

The Group uses these channels to serve several types of customers, including retail customers and households, SMEs, large companies and institutions. The Group offers a wide range of products and services to retail customers and households, which include current accounts and loans, mortgage loans and savings and investment solutions. SMEs can receive specific financial services, such as loans, consultancy and payment instruments. Large companies and institutions can benefit from a comprehensive range of corporate banking, investment and treasury management services as well as international trade solutions, consolidating Intesa Sanpaolo's role as the reference partner in all economic sectors.

The Group's main customer categories are listed below:
- retail customers: individuals and companies with less complex financial requirements which are the main element of the activities of the Banca dei Territori Division (approximately 13.7 million customers) and the International Banks Division (about 7.4 million customers);
- corporate customers: companies, financial institutions and public administration, domestic and international, included in IMI Corporate & Investment Banking Division (19 thousand customers in Italy);
- private customers: high net worth individuals with more complex requirements which are offered customised services. Specifically, the Private Banking Division has approximately 125 thousand private and high net worth individuals;

With respect to the main markets, the Parent Company has a strong presence in Italy with a network made up of approximately 3 thousand branches. Furthermore, the Group has a strategic international presence, with roughly 900 branches and 7.5 million customers, including subsidiary banks operating in commercial banking in 12 countries in Central/Eastern Europe and in the Middle East and North Africa. It also has an international network specialising in providing support to corporate customers in 25 countries, particularly the Middle East and North Africa, and in countries where Italian businesses are especially active.

Performance

Thanks to its strong performance, the Intesa Sanpaolo Group can generate increasing and sustainable value for all its stakeholders. The Group's net income for 2024 amounts to 8.7 billion euro, which generated cash dividends of 6.1 billion euro for the Group's shareholders[39], of which approximately 40% goes directly to Italian households and foundations, and a 2 billion euro share buyback, to be launched in June 2025[40], in addition to the 1.7 billion euro share buyback which was completed in October 2024. Personnel expenses amount to 7.2 billion euro. In 2024, the public sector benefited from direct and indirect taxes equal to 5.3 billion euro, up by 700 million euro on 2023. Households and businesses received medium/long-term loans worth 69.8 billion euro (of which 43.4 in Italy). Around 144,000 businesses have received help to return to performing status since 2014, of which 3,100 in 2024.

With respect to the main results in the ESG area, also considering the goals set out in the 2022-2025 Business Plan, the "Cibo e riparo per i bisognosi" (Food and shelter for the needy) programme continued, confirming Intesa Sanpaolo Group's strong focus on combating poverty. As part of this programme, 54.1 million euro's worth of initiatives have been carried out in the 2022-2024 period, exceeding the Plan's goals. Also this year, the Group confirmed its strong commitment to the green transition by disbursing new green loans to individuals for a total of 9 billion euro over the 2022-2024 period, including 4.1 billion euro in 2024; furthermore, the improvement of ESG asset management and insurance product offerings continued, with a penetration of about 76.4% of total AuM[41]. With respect to the acceleration of the Commitment to Net-Zero, the Group's targets were validated by the Science Based Target Initiative[42]. Finally, the Group obtained the Top Employer Europe 2025[43]award, and once again was confirmed Top Employer Italy[14] for the fourth year running. Furthermore, it holds the first place in the LinkedIn Top Companies 2024 ranking as the best company in Italy in which to develop one's career and grow professionally;

Double materiality assessment

Methodology and rationales

For the purposes of this Consolidated Sustainability Statement, the Group has preliminarily conducted an assessment of the main material sustainability matters (the "double materiality assessment"), considering the impacts (positive and negative, actual or potential) of its operations on the economy, the environment and people. The impact assessment also includes the assessment of the materiality of the effects on matters related to human rights and, more in general, areas where, when material, the disclosure could be functional to stakeholders and their assessments of the Group operations. Furthermore, it covers the risks and opportunities which have, or are expected to have, material financial effects on the Group.
The double materiality assessment carried out in 2024 is based on the regulatory requirements of the ESRS, the guidelines on materiality[44] and the technical details provided by the regulator (e.g. those provided in the Frequently Asked Questions (FAQs) on double materiality assessment. It was conducted in accordance with the Group's business context via an active dialogue with stakeholders.

---

39 Of these, 3,022 million euro paid as interim dividend on 20 November 2024 (17 cents per share) and 3,044 million euro to be paid in May 2025 (17.1 cents per share), equal to 34.1 cents per share in 2024.

40 Subject to shareholder approval.

41 Eurizon perimeter - Article 8 and Article 9 SFDR 2029/2088 funds and asset management products.

42 Obtained on 27 January 2025

43 From Top Employers Institute.

44 Reference should be made to the guidelines "IG 1: Materiality Assessment Implementation Guidance" issued by EFRAG.

Compared to the 2023 report, which was prepared in accordance with the GRI Standards – Universal Standards (2021), in 2024, the Group's double materiality assessment complied with the ESRS which introduce the concept of materiality and consider the impact of the Group's operations (impact materiality) on internal and external stakeholders and the external risks and opportunities which have or may have material financial implications on the Group (financial materiality). Specifically:

- impact materiality considers impacts connected with the undertaking's own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts (inside-out perspective); The identification and assessment steps of the Group's impacts were conducted in accordance with the approach adopted in 2023;
- financial materiality, which considers, from an outside-in perspective, sustainability matters that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

The Group assessed both aspects and reported on the material aspects for the above perspectives in order to identify and assess material impacts, risks and opportunities (IROs).

The Group conducted the double materiality assessment considering and emphasising the specific characteristics of the business lines and the geographical areas in which it operates and in which the counterparties with which it carries out business relationships operate. The type of suppliers and counterparties is an additional element considered during the analysis and assessment step.

Double materiality aspects provide the basis for sustainability reporting and also play a crucial role as they also contribute to shaping the company's strategy with regard to material topics for the business and its stakeholders.
The double materiality assessment was developed in accordance with the following macro-stages:

- Group's stakeholder mapping;
- context analysis to identify positive and negative, actual and potential impacts on the economy, the environment and people, including human rights, arising from Group operations, and the risks and opportunities generated by the external environment, based on an analysis of different sources, such as national/international documentation in the ESG regulatory context and the documentation of relevance to the sector in which the Group operates at national and international level;
- identification of the impacts, risks and opportunities to be assessed and which are potentially relevant to the Group;
- assessment of the IROs which are potentially relevant to the Group by:
  - conducting an internal analysis based on metrics aligned with the requirements of the ESRS reporting standards. Specifically, the materiality of IROs was assessed based on exceeding a specific materiality threshold defined in accordance and in line with the Group's current risk management process;
  - engaging its stakeholders via the engagement and management activities listed below;
  - identifying the material sustainability matters relevant to the Group based on the aggregation of the materiality results of the IROs arising from internal analysis and stakeholder engagement activities;
- consolidating and sharing the list of sustainability matters material for the Group.

The process will be updated on an annual basis and revised based on any regulatory changes.

The above macro-stages, which identify and assess IROs, were carried out as part of the following operating process.

Group's stakeholder mapping

Stakeholder engagement activities are carried out as part of the double materiality assessment.

PEOPLE
Group people
Employees
Trade unions

CUSTOMERS
Private individuals and households
Private individuals and households in financially vulnerable circumstances

SUPPLIERS
Large suppliers
Small suppliers
Business partners
Sub-contractors

ENVIRONMENT
Environmental groups
Future generations
Scientific community

COMMUNITY
Community interest groups
Regulatory authorities
National and international public institutions
Media

In this respect, the stakeholder map represents the Group's network of relations, with which Intesa Sanpaolo exchanges views on a regular basis in order to identify and monitor their needs and prospects in relation to priority impact, risk and opportunities areas.

When performing the double materiality assessment, in line with the applicable EFRAG Guidelines, the Group applied the following stakeholder engagement approach:
- engage the Group's competent internal structures which maintain constant and ongoing dialogue with the stakeholders concerned, in mapping and assessing the materiality of impacts, risks and opportunities (stakeholder management);
- directly engage specific stakeholders via dedicated workshops, interviews and questionnaires (stakeholder engagement).

The categories of stakeholders shown in the above map were engaged in the identification and assessment of the materiality of the IROs linked to the sustainability matters which are closer to their experience, knowledge and sensitivity. This enhanced stakeholders' knowledge of the Group's processes and strategies related to the sustainability matters closest to them.

The listening methods applied to each category of stakeholders and a summary of the sustainability matters explored with each category are shown below:

CATEGORY OF STAKEHOLDER	STAKEHOLDER	LISTENING METHOD	SUMMARY OF THE ISSUES COVERED
CUSTOMERS	Retail customers	Integration of dedicated questions in the retail customer questionnaire and interview with BdT Business Structures	▪ Initiatives for environmental protection and reduction of the environmental footprint of the Group's offices and branches ▪ Responsible, solid and sustainable governance, value creation and distribution for all the Group's stakeholders ▪ Commitment to promoting sustainable economic development, also in light of the international and EU objectives in the Climate Change and sustainability area. More specifically, promotion of an economic model with low carbon emissions based on the circular economy, through the development of a dedicated, customer-centric offering ▪ Pursuit of the banking business in full compliance with the rules and principles of fairness in business ▪ Disbursement of loans to sections of society that would find it difficult to access credit, and provision of products with a high social impact ▪ Attention to service quality, customer care, relationship and satisfaction ▪ Promotion of a growth strategy geared towards digital innovation to anticipate new trends and be competitive on the market ▪ Commitment to asserting its role as a digital company through an advanced multichannel platform aimed at ensuring an innovative, safe and effective offer ▪ Commitment to guaranteeing IT security to its customers ▪ Sustainable investments and integration of sustainability issues in the conduct of the insurance business ▪ Talent development, development of internal skills, evaluation and incentive systems, regular training plans, diversity management ▪ Support to the community and commitment to culture through solidarity initiatives with projects carried out in partnerships, donations and sponsorships, promotion of art and culture in Italy and abroad
	Corporate customers	Integration of dedicated questions in the customer questionnaire and interview with BdT Business Structures	
ENVIRONMENT/ COMMUNITY	Representative figures / reference experts	Virtual one-to-one interviews with representative figures of the Community and the territory and interview with the internal structures	▪ Environmental aspects, in particular in relation to climate change and biodiversity ▪ Evolution of the regulatory environment (e.g. CSDR, ESRS) and the potential impacts on organisations ▪ Ability to promote a systemic approach towards the achievement of the Sustainable Development Goals (SDGs) defined in the context of the United Nations ▪ Leading role of the Intesa Sanpaolo Group on ESG issues ▪ Importance in communicating the results achieved and the objectives set in the sustainability and ESG area ▪ Main challenges and strengths of the Intesa Sanpaolo Group for the implementation of the Business Plan with a focus on the ESG area ▪ Importance of diversity and inclusion within the workplace ▪ Relevance of the concept of Innovation and related satisfaction of customer needs ▪ Customer loyalty ▪ Support for SMEs in the sustainability area ▪ Educating new generations on sustainability issues

CATEGORY OF STAKEHOLDER	STAKEHOLDER	LISTENING METHOD	SUMMARY OF THE ISSUES COVERED
SHAREHOLDERS/ INVESTORS	SRI investors[45]	Analysis of the main questions asked by the ESG Investors of the Intesa Sanpaolo Group	▪ Environmental aspects, in particular relating to climate change adaptation, biodiversity, natural resources and decarbonisation ▪ Aspects relating to finance and sustainable investments ▪ Standard sustainability policies ▪ Inclusion and diversity ▪ Employee well-being ▪ Development and digitalisation ▪ ESG sustainability and integration in business strategies ▪ Gender pay gap ▪ Workers' rights and corporate governance
PEOPLE	Group's people, in Italy and abroad	• Interviews with HR internal structures • Survey aimed at listening to the opinions and needs of the Group's people by providing questionnaires on an internal climate survey and questions relating to sustainability issues to over 72,000 Group's people	▪ Assessment of the perception of the Group's image from the customers' point of view, based on individual professional experiences ▪ Attention and care of employment levels in restructuring processes ▪ Recruitment of young people ▪ Assessment of the variables related to personnel enhancement (e.g. sense of pride and belonging, merit recognition, autonomy and financial recognition) ▪ Talent development and retention ▪ Assessment of the training and professional growth opportunities provided by the Intesa Sanpaolo Group ▪ Employee well-being (flexibility and work-life balance, relationship with colleagues and managers) ▪ Job satisfaction of Intesa Sanpaolo Group people ▪ Evaluation of the transparency and objectivity of the performance assessment systems ▪ Assessment and knowledge of the Policies applied by the Group (e.g. Diversity and Inclusion) ▪ Assessment of customer satisfaction on aspects such as the reliability, transparency and clarity of the Intesa Sanpaolo Group's procedures ▪ Intesa Sanpaolo Group ESG initiatives and products
	Trade unions	Virtual focus group with trade union representatives	▪ Employment protection and future, including in consideration of the service digitalisation trend ▪ Community support ▪ Financial inclusion ▪ Reporting of non-financial information ▪ Environmental issues and biodiversity ▪ Ecological transition, importance of the use of renewable energies and promotion of sustainable mobility for employees ▪ Youth unemployment levels in the South ▪ Gender pay gap
SUPPLIERS	Dedicated internal structure	One-to-one interviews	▪ Environmental topics, biodiversity and circular economy ▪ Job protection, health and safety, diversity & inclusion and well-being of people along the supply chain ▪ Management of relationships with suppliers

Employee representatives pursuant to Legislative Decree no. 125/2024 were engaged in compliance with the relevant regulations and agreements, in particular, in the double materiality assessment. Furthermore, they will be subsequently involved in the approval of the Consolidated Sustainability Statement by the Board of Directors.

Context analysis

In order to map IROs, the Group analysed the context in which it defines and implements its business activities and relationships. Specifically, the following elements were considered:

– external documentary sources, updated to 2024, to analyse reference standards and frameworks, including international indices (DJSI - Dow Jones Sustainability Indices, Morningstar ESG Index, Euronext ESG Indices CDP 2023), reference standards and reports for the reporting of sustainability performance (WEF's Global Risks Report, The OECD Guidelines for Multinational Enterprises, BSR – Business for Social Responsibility, World Business Council for Sustainable Development – WBCSD), documents and reference frameworks in the field of Human Rights (UN Guiding Principles on Business and Human Rights), the Proposal for a Directive of the European Parliament and of the Council on corporate sustainability due diligence which amends EU Directive 2019/1937 (CSDDD, EU Directive 2024/1760 of the European Parliament and of the Council of 13 June 2024 on corporate sustainability due diligence) and further reference regulations referred to by the ESRS (EU Regulation 2019/2088 – SFDR, EU Regulation 575/2013 – "Pillar 3", EU Regulation 2016/1011 – "Benchmark Regulation", EU Regulation 2021/1119 – "EU Climate Law");
– external documentary sources, updated to 2024, for the analysis of current trends in the banking and insurance sector, including the SASB Materiality Map, S&P Global Ratings, Fitch Ratings, The OECD Guidelines in the context of Institutional Investment, Financial Sector - Responsible business conduct for institutional investors - Key considerations for due

[45] Sustainable and Responsible Investment.

diligence under the OECD Guidelines for Multinational Enterprises, MSCI - ESG Industry Materiality Map, GRI – Sector Standards, the Supervisory Expectations of the Bank of Italy and the ECB, the Recommendations of the Task Force on Climate-related Financial Disclosures (in particular, the “Climate-Related Risks, Opportunities, and Financial Impacts” section), Principles for Responsible Banking, accounting standards (IFRS) for sustainability reporting;
- internal document sources, including the 2022-2025 Business Plan, the Code of Ethics, the Consolidated Non-financial Statements of the last three years, the Financial Statements, communications of the top management, the minutes of the Shareholders’ Meetings and company policies, also in order to identify how the impacts are linked to the strategy and business model;
- detail benchmark conducted on the banking sector in relation to material aspects and relevant stakeholders (Sustainability Statement/Consolidated Non-financial Statements and additional public documentation of other Italian and international financial groups);
- feedback/input arising from the engagement of the Group’s stakeholders.

In accordance with the applicable legislation, the double materiality assessment covered own operations and the upstream and downstream value chain.

Identification of impacts, risks and opportunities

The analyses conducted identified and assessed, for each ESRS, the Group's possible IROs, applied to own operations and the value chain. Impact materiality and financial materiality are interrelated and, from a methodological point of view, were conducted at the same time.

The Group's impacts on people or the environment are identified based on the specific features of the Group's operating and business model, changes in strategy and management decisions made to address those impacts, and based on internal analysis and due diligence processes. The Group’s impacts other than sustainability issues in the external context can give rise to risks and opportunities.

Risks and opportunities are identified based on the impacts, dependencies and sustainability issues that have or could have financial effects on the Group. For example:
- financing/investing in sectors/countries with a weak ESG profile could result in credit/market risk arising from high concentration in high-risk territories/areas with respect to the sustainability issue considered;
- development of ESG initiatives, donations, programmes and controls by the Group which could contribute to improving the Group’s brand reputation and/or to increasing stakeholder trust;
- definition of specific ESG criteria, investment and/or financing strategies which could contribute to expanding the product range through alignment with sustainability goals.

Assessment of the materiality of IROs

The materiality of IROs was assessed by conducting an internal analysis based on metrics aligned with the ESRS requirements, discussed and consolidated through interviews with the Group's internal operating structures and, as described earlier, through a stakeholder management process.

The methodology used was formalised in internal documents and the related criteria are described in Group’s specific internal regulations.

In order to assess and prioritise impacts on people and the environment, an internal analysis was conducted using the following metrics:
- Scale, i.e. how grave the impact is, based on a scale that ranges from “very low” to “very high”;
- Scope, i.e. how widespread the impact is, based on a scale that ranges from “highly localised” to “global”;
- Irremediable character, i.e. the extent to which the impact can be remediated and, for negative impacts, based on a scale that ranges from “very low” to “very high”;
- Likelihood, which measures the likelihood of occurrence of the impact and, for potential impacts, is based on a scale that ranges from “very unlikely” to “extremely likely”, considering different time horizons.

The individual impacts identified by the Group are assigned a score, according to the metrics described earlier, where the maximum score is the greatest benefit generated in the event of positive impacts, or the greatest harm in the event of negative impacts.

Impact assessment activities were carried out considering the specific features of the Group’s business. Specifically, for the downstream value chain, the sectors in which the counterparties most exposed to the risk of adverse impact for each sustainability issue operate, were identified.

Impact materiality is represented by exceeding a pre-established materiality threshold, calculated as the average of the score assigned to the scale, scope and irremediable character metrics. Specifically, the materiality:
- of a positive actual impact is the average of the score assigned to the scale and scope metrics;
- of a negative actual impact is the average of the score assigned to the scale, scope and irremediable character metrics;
- of potential impacts is also determined by likelihood. Specifically, the materiality:
    - of a potential positive impact is obtained by multiplying likelihood by the average of the score assigned to scale and scope.
    - of a potential negative impact is obtained by multiplying likelihood by the average of the score assigned to the scale, scope and irremediable character metrics.

For potential negative impacts on human rights, the materiality of the impact (scale, scope and irremediable character) is more important than the likelihood, in line with the requirements of the ESRS; this guideline has been incorporated into the assessment methodology adopted.

Based on the analyses carried out, the Group shows material impacts as described in the chapters covering individual ESRS, both via its direct activities (own operations) and its business relationships (upstream and downstream value chain).

Specifically, with respect to own operations and upstream value chain, the material impacts affect people or the environment as a result of the initiatives implemented or planned (positive impacts) and the negative impacts arising from operations (negative impacts). On the other hand, for the downstream value chain, this impact reflects the exposure of the loan and investment portfolio to sectors or countries that, in turn, may affect people and/or the environment.

Time horizons were considered when assessing scale, irretrievable character and likelihood in accordance with the ESRS' definition of short, medium and long term.

The materiality of each IRO was assessed on the basis of qualitative-quantitative information, also considering the results of the context analysis and the stakeholder engagement process.

When using a quantitative approach, the process involved the identification of data used in well-established internal processes, which determine external or internal reporting (e.g. risk data, projections) and management data derived from well-established processes.
Specifically:

- risks were assessed in accordance and in line with the Group's current risk management process, using, where possible, analyses and metrics already in place within the Group (e.g. materiality assessment of environmental, social and governance risks compared to traditional risks (prudential from a financial perspective));
- opportunities were assessed based on the controls, policies and goals set out in the Group's budget and Business Plan, and the possibility of expanding the target customers through the development of products aligned with sustainability goals.

With respect to the qualitative approach, materiality was assessed based on analyses which promote the initiatives, policies and strategies prepared internally by the Group, including, for example, those formalised in the 2022-2025 Business Plan.

When assessing financial materiality, the actual financial impact of the Group's material risks and opportunities was considered, in line with reference regulations, considering asset exposures and any financial losses and actual or prospective revenues, using approaches that reflect the highest level of granularity available and the estimates and assessments made by the Group as part of ordinary planning and risk analysis activities.
Financial materiality is assessed at the same time as impact materiality, identifying any interaction and interconnection between them.

Specifically, the financial impact of risks is assessed considering the Group's exposure to the counterparties in the portfolio and financial institutions that issue debt securities and other types of financial assets that belong to sectors or countries potentially exposed to ESG risk factors. Furthermore, the impact of operating losses caused by the Group's inadequate operating processes, including assets, resources and relationships that form part of its own operations, or by the threat of penalties or penalties applied in respect of sustainability issues, was also assessed.
In accordance with applicable legislation, the assessments were carried out considering the inherent risk, i.e. without considering the potential risk prevention or mitigation mechanisms adopted by the Group.

With respect to opportunities, the identification and assessment process is also aligned with the indicators set out in the Group's budget and Business Plan concerning the offering of ESG-virtuous products.

In accordance with the Guidelines[46], both qualitative (by involving the Group's various structures) and quantitative aspects were considered, using, where possible: methodologies, controls and metrics already in place within the Group (e.g. as part of risk materiality assessment). Where necessary, these assessments were integrated with additional ones to accurately meet the requirements applicable to the relevant sustainability matter.

Specifically:

- the identified risks were assessed in accordance and in line with the Group's current monitoring framework and regulations. Where applicable, each risk (e.g. credit risk, market risk, liquidity risk, operational risk) typical of supervised financial intermediaries is considered specifically with respect to the sustainability matter examined at the most granular level possible, linking it to cases that have been examined in detail;
- the opportunities were assessed considering the Group's ESG initiatives, polices and strategies. The Group has identified the following types of opportunities: (i) expand the product range and the customer portfolio; (ii) improve brand reputation and increase stakeholder trust; (iii) attract talent.

The internal analysis was carried out based on the assessment metrics set out in the ESRS and listed below:

- magnitude: this is the potential magnitude of the financial effects arising from risks or opportunities and is defined using a scale which ranges from "negligible" to "significant", respectively;
- likelihood of occurrence: this indicates how likely a financial risk or opportunity is to occur. It was defined using a scale which ranges from "very low" to "very high";
- time horizons of the analysis: the materiality assessment of the mapped risks and opportunities covers several time horizons in line with the prospective estimates and evolutions already produced within the Group (e.g. materiality

[46] "EFRAG IG 1: Materiality Assessment Implementation Guidance".

assessment, ICAAP, budget planning/strategic plan) and scenarios derived from external sources. It is carried out using a cautious approach. In particular, the following time horizons were considered:

- short-term scenario: the reference time horizon is 1 year (reference linked to budget/RAF);
- medium-term scenario: the reference time horizon is up to 5 years (reference linked to simulation/stress scenarios and business plan);
- long-term scenario: the reference time horizon is longer than 5 years (reference linked to medium to long-term planning, multi-year action lines).

Consolidating and sharing the list of sustainability matters material for the Group

The Group has a structured decision-making process designed to consolidate and verify material impacts, risks and opportunities.

A summary of the mapping of the identified IROs and the main evidence and outcomes obtained after performing the double materiality assessment, was prepared based on the analyses conducted.

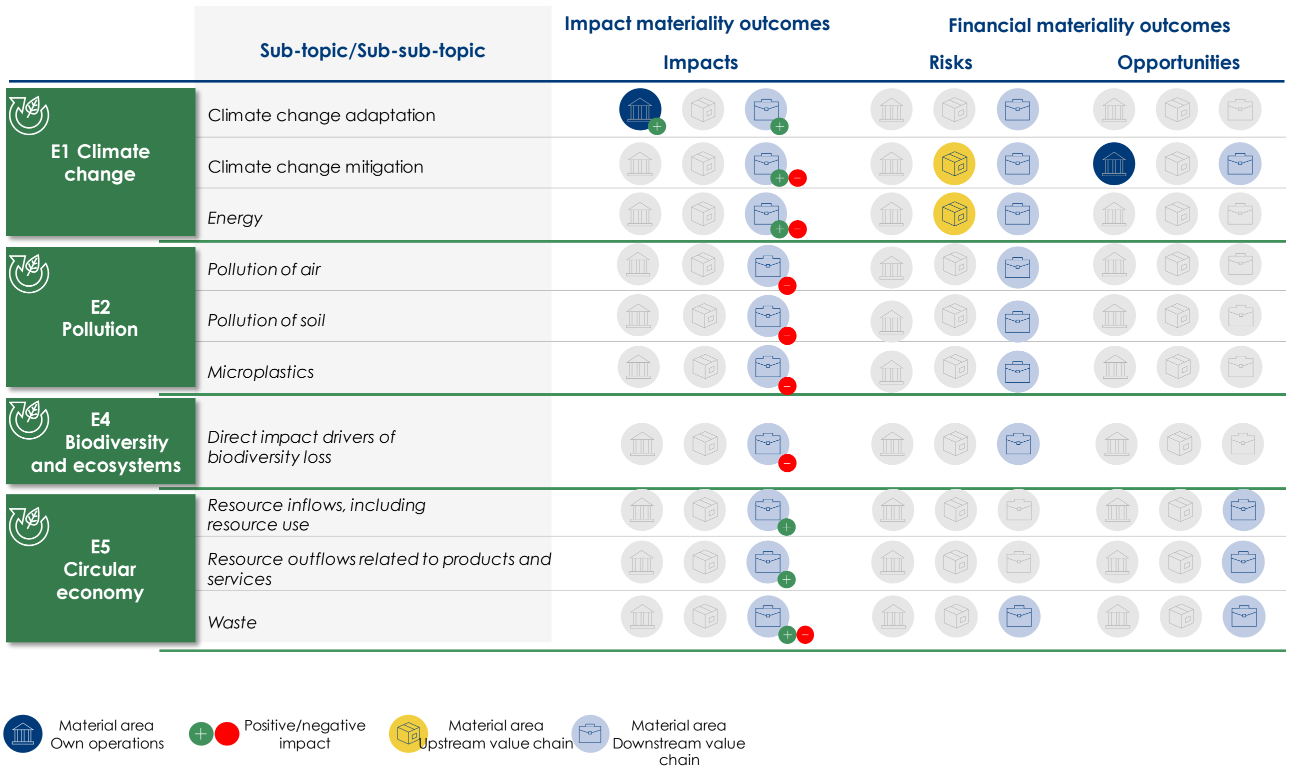
The IRO map was reviewed, shared and consolidated by the Group's internal offices and operating structures. Each of them reviewed the map to the extent of their remit as part of the above-mentioned stakeholder management process.

Finally, after completing the impact and financial materiality assessments which identify the environmental sustainability, social and governance aspects that are relevant to the Group, the list of material topics was discussed with the Steering Committee and the Risks and Sustainability Committee which assists the Board of Directors in its subsequent approval.

The CSRD directive defines the sustainability matters to be assessed (e.g. own workforce) and provides a granular degree of detail by defining sub-topics (e.g., working conditions), which delve into a specific aspect of it, and, where available, sub-sub-topics (e.g. adequate wages) that further detail an element of the sub-topic.

Based on the above assessments, all macro-topics (the “topics”) proposed by the ESRS were identified as material, except for the “Water and Marine Resources” one.
However, as discussed later on, not all sub-topics and sub-sub-topics were material.

The outcomes of the double materiality assessments are shown below, indicating the relevant boundaries.



S1 Own workforce	Secure employment		n.a.	n.a.		n.a.	n.a.		n.a.	n.a.

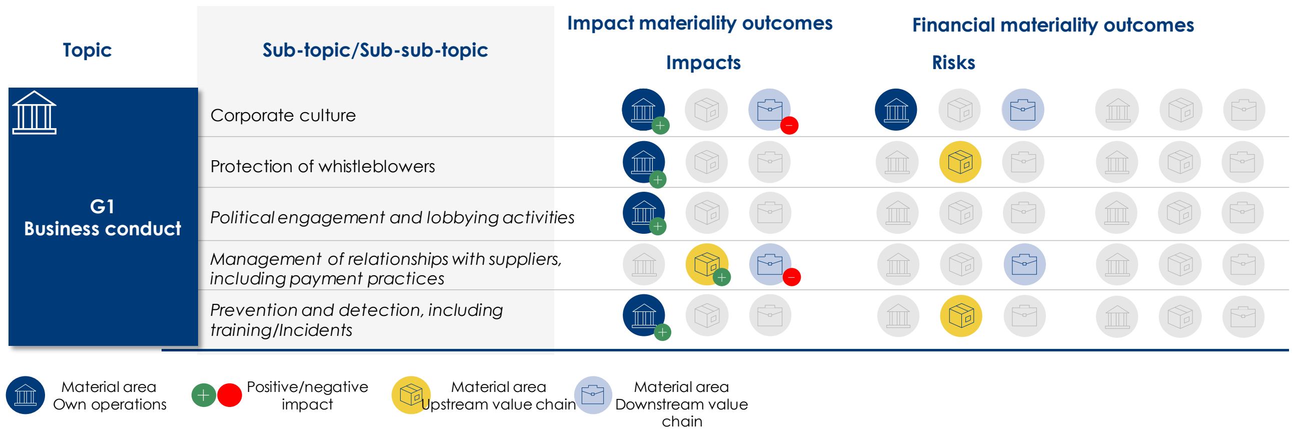
Material area Own operations · Positive/negative impact · Material area Upstream value chain · Material area Downstream value chain



In the subsequent chapters, the impacts, risks and opportunities that were identified and analysed and that led to the materiality assessment of the above topics and sub-topics are described for each topic. In brief, the analyses conducted confirmed the resilience of the Group's strategy and business model, also considering that the potential expected negative impacts associated with ESG risk factors are managed through appropriate actions (developed and/or planned) which are aimed at mitigating risks, capitalising on opportunities and supporting the Group's sustainability with a long-term perspective.

Governance structure

Role and composition of the administration, management and control bodies and of sustainability governance

The Parent Company Intesa Sanpaolo has adopted the "one-tier" management and control model, whereby management and control duties are performed, respectively, by the Board of Directors and the Management Control Committee set up within it, both appointed by the Shareholders' Meeting.

Detailed information on the corporate governance system and remuneration – including references to diversity in the Board of Directors – is provided in the "Report on Corporate Governance and Ownership Structures" and in the "Report on remuneration policy and compensation paid" available on the Bank's website.

Board of Directors: role and main characteristics

The Board of Directors is responsible for exercising the Company's guidance and strategic supervision duties and for resolving on all the most important corporate actions, with the power to undertake all transactions considered necessary, useful or appropriate in achieving the corporate purpose, of both an ordinary and extraordinary nature, and to adopt all decisions reserved to it by law, by the Articles of Association and by the regulations. In specific cases and in the manner provided for by law and the Articles of Association, the most significant management decisions are submitted to the Shareholders' Meeting for approval.

The Chair of the Board of Directors oversees the work of the Board, organises and directs the activity and performs all the tasks envisaged by the supervisory legislation and the Articles of Association. He/She has a non-executive role and does not carry out, not even de facto, management functions.

The Managing Director and CEO is also the General Manager and supervises the company's management to the extent of his/her assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board.

The Management Control Committee, appointed by the Shareholders' Meeting, is part of the Board of Directors and is made up of five independent Directors pursuant to the Articles of Association and exercises the control functions also as an internal control and audit committee (pursuant to Legislative Decree no. 39/2010).

The Board of Directors has established four internal committees, whose members are appointed by the Board itself from among its members, with assessment, advisory and propositional tasks:
- Nomination Committee;
- Remuneration Committee;
- Risks and Sustainability Committee;
- Committee for Transactions with Related Parties.

Composition of the Board of Directors

The Ordinary Shareholders' Meeting of 29 April 2022 set the number of members of the Board of Directors at 19, appointing directors for the three-year term of office on the basis of the lists submitted by shareholders.

All directors are non-executive, with the exception of the Managing Director and CEO (18 non-executive members and 1 executive member).

The Directors meet the suitability requirements required by the applicable legislation and the provisions of the Articles of Association. Specifically, all Directors meet the independence of mind requirement, as defined by banking legislation, and at

least two thirds of the directors meet the qualified independence requirement defined by the special legislation for banks and listed companies and Intesa Sanpaolo's Articles of Association (in this term of office, there are 14 independent directors, i.e. 74% of all members of the Board).
All Board Committees are composed of five non-executive Directors, the majority of whom are independent, with the exception of the Committee for Transactions with Related Parties, which is entirely composed of independent Directors. All the Committees are chaired by independent Directors.

Minority shareholders are adequately represented in the Board of Directors (5 members, representing 26% of the total, were appointed from the slate submitted by minority shareholders) and, in the current Board structure, they are present in all Board Committees. The Management Control Committee and the Committee for Transactions with Related Parties are also chaired by minority shareholders. No employees' representatives were appointed in the Board as permitted by the law and the Articles of Association.

Without prejudice to the legislation on public incompatibilities, no Director has held a position in the public administration similar to that held in administrative, management and control bodies in the two years prior to taking on the current mandate.

Competences and diversity

According to Intesa Sanpaolo's Articles of Association, the Board shall adopt the necessary measures to ensure that each Director, and the Board as a whole, have a continually adequate level of diversification, including in terms of experience, age, gender and international orientation, in addition to competence, reputation and fairness, independence of mind, and time commitment.

In the document on the qualitative and quantitative composition of the Board of Directors published on the Bank's website in March 2022, in view of the renewal of the Corporate Bodies which took place with the ordinary Shareholders' Meeting of 29 April 2022, the shareholders were asked to ensure that the Board of Directors had the broadest gender diversity with adequate professional skills, as well as a diversity of age brackets amongst Directors, in addition to a comprehensive level of knowledge and experience.

The less-represented gender in the Board of Directors must be reserved a share of at least two fifths of the total members, as established by currently applicable laws on the matter of equal access to the management and control bodies of listed companies. Furthermore, in the current structure of the Board, there are 8 women (accounting from 42% of Directors), i.e. the female ratio is 0.73[47]; furthermore, the female gender represented within all the Board Committees makes up 80% of the members of the Committee for Transactions with Related Parties and has the chairmanship of the Risks and Sustainability Committee and the Nomination Committee.
The Board of Directors assessed its composition as adequate, including in terms of diversity, and suitable for a properly balanced composition of the Board Committees.

Senior officers of the subsidiaries are nominated by the Board of Directors, which operates according to uniform policies and principles at Group level and in compliance with the regulations and best practices applicable to each subsidiary, with specific importance given to the level of diversity, including in terms of age, gender, seniority of service, geographical origin and international orientation. In establishing the composition of the Bodies, the most adequate and effective mix of personal and professional profiles is sought for each subsidiary in terms of its nature, the structure of its activities and the risks taken. To this end, any indications made by the Management Body of each subsidiary during the annual self-assessment process are taken into account.

With reference to the appropriateness and diversity of the professional profiles required, in accordance with the Articles of Association, at least four members shall be enrolled with the Register of Statutory Auditors and shall have practised as auditors or acted as members of a limited company control body for at least three years. In the current composition of the Board of Directors, 9 Directors (or 47%), including all members of the Management Control Committee, meet this requirement. In accordance with the Articles of Association, they shall also meet a professional qualification requirement which reflects the special relevance of the experience gained.

Furthermore, in the document on the quali/quantitative composition, the set of very good or distinctive expertise, knowledge and skills – with a very wide, medium-wide or limited distribution – considered appropriate to achieve the optimal overall qualitative composition of Intesa Sanpaolo's Board of Directors, was outlined in a "Skills Directory" for the 2022-2024 term of office.

Without prejudice to the general expertise required for all areas envisaged by the applicable legislation, the information provided refers to the very good/distinctive expertise declared by the individual Directors at the time they accepted the nomination:
- ability to read and interpret the financial statements data of a complex financial institution and financial and non-financial reports (95%);
- guidance and strategic planning (95%);
- knowledge of banking and financial products (89%);
- experience of governance and corporate governance structures and mechanisms (95%);
- knowledge of financial markets (100%);
- knowledge of banking and financial regulations (84%);
- knowledge of internal controls (74%);
- risk management skills (79%);
- knowledge of information & digital technology issues (16%);

[47] Number of women sitting on the BoD compared to the number of men.

- overall knowledge of the banking business and typical sector strategies and techniques for assessing and managing the risks associated with banking activities, appropriate to the complexity and significance of Intesa Sanpaolo (95%);
- knowledge of the socio-economic realities and market mechanisms of the countries in which the Bank operates and/or strategic goals (74%).

In particular, with respect to sustainability (ESG) knowledge, upon accepting their candidature, 84% of the Directors declared they had very good/distinctive expertise in sustainability matters and their integration into the Bank's strategies.

Several Directors also hold positions on the Boards of Directors of leading Italian universities as well as on the Boards of foundations and non-profit sector bodies active in the fields of art and culture, health, environment, support for poverty and the circular economy and support for nutrition policies. Furthermore, a Director, as well as Chair of the Risks and Sustainability Committee, holds the same position in another listed company.

Following the renewal of the Bodies in 2022, the characteristics declared by the Directors were assessed by the new Board as appropriately diversified and suitable to ensure adequate Board composition and a well-balanced composition of the Board Committees.

In view of the upcoming renewal of the Corporate Bodies in April 2025, the guidelines on the qualitative-quantitative composition of the Board deemed optimal, as approved by the Board in accordance with applicable legislation, are available on the Group website.

Board induction

The skills and expertise were subsequently strengthened and supplemented on the basis of training programmes as well as of intensive induction activities for both the new directors (onboarding) and the entire Board.

With the support of the Nomination Committee, the Board of Directors shall ensure the implementation of induction and training programmes for its members. In this context, following the Chair's indications, Board Members' participation in initiatives is promoted to enhance the degree of knowledge of the operating sectors of the Bank and of the Group companies, company dynamics and their development, the principles of sound risk management and the regulatory and self-regulatory environment of reference, and in formal and informal meetings, aimed at further review of strategic matters.

The induction plans are drawn up periodically following (i) the first assessment carried out after appointment and (ii) the self-assessment carried out annually by the Board of Directors. In any event, Directors are given the opportunity to make individual requests for training in a specific area, whenever they consider it necessary.

During the annual self-assessment, the Board, with the support of the Nomination Committee, expresses its opinion on the implementation and quality of the induction plan implemented, also to help refine the process and strengthen the quality of training.

In 2024, 11 induction sessions were held for Directors. The training sessions covered, inter alia, the following topics: ESG-related topics, risk data aggregation and risk reporting, the main changes introduced by Basel IV, the new EBA Guidelines on AML, Digital Finance – Regulation on markets in crypto-assets.

As a result of the self-assessment process carried out in 2024, the Board of Directors expressed extremely positive evaluations of the induction activities carried out during the year in terms of the size, level of detail and relevance of the topics covered.

To promote better understanding of the applicable corporate and regulatory framework and its development, a collection of governance documents, regulatory references, key correspondence with the Supervisory Authorities, accounting positions and any additional documentation conducive to the performance of their duties is also available to Board Members – and regularly updated – through a dedicated electronic platform.

The Board of Directors receives periodic reports from the corporate control functions on their activities, which illustrate the checks carried out, the results achieved, the weaknesses found and the proposals for action to be taken to eliminate them within the various company areas. These reports shall also cover anti-corruption and AML issues.

Sustainability governance

The main ESG responsibilities of Intesa Sanpaolo Bodies and Structures are specified below in line with the Articles of Association, the Bodies' regulations and the Group's internal regulations.

Board of Directors	The Board of Directors, with the support of the Risks and Sustainability Committee: • defines and approves sustainability (ESG) strategies and policies, including the social and cultural responsibility model and combating climate change - taking into account the objectives of sound and sustainable value creation and distribution for all stakeholders; • defines and approves the risk objectives, incorporating sustainability-related risks (ESG) – in particular climate and environmental risks – in its risk appetite framework; • approves the results of the impact and financial materiality analysis that identifies those environmental sustainability, social and governance aspects that are material with regard to the impacts, risks and opportunities considered, consistent with applicable regulations; • approves the Consolidated Sustainability Statement, ensuring that it is prepared and published in accordance with the applicable regulations, after review by the Management Control Committee as well as any other significant report in this area; • examines the annual report submitted by the Manager responsible for preparing the company's financial reports on sustainability risk monitoring and the periodic reports submitted by the corporate control functions; • approves the updates to the Code of Ethics and the policy setting out Diversity, Equity & Inclusion principles. The Board of Directors' Regulations state that Directors have a duty to contribute to creating value for shareholders with the aim of delivering medium- and long-term sustainability, also taking into account the interests of other stakeholders relevant for the Company, in accordance with the principles of sound and prudent management and with the reference principles and values adopted by the Bank. In 2024, the Board of Directors met 21 times. Of these, 16 meetings also covered ESG matters.
Risks and Sustainability Committee	It supports the Board of Directors in the performance of all the above tasks, focusing, in particular, on: • the assessment and investigation of sustainability (ESG) matters related to the Bank's business operations; • the approval of the list of ESG-sensitive sectors relevant to the Group's financing activities; • the assessments and resolutions to be made in respect of the sustainability impact and financial materiality assessment, including for the purposes of approving the Consolidated Sustainability Statement. This analysis identifies the environmental sustainability, social and governance aspects that could be potentially relevant given the impacts, risks and opportunities considered, consistently with applicable regulations, as well as the related methodology. • checking the Group's positioning with respect to national and international sustainability best practices, specifically with respect to Intesa Sanpaolo's participation in the main sustainability indices. In 2024, the Risks and Sustainability Committee met 47 times. Of these, 23 meetings also covered ESG matters. The support that the Committee provided to the Board in exercising its strategic supervision functions on sustainability, as well as in setting and monitoring climate and environmental risk objectives, is cross-sectoral and was also ensured when examining the areas of governance and risk management, business model and strategic guidelines and the most significant transactions for risk management procedures. Specifically, the Committee monitored the progress of the activities necessary to prepare the Consolidated Sustainability Statement in accordance with applicable legislation, shared the ESG KPIs for the 2024 Budget and the sector-specific Targets under the Net Zero Banking Alliance, as well as the streamlining of the process to identify and monitor climate and environmental risks. The members of the Risks and Sustainability Committee must have the knowledge, skills and experience necessary to be able to fully understand and monitor the Bank's risk strategies and guidelines, including with respect to sustainability.
Management Control Committee	The Management Control Committee, • in liaison with the corporate functions responsible for the sustainability issues (ESG) and the Internal Auditing function, supervises the compliance with the principles and values contained in the Code of Ethics; • with respect to the Consolidated Sustainability Statement, supervises compliance with the provisions of Legislative Decree no. 125/2024 and reports on this in its annual report to the Shareholders' Meeting, and examines the Consolidated Sustainability Statement in exercising its supervisory functions, in advance of the Board of Directors' meeting; • examines the annual report submitted by the Manager responsible for preparing the company's financial reports on sustainability risk monitoring and the periodic reports submitted by the corporate control functions. Furthermore, the Committee carries out the duties covered by Legislative Decree no. 30/2019, acting as the Control and Audit Committee.
Managing Director and CEO	The Managing Director and CEO • governs sustainability performance; • exercises the power to submit proposals to the Board of Directors for the adoption of resolutions within its remit; • ensures the consistency of the risk management process with the risk appetite and the relevant risk governance policies; • is informed by the Manager responsible for preparing the Company's financial reports on an annual basis about the controls over the risk of sustainability reporting; • provides, jointly with the Manager responsible for preparing the Company's financial reports, the legally-required certifications about financial and sustainability information required by law.

The Internal governance structures involved in the management and control of ESG risks are shown below. They ensure the application of controls in compliance with regulatory requirements and in line with the Group's business operations and the context in which it operates.

Steering Committee	The Steering Committee, which plays a central role, assists the Managing Director and CEO and is a Group management body with a decision-making, reporting and consulting role, composed of the Managing Director and CEO, who chairs the committee, and the top management, including the heads of Governance Areas and Divisions. In the context of the Business Plan and Sustainability (ESG) Session, the Committee: • collaborates, taking into account the objectives of solid and sustainable creation and distribution of value for all stakeholders, in the definition of strategic guidelines and sustainability policies (ESG), including the model of social and cultural responsibility and the fight against climate change, which the Managing Director and CEO submits to the relevant Board Committees and the Board of Directors; • collaborates in identifying and updating potentially relevant environmental sustainability, social and governance matters in relation to the impacts, risks and opportunities considered, consistent with applicable regulations, as part of the impact and financial materiality assessment; • examines the Consolidated Sustainability Statement and any other significant report on sustainability matters, prior to its submission to the Board of Directors; • guides the consistency of technological development with the Group's ethical principles, particularly with specific reference to artificial intelligence/machine learning. The Committee meets at least on a quarterly basis in the context of the Business Plan and Sustainability (ESG) Session. In 2024, the Steering Committee met 26 times in the context of the Business Plan and Sustainability (ESG) Session, covering issues with ESG impacts. Specifically, these sessions provide quarterly monitoring of strategic initiatives related to the 2022-2025 Business Plan.
Group Control Coordination and Non-Financial Risks Committee	In the Operational and Reputational Risk session, the Group Control Coordination and Non-Financial Risks Committee examines the main ESG risk profiles, which are or could be reflected in the operational and reputational risk exposure. This session, chaired by the Chief Risk Officer, is attended by the heads of the Group's corporate control functions, the relevant Governance Areas and the Manager responsible for preparing the Company's financial reports.

Every quarter, the Steering Committee and the Group Control Coordination and Non-Financial Risks Committee report to the Board of Directors on their activities, enabling the Board to play an oversight role on the main issues covered.

The Governance Area of the Chief Financial Officer includes the responsibility for preparing the Consolidated Sustainability Statement, as well as monitoring and interpreting the development of relevant European and national legislation, as well as defining and subsequently updating the resulting methodological rules.
Set up in April 2024, the Governance Area of the Chief Sustainability Officer (the "CSO") reports to the Managing Director and CEO and its mission is to drive the Group's development strategies on sustainability.

The Governance Area of the CSO has the following main functions:
- guide the development and implementation of the Group's ESG strategy, also helping to identify specific actions and initiatives, and new business opportunities; collaborating on ESG reporting and promoting the dissemination of a culture of sustainability and innovation;
- play an active role in the development and promotion of the local areas and communities in which the Group operates, supporting non-profit organisations and promoting social inclusion initiatives and educational interventions;
- promote the innovation of businesses and territories as a key factor for sustainable development through applied research and support for start-ups, open innovation, the transition to the circular economy and the development of innovation ecosystems;
- promote the Group's historical, artistic, architectural, and archive assets to contribute to the civil and cultural growth of the local areas and communities it serves, ensuring their protection and appreciation.

The Governance Area of the CSO also includes that of the Chief Social Impact Officer (the "CSIO"), which directs, governs and implements social impact initiatives and projects, promotes the well-being and inclusion of people and the Community, and directs, coordinates and oversees initiatives to mitigate the direct environmental impacts generated by the Group.

The ESG Control Room (the "Control Room") was strengthened and reorganised in 2024 to support the performance of ESG-related activities by the Steering Committee. The Control Room is a collegiate managerial body with advisory, analysis and assessment powers. It provides the Steering Committee with specific support in the strategic proposition of ESG guidelines, policies and initiatives, the monitoring of goal achievement as well as the consideration of any actions that may be appropriate or necessary in order to achieve results.

The main functions of the ESG Control Room are listed below:
- support the Steering Committee in the Business Plan and Budget processes, in reviewing and assessing proposals about relevant ESG directions and initiatives at Group level, while assessing priorities, metrics and targets (KPIs);
- analyse policies, including the Group's social and cultural responsibility model to combat climate change;
- make assessments on proposals for the Group's ESG commitments and key business implications;
- make assessments and provide indications about proposals to join the main voluntary initiatives and the related plan of activities necessary to achieve the resulting objectives, monitoring the progress of activities and results. Furthermore, assess the main social initiatives at Group level;

- analyse the main ESG reports, including monitoring of initiatives, key ESG targets/goals (Plan and Budget KPIs), and identification of key elements prior to the preparation of ESG disclosure;
- analyse and comment, where necessary, on the integration of ESG criteria into equity investments and credit strategies;
- analyse the external context, sharing the results of ESG regulation monitoring activities and the analyses on the potential impacts of ESG trends, also with reference to other players;
- receive information on relevant requests received from Regulators or Authorities in the ESG area reported by the reference functions (Divisions and Governance Areas) and the related feedback if these involve the submission to the Bank's Bodies.

The heads of some of the Governance Areas/Divisions and, if necessary, depending on the matters addressed, the heads of other Government Areas/Divisions and/or those of other Group structures are permanent participants in the Control Room.
The Chair of the ESG Control Room reports whenever necessary and at least once a year, directly or through their delegates, to the Steering Committee on the assessments and activities carried out by the Control Room.

The ESG Control Room operates and discusses initiatives and relevant topics with the assistance of the following Panels:
- ESG Coordination Panel, launched in 2020 and formerly known as the ESG Control Room. Its main purpose is to share, update and monitor ESG activities and goals, with the collective participation of all Governance Areas and Business Divisions through Sustainability Managers;
- Sustainable Investments and Insurance Panel, launched in 2022. Its mission is to ensure comprehensive oversight of the ESG initiatives of the Wealth Management Divisions;
- Social Impact Panel, which will be launched in 2025. This panel will coordinate and steer the Social Impact area, in addition to examining, monitoring and discussing specifically related initiatives and topics.

The ESG Panels meet whenever necessary, with a minimum frequency ranging from every quarter to every six months. The Sustainability Managers and the representatives of the company structures involved in the topics addressed participate in the Panels.

The Control Room and the Panels operate with the assistance of the Sustainability Managers. They are appointed by the head of each Governance Area/Division usually from among their first reporting line, and, to the extent of their remit, monitor ESG matters with respect to the relevant Governance Area/Division, including any Group company that belongs to it.

The head of the CSO Governance Area chairs the ESG Control Room and the related Panels, except for the Social Impact Panel which is chaired by the head of the Chief Social Impact Officer Governance Area. The delegates of the CSO Governance Area coordinate the related activities with the ESG Control Room and the Panels.

The Chief Risk Officer (CRO) Governance Area defines, develops and updates the ESG risk management and assessment system. As part of the Risk Appetite Framework, and in view of the subsequent submission to the Corporate Bodies, a level of ESG (including climate change) and reputational risk tolerance is proposed, defining specific exposure limits, risk indicators, and actions to be monitored and updated. The Board of Directors approves the updates to the Risk Appetite Framework.

The CRO Governance Area also heads climate risk identification, assessment and management processes.
Finally, the CRO Governance Area includes a specific function which periodically reports on the overall status of the ISP Group's risks via a "Tableau de Bord of Risks". The latter document includes a section about reputational and ESG risks in order to monitor compliance with the risk appetite limits and informs top management and the competent department structures about its performance.

As shown by the ESG responsibilities of administrative bodies described earlier, sustainability IROs are taken into account both when defining and monitoring the corporate strategy and in the context of risk management processes. With respect to strategic assessment elements, in 2024, the Board of Directors approved the definition of new sector targets[48], confirming the Group's commitment to climate transition, and promoted the definition of new operational tools to support communities in order to strengthen the Intesa Sanpaolo Group's positioning in terms of social responsibility. With respect to compliance and risk management, the Board of Directors examined and approved the most relevant internal legislation on:
- Risk Appetite Framework;
- governance of reputational risks;
- principles of corporate conduct;
- principles of diversity, equity and inclusion.

Material sustainability IROs are regularly discussed by the Board of Directors and the Risks and Sustainability Committee during the year and are brought to the Bodies' attention by various reporting structures (and any assisting structures, where necessary) according to the relevant topic. In particular, in 2024, the following structures reported on sustainability issues:
- the Chief Sustainability Officer (CSO) Governance Area;
- the Chief Financial Officer (CFO) Governance Area;
- the Chief Risk Officer (CRO) Governance Area;
- the Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area.

The main sustainability IROs discussed during the meetings held in 2024 by the Board of Directors and the Committees in charge of ESG issues are as follows:
- governance of reputational risks;
- climate-related and environmental risks;

[48] For additional information on the Group's additional sector targets, reference should be made to the Sectoral Plan section in ESRS E1 – Climate Change.

- definition of targets for the progressive reduction of indirect greenhouse gas emissions in line with the commitments made as a result of joining private initiatives (e.g. the Net Zero Banking Alliance);
- promotion of an appropriate corporate culture and of the principles of social and environmental responsibility;
- diversity, equity and inclusion;
- health and safety of workers;
- support to communities and enhancement of local areas.

This includes control activities over the Group's ESG performance, by monitoring the results of the main sustainability KPIs and the achievement of the ESG targets set out in the Business Plan. This information was submitted to the Risks and Sustainability Committee for assessment in the first quarter of the year.

Incentive systems linked to sustainability factors

The Managing Director and CEO is the only executive member of the Board of Directors and, therefore, is the only beneficiary of an annual Incentive System and a long-term Incentive Plan for the role of General Manager. These systems also include sustainability-related metrics.

Structure of the annual incentive system

The annual Incentive System[49] is formalised through a Performance Scorecard with both financial and non-financial KPIs. Specifically, quantitative KPIs (financial and non-financial) are clustered within 4 drivers (Growth, Profitability, Productivity and Cost of Risk/Sustainability), while the (non-financial) qualitative KPIs are divided into strategic actions or projects that represent the enabling factors for the achievement of the financial KPIs or contribute to the achievement of the Plan objectives. The latter objectives are usually reported by identifying ex-ante drivers that guide the subsequent assessment. With respect to non-financial quantitative KPIs, similarly to the previous years, the Group’s Environmental, Social and Governance transversal KPI was assigned in 2024.
Each KPI is assigned a weight equal to at least 10% to ensure the significance of the objective, and no more than 30% to guarantee appropriate weighting of the numerous objectives. The accrual period is annual.
The total bonus due to the Managing Director and CEO is allocated based on the assessment of the results of the individual performance scorecard, according to a deterministic calculation.
In any case, it is subject to verification of the gateway conditions and the absence of individual compliance breaches, as well as subject to corrective mechanisms.
The premium is paid partly in cash and partly in Intesa Sanpaolo shares and is disbursed over a five-year deferral horizon.
Each deferred portion is subject to a mechanism of ex-post correction (malus conditions).
Furthermore, in the five years following the payment of the individual instalment (up-front or deferred) of variable remuneration, the company reserves the right to activate claw-back mechanisms.

Structure of the Long-Term Incentive Plan

The CEO is also a beneficiary of the Long-Term Incentive Plan (PSP), which is also awarded to the remaining Management (around 3,100 beneficiaries). The Plan is based on shares awarded upon the achievement of specific performance targets that are consistent with the Business Plan (i.e. PON/RWA, Cost/Income, NPL ratio and relative TSR) and whose levels correspond to those set in the Plan itself.
There are also two bonus de-multipliers:

- Composite ESG KPI, consisting of a sub-KPI for each of the three ESG factors (Environmental, Social and Governance) whose target level is defined in the 2022-2025 Business Plan. This acts as a de-multiplier by reducing the number of possible shares accrued by 10%-20% depending on the degree of any failure to achieve the 2022-2025 Business Plan targets;
- Capital target: measures the maintenance of CET 1 levels above the target defined in the Group's RAF over the Plan's time horizon. It acts as a de-multiplier by reducing the number of shares vesting at the end of the Plan by 10% for each year of breach (up to a maximum reduction of 40% over the entire Accrual Period).

The Plan is subject to verification of the gateway conditions and the absence of individual compliance breaches. 60% of any bonus earned is deferred over a five-year horizon and, depending on the impact on fixed remuneration, 60%-55% is allocated in shares subject to a retention period (the remainder is allocated in shares not subject to a retention period). Malus and clawback conditions also apply.

The ESG Component in CEO Incentive Plans (Annual and Long-Term)

With regard to the variable remuneration of the Managing Director and CEO, the ESG component is of central importance and is included both in the annual Incentive Plan through the provision of a specific KPI, and in the long-term Performance Share Plan in which an ESG composite KPI is envisaged that acts as a de-multiplier of any bonus earned.
Within the annual Incentive System, the ESG KPI – present since 2021 and representing an evolution from the previous cross-cutting "Diversity & Inclusion" KPI – has been assigned to the CEO's Performance Scorecard, consistent with the Bank's growing commitment to social, cultural and environmental sustainability and the goal of creating long-term value for its people, customers, community and environment as well as in line with the increasing focus on these issues by Regulators, Proxy Advisors, Shareholders and Group Stakeholders. Moreover, a cross-Group ESG KPI is also assigned to about 3,000 Group managers in Italy abroad with a weight of 10% or 15%.

---

[49] For additional information about incentive systems, reference should be made to the Report on remuneration policy and compensation paid, available on the Group’s website.

The ESG KPI of the CEO (with weight of 15%) is assessed on the basis of specific drivers:
- presence of Intesa Sanpaolo in the sustainability indices of specialist companies (no. of presences);
- promotion of an inclusive work environment through the identification and implementation of targeted management actions, with a particular focus on meeting the commitments in terms of gender equity assigned to each Division/Governance Area: i) in annual hires; and ii) in the pool of candidates for first appointment to managerial roles;
- group ESG initiatives:
  - support for the green economy and circular economy: i) development of ESG commitments; ii) setting of targets for reducing financed emissions in additional priority sectors; iii) reduction of exposures in ESG risk sectors; iv) and completion of the ESG Credit Framework;
  - growth in Sustainable Investments through the impact of ESG investments on total AuM (%);
  - youth orientation and employability initiatives.

In the PSP long-term incentive plan there is a composite KPI that, in an effort to promote the pursuit of sustainability, acts as a de-multiplier as mentioned in the previous section. The KPI consists of a sub-KPI identified in the Business Plan for each of the 3 factors comprising ESG, namely:
- Environmental: new loans for the green/circular economy and the ecological transition with a special focus on supporting the Corporate/SME transition (weight 40%);
- Social: number of people who successfully completed the re-skilling and up-skilling programmes with reallocation in new job roles in the case of the former (weight 40%);
- Governance: percentage of women in new appointments to senior positions, i.e. -1 and -2 organisational levels below the CEO (weight 20%).

Moreover, note that the same ESG composite KPI is included in the LECOIP 3.0 Plan, the long-term incentive plan dedicated to Professionals in Italy, which 45,629 people have signed on to (about 63% of those entitled) and which is based on Certificates having Intesa Sanpaolo shares as the underlying asset. Specifically, in this case, the KPI recognises a minimum return (of 4%) on the capital initially allocated upon the Group's achievement of that KPI. If the indicator is not achieved, the amount that would have been paid to employees will be invested by the Bank in ESG projects that contribute to the achievement of the ESG objectives concerned.

The annual Incentive System and the long-term Performance Share Plan are approved by the Shareholders' Meeting, upon proposal of the Board of Directors supported by the Remuneration Committee. Moreover, the Risks and Sustainability Committee, without prejudice to the prerogatives of the Remuneration Committee, supports the Board of Directors and examines them in order to check their connection with current and prospective risks.

Risk management and internal controls of sustainability reporting

The Intesa Sanpaolo Group adopts an internal control system based on three levels, in line with the legal and regulatory provisions in force. The model has the following types of control:
- Level I: line controls which are aimed at ensuring proper performance of operations (for example, hierarchical, systematic and sample-based controls) and which, to the extent possible, are incorporated in the IT procedures. They are carried out by the same operating and business structures, including through units dedicated exclusively to control duties reporting to the heads of the same structures or performed as part of the back office.
- Level II: consists of risk and compliance controls to ensure, inter alia: (i) the correct implementation of the risk management process, (ii) observance of the operating limits assigned to the various functions and (iii) compliance of company operations with the rules, including self-governance rules. The functions assigned to such controls are separate from the ones in charge of production and contribute to the definition of the risk governance policies and the risk management process. In the Intesa Sanpaolo Group, Level II includes the following Parent Company structures and the equivalent local units of the Group companies, where established:
  - Chief Compliance Officer Governance Area, which is assigned the tasks and responsibilities of the “regulatory compliance function (compliance)”;
  - Chief Risk Officer Governance Area, which is assigned the tasks and responsibilities of the “risk control function (risk management)”.
- Level III: internal audit controls to identify breaches of procedures and regulations, as well as to periodically assess the completeness, adequacy, functionality (in terms of efficiency and effectiveness) and reliability of the internal control system and the IT system at Group level, at scheduled deadlines in relation to the nature and intensity of the risks.

The Group has therefore put in place a structured system of controls and responsibilities to ensure the compliance of the Consolidated Sustainability Statement with the applicable legislation from a risk-based perspective, aimed at managing the risks associated with reporting sustainability information to third parties.
The structures involved in the control system perform specific activities, which are detailed in internal Group documents and aimed at ensuring the quality and compliance of the Consolidated Sustainability Statement throughout all stages of the process. These control activities are directly related to the main types of risks identified and represent forms of risk mitigation. Specifically:
- when defining the work plan and the structure of the Statement, the controls focus on the analysis and interpretation of the relevant legislation, the correct definition of the scope of consolidation and the verification that the double materiality analysis is complete and accurate, with a clear identification of its results;
- during the collection of information and the preparation of contributions, control activities include the verification of data sources and the loading of information through formal systems and procedures aimed at verifying the completeness, accuracy, consistency and comprehensiveness of such information by the respective contributors and validators;
- finally, in the aggregation and finalisation phase of the Consolidated Sustainability Statement, the outcomes of the contribution and validation process are verified, the correctness of the metrics is checked and the information on policies, actions and targets is harmonised, ensuring that the final document meets regulatory and quality requirements.

Moreover, the Manager responsible for preparing the Company's financial reports performs the verification and monitoring, through the structures reporting to him/her, designed to ensure that the Consolidated Sustainability Statement included in the report on operations has been prepared in compliance with the reporting standards adopted in accordance with the CSRD.

This integrated system ensures an effective, transparent management of Consolidated Sustainability Statement that is aligned with regulatory requirements and quality standards defined by the Group.
Risk assessment and internal controls relating to sustainability reporting have therefore been integrated within the functions identified by the new internal regulatory framework defined by the ISP Group.

The results of the control and risk assessment activities will subsequently be communicated to the administrative, management and control bodies, as envisaged in the aforementioned framework.

Indeed, the Manager responsible for preparing the Company's financial reports brings to the Board of Directors' attention an annual report on the activities to monitor the sustainability statement risk, which is included in the "Report on the internal control system for the financial reporting process", while the corporate control functions submit their own periodic reports.

Environmental information

ESRS E1 – Climate change

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which takes into account the Group's impacts with respect to external and internal stakeholders (people and the environment) in the short, medium or long term from an inside-out perspective;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E1 – Climate Change were identified taking into consideration the specific features of the Group. Specifically, the impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings in relation to climate change (for instance, "Rules for the Environmental and Energy Policy" and "Group Guidelines on ESG Risk Governance", 2022-2025 Business Plan, internal documents such as the "Business Environment Scan" and materiality analysis of climate risks), the controls defined and put in place by the Group to combat climate change, as well as an assessment of the transitional and physical risks the Group could be exposed to.

The analyses were conducted by assessing the materiality of the impacts, risks and opportunities identified for each of the three sub-topics of ESRS E1, namely: "Climate change mitigation", "Climate change adaptation" and "Energy", with reference to all types of energy production and consumption[50]. The standard also requires the identification of climate-related issues within these sub-topics that may generate physical climate risks for the undertaking, and transition risks resulting from the implementation of climate change adaptation measures.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units affected and external stakeholders (e.g. experts on communities or the environment) and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers connected with, among other things, the adoption of internal policies and the promotion of initiatives able to guarantee the achievement of the objectives of climate neutrality and energy efficiency defined;
- upstream value chain: the impact assessment involved ESG questionnaires administered to suppliers and an analysis of their feedback;
- downstream value chain: an analysis was conducted on the indirect impacts conveyed through exposures on the Group's portfolios to counterparties belonging to sectors that generate high greenhouse gas emissions and are considered to be highly exposed to physical and transitional risks related to climate change. Furthermore, in order to assess the impacts associated with the downstream value chain, dedicated initiatives that the Group has signed on to (e.g. UN Global Compact, Net Zero Banking Alliance - NZBA) were analysed, as well as internal financing and investment policies that provide for the selection of undertakings that have defined and implemented climate change actions (e.g. transition plan).

The analysis revealed the following impact materiality outcomes with respect to the above scopes:

- own operations: as a result of the adoption of internal policies and corporate strategies aimed at reducing the impact of climate change by the Group's operations, material positive impacts were identified with respect to climate change adaptation;
- upstream value chain: considering the Group's operations and type of business, which focuses mainly on financial activities and services, no material impacts of the Group conveyed through the supply chain emerged;
- downstream value chain: considering the definition of criteria and strategies that positively contribute to the mitigation of and adaptation to climate change of counterparts, as well as to the reduction of energy consumption and indirect emissions thereof, material positive impacts on all sub-topics were identified. At the same time, given the presence within the Group's portfolios of exposures to counterparties belonging to sectors that may be negatively impacted by this issue, material negative impacts were identified.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes previously identified.

With regard to physical climate-related risks, the Group has adopted a structured process for identification and assessment, following the operational steps described below:

- identification of material climate hazards, which involves the analysis of potential climate-related physical risks, distinguishing between acute physical risks (e.g. heat waves, storms, floods, forest fires) and chronic risks (e.g. sea level

[50] "ESRS E1 Delegated Act 2023 5303 - Annex 1": "climate change mitigation" refers to the undertaking's efforts for the overall process of limiting the global average temperature increase to 1.5°C above pre-industrial levels, as laid down in the Paris Agreement. "Climate change adaptation" refers to the process of adapting an undertaking to actual and expected climate change.

rise, changes in mean temperatures, changes in precipitation patterns), and the use of high-emission climate scenarios (e.g. IPCC SSP5-8.5) and regional projections to identify and predict material climate events;
- identification of supporting tools and climate data, which consists of the application of geospatial analysis tools and climate models to ensure that risk identification is based on reliable data and recognised methods as further described below;
- for own operations: exposure and sensitivity assessment, which involves analysing assets and operations to assess the degree of exposure and sensitivity to identified climate hazards. This analysis takes into account the likelihood, potential magnitude and duration of risk events, as well as the specific geographical coordinates of the Group's operating sites;
- value chain analysis, which includes the main suppliers and counterparties the Group is exposed to and invests in, assessing the vulnerability of critical assets and logistics infrastructure in order to map physical risks throughout the supply chain;
- integration of climate and environmental risk assessments into risk management systems to enable the identification of priorities and the development of mitigation and adaptation strategies to reduce overall vulnerability.

Various methods of analysis were used to evaluate the portfolios, specifically:
- scenario-based climate projections of the Network for Greening the Financial System (NGFS) were used;
- for sovereign bond exposures only, on the other hand, the estimation methods are based on the projection of interest rates under different climate scenarios from which potential shocks to sovereign bond yield curves are derived. The analyses were conducted with the aim of assessing the effects of climate change and the decarbonisation of economies on sovereign bond yields in various scenarios.

In view of the aforementioned process, the following analyses were carried out with respect to physical risk on the three perimeters identified in the materiality analysis, specifically with reference to:
- own operations: the operational risk and the reputational risk the Group would be exposed to in the event of an interruption of operations due to the occurrence of extreme weather events were assessed;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the matter in question (such as a policy to protect company assets, updates to the Business Continuity and Disaster Recovery plans);
- downstream value chain: the assessment focused on credit risk, market risk, liquidity risk and strategic risk connected with the matter in question. This would also give rise to reputational risk.

Note that the analyses conducted involved multiple time horizons (i.e. short, medium and long term[51]) and that, based on the time period under review, internal documentation (e.g. the Group's Risk Appetite Framework), business plan projections and simulations and projections used for the purposes of analysing the risks the Group is subject to were considered.

Based on the analyses conducted, for the purposes of financial materiality, with reference to the downstream value chain, credit risk and reputational risk emerged as material risks over the medium to long-term time horizons due to exposure to sectors associated with counterparties potentially subject to a high risk of being impacted by physical risk events.

With reference to transition risk, the following assessments were made for the different scopes of reference identified:
- own operations: an assessment was made of operational risk and reputational risk due to possible initiatives that might not adequately mitigate climate change with respect to the communicated statements and objectives;
- upstream value chain: the operational risk and the associated reputational risk the Group is potentially exposed to were assessed in the event that it uses suppliers that adopt less structured controls with respect to the sustainability issue under investigation (e.g. with reference to the management of its own greenhouse gas emissions);
- downstream value chain: credit risk, market risk and liquidity risk potentially arising from exposure to transition risk factors were assessed. This would also give rise to reputational risk.

With regard to the loan portfolio, the identification of transition risks and the assessment of exposure to these risks takes into account climate projections based on the NGFS climate scenarios consistent with the Paris Agreement. On the other hand, with regard to sovereign bond exposures, the Group conducted analyses to assess the impact of climate change and the decarbonisation of economies on sovereign bond yields. The estimation methodology is based on the NGFS framework and in particular on the projection of interest rates under different climate scenarios from which potential shocks to sovereign bond yield curves are derived.

Following the analysis carried out, for the purpose of financial materiality, with reference to the downstream value chain perimeter, credit risk, market risk and reputational risk emerged as material in the medium to long term due to exposure to sectors associated with counterparties potentially subject to high transition risk. Reputational risk is also material as far as the upstream value chain is concerned, given the existence of counterparties with a less evolved approach to transition risk management.

Finally, with regard to the sub-topic of energy, the risk analyses focused on:
- upstream value chain: the assessment focused on potential exposures to reputational risk in the case of Group suppliers that adopt less structured controls with respect to the issue of sustainability studied (e.g. energy efficiency improvements);
- downstream value chain: mainly credit risk, market risk and liquidity risk potentially arising from impacts on the value of the production assets of the financed counterparties due to inefficiencies in the management of energy supplies were considered. This would also give rise to reputational risk.

As a result of the analysis carried out with respect to the topic of energy, for the purpose of financial materiality reputational risk emerged as material for the upstream value chain, while for the downstream value chain, considering the exposure to sectors associated with counterparties that are potentially risky in this respect, credit risk and reputational risk emerged as material.

[51] As already outlined in chapter "ESRS 2 - General disclosures, Drafting criteria and methodology, Time horizons".

Finally, for the purposes of assessing financial materiality, opportunities were analysed that have or can be expected to have a material financial influence on the Group.
With regard to climate change adaptation, opportunities were identified exclusively on the downstream value chain, which were found to be immaterial based on the analysis of internal documentation and discussions with the relevant internal structures.

With regard to opportunities related to transition risk factors in the context of climate change mitigation, the following analyses were conducted with respect to the following perimeters:

- own operations: on the basis of interviews with the competent organisational units, the assessment looked at current and/or planned Group initiatives in support of climate change mitigation;
- downstream value chain: opportunities were assessed in relation to the possibility of expanding the product range aligned with environmental sustainability objectives. This analysis was also carried out taking into account the possible presence of indicators related to disbursed or planned funding aimed at climate change mitigation.

Downstream of the analyses conducted, from a financial materiality perspective, the aforementioned opportunities are material considering the numerous initiatives already undertaken by the Group to combat climate change with respect to the perimeter of its own operations (e.g. actions aimed at reducing its own emissions as part of the Group's Own Emissions Plan) and the downstream value chain (e.g. the Group's strong commitment to aligning with the criteria defined by the European Taxonomy Regulation) and the objectives defined by the Group in this regard from a commercial perspective, in addition to the strategic priority that the Group has long since fully integrated into its overall business approach.

As far as opportunities in the energy sector are concerned, the analyses focused on the scope of own operations with a view to improving brand reputation/positioning resulting from the definition of energy efficiency targets. Based on the analysis of internal documentation and discussions with relevant internal structures, the opportunity identified, net of those related in a broader sense to climate change mitigation (represented above), is not relevant to financial materiality.

Resilience Assessment

Using an in-depth analysis of external factors such as global sustainability trends, changes in public policy and evolving stakeholder expectations, banks can accurately identify risks and opportunities that influence their operations and long-term strategy. In this context, the Group used the “Business Environment Scan” (BES), an essential tool to strengthen the capacity of financial institutions to adapt to a changing environment characterised by regulatory, economic and environmental changes.

This approach allows economic, social and environmental considerations to be integrated into strategic planning, ensuring a greater ability to adapt to unforeseen events such as market downturns or regulatory pressures. In the banking context, the BES is particularly relevant for assessing interactions with the credit market, climate risk and the transparency requirements of the Group's stakeholders.

For this reason, the Intesa Sanpaolo Group has identified a number of variables considered within the “Business Environment Scan” to analyse climate risk issues (transitional and physical):

- macroeconomic variables: identification of the most material variables impacting each business area, description of the reasons for their materiality, and assessment of the expected impacts based on the deltas between the projections of the variables (based on the Oxford Economics and Central Banks and Supervisors Network for Greening the Financial System databases) under the three climate scenarios considered: i) Hot House World, ii) Orderly Transition, iii) Disorderly Transition[52];
- competitive landscape: description of the commercial offers and initiatives related to climate and environment announced by the Intesa Sanpaolo Group's Italian and international peers, and assessment of the expected impacts based on peer positioning;
- regulatory trends: presentation of the main climate and environmental regulatory trends affecting each business area, both in terms of existing regulations and future legislation currently under discussion, and assessment of the expected impact of regulation also with respect to the implications for both banks and bank customers;
- technology trends: identification of key climate and environmental technology trends affecting each business area and assessment of their expected impact based on the potential of the trend to revolutionise business area operations to support customers' green transition;
- social/demographic trends: presentation of the main social and demographic trends influencing each business area and assessment of the expected impact based on an understanding of the changing needs, preferences and behaviour of the population;
- transition risk: assessment of the quantitative impact of the process of upgrading to a low-carbon and more environmentally sustainable economy on the Intesa Sanpaolo Group's exposures;
- physical risk: assessment of the quantitative impact of climate change on the Group's exposures, including more frequent extreme weather events and gradual changes in climate.

For each variable analysed, the potential impact was assessed and the time horizon in which these effects could materialise is noted. The combined impacts of all dimensions provide an explicit judgement of how climate and environment-related risks and opportunities might affect the Intesa Sanpaolo Group's business model in the short, medium and long term.

[52] Hot House World: assumes implementation of only current climate policies, resulting in high physical risks due to significant global warming; Orderly Transition: envisages the early and gradual adoption of stringent climate policies to limit warming to 1.5°C and achieve zero net CO_2 by 2050; Disorderly Transition: characterised by delayed or divergent policies across sectors and countries, with emissions peaking in 2030 and more drastic measures to limit warming below 2°C.

The analysis covered 14 company areas:
1. Banca dei Territori (BdT) – Italy – Residential Real Estate (RRE);
2. Banca dei Territori (BdT) – Italy – SMEs (Small and medium-sized enterprises);
3. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Manufacturing;
4. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Wholesale & Retail Trade;
5. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Construction;
6. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Real Estate Activities;
7. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Oil & Gas;
8. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Power Generation
9. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Automotive;
10. International Banks Division (IBD);
11. Private Banking;
12. Asset Management;
13. Insurance;
14. Corporate Centre.[53]

In the case of the Corporate Centre, the area was integrated to also consider its own operations. In this context, the activities of the business area responsible for Treasury and Asset Liabilities Management (ALM) were analysed.

The exercise was conducted in 2024 as part of the "Business Environment Scan".

The initial phase of the resilience analysis involved the definition of the BES framework, which considers short, medium and long-term time horizons, outlining the business landscape the Group operates in from a climate and environmental perspective.

In this context, time horizons of a managerial and strategic nature aligned with the time horizon of the Business Plan were used for the "Business Environment Scan". Specifically:
- short term (ends in 2027): a time interval that includes the following three years and aligns with the Group's internal adequacy processes, such as the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP);
- medium term (ends in 2030): time interval extending from year 4 to year 6 from the time of the analysis. It considers evolving factors that complement the Business Plan and establishes guidelines for the development of the next plan. By analysing the medium term, the Group can adapt its strategies and initiatives to address emerging trends, market dynamics and stakeholder expectations;
- long term (ends in 2050): time span from year 7 to year 26. This interval is particularly important considering the Group's commitment to achieving Net Zero emissions targets by 2050. Considering the long term, the Group can develop sustainable strategies and initiatives that contribute to a low-carbon future and align with global sustainability goals.

The results of the analysis are shown in terms of expected qualitative impacts (classified as "low", "medium", "high") for each variable, within each business area and over the three time horizons defined.

Overall, out of the 14 business areas indicated above, six relevant areas have all variables rated as "medium" or "high" impact, and at least one variable rated as "high" impact. Specifically:
- BdT – Italy – Residential Real Estate;
- BdT – Italy – SMEs;
- IMI C&IB – Large corporate – Oil & Gas;
- IMI C&IB – Large corporate – Power Generation;
- IMI C&IB – Large corporate – Automotive;
- International Banks Division.

The impact analysis carried out on the variables identified had the following outcome: 30% of the "medium" or "high" impacts are expected to occur in the short term, 60% in the medium term and 10% in the long term.

More details are given below for each of the dimensions analysed:
- macroeconomic variables: impacts are expected in the medium term (with the exception of energy prices, which affect the Oil&Gas and Power Generation sectors in both the short and long term);
- competitive landscape: impacts are expected in the short to medium term, also driven by the development of the market with regard to products and services dedicated to climate;
- regulatory trends: significant impacts were identified for almost all the company areas under analysis (for 13 of the 14 areas analysed and mentioned above, this trend was assessed as having a "high" impact in the short to medium term). These present both opportunities and potential risks;
- technology trends: impacts are expected mainly in the medium term, highlighting opportunities to support the green transition of bank customers;
- social/demographic trends: in general, more limited impacts are expected, with different time horizons depending on the area, e.g. increasing customer demand for sustainable products and investments and greater awareness of the consequences of climate risks.

[53] In addition to credit risk, the "Corporate Centre", with functions of direction, coordination and oversight of the entire Group, is attributed with the risks typical of this Business Unit (namely those arising from equity investments), the risks pertaining to the exposures in default, the Banking Book interest rate and exchange rate risk, as well as the risks arising from the management of the Parent Company's FVOCI (Fair Value through Other Comprehensive Income) portfolio.

In addition to the analysis focusing on qualitative assessment, an analysis of transition risk and physical risk drivers was performed, quantifying the impact of these drivers on the Group's portfolios, considering their composition and specific characteristics. This analysis shows that:

- in terms of transition risk, the Intesa Sanpaolo Group's portfolios, although not significantly exposed in the short term, have an increasing exposure over longer time horizons. Small or medium-sized enterprises (SMEs) and large companies are increasingly exposed to transition risk, particularly in the Power Generation and Oil & Gas sectors, while residential real estate is exposed to medium- and long-term impacts due to emission reduction regulations;
- in terms of physical risk, flood events are expected to become a significant problem for residential properties in the long term. For SMEs, the exposure to physical risk is moderate, with drought and forest fire events as the main risk drivers, while drought, forest fire and flood events pose a significant risk for large companies in various sectors over the long term.

Furthermore, in order to effectively address the evolution of impacts in the different time horizons and dimensions analysed, the Group has defined a set of follow-up actions, some of which have already been implemented, taking into account the results of the BES. These actions aim to mitigate risks, exploit opportunities and ensure the long-term sustainability of the Group in the face of climate and environmental challenges. Key initiatives include, for example:

- active and constant monitoring of national and international ESG legislation;
- participation in working groups and initiatives related to climate change;
- assessment of climate and ESG-related risks during credit processes and integration of ESG risks into creditworthiness assessments;
- ESG sector mapping, to trace ESG issues back to the NACE/ATECO sectors used by the Group;
- sectoral target setting initiatives (in the context of the NZBA) to reduce the CO2 emissions financed, implementing and monitoring a transition plan related to the sectors considered;
- implementation and monitoring of the “Own Emissions Plan”;
- adoption of the business continuity plan and actions to prevent/mitigate physical damage to the Group's physical facilities;
- actions to increase energy efficiency.

In this context, by recognising the impacts, implementing the actions defined above and constantly monitoring the company’s context, the Intesa Sanpaolo Group can continue to manage climate and environmental risks while pursuing opportunities for sustainable growth.

Integration of sustainability performance into incentive systems

The Intesa Sanpaolo Group is aware that it also has a significant social and environmental impact in the settings in which it conducts its business, choosing to act not only in the pursuit of profit, but also with the aim of creating long-term value for the Group, our people, customers, the community and the environment.

With particular regard to climate aspects, these contribute to the determination of the variable remuneration of the Managing Director and CEO and the rest of the company workforce in the framework of both the Annual Incentive System and the Long-Term Incentive Plans.

With regard to the Managing Director and CEO, the 2024 Performance Scorecard of the Annual Incentive System includes a specific, detailed ESG KPI with a weight of 15%, while the "Performance Share Plan" (PSP) long-term incentive, based on shares awarded in the future against the achievement of specific performance targets, includes a composite KPI that, in an effort to promote the pursuit of sustainability, acts as a de-multiplier, reducing the number of shares that may be vested by 10%-20% depending on the degree of achievement. The composite KPI consists of a sub-KPI identified in the Business Plan for each of the three environmental, social and governance factors.

Failure to achieve the ESG composite KPI envisaged in the long-term Performance Share Plan entails the curtailment of any bonus that may have vested by 10%-20%.

For the Managing Director and CEO, the ESG KPI resulted in the vesting of 16% of the bonus for the 2024 annual Incentive System.

With regard to the Annual Incentive System, the driver of the ESG KPI assigned to the CEO and connected to the climate is the support for the green economy and circular economy assessed in terms of: i) development of ESG commitments; ii) setting of targets for reducing financed emissions in additional priority sectors; iii) reduction of exposures in ESG risk sectors; iv) and completion of the ESG Credit Framework. Also assessed is the development of sustainable investments in terms of ESG investments as a percentage of total AuM (%).

With regard to the PSP Long-Term Incentive Plan, the environmental component of the ESG composite KPI (which acts as a de-multiplier as mentioned in the previous paragraph) relates to the new credit for the green/circular economy and ecological transition with a particular focus on supporting the transition of corporate undertakings/SMEs (the latter having a weight of 40%).

For more details on the ESG KPI of the Annual Incentive System and the PSP see the section "The ESG Component in CEO Incentive Plans (Annual and Long-Term)" of the ESRS 2 Standard.

Strategies to counter climate change in own operations

Policies to mitigate and adapt to climate change

The Intesa Sanpaolo Group has developed and adopted a series of policies to monitor and address issues related to climate change and energy efficiency.

First, a Code of Ethics was adopted that promotes an efficient and conscious use of all resources, avoiding waste and always prioritising sustainable choices over time. Moreover, the document contains guidelines aimed at combating climate change, protecting nature and biodiversity and supporting the transition to a sustainable, green and circular economy.

Within the Group, the adoption of the principles of the “Code of Ethics” has enabled the development of several policies aimed at mitigating climate change impacts within the Group's own operations.

In this context, of note is the “Environmental and Energy Policy” (hereinafter referred to as the Policy), which applies the values of the “Code of Ethics” and which aims to minimise environmental impacts and ensure legislation compliance, in line with the Environmental Code (Legislative Decree 152/06) and in accordance with the Organisational, management and control model pursuant to Legislative Decree 231/01. The main objectives include combating climate change, managing ESG risks, preventing environmental impacts, efficient and responsible use of resources, and careful selection of suppliers with ethical, social and environmental requirements. In this context, this Policy enables the Group to comply with initiatives that promote principles of sustainability and social responsibility (e.g. UN Global Compact).

The most senior level accountable for the implementation of the policy is the Environmental Manager, in charge of the Intesa Sanpaolo Environment and Energy structure, whose mission is to direct, coordinate and oversee initiatives aimed at mitigating the direct environmental impacts generated by the Group's own operations, ensuring the monitoring of regulatory compliance for environmental protection and energy efficiency. The Environmental Manager delegates the specialised operational structures to monitor compliance risks, such as Real Estate Management and Group Technology.

Furthermore, there are environmental and energy functions that carefully monitor operations, coordinate regulatory compliance audits, and perform periodic checks, inspections and audits at the Group's sites with a focus on waste management, energy consumption measured compared with the consumption expected, taking into account the characteristics of the building (climate zone, size, facilities, number of employees). The Intesa Sanpaolo Group has implemented management systems for the environment (ISO 14001 Certification) and energy (ISO 50001 Certification) certified by an international third party and subject to periodic audits, thus ensuring a systematic approach to sustainability that is aligned with international best practices.

Similarly, resource procurement aspects are managed on the basis of the “Green Banking Procurement Rules”, which provide procurement guidelines in areas such as energy, office materials, sustainable renovations and event organisation. Key objectives include optimising resources, promoting sustainable practices in the procurement of goods and services, reducing CO2 emissions, promoting efficiency and the circular economy. The most senior level responsible for the “Green Banking Procurement Rules” document is the head of the Intesa Sanpaolo Environment and Energy structure.

In this context, the Intesa Sanpaolo Group makes the aforementioned policies available to all stakeholders that are potentially involved and to those who contribute to their implementation through internal and external channels, using the Intranet for Group employees and the official website for all external stakeholders, applying them to all Group companies, including the Parent Company and subsidiaries.

Own Emissions Plan

In accordance with the "2022-2025 Business Plan", in 2022 the Intesa Sanpaolo Group implemented a plan to reduce its own emissions, called "Own Emissions Plan", following the Science Based Target Initiative (SBTi) protocol that calls for keeping the global temperature increase below 1.5°C compared to pre-industrial levels, as envisaged by the Paris Agreement.

The plan establishes a 53% reduction in Scope 1 and Scope 2 [54]emissions by 2030 (-51.427 thousand tonnes of CO_2eq) compared to the 2019 baseline (96.192 thousand tonnes of CO_2eq), and also sets the goal of becoming carbon neutral at the same time, offsetting residual emissions through the purchase of carbon credits.[55] In this context, the Group aims to achieve 100% electricity from renewable sources purchased for its operations. The definition of the target is based on 2019 data and the assessment of the market for green certificates to 2030, as well as other contractual options such as Power Purchase Agreements (PPAs).

It is confirmed that the calculation of emissions for the activities covered by the plan considers the entire scope of the Group, and this has remained unchanged since its definition. Moreover, the 2019 baseline, selected as representative of the Group's consumption and not affected by the exceptional events that characterised the following years such as 2020 and 2021, has never been changed, despite the inclusion of additional subsidiaries in the new Consolidated Sustainability Statement boundary, which in any case have a residual impact in terms of CO_2eq (less than 1% of the total).

To define the pathway for reducing its own emissions, the Group adopted an integrated approach, combining two methods:
- "bottom-up”, involving various internal stakeholders including Real Estate Management, People Management & Development, Workers Benefits, branches and foreign companies to identify the main decarbonisation levers;

[54] See the section "Gross Greenhouse Gas Emissions – Scope 1, 2, 3 and Total" of this standard for a description of Scope 1, 2 and 3 emissions.

[55] Note that as at 31 December 2024 the Group does not directly invest in GHG capture and storage, but holds intangible amounts of CO_2 emission rights (related to the European Union Emissions Trading System - EU ETS) deriving from proprietary trading operations carried out by the IMI Corporate & Investment Banking Division.

- "top-down", selecting the projects with the greatest potential for emission reductions relative to implementation costs, and defining the investments required to enact them.

With regard to the achievement of the declared decarbonisation targets, three levers have been adopted for both the Italian and foreign boundaries (branches, banks and companies) identified for 2024 and beyond:

a) repositioning of the electricity supply towards renewable sources;
b) implementation of measures aimed at reducing both energy consumption and dependence on fossil fuels for the Group's buildings through, for example, the gradual elimination of heating/air conditioning systems powered by gas and diesel oil and the renovation of inefficient systems with the use of heat pumps, the installation of photovoltaic panels and the activation of energy management/monitoring systems;
c) electrification of the company car fleet, both through hybrid and electric vehicles, and the installation of charging stations.

Specifically:

- the first lever is applied to the entire boundary of the Group;
- the second and third levers impact the Italy boundary and the foreign subsidiary banks located in Albania, Bosnia-Herzegovina, Croatia, Ukraine, Serbia, Slovenia, Moldova, Slovakia and the Czech Republic, Egypt, Romania, Hungary.

During 2024, the main initiatives implemented were:

- with regard to the first lever, the supply of energy from renewable sources is constantly monitored, which has proven to be in line with the target. One example is the Egyptian subsidiary Bank of Alexandria, which, in view of the restrictions in the local market, purchased i-RECs, and entered into a contract with NREA (New and Renewable Energy Authority) for the procurement of electricity from renewable energy sources for its sites in the Cairo region, covering about 91% of its electricity purchases;
- under the second lever, the following was done:
  - replacement of existing boilers with heat pump systems in some branches and buildings and extension of the smart building platform for monitoring consumption, with regard to the Italy boundary;
  - replacement of existing boilers with heat pump systems and replacement of obsolete air conditioning systems at some sites of the Hungarian subsidiary CIB Bank;
  - installation of a photovoltaic system at the Croatian subsidiary PBZ;
  - replacement of lighting fixtures with LED technology, obsolete air conditioning and electrical systems at some sites of the Slovak subsidiary VUB;
- with regard to the third lever:
  - increase in the number of electrified cars (full electric, plug-in hybrid and full hybrid) and simultaneous decrease in cars with internal combustion engines. In order to facilitate the adoption of plug-in rechargeable vehicles, a project was launched to install recharging stations at parking spaces of the Group's main buildings.

The implementation of the planned actions takes place in cooperation with the relevant corporate functions, ensuring an effective sharing of the necessary costs and resources. The availability of human and financial resources (the latter made available through the annual capital budget cycle), employed through an integrated, systemic approach that combines strategic allocation with the presence of specific skills, access to appropriate technologies and the support of an adequate regulatory framework, contributes to the implementation of the actions envisaged in the "Own Emissions Plan".

With reference to OPEX (administrative expenses) and CAPEX (property and equipment), we note their limited significance given the Group's sector of operations.

Finally, note that the update of the "Own Emissions Plan" is periodically shared during the meetings of the ESG Control Room and the ESG Coordination Committee.

Greenhouse gas emission reduction targets

Climate change mitigation and adaptation objectives in own operations

Target: Scope 1 and 2 - % of actual reduction in own emissions from implemented measures	**Date**	**Value**
Baseline	31.12.2019	96.192 tCO_2eq
Final balance	31.12.2024	-35%
Target	2030	-53%

Target: % Purchase of electricity from renewable resources	**Date**	**Value**
Baseline	31.12.2019	87.7%
Final balance	31.12.2024	92.8%
Target	2030	100%

In this context, as at 31 December 2024 the Group had already achieved a 35% reduction in emissions compared to the 2019 baseline (96.192 thousand tCO_2eq). This reduction corresponds to 34.256 thousand tonnes of CO2eq, and the Group remains in line with its target for 2030.

Moreover, as required by Regulation EU 2023/2772, the Group has identified “entity specific” disclosures in addition to the mandatory disclosures, to enable users to understand the impacts, risks or opportunities related to sustainability with reference to specific climate change issues, consistent with the Group's strategy to address climate change in its own operations as described in the preceding paragraphs, to which reference should be made for further details. Specifically, the metric identified for this purpose relates to the percentage of electricity purchased from renewable resources, which stands at 92.8% as at 31 December 2024.

Finally, note that like all financial institutions, the Intesa Sanpaolo Group does not currently fall into any of the categories listed in the European legislation on exclusion from the EU-Paris aligned Benchmark (EU PAB).

Strategy to combat climate change at portfolio level

Policies to mitigate and adapt to climate change

The Group adopts a series of policies to safeguard decarbonisation objectives at the portfolio level and to monitor climate adaptation issues, starting with the “Code of Ethics”, which, among its principles, envisages responsible management of indirect environmental impacts, for example committing to promoting services and products to foster the development of a low-emission economy.

In order to ensure an effective and efficient management and control system, strategic decisions on risk management at the Group level are referred to the Board of Directors of Intesa Sanpaolo, in its capacity as Parent Company. Thus, the Board plays this role not only with reference to the Parent Company, but also assessing the Group’s overall operations and the risks to which it is exposed. In fact, Intesa Sanpaolo's Board of Directors, with the support of the Risks and Sustainability Committee, approves policies on climate change, including the “Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks” (hereinafter “Guidelines for the Governance of ESG Risks”) in line with the Group's strategic and sustainability objectives. The Chief Risk Officer Governance Area (CRO Area) is responsible for, develops and maintains, in conjunction with other relevant structures, the aforesaid guidelines and the related implementing rules and is responsible for the design, development and maintenance of the internal system for the management and assessment of the Group's reputational and ESG risks.

As part of the overall ESG risk management framework, the "Guidelines for the Governance of ESG Risks" document devotes special attention to the monitoring and mitigation of climate risks and climate change adaptation. The containment of exposure to such risks passes first and foremost through preventive efforts centred on the development of a regulatory framework that also provides for the preparation and implementation of sector-specific rules that limit credit operations in specific sectors and that are able to identify and guard against risks arising from adaptation to climate change (e.g. physical risks).

The guidelines apply to Group banks and companies, which adapt them to their own context, and, in the case of the International Banks Division, to the specifics of local regulations.

In formulating the “Guidelines for the Governance of ESG Risks”, the Group referred to the principles defined by international best practices and to developments promoted and expressed by the regulator and supervisor at the European and international levels. Specifically, at the EU level, reference was made to the legislation that followed the Action Plan for Sustainable Finance and Growth published in 2018 by the European Commission, while at the international level inspiration was drawn from the initiatives aimed at promoting best sustainability practices in the banking sector that the Group has adopted, including the UN Global Compact, UN Environment Programme Finance Initiative (UNEP FI), Principles for Responsible Banking, Principles for Responsible Investment, Principles for Sustainable Insurance, Equator Principles and Net-Zero Banking Alliance (NZBA).

These guidelines play an essential role in applying the principles of reference and the definition of the roles and responsibilities of corporate bodies, internal governance structures and the main corporate functions involved in monitoring these risks.

ESG risk governance process

The “Guidelines for the Governance of ESG Risks” outline the Group's ESG risk governance process (including on climate change adaptation issues), which consists of five steps:
- identification: identification and description of ESG risk factors, including in terms of transmission channels, with particular reference to climate and environmental risks (e.g. ESG risk scenarios in stress testing processes);
- assessment and measurement: determination of exposure to ESG risks (e.g. the ESG & Reputational Risk Clearing process);
- monitoring and control: continuous monitoring of the evolution of ESG risk exposure (e.g. monitoring of ESG KPIs established in the Risk Appetite Framework);
- mitigation: the containment of ESG risks through appropriate actions and strategies, including preventive initiatives, aimed at reducing the severity of the impact of such risks (e.g. the definition of remedial actions in the event of breaches of ESG limits in the RAF);
- communication: provision of appropriate information flows to allow adequate transparency and knowledge of ESG risk exposure (e.g. ESG risk reporting and ESG risk disclosures, including indicators factoring in physical climate risks).

Specifically, with reference to the aforementioned assessment and measurement phase, consistent with the strategic guidelines on the subject, ESG risk management is also implemented through the ESG & Reputational Risk Clearing process, which has the objective of identifying and assessing beforehand potential ESG and reputational risks (including climate and environmental risks) connected to credit proposals, the selection of suppliers/third parties connected to commercial agreements, equity investments and extraordinary transactions.

The ESG & Reputational Risk Clearing process thus seeks to represent the potential ESG and reputational risk profiles associated with a specific transaction/counterparty or initiative, enabling informed assumption of risk in the related decision-making processes. A first level of clearing, performed by the line functions, is aimed at an analysis of the main ESG and reputational risk factors and performed by the structure that manages the relationship with the counterparty. In this context, credit proposals are subject to first-level clearing in a manner differentiated according to sector-specific assessments and the characteristics of the individual counterparty and transaction. A second level of clearing, activated based on the outcome of the first level, is aimed at examining and assessing any critical concerns that may have emerged from the first level, and also involving an expert analysis of these risk profiles. Generally, the outcome of the assessment is an advisory opinion that includes an assessment of the main critical concerns identified, the related mitigators and the level of risk assigned based on proprietary metrics. Escalation mechanisms are triggered when there are risk classes that are not consistent with the Group's risk appetite.

Also within the broader framework of ESG risk assessment and management is the implementation of the Equator Principles (EPs), which define a framework for environmental and social risk management in the financing of large projects, thus reinforcing the commitment to managing the impacts associated with the activities of corporate customers. EPs are international guidelines that the Intesa Sanpaolo Group has adopted on a voluntary basis since 2007, using their latest updated version (EP IV) applicable to the financing of infrastructure and industrial projects that may have adverse effects on people and the environment (e.g. energy plants, petrochemicals, mining, transport and telecommunications infrastructure). These principles are based on the criteria of the World Bank's International Finance Corporation (IFC) and cover environmental issues: the prevention of pollution and the promotion of energy efficiency; the preservation of biodiversity; and the sustainable management of natural resources.

The internal regulations on Equator Principles are applied by the Parent Company and by the subsidiaries that offer financing falling within the scope of application of the EPs, and are valid in all countries where the Group operates and for all countries where the Group offers financing. Regardless of the customer's industry, the EPs apply to the financial products listed below when they are used to support the development of new projects and meet specific criteria:
- project finance advisory services;
- project finance;
- project-related corporate loans;
- bridge loans;
- project-related refinancing and acquisition operations.

The project assessment process starts with the assignment of a three-level risk category by the Group, which involves the integrated consideration of several factors.[56] Proportional to the risk level assigned, requirements are defined in terms of both the documentation to be produced and the activities to be performed by the customer. In this context, the Group incorporates environmental and social clauses into the loan documentation and verifies the proper implementation of the agreed clauses.

Management of sustainability issues in sensitive sectors

At the portfolio level and with respect to the objectives of decarbonisation, the "ESG Risk Governance Guidelines" also outline an ESG risk governance model based on materiality assessments of ESG risk factors in relation to the various risk categories (credit risk, market risk, operational risk, liquidity risk and reputational risk) and their incorporation into the various risk management areas. The materiality analysis (Climate/ESG Materiality Assessment) is the process of assessing the potential impacts of ESG and climate risks for the Group. This analysis is based on an organic and structured approach to risk assessment which involves a granular definition of the risk drivers and the integration of forward-looking elements. The aggregate analysis of the materiality of ESG risk factors at the sector level leads to the definition of an enhanced risk control for the sectors most exposed to ESG risks, the definition of sector-specific strategies in this regard, and the implementation of specific safeguards within the Risk Appetite Framework (i.e. the RAF).
In this context, the Guidelines define, among others: i) a list of "sensitive sectors" with regard to ESG and/or reputational risks; ii) general criteria to limit and exclude lending; iii) detailed criteria applicable to individual sensitive sectors through the application of sector-specific rules.

Specifically, with reference to the general exclusion criteria, the Group undertakes not to finance companies and projects that are characterised by their negative impact on:
- UNESCO World Heritage Sites;
- wetlands according to the Ramsar Convention;
- International Union for Conservation of Nature (IUCN) protected areas I to VI.

As far as sector-specific regulations are concerned, the Group has decided to regulate its Oil & Gas operations to support the energy transition through the "Rules for Oil & Gas Operations", a summary of which is available on the Group's institutional website.

These internal regulations apply to the entire Intesa Sanpaolo Group with reference to the financing and investment activities described within the document. Specifically, these rules refer to the sector as a whole and thus to all segments of operations:
- upstream (oil and gas exploration and production);
- midstream (transport, storage and wholesale distribution);
- downstream (oil refining and distribution of finished products);
- trading (buying and selling oil, gas and refined products).

[56] For more information about this topic, see the "Climate Report".

In this context, the Group is committed to not financing projects involving new oil extraction sites or with negative environmental impacts in "critical areas" of the planet, such as the Arctic region and the Amazon Sacred Headwaters,[57] and has identified specific exclusion policies for the extraction of unconventional resources, providing for the phase-out of exposures related to such unconventional resources[58] by 2025. Currently, these exposures are in line with the stated phase-out target.

In this context, the exclusion policy is applied through:
- the ESG & Reputational risk clearing process described earlier;
- the analysis of transition plans to assess the counterparty's progress in achieving its climate targets;
- the periodic measurement of the emission intensity of the financed counterparties in the Oil & Gas sector to ensure the progressive alignment of the portfolio to climate neutrality targets.

Furthermore, with the aim of targeting exposures in line with the commitments made for this sector, the Group directs its operations towards the most virtuous counterparties committed to a transition towards more sustainable businesses (with a focus on the level of CO_2 emissions).

With regard to the coal sector, as indicated in the "Rules for operating in the coal sector", a summary of which may be found on the Group's institutional website, Intesa Sanpaolo is committed to supporting customers in the sector in the gradual reduction of the use of coal for power generation and in projects adopting energy-efficient and low greenhouse gas emission technologies, through targeted financing, a rigorous assessment of ESG risks in the Risk Clearing process and a limit on overall exposure to this area.

Moreover, the Group has undertaken not to increase its exposure in respect of non-financial products and services to companies with at least one of the following characteristics:
- operating in the production of electricity from coal and which do not have a documented plan/strategy for the progressive reduction of greenhouse gas emissions;
- failure to document a planned limit of no more than 35% of installed capacity from coal by 2030;
- having plans to expand installed coal-fired capacity or engaged in the construction of new coal-fired thermal power plants.

The Group will manage its outstanding exposures to the above companies with a view to phasing them out and is committed to phasing out its exposure to counterparties active in coal mining by 2025. Currently, these exposures are in line with the stated phase-out target.

These rules apply to the entire Intesa Sanpaolo Group, and specifically to the following sectors:
- coal mining;
- coal-fired power generation (coal-fired power plants - CFPPs).

Internal classification of sustainable lending products and transactions

The Intesa Sanpaolo Group also has internal regulations for the classification of sustainable lending products and transactions, under the responsibility of the Chief Risk Office Governance Area. This legislation applies to Group companies and defines environmentally sustainable activities among several categories, with internal criteria different from the European Taxonomy, to promote both climate change mitigation and adaptation. Indeed, these latter activities are those aimed at reducing or eliminating physical risk, including through the use of enabling activities such as data collection and early warning systems. For example, included in this scope are activities with the following objectives:
- reduce or avoid damage/disruptions due to risks related to adverse temperatures (e.g. heat and cold waves, fires, temperature variability, thawing permafrost, increased thermal stress);
- reduce or avoid damage/disruptions due to risks related to adverse winds (e.g. typhoons and hurricanes, dust, storms, sandstorms);
- reduce or avoid damage/disruptions due to risks related to adverse water phenomena (e.g. flooding, heavy rainfall, drought, glacial flooding, sea level rise, increased water stress and hydrological variability to increase water availability);
- reduce or avoid damage/disruption due to risks related to adverse soil phenomena (e.g. landslides, avalanches, subsidence, erosion and soil degradation).

The classification categories of sustainable lending products and transactions were defined in line with the internationally recognised guidelines of the Loan Market Association (LMA) on Green Loan, Social Loan and Sustainability-linked Loan Principles. These principles provide a globally shared framework, promoting standardisation and transparency of practices in the sustainable financial sector.

The macro-processes for the classification of sustainable products (and also for the classification of sustainable lending transactions), which also assess any applicable conventions/covenants/KPIs, if relevant, are differentiated for each business division and envisage that the attribution of the sustainability classification (sustainability attribute), based on internal regulations, is assessed by the Chief Risk Officer Governance Area in terms of consistency with the ESG risk management framework.

In general, the main guidelines and rules mentioned in this section are available to all stakeholders potentially involved and those contributing to its implementation through internal and external channels, via the Intranet for Group employees and on the institutional website for all external stakeholders.

57 Area understood as the drainage basin of the Amazon River, and of the Napo, Pastaza and Marañon rivers.

58 Shale/tight oil, shale/tight gas, tar sands/oil sands, coal bed methane/coal seam gas.

Sectoral Plan

Aware of the challenge posed by climate change, the Intesa Sanpaolo Group is committed to contributing to the achievement of global climate goals by supporting the transition to a low-carbon economy. To this end, the Group has chosen to pursue the Net-Zero target by 2050, also setting intermediate targets to 2030, also included in the "2022-2025 Business Plan", for its emissions and main business lines.

Besides being a member of the Net-Zero Banking Alliance (NZBA), the Group joined the Net-Zero Asset Managers Initiative (NZAMI)[59] through Eurizon Capital, Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.a. and Fideuram Asset Management Ireland, and through Intesa Sanpaolo Assicurazioni the Net-Zero Asset Owner Alliance (NZAOA) and the Forum for Insurance Transition to Net-Zero (FIT).

In 2022, Intesa Sanpaolo drew up its first High-Level Transition Plan for lending and investment activities, outlining its overall architecture. This architecture was then subject to a progressive refinement that led in 2023 to the definition of the "Sectoral Transition Plan", which incorporates the strategic actions to be implemented to achieve the objectives set for each sector.

In line with the commitments of the Net-Zero Banking Alliance and the goal of limiting global warming to 1.5°C, in recent years the Intesa Sanpaolo Group defined a series of sector-specific targets to 2030.

The first four targets for the Oil & Gas, Power Generation, Automotive and Coal Mining sectors were published in the "2022-2025 Business Plan".

In 2023, emission reduction targets were also set for the Iron & Steel and Commercial Real Estate sectors, and lastly in 2024 targets were introduced for the Cement, Aluminium, Residential Real Estate and Agriculture - Primary Farming sectors.[60] The Group decided not to set targets for the Shipping and Aviation segments, as they are immaterial for the amount of emissions financed or for portfolio exposure.

In terms of the target setting process, the CSO Governance Area, in consultation with the CRO and CFO Governance Areas and the Bank's Business Divisions, as part of a dedicated project formulate baselines and projections of the emissions generated by each sector, identify a possible target and design the relevant transition strategy. These targets are reviewed by the ESG Control Room and the Steering Committee and then approved by the Board of Directors with the support of the Risks and Sustainability Committee.

The targets and related transition plan, which are reported in this Consolidated Sustainability Statement, are included in more detail in the "Climate Report", a document published annually by the Group and dedicated to climate topics and the transition to a low-emission economy, in line with the requirements of the Group's climate commitments. This document is reviewed by the Steering Committee and approved by the Board of Directors, with the support of the Risks and Sustainability Committee.

With reference to OPEX (administrative expenses) and CAPEX (property and equipment), we note their limited significance given the Group's sector of operations.

The Group followed up on the net-zero commitment outlined in the 2022-2025 Business Plan and submitted its targets to the SBTi in 2024, obtaining validation in January 2025.

In order to achieve sector-specific emission reduction targets and accompany customers on their path towards decarbonisation, the Intesa Sanpaolo Group has identified several levers that enable and support the sustainable transition:

- dedicated products and incentives, including:
  - access to a credit facility dedicated to the circular economy, designed for customers adopting an innovative circular business model, offering them advantageous credit access conditions61;
  - green financing aimed at financing projects with a significant environmental impact;
  - sustainability-linked financing with a discount/bonus mechanism as an incentive for customers who meet predefined sustainability targets;
  - Green, Social and Sustainability Bonds whose proceeds are used to finance/refinance green and/or social projects, in line with the ICMA (International Capital Market Association) Guidelines;
  - advisory services to support customers' decarbonisation and accompany them in the development of customised ESG tools linked to their strategies and transition plans.
- Furthermore, consistent with the ESG commitments and objectives of the "Business Plan" and in line with the requirements of the European Taxonomy, several strategic initiatives were developed in 2024. Specifically, with regard to the IMI Corporate & Investment Banking Division, the initiatives include the development of green products and a framework for financing aligned with and/or dedicated to the European Taxonomy.

In order to ensure constant, comprehensive monitoring of the achievement of the targets defined, a structured process for monitoring results was implemented in five annual iterations. The purpose of these reviews is to monitor the progress of performance against the target set, while at the same time making it possible to prepare year-end reporting and final accounting.

59 On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context. As the initiative undergoes the review, activities to track signatory implementation and reporting have been suspended.

60 In the same year, the Commercial Real Estate target was also revised to a level consistent with the trajectory to keep the temperature increase well below 2 degrees.

61 The facility does not follow the technical screening criteria of the European Taxonomy, having been developed in close partnership with the Ellen MacArthur Foundation before the Taxonomy's entry into force.

During monitoring, a comparison is made between the performance reported and the baseline, target and benchmark curve in relation to each sector with the aim of quantifying any deviations. Where necessary, meetings are convened to share any proposals for actions and initiatives to be addressed by the business divisions to ensure the achievement of the targets set. For more details on the progress achieved against the targets set, see the section "Greenhouse gas emission reduction targets" below.

Overview of Sector-Specific Transition Plans[62]

This section provides an overview of the sectors for which emission reduction targets have been set, for each providing the market context, the enabling factors and finally the Intesa Sanpaolo Group's decarbonisation strategy and levers.
For the targets relating to the Sector-Specific Transition Plans, see: "Climate change mitigation and adaptation objectives at the portfolio level" of this chapter.

1. Agriculture – Primary farming

Market context[63]
- The agricultural sector is commonly defined as difficult to decarbonise in view of the emissions generated by its physical, chemical and biological processes, contributing to more than 10% of the EU's greenhouse gas emissions. In order to meet EU targets, agriculture and the transport, civil, waste and industrial sectors in Italy will have to reduce emissions by 43.7% by 2030 compared to 2005.

Enabling factors
- In order to reduce emissions from the agricultural sector, several decarbonisation technologies are being adopted, including: sustainable crop practices (e.g. low-emission fertilisers, cover and bioenergy crops), efficient livestock management, promotion of sustainable food systems (e.g. plant proteins, waste reduction, responsible sourcing) and virtuous forest management to increase carbon removal, produce renewable energy and support the local economy.

Intesa Sanpaolo Group decarbonisation strategy and levers
- The Intesa Sanpaolo Group has identified several levers aimed at decarbonising the sector, for instance by providing financing to low-emission customers that have defined transition plans, or by supporting the development of innovative green solutions. Among the products promoted by Intesa Sanpaolo dedicated to undertakings in the agri-food sector are:
  - Crescita Agri for financial support to farms through the provision of funding for investment programmes;
  - S-Loan Green projects for investments in sustainable agriculture and livestock, forestry and environmental restoration.

  In addition, in 2024 the Group implemented initiatives with ACEA to develop innovative solutions for the efficient use of water and signed an agreement with Coldiretti and Consorzio Italiano Biogas (CIB) to finance agricultural biomethane plants.

2. Aluminium

Market context[64]
- Aluminium is a crucial element in the transition to a low-carbon economy as it plays a key role in reducing emissions in various sectors, such as transport, construction and food and beverage packaging. However, its production requires the emission of a significant amount of CO_2, with almost 270 million tonnes generated in 2022 globally. Despite the pandemic, global aluminium production grew by more than 3% from 2020 to 2022, driven by demand in high value-added sectors. The sector's decarbonisation rate, defined as "hard to abate", is less than 2% per year, well below the 4% predicted by the International Energy Agency's Net-Zero Emissions by 2050 Scenario (NZE). To ensure alignment with these targets, near-zero-emission technologies need to be developed and adopted and recycling actions need to be boosted.

Enabling factors
- Promising technological innovations, such as the industrial-scale production of primary aluminium using inert anodes and alternative energy sources such as hydrogen or near-zero-emission electricity can be relied upon to achieve significant emission reductions.

Intesa Sanpaolo Group decarbonisation strategy and levers
- Intesa Sanpaolo is committed to supporting the sustainable transition of the aluminium sector towards Net-Zero, contributing to the reduction of industrial emissions and ensuring the resilience of its portfolio. Indeed, the Group has identified the following key levers to promote the sustainable transition of its aluminium customers, focusing on:
  - increased financing to companies with transition plans aligned with Net-Zero targets, offering performance-based financial products to reward undertakings that achieve decarbonisation targets. Particular attention is paid to supporting customers investing in innovative technologies, with a specific focus on secondary production activities (i.e., production of recycled aluminium through the recovery and remelting of aluminium scrap);
  - support the transition to sustainable solutions by financing companies that produce "green aluminium" or are engaged in the transition to renewable energy sources (e.g. hydro, solar and wind power) and business models related to the circular economy, and by financing projects aimed at building the infrastructure necessary for the sector's transition.

[62] For more details on sector-specific transition plans, see the "Climate Report".

3. Automotive

Market context[65]

- The automotive sector is one of the largest contributors to CO_2 emissions: cars and vans respectively account for around 16% and 3% of EU emissions. The sector is undergoing significant changes, partly as a result of European regulations that aim to reduce CO2 emissions by 55% by 2030 and achieve zero emissions for new vehicles by 2035. To meet these regulatory requirements, vehicle manufacturers are investing in electrification technologies, leading to a growth in the share of electric cars in Europe, which has already almost tripled from 2020 to 2023. Between 2019 and 2022, emissions were reduced by 27% for new passenger cars and 10% for new vans. In 2024 the industry went through and is still going through a phase of uncertainty and readjustment to the new competitive environment, partly related to exogenous factors that industry players have little control over.

Enabling factors

- Government strategies and increased investment in the electrification of the automotive industry are two key enabling factors supporting the transition. For example, the United States and the European Union are investing in public charging infrastructure to reduce consumer concerns about vehicle range and to promote the adoption of electric vehicles.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Intesa Sanpaolo Group promotes investments in advanced technologies that enable low-emission mobility solutions, such as electric vehicles, hydrogen power technologies, advanced hybrid systems and battery procurement. Specifically, the Group commits to:
  - support customers along the entire value chain, including the support of manufacturers and suppliers, by offering dedicated financial products, advisory services and strategic partnerships that enable innovation, optimise operations and reduce environmental impact;
  - support customers for the investments needed for the transition to the electric mobility model, working with them to define and implement the most suitable financial strategy.

4. Cement

Market context[66]

- Cement is a “hard to abate” sector due to the use of carbon-intensive materials and the high temperatures required for production, and is characterised by still underdeveloped decarbonisation technologies. Direct CO_2 emissions have remained constant since 2018, and represent an even greater challenge in the face of growing global demand. Based on the Net-Zero Emissions Scenario, to achieve the goal of limiting the temperature increase to 1.5°C, the sector would have to reduce its carbon intensity by 4% each year until 2030.

Enabling factors

- The main enablers for the sector’s decarbonisation include some solutions that can be implemented in the short term, such as improving material efficiency, adopting low-carbon fuels in furnaces and increasing the energy efficiency of existing plants. Furthermore, carbon capture, utilisation and storage (CCUS) solutions, whose adoption is increasing, are a complementary option for achieving decarbonisation targets.

Intesa Sanpaolo Group decarbonisation strategy and levers

- Intesa Sanpaolo has defined a strategic approach in line with decarbonisation commitments related to investments in the cement sector, deploying the following levers:
  - financing of customers aligned with the transition, evaluating customers based on their published decarbonisation commitments, supporting customers with ambitious Net-Zero targets and that are investing in and implementing innovative technologies;
  - support for the development of specific transition solutions, through the development of innovative technologies such as Green Cement, the promotion of renewable energy integration and investment in carbon capture, utilisation and storage (CCUS) solutions.

5. Coal mining

- The Intesa Sanpaolo Group's "Rules for lending operations in the coal sector" (for more information on the subject, see the section on policies on climate change mitigation and adaptation) define the limits and exclusion criteria for the lending operations in the segments of coal extraction and coal-fired power plants, supporting customers in their efforts to reduce their use of coal for the production of energy and encouraging the transition towards low carbon-intensity alternatives, such as renewable sources and gas. The Group also undertakes to phase out its exposure to counterparties belonging to the coal mining sector by 2025.

[66] Source: IEA, "The Net Zero Emissions by 2050 (NZE) Scenario", https://www.iea.org/reports/global-energy-and-climate-model/net-zero-emissions-by-2050-scenario-nze.

6. Iron & Steel

Market context[67]

- The steel sector, responsible for about 25% of global CO_2 emissions, plays a crucial role in climate change mitigation. Although emissions have stabilised in recent years, significant reductions are needed to ensure alignment with the Net-Zero Emission Scenario, which envisages a drop of about a quarter in emissions intensity by 2030. The downward trend in emissions from steel production is mainly driven by stricter regulations and the increase of sustainable investments, supported by decarbonisation technologies.

Enabling factors

- Key enablers to support the sustainable transition and decarbonisation of the steel sector include international regulatory frameworks, global collaborations, corporate commitment and advanced technologies. For example, major steel producers are publishing their emission reduction targets, demonstrating a strong commitment to decarbonisation. As far as international collaborations are concerned, several initiatives involving both public institutions and private and non-governmental sector actors (e.g. First Movers Coalition) have been launched with the aim of coordinating and optimising joint efforts on a global level. Finally, technological innovations currently under development and set to play a crucial role in the decarbonisation of the sector include steel production using hydrogen, electric arc furnaces, the increasingly advanced use of renewable energy, and, as a complementary decarbonisation option, carbon capture and storage (CCS) technologies.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Intesa Sanpaolo Group is committed to supporting the transition of the Iron & Steel industry by prioritising the following initiatives, with the aim of promoting sustainable practices:
  - support counterparties that have already set targets to reduce emissions in line with Net-Zero targets;
  - finance decarbonisation projects with dedicated funding, e.g. in relation to investments in innovative technologies such as steel production from hydrogen, among others;
  - engage customers in the definition and implementation of Net-Zero strategies by providing customised financing solutions to support the adoption of innovative enablers of sustainable transition (e.g. increased energy efficiency, integration of renewable energy and green innovation).

7. Oil & Gas

Market context[68]

- Oil & Gas operations contribute almost 15% of global energy-related emissions. A significant share of these emissions is methane, the reduction of which is essential in the sector, along with other strategic initiatives such as the electrification of plants and the use of low-emission hydrogen. To achieve the emission reduction targets in this sector, investments of 600 billion dollars by 2030 are needed globally. Global demand for oil is also expected to stabilise at around 106 million barrels per day by the end of the decade due to increased sales of electric vehicles, improved energy efficiency and the transition to renewable energy sources, thus reducing the use of oil in transport and power generation.

Enabling factors

- Governments and policy makers have announced their commitment to support developing countries in reducing emissions, while oil and gas companies are pledging to cut emissions (especially methane emissions) and promote the transition to renewable energies. New technologies such as carbon capture, utilisation and storage and biorefineries are instrumental for the decarbonisation of heavy industries and the aviation sector, especially for the production of Sustainable Aviation Fuel (SAF).

Intesa Sanpaolo Group decarbonisation strategy and levers

- the Intesa Sanpaolo Group promotes financial solutions (e.g. sustainability-linked, green and transition loans, green bonds and transition project financing) and advisory services related to sustainable activities to support customers' transition through investments in low-carbon technologies and solutions to increase the energy efficiency of operations;
- the Intesa Sanpaolo Group has defined policies and rules introducing specific limits and exclusions for financing activities, reducing the services provided to companies operating in the oil and gas sector. In fact, with regard to the sector of unconventional oil & gas resources[69], the Group has brought forward the phase-out of exposures related to these resources to 2025 instead of 2030, as stated in the "Rules for Oil & Gas Operations", updated in June 2024.

8. Power Generation

Market context[70]

- Power generation is a sector at the heart of the transition to Net-Zero emissions and is driven by significant growth in renewables. The sector also plays a crucial role in meeting the electrification needs of the market and will have to grow rapidly to reach 50% of global energy consumption by 2050. Key technologies such as solar, wind, nuclear, electric vehicles, heat pumps and hydrogen are essential for achieving these decarbonisation goals.

Enabling factors

- Global renewable energy capacity is expected to grow to 2.7 times 2022 levels by 2030, supported by Net-Zero targets and energy security policies aimed at making renewables cost-competitive. Furthermore, the use of electricity from renewable sources is expected to account for almost 20% of global energy consumption in the transport, industry and building sectors by 2030 compared to 13% in 2023, reducing dependence on imported fossil fuels. In the European context, the Renewable Energy Directive aims to raise the target for the share of renewable energy to at least 42.5% of the Union's total energy consumption by 2030, supporting growth in demand from the private sector and households.

Intesa Sanpaolo Group decarbonisation strategy and levers

- Power Generation was among the first sectors for which the Intesa Sanpaolo Group set decarbonisation targets. The Group defined its approach through two strategic elements:
  - active financial support, making available credit lines and financial solutions designed to promote renewable energy, through solar photovoltaics, onshore and offshore wind energy and battery energy storage systems, as well as innovative solutions such as green hydrogen and carbon capture, utilisation and storage (CCUS);
  - multistakeholder engagement and partnerships, facilitating and enabling the creation of collaborations, e.g. through advisory services for mergers and acquisitions (M&A), collaborations with Multilateral Development Banks (MDBs) and support for Public-Private Partnerships to align public sector objectives with private sector innovation, investment and expertise.

9. Real Estate (Commercial and Residential)

Market context[71]

- The building sector accounts for a significant share of global energy consumption and emissions. At the European level, it is responsible for 36% of carbon emissions and 40% of energy consumption. The existing building stock in Europe has limited energy efficiency, with an annual renovation rate of 1%. The European Union has introduced specific initiatives to address this scenario, such as the EU Energy Performance of Buildings Directive, which aims to reduce emissions from the EU building sector by 60% by 2030 and achieve zero emissions from the building stock by 2050. Although emissions from buildings in the EU decreased by 34% between 2005 and 2022 thanks to decarbonisation strategies and milder winters, the decarbonisation of the sector is lagging behind the target.

Enabling factors

- The reduction of emissions from buildings is possible through the implementation of solutions such as electrification, the use of renewable energy, and the use of energy-efficient materials and designs (e.g. aerogel, optimisation for daylight and ventilation), facilitated by the development of a favourable regulatory framework and targeted incentives such as the implementation of government policies for the decarbonisation of the energy grid.

Intesa Sanpaolo Group's decarbonisation strategy and levers for the Commercial Real Estate sector

- The Intesa Sanpaolo Group actively supports companies in their sustainable transition through strategic initiatives (e.g. the "Orizzonte Impresa - Transizione Energetica" programme) that offer dedicated products and services:
  - loans to support the transition, with favourable conditions linked to increased energy efficiency standards and the implementation of sustainable building solutions. For example, the Group offers financial products such as S-Loan Green Projects related to buildings certified with the highest level of environmental standards (e.g. LEED gold level, energy class A or B);
  - strategic consulting services to support customers in relation to sustainability issues through various initiatives (e.g. collaboration with Enel X, Regalgrid and Deloitte in relation to Renewable Energy Communities and the implementation of "Incent Now", a platform for consulting public tenders);
  - additional financial instruments to support renovations, energy efficiency upgrades or the earthquake-proofing of buildings, for example providing the possibility of assigning a tax deduction to the bank[72], obtaining immediate payment of the amount. Furthermore, through Intesa Sanpaolo Rent Foryou the Group offers medium and long-term rental solutions for the optimisation and management of consumption (e.g. IoT sensors, software and Artificial Intelligence for the control of electrical systems) and for the transition to sustainable energy (e.g. solar panels).

Intesa Sanpaolo Group's decarbonisation strategy and levers for the Residential Real Estate sector

- To support the energy transition of residential buildings in Italy, Intesa Sanpaolo offers dedicated financing for the purchase, construction or redevelopment (including the replacement of windows, boilers and the installation of photovoltaic panels) of energy-efficient buildings (minimum class B) that meet certain criteria (e.g. energy class, year of construction, geographical location), also through incentive mechanisms and customer advisory services.

For the Residential Real Estate sector, as for the Commercial Real Estate sector, the achievement of the target is highly dependent on the implementation of government policies for the decarbonisation of the energy network.
For more details, see the section "Climate Change Actions and Resources at the Portfolio Level".

[72] With regard to the works set out in Articles 119-121 of Decree-Law no. 34/2020, converted into Law no. 77/2020 ("Rilancio Decree"), as amended.

Greenhouse gas emission reduction targets

Description of the objective

The aforementioned sectors for which 2030 emission reduction targets have been set, approved by the Bank's Board of Directors, were identified based on a materiality criterion from among the most emission-intensive sectors envisaged by NZBA.

The period of application of the targets set by Intesa Sanpaolo runs from 2021 for the Oil & Gas and Coal mining sectors (the latter with a phase-out target to 2025) and from 2022 for the others.

The methodological choices adopted by the Intesa Sanpaolo Group relating to baselines, metrics and target setting were defined taking into consideration i) "Guidelines for Climate Target Setting for Banks", issued by UNEP-FI (April 2021) and ii) Financial Sector Science-Based Targets Guidance - version 1.1, issued by SBTi (August 2022). Therefore, the climate targets set by the Group pursue the temperature targets of the Paris Agreement[73] and support the transition to a net-zero economy by 2050. Furthermore, the choices regarding the selection of the value chain segment, the emissions considered and the proxies used are in line with PCAF (Partnership for Carbon Accounting Financials) methodologies. The Group applies science-based scenarios, such as the IEA Net-Zero 2050, whose curves are aligned with the temperature targets of the Paris Agreement.

The Bank's lending and investment activities considered in the perimeter are as follows:
- Medium- to long-term financing (with the exception of the Oil & Gas sector, for which short-term financing is also considered);
- Hold-To-Collect (HTC) bonds for the Oil & Gas sector;
- Banking book equity, if material.

Small or medium-sized enterprises (SMEs), defined as specified in Article 501, paragraph 2, letter b), of the CRR, which refers to Commission Recommendation 2003/361/EC, are excluded only if they are unaffiliated sole proprietorships. The reason for the exclusion of SMEs lies in the limited availability of data for smaller, unlisted companies, which would imply extensive use of sector-specific proxies for estimating emissions and production data and could lead to a strong convergence of the portfolio figure towards the sectoral average.

For the Agriculture – Primary Farming sector, SME Corporate counterparties with a turnover of more than 10 million euro are included in order to define a boundary that is representative of the typical size of counterparties financed in this sector.

SMEs[74] (but not retail SME customers) are included in the Commercial Real Estate segment in accordance with SBTi Guidance, while the Residential Real Estate segment only includes exposures to Private Retail counterparties.

In order to avoid double counting of emission data, only certain segments of the value chain are considered for each sector. The sectors and related segments considered are defined according to the internal classification based on NACE codes at the Group level.

Below are the segments of the value chain considered for each sector:
- Agriculture – Primary Farming: focus on operational counterparts in the primary farming sub-sector;
- Aluminium: focus on aluminium producers;
- Automotive: focus on light vehicle production (passenger cars and light trucks). Component manufacturers are excluded;
- Cement: focus on cement and clinker producers;
- Iron & Steel: focus on companies producing crude steel and using iron (or scrap) as input. Mining, steel finishing and downstream activities are excluded;
- Oil & Gas: focus on upstream operators and those operating along the entire value chain in order to stimulate operational efficiency in extraction and to foster the transition of companies from high-emission fossil fuels to low-emission and renewable fuels. Refineries, pipelines and downstream activities are excluded;
- Power Generation: focus on power generation and integrated operators to encourage the use of low-emission energy sources. Electricity transport and distribution are excluded;
- Commercial Real Estate and Residential Real Estate: focus on emissions related to the use of buildings in Italy.

For each sector, the emission categories considered are:
- Agriculture – Primary Farming: Scope 1 and 2;
- Aluminium: Scope 1 and 2;
- Automotive: Scope 3 WTW (Well-to-Wheel);
- Cement: Scope 1 and 2;
- Iron & Steel: Scope 1 and 2;
- Oil & Gas: Scope 1, 2 and 3;
- Power Generation: Scope 1 and 2;
- Commercial and Residential Real Estate: Scope 1, 2 and 3.

[73] Except for the target set for the Residential Real Estate sector.

[74] The Commercial Real Estate boundary includes corporate SME but not retail SME customers. Corporate SMEs are defined as undertakings with an individual/group size indicator between 2.5 and 50 million or with an individual/group size indicator below 2.5 million if the individual/group exposure is greater than or equal to 1 million.

For all sectors, the Bank uses the Sectoral Decarbonisation Approach (SDA) methodology to measure and reduce an emission intensity metric for each sector defined as the ratio of financed emissions to financed output (financed surface area for Commercial and Residential Real Estate). For Agriculture – Primary Farming, the Bank adopted a “'revenue intensity” metric that measures emissions relative to total counterpart revenue.

Specifically, the emission intensity metrics for the different sectors are as follows:
- Agriculture – Primary Farming: tCO2eq/€MM;
- Aluminium: tCO2eq/t Aluminium;
- Automotive: gCO2eq/vkm;
- Cement: tCO2eq/t Cement;
- Iron & Steel: tCO2/t Steel;
- Oil & Gas: gCO2eq/MJ;
- Power Generation: kgCO2eq/MWh;
- Commercial Real Estate and Residential Real Estate: kgCO2eq/m2.

Note that for coal mining Intesa Sanpaolo has not defined a target based on emission intensity, but rather has adopted a policy of phase-out by 2025, consistent with the provisions of the “Rules for lending operations in the coal sector”. For the Oil & Gas sector, the progressive alignment of the portfolio with climate neutrality objectives is also governed by the “Rules for Operations in the Oil & Gas Sector”.

The method described here made it possible for each target defined and reported to identify a number of levers conducive to achieving the decarbonisation objectives. The main levers were made explicit and emphasised in the section on the “Sectoral Plan”.

In this context, the Group monitors progress towards the achievement of its targets, reporting on the level of progress at the end of each year of monitoring, reporting on physical intensity, economic intensity and absolute emissions, the latter published in the “Climate Report”. The Group did not define any upper limit for GHG emissions (in absolute value) in 2024.

Finally, for the Power Generation and Automotive sectors, the methodology and reference area were updated in 2023 in line with SBTi requirements. This revision led to a change in the target defined for the Automotive sector, while it was not necessary to revise the target defined for the Power Generation sector.

Climate change mitigation and adaptation objectives at the portfolio level

Target: Agriculture – Primary farming - emissions financed in terms of tCO_2eq/€MM	**Date**	**Value**
Baseline	31.12.2022	721
Final balance	31.12.2024	675
Target	2030	641

Target: Aluminium - emissions financed in terms of tCO_2eq/t Aluminium	**Date**	**Value**
Baseline	31.12.2022	4.79
Final balance	31.12.2024	4.38
Target	2030	4.31

Target: Automotive - emissions financed in terms of gCO_2eq/vkm	**Date**	**Value**
Baseline	31.12.2022	192
Final balance	31.12.2024	192
Target	2030	100

Target: Cement - emissions financed in terms of tCO_2eq/t Cement	**Date**	**Value**

Final balance	31.12.2024	0.64
Target	2030	0.5

Target: Coal Mining - exposure in €/billion	**Date**	**Value**
Baseline	30.06.2021	0.2
Final balance	31.12.2024	0.01
Target	2025	0

Target: Iron & Steel - emissions financed in terms of tCO_2/t steel	**Date**	**Value**
Baseline	31.12.2022	1.05
Final balance	31.12.2024	0.82
Target	2030	0.81

Target: Oil & Gas - emissions financed in terms of gCO_2eq/MJ	**Date**	**Value**
Baseline	30.06.2021	64
Final balance	31.12.2024	64
Target	2030	55[75] (52-58)

Target: Power Generation - emissions financed in terms of $kgCO_2eq$/MWh	**Date**	**Value**
Baseline	31.12.2022	202
Final balance	31.12.2024	123
Target	2030	110

Target: Commercial Real Estate - emissions financed in terms of $kgCO_2eq/m^2$	**Date**	**Value**
Baseline	31.12.2022	43.16
Final balance	31.12.2024	38.94
Target[76]	2030	22.11

Target: Residential Real Estate - emissions financed in terms of $kgCO_2eq/m^2$	**Date**	**Value**
Baseline	31.12.2022	30.13
Final balance	31.12.2024	28.77
Target[76]	2030	19.26

Metrics and data may be updated over time based on developments in emission calculation methods, updates to the NZBA and SBTi Guidelines, as well as updated data sources and established market practices. Moreover, metrics and data are based on projections and estimates that rely on sector-specific assumptions and strategic plans of the underlying entities, some of which may depend heavily on external factors, such as but not limited to technological improvements and/or implementation of government policies. Metrics are calculated using data whose quality and availability is subject to change over time.

Objectives and metrics relative to Green Mortgages

The Group's objective relating to the provision of Green Mortgages was included in the "2022-2025 Business Plan" through the involvement of the business divisions that, starting from the analysis of the economic and commercial context of reference and through the definition of specific actions and initiatives to support customers, propose and coordinate the offer of dedicated product solutions and services in order to promote evolution in the realm of environmental sustainability.

75 Central value of the target range identified.

76 The achievement of the target is highly dependent on the implementation of government policies to decarbonise the energy grid.

The Intesa Sanpaolo Group contributes to the reduction of carbon emissions and promotes access to sustainable housing solutions through the provision of loans for energy-efficient real estate projects and the improvement of existing energy performance.

The scope of the target includes loans to private individuals disbursed throughout Italy and in the countries where the banks of the International Banks Division (IBD) have branches. Originally focused on the Italian market, it was possible to extend the Group's internal ESG classification rules to the foreign boundary as well. Intermediate targets have also been set within the plan to ensure that the final goal is achieved. These include an increase in the proportion of Green Mortgages with respect to the total number of mortgage loans disbursed each year and the progressive improvement in the energy performance of the financed properties. In this regard, to date the targets are in line with what was budgeted.

As reported in the “Climate Change Actions and Resources at the Portfolio Level” section below, the Group supports the green projects of retail customers, including the Green Mortgage, a mortgage loan with favourable terms to finance the purchase/construction of energy-efficient buildings or the upgrading of existing buildings, improving their performance. In accordance with the objective set out in the “2022-2025 Business Plan”, the Group contributes to facilitating the renovation of Italy's real estate assets and the diffusion of energy-efficient homes in synergy with the EeMAP criteria (a European initiative – that the Group has signed on to – that aims to create a standardised energy efficiency mortgage loan at the European level).

Target: Green Mortgages Disbursed – cumulative disbursement in €/billion		
	Date	**Value**
Baseline[77]	31.12.2021	-
Final balance	31.12.2024	9
Target	31.12.2025	12

Specifically, note that the cumulative disbursement for Green Mortgages represented in the "Final" field of the table above refers to 4.1 billion euro in 2024.

In this regard, note that the process of calculating the disbursement figure for 2024 involved extracting data from accounting records for the Parent Company component and management software records for the IBD component. With regard to the value reported in the "Final" field, the figures for 2022 and 2023 were extracted from the management software.

Climate change actions and resources at the portfolio level

In line with the regulatory evolution on sustainability, the Group has adopted a medium- to long-term strategy and a cross-cutting and holistic approach to ESG issues, which is based on:
a) the definition of a Group ESG strategy;
b) the integration of ESG factors into the general risk management framework, and in particular into the Risk Appetite Framework in which there is a specific section devoted to ESG and climate change risks;
c) the integration of ESG factors in lending processes and in the definition of lending strategies;
d) careful consideration of ESG factors in the development of policies, products and services;
e) the dissemination of an ESG risk culture throughout the company.

The Chief Risk Officer, Chief Financial Officer and Chief Sustainability Officer, with the support of the various Governance Areas and Divisions, work together to identify and analyse ESG risks and opportunities with particular reference to climate change. The same areas are responsible for defining objectives and guidelines to implement processes for assessing, monitoring and mitigating risks and for defining lending strategies.

With regard to climate change mitigation, the integration of ESG risks into the risk management framework takes place through several actions. Specifically, the RAF integrates and translates into specific controls what is defined in terms of strategic guidelines, ESG/Climate Materiality Assessment and ESG Sectoral Color Coding, identifying year after year, limits, Key Risk Indicators and specific actions aimed at mitigating ESG risks, particularly with reference to the sectors most exposed to these risks. This also includes specific actions related, for example, to the Group’s strategic choices, such as subscribing to the Net-Zero targets. The ESG Climate Change and Reputational Risk section of the Group RAF includes:
- specific limits in relation to the exposure to the Coal Mining and Oil & Gas sectors; for Coal Mining in particular the limit is reviewed annually in line with the target of phasing out lending by 2025;
- specific early warning thresholds/KRIs relating to the emission intensity (CO2eq) in terms of financed production of the counterparties belonging to the Oil & Gas, Power Generation, Automotive and Iron & Steel sectors, with the aim of meeting the commitments made within the Net-Zero Banking Alliance and the Science Based Target initiative;
- monitoring of new disbursements broken down by energy performance class (EPC) to improve the quality of the residential properties taken as collateral and consequently reduce the transition risk associated with mortgage loans;
- specific warning thresholds for new disbursements in the Residential Real Estate (RRE) portfolio to improve the quality of the residential properties taken as collateral, and consequently reduce the transition and physical risk associated with mortgage loans. In particular, with regard to the lower energy performance classes (EPC certifications) and in areas with very high physical risk;
- a warning threshold in relation to the exposure to debt securities of government issuers in the Group’s banking book that, based on certain internal ESG-related criteria, are defined as “high risk”.

Moreover, the Climate Scenario Analysis is used, within the more general framework of the materiality assessment, in order to explore potential portfolio vulnerabilities, particularly the loan portfolio, in the context of regulatory stress tests or of the Internal Capital Assessment Adequacy Process (ICAAP) and the Internal Liquidity Assessment Adequacy Process (ILAAP). In conducting this activity, the Intesa Sanpaolo Group adopts an approach that incorporates different solutions dedicated to the

[77] Plan target that represents the planning of a new activity that does not have a base value.

verification of the impacts of transition and physical risk on the Non-Financial Corporate (NFC) portfolio and on the real estate collateral portfolio. With regard to transition risk, the impact is assessed by means of shocks applied to the balance sheets of the individual counterparties and to the energy efficiency level of the residential and commercial immovable property provided as collateral.

The monitoring of climate change adaptation risks in the risk management framework is done through several actions, including:
- within the Credit Risk Appetite, physical risks arising from catastrophic events that may impact the deterioration of the Probability of Default (PD) are taken into account (at the counterparty level);
- as part of the Risk Appetite Framework, through the integration of indicators to guard against physical risks based on Residential Real Estate (RRE) in locations subject to high acute physical risks with corresponding remedial actions in the event of exceeding these limits;
- as part of the ESG & Reputational Risk Clearing process, where the counterparty ESG profile and score is used, which also includes considerations of the impacts that physical climate risk drivers may have.

Moreover, the Group highlights and monitors physical risks, recognised as drivers that can cause material damage or a drop in productivity, or have indirect impacts such as the interruption of production chains, directing the Group's financing and investment choices.

The reported actions are implemented as an essential part of the Group's climate risk management strategy and do not require specific resources dedicated exclusively to such actions, as they are part of the overall context of the Group's ESG strategy.

With regard to the credit framework, the Group has currently developed a holistic approach for the integration of ESG/Climate factors within it. The ESG/Climate Credit Framework, which includes ESG/Climate criteria to guide the strategic management of the loan portfolio among others, operates on three levels:
- by sector, with the definition of the "ESG Sector Strategy - Color Coding", which considers risks and opportunities and defines the attractiveness of sectors in credit strategies; as an integral part of the ESG strategy, a heatmap assigns ESG priorities to each business area;
- by counterparty, with the introduction of an ESG score defined at the counterparty level, in order to guide new disbursements within the risk framework defined by the Credit Risk Appetite (CRA);
- by transaction, with the definition of the internal framework of sustainable lending products and transactions described in the section "Policies to mitigate and adapt to climate change".

Specifically, the ESG counterparty score, which the Intesa Sanpaolo Group has adopted for non-financial companies, first implemented on the Bank's IT systems in 2022 with respect to the portfolio of the Banca dei Territori and IMI Corporate & Investment Banking Divisions, then subsequently extended to banks belonging to the International Banks Division operating in the European Union, and to the Project Finance operations of the IMI Corporate & Investment Banking Division, also includes components relating to climate risk (with reference to the level of preparedness of corporate customers to manage transition and physical risk). The purpose is to assess the ESG profile of corporate customers, adopting the same approach across the entire portfolio, from large listed customers to small and medium-sized enterprises. The score leverages on data from external and internal sources and covers the most important indicators of risks and opportunities in the three ESG dimensions, including (but not limited to) the carbon footprint for the Environmental part.[78] Furthermore, in 2024 the scope of the ESG Scoring model was expanded to include counterparties from the financial sector, banks and to assess states, provinces and regions.

A precise quantification of the emission reduction with respect to each action at the portfolio level is not possible due to the complex connection between actions taken and emission trends in the counterparties' sectors.

Moreover, the "2022-2025 Business Plan" aims to support the ecological transition through: (i) sustainable lending initiatives for retail customers, (ii) support to SMEs/Corporates in their journey towards sustainability, including through ESG Workshops, in collaboration with specialised partners (for more detail, see the "Targets and metrics" section of the ESRS S4 Standard), and the Skills4ESG Platform for training and customer engagement.

The Group continued to provide loans and mortgages for environmental purposes to retail customers in 2024. The provisions of the European Energy Performance of Buildings Directive (EPBD) provide for the gradual upgrading of the building stock in EU countries. With this in mind, the banking system is urged to play a transformative role in directing financial investments towards activities that can help reduce the EU's dependence on fossil fuels, thereby supporting the achievement of the EU's climate targets for net-zero emissions by 2050. The financing solutions proposed by the Intesa Sanpaolo Group are not only available to support the purchase or construction of an energy-efficient property, but also to those who want to improve energy efficiency through, for example, the replacement of windows and doors and high-performance boilers, the purchase of environmentally-friendly vehicles and installation of solar and photovoltaic panels.

In this context, the Group proposes "Green - Mutuo Domus": a subsidised mortgage (reduction of the Annual Percentage Rate (APR) and free energy certification for renovation purposes) which makes it possible to purchase and build a residential property in Italy with a high energy efficiency class (equal to or higher than B) or to renovate a residential property in Italy improving its energy performance rating by at least one class. For more information on Green Mortgages, see the section "Targets and metrics related to Green Mortgages".

[78] For more information about the ESG score, see the "Climate Report".

The range of green solutions has been enriched with a series of dedicated services, some of which are provided by partner companies. These additional and optional services help to assess the possible savings that can be made through energy redevelopment measures, for example. Consistent with the regulatory framework defined by Regulation EU 2020/852 on the European Taxonomy, the Intesa Sanpaolo Group has implemented a series of activities aimed at providing information on the energy performance of buildings as collateral for loan applications.
In this regard, the Intesa Sanpaolo Group participates in the European Energy Efficiency Financing Coalition and the “Energy efficient Mortgages Action Plan” (EeMAP) project. As part of “EeMAP”, Intesa Sanpaolo has also joined the “Energy Efficient Mortgage Label” (EEML), a project that aims to maximise the regulatory alignment of the portfolio with key legal developments such as the European Union taxonomy, the Mortgage Credit Directive (MCD), the Capital Requirements Regulation (CRR), or international equivalents. As part of the EEML project, starting in 2021, each quarter the Intesa Sanpaolo Group reports aggregate figures on the green portfolio and the standard portfolio.

Moreover, the main products proposed to SME customers include the sustainability-linked “S-Loan” to support small- and medium-sized enterprises that aim to improve their sustainability profile to assist them on a path of structural change, associating their economic and financial decisions also with their environmental impacts, through precise commitments undertaken with the Group using specific ESG indicators (KPIs) subject to annual monitoring.

In 2024 the “S-Loan Progetti Green” product was introduced, a loan supporting all types of business investments capable of generating a positive environmental impact on processes, infrastructure, technologies, services, and products. The Group's objective is to stimulate investments by corporate customers to finance their environmental sustainability projects. Specifically, with regard to climate change mitigation and adaptation, eligible investments concern:

- renewable energies;
- energy efficiency;
- sustainable transport;
- climate change adaptation;
- green buildings.

In addition, Intesa Sanpaolo provides S-Loan CER financing for companies that decide to invest in renewable energy. The mechanism provides an incentive in terms of an interest rate subsidy, with an additional bonus if the undertaking allocates part of the energy produced and not self-consumed to the Renewable Energy Community[79] (CER).

Among the products that support professionals and undertakings in the realisation of investment programmes in the energy sector is the “Energia Impresa” loan, which has several lines of action:

- plants for generating electricity from renewable sources (RES projects);
- photovoltaics, electricity generation from photovoltaic solar energy;
- wind power, electricity production from wind power only onshore;
- hydroelectricity, production of electricity from hydraulic sources classified as “small derivation”;
- residual gases from purification processes;
- small-scale biogas plants for the production of electricity from biogas;
- biomethane plants, for the production of biomethane for transport or other uses;
- energy efficiency measures, for investments in the energy efficiency of buildings, thermal and electrical consumption, and energy production plants.

In addition, "NOVA+" is the specific medium- to long-term financing line designed to support undertakings for research, development and innovation projects. The Nova+ Research line includes specific products:

- “Nova+ Green”: intended to support product or process innovation projects aimed at achieving climate neutrality or the integration of circular economy processes;
- “Nova+ Mobility”: intended to support innovative projects of undertakings aimed at the transition of mobility towards a new paradigm of sustainability, digitisation and connectivity;
- “Nova+ Agritech”: intended to support innovative projects of undertakings aimed at the transition of agriculture towards a new paradigm based on principles of sustainability, resilience and productivity.

The aforementioned initiatives are addressed to all undertakings/groups of any sector and size in Italy.

In this context, the Medium/Long-Term Loan with SACE Green guarantee is also the medium/long-term financing line intended to support the achievement of environmental objectives, as defined by the Green Convention signed by the Ministry of the Economy and Finance with SACE, including those related to climate change mitigation and adaptation.

This initiative is aimed at corporations, including cooperative companies with registered office (or secondary office) in Italy and a turnover equal to or less than 500 million euro, as reported in the latest approved financial statements prior to the date of application for the SACE Green guarantee.

In the same vein, the InvestEU – Sustainability Guarantee can be granted on financing operations designed to support the achievement of climate change mitigation and adaptation objectives, and is targeted at customers falling within the SME and Small Mid Cap company size for operations that meet certain eligibility criteria.

[79] An Energy Community is an association that produces and shares renewable energy, in order to generate and manage cost-effective green energy on its own, while significantly reducing CO_2 emissions and energy waste. Participants can include citizens, businesses, public authorities, small and medium-sized enterprises.

Also of note is the development of the Think Forestry programme (launched in November 2023) to accompany customer companies on the path of environmental transition, with the dual objective of accelerating climate change mitigation by acting on the management and reduction of CO_2 emissions of customer companies and to safeguard and promote nature.

The programme provides access to a network of leading national forestry initiatives through an agreement with the Climate Network non-profit organisation. An extensive planting programme was initiated with the aim of contributing to the "reforestation" of the Italian territory. The Bank actively participates in the programme by carrying out tree planting in several Italian cities and encouraging the participation of its corporate customers. The development of the initiative was further expanded through the involvement of consumers through a specific initiative of For Funding, Intesa Sanpaolo's crowdfunding platform aimed at supporting social and environmental initiatives with the greatest impact through both private contributions and Group resources. Indeed, the Bank has also decided to allocate a portion of the commissions from credit card transactions to this project. Furthermore, through an evolution of the programme, the Bank will be able to offer innovative tools to support the efforts of corporate customers in measuring and reducing their CO_2 emissions and in the management of residual emissions.

With particular regard to the topic of adapting to climate change, the Intesa Sanpaolo Group confirmed its concrete commitment to support the populations affected by natural disasters affecting the Italian territory by activating dedicated credit lines, providing new subsidised loans intended for the restoration of damaged properties (houses, shops, offices, artisan workshops, companies), suspensions on existing loans, actions in the area of protection and preferential, simplified and expedited procedures.

In this context, with regard to insurance products for the Business world, the "Tutela Business Manifattura" and "Tutela Business Commercio" products include the possibility of extending coverage for fire and other material events through the purchase of catastrophic event coverage, which includes earthquake and additional flood coverage.

With respect to the International Banks Division, a strong commitment to the green transition of its customers is emphasised both through a commercial offer dedicated to the financing of projects aimed at increased energy efficiency, the growth of the circular economy and the containment of climate impact, and through awareness initiatives for the dissemination of knowledge and understanding of ESG issues.

In the retail and micro-business sector, dedicated solutions such as loans and Green Mortgages for the purchase, construction and increased energy efficiency of real estate are available in the catalogue.

In the third quarter of 2024, the "Green dedicated S-loan" product was introduced in three banks of the Division: Všeobecná úverová banka (VUB), CIB Bank (CIB) and Banca Intesa Beograd (BIB).

The financial products of the IMI Corporate & Investment Banking Division focuses on ESG solutions with special attention to environmental aspects. It includes sustainability-linked instruments that encourage the customer to improve its sustainability performance, and loans with proceeds tied to dedicated projects, which can also benefit from the circular economy credit facility, promoting decarbonisation and reuse of resources. In particular, in terms of Sustainability-linked solutions, in 2024 the Group supported its customers with loans, bonds, guarantees, securitisations and hedging activities, while the transactions with earmarked income include Green loans, Green, Social and Sustainable bonds, Green Convertible bonds, as well as Project Finance dedicated to the world of renewable energy (wind, photovoltaic, biomass, hydroelectric).

Moreover, the Division offers a wide range of advisory services focused on the sustainable transition. Specifically, an ESG Advisory Team was established in 2023 to assist customers served by IMI Corporate & Investment Banking in the development of customised ESG tools linked to their strategies and transition plans.

For more details on Sustainable Finance, with reference to climate/environmental topics, see the "Sustainable finance metrics" section of ESRS S4.

Lastly, with regard to asset management, in 2024 Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.a., Fideuram Asset Management (Ireland) and Eurizon Capital SGR signed the Global Investor Statement to Governments on the Climate Crisis, an initiative urging governments to strengthen their climate policies in order to contain the rise in temperatures within 1.5 degrees Celsius.[80]

Strategy for managing climate risks in the supply chain

Policies to mitigate and adapt to climate change in the supply chain

With respect to strategies and actions that control and mitigate the climate risks which may affect its supply chain, as per its Code of Ethics, the Group is committed to promoting forms of behaviour consistent with the highest ethical standards, both nationally and internationally. This document governs the relations with suppliers aimed at safeguarding the principles of ethical, social and environmental responsibility and favours long-term business relationships based on trust and transparency.

Furthermore, internal guidelines are in place to define the roles and responsibilities of the Corporate Bodies and the structures of the Parent Company and the Group companies with respect to management of Group purchases, in addition to principles and macro-processes to be complied with during all stages of the process underlying the management of purchases of goods and services, in compliance with the Code of Ethics, in particular in relation to:

[80] For more details on sustainability issues (with specific reference to environmental matters) for the Wealth Management divisions, see the Climate Report.

- transparency and equity in suppliers' selection and qualification and in the application of the compliance process with current guidelines on environmental, social and governance sustainability to ensure respect for the environment, human rights, working conditions and business ethics throughout the supply chain, also by evaluating specific local features;
- the adoption of measures and tools that minimise negative impacts and foster awareness of ESG risks and opportunities.

These guidelines apply to all Group companies. Responsibility for their approval rests with the Board of Directors of Intesa Sanpaolo S.p.A. as the Parent Company and the competent Bodies of the Intesa Sanpaolo subsidiaries subject to management and coordination activities to the extent of their implementation, while the Chief Cost Management Officer Governance Area is the structure responsible for the document. In line with these values, the Group adopted "Green Procurement rules" which form part of environmental protection activities. The procurement policy promotes a responsible approach to the sourcing and use of goods and services, prioritising those that meet specific environmental criteria at all stages of the procurement process. The aim is to identify the best solutions in term of design, products or services with the lowest possible environmental impact throughout their life cycle, taking into account market availability. These rules are the Group's main commitment in terms of value chain sustainability. Indeed, the main environmental aspects considered include the reduction of energy consumption and the related carbon dioxide emissions, sustainable waste management, optimised consumption of materials such as paper, toner and stationery, and the purchase of environmentally-friendly office equipment[81]. Thanks to these initiatives, the Group consolidates its commitment to environmental sustainability, integrating it as a core element of its corporate strategy and covering energy efficiency, in addition to climate change issues. For additional information about the "Green Procurement rules", reference should be made to the "Policies to mitigate and adapt to climate change in the portfolio" section. In this respect, the Rules must be applied to the procurement process by the Procurement bodies. The guiding principles behind a sourcing strategy include, inter alia:

- transparency and tracking of the entire procurement process;
- formalisation of the agreement in compliance with the Group's standard regulatory conditions;
- attention in relations with third parties to controls over operational risks, compliance with the Group's general guidelines on reputation and governance of environmental and social risks (ESG), as well as the overall sustainability of the choices adopted.

Supplier selection must take into due consideration, in addition to the specialisation in the required product area and the economic/financial solidity, also its reputational and sustainability profile (ESG), verifying the possible existence of external prejudices (such as judicial and insolvency proceedings). In this respect, the "Environmental and energy policy" sets Intesa Sanpaolo Group's approach to prevent, manage and, where possible, mitigate environmental impacts (which include those related to energy consumption), which are also generated along its value chain. With respect to own operations, reference should be made to the specific guidelines provided in the "Environmental and energy policy" in the section covering the "Policies to mitigate and adapt to climate change".

These regulations are part of a broader context in which the Group confirms its commitment to the principles of sustainable development. By participating in international initiatives such as the UN Global Compact, the UN Environment Programme Finance Initiative (UNEP FI), the UN Principles for Responsible Investment etc., the Group promotes the dialogue between companies, institutions and civil society, also to respect the environment, and supports the dissemination of a culture of sustainability.

Actions and resources in relation to climate change in the supply chain

During 2023, a new application platform was implemented which interfaces with Supplier Gate[82], for the management of the qualification process and for the monitoring of the counterparties of interest, with the aim of automating the collection of all the information required for their assessment, determining a qualification score (global score) and focusing the control activities on the most critical aspects. The assessment of suppliers that registered on the Supplier Gate portal takes into account not only the economic-financial and technical-organisational characteristics of each of them, but also the aspects pertaining to business ethics, respect for human rights, workers' rights, and the environment, based on the statements made through the compilation of specific questionnaires and/or the possession of certain certifications (including ISO 50001 and 14001 and the adoption of an ISO 50001-compliant energy management system). The ESG score obtained is included in the Global Score and is also made available through internal applications and resources and specific management dashboards that generate aggregated information, by number of suppliers and by expenditure, among those with a high, medium or low score.

Suppliers with a medium or high ESG score receive an increasing percentage improvement in their Global Score (which indicates the supplier's possibility of being selected and used by the Group). This approach rewards the best ESG-performing suppliers by giving them a better ranking than competitors with similar performance in other areas.

In 2024, completion of the ESG questionnaire became mandatory and is now a prerequisite for participation in tenders issued by the Group via the Group Supplier Portal. The aim of this initiative is to map the ESG profile of the suppliers used, in order to, particularly with respect to green and social categories, determine the average positioning, assess any critical issues and define an improvement plan to bring all the most strategic partners to a medium/high level of maturity.

In this respect, the Group has set the goal of completing the ESG mapping of all active and managed suppliers by 2025. At the end of 2024, mapping was completed by 86%.

Furthermore, as of 2025, for tenders relating to "green" product categories (as defined in the "Green Banking Procurement Rules") and without any distinction in terms of geographical area or size of the suppliers, the internal delegates in charge of the technical assessment will also receive the ESG Score at counterparty level (if already included in the Group's systems) as well as the ESG score as per the completion of the questionnaire with the corresponding answers, in order to share the strengths and weaknesses of the suppliers participating in the tender as important elements to be assessed prior to the awarding stage.

[81] For additional information about this topic, reference should be made to the "Climate Report".

[82] Application used to interact with suppliers, hence registration processes, updating documents and tender management.

Finally, for suppliers with low ESG scores and included in "green" categories, the Group plans to launch actions that encourage their improvement/awareness by 2030 (e.g., training initiatives, support for obtaining certain certifications).

Energy consumption metrics

The Group measures and reports the effectiveness of its climate change mitigation and adaptation policies using the following metrics: "Energy consumption and mix" and "Energy intensity based on net revenue associated with activities in high climate impact sectors".

Energy consumption and mix

This section covers the energy consumption metrics applicable to the Group's own operations.

In particular, the table below shows the Group's energy consumption in 2024 with the aim of providing a detailed and exhaustive picture of the energy consumed by the processes owned or controlled by the Group. Specifically, total energy consumption is broken down by fossil, nuclear and renewable energy sources. Furthermore, self-production of renewable and non-renewable energy is also shown.

The figures shown below are in megawatt-hours (MWh).

Table 5[83] – Energy consumption and mix (in MWh)

	2024
Total energy consumption	**565,284**
Total fossil energy consumption	*233,889*
Fuel consumption from coal and coal products	-
Fuel consumption from crude oil and petroleum products	36,475
Fuel consumption from natural gas	136,694
Fuel consumption from other fossil sources	-
Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources	60,719
Share of fossil sources in total energy consumption	41.4%
Consumption from nuclear sources	*4,661*
Share of consumption from nuclear sources in total energy consumption	0.8%
Total renewable energy consumption	*326,735*
Fuel consumption from renewable sources	-
Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources	325,382
Consumption of self-generated non-fuel renewable energy	1,353
Share of renewable sources in total energy consumption	57.8%
Non-renewable energy production	23,539
Renewable energy production	1,353
Total energy consumption from activities in high climate impact sectors	1,081
Total energy consumption from activities in high climate impact sectors per net revenue from activities in high climate impact sectors	0.00002

The Group also operates in high climate impact sectors. Consequently, it reports its energy consumption from fossil fuels disaggregated by sources. Furthermore, only to the extent of high climate impact sectors, it provides information on energy consumption and energy intensity (total energy consumption per net revenue) associated with activities in these sectors.

In this respect, it is noted that high climate impact sectors are those listed in sections from A to H and in section L of the Statistical classification of economic activities (NACE), as per Commission Delegated Regulation (EU) 2022/1288: a small number of Group companies operate in sectors covered by sections F-Construction, G-Wholesale and Retail Trade and L-Real Estate Activities. Consequently, "total energy consumption from activities in high climate impact sectors" shows total energy consumption gross of energy from fossil fuel, nuclear sources and renewable sources related to own operations in these sectors. "Total energy consumption from activities in high climate impact sectors per net revenue from activities in high climate impact sectors" is calculated as follows: "total energy consumption from activities in high climate impact sectors (MWh)/net revenue from activities in high climate impact sectors (euro), with the above figure as the numerator and the net revenue attributable to the above activities (high climate impact) as the denominator.

[83] Numbering refers to the XBRL tables published by EFRAG.

Energy intensity based on net revenue in high climate impact sectors

The table below provides useful information for understanding the denominator of the energy intensity ratio. Specifically, it shows the net revenue from activities in high climate impact sectors (as defined earlier) in which the Group operates, which is used to calculate the above energy intensity, in addition to the net revenue[84] broken down by the component not attributable to activities in high climate impact sectors.

Figures are shown in million euro and refer to the Group as a whole.

(millions of euro)

	2024
Net revenue from activities in high climate impact sectors	65
Net revenue from activities other than in high climate impact sectors	51,893
Net revenue	51,958

The above table shows that net revenue from activities in high climate impact sectors used to calculate energy intensity amounts to 65 million, while net revenue from activities not attributable to high climate impact sectors amounts to 51,893 million compared to total net revenue as per the consolidated financial statements (51,958 million).

Greenhouse gas emissions metrics

As part of its strategy to combat climate change in its own operations and at portfolio level, the Group measures and reports the effectiveness of its climate change mitigation and adaptation policies using the metrics below, which contribute to the achievement of its greenhouse gas emission reduction targets.

The Intesa Sanpaolo Group's greenhouse gas emissions are reported in accordance with the GHG Protocol Corporate Standard (Greenhouse Gas Protocol) and relate to:
- Scope 1 direct emissions, which include direct emissions from sources owned or controlled by the undertaking including, inter alia, the emissions generated by heating owned buildings and the fuel used for its car fleet;
- Scope 2 indirect emissions, which include indirect greenhouse gas emissions from purchased or acquired energy, such as electricity, steam, heat or cooling, generated off-site and consumed by the undertaking;
- Scope 3 indirect emissions (classified in the categories from 1 to 15 which are deemed significant; for additional information on these categories, reference should be made to the next paragraph on "Gross GHG emissions – Scope 1, 2, 3 and total"), which include all the other indirect emissions that are a consequence of the activities of the undertaking, but which do not fall under Scope 1 and Scope 2 emissions, such as, for example, those generated by investments ("financed emissions"), production of paper or office equipment, management of waste generated.

Gross GHG emissions – Scope 1, 2, 3 and total

This section covers, in particular, the metrics applicable to greenhouse gas (GHG) emissions which apply to both own operations and the upstream and downstream value chain.

To this end, the table below shows GHG emissions in tonnes of CO_2 (tCO_{2eq}) as a total and by scope, i.e., Scope 1, Scope 2 (location-based[85] and market-based[86]) and Scope 3. Specifically, for Scope 3, it shows the significant categories for the Group with respect to the 15 categories envisaged by the GHG Protocol Corporate Standard. With respect to category 15 ("Investments" attributable to financed emissions), it is noted that this figure is consistent with Pillar 3 reporting.

[84] The Group has adopted the definition of "net revenue" as set out in the Directive on the annual accounts and consolidated accounts of banks and other financial institutions. Specifically, it considered the following income statement items: 262:10, 40, 70, 80, 90, 100, 110, 230 (positive components only), 250 (positive components only), 280 (positive components only)

[85] The location-based method quantifies the GHG emissions associated with energy consumption based on the national average energy generation emission factors of the countries where energy is purchased.

[86] The market-based method considers the specific emission factors provided by heat and electricity providers, which reflect the effective composition of the energy mix purchased. When electricity is sourced from certified renewable sources, a zero emission factor is assigned for Scope 2, as these sources do not generate direct emissions.

Table 6 – GHG emissions (in tCO_2eq)[87]

	2024
Scope 1 GHG emissions	
Gross Scope 1 greenhouse gas emissions	45,280
Percentage of Scope 1 GHG emissions from regulated emission trading schemes	-
Scope 2 GHG emissions	
Gross location-based Scope 2 greenhouse gas emissions	115,789
Gross market-based Scope 2 greenhouse gas emissions	16,656
Scope 3 GHG emissions	
Gross Scope 3 greenhouse gas emissions	**59,892,681**
Percentage of GHG Scope 3 calculated using primary data	*26.4%*
Purchased goods and services	7,179
2. Capital goods	6,432
3. Fuel and energy-related Activities	25,645
4. Upstream transportation and distribution	13,161
5. Waste generated in operations	254
6. Business traveling	5,959
7. Employee commuting	33,441
8. Upstream leased assets	2,419
9. Downstream transportation	-
10. Processing of sold products	-
11. Use of sold products	239
12. End-of-life treatment of sold products	-
13. Downstream leased assets	3,489
14. Franchises	-
15. Investments	59,794,462
Total GHG emissions	
Total GHG emissions (location- based)	60,053,750
Total GHG emissions (market- based)	59,954,617

(metric ton of CO2 eq)

	2024
Gross Scope 1 greenhouse gas emission	45,280
Gross location-based Scope 2 greenhouse gas emission	115,789
Gross market-based Scope 2 greenhouse gas emission	16,656
Gross Scope 3 greenhouse gas emissions	59,892,681

(metric ton of CO2 eq)

	Italy	**Foreign**
Total GHG Emission	35,128,121	24,925,629

[87] This table does not include the columns pertaining to the reference targets. In this respect, reference should be made to the “Greenhouse gas emission reduction targets” and the “Climate change mitigation and adaptation targets in own operations” sections.

With respect to Scope 3, category 15 only includes exposures to non-financial corporations: these emissions are estimated based on information about the counterparty and the average intensity of emissions by sector.
With respect to the Residential Real Estate (RRE) sector, for which the Group has set an emissions reduction target to 2030 described in the "Greenhouse gas emission reduction targets" section, estimated emissions amount to 2 million tCO_2 (this figure is derived from the management accounts). For additional information, reference should be made to the Climate Report.

In addition to the above, it is noted that category 15 - Scope 3 emissions refer to the Group's scope of prudential consolidation and includes financial assets in associates, subsidiaries and joint ventures which are not consolidated.
In preparing the disclosure for Scope 1, 2 and 3 (excluding category 15), the Intesa Sanpaolo Group calculated the emission factors on a country-by-country basis in order to obtain a picture as realistic as possible with respect to the actual emissions generated directly by the Group, in particular for Scope 1 and 2. Each emission factor, multiplied by the respective consumption, generates CO_2eq emissions.
Furthermore, the Group decided to disaggregate and report GHG emissions by country/geographical location (Italy/abroad), disaggregating total emissions and considering Scope 2 emissions calculated in accordance with the location-based method.

The reporting methodologies envisaged by the Italian Banking Association (ABI) Guidelines are usually applied[88].

Specifically, with respect to electricity:
- in terms of "residual mix" (to be used when calculating market-based emissions), the Association of Issuing Bodies (AIB) is the source of emission factors. Where this is not available, the "national mix" is considered;
- in terms of "national mix" (to be used when calculating location based emissions):
  - for Italy, the Italian Institute for Environmental Protection and Research (ISPRA, Istituto Superiore per la Protezione e la Ricerca Ambientale) is the source of emission factors;
  - for the rest of the countries, excluding the US, the International Energy Agency (IEA) is the source of emission factors;
  - for the US, the Environmental Protection Agency (EPA) is the source of emission factors.

With respect to fossil fuel (natural gas, gas oil and LPG):
- for Italy, ISPRA is the source of emission factors;
- for the rest of the countries, excluding the US, the emission factors are calculated using the data collected by the UNFCCC – United Nations Framework Convention on Climate Change. Where these are not available, the average value of the countries considered is assigned;
- for the US, the EPA is the source of emission factors.

With respect to district heating, a more prudent approach was used given the methodology introduced by the new reporting standard. Specifically:
- for Italy, where available, the emission factors reported by the various suppliers were considered, collecting the necessary evidence;
- for the US, the EPA is the source of emission factors;
- for the UK, the Department for Environment Food and Rural Affairs (DEFRA) is the source of emission factors;
- for the rest of the countries, excluding the US and the UK, an average value between that of ISPRA (Italian average factor), EPA and DEFRA was considered.

With respect to the car fleet, reference was made to ISPRA.

Finally, with respect to the Global Warning Potential (GWP) values, the Intergovernmental Panel on Climate Change (IPCC) (Assessment Report) was the reference source.

Scope 3 data collection and calculation methodologies for the significant categories from 1 to 14 included in Table 6 – GHG emissions (in tCO_2eq) are described below.
- Scope 3 - category 1 Purchases of goods and services include:
  - the paper used in office activities. The processes considered are those from production to delivery to the Group. Emissions from production are an average sector scenario, derived from the UK government's greenhouse gas reporting conversion factors. For all processes included in the system boundaries, GHG emission factors have been sourced from Ecoinvent 3.5. The IPCC 2013 equivalence factors have been applied;
  - the use of cloud-based data centre services. Scope 1, 2, 3 annual emissions reported by suppliers, in relation to the services offered to the Group, are considered.
- Scope 3 – category 2. Capital goods include the most significant IT and electronic equipment purchased by the Group during the reporting year: PCs and laptops, monitors, printers, smartphones, tablets, ATMs, etc. The system boundaries include cradle-to-gate operations, i.e. the entire product supply chain. In accordance with the GHG Scope 3 Emission Standard (WBCSD/WRI) protocol, emissions generated by the production of capital goods are entirely recognised when purchased, regardless of the lifetime of the product. Emission factors were sourced, where possible, from publicly available primary data, such as Life Cycle Assessment (LCA) reports, Environmental Product Declarations (EPDs), manufacturers' sustainability statements or, alternatively, for the remaining products, emission factors from the Ecoinvent 3.5 datasets with satisfactory representativeness were applied. Transport distances from production countries, mainly China and other East Asian countries, were considered. ATM machines were modelled based on the percentages of the materials they are composed of and the use of the corresponding Ecoinvent datasets. The IPCC 2013 equivalence factors have been applied.
- Scope 3 – category 3. The energy vector indicator of the Group's energy consumption includes emissions related to the fuel supply chain, construction and operation of infrastructure, distribution and transmission losses.

[88] Reference is made to the Guidelines on the bank-wide application of ESRS in environmental matters, ABI Lab, 2024 (ABI Lab Guidelines).

- In order to characterise impacts, where possible, regional data were used or average European/world-wide scenarios. With respect to electricity consumption, country-specific “residual mixes” were used, where available, or “national mixes”. Ecoinvent 3.5 emission and IPCC 2013 equivalence factors were used and applied, respectively.
- Scope 3 – category 4. With respect to upstream transport and distribution, the emissions generated by the transport of money to replenish ATMs by third-party companies on behalf of the Group were considered.
- The system was modelled assuming a van transport scheme. Emissions cover all stages of the life cycle: fuel supply chain, combustion emissions and vehicle manufacture. Ecoinvent 3.5 emission factors were used.
- Scope 3 – category 5. Waste-related emissions include the end-of-life treatment of special waste generated for the Group's operations. The stages considered include the transport of waste to treatment facilities and the end-of-life treatment. Information on the effective end-of-life was sourced from the Waste Identification Forms completed in accordance with the applicable Italian legislation and from specific questionnaires provided for foreign companies. With respect to the remaining waste streams sent to landfill, incineration or other treatment processes, Ecoinvent 3.5 emission factors were used. The IPCC 2013 equivalence factors have been applied.
- Scope 3 – category 6. Emissions related to business travel include journeys made by aircraft, trains and personal cars by employees. The methodology used to calculate emissions, in accordance with the ABI Guidelines, is based on data obtained by applying appropriate ratios derived from the ICAO's Carbon Emission Calculator, the EcoPassenger application and ISPRA's National Information System.
- Scope 3 – category 7. Emissions due to employees’ commuting are calculated, for Italy, using the data obtained from specific questionnaires sent to employees that operate in cities covered by Commuting Plans and subsequently remeasured against the total number of Group employees. Using the primary data, specific emission factors are applied, as extracted from the ISPRA database. Public transport and shuttles, motorbikes, private cars and trains were considered.
- Scope 3 – category 8. The Intesa Sanpaolo Group has buildings leased by third parties which are used as guest houses. It is assumed that these assets have unit emissions similar to assets with operational control[89]. For reporting purposes, intensity factors (location-based Scope 1+2 CO2eq/m2) were calculated for buildings with operational control and applied to guest houses leased by third parties.
- Scope 3 – category 11. With respect to the banking/financial services/products used by customers, the main transactions were considered, broken down by channel used (internet banking/mobile banking), type (payment/transfer) for Group banks. The following information was considered for assessment purposes: average time and average electricity consumption for each operation broken down by type of device used. The operating time was estimated, while the average electricity consumption for mobile devices and PCs was based on sector studies. The emission factors for electricity consumption are those used for Scope 2 calculation purposes.
- Scope 3 – category 13. The Intesa Sanpaolo Group has owned assets which are leased to third parties (properties classified in accordance with IAS 40). No operational control exists for these properties: the reporting approach is based on this principle. Specifically, IAS 40 includes properties leased to third parties which are not part of the Group’s core business. For reporting purposes, where available, precise consumption data were used, applying the relevant emission ratios and, in other cases, intensity factors (location-based Scope 1+2 CO2eq/m2) for buildings with operational control and applied to those leased to third parties, assuming that these assets have unit emissions similar to those of assets with operational control. Consequently, assets held for investment purposes in “Commercial Real Estate” and assets under finance leases to third parties are not included in this category, as they are linked to strictly related banking transactions.

Prudently, all properties that were not classified under IFRS 5 at the beginning of 2024, despite being classified as assets held for sale during the year (e.g. the property in Via Clerici in Milan), were considered when reporting the related GHG emissions.

Compared to that disclosed in the Group's “2023 Consolidated Non-financial Statement”, it is noted that Scope 3 reporting also included emissions:
- from the use of cloud-based data centre services under category 1 - Purchased goods and services;
- under category 7 – Employee commuting;
- under category 8 – Upstream leased assets;
- under category 13 – Downstream leased assets.

Overall, the percentage of GHG Scope 3 emissions calculated using primary data, sourced from suppliers or other partners along the value chain, was 26.4% for all significant categories reported.

Based also on “Table 6 – GHG emissions (in t CO_2eq)”, it is noted that Scope 3 emissions related to the following categories were excluded:
- Scope 3 – category 9 “Downstream transportation”, as the Intesa Sanpaolo Group does not produce goods that require transport and distribution;
- Scope 3 – category 10 “Processing of sold products”, as there are no intermediate products that require further processing, transformation or inclusion in another product before use;
- Scope 3 – category 12 “End-of-life treatment of sold products”, as the Intesa Sanpaolo Group does not produce goods that require end-of-life treatment;
- Scope 3 – category 14 “Franchises”, as the Group does not grant third party companies licences to sell or distribute its services.

Furthermore, at 31 December 2024, the Group has biogenic emissions of CO_2 from the combustion or bio-degradation of biomass equal to 0 for Scope 1 areas. With respect to Scope 2 and 3, no national methodologies are in place for the timely identification of such indirect emissions.

[89] Based on that set out in the Italian Banking Association (ABI) Guidelines, the emissions generated by owned assets leased to third parties are reported in accordance with the principle of operational control.

In 2024, the percentage of contractual instruments used by the Group to purchase and sell energy with respect to GHG Scope 2 emissions is 81.3%; that of bundled contractual instruments is 76.5%, while the percentage of unbundled instruments is 4.8%.

The Intesa Sanpaolo Group focuses, in particular, on reporting the electricity purchased from renewable sources. At present, the contractual instruments used to certify the use of this type of energy are as follows:
- Guarantee of Origin (GO) certificates;
- specific "green" supplies identified in supply contracts;
- Power Purchase Agreements (PPA);
- International Renewable Energy Certificates (i-REC).

At present, the bundled contractual instruments that certify the use of electricity from renewable sources are those listed above, while the unbundled ones are only the i-RECs, purchased for Egypt.

Finally, there are no significant changes to report about the effects of any significant events and changes in the circumstances (affecting GHG emissions) that occurred between the reporting date of this document and the reporting dates of the entities included in the Group's value chain.

Financed emissions

As part of Scope 3 - category 15, in line with the methodology developed by the Partnership for Carbon Accounting Financials (PCAF), the following priority of emission data sources has been established:
- reported emissions: collected directly by the counterparty or by infoproviders (they account for 26.5% of the financed emissions reported at 31 December 2024);
- physical activity-based emissions: estimation based on the production data of the counterparty multiplied by specific emission factors;
- economic activity-based emissions: sectoral proxy calculated based on sectoral emission intensity, and country/geographical area and counterparty size if the estimation sample is deemed sufficient. With respect to the counterparty, the emission figure is obtained by multiplying the counterparty's revenue by specific emission factors derived from a clustering model.

Financed emissions are calculated by considering the exposure (loans and advances, debt securities, and equity investments) to the counterparties in relation to the total liabilities (financial liabilities and equity) of the counterparties. Specifically, the reference period for emissions figures is updated to 2022. Consequently, the delay between the Group's exposure data and emissions data is two years.

Finally, there are no significant changes to report about the effects of any significant events and changes in the circumstances (affecting GHG emissions) that occurred between the reporting date of this document and the reporting dates of the entities included in the Group's value chain.

GHG emission intensity

This section covers the intensity of GHG emissions, i.e. total GHG emissions in metric tonnes of CO_2eq compared to net revenue.

The Group calculates this intensity using the following formula: total GHG tCO_2eq emissions/net revenue.

In this respect, the net revenue used for calculation purposes amounts to 44,798 million, compared to total revenue of 51,958 million as per the financial statements at 31 December 2024. The table below provides useful information for understanding the above denominator and, in particular, the reconciliation of the net revenue used to calculate GHG emission intensity with net revenue as per the financial statements. Figures are expressed in million euro.

(millions of euro)

	2024
Net revenue used to calculate GHG intensity	44,798
Net revenue other than used to calculate GHG intensity	7,160
Net revenue	51,958

On the other hand, the numerator of GHG emission intensity is equal to the total emissions, indicated above.

Based on the above, the intensity of GHG emissions is as follows:
- 0.001338 tCO2eq/euro under the market–based method;
- 0.001341 tCO2eq/euro under the location–based method.

The Group has adopted the definition of "net revenue" as set out in the Directive on the annual accounts and consolidated accounts of banks and other financial institutions. Specifically, it considered the following income statement items: 262: 10, 40, 70, 80, 90,100,110, 230 (positive components only), 250 (positive components only), 280 (positive components only). In line with the prudential scope, to which the Scope 3 - category 15 emissions represented by the numerator refer, it is noted that the denominator does not include items 160 and 170 which pertain to the "revenue" of the insurance segment. Furthermore, since category 15 is the most significant addend in the numerator of GHG emission intensity, even considering only the revenue items consistent with category 15 alone, the figure would be less than 0.003.

Internal carbon pricing

Internal Carbon Pricing (ICP) is a scheme through which undertakings assign a monetary value to GHG emissions and integrate it (the “price”) into investment decisions and business operations. Specifically, an Internal Carbon Pricing scheme uses market mechanisms and transfers the cost of GHG emissions to the issuer by assigning a price on carbon dioxide emissions.
The adoption of an internal carbon pricing scheme by the Group is a strategic decision aimed at managing climate-related business risks and promoting a transition to a zero-emission business model.

The scheme used by the Group to set its internal carbon price (the “ICP scheme”), is the shadow price and refers to Green Banking Procurement, in particular purchases of IT equipment. Indeed, the ICP is applied to all procurement activities that go through information and communication technologies (ICT) purchases, which are carried out centrally, in line with the Group's procurement policy. In residual cases (e.g. specific geographical areas) for specific purchases that do not go through centralised procurement, the ICP does not apply.

In this respect, the GHG emissions generated by the electricity consumed through IT equipment are subject to internal carbon pricing, based on product certifications (e.g. Energy Star) and/or supplier declarations. The resulting cost is added to the purchase and usage cost (energy), contributing to the lifecycle cost of the machines. This assessment supports Intesa Sanpaolo Group in selecting the most convenient supply from a lifecycle perspective. The main categories of tools subject to ICP include laptops 99%, mini-desktops 100%, desktops 100%, cash in-cash out 100%, ATMs/MTAs 100%, monitors 35% and printers 81%.

Pricing is applicable to the environmental impact analysis via a technical assessment of the equipment and an assessment phase of energy consumption and environmental characteristics. In 2019, the internal carbon price was set at €57/tCO_2eq, as indicated by the Life Cycle Impact Assessment Environmental Prices method in its 2018 EU28 version, which calculates the carbon footprint over the entire life cycle of the product in line with market practice. In 2023, the ICP rose to €100/tCO_2eq, up considerably on the €64/tonCO_2eq indicated by the NGFS, in line with the call to increase domestic prices in view of the 1.5°C target and within the range of €50-160/tonCO_2eq as proposed by the LCIA Environmental Prices. Pricing is applicable for the environmental impact analysis via a technical assessment of the equipment and an assessment phase of energy consumption and environmental characteristics.
The ICP is calculated based on a third-party study.

ICP emissions include Scope 2 location-based emissions related to electricity consumption (emissions linked to the use of IT devices in scope), equal to 3,487 tCO_2eq in 2024, while the share percentage of GHG Scope 2 emissions covered by the ICP scheme in relation to total GHG Scope 2 location-based emissions is equal to 3.02%.

Table 11 – Application of shadow price

	Volume at stake (tCO_2eq)	Prices applied (€/tCO_2eq)	GHG Scope 1 [%]	GHG Scope 2 [%]	GHG Scope 3 [%]	Perimeter description
CapEx shadow price	3,487	100		3.0 %		
Research and Development (R&D) investment shadow price						
Internal carbon fee or fund						
Carbon prices for impairment testing						

Anticipated financial effects from material physical and transition risks and potential climate-related opportunities

This section covers the anticipated financial effects from material physical risks. Specifically, the Group decided to disclose only the information already available as part of Pillar 3 reporting, availing of the phase-in provisions for the other information covered by the current disclosure requirement.

The following table, which complies with Pillar 3 disclosure, provides information on exposures in the banking book, including loans and advances, debt securities and equity instruments not held for trading and not held for sale, towards non-financial companies, on loans collateralised by immovable property and on repossessed real estate collateral, exposed to chronic and acute climate-related risks, with a breakdown by sector of economic activity (NACE classification) and by geography of location of the activity of the counterparty or of the collateral, for those sectors and geographical areas subject to climate change acute and chronic events.
Sensitive exposures are shown separately:
- for the impact from chronic events only, including risks relating to gradual changes in weather and climate and having a possible impact on economic output and productivity;
- for the impact from acute events only, including risks that may cause sudden damage to properties, disruption of supply chains, and depreciation of assets;
- for both the impacts described above.

(millions of euro)

The assets exposed to significant physical risk are located in Italy and in the areas where the Group's main European investees operate (i.e. Croatia, Romania, Slovakia, Slovenia, Serbia and Hungary).

For the identification of exposures subject to climate change physical risk, the Intesa Sanpaolo Group has used an external provider that has provided mapping and measurement of the risks at individual property level (understood as a collateral asset or registered office/production site where available, for exposures to Non Financial Corporations). The Group has prudently chosen to use the “Current Policies” scenario provided by the NGFS (equivalent to a Representative Concentration Pathways (RCP) 6.0 scenario[90]) as the baseline scenario, as it assumes that current policies are not subject to any changes by regulators, resulting in very high physical risks. The physical risk events considered differ according to the business sectors of the companies and the loans collateralised by immovable property based on the specific characteristics of each type of exposure.

[90] Climate change pathways based on different concentrations of greenhouse gases. The RCP 6.0 scenario is the pathway leading to a radiative forcing of 6.0 W/m^2 by 2100, with CO_2 levels reaching 670 ppm and global temperatures rising by +3-4°C.

The following table shows the exposures collateralised by commercial and residential immovable property and repossessed real estate collateral, including information on the energy efficiency level of the collateral measured in terms of kWh/m² energy consumption and label of the energy performance certificate (EPC).

The presentation is broken down according to the geographical area in which the collateralised property is located (EU and non-EU area). Where the energy efficiency level in terms of kWh/m²/year is an estimated figure, this is stated in the row concerned. The estimation is only calculated for the types of immovable property provided as collateral subject to mandatory energy performance certificate (e.g. residential properties, buildings used for production).

(millions of euro)

ESRS E2 – Pollution

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E2 – Pollution were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings in relation to pollution (for instance, "Rules for the Environmental and Energy Policy and Group Guidelines on ESG Risk Governance") and the governance measures in place to minimise the negative impacts connected with pollution in own operations and in the upstream and downstream value chain, along with an assessment of the risks tied to aspects of pollution to which the Group may be exposed. For the purposes of the double materiality assessment, experts in environmental matters were engaged.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders (such as interviews with experts in the sector) and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers connected with, among other things, the adoption of internal policies and the promotion of initiatives able to guarantee delivery of pollution reduction targets;
- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties belonging to high-impact industries from a pollution point of view. In addition, investment/lending criteria and strategies were taken into account in assessing the counterparties.

The impact materiality outcomes found by the assessments identified negative indirect material impacts in the downstream value chain. The materiality of the impacts was specifically tied to exposures in Group portfolios toward counterparties belonging to industries that potentially have a negative impact on the matter in question.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeters identified.

With reference to risks, the following assessments were made:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks in relation to pollution were found;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the matter in question (such as pollution-related events and the use of polluting substances, or lack of action taken to reduce pollution);
- downstream value chain: the assessment focused on credit risk and market risk connected with the matter in question, This would also give rise to reputational risk.

In terms of financial materiality, the assessment of the downstream value chain found that credit risk and reputational risk were material. The materiality of the impacts was specifically tied to exposures in Group portfolios toward counterparties belonging to industries that potentially have a negative impact on the matter in question, especially in terms of air pollution, soil pollution and microplastics.

In relation to opportunities, the financial materiality assessment was conducted with reference to the following perimeters:

- own operations: on the basis of interviews with the competent organisational units, the assessment looked at current and/or planned Group initiatives for reducing pollution, with reference to the Group's own operations;
- upstream value chain: no potentially material opportunities were identified in terms of financial materiality;
- downstream value chain: opportunities were assessed in relation to the possibility of expanding the product range to include new products aligned with environmental sustainability objectives. The assessment took into consideration the performance targets and indicators in the budget and business plan for loans provided or planned with environmental objectives.

The financial materiality assessment did not identify any material opportunities among those mapped, as none were found to target or significantly further the management and reduction of pollution on the part of customer counterparties, nor were any initiatives found to be material for own operations, given the specific nature of the Group's operations.

Policies, targets and actions at portfolio level

Pollution policies

In line with the principles of its Code of Ethics, Intesa Sanpaolo Group has joined major international initiatives such as the UN Global Compact and the Principles for Responsible Banking (PRB), making it one of the premiere European financial groups to have joined all of the leading sustainability initiatives sponsored by the United Nations for the financial sector, within the framework for achieving the United Nations Sustainable Development Goals.

Accordingly, the Group acknowledges the problem of pollution, the benefits that can come from preserving and restoring nature, and the key role that financial institutions can play in this regard.

Underlining its commitment and in accordance with the "Group Guidelines for ESG Risk Governance", in 2024 Intesa Sanpaolo Group prepared new "Rules on Biodiversity and Nature", which were adopted in January 2025. The rules take up the requirements of the E4 standard to support own operations relating to these topics, also through sustainable loans to customers for projects that have a positive impact in this area.

Applicable to all the Group, the rules identify a list of sensitive economic sectors that have a potentially negative impact on biodiversity and/or pollution. The sectors include the mining industry and the extraction of resources, which is known to be a potential cause of soil and water pollution, and the transport industry, where vehicle emissions are polluting (besides CO_2, nitrogen oxides and particulate matter, for example). Under the rules, lending is prohibited to counterparties engaged in, and projects connected with, such activities and located in critical geographical areas, such as protected areas and countries that have not ratified the main accords and protocols on the environment, such as the Montreal Protocol on Substances that Deplete the Ozone Layer.

Where there is evidence of potential impact, special attention is to be focused in ESG and reputational risk assessments on sensitive activities located in countries that have not ratified one or more international conventions. The list of conventions includes those addressing the matter of pollution, such as the Rotterdam Convention on chemical products and pesticides, the Basel Convention on hazardous waste and the Stockholm Convention on Persistent Organic Pollutants.

The rules are part of the general framework of Group ESG risk management, risk appetite and relevant strategic guidelines. An overview of the rules is available to the public for all stakeholders to access on the Group's website. Responsibility for the updating of the Rules on Biodiversity and nature is tasked to the governance areas of the Chief Risk Officer (CRO) and Chief Sustainability Officer (CSO) to ensure their alignment with applicable national and international regulations, standards and best practices.

Pollution targets

In relation to environmental risks, including pollution, the aim of the Group is to incorporate measures into the risk management framework and related decision-making processes to ensure their governance. Nevertheless, it should be stressed that the materiality assessment performed, for the standard in question, on the loan portfolio is based on current models and metrics that are still under development, in terms of their methods and standardisation, and factored in a medium/long-term time horizon. The development of methodological standards of reference and the availability of more detailed and reliable data will enable the materiality assessment to be fine-tuned and additional, more specific governance measures to be introduced.
As mentioned in the previous section, risk governance measures introduced include the "Rules on Biodiversity and Nature", which focus specifically on matters relating to pollution. In addition, as reported below, the Group has initiatives and actions in place to help minimise pollution, although no specific quantitative targets have been set.

Pollution actions

While the public information of a quantitative and verifiable nature required for the measurement of this risk and for targeted action to be taken is lacking, the Group has adopted a number of initiatives and actions for the management and governance of ESG matters, and specifically environmental matters, in the loan portfolio, which cover the direct or indirect impacts of pollution. Those initiatives and actions include "S-Loan Progetti Green" loans and loans backed by SACE Green guarantees, which also support investments aimed at preventing, controlling and reducing pollution, as well as a third-party environmental insurance policy, which covers damage to the environment or imminent pollution threats and emergency services for the conservation and restoration of the affected area.

In addition, the proprietary ESG scoring model utilised by the Group to assess the ESG profile of corporate customers takes into consideration components connected with pollution. The scoring model considers information sourced from external providers on environmental certifications and, for counterparties assessed by the main international info-providers, information on waste and pollution.

The resulting ESG score is incorporated into group processes to give an ESG perspective in the application of the credit framework and credit strategies, showing how the pollution considerations making up the score are included in frameworks and strategies relevant to the Group.

Furthermore, the Group recognises the importance of widespread stakeholder engagement in fostering the development of mindset focused on reducing pollution and protecting nature. Accordingly, Intesa Sanpaolo contributes to the creation of engagement opportunities that promote a culture of sustainable change, involving engagement initiatives, partnerships, training, research projects, participation in working tables and awareness-raising campaigns. In this regard, Intesa Sanpaolo Group is a signatory of the Finance Leadership Statement on Plastic Pollution, in acknowledgement of the role the financial sector can play in addressing the material risks of pollution and promoting the ecological transition.

ESRS E3 – Water and marine resources

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E3 – Water and Marine Resources were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings in relation to the topic (for instance, the Rules for the Environmental and Energy Policy and Group Guidelines on ESG Risk Governance) and risk governance measures activated by the Group, also considering the agreements/partnerships in place with associations (such as One Ocean Foundation, which engages in research activities for marine conservation) and partnerships with universities to develop initiatives on the matter (such as the development of a blue economy study centre), as well as an assessment of the risks tied to water management and use to which the Group may be exposed. For the purposes of the double materiality assessment, experts in environmental matters were engaged.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with competent internal units and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative information such as internal policies, company strategies and initiatives for the responsible use of water;
- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties/undertakings belonging to high-impact industries from a water and marine resources point of view. In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeters identified.

With reference to risks, the following assessments were made:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks connected with the topic were found;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to water and marine resources;
- downstream value chain: the assessment focused on credit risk and market risk connected with the matter in question, This would also give rise to reputational risk.

In relation to opportunities, the financial materiality assessment focused on the downstream value chain, given the specific features of the Group's business and the finance business in general. In terms of business development opportunities, the assessment specifically looked for targets and performance indicators linked to the sustainability matters in question in the budget and business plan.

The double materiality assessment performed found that the topics addressed by standard ESRS E3 – Water and Marine Resources were not material at Group level, both in terms of impact materiality and financial materiality. In relation to own operations, the Group was not found to have a material impact on water consumption and management, while in relation to the upstream and downstream value chain, the concentration of exposures and suppliers that could have an impact on the matter was not found to be significant.

The Group is engaged in business areas focused on customer lending for the specific purposes of improving the management and efficiency of water use; however, such initiatives, at present, make up only a marginal part of overall business and are not, therefore, material for the purposes of disclosure in this statement.

ESRS E4 – Biodiversity and ecosystems

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E4 – Biodiversity and Ecosystems were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings and risk governance measures activated by the Group to promote and protect biodiversity and ecosystems, also through initiatives and projects dedicated, for instance, to reforestation and natural capital preservation such as "Think Forestry" (for more information see the section "Strategy to combat climate change at portfolio level" in Standard ESRS E1), as well as an assessment of the risks tied to biodiversity issues to which the Group may be exposed.

Specific analyses were carried out to assess the Group's dependencies and impacts in relation to biodiversity, ecosystems and related services. For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders, including experts in environmental matters, and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers, such as internal Group policies and companies strategies relating to the matter (for example, combating climate change, the overexploitation of land, etc.);
- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties/undertakings belonging to high-impact industries from the point of view of biodiversity, the state of species and the extent and condition of ecosystems. In addition, investment/lending criteria and strategies were taken into account in assessing the counterparties.

The impact materiality outcomes found by the assessments identified negative indirect material impacts in the downstream value chain. The materiality of the impacts was specifically tied to exposures in Group portfolios toward counterparties belonging to industries that potentially have a negative impact on specific issues, such as climate change, the intensive use of natural resources, pollution and other aspects that together affect biodiversity loss. With reference to the downstream value chain, no actual or potential negative material impacts were found on affected communities, as regards commodity production or procurement, given the specific nature of the Group's business.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeters identified.

With reference to risks, the following assessments were made:

- own operations: considering the specific features of the Group's core business, the fact that its offices are not located in protected or high-biodiverse areas and the feedback from interviews with competent organisational units, no risks were identified regarding any direct impact on the loss of biodiversity and the extent and condition of ecosystems;
- upstream value chain: the assessment focused on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to sustainability matters (such as the adoption of measures to mitigate the risk of environmental pollution and an environmental policy);
- downstream value chain: the assessment focused primarily on the potential credit risk and market risk arising from threats to biodiversity and the equilibrium of the relative ecosystems, This would also give rise to reputational risk.

The financial materiality assessment of the downstream value chain identified a material credit risk in the Group's credit exposures to counterparties belonging to sectors that depend on ecosystem services and to industries that have a potentially negative impact on specific issues, such as climate change, the intensive use of natural resources, pollution and other aspects that together affect biodiversity loss. As a result, the reputational risk arising from the negative impact of such credit risk on the Group's image was found to be material.

In relation to opportunities, the financial materiality assessment was conducted and identified opportunities with reference to the following perimeters:

- own operations: on the basis of interviews with the competent organisational units, the assessment looked at current and/or planned Group initiatives in support of biodiversity and ecosystems, which could contribute to improving the Group's reputation;
- downstream value chain: the possibility of expanding the range of products aligned with biodiversity objectives. The assessment also took into consideration any targets and performance indicators in the budget and business plan and indicators on loans planned or provided aimed at improving impacts on and the preservation of biodiversity and ecosystems.

The financial materiality assessment did not identify any material opportunities among those mapped, as none were found to target or significantly further the management and reduction of elements directly tied to biodiversity loss on the part of customer counterparties, nor were initiatives found to be material for own operations, given the specific nature of the Group's operations.

Resilience Assessment

In 2024, the governance area of the Chief Risk Officer (CRO) carried out a risk assessment of the natural capital of Intesa Sanpaolo Group. That "resilience assessment" was the starting point for a pilot exercise to assess the impacts on biodiversity and the dependencies on ecosystem services of the Group's corporate customer portfolio.

The pilot exercise was run on a sample portfolio of undertakings representing the core business of Intesa Sanpaolo Group, and hence the loan portfolio. Undertakings were chosen for the sample considering, by order: (i) industries listed as "priority sectors" by international standards and initiatives such as the "Taskforce on Nature-related Financial Disclosures" (TNFD); and (ii) undertakings with the greatest exposures in each of the portfolio sectors of the IMI Corporate & Investment Banking (IMI C&IB) and Banca dei Territori (BdT) divisions.

In the absence of a specific standard for climate macro-scenarios, currently being developed by the Network for Greening the Financial System (NGFS), the assessment focused on actual impacts and dependencies, drawing from updated sector-specific estimates and maps on the state of ecosystems available at the end of 2023.

Expanding its sights, the materiality exercise in 2024 introduced medium-to-long-term considerations (2030–2050) by using ecosystem scenarios based on the Mean Species Abundance (MSA) metric. This enabled forward-looking assessments to be incorporated into the analysis, enriching the understanding of local area risks for corporate customers.

Finally, the pilot exercise was based exclusively on information in the public domain, such as sector-specific estimates and area maps, without the direct engagement of the counterparties or local experts.

For each dimension considered, various risk levels were set and the Group's exposure measured at each level, in terms of gross carrying value. The resilience assessment looked at (i) the single dimension (impact and dependency) of risk (both transaction and physical risk) and (ii) the aggregate level.

Specifically, the assessment focused on impacts on nature and the relative impact and natural capital dependency indicators:
- impacts on nature (such as changes in nature caused by business operations, which can lead to potential impacts on social and economic matters) and dependencies on nature, such as aspects of ecosystem services on which an organisation or other actors depend for their operations (such as water availability, etc.);
- seven impact indicators (which can be categorised as "pressure" factors on biodiversity) affecting the transaction risk of corporate customers, and three indicators of natural capital dependency (which can be categorised as risk factors tied to the degradation of ecosystem services) affecting the physical risk of corporate customers.

The approach adopted by the Group was aligned to best practices and the guidelines provided by the Taskforce on Nature-related Financial Disclosures (TNFD), as well as the "Locate, Evaluate, Assess and Prepare" (LEAP) process recommended by the TNFD. In particular, the loan portfolio's exposure to vulnerability in relation to environmental risks was assessed. This process enabled a top-down, sector-based view of materiality and a bottom-up view of local area materiality to be integrated into the exercise. The main drivers of impacts and dependencies were analysed for 1,000 non-financial counterparties of greatest materiality in terms of exposure and priority sectors, as identified by the TNFD.

a) The "Locate" step involved locating head offices and local production facilities to lay the groundwork for analysing interactions between industries and surrounding nature (direct operations). Access to external information sources for mapping ecosystems was instead the starting point for identifying ecosystem services and biodiversity pressures.
b) The "Evaluate" step involved the specific impact/dependency scoring of each sector using sector-level materiality (top-down approach). Impacts and dependencies (for direct operations) were assessed using a bottom-up approach, taking into account the relevance of the state of specific natural resources for the assessment area and the materiality of the sector-specific dependency or impact.

The relevance and materiality of the direct operations of counterparties were then adjusted using input-output matrices for the analysis of risk in the upstream value chain. For each company (at the local unit level), the different sector-specific and local area scores were estimated and normalised, so as to enable comparison between sectors and geographical areas.

c) In the "Assess" step, the environmental risk exposure of the loan portfolio was quantified by combining the sector-specific and local area vulnerability scores and taking into account the associated exposure of each counterparty.
d) In the "Prepare" step, the pilot exercise described laid the groundwork for a broader assessment of nature-related risks covering the entire loan portfolio of the parent company.

The resulting assessment outcomes are shown in terms of expected qualitative impacts at aggregate level, considering the median of the single impact and dependency indicators in the perimeter, classified as: very low, low, medium, high and very high.

Overall, in quantifying the environmental risk exposure of the loan portfolio (considering the top 1,000 undertakings within "priority" sectors), by combining the sector-specific and local area vulnerability scores, the pilot exercise found only a small portion of the portfolio analysed to be exposed to medium/high sector-specific and local area risks.

Finally, a series of follow-up actions (including some already pursued by the Group) were identified to adapt strategy to the outcomes of the resilience assessment in relation to changes in biodiversity.

These actions aim to mitigate risks, capitalize on opportunities and pave the way for the long-term sustainability of the Group in the face of environmental challenges. The actions include, for example, the development of the assessment framework to expand the perimeter of counterparties assessed and incorporate forward-looking metrics; the setting of rules on biodiversity (see the relevant section for a detailed description); the constant, pro-active monitoring of the relative statutory framework; participation in climate change working groups and initiatives; risk assessments linked to ESG matters in the lending process; the incorporation of ESG risks into creditworthiness assessments; and ESG sector mapping.

Policies, targets and actions at portfolio level

Policies related to biodiversity and ecosystems

Intesa Sanpaolo Group acknowledges the risks arising from biodiversity loss and pollution, the benefits that can come from preserving and restoring nature, and the key role that financial institutions can play in this regard. Accordingly, the “Group Code of Ethics” takes biodiversity and nature conservation into consideration in terms of the direct and indirect environmental impacts that Group operations can generate.

A specific Group policy governs own operations in relation to risks affecting biodiversity and ecosystems. The policy sets out specific limitation and exclusion criteria, fine-tunes risk assessment procedures and encourages sustainable lending aimed at promoting the conservation or improvement of biodiversity or ecosystem services, also with the welfare of local communities in mind.

Within this framework, in 2024 the Group prepared new “Rules on Biodiversity and Nature”, which were adopted in January 2025, as explained in the section “Pollution policies”. The rules outline the approach adopted by Intesa Sanpaolo Group to biodiversity and nature issues in relation to lending activities, wealth management & protection, direct impacts and initiatives to further the ecological transition.

Applicable to all the Group, the rules also set out exclusion, heightened assessment and risk monitoring criteria for lending to new projects and counterparties. The exclusion criteria identify the new projects and counterparties that the Group declines to finance, based on their location, their economic sector (including intensive farming and sectors that have an impact in terms of deforestation and the indiscriminate use of marine resources), and the classification of certain types of projects as “controversial” due to their impacts or dependencies on aspects of biodiversity and nature. In particular, lending to new projects and counterparties is considered at risk where they are located in countries that have not ratified the main conventions on biodiversity and nature or in protected geographical areas under the main international conventions.

In line with the Group’s strategic guidelines and ESG risk governance framework, Intesa Sanpaolo Group focuses special attention in its own operations on new projects in sectors and/or geographical areas of high exposure to ESG risks, especially in terms of biodiversity and nature, which are assessed through an “ESG & Reputational Risk Clearing” process. Accordingly, the “Rules on Biodiversity and Nature” refer to a series of international biodiversity conservation and environmental protection conventions, including the Convention on Biological Diversity (CBD), the Cartagena Protocol and the Rotterdam Convention, which together provide a regulatory framework for promoting sustainable practices, guaranteeing biosafety and restricting the use of hazardous chemicals. The conventions additionally support the traceability of products, components and raw materials throughout the value chain, improving the sustainability of production chains in the countries that have implemented the conventions.
The implementation of the Equator Principles is also relevant here, providing a framework that contemplates the protection of biodiversity and the sustainable management of natural resources. For more details, see the section “ESG Risk Governance Process” in standard ESRS E1.

In addition, the Group sets criteria to support undertakings working in practice towards, or wishing to pursue, ecological transition, also as regards biodiversity topics. In this regard, the group promotes and always permits loans that are EU taxonomy-aligned and sustainable from an “environmental” point of view, in accordance with internal classification rules as specifically concerns biodiversity and ecosystem conservation and restoration objectives.

The rules are part of the general framework of Group ESG risk management, risk appetite and relevant strategic guidelines. An overview of the rules is available to the public for all stakeholders to access on the Group’s website. Responsibility for the updating of the rules is tasked to the governance areas of the CSO and CRO to ensure their alignment with changing regulations, standards and national and international best practices on the matter.

With specific reference to asset management, Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.A., Fideuram Asset Management (Ireland) and Eurizon Capital SGR all take into consideration the principal adverse impacts (PAI) of their investment decisions on sustainability factors and regularly disclose the outcomes in the relative reports.

Eurizon had adopted its own “Commitment Policy” in which the company has outlined an internal screening framework based on the principles set out in the Kunming-Montreal “Global Biodiversity Framework” (GBF). Named Eurizon Naturewatch, it is designed to identify issuers that can give rise to negative impacts on biodiversity as a result of (i) their production sites being located near sensitive areas and fragile ecosystems, or (ii) their own operations. The aim of the framework is to provide an assessment of the exposure of investee companies to issues connected with the exploitation of ecosystems and the potential value losses associated with such exposure, so as to prioritise engagement initiatives with investees with the greatest such exposure.

Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.A. and Fideuram Asset Management (Ireland) have similarly published commitment policies and sustainability policies. Specifically, the commitment policies identify the mitigation of biodiversity loss as one of the four "macro-themes" cutting across all industry sectors, namely: (i) reduction of GHG emissions; (ii) mitigation of biodiversity loss; (iii) respect for human rights and combating the manufacture of non-conventional weapons; and (iv) good corporate governance practices.

Targets related to biodiversity and ecosystems

In relation to environmental risks, including biodiversity and ecosystems, the aim of the Group is to incorporate measures into the risk management framework and related decision-making processes to ensure their governance. Nevertheless, it should be stressed that the materiality assessment performed, for the standard in question, on the loan portfolio is based on current models and metrics that are still under development, in terms of their methods and standardisation, and factored in a medium/long-term time horizon. The development of methodological standards of reference and the availability of more detailed and reliable data will enable the materiality assessment to be fine-tuned and additional, more specific governance measures to be introduced.
As mentioned in the section "Policies related to biodiversity and ecosystems", the Group has adopted "Rules on Biodiversity and Nature" to govern these matters. Finally, as reported below, the Group has initiatives and actions in place in support of biodiversity and the protection of ecosystems, although no specific quantitative targets have been set.

Actions related to biodiversity and ecosystems

While the public information of a quantitative and verifiable nature required for the measurement of this risk and for targeted action to be taken is lacking, the Group has nevertheless started up a number of initiatives and actions to support undertakings in their ecological transition. They include medium/long-term financing through "S-Loan Progetti Green" loans and specific green guarantees, such as loans backed by SACE Green guarantees, which can also be used to fund projects and initiatives concerning biodiversity and ecosystems.

In this respect, Intesa Sanpaolo has developed a "Green, Social and Sustainability Bond Framework" for issuing bonds to finance eligible loans under the environmental categories of the framework, including projects for the management of living natural resources, land and biodiversity.

Moreover, the ESG score used by Intesa Sanpaolo Group to assess the ESG profiles of corporate customers also considers components concerning biodiversity and natural resources. The scoring model takes into account information sourced from external providers on environmental certifications and, for counterparties assessed by the main international info-providers, information on initiatives pursued by the undertaking for the restoration, rehabilitation and clean-up of local areas, and an assessment of the impacts of the undertaking's own operations on biodiversity and water resources.

The resulting ESG score is incorporated into group processes to give an ESG perspective in the application of the credit framework and credit strategies, showing how the biodiversity considerations making up the score are included in frameworks and strategies relevant to the Group.

In 2023, Eurizon Capital SGR, Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.P.A. and Fideuram Asset Management (Ireland) joined the Nature Action 100 initiative, which promotes the adoption by institutional investors of best practices to combat biodiversity loss and deforestation.

Intesa Sanpaolo Group supports sustainable growth and development also through partnerships, training initiatives and applied research projects. Examples include the applied research projects developed with the Intesa Sanpaolo Innovation Center to study environmental attitudes and correlated behaviour using a neuroscientific approach, with the aim of identifying effective ways of raising awareness and promoting virtuous action in the community in relation to climate change and biodiversity, and the planning of new applied research to measure biodiversity levels in urban areas, using robots equipped with various sensors and a camera.

ESRS E5 – Resource use and circular economy

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E5 – Resource use and circular economy were identified taking into consideration the specific features of the Group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings (for instance, the Rules for the Environmental and Energy Policy and Group Guidelines on ESG Risk Governance), the controls/actions put in place by the Group to contribute to the implementation of recycling systems and the use of recycled/recyclable materials, the renewal of partnerships related to this issue (e.g. Ellen MacArthur Foundation, with Cariplo Factory for the Circular Economy Lab), as well as an assessment of the risks related to circular economy aspects the Group could be exposed to.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal Group units and external stakeholders, including experts in environmental matters, and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable nature of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers, such as internal Group policies and company strategies relating to the matter (for example, recycling systems and the use of recyclable/biodegradable materials);
- upstream value chain: the impact assessment involved "ESG questionnaires" administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties/undertakings belonging to high-impact industries with respect to the circular economy and resource use. In addition, investment/lending criteria and strategies were taken into account in assessing the counterparties.

As a result of the analysis performed, the following impact materiality outcomes emerged: with regard to the downstream value chain, positive material impacts were identified through the adoption of lending/investment strategies and the offer of products related to these sustainability issues, and negative indirect impacts related to exposures to counterparties operating in sectors considered to have a potential impact on waste.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified.

With reference to risks, the following assessments were made:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks in relation to the issue of circular economy and use of resources were found;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the issue in question (such as lack of definition of an environmental policy);
- downstream value chain: the assessment focused primarily on the potential credit risk and market risk arising from threats to the circular economy and resource use. This would also give rise to reputational risk.

With regard to financial materiality, the analyses conducted identified significant credit and reputational risks related to waste management in the production process exclusively for the downstream value chain.

With regard to the financial materiality of opportunities, analyses were conducted mainly on the downstream value chain, in view of the Group's type of business and the special nature of financial activities. Analyses and assessments were made of commercial opportunities in terms of financing counterparts with the aim of improving their circular economy profiles and improving the efficiency of production processes, as well as the possible presence of Budget and Business Plan performance targets and indicators.

As a result of the financial materiality analysis performed, material opportunities emerged, especially with respect to the Group's dedicated lending facilities for specific projects to improve the circular economy in customers' production processes on specifically identified business initiatives.

Policies, targets and actions at portfolio level

Policies on resource use and circular economy

In line with the Intesa Sanpaolo Group's strategic approach, the circular economy policies adopted set out the principles, rules and processes for pursuing the Group's objectives in the transition towards a circular economy model, focused on resource efficiency, waste reduction and especially the creation of value throughout the entire product life cycle. The primary objective is to guide the transition of undertakings and communities towards an inclusive circular economy, an economic approach capable of accelerating climate change mitigation policies, restoring biodiversity and reducing pollution, not only by reducing greenhouse gas emissions but also by optimising the availability and use of commodities, the regeneration of natural resources and technological innovation, contributing to the creation of a more sustainable, equitable and resilient economic system. This commitment is consistent with global trends towards sustainability and environmental regulations and helps reduce the risks associated with volatile resource prices. The scope of circular economy policies encompasses all Group activities, with a focus on internal resource management (e.g. procurement practices) and financial support for projects and undertakings that promote circular business models. As indicated in ESRS 2, in the section "Role and composition of the Administrative, Management and Supervisory Bodies and Sustainability Governance", the Chief Sustainability Officer Governance Area is responsible for overseeing and implementing sustainability policies. In this context, a specific competence centre represented by the Intesa Sanpaolo Innovation Center (ISPIC[91]) was identified to oversee circular economy policies.

The Intesa Sanpaolo Group's "Code of Ethics" incorporates circular economy principles through environmental protection, support for the country's development through ecological transition and the adoption of circular economy models, as well as through the responsible management of indirect environmental impacts.

Moreover, the Group ensures transparency with respect to stakeholders by making available the main circular economy policies in a variety of areas through the company's communication channels:
- with specific regard to the European Taxonomy, internal rules and the macro-process adopted by the Group for the identification and reporting of exposures aligned with this legislation have been put in place, including those related to the fourth of the six environmental objectives, i.e. “Transition to a Circular Economy”;
- with regard to the internal framework of sustainable lending products and transactions, a specific category is the area of environmental sustainability called “Ecological efficiency and circular economy”, assigned on the basis of the consistency of the lending transaction with the five Circular Economy criteria detailed later in the text and defined in cooperation with the Ellen MacArthur Foundation (EMF). Note that this framework is currently not fully aligned with the criteria of the European Taxonomy relating to the environmental objective (Transition to a Circular Economy);
- with regard to the "Green, Social and Sustainability Bond Framework", published on the Group's institutional website, i.e. the internal rules the Group has adopted to issue Green, Social and Sustainability debt securities in various formats and currencies (secured, unsecured, subordinated) to finance new and current loans/assets with environmental and/or social benefits, including those related to the support of the circular economy, the proceeds of any bonds issued by the Group under this framework are allocated exclusively to loans falling under a limited set of green categories, including the macro-category dedicated to the circular economy, in which five to eight sub-categories are defined (equivalent to the five green criteria listed further down in the text). The framework is aligned with the “Green Bond Principles 2021”, the “Social Bond Principles 2021” and the “Sustainability Bond Guidelines 2021” of the International Capital Market Association (ICMA), as well as with the European Taxonomy (on a best-effort basis);
- with regard to the Intesa Sanpaolo Group's internal ESG Scoring rules, which represent a company-wide (counterparty) assessment of the ESG profile of corporate customers, there are certain aspects related to the circular economy;
- the “Green Procurement Rules”, which can be consulted on the Group's website, among other things set out the Group's objective of promoting circular procurement models for stationery, toner, gadgets and free gifts in order to pursue sustainability goals.

The Group incorporates circular economy principles into its policies within the lending process based on both specific circular economy criteria defined together with the Ellen MacArthur Foundation (relating to the circular framework) and specific green economy criteria (relating to the green framework[92]). In this context, the Intesa Sanpaolo Innovation Center is responsible for making a technical assessment of the level of circularity and eligibility for funding of initiatives proposed by corporate customers.

Specifically, the eligibility criteria for the internal circular framework are:
- solutions that extend the product life or cycles of use of goods and materials (circular design; application of modular design; implementation of reverse logistics programmes; repair and regeneration or reconditioning of products; use of product-as-service models, pay-per-use and/or sharing economy);
- procurement of secondary or sustainably sourced renewable resources and/or recycled material (including the use of renewable energy for self-consumption);
- solutions that significantly increase the efficiency of resource consumption, either within the company or along its value chain (application of industrial symbiosis principles and implementation of an integrated value chain that transforms waste into production inputs; implementation of cycle closure models and/or application of eco-design and systemic design principles; implementation of processes based on natural principles for CO2 capture and storage and/or CO2 capture and utilisation, to support the achievement of decarbonisation and net-zero impact targets);
- fully reusable, recyclable or compostable products, placed in an efficient context of collection, separation and reuse after use;

[91] ISPIC is the Group company that explores future scenarios and trends, develops multidisciplinary applied research projects, supports start-ups, accelerates the business transformation of undertakings according to the criteria of open innovation and the circular economy, promotes the development of innovative ecosystems and spreads the culture of innovation, to make the Intesa Sanpaolo Group the driving force of a more aware, inclusive and sustainable economy.

[92] Green, Social & Sustainability Bond Framework of the Intesa Sanpaolo Group.

- innovative technologies and activities that enable circular economy models (e.g. Internet of Things solutions for implementing tracking systems, reverse logistics and/or predictive maintenance; Big Data, Artificial Intelligence and Cloud Computing in order to dematerialise services and develop markets for commodities and/or secondary materials; regenerative agriculture practices and/or hydroponic/aeroponic/precision farming technologies to improve soil health, increase biodiversity, produce food close to the place of consumption and cultivate in unfavourable areas).

For the green framework, the eligibility criteria used are:
- renewable energies not for self-consumption and in particular investments in production, transmission, infrastructure and associated assets, such as solar, wind, bioenergy/biomass and hydroelectric energy;
- energy efficiency (storage of energy from renewable energy; smart grid technology and/or infrastructure; energy-efficient equipment for buildings);
- sustainable mobility (financing of low-carbon passenger cars and light commercial vehicles and urban and suburban road/rail passenger transport with zero specific CO2 exhaust emissions; infrastructure enabling low-carbon road and public transport);
- green buildings (new, existing and renovated buildings that meet certain criteria, e.g. Class A Energy Performance Certificate (EPC), LEED/BREEAM high-level certification);
- environmentally sustainable management of living natural resources, land use and biodiversity (projects and activities aimed at the development and use of sustainable agricultural practices, conservation, preservation and/or restoration of nature and biodiversity and of natural habitats and ecosystems).

Note that at present the internal framework does not completely overlap with the criteria of the European Taxonomy on the Circular Economy and therefore loans granted with this framework are not considered "aligned" with the criteria of the taxonomy for the purpose of calculating the Green Asset Ratio.

Objectives for resource use and circular economy

The Intesa Sanpaolo Group has confirmed its commitment to the circular economy by promoting the dissemination of this model, also drawing on the support of the Ellen MacArthur Foundation, the main advocate of the transition to the circular economy and a Strategic Partner of the Group since 2015 as part of a multi-year collaboration. The transition to a circular economy is also pursued thanks to the contribution of the Intesa Sanpaolo Innovation Center (ISPIC), a Group company dedicated to frontier innovation and a centre of expertise in the circular economy, although no precise quantitative targets have been defined.
However, as detailed in the next section, the Group has shown a strong commitment to promoting circular economy practices, which are considered an integral part of its sustainability strategy.

Actions related to resource use and the circular economy

One of the main initiatives implemented by the Group with regard to the circular economy is the provision of an 8 billion euro credit facility for undertakings (for more details see the document “2022-2025 Business Plan” available on the Group's website), consistent with the green and circular criteria of the internal framework and widely used. This commitment has been renewed and increased from that of the “2018-2021 Business Plan”, underscoring the enduring and ongoing commitment to these issues.

Moreover, in order to help accelerate the transition to the circular economy paradigm, several initiatives continued and new projects were launched during the year, which can be grouped into four macro-areas: finance, innovation, corporate centre and advocacy, and research.

FINANCE

With a view to concretely supporting undertakings in the circular economy transition process, the Group offers customers of the Banca dei Territori, IMI Corporate & Investment Banking and International Banks Divisions (IBD) the opportunity to access financing dedicated to the circular economy and which may include specific incentives. This opportunity is aimed at both Italian and foreign undertakings that adopt circular solutions in innovative ways, granting them the best conditions for access to credit.

In general, support has been provided for numerous company projects for activities such as the replacement of critical and fossil fuel materials with recycled or organic materials, the reuse of urban organic waste for the production of biomethane and compost and the recovery of CO_2, the revamping of renewable energy plants with the extension of their lifetimes and the increase in their production capacity, and the recovery of industrial waste for its reuse in new product lines.

Furthermore, in 2024 the Group executed its second synthetic securitisation transaction in the area of ESG and Circular Economy with the aim of optimising the capital allocated to a portfolio of loans to undertakings with a high ESG Score and/or engaged in the circular economy. With a portfolio of around 2.5 billion euro, the transaction freed up additional resources to support a circular and sustainable economy, also thanks to the possibility of including new loans during its life.

In the area of sustainable bonds, in 2019 Intesa Sanpaolo was the first Italian bank to issue a Green Bond worth 750 million euro focused on the circular economy and intended to support the loans granted by the Bank as part of dedicated credit supply.

Finally, the Group's commitment to support the circular economy also continued within the Wealth Management Division. Eurizon Capital SGR has positioned itself as a leader in the circular transition, continuing to present its strategy both in Italy, in collaboration with the Group's Private Banking division, and abroad, where Eurizon organised an event in collaboration with the Italian Chamber of Commerce in Zurich. Eurizon promotes awareness of the circular economy in the investment world, also via the creation of digital training materials, which were updated in 2024.

INNOVATION

In addition to the financial sphere, the Group also implements its circular economy strategy through specialised support for initiatives and innovation projects that foster the transition of undertakings. A central role in this area is played by the Circular Economy Lab, a multi-stakeholder innovation initiative set up in 2018 in Milan thanks to the collaboration between Intesa Sanpaolo, ISPIC, Fondazione Cariplo and Cariplo Factory. The Circular Economy Lab offers non-financial services to foster innovation, with the aim of supporting and accompanying the transformation of the Italian economic system and disseminating new models of value creation in the collective interest, accelerating the transition to the circular economy. The activities of the Circular Economy Lab, which developed projects during the course of the year related to the circular economy that also dealt with issues of increasing the circularity of products and materials, fall into three lines:

- training, employing methods of disseminating the circular economy culture aimed at companies and the academic world, through dedicated workshops and lectures. In 2024, 18 lectures were delivered to both national and international universities or specialised courses;
- connection activities, through initiatives geared towards creating an open dialogue on the topic, involving an extensive national and international network of companies, institutions, universities, research centres and other partners. In this context, 18 Circular Economy dissemination events on sector-specific verticals were organised during 2024, six of them within the "ESG Workshops" of the Group's BdT Division;
- innovation activities, through innovative consulting services aimed at accelerating the transformation of SMEs and corporate entities towards circular business models. Specifically, seven projects were carried out in 2024 with Intesa Sanpaolo corporate customers.

CORPORATE CENTRE AND ADVOCACY

With the goal of contributing to the dissemination and consolidation of the circular economy, the Group continued its advocacy on the topic at the international and national levels in 2024.

Notable international initiatives included a collaboration with the United Nations Environment and Finance Programme (UNEP FI) to promote circular economy best practices in the global banking sector.

Specifically, in 2024 UNEP FI cited the Circular Economy Lab as a case study within its guidance document for banks called "Circular Economy as an Enabler for Responsible Banking: Leveraging the Nexus between Circularity and Sustainability Impact", recognising the Group's commitment to supporting corporate customers in adopting circular business models.

Within the same document, the Green Bond was also mentioned as an example of sustainable bond products focused on the circular economy, recognising the significant results in terms of environmental impacts generated by this initiative, and more generally the Group's commitment to spreading the values of the circular economy.

The Group's activity in the task force coordinated by UNEP FI and called "Circular Economy as an enabler to operationalise the nexus between climate, nature, pollution and healthy & inclusive economies" continued in 2024. This task force aims to orient the Principles for Responsible Banking (PRB) towards the circular economy, recognising how the latter can be the strategic lever for the financial sector to achieve the objectives of decarbonisation, restoration of biodiversity, reduction of pollution and support for local economies. The publication of the first non-binding guidelines for banks, the drafting of which the Group actively contributed to, took place on 18 July 2024 through the two documents "Circular Economy as an Enabler for Responsible Banking: Leveraging the Nexus between Circularity and Sustainability Impact", of a general nature, and "Circular Solutions to Achieve Climate Targets", which also includes insights into the interconnections between the circular economy and climate change for the construction and textile sectors, as well as a cross-sectoral (sector-agnostic) introduction.

Again in the international sphere, thanks to the coordination of the Chief Institutional Affairs and External Communication Officer Governance Area, a new collaboration between Intesa Sanpaolo and ISPIC with the International Finance Corporation (IFC, World Bank Group) was also launched in 2024 to develop and disseminate new circular economy guidelines and practices in the international banking sector, with a particular focus on multilateral development banks. As a first concrete action, through ISPIC, the Bank organised a webinar dedicated to the topic entitled "Circular Finance: Practical Experience from Intesa Sanpaolo", which was attended by about 50 people mainly from the IFC, as well as other multilateral banks.

Initiatives of national importance include the Group's participation through the Circular Economy Lab in the activities of the Italian Alliance for the Circular Economy, of which it is a promoter, the partnership with the Freight Leaders Council (FLC) and the renewal of sponsorship of the Water Value Community promoted by The European House Ambrosetti. Indeed, activities were organised in 2024 to strengthen the role and positioning of the Alliance for the Circular Economy, in addition to the scenario analysis aimed at identifying the prospects and potential of the circular economy. With the FLC, networking continued via dedicated events, one of which focused on the presentation of the activities that ISPIC can make available to members, in addition to having contributed to the drafting of the "Topical Notebook" published annually by FLC. Finally, with regard to the "Water Value Community", in the 2024/2025 edition it aims to expand the contribution of the various sectors of the extended water supply chain to the transition from a linear to a circular development model.

In an effort to promote the adoption of circular economy practices internally, the Group continued its experimentation on the application of innovative and circular asset management models in the ICT area. The fifth pilot project for the sale of decommissioned IT hardware by the Group was completed in 2024, with the goal of boosting the value of these assets from a circular perspective (e.g. reconditioning, reuse), of reducing the costs associated with storage in warehouses and contributing to the reduction of CO_2 emissions associated with the related disposal and decommissioning operations, in keeping with the objectives of Intesa Sanpaolo's "Own Emissions Plan". Specifically, the sale involved 600 notebooks, for a total of about 101 kg of CO_2 saved.

In order to promote and disseminate the circular economy paradigm, a number of initiatives continued during the year and new projects were launched, both inside and outside the company. For example, with regard to the International Banks Division, in 2024 four online sessions were organised for the relationship managers of the Group's international subsidiary banks, with the aim of supporting customers in their transitions towards a sustainable and circular economy, also through the sharing of best practices at the Group level. Moreover, during the year the Turin museum branch of Gallerie d'Italia promoted two cultural initiatives on the circular economy and addressed to the external public, which continued the photographic exhibition “Luca Locatelli: The Circle” in Milan, previously exhibited in Gallerie d'Italia - Turin from 21 September 2023 to 18 February 2024 and organised in collaboration with the Fondazione Cariplo and the Fondazione Compagnia di San Paolo, with the specialised support of EMF and ISPIC.

Finally, as part of the initiatives carried out through the Circular Economy Lab, in 2024 the collaboration with the Italian Circular Economy Stakeholder Platform (ICESP) continued for the dissemination of good circular economy practices. Lastly, the Circular Economy Lab is a technical partner of Tech4Planet, the National Technology Transfer Centre for Environmental Sustainability, an initiative promoted by Cassa Depositi e Prestiti and co-invested by Neva SGR among others, with the aim of identifying and accelerating research projects by facilitating the path to entrepreneurial initiatives.

RESEARCH

On the research front, the Group's collaboration with Bocconi University in the Circular Economy & Finance area continued in 2024, involving the university's independent research centre GREEN[93] in order to further expand the relationship between circular economy and sustainability, improve the metric for measuring the degree of circularity of undertakings (called Circularity Score - CS) and assess the opportunities offered to the financial sector by the circular transformation of economic sectors, starting for example from the theory of de-risking financial portfolios. Another activity in the research area was ISPIC's collaboration through the Circular Economy Lab with the Energy & Strategy Observatory of Milan Polytechnic for the development of the “Annual Report on the State of the Circular Economy in Italy”, which is also available on the Group's website for those wanting more information.

[93] Centre for Research on Geography, Resources, Environment, Energy & Networks

Reporting pursuant to the EU Taxonomy (Regulation (EU) 2020/852)

Introduced within the framework of the EU Action Plan on Financing Sustainable Growth, Regulation (EU) 2020/852 (the "Taxonomy Regulation") establishes that activities can be defined as "environmentally sustainable" if they contribute to at least one of the following environmental objectives, without significantly harming the other objectives, and are carried out in compliance with minimum safeguards[94]:

- climate change mitigation;
- climate change adaptation;
- sustainable use and protection of water and marine resources;
- transition to a circular economy;
- pollution prevention and control;
- protection and restoration of biodiversity and ecosystems.

Various delegated acts have been adopted under the regulation over the years. For each of the six environmental objectives, the acts identify the "Taxonomy eligible" economic activities that can potentially contribute to the objectives and set out the screening criteria to assess whether they are "Taxonomy-aligned" by making a substantial contribution to at least one of the objectives. Commission Delegated Regulations (EU) 2021/2178 and (EU) 2022/1214 set out the key performance indicators for measuring the Taxonomy performance of undertakings and the relative methodologies, approaches and disclosure obligations for non-financial undertakings, credit institutions, asset managers, insurance and reinsurance undertakings and investment firms.

In accordance with the regulatory framework in force and in light of the guidance provided by the European Commission[95], for the year ended 31 December 2024, Intesa Sanpaolo Group measured the following KPIs, presented in tabular form where required:

- Green Asset Ratio (GAR)[96];
- key performance indicator for financial guarantees (FinGuar KPI);
- key performance indicator for assets under management (AuM KPI);
- key performance indicator for asset managers.
- key performance indicators for insurance and reinsurance undertakings (Investment KPI and Underwriting KPI);
- disclosure about economic activities in the fossil gas and nuclear energy sectors;
- weighted average key performance indicator for the Group (Weighted Average KPI)[97];
- KPIs of subsidiaries exempted from reporting sustainability information;
- share of exposures to taxonomy-eligible and taxonomy-non-eligible economic activities with reference to the further four environmental objectives and the new economic activities introduced for the first two environmental objectives.

For more information on the presentation of the KPIs in tabular form, see Annex I – Taxonomy Template of this Consolidated Sustainability Statement.

[94] The minimum safeguards are procedures implemented by an undertaking that is carrying out an economic activity to ensure alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the International Labour Organisation's Declaration on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

[95] In 2024, on the basis of the guidance set out in the Commission Notice of 8 November 2024 published in the OJEU and the additional set of guidance provided in the draft notice of 29 November 2024, the Group identified the best efforts needed to comply with the guidance, considering the time-frame and data available. It should be noted that the clarifications responding to FAQs contained in the draft notice are not binding.

[96] As required by FAQ No. 8 (Commission Notice of 8 November 2024), we report the KPIs of the subsidiaries that have made use of the exemption from reporting sustainability information contemplated in Article 7 of Legislative Decree 125/2024 and in the legislative acts of other countries implementing Directive (EU) 2022/2464 ("CSRD"): Privredna Banka Zagreb: 3.61% GAR Turnover-based stock; 3.64% GAR CapEx-based stock; 5.54% GAR Turnover-based flow; 6.30% GAR CapEx-based flow; Intesa Sanpaolo Bank (Slovenia): 1.87% Turnover-based stock; 1.93% CapEx-based stock; 5.51% GAR Turnover-based flow; 6.06% GAR CapEx-based flow; Fideuram-Intesa Sanpaolo Private Banking: 2.08% Turnover-based stock; 2.58% CapEx-based stock; 2.70% GAR Turnover-based flow; 3.39% GAR CapEx-based flow; CIB Bank: 0.97% Turnover-based stock; 2.56% CapEx-based stock; 2.00% GAR Turnover-based flow; 7.29% GAR CapEx-based flow.

[97] As envisaged by FAQ No. 7 (Commission Notice of 8 November 2024).

TEMPLATE 0: SUMMARY OF KPIs TO BE DISCLOSED BY CREDIT INSTITUTIONS UNDER ARTICLE 8 TAXONOMY REGULATION

		Total environmentally sustainable assets[98]	KPI (Turnover based)	KPI (CapEx based)	% coverage (over total assets)[99]	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)[100]	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)[101]
Main KPI	**Green asset ratio (GAR) stock**	20,516	3.63%	4.36%	73.80%	44.02%	26.20%

		Total environmentally sustainable assets	KPI (Turnover based)	KPI (CapEx based)	% coverage (over total assets)	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)
Additional KPIs	GAR (flow)	5,859	8.11%	11.32%	9.43%	44.02%	26.20%
	Trading book[102]	-	-	-			
	Financial guarantees	161	2.72%	4.65%			
	Assets under management	4,417	1.97%	3.20%			
	Fees and commissions income[103]	-	-	-			

Intesa Sanpaolo Group’s Turnover-based GAR stock of 3.63% consists of the following exposures:
- loans to households collateralised by residential immovable property that have been assessed as being Taxonomy-aligned for the environmental objective of climate change mitigation on the basis of compliance with the relevant technical screening requirements for buildings contained in Delegated Regulation (EU) 2021/2139 (2.41%)[104];
- Taxonomy-aligned exposures to financial and non-financial counterparties subject to NFRD/CSRD requirements (1.22%).

The KPI shows an increase compared to the year ended 31 December 2023 of approximately 37%, attributable primarily to loans to households collateralised by residential immovable property. Note that the alignment of exposures to financial counterparties has been included in the numerator of the GAR for the first time as of the current year.

The KPI for financial guarantees considered financial guarantees securing loans, advances and debt securities financing economic activities pursued by financial and non-financial undertakings. The KPI was largely in line with the figure for the year ended 31 December 2023.

[98] Amounts are stated in millions of euro.

[99] Percentage calculated as the ratio of KPI-covered assets to the Bank’s total assets.

[100] Percentage calculated as the ratio of assets excluded from the numerator of the KPI (in particular: derivatives, exposures to undertakings that are not obliged to publish non-financial information pursuant to Article 19a or 29a of Directive 2013/34/EU, on-demand inter-bank loans, cash assets and equivalents, other asset classes and the trading book) to total covered assets. The % was found to be the same at flow level.

[101] Percentage calculated as the ratio of assets excluded from the denominator of the KPI (specifically: exposures to central governments and supranational issuers, exposures to central banks and the trading book) to the Bank’s total assets. The % was found to be the same at flow level.

[102] The Trading Book KPI applies commencing as of 2025 (publication in 2026).

[103] The Fee & Commission KPI applies commencing as of 2025 (publication in 2026).

[104] The alignment checks also covered compliance with the DNSH criterion for the environmental objective of climate change adaptation (i.e. assessment of physical risk).

The KPI for assets under management considered investments at the consolidated level held by Eurizon Capital SGR,[105] Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.a[106]. and VUB[107], including any assets delegated to third parties for management and excluding assets managed under delegation on behalf of third-party financial undertakings[108]. This KPI should be judged considering that assets managed largely consist of exposures to derivatives and investments in European and non-European undertakings not subject to NFRD/CSRD requirements, which have been excluded from the numerator.

In general, with reference to the calculation of the key performance indicators reported:

- exposures to non-financial counterparties where "use of proceeds is not known" have been weighted according to Turnover and Capital Expenditure (CapEx) that is Taxonomy-eligible for all the environmental objectives and Taxonomy-aligned in relation to the first two environmental objectives, on the basis of the targets published by those counterparties in their non-financial statements (actual data)[109] and obtained by the Bank through a specialist infoprovider;
- exposures to financial counterparties where "use of proceeds is not known" have been weighted according to Turnover and Capital Expenditure (CapEx) that is Taxonomy-eligible and Taxonomy-aligned in relation to the first two environmental objectives, on the basis of the targets published by those counterparties in their non-financial statements (actual data)[110] and obtained by the Bank through a specialist infoprovider;
- exposures to financial and non-financial counterparties where "use of proceeds is known" have been considered to the extent that the assets financed are economic activities which are taxonomy-aligned with respect to the environmental objectives of climate change mitigation and climate change adaptation.

Finally, the Turnover-based and CapEx-based KPIs for the Group, showing the weighted average of the EU Taxonomy KPIs of the individual business segments in proportion to the revenues generated by each in the consolidated financial statements (with prevalence shown by the banking business segment, followed by the insurance business), were measured at 3.14% and 4.00% respectively. Compared to last year, the KPIs show an increase of +0.84% and +0.90% respectively, reflecting the higher EU Taxonomy KPIs of the individual business segments.

Taxonomy in the business and financial strategy and in product design

Through the 2022-2025 Business Plan, the Intesa Sanpaolo Group aims to continue to generate increasing and sustainable value, further strengthening its leading position in ESG issues with a world-class position in terms of social impact and a strong focus on climate.
The Group is specifically playing its part in fast-tracking the transition to a sustainable economy through its target of net-zero emissions by 2050 for the loan and investment portfolios, asset management and insurance business, confirming the commitment made by the Group in joining the relative initiatives sponsored by the United Nations (NZBA, NZAMI[111], NZAOA, e FIT). Specifically in relation to lending activities, intermediate targets have been set for all priority sectors (for more information see the Climate Report).

Intesa Sanpaolo Group appreciates that the Taxonomy was designed with a view to assigning the European banking system a crucial role in boosting the real economy to pursue the European Union's ambitious strategy for sustainable development and the transition towards a low-carbon economy (reduction in emissions by at least 55% by 2030 and carbon neutrality by 2050), increasing the level of transparency and comparability of markets. In this context, since 2022 the Group has been working on its "EU Taxonomy Green Enhancement" project to respond to the regulatory requirements of the EU Taxonomy, assess the level of regulatory alignment of its loans, and actively steer the loan portfolio, in particular for new disbursements, by identifying new business opportunities, also through new products, and reviewing the pricing incentive system.

[109] As envisaged by FAQ No. 3 (Commission Notice of 8 November 2024).

[110] As envisaged by FAQ No. 3 (Commission Notice of 8 November 2024).

[111] On 13 January 2025, NZAMI launched a review of the initiative to ensure it remains fit for purpose in the new global context. As the initiative undergoes the review, activities to track signatory implementation and reporting have been suspended.

Social information

ESRS S1 – Own Workforce

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS S1 – Own Workforce were identified taking into consideration the specific features of the Group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings (for instance, the 2022–2025 Business Plan and policies adopted in the various segments, etc.) and the governance measures in place to minimise the negative impacts connected with the topic in its own operations, along with an assessment of the risks tied to aspects of its own workforce to which the Group may be exposed.

For the purposes of the double materiality assessment, the Group considered all own workers (employees and contractors) in relation to which it generates actual or potential material impacts, risks and opportunities. Workers making up the Group's own workforce include employees engaged on permanent, temporary or apprenticeship contracts and contractors engaged on temping or project-based contracts.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders (such as interviews with trade union representatives and with worker safety representatives) and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood) within the perimeter of own operations.
The impact assessment was performed on the basis of drivers such as the identification and implementation by the Group of governance measures to ensure working conditions, equal treatment and opportunities for all and the privacy of workers (such as recruitment plans, talent development programmes, occupational health and safety measures, measures to promote diversity and inclusion).

The impact materiality outcomes found by the assessments identified positive material impacts in own operations. Specifically, the materiality of the impacts was connected with the effective contribution made by the Group to protecting its own workforce, through internal policies and company strategies in place. They relate to the matters contemplated by the standard in terms of working conditions (secure employment, working time, adequate wages, social dialogue, freedom of association, including the existence of work councils, information, consultation and participation rights of workers, collective bargaining, work-life balance and health and safety), equal treatment and opportunities for all (gender equality and equal pay for work of equal value, training and skills development, employment and inclusion of persons with disabilities, measures against violence and harassment in the workplace and diversity) and privacy.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeter of own operations. The process of mapping and assessing the risks and opportunities that have or may have financial effects considered the connections of the Group's impacts and dependencies with the risks and opportunities that may arise from those impacts and dependencies. For example, the positive impacts arising from the adoption of policies to guarantee adequate working conditions, such as secure employment and adequate wages, and equal treatment, such as gender equality and inclusion, flexible working arrangements and work-life balance, can contribute to the creation of opportunities to improve brand reputation, enhance stakeholder trust and attract new talent.

The risks assessed included operational risk and compliance risk arising from deficiencies in the setting and implementation of policies to protect workers' rights. This would also give rise to reputational risk.

The Group appreciates how the ever-greater complexity and dynamism of the context, together with the growing materiality of compliance risk, business continuity, reputational risk and the "emerging" risks connected to the Next Way of Working[112] programme and climate change, make it necessary to upgrade the health, safety and environment (HSE) risk assessment model to 4.0 standards. It is similarly important to raise awareness of the impacts of new digital technologies on work and workplaces and the challenges and opportunities they bring for occupational health and safety, with a view to raising the efficiency of governance measures in place and mitigation actions. In particular, to guarantee protection of health and safety in the workplace, the Group runs in-depth assessments on groups of similar workers, with different groups identified each time,

[112] The "Next Way of Working" programme promotes and fosters inclusive behaviours. Leveraging new technological tools, it supports people in the organised use, in a balanced and voluntary way, of a hybrid working mode, based on a mix of work in the office and at home, ensuring maximum flexibility in organising time and activities in individual work and teamwork.
"Emerging risks" mean personal, environmental and organisational vulnerabilities in terms of both new risks and those arising from the transformation of conventional risks, connected with the digital transformation of work practices.

who may be exposed to "work-related stress", especially in connection with the introduction of new models (such as new-concept branches, longer branch hours, digital bank branches, etc.). As such, the Group took into account the risks to which workers in its own workforce may be exposed.

The financial materiality assessment of the risks identified and analysed under the rationale described, involving engagement with internal units and stakeholders, found that they were not material in relation to the standard in question.

Finally, the financial materiality assessment of opportunities looked at the initiatives, governance measures, policies and processes in place or planned by the Group that could give rise to opportunities for attracting external talent and enhancing the Group's reputation and the trust of stakeholders with regard to the protection of workers' rights in the Group's own workforce.
The financial materiality assessment found material opportunities connected with:
- talent attraction, in relation to the topics of secure employment, work hours, work-life balance, training and skills development and diversity;
- improved brand reputation, in relation to the topics of secure employment, work hours and adequate wages;
- greater trust of stakeholders in the Group, in relation to the topics of social dialogue, freedom of association, including the existence of work councils, information, consultation and participation rights of workers, collective bargaining, work-life balance, health and safety, gender equality and equal pay for work of equal value, measures against violence and harassment in the workplace and diversity.

Characteristics of Group employees and breakdown

Below we report key information on the breakdown of the Group's own workforce.
The headcount shown is in line with the figures reported in the consolidated financial statements, limited to the companies scoped into this Statement and excluding contractors engaged on project-based and temping contracts (and not on employment contracts)[113]. The figure shows the headcount of all employees in service at the end of the reporting period.

At 31 December 2024, the Group headcount within the scope of the Consolidated Sustainability Statement amounted to 93,539 employees. The following table shows the breakdown of the total number of employees by gender.

Table 2 – Number of employees by gender

	2024
Female	50,725
Male	42,814
Other	-
Not reported	-
Total	**93,539**

The following table shows the breakdown of the total number of Intesa Sanpaolo Group employees at 31 December 2024 by gender (women and men) and contract type. As shown in the table, almost all Group employees are employed on a permanent basis.

Table 4 – Number of employees by gender and contract type

	2024				
	Female	Male	Other	Not reported	TOTAL
Permanent employees	49,225	41,692	-	-	90,917
Temporary employees	1,500	1,122	-	-	2,622
Non-guaranteed hours employees	-	-	-	-	-

In 2024, the total number of employees that left the Group amounted to 5,511, with a turnover rate for the period of 5.89%. The turnover rate was measured as the ratio of total employee terminations to total headcount at year end, where terminations included all employment contracts terminated for any reason during the year (voluntary resignations, dismissals, retirement, exit incentives, death, etc.).

Finally, we report that Italy is the only country where the Group's workforce is significant (meaning 50 or more employees making up at least 10% of the total), with a total of 71,174 employees, accounting for 76% of total headcount.

The Group's commitment to human rights

Intesa Sanpaolo Group strives to promote respect for human rights and foster a corporate culture based on respect for the person and individual dignity by safeguarding the rights of all employees, combating any direct or indirect form of forced or child labour and protecting the physical and moral integrity of all Group people, through management based on respect for the personality and professionalism of each individual, within a framework of loyalty and mutual trust. The protection of workers'

[113] The total headcount of 94,736 employees stated in the section "Key performance indicators and other indicators" in the Report on Operations refers to the total number of employees in service at the reporting date within the scope of the consolidated financial statements.

rights and human rights is guaranteed by compliance with the general principles set out in the Code of Ethics and with the Principles on Human Rights. Moreover, the Group has joined the UN Global Compact.

The Code of Ethics draws on leading national and international initiatives for the protection of human rights (such as the Universal Declaration of Human Rights proclaimed by the United Nations, the UN Covenant on Civil and Political Rights, the ILO Declaration on Fundamental Principles and Rights at Work and the OECD Guidelines for Multinational Enterprises), setting out the values of the Group in an effort to steer individual conduct towards them. All Group banks and companies have adopted the Code of Ethics in their governance systems to incorporate social and environmental considerations into processes, practices and decision-making, alongside the obligations of Legislative Decree 231/2001. The Code of Ethics is updated regularly to reflect changes in the Bank's operational framework, ensuring the full transparency and consistency that is fundamental for building a relationship of trust with stakeholders.

The cardinal principles of the Group, as set out in the Code of Ethics and with which all Group policies are aligned, are:
- listening and dialogue: the Group leverages listening and dialogue to continuously improve its relationships and build trust, by promoting internal communication and inclusion and developing tools for engagement and discussion between the various company entities. It also encourages management staff to listen to the needs of people and build on their suggestions for improving and growing together.
- transparency: the Group aims to continuously further a culture of transparency on which to build relationships between people. Transparency underpins all its actions, allowing people to make informed, aware and independent decisions;
- equity and inclusion: for the group, respect for individuality and the dignity of people is fundamental for creating an inclusive workplace committed to preventing all forms of discrimination in conduct and to respecting difference (in terms of gender, gender identity and/or expression, emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion);
- respect for people: the Group strives to prevent any conduct that is harmful to human dignity, guaranteeing assistance and confidentiality, and to promote an inclusive workplace that is respectful of privacy, sustainable and conducive to achieving a work-life balance;
- protection of health and safety: the Group works to ensure the health and safety of its people and promote an experience of work that is respectful of their physical and mental health, by identifying and governing occupational health and safety risks and adopting preventive and protective measures, with residual risks managed through emergency and intervention plans for improving the well-being of people;
- appreciation and motivation: the Group recognises the strategic importance of the relational, intellectual, organisational and technical skills of every individual, and considers them fundamental in valuing and motivating people in relations;
- cohesion: the Group works to strengthen the spirit of belonging in people by spreading its values, sharing strategies and objectives, supporting leaders, creating ways of participating in success and promoting solidarity initiatives;
- management and staff remuneration policies: the Group's remuneration policies are based on the principles of equity, merit and the sustainability of outcomes.

To ensure its maximum reach, the Code of Ethics is published on both the institutional website of the Group and on the company Intranet. It has been produced to be accessible for the blind and visually impaired, following the accessibility rules certified by the LIA Foundation (for accessible Italian books). In addition, a copy of the Code of Ethics is given to every director, employee and contractor upon their appointment, employment or engagement.

Finally, to give concrete expression to the commitments and values set out in the Code of Ethics and to ensure the rights of every worker are respected, the Group applies Principles on Human Rights, as approved by the Board of Directors, which take up and develop the values set out in the Group Code of Ethics. Alongside the commitment to complying with relevant legislation in all the countries where it operates, the Principles on Human Rights are the Group's pledge to identifying, mitigating and, where possible, preventing potential adverse human rights impacts connected with its operations, s recommended by the UN Guiding Principles on Business and Human Rights. Specifically, the Principles on Human Rights protect freedom of association and the right to join trade unions and workers' councils and combat any form of child labour and forced labour. The document is provided to all employees and is published on the institutional website of the Group.

The Group has additionally adopted Diversity, Equity & Inclusion Principles to give concrete expression to its commitment to implementing policies promoting the inclusion of all forms of diversity both inside and outside the Group.
Finally, in keeping with its firm commitment to human rights, Intesa Sanpaolo Group issues an annual Modern Slavery Statement, disclosing the actions taken to combat any risk of modern slavery in its own operations and in the value chain. For more information, see the Intesa Sanpaolo Modern Slavery Statement on the institutional website of the Group.

Metrics on human rights in the own workforce

The following table presents a series of metrics for monitoring incidents and complaints concerning social matters and human rights in relation to Group employees. Specifically:
- "Total number of incidents of discrimination" shows the number of criminal litigations or labour law suits brought by employees against the group and internally-verified cases of non-compliance, all in relation, on a primary or secondary basis, to discrimination, including harassment;
- "Number of complaints filed through channels for employees" measures the number of reports filed by Group people through the relevant channels provided (such as the Code of Ethics inbox, the whistleblowing system and the channel for reporting sexual harassment) raising concerns on various issues connected with social matters, such as working conditions, equal treatment and the fundamental rights of workers;
- "Number of complaints filed with National Contact Points for OECD Multinational Enterprises" shows complaints sent to National Contact Points for OECD multinational enterprises related to the same matters addressed by the previous metric;

- “Total amount of fines, penalties and compensation for damages as a result of incidents and complaints” discloses the overall amount of fines, penalties and compensation imposed on the Group as a result of the incidents or complaints reported above;
- “Number of severe human rights incidents” shows the number of severe human rights incidents connected to the Group’s workforce. The severity of the incidents is assessed on the basis of the scope, scale and irremediable character of the incident;
- “Number of severe human rights incidents constituting non-respect of the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises” discloses how many of the severe human rights incidents reported breached the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises;
- “Total amount of fines, penalties and compensation for damages as a result of human rights incidents” reports the overall amount of fines, penalties and compensation imposed on the Group for serious human rights incidents reported.

Table 18 – Human rights incidents and violations

	2024
Number of incidents of discrimination	9
Number of complaints filed through channels for own workers to raise concerns	39
Number of complaints filed to National Contact Points for OECD Multinational Enterprises	-
Amount of material fines, penalties, and compensation for damages as result of violations regarding social and human rights factors	43,742
Number of severe human rights issues and incidents connected to own workforce	-
Number of severe human rights issues and incidents connected to own workforce that are violations of UN Global Compact Principles and OECD Guidelines for Multinational Enterprises	-
Amount of material fines, penalties, and compensation for severe human rights issues and incidents connected to own workforce	-

Below we provide contextual information on the data presented in the foregoing table:
- the 9 incidents of discrimination included 6 verified cases of sexual harassment, reported through the channels provided, for which the Group consequently activated disciplinary measures, and 3 litigation cases over alleged discrimination;
- the 39 complaints filed by Group people through the channels provided, in Italy and abroad, primarily concerned the matter of work-life balance, potential cases of sexual harassment and improper or discriminatory conduct by other employees;
- the amount of 43,000 euro reported refers to an appeal ruling imposing compensation for damages on the Bank (challenged by the Bank in an appeal lodged with the Court of Cassation), in relation to a law suit brought in 2018[114].

Job protection and labour relations

Job protection and labour relations policies

Workers’ rights in the Group are protected by the general principles of the Code of Ethics, the Principles on Human Rights, the Principles on Diversity, Equity and Inclusion and by the collective bargaining system, which operates fully on two distinct and complementary levels, the national level and the Group level.

The Group makes every effort to guarantee freedom of association in trade unions and workers’ councils, adopt complementary protection measures and give all its people the chance to express their individuality and creativity in their jobs, valuing the diversity and bringing out the best in each of them, as a driving force for innovation and an essential contribution to the Group’s growth.

In keeping with the commitments enshrined in the Code of Ethics, the people management model is based on collective bargaining agreements made at both the national level and enterprise level. Compliance with their provisions and with statutory rules is instrumental to improving the working environment, with a view to continued growth in the quality of relations between the Group and its personnel.

The tasks and powers delegated by law and industry regulations for enterprise-level bargaining are exercised by the Group Trade Union Delegation, in relation to: performance bonuses or the broad-based short-term plan, supplementary retirement schemes, healthcare, job positions and career development plans.
Engagement with trade unions is also pursued through a number of bilateral bodies. They include the Welfare, Safety and Sustainable Development Committee, which adequately represents both the company and the trade unions, to which technical experts are invited as required to provide specific expertise on matters addressed. The committee is tasked with finding solutions to improve the well-being of the Group’s people and make a positive contribution to productivity with advanced and innovative responses in the area of pensions, welfare and services for families, education and an improved work-life balance.
The Consultation Committee is instead called to address work initiatives of general interest to the Group, in particular as concerns the application methods and interpretation of agreements in place, and, where necessary, receives reports on progress made on the business plan.

[114] The amount was fully expensed drawing on Provisions for Risks and Charges.

The protocol also provides for local level meetings on a more or less quarterly basis, providing additional opportunities for engagement with trade unions. Under the trade union agreement made on 23 October 2024, a new bilateral body was created, tasked with monitoring the impacts arising from technological innovation and the new digitalisation measures introduced by the Group, specifically as regards impacts on bank branches, with findings presented at the negotiating table with the Group.

The development of labour policies is managed by a specific unit in the Governance Area of the Chief People & Culture Officer, which is tasked with drawing up trade union agreements and monitoring their implementation. The Head of Relations with Workers' Representatives and Welfare is responsible at the operational level.

Remuneration policies

At the national level, Intesa Sanpaolo is a member of the Italian Banking Association and applies the National Collective Bargaining Agreement for the credit sector. The bank actively participated in the last renegotiation of the agreement, signed on 23 November 2023. For relevant delegated matters, direct employment relationships are also governed by enterprise-level collective bargaining.

The enterprise-level agreement addresses remuneration matters in relation to pay structure and pay levels for the employment grades envisaged under the national collective bargaining agreement. Enterprise-level bargaining also sets out specific provisions for career development paths and additional employee benefits, such as meal vouchers. The development of remuneration policies is tasked to the Governance Area of the Chief People & Culture Officer.

In relation to employees outside of Italy, the Group complies with collective bargaining agreements where they exist, or the provisions of local labour law. The Group undertakes to apply standard conditions across the countries where it operates, apart from improved conditions for top management.

In 2015, under collective bargaining provisions and specific trade union agreements, the Group and trade unions agreed to the introduction of a broad-based short-term plan (PVR), which incorporates a productivity bonus for the workforce as a whole into the incentive system designed to reward outstanding performance by awarding a growing bonus for the delivery of set objectives.

For all Group people, with the exception of Risk Takers and Middle Management, for whom specific incentive systems are envisaged, a trade union agreement was signed on 9 May 2024 for the payment of the 2024 PVR, both on a distributive-participative basis, to reward the collective contribution made toward year-end earnings and delivery of the targets set by the 2022–2025 Business Plan, and on an incentive basis, to reward team effort and performance.

The 2024 PVR is made up of two components:
- Base Bonus, awarded on the basis of the professional profile, consisting of a fixed amount for all employees and an additional quota for incomes up to 39,000 euro.
- Excellence Bonus, awarded on the basis of outstanding individual performance and team objectives, consisting of two quotas, one of which is reserved exclusively to network personnel involved in the sale of insurance products.

The amount of the Base Bonus awarded ranged from a minimum of 1,150 euro to a maximum of 2,950 euro, on top of which the Excellence Bonus will be paid.

As in other years, in 2024 employees absent for long periods of time were still able to participate in the PVR, with special attention paid to protecting employees away on parental leave.
In addition, confirming the importance that the issues of assistance and services for families and work-life balance have in the Group's policies, employees had the option of requesting that all or part of their PVR bonus be paid in the form of welfare services, taking advantage of the opportunities that the tax regulations in the area of workplace productivity remuneration offer employees year by year.
The application of collective bargaining agreements to Group employees ensures an adequate salary at national level, in line with the requirements of legislation. The 23 November 2023 agreement signed jointly by Intesa Sanpaolo, the Italian Banking Association and national trade union representatives provided for an average pay rise of 435 euro per month, applicable in tranches: 250 euro as from 1 July 2023, 100 euro as from 1 September 2024, 50 euro payable as from 1 June 2025, and 35 euro as from 1 March 2026.

In addition, in line with remuneration policies and the incentive systems of the Group, where a revision process is activated for the pay levels of personnel in positions covered by enterprise-level agreements, the guidelines applicable were set out. The guidelines highlight the need for comprehensive consistency in pay initiatives and for special focus to be placed on gender equality, outlining a priority scale that takes into consideration market benchmarks for the remuneration of positions covered and the performance of people. The approach respects the principle of "equal pay for equal work" and seeks to help make the Group an "employer of choice" able to attract, motivate and retain the best talent.

In particular, the Group ensures that its remuneration and incentive systems and all decisions concerning pay are based on merit and professional skills, regardless of the gender or other diversity of the person, and that they uphold the principles of equity. For more information on this topic, see the sections "Equal Pay Policies" and "Diversity, Equity and Inclusion". See also the Report on Remuneration Policy and Compensation Paid, published on the institutional website of the Group.

Metrics on collective bargaining coverage and social dialogue

As at 31 December 2024, a total 89% of Group employees were covered by applicable national collective bargaining agreements, with 100% of Italian employees covered. In countries where coverage by collective agreements is not envisaged, the Group handles labour relations with employees in compliance with the provisions of local labour law.
With reference to Italian operations, 76% of the workforce is covered by a trade union.

The following tables shows the coverage rate of employees covered by collective bargaining agreements and workers' representatives for countries where the Group's workforce is significant. As specified in the section "Characteristics of Group Employees and Breakdown", Italy is the only country where the Group's workforce is significant.

Table 8 – Coverage rate of employees that are covered by collective bargaining agreements and workers' representatives

Coverage Rate	Collective Bargaining Coverage		Social dialogue
	Employees – EEA	Employees – Non-EEA	Workplace representation (EEA only)
0-19%			
20-39%			
40-59%			
60-79%			Italy (76%)
80-100%	Italy (100%)		

Finally, we report that no agreements exist for the representation of employees by a European Works Council (EWC), a Societas Europaea (SE) Works Council or a Societas Cooperativa Europaea (SCE) Works Council.

Metrics on adequate wages

The Group is committed to guaranteeing an adequate wage for all its employees. In this regard, in each of the countries where the Group operates, all employees are paid an adequate minimum wage.
Here, "adequate minimum wage" means the minimum set by law at the national level or determined on the basis of collective bargaining agreements.[115]

Processes for engaging with own workers and their representatives

The labour relations model, adopted and developed by the Group together with trade unions, has always promoted dialogue between the parties on a continuous basis. The model is a way of identifying the most suitable solutions and tools for addressing and managing the various growth and reorganisation phases. As mentioned, trade union relations are organised and developed also through the work of bilateral company/trade union bodies, formed with the aim of analysing, identifying and proposing positive actions, solutions and tools in the areas of equal opportunities, welfare, safety and sustainable development. Operational responsibility for ensuring dialogue with workers' representatives is tasked to the Relations with Workers' Representative and Welfare unit in the Governance Area of the Chief People & Culture Officer.

Relations with trade unions are regulated within an industry framework and by the "Labour Relations Protocol", which has made it possible to implement a specific trade union relations model within the Group.
Meetings with trade union representatives are held at the Group Delegation level and/or through the Welfare, Safety and Sustainable Development Committee, generally on a weekly basis. The Consultation Committee is convened whenever the need arises for joint efforts to identify possible solutions to disputes and for meetings to discuss labour matters of general interest to the Group. The Joint Business Policy and Corporate Climate Committee generally meets on a quarterly basis. Meetings are also held on the local level, generally on a quarterly basis, as an additional opportunity to engage with workers' representatives.

Dialogue with trade unions regarding company projects is ongoing, prompt and aimed at identifying shared solutions to the various requirements that come to the attention of the Parties. This also takes place in accordance with trade union coverage in Italy, as disclosed above, which is in line with national coverage in the sector.
More than 30 agreements were made in 2024.

Remediation processes for employees and their representatives and reporting channels

The Group provides various company channels for reporting grievances, needs and concerns, such as the Code of Ethics inbox and the whistleblowing channel. The Code of Ethics inbox allows any breaches to be reported via e-mail, guaranteeing maximum confidentiality and protection from any form of retaliation, discrimination or penalisation. The whistleblowing channel allows any authorised user (employees, contractors, supplier, consultants, etc.) to report suspected infringements, both actual or potential, via the specific mechanisms activated 24/7. For further information on the Code of Ethics reporting channel and the whistleblowing procedure, see, respectively, the sections "Whistleblowing Policies, Objectives and Actions" and "Policies, Targets and Actions related to Corporate Culture" in the ESRS G1 – Business Conduct chapter.
Collective bargaining processes additionally envisage occasions for assessing any infringements and specific mechanisms that are activated in the event of a dispute. Where a breach is found to infringe the law, the process is no longer handled at the company level, but through national/international legal process. The "Labour Relations Protocol" similarly envisages bodies and processes to check application methods and the interpretation of agreements in place. One such body is the Consultation Committee, in which the Group and trade union representatives work together to identify possible solutions for disputes arising at the local level.

[115] For countries in the European Economic Area, reference is made to Directive (EU) 2022/2041 on adequate minimum wages; whereas for countries outside the European Economic Area, wage levels are set in accordance with international, national or subnational standards or with collective bargaining agreements, providing they guarantee dignified living standards.

The Joint Business Policy and Corporate Climate Committee adopts uniform criteria for assessing reports of business conduct in breach of the Group's values and the provisions of collective bargaining agreements concerning business policy. The objective is to guarantee constant monitoring and the formalisation of positive action proposals for preventing critical situations. Such reports can be made directly by Group people and/or trade unions to the dedicated inbox, with guarantees in place for the protection of personal data and the constant monitoring of reports, with a view to formulating positive action proposals for preventing critical situations.

Where necessary, agreements contemplate occasions for discussion and checks on their implementation in cases such as changes in company organisation, with specific and timely meetings held with the Group Delegation, Welfare, Safety and Sustainable Development Committee and/or the Consultation Committee.

Job protection targets and metrics

In line with 2022–2025 Business Plan targets, Intesa Sanpaolo aims to reallocate and reskill/upskill its people capacity towards new priority initiatives, focusing on the most strategic professional roles and skills for the Group.

Target: Reskilled/upskilled people (2022–2025) – Number of people acquiring new skills and reskilled for new profiles

	Date	Value
Baseline[116]	31.12.2021	-
Final balance	31.12.2024	6,902
Target	2025	8,000

With reference to the 2022–2025 Plan target, since the start of the plan a total of 6,902 people have been involved in upskilling and reskilling programmes. Organised by the Group, these programmes aim to improve skills and retrain workers and employees to enhance their contribution to strategic and high value-added activities in Group operations.

Actions related to job protection and labour relations

For Intesa Sanpaolo Group, job protection is a key element of the 2022–2025 Business Plan. Accordingly, with a view to fast-tracking generational changeover within the framework of technological transformation, with a resilient and sustainable business model for a scenario of digitalisation and artificial intelligence, on 23 October 2024 Intesa Sanpaolo sealed an agreement enabling the roll-out of service and business models designed to be simpler and more effective for customers, but also to free up time for professional development activities, involving a major upskilling/reskilling plan to tackle the need to spread new digital skills and cover new job roles.
The agreement envisages the cutback of the workforce by 4,000 employees by the end of 2027, exclusively on a voluntary basis for retirement or access to the industry solidarity fund. Concurrently, again under the trade union agreements in place, including the 23 October 2024 agreement, 4,600 new permanent hires are planned by 31 December 2025, plus another 3,500 permanent new hires by 30 June 2028, for the balanced management of the effects arising from the cutback and in order to support the Bank's growth.

In this framework, in 2024 approximately 1,550 employees left and an equivalent number of new hires joined the Bank. The Bank's employment policies also envisage mixed contracts for new hires, involving a working method whereby individuals are engaged on two contracts, one on a permanent part-time employment basis and one as a self-employed financial advisor for out-of-branch activities. At the end of 2024, 1,200 people were in service on such a contract.

In keeping with the strategy adopted and in view of the plan target to reallocate and reskill/upskill 8,000 people by 2025 for new priority initiatives, in 2024 more than 3,000 people (approx. 6,900 since the start of the plan in 2022) were involved in reskilling and upskilling plans primarily targeted at business development (such as Digital Branch), controlling functions (Enabling Integrated anti Financial Crime – ENIF/Know your customer – KYC), technological projects (Application Digitalisation, Data & Analytics) and training on data, AI and technology (MATRIX project).[117]

From a geographical point of view, the people involved in the various programmes are located throughout the entire country, leveraging a "delocalisation" concept implemented on an increasingly wider basis, also thanks to the growing reach of new working methods as part of the "Next Way of Working" project.

In the Governance Area of the Chief People & Culture Officer, the Group Internal Mobility & Reskilling Center oversaw mobility tools and processes in 2024, assessing the availability of internal people and their relative skill sets, on the basis of needs identified and ensuring the adequate staffing of new areas.

Since the start of the Business Plan in 2022, activities have been monitored and reported on a quarterly basis, with a view to delivering all the plan's targets by its conclusion in 2025. People involved in change programmes are sent regular anonymous surveys to check their level of satisfaction, motivation and engagement in the activities of their new jobs. To date, the feedback shows high levels in all the areas.

[116] Plan target that represents the planning of a new activity that does not have a base value.
[117] For more information on the project, see the section Actions Related to Training and Employee Development.

Diversity, equity and inclusion

Diversity, equity and inclusion policies

The Group has adopted Principles on Diversity, Equity & Inclusion ("DE&I Principles") to give concrete force to its commitment to promoting and spreading, both internally and externally, an inclusive policy that values all forms of diversity. Intesa Sanpaolo Group's DE&I Principles lay out the framework of its inclusive approach to all forms of diversity, based on respect for all individuals, the enhancement of talent, meritocracy and equal opportunity. It also sets out concrete commitments for the promotion of an inclusive environment and identifies the conduct expected of all Group people. A specific section is dedicated to commitments on gender equity, aimed at guaranteeing fair opportunities in hiring processes, promotion to senior roles, appointments to management positions and in the succession plan for top management roles. The policy stresses the principle of zero tolerance of any form of discrimination and envisages a specific channel for reporting breaches. The regular monitoring of the commitments undertaken by the Group is tasked to the DE&I Control Room.

The DE&I Principles aim to build a pluralistic and respectful workplace where all forms of diversity are protected, be it in terms of gender, gender identity and/or expression, emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion. This objective is pursued as an ethical duty towards all Group people and towards all stakeholders. At the same time, it is a priority for business and sustainability, as bringing together diverse ideas and skills promotes innovative solutions and more effective decision-making. It also enhances the reputation of the corporate brand, improving the ability to retain, motivate and attract the best talent. Finally, it maximises value creation for stakeholders, building on the improvement suggestions from certifying bodies, international benchmarks and stakeholders in general, contributing to the identification of best practices for inclusion.

In relation to the commitment to guaranteeing gender equity, the following principles are taken into consideration:
- gender balance in annual hires;
- gender balance, on an annual basis, in the pool of candidates for first appointment to managerial positions;
- gender balance in the pool of candidates for senior management positions in the annual total;
- at least one candidate of the less-represented gender for each position in the pool of candidates for top management positions (chief and executive directors).

Specific commitments and affirmative actions are also envisaged to promote inclusion, such as:
- promoting the accessibility of premises, communication, information and training, including the availability of equipment/applications and considering any conditions of disability;
- guarantees in company regulations affording the same benefits for people in same-sex relationships and in mixed-sex relationships;
- fostering the value of inclusion through training, awareness-raising and the use of inclusive language;
- creating of an inclusive workplace based on trust, respect and the valuing of cultural and personal diversity;
- combating any form of discrimination or harassment;
- promoting inclusion in the local areas and socioeconomic contexts in which the company operates.

The DE&I Principles apply to all Group people in their dealings with internal and external stakeholders and to the members of the management and control corporate bodies. In relation to people working with the Group as contractors and not as employees (such as agents, freelance financial advisors, suppliers and subcontractors), they are required to respect the values and principles set out by acknowledging a specific policy statement addressed to them. The Group also strives to support and promote the adoption of the values and principles of diversity, equity and inclusion by customers – in particular Business & Corporate customers – within the framework of their ESG policies.
Finally, in line with the DE&I Principles, the Group is committed to stepping up engagement with stakeholders representing specific interests (such as employee resource groups – ERGs) and that present improvement proposals, with a view to openness and constructive dialogue, including the planning and roll-out of joint actions.

The DE&I Principles were reviewed and updated in 2024, with the new version approved by the Board of Directors. The amendments concerned the inclusion of reporting on pay gap matters to the Board of Directors and the analysis of the gender coverage of merit-based initiatives.
The Chief People & Culture Officer is tasked with identifying objectives and the relative strategy for achieving them and with ensuring that the effort of all Group units is adequate and consistent with the terms of the DE&I Principles. The officer also reports annually to the Board of Directors of the Parent Company and to the Risks and Sustainability Committee on outcomes delivered.

The "Rules for Combating Sexual Harassment" outline the Group's firm commitment to preventing and combating any form of sexual harassment and ensuring full respect and maximum protection for the dignity of the individual. Under the rules, zero tolerance is shown of harassment of any kind. The objective is to create the conditions for episodes of sexual harassment to be reported, ensuring an effective and strict process for managing reports that guarantees maximum rigour and maximum protection of confidentiality for the people involved.
The rules apply to: all employees of Intesa Sanpaolo Group in carrying on their duties both inside and outside the group; agents and freelance financial advisors/contractors in carrying out their duties with internal and external people; temping staff; people on internship/work experience programmes; and business partners of the Group in their contact with the Group for any reason.

The rules similarly apply during social events, business travel, training and occasions outside normal working hours but connected with work activities, as well as outside the workplace in cases where the sexual harassment offender and the victim both belong to the categories covered by the rules. Under the rules, the process for managing reports is guaranteed by the head of the Diversity, Equity & Inclusion unit.

All Group banks and companies are required to adopt the rules, adapting them as necessary to their own contexts with the approval of the Parent Company's Diversity, Equity & Inclusion unit. Where the rules are more restrictive than local law, Intesa Sanpaolo nevertheless requires their application, regardless of whether conduct is prohibited or not by local law.

For more information, see the DE&I Principles and the Rules for Combating Sexual Harassment, published on the institutional website of the Group.

Finally, in relation to matters concerning disability and chronic disease, an inter-functional working group is in place in Italy, set up under the inclusion agreement made in August 2018 and in line with the Principles on Diversity, Equity and Inclusion adopted subsequently in October 2020.
Working in synergy with the Diversity, Equity and Inclusion unit, the inter-functional working group meets on a regular basis with the trade unions through the Welfare, Safety and Sustainable Development Committee to identify the initiatives to be undertaken.
Overall, the policy is coordinated by the Workers' Benefits office, and involves the active participation of around 80 people, representing many of the organisational units.
The objective is to unite different professionals in supporting and promoting the contribution of all Group people and foster a climate conducive to well-being and support in company life, while expanding the welfare options available.

Metrics on diversity by gender and age

The table below shows the age distribution of the own workforce by number and percentage of total Group employees at 31 December 2024.

Table 10 – Number and percentage of employees by age group

Number and percentage of employees	2024
Under 30 years old	6,339
Between 30 and 50 years old	45,024
Over 50 years old	42,176
% under 30 years old	6.8%
% between 30 and 50 years old	48.1%
% overo 50 years old	45.1%

In terms of the gender distribution of employees at top management (executive) level at 31 December 2024, of the total number of 26 employees, 76.9% were male and 23.1% were female. The following table specifically shows the gender distribution of employees in top management positions, by number and percentage of total employees at 31 December 2024.

For this purpose, top management includes the Managing Director and CEO of Intesa Sanpaolo and direct reports, the Chief Audit Officer, the Deputy Heads of the Divisions and Governance Areas (at the reporting date, the Deputy Head of the IMI Corporate & Investment Banking Division and the Deputy Chief Financial Officer), and the manager responsible for preparing the company's financial reports.

Table 11 – Number and percentage of employees by gender at top management level

Number of employees top management level	2024
Female	6
% of total at top management level	23.1%
Male	20
% of total at top management level	76.9%
Other gender	-
% of total at top management level	-
No data	-
% of total at top management level	-
Total	26

The 2022–2025 Business Plan requires new appointments to senior positions – including both top management and first and second-level reports to the CEO – show a gender balance (approx. 50% men and 50% women) so as to meet the target of women holding around 30% of senior leadership positions by 2025. Considering the organisational structure in place at 31 December 2024, senior positions (including first and second-level reports to the CEO) showed a gender distribution of 71.7% men and 28.3% women.

Equal pay policies

Intesa Sanpaolo Group adopts gender-neutral remuneration and incentive policies, which contribute in the pursuit of equality for all employees. The policies ensure that Group people are paid equal remuneration for work of equal value, also in terms of the conditions for its awarding and payment.
Specifically, the Group guarantees that its remuneration and incentive systems and all decisions concerning pay are gender neutral (and neutral with respect to all forms of diversity, such as emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion) and based on merit, professional skills and the principles of equity.
To enable the application of gender-neutral policies and assess their effectiveness, the Group adopts:

- systems for measuring organisational positions, taking into account the responsibilities and complexity handled by the different roles. Specifically for the management cluster, the Group has adopted a Global Banding System based on the uniform grouping of managerial positions that are similar by levels of complexity/responsibility managed, measured using the International Position Evaluation (IPE) methodology. The professional cluster is instead segmented by career title attributed on the basis of specific criteria (seniority, autonomy and complexity, as well as skills, economics, impact and exposure), so as to give a granular reflection of the level of professional contribution provided in one's work and the progressive specialisation of skills, or by professional group, also considering the system of roles set out in enterprise-level collective bargaining agreements;
- for the management cluster, market benchmarks are associated to each Global Band and differentiated by professional category and geographical area. For professional positions, career titles are associated to market trends differentiated by professional category and geographical area;
- incentive systems tied to objective parameters that allow merit and performance to be rewarded.

The Board of Directors of Intesa Sanpaolo, with the support of the Remuneration Committee, assesses the gender-neutrality of policies on an annual basis and measures the gender pay gap, and its change over time, using an internal methodology set in accordance with industry regulations. For the purpose, the gender pay gap has so far been measured for positions of equal value and on a country by country basis distinctly for: (i) Risk Takers, excluding members of the Board of Directors; (ii) members of the Board of Directors considering its management function; (iii) members of the Board of Directors considering its supervisory function; and (iv) all remaining personnel. The reasons for any pay gaps found are duly documented and, where necessary, corrective action is taken.

Group remuneration and incentive policies are submitted annually to the binding vote of the shareholders' meeting, by proposal of the Board of Directors. For additional information on this topic, see the Report on Remuneration Policy and Compensation Paid, available on the institutional website of the Group.

Metrics on equal pay

The value stated below shows the gender pay gap between male and female employees, expressed as the percentage gap in average pay levels between female and male employees, as required by the ESRS standards applied for the purposes of this Statement.

In 2024, the pay gap amounted to 25.8%.
The pay gap was measured on the basis of the average gross hourly pay level of Group employees, calculated considering all supplementary and variable components of the salary package, including wages and other compensation paid in cash or as benefits to employees for their work on an annualised basis, without considering their different duties, organisational role or seniority level.
Variable components tied to long-term incentive systems were recognised on an accrual basis.
The measure covers all employees in service at the companies scoped into the Consolidated Sustainability Statement at 31 December 2024, with the exception of the companies Risanamento S.p.A. and Banca Intesa Russia.
Amounts stated in different currencies were converted into euro at the average exchange rate for the year.

The total remuneration rate of the Group for 2024 was 135.2. The rate is measured as the ratio of total annual remuneration of the highest-paid individual to the median annual total remuneration for all employees, excluding the highest-paid individual. The highest-paid individual was the CEO of Intesa Sanpaolo Group, whose remuneration includes both a fixed component and variable components. The median was calculated using the same criteria and covering the same scope described for the gender pay gap metric.

For both metrics disclosed in this section, no corrective factors were applied to remuneration paid to take into account the cost of living in the country of reference.

Processes for engaging with own workers and their representatives

The engagement process with the own workforce is carried on under the responsibility of the head of Diversity, Equity & Inclusion. Such engagement involves: (i) trade union representatives; (ii) constant dialogue with communities (employee resource groups or affinity groups); and (iii) surveys and listening initiatives, also at the individual level.

For DE&I initiatives, people are engaged individually (through surveys and listening initiatives), through trade union representatives, and through ERG communities (employee resource groups or affinity groups).
Surveys are conducted on a biennial basis through questions added to the Climate Analysis and other surveys, with no set frequency, on topics specifically linked to DE&I issues. In 2024, a questionnaire was administered to survey "Stereotypes, harassment and gender violence – What do you think?". Additional one-time listening initiatives are promoted with the company

population, such as specific post-event surveys. Other questionnaires instead survey people belonging to a specific area or division on relevant topics or areas of action, to steer targeted projects. Group people can instead request contact or send in suggestions by e-mail to the DE&I unit. Trade union representatives are engaged in advance of the roll-out of initiatives and, where relevant, after their close to report on outcomes. The DE&I unit is at the disposal of ERG communities to listen to their concerns and, when matters of specific interest to a community are addressed, engagement is arranged before any initiative is pursued.
Inclusion is a material topic of priority for the Group also in the framework of trade union negotiations, with an Inclusion & Equal Opportunity Framework Protocol made in 2014 that was the basis for a specific agreement and which is incorporated into Group's enterprise-level collective bargaining agreement. As regards sexual orientation and gender identity, specific company policies were introduced back in 2014 to define the framework for the extension of company benefits to same-sex unions. Alongside the promotion of the specific inter-functional working group for issues connected to disability and disease, the Inclusion Agreement envisaged the roll-out of experimental projects, with the support of the Welfare, Safety and Sustainable Development Committee, aimed at promoting the employability of people with autistic spectrum disorders. These projects are partly funded by the Arrotonda Solidale ("Round-down Solidarity") initiative, which involves the contribution, on a voluntary basis among all the Group's people, of the residual amount collected from rounding down net monthly salaries to the nearest euro. In turn, the Company contributes the remaining cents to make a total of one euro for each Group person taking part in the initiative.

Engagement with trade union representatives is organised with no set frequency. The representatives are engaged on matters within the scope of collective bargaining agreements, but also on matters not covered by contract.
The various engagement initiatives with the own workforce provide the input for reports on the response and appreciation rates of specific initiatives, projects or events. The aggregate outcomes are anonymous and contribute to steering future initiatives. Where trade union representatives have been engaged, outcomes are reported after the close of the initiative. Where ERG communities have been engaged, a meeting is held directly with the people making up the community.

ERG communities are bodies that by their nature represent the interests and perspectives of affinity groups. Examples include ISPROUD, the Intesa Sanpaolo LGBTQ+ and Allies community, and "ARTICOLO19 – Disability & Citizenship", a community formed with the objective of developing content and ideas to improve the lives of people with disabilities and their families, with the prospect of providing an additional contribution to disability and inclusion issues. Diversity and inclusion are promoted through internal and external communication channels, with information provided on the company Intranet for accessing available services and opportunities.

Remediation processes for employees and their representatives and reporting channels

Two types of channels (the Code of Ethics inbox and the Whistleblowing system) are available to Group people to report needs/concerns/alleged breaches of their rights, facilitating the Group in remedying the negative impacts they may suffer. For further information on the Code of Ethics reporting channel and the whistleblowing procedure, see, respectively, the sections "Whistleblowing Policies, Objectives and Actions" and "Policies, Targets and Actions Related to Corporate Culture" in the ESRS G1 – Business Conduct chapter.

In addition, the DE&I unit provides an inbox to which people can write to express their needs or concerns on matters of competence. The inbox is monitored by a member of the office and replies are given to all requests or messages received, also with the involvement of any other competent functions in relation to the matter raised. Reports are followed-up as envisaged for each specific channel. In addition, the "Rules for Combating Sexual Harassment" provide for a specific reporting channel for the matter, setting out the roles of all the organisational units involved.
Working tables to address reports of sexual harassment are activated by the DE&I unit, in its capacity as guarantor of the process. Working tables bring together various functions, which work together to guarantee that reports of sexual harassment are handled appropriately, confidentially and in accordance with company policies, ensuring victims receive all the support they need and that corrective measures are adopted. The areas and professional profiles involved include:
- Diversity, Equity & Inclusion;
- Human Resources Management;
- Audit;
- Chief Equity, Legal & M&A Officer Governance Area;
- Health & Safety.

Reports are duly investigated and, where sexual harassment or any breach of other Bank regulations is found, the resulting disciplinary action is decided by the competent Labour Proceedings function. Additional remedies, such as to protect the victim, for instance, may be adopted on the basis of the specific situation. A psychological counselling and legal advisory service is always available to people involved in a sexual harassment case, even where the harassment took place outside the workplace (in the private sphere, for instance). For further information of a quantitative nature on such cases, see the section "Metrics on Human Rights in the Own Workforce".
These reporting channels are guaranteed by the Bank through its specific DE&I polices and Rules for Combating Sexual Harassment, which each envisage specific reporting channels (such as the "segnalazioni_molestie@intesasanpaolo.com" inbox for reporting sexual harassment). Mandatory training on the topic of sexual harassment is delivered every year to raise awareness in people of the meaning of harassment and its consequences. The relative reporting channel is indicated during the course.

Information on the number of times a working table is activated during the year for the management of sexual harassment reports and on the outcomes of the relative investigations are recorded in a special register. Under the Rules for Combating Sexual Harassment, the effectiveness of the reporting channel is ensured via the constant monitoring of the e-mail inbox and by confirmation of receipt of reports, which is communicated to the person making the report within one working day from receipt.

The rules are published on the company Intranet and all Group people, in accordance with the Group's Internal Code of Conduct, are required to acknowledge them, contacting the competent units if they have any doubts as to their interpretation. The matter of reporting sexual harassment was the topic of a specific survey in 2024, which looked at various aspects, including trust in the channel used.
The questionnaires reiterated the commitment to respecting and protecting the victim and/or person making the report; in fact, both for reports concerning breaches of the Principles on Diversity, Equity and Inclusion and reports of sexual harassment, measures are in place to protect people from any retaliatory action.

In relation to disability-related matters, Group people can turn for help to their Human Resources Management office, specifically tasked with disability management. A dedicated inbox is provided for the purpose (disability.management@intesasanpaolo.com), with a specific section on the Intranet. Disability issues are regularly discussed with trade unions within the framework of the Welfare, Safety and Sustainable Development Committee.

The work of the inter-functional working group in practice involves the management of individual reports, as well as a range of other activities, such as the governance of IT accessibility matters, the delivery of dedicated training to all Human Resources Management offices, managers in charge of people with sensory disabilities and top management, and awareness-raising initiatives engaging all Group people.

Diversity, equity and inclusion targets

The 2022–2025 Business Plan requires a gender balance (approx. 50% male and 50% female) in new appointments to senior management positions (first and second-level reports to the CEO). The progressive delivery of that target is monitored by the DE&I Control Room on a quarterly basis. The setting and monitoring of the target and measurement of progress does not involve engagement with the workforce or trade union representatives.
Appointments are considered "to senior positions" when they:
- open "access" to first or second-level reporting positions to people in lower levels of the organisational ladder or who are external to the Group;
- promote people from second-level to first-level positions reporting to the Managing Director and CEO.

Where a person is appointed to more than one senior position, each appointment is considered separately. For the purposes of the target set, "horizontal appointments", which do not involve a step up in the organisational ladder, are not considered, both where a person changes role and where a person is assigned a new role in addition to their existing area of responsibility. In the case of transition periods, where a person temporarily steps down from a senior position (first or second-level report) but will later return to their level (for example, pending the creation of new positions that have been planned), such appointments are not considered if the person "steps back up" the same level previously held. In practice, such appointments are treated as being equivalent to "horizontal appointments" and the step down/step up of the person to a senior position is considered purely a temporary measure for the creation or preparation of the new organisational role. Appointments that instead lead a person to step up the organisational ladder to a higher position than the previously held are considered. Only the organisational levels effectively included in the organisational chart are considered.

On the basis of the organisational structure in place as at 31 December 2024, we report that over the period 2022–2024, 25 appointments were male (50%) and 25 appointments were female (50%).

Diversity, equity and inclusion actions

DE&I actions and initiatives cover all Group people, with each initiative targeted at specific clusters. Some initiatives are also run outside the Group, reaching out to groups such high school pupils and university students. While some actions are stand-alone events (such as awareness-raising or training sessions), others are organised on a repeat basis to cover the entire cluster targeted, lasting several months or more than one year.

During 2024, the Diversity & Inclusion (D&I) unit, reporting directly to the Chief People & Culture Officer, continued its work promoting an inclusive work environment, capable of welcoming and giving value to all forms of diversity. The Group's inclusion strategy forms the groundwork for effectively governing the coordination of initiatives and is backed by the ongoing measurement and assessment of outcomes delivered. The DE&I Working Group, made up of representatives from each division, governance area and other key units involved in the planning and roll-out of initiatives, continued its alignment, coordination and discussion work, enabling continuous exchange between the DE&I unit and all Group entities.
The Diversity, Equity & Inclusion Control Room worked throughout the year on its task of continuously monitoring compliance with the commitments set out in the Diversity, Equity & Inclusion Principles, specifically in relation to gender equity.
The DE&I Control Room has been renamed the Diversity, Equity & Inclusion table and its participating functions and responsibilities updated.

One project carried on over the course of the year was "Words of Respect", focused on promoting inclusive communication. The project builds on cooperation between the Diversity, Equity & Inclusion unit and Internal Communications units, with the support of an inter-functional working group. The main objective of the project is to draw up an internal document suggesting good practices to adopt, to help Group people be more inclusive and accessible in their language. The project also involves awareness-raising initiatives and training, targeted at all Group people on the importance of using language that respects all forms of diversity.

Intesa Sanpaolo's very first "Inclusion Week" was held in May to promote thinking and raise awareness of the value of diversity. The five days of the initiative each covered a different macro-theme, with ten on-line events featuring Group people and external guests as speakers.

To promote female talent and encourage the creation of fair and inclusive working environments, initiatives for the development of female professionals and managers continued, including initiatives aimed at the empowerment and growth of women included in development plans, which involve job rotation programmes, shadowing, training and empowerment.
A new programme was started up, entitled “The Art of Leadership | Mastering the Future”, to spread a leadership mindset able to rise to the technological, economic and social challenges shaping the context of continuous change in which the Group operates, with the aim of generating “virtuous” connections that can grow over the years. The initiative targeted the management cluster and around 750 professionals (Masters) from all the different corporate areas.
The group coaching programme continued for women taking up a role of responsibility for the first time, with a view to improving inclusive leadership skills.
The programme for the Group's long-term absentees also continued its activity, involving more than 500 long-term absentees in a voluntary orientation programme, with the aim of establishing a close relationship with the employees during their absence and promoting their successful return to work.
Parenting support initiatives in place targeted both mums and dads. Alongside training to promote awareness of the value of being a working parent, an awareness-raising campaign continued to reach out to dads in the various Group areas and engage them in a rethink of the gender stereotypes tied to parenting.

On the topic of sexual orientation and gender identity, Intesa Sanpaolo continued its partnership with Parks – Liberi e Uguali, running joint communication and awareness-raising campaigns to encourage the full inclusion of LGBTQ+ people.
Efforts continued to ensure support, within the Group, to people desiring assistance in the workplace during their gender affirmation process.

The year witnessed the continuing growth of ISPROUD, the ERG community (employee resource group or affinity group) of LGBTQ+ people and allies, established spontaneously in 2021. In 2024, the community grew to more than 1,742 members in Italy and abroad, who meet periodically to discuss and share ideas and experiences to be translated into tangible project ideas to propose to the company. ISPROUD worked with the Diversity, Equity & Inclusion unit and with the rest of the Group on a number of initiatives, providing its contribution for the planning of internal and external contents, the organisation of events and the launch of new projects.

Intesa Sanpaolo Group was the best-ranking bank in the world on the international FTSE Diversity and Inclusion Index—Top 100 (by FTSE Russell, formerly Refinitiv), which ranks the top 100 companies with the most diverse and inclusive workplaces. Ranked seventh worldwide, the Group was the top-ranking banking group globally and the only Italian bank to be ranked.
Compiled by FTSE Russel, the index ranks over 15,500 publicly-traded companies globally on the basis of 24 separate metrics across four key pillars: gender diversity, inclusion, people development and news & controversies. FTSE Russel is a leading global provider of benchmarks, analytics and data solutions with multi-asset capabilities.

Intesa Sanpaolo is the first bank in Italy, and one of the first in Europe, to have obtained Gender Equality European & International Standard (GEEIS-Diversity) certification. The international GEEIS-Diversity label by Arborus measures and assesses the effort invested by companies in diversity and inclusion as strategic elements of an organisation. Intesa Sanpaolo is the first major Italian banking group to have obtained the gender equality certification envisaged by the national recovery and resilience plan (NRRP), thanks to its efforts to promote diversity and inclusion. In 2024, the second follow-up audit was carried out. The audit specifically assessed the implementation of a gender equality management system in Group companies in Italy.

The value of inclusion was the subject of various training contents designed and proposed during the year, which were customised and aimed at different Group populations. In 2024, inter-cultural training initiatives were started up, focused specifically on the effectiveness and importance of inclusive and respectful communication between cultures.
After having reached all people in manager roles in Italy, the managerial discussion initiative on inclusive leadership topics was extended to all Group people in manager roles outside of Italy. People covering roles of responsibility were involved in a training course focused on building an inclusive leadership mindset, with sessions dedicated to the issue of disability and mental health (more than 6,500 people involved). A pilot version of the initiative is set to be run with a group of people representing banks in the International Banks Division, to assess the opportunity of involving all people covering roles of responsibility, adapting the course to the specific features of the local context. A dialogue has been started up with banks in the International Banks Division on DE&I matters, focusing in particular on disability, with a view to creating a common approach to projects.

Again in relation to the International Banks Division, the “women4Future” initiative continued to run within the framework of the “People First” programme. The initiative involves a committee of women in top management roles in the division, united by the objective of working together and sharing their perspectives in a dedicated framework, to help guide innovation and bring positive change to the division.

Finally, in 2024 the Group rolled out a series of training initiatives to foster inter-generational dialogue and promote constructive cooperation between people of different ages in work teams.

Actions for the inclusion of people with disabilities

The inter-functional working group handles and assesses with maximum care individual requests made for arrangement measures. The process involves identifying, and adopting when necessary, the adjustments and arrangements needed to guarantee that people with disabilities enjoy and exercise all their human rights and fundamental freedoms on par with others. The inter-functional working group works on projects in a number of areas, including accessibility, communication, development of an inclusive culture, training and joint projects directly involving Intesa Sanpaolo people.

Together with trade union representatives, all the members of the group took part in the advanced training course “Disability Managers and the Working World”, organised by the Catholic University of the Sacred Heart in Milan to lay the groundwork for adopting a common language, an important work tool.

In 2024, “ARTICOLO 19 – Disability & Citizenship” affirmed its identity as an affinity group championing disability issues. What started out as a small group of people has progressively grown, with the objective of developing ideas and content to improve the lives of people with disabilities and their families, with the prospect of providing an additional contribution to disability and inclusion issues.

In this field, at the initiative of the philanthropic Intesa Sanpaolo Foundation, a non-profit mutual society has been set up with the mission of pursuing initiatives to benefit the disabled children reliant on care of Group people.

A similarly strong commitment is shown to the outside world, as seen in Intesa Sanpaolo’s participation in several conferences on the topic, such as the joint-company round table “Abilitiamo la Disabilità” (Let's Enable Disability), an initiative to discuss the experiences gained, with the aim of investigating, consolidating and spreading a profound culture on disability management issues.

Other initiatives included “Visite d’altri sensi” (Visits in Other Senses, after the pilot project run in November 2022) and “Oltre le barriere” (Beyond the Barriers, launched in 2024). The first initiative, organised in partnership with “Gallerie d’Italia”, involves Group people with visual disabilities in the role of sensory tour guides at the museums. The aim is to unlock an appreciation of art from a different perspective and, above all, foster empathy by putting oneself in another person’s shoes. The second initiative, organised in partnership with the Innovation Center, saw the production of an urban mobility accessibility project that was a finalist in the internal “#RealizzAbile” competition. The project was run as a pilot project with the involvement of the Turin City Council and a number of start-ups. The initiatives respectively attracted the participation of around 70 people for the museum sensory tours and 44 teams in the competition.

In addition, since 2018, Intesa Sanpaolo has been a certified Dyslexia-friendly company, confirming its commitment to raising awareness of specific learning disorders (SLDs). This commitment is given practical expression through the delivery of specific webinars targeted at all Group people and the availability on the Intranet of guides, video clips, infographics and a self-assessment questionnaire for parents and families, all exploring the many different aspects of dyslexia and helpful for living with the disorder, making a positive impact on well-being and quality of life in all contexts.

In 2024, the International Banks Division worked together with the Group Diversity, Equity & Inclusion unit to share experiences and plan joint projects to further inclusion, with specific focus on disabilities. The three face-to-face meetings organised involved all the banks in the division.

Training and development

Policies relating to the training and development of Group people

Training and communication are two fundamental levers for the involvement of all the Group's people in a process of continuous growth and enhancement with the aim of guaranteeing the best professional experience. In line with the 2022-2025 Business Plan, the Intesa Sanpaolo Group continues to invest in its people, creating a unique ecosystem of skills that is suited to both the current context and its future evolution.

In the belief that the constant updating and training of its people represent an important distinctive factor and increase its overall added value, the Group is committed to further strengthening its control over mandatory training, thus also responding to the requests of the Supervisory Authorities.
The criteria for the participation in mandatory training are detailed in the Group's specific internal regulations according to which all Group employees with subordinate employment contracts are required to attend such training sessions in order to guarantee the correct performance of the tasks and duties of the recipients, ensuring knowledge of the regulations and company processes. Furthermore, training is also under the scrutiny of the Supervisory Authorities, which, in certain circumstances, can adopt disciplinary measures. The internal regulations are applied at Group level; to this end, all the Governance functions involved work, each within their respective areas of competence, to ensure a standardised application of the methodology at Group level.
Knowledge of the published training obligations which the employee has signed up to is acquired through periodic access to the company's training platforms. Each employee is required to access the company's platforms to view their obligations, and to support this they receive periodic summary notifications on the training obligations still to be fulfilled and the related deadlines.

For the benefit of employees who do not meet the technical conditions for participation in the courses according to the methods defined above (for example, visually impaired persons), specific provisions are put in place which determine the methods and timeframes for the completion of the mandatory courses intended for them.
In consideration of the impacts, risks and opportunities related to the Group's scope of operations, the management of training requests is guaranteed by the preparation of the Parent Company's training plan, which includes differentiated training initiatives based on the role, the areas covered and the associated responsibilities.

The training plan is defined annually, implemented and monitored through the involvement of the competent corporate structures. This illustrates the training provisions planned for the Parent Company, it specifies which ones will also be extended to the subsidiaries, and is broken down into:
- compliance talks, intended for Chiefs, division heads and executive directors, aimed at training on strategic and innovative topics through content that is consistent with the responsibilities and areas of action of these roles;
- training plans for all other managers and professional profiles, divided into cross-cutting and/or specific initiatives based on the role performed, the activities supervised or specific regulatory provisions;
- initiatives set out in the Parent Company's training plan contemplated by the subsidiaries in their own training plan, indicated as being applicable to the entire Group and integrated with the initiatives defined and implemented independently on the basis of local and/or sector regulations as well as the related business requirements.

Training requirements are identified on an annual basis by the reference structures based on current and/or newly issued regulations. Specifically, the Chief People & Culture Officer Governance Area, with the support of the competent human resources functions, starts collecting training requirements from the reference structures, which identify them based on:
- specific job requirements;
- legal provisions relating to issues that require training initiatives, including those enabling the provision of services and the marketing of products;
- topics of particular relevance for the Group;
- findings/reports from the Supervisory Authorities, which require dedicated training provisions;
- periodic review, during the year, of the training requirements indicated by the reference structures to incorporate any changes and additions.

Within the Group's guidelines, the structure responsible for training activities contributes to compliance with all regulations regarding anti-money laundering, counter-terrorist financing, embargoes, antitrust, fairness in customer relations, and integrity in the management of tax issues. Training also contributes to combating corruption, applying the “zero tolerance” principle and promoting corporate behaviour based on the utmost consistency and transparency, and preventing, where possible, potential situations of conflict of interest.

The training activities are also intended to support the dissemination of the sustainability culture, not only by conveying ESG notions and knowledge, but also by ensuring that for the Group's people these are transformed into the skills needed to act as "agents of change", contributing to the implementation of corporate strategies geared towards generating economic, social and environmental value together.

Indeed, the Intesa Sanpaolo Group aims to have all Group’s employees trained in ESG by 2025, through a training provision structured on two levels:
- a basic level, cutting across the various topics and provided to all employees, above all through online remote training modules;
- an in-depth specialist level, on individual topics, managed by the Divisions and Governance Areas concerned, including in-person training.

The topics covered cut across all three ESG areas.
In line with its commitments to the ecological transition, the fight against climate change and the protection of nature and biodiversity, the Group is committed to spreading environmental values, promoting the involvement of all its people in the implementation of responsible environmental practices. Specific courses are mandatory for personnel directly involved in the implementation of the environmental and energy management system, but are also available to all employees.

Great attention is also paid to social issues, with particular reference to Diversity, Equity and Inclusion, the fight against sexual harassment, and human rights. In order to promote and encourage the creation of fair and inclusive work environments, the company organised courses on unconscious bias, which is important to recognise in order not to fall prey to it in one's daily work. The topic of gender differences was addressed, for example, both with a mandatory refresher course on combating sexual harassment, as a lever for the effective implementation of the Group Rules on the matter, and with a course on Female Empowerment, with the aim of reflecting on how some elements, including the culture on gender roles and differences, can influence the ability of each person to best express their potential and to transfer skills that can be used to free up unexpressed resources, working on the deconstruction of stereotypes and self-limiting prejudices.

Processes for the involvement of employees and their representatives

The needs and training delivery model analysis process is guaranteed by the Learning Business Partner function which interfaces with the Human Resources functions and the Group structures for the identification and analysis of training requirements.

The process develops through the following phases:
- collection of training requirements;
- analysis and development of training requirements;
- coordination of the implementation of training initiatives;
- monitoring activities.

“Collection of training needs” means the activity carried out in conjunction with the human resources functions to identify the professional, mandatory and managerial training needs identified by the Governance Areas/Divisions, within the scope of annual and periodic planning activities and in compliance with sustainability criteria. "Training needs analysis" means the assessment carried out by the Learning Business Partner function, in conjunction with the human resources structures, of all the elements necessary for a detailed examination of the training needs collected, to define the feasibility of the training initiative and the possible cross-cutting aggregations, giving special priority to the implementation of mandatory initiatives.
Once the training needs have been collected from each structure contact, the Chief People & Culture Officer Governance Area defines, with the support of the dedicated supplier, the method of delivery of the training provisions, distinguishing between in-person or remote initiatives based on the chosen channel.

The activities described are also included among the funding opportunities planned for the development of continuous professional training and for upskilling and reskilling activities for professional profiles of specific interest.
In this context, the training plan is shared with the Welfare, Safety and Sustainable Development Committee/Joint Training Body (COWESS), a bilateral body composed of company and union representatives, provided for by the current Group Labour Relations Protocol and in line with the provisions laid down by the National Collective Bargaining Agreement. COWESS is tasked with studying, analysing and researching training matters, including the examination of material relating to financing projects promoted by entities operating in the vocational training sector.

Furthermore, in 2024 Intesa Sanpaolo entered into an agreement with all the trade unions aimed at strengthening the role of training as a pillar of the bank of the future and a priority tool to ensure engagement and the responsibility pact with the Group's people in order to increase their satisfaction, promoting the development of skills, employability and professional growth.

Thanks to continuous, personalised and innovative upskilling and reskilling processes, tailored to the new organisational processes and with high added value contents on transformative issues and strategic areas such as artificial intelligence (AI), data analytics, ESG, and internationalisation, training will allow to guide the Group's people through the change with the acquisition of the required professional skills but also towards new professions.

In line with the process described above, the Group's people have the opportunity to interface directly with their managers and their human resources manager to express their training needs.

Objectives and metrics relating to the development of the Group's people and talent management

The Intesa Sanpaolo Group pursues the objective of providing its employees with growth paths based on training as a driver for the development of the talents present within the Group, as well as the ability to attract people from the outside. Consequently, it has set itself qualitative and quantitative objectives linked both to the provision of hours of cross-disciplinary training to all its people and to specific learning and collaboration methods.

In order to support the definition within the Group of a consistent model for the development and enhancement of the professional contribution provided, groups of professionals with homogeneous skills, learning paths and qualifications have been identified. These groups, which bring together people from the Italian Group perimeter and are referred to as job communities, can be formed according to two different logics. In particular, job communities are set up:

- by profession, “natural communities”, made up of professional profiles with homogeneous skills (Professions) and titles (Titles);
- by interest, which include those who, regardless of skills and titles, are driven by a specific or project-related interest in strategic themes for the Group (for example, AI, Art and Culture, etc.).

In the 2022-2025 Business Plan, a target was defined in relation to the job communities with the aim of reaching an overall value of 20,000 people involved by December 2025.

Target: Number of people in "job communities"		
	Date	**Value**
Baseline[118]	31.12.2021	-
Final balance	31.12.2024	36,775
Target	2025	20,000

Intermediate end-of-year milestones were also set along the same time horizon, and were always achieved and exceeded. The target is monitored on a quarterly basis through an indicator defined by the following components:

- number of people with homogeneous Titles and Professions;
- number of people in Profession job communities without Titles and therefore gathered with respect to the same professional profile;
- number of people in interest job communities.

The target was defined by the competent functions within the Chief People & Culture Officer Governance Area.

As of 31 December 2024, the number of people in job communities was 36,775, of which 22,176 people with homogeneous Professions and Titles.

The Talent Management strategy also includes the “Leader of the Future” programme, aimed at all Intesa Sanpaolo Group people, both in Italy and abroad, and which is also one of the objectives set out in the 2022-2025 Business Plan.

The programme consists of two project initiatives:

- International Talent Programme: it is one of the most important initiatives for the enhancement of talents at Group level, which aims to develop a new generation of managers and professional roles with a cross-cutting and international culture through personalised paths with an indicative duration of three years. A mentorship and tutorship programme is dedicated to the talents, which involves the Senior Managers and the Heads of the structures to which those same talents belong;
- Key People: it is the second pillar of the Group's innovative talent strategy, which aims to identify and develop the Leaders of the Future. It represents a path of excellence for selected members of the Group's middle management, with the aim of enhancing professional and managerial growth, as well as guiding them towards future leadership roles in more complex managerial contexts.

The key objectives of the “Leaders of the Future” programme are:

- human capital enhancement: recognising and promoting existing talents within the organisation, encouraging their professional growth and development;
- strategic management of internal professional growth: ensuring that the Group has constant access to the best resources, thus reducing the need for external recruiting to fill critical roles;
- generational renewal: ensuring the constant rejuvenation of the talent pool, enabling the Group to maintain a balance between experience and new perspectives.

[118] Plan target that represents the planning of a new activity that does not have a base value.

The expected results of the “Leaders of the Future” programme are:
- continuity and stability: establishing a talent pipeline ready to transition into key roles, ensuring business continuity and organisational stability;
- competitiveness: increasing the Group's competitiveness through the acquisition and retention of high-level skills;
- organisational culture: strengthening a corporate culture focused on excellence, innovation, and continuous growth.

The target value of people involved in the Leader of the Future programme is approximately 1,000 colleagues over the 2022-2025 Business Plan period, selected both in Italy and abroad. The indicator includes both programme populations: International Talent Programme and Key People.

Target: Number of people enrolled in talent programmes		
	Date	**Value**
Baseline[119]	31.12.2021	-
Final balance	31.12.2024	975
Target	2025	1,000

For the International Talent Programme, the number reported represents the people belonging to the talent community at the reporting date, and includes both talents who are undergoing the development path and those who have completed it.

As regards the Key People programme, however, the population boundary has been defined for the entire 2022-2025 Business Plan, and is therefore stable.

From the launch of the “Leader of the Future” Programme to the end of 2024, a total of 975 people have been involved in talent management and development activities, through participation in the two “Talent Programme” and “Key People” programmes mentioned above.

Actions relating to the training and development of Group people

Training activities at Group level and across departments

The training activities are provided thanks to the intervention of the Chief People & Culture Officer Governance Area, which is tasked with:
- promoting the dissemination of a Group culture that supports change and contributes to creating an inclusive and high-quality working environment for all people;
- defining training proposals and implementing the relevant training programmes to enable the continuous updating of skills, fulfilment of regulatory obligations and professional retraining, in line with the company’s needs and strategies, individual motivation and enhancement of all Group people;
- preparing the Training Plan, coordinating the collection of training needs.

The People Attraction, Skills & Learning Strategy Structure reports to the Chief People & Culture Officer Governance Area and oversees, with the support of a dedicated supplier, where necessary and with the competent Group structures involved, all activities relating to needs analysis, the identification of the delivery model and the planning and delivery of training provisions.

All training, including mandatory training, is carried out with the support of a dedicated supplier in order to guarantee high quality standards and constantly updated content based on the Group's specific needs. The collaboration between Intesa Sanpaolo and Digit'Ed S.p.A. (Intesa Sanpaolo's partner in the implementation of training initiatives), a company established in 2022 following the transfer of the training business line, continued throughout 2024. Digit'Ed, leveraging Intesa Sanpaolo's innovative learning infrastructures, was able to position itself on the market as an aggregator of the best Italian operators in the sector.
The main channel for the provision of training, especially mandatory training, is the digital one which enables:
- to quickly make training content and any subsequent updates available to very large audiences;
- to access training content at any time from the company's platforms;
- to independently manage learning times.

Alternatively, if required by specific regulatory provisions or for other organisational reasons, training can be provided through Live classrooms (physical or remote).

The People Attraction, Skills & Learning Strategy structure, during 2024, continued to implement innovative training models and methodologies, geared towards the Group's people and conducive to promoting multi-channel training that maximises simplicity and flexibility of learning through the use of the various corporate training platforms (for example, Apprendo, Myla, Scuola dei Capi (Management School) and LEA, the latter dedicated to people belonging to international subsidiary banks coordinated by the International Banks Division).

In 2024, in continuity with what was done the year before, corrective mechanisms concerning non-completion of mandatory training within the required timescales were introduced in the incentive system in order to further strengthen its monitoring.

On a thematic level, the training provision has been expanded and updated with the publication of new digital content to incorporate regulatory updates regarding Legislative Decree 231, Anti-Money Laundering and Anti-Corruption. During 2024, a specific training plan on “ICT and Security Risks” was prepared which, in the current context characterised by a strong push towards the digitalisation of processes and tools, technological development and the complex international political situation, included training and awareness initiatives, aimed at increasing people's awareness and know-how on the main ICT risks. A digital training guide on the Code of Conduct was also published.

[119] Plan target that represents the planning of a new activity that does not have a base value.

The training initiatives are aimed at all Group's people (for example, threats deriving from phishing, cyberfraud and new trends) as well as at clusters that monitor specific business risks. This area also includes the MATRIX Project, designed with the aim of creating an ecosystem of models and tools for human resources, aimed at supporting the technological development of the Group with adequate resources which, in continuity with 2023, planned a significant investment in training in order to respond to the needs arising from the evolution of the company's workforce and promote the acquisition and enhancement of key knowledge in the IT sector. The training programme is aimed at both newly hired colleagues, with a specific onboarding process including digital and live content designed ad hoc, and at professional profiles already included in the role with specific technical/specialist initiatives and certification paths.

In order to promote prudent risk-taking when it comes to current and prospective risks across all levels of the organisation, with particular focus on those connected to climate change and technological innovation, information, awareness and training initiatives were provided in the context of risk culture and management.

The topics covered through ESG training, with a particular focus on environmental and social issues, in 2024, covered topics such as the EU Taxonomy and included the publication of a new collection of mandatory training modules on the Corporate Sustainability Reporting Directive (CSRD). Furthermore, the Group organised a mandatory training course for all employees to strengthen knowledge and implementation of the principles and values enshrined in the Code of Ethics, a key governance tool.
With particular reference to the protection and respect of human rights, a series of mandatory training modules on Modern Slavery were developed, with the aim of disseminating knowledge regarding companies' responsibility in preventing modern slavery within their operations and supply chains, also responding to external regulatory requirements (for example, UK Modern Slavery Act, Australian Commonwealth Modern Slavery Act). A compliance talk on “Code of Ethics, combating Modern Slavery and sexual harassment: Intesa Sanpaolo’s approach” was held for the benefit of Chief and Executive Directors.

Diversity, Equity & Inclusion initiatives were once again provided in continuity with the work carried out in previous years, such as initiatives dedicated to female empowerment, parenting and the dissemination of the aging culture. Other initiatives were added dedicated to the issues of interculturality, inclusive leadership, disability and inclusive language.

During 2024, 31 Digital Talks were delivered with testimonials from subject matter experts on various topics, including the circular economy and organisational well-being.

With reference to the actions taken in order to support people in job communities, several initiatives were carried out in 2024:
- New job communities: with the aim of increasing the number of people who can be hired and participate in the communities, 4 new communities were activated:
  - 3 in the first six months, 2 of which were by profession and 1 was by interest;
  - 1 by interest in the fourth quarter.

  With these actions, as of 31 December 2024, 12 job communities were active (7 by profession and 5 by interest) dedicated to the Group's colleagues in the domestic perimeter.
- App Activation: in order to be able to use the technological platform dedicated to job communities even on the move, a customised company app dedicated to business communities was activated in June 2024.
- Professional titling: the dissemination activity of the Titling model dedicated to Professionals continued. In particular, a new model dedicated to the Chief Data, AI, Innovation and Technology Officer (CDAITO) Governance Area was adopted and a comprehensive title updating activity was carried out for the remaining Governance Areas and for division personnel.

On the other hand, as regards the “Leaders of the Future” programme, for the entire duration of the 2022-2025 Business Plan, participants will follow a personalised development path, financed through an ad hoc budget: specialist and managerial training in English in collaboration with the best Business Schools, premium coaching and individual empowerment initiatives, international workshops focused on innovation, project work initiatives strongly connected to the Group's businesses.
The development paths for talents participating in the “Leaders of the Future” programme are, among others, one of the qualitative factors taken into consideration to assess the impacts of the Intesa Sanpaolo Group strategy on its employees' well-being.

Initiatives at the division level

The IMI Corporate & Investment Banking Division has promoted initiatives aimed at recognising the role and effects of stereotypes that hinder the effectiveness of intercultural and generational relationships in order to provide tools to overcome them and create bridges for collaboration, thereby enhancing everyone's differences and contribution.
In 2024, the Division also continued to organise updating and awareness-raising initiatives on the Bank's ESG positioning in favour of the international "SHAPE" community, dedicated to young people under 36. Particular attention also continued to be paid to ESG issues in the curriculum of the new Higher Education Course "IMI CIB Next Generation Education Program", promoted by the Division in collaboration with Digit’Ed and Scuola di Direzione Aziendale Bocconi.

In 2024, the Insurance Division launched an ESG initiative to provide an overview of the main ESG issues impacting the market and share the latest regulatory and strategic sustainability news, with a particular focus on ESG risks, illustrating challenges, opportunities, related impacts and management insights. Furthermore, the Division participated in initiatives aimed at promoting intercultural relations to enable people belonging to the Insurance Group to acquire useful tools to create bridges for collaboration, thereby enhancing everyone's differences and contribution.

The Asset Management Division also maintained the "Eurizon Higher Education" course for 2024, aimed at a selection of young people under 35 from the Italian companies of the Division, confirming the path with two ESG training modules: "Eurizon's Governance", "Ethics and behaviours", and "The ESG wave", the latter two relating to the ESG impact on finance, the economy and society and on the Division's sustainability policy. In 2024, the Asset Management Division also participated in cross-cutting initiatives aimed at promoting intercultural relations to enable people to acquire useful tools to create bridges for collaboration, thereby enhancing everyone's differences and contribution.
The Chief Audit Officer developed, in collaboration with the Group's Learning Strategy and Digit'Ed, an in-depth course on ESG issues, delivered in collaboration with AIIA (Italian Internal Audit Association) and dedicated to a selected group of employees, with a focus on aspects related to the auditors' activities.

At the international level, the Digital Talks dedicated to the Managers of international subsidiary banks belonging to the International Banks Division (IBD) continued, with three editions on the topics of macroeconomic trends, leadership and new ways of working and inclusive leadership.

The International Banks Division (IBD), in continuity with previous years, guaranteed ESG training across all in-scope banks, both across all personnel with high-level online initiatives, and across more targeted professional profiles with more specialised live initiatives.
In particular, the Group continued the online provision of the mandatory course on the Code of Ethics, as well as the non-mandatory provision, with initiatives such as "ISP4ESG, our contribution to the future", "Circular Economy Plafond" and "EU Taxonomy".
The live course "ESG: Disclosing Sustainability" was provided to the professionals of all banks and the Division. Finally, the managers of international subsidiary banks were also involved in two specific digital talks held in English: "ESG: Human traces in the environmental evolution" and "Urban Re-generation New purpose for urban spaces through sustainable architecture". Furthermore, the "People First" programme was set up with the aim of educating and raising awareness among the Division's people on ESG issues.
During the year, many activities were organised that involved the entire scope of the Division:
- three online webinars were organised for colleagues in the Division's head office structures but also for the Banks,
- "Climate Change", "The art & science of fair trade - chocolate" and "The Story of Patagonia" with the involvement of over 300 people;
- the "ESG Gamification Experience" initiative continued, with the progressive involvement of all the banks in the Division. After VUB, CIB, and PBZ, a new edition took place in BIB, Intesa Sanpaolo Albania and Intesa Sanpaolo Slovenia, as well as one involving the head office structures;
- a contest was launched that involved the use of the Aworld application to involve and motivate people on sustainability issues, encouraging the adoption of sustainable behaviours in everyday life. The final event was a Sustainability Journey held at some Italian companies with a strong ESG impact;
- the Digital Talks dedicated to the Managers of international subsidiary banks continued to be held on a monthly basis on various topics, such as leadership and innovation.

Health and safety

Health and safety policies

The Health & Safety structure ensures the monitoring of compliance risk with reference to the areas of occupational health and safety protection, pursuant to Legislative Decree 81/08, fulfilling the role of specialist function provided for by the Group Compliance Guidelines.

The principles and procedures to be adhered to and implemented to ensure a safe working environment are governed within Intesa Sanpaolo by three documents:
- the Occupational Health, Safety and Welfare Policy;
- the Health and Safety, Environment and Energy Management Policies and Systems (both applied at Group level);
- the corporate rules on occupational health and safety involving the Italian perimeter.

These documents complement the declarations set out in the Group's Code of Ethics, which places its employees' health and safety among its fundamental principles and to which reference is made for the discussion of the commitments regarding human rights.

The corporate rules on occupational health and safety summarise the "System of Tasks and Responsibilities" which involves a number of entities, each in relation to specific professional skills and certain functions. Furthermore, they identify the main activities related to the management of accident prevention in the workplace. According to these rules, the employer is responsible for implementing these policies.
The above documents define the principles and procedures to be adhered to and implemented in order to ensure a safe working environment.
The above policies comply with national and international standards for respecting human rights in the occupational health and safety sector. As evidence of this, the organisation obtained the ISO 9001, ISO 45001 and ISO 45003 certifications. The documents are made available both through the intranet portal for Group people and through the institutional website for external customers or stakeholders.

Processes for the involvement of employees and their representatives

The Group's commitment to involving people is expressed in the Code of Ethics, promoting listening and dialogue at all levels. Employee hiring is also ensured through trade union representatives. As well as by the industry outlook, relations with the Trade Unions are also regulated by the Labour/Management Relations Protocol, which has made it possible to implement a specific union relations model within the Group.

With reference to the involvement of employees in health and safety matters, the role of Worker Safety Representatives (WSRs) comes into play. These are generally assigned the task of communicating and engaging with employees in order to take their perspectives into consideration. There are 96 such representatives and they cover 100% of Italy's workers, 40 of these are part of the delegation that meets periodically with the Safety and Protection Department and with the employer's delegate. On that occasion, all the activities carried out by the Prevention and Protection Service are summarised using a reporting system set forth by the legislation which includes activities carried out and programmes for the following years. Information on these topics is made available through the intranet portal and mandatory training (Apprendo platform), subject to assessment and monitoring.

The Process Guides define the role and responsibility of the Safety Officer, which also includes hiring of and communicating with employees.

Remediation processes for employees and their representatives and reporting channels

The management of material impacts on the Group's people in the health and safety area is governed by a specific Process Guide (Compliance Management Process Guide - Management of Occupational Safety Regulations) which sets out the approach to managing the anomalies identified through control activities and any corrective actions to be implemented.
This Guide also defines the communication channels made available to employees to receive information and communicate with the reference functions in health and safety matters. This process is managed by the Safety Officer, who undertakes responsibility for it.
In addition to Code of Ethics and whistleblowing reports, the channel for reporting risks and incidents is available to some company roles, such as branch managers and WSRs, who have the right to access all workplaces and submit reports that are subject to checks by the head office structure in order to determine whether or not to open the risk factors.

Furthermore, it is worth highlighting the presence of direct channels dedicated to branch managers to report risks and incidents. This option is also available for the Occupational Medicine department, which has a direct channel available to request additional medical examinations. In addition, the Group employees can benefit from psychological support following a traumatic event.

The risk monitoring and assessment activities for workers in the health and safety sector are set out in the Process Guide, which also identifies the various structures in charge of these processes (the employer is responsible for risk assessment, the Prevention and Protection Service must plan and carry out inspections and audits for the integrated risk assessment and record the results). In addition, in the event of risk factors being opened, these are recorded in the systems and a tracking process verifies their acceptance and the subsequent completion of the intervention.

Corporate roles specifically identified for this purpose (for example, supervisors) are provided with dedicated training on the correct use of reporting channels, available on the company intranet with the related access instructions, thus guaranteeing the privacy of the person who makes the report.

Health and safety objectives

The Group put in place a series of policies and actions to protect its employees on health and safety matters that enable it to monitor and address these issues on an ongoing basis, allowing the achievement of the standards set to protect the Group's people, even without a precise definition of quantitative and measurable targets.

Actions related to health and safety issues

In relation to health and safety issues, the Intesa Sanpaolo Group proposes various initiatives aimed at its employees, which go beyond the provisions set forth by the law, with a holistic and integrated approach, including, for example, the provision by the Occupational Health Doctor of tools aimed at investigating emerging risks such as new forms of stress and, as of the current year 2024, subjective vulnerabilities deriving from specific individual conditions. Furthermore, the activation of neuroscientific research projects aimed at identifying intervention strategies on the subject of cognitive load, technostress, and the aging effect is also encouraged (for which the industrialisation of the related training was completed during the current year). Other topics covered include Human Computer Interaction or Acoustic Well-being, which are added to traditional prevention activities and continuous training on new relevant issues.
The Process Guides detail the activities aimed at identifying risks and the operational controls carried out, as well as any corrective actions to be implemented (for example, prevention and protection measures implemented and personal protective equipment).
In particular, the method used to assess workplaces and the related Risk Contexts involves conducting a technical analysis and a field analysis, through inspections of all workplaces. Where deemed necessary, checks and measurements are also carried out on site using specific equipment by qualified and specially trained technical personnel. The Risk Assessment Document (DVR) takes into account all the measures implemented and the assessments of how effective these measures are. In terms of mitigation measures, it should be noted that in the area of psychosocial risks, the Group obtained the ISO 45003 certification of conformity for the “Management of health and safety at work - Psychological health and safety at work - Guidelines for the management of psychosocial risks” for the second consecutive year.

For each of the identified mitigation measures, the areas and significance of the risk to which they refer are also identified, in addition to the level of intervention in terms of primary, secondary and/or tertiary prevention.

Mandatory health surveillance by law currently involves approximately 50 thousand Group people. The results of these examinations, in anonymous and aggregate form, are the basis of the epidemiological survey that provides a general picture of the Group's people's health.
The Group also launched the project "Subjective Vulnerabilities", which aims to

- support workers with "subjective vulnerabilities", both during the initial induction phase and subsequently, if there are any changes in their health condition;
- monitor over time the effectiveness of the measures intended to support these employees, including in relation to job changes;
- provide a data matrix for epidemiological analysis purposes;
- promote an integrated management strategy, targeted at the individual employee, aimed at:
    - identifying the need in relation to one's limitations and functionality;
    - providing specific training to the employee and the work team;
    - detecting any need for further assistance in an emergency;
    - identifying reasonable mitigation/arrangement measures.

Health and safety metrics

As of 31 December 2024, 100% of employees are covered by an Occupational Health and Safety Management System. In particular, as regards the Parent Company and the companies belonging to the Italian scope of the Insurance Division, this Management System is certified according to the ISO 45001 standard. For all other companies, however, there is an Occupational Health and Safety Management System that is defined internally within the Group.

The following table shows the main indicators regarding work-related injuries and deaths that occurred in the Group during the year.

Table 13 – Performance of health and safety indicators for the Group's collaborators

	2024
Percentage of people in its own workforce who are covered by health and safety management system based on legal requirements and (or) recognised standards or guidelines	100%
Number of fatalities in own workforce as result of work-related injuries and work-related ill health	-
Number of fatalities as result of work-related injuries and work-related ill health of other workers working on undertaking's sites	-
Number of recordable work-related accidents for own workforce	537
Rate of recordable work-related accidents for own workforce	3.39

The number of recordable injuries is indicated by taking into account both injuries that occurred to employees at work and those that occurred while commuting, based on the accident reports submitted.
The injury rate is calculated as the number of injuries in the year out of the total hours worked, multiplied by a coefficient equal to 1,000,000. The estimate of hours worked is based on normal or standard working hours, taking into account the right to periods of paid leave. As regards the Italian scope, this estimate follows the calculation criteria defined by INAIL methodologies.

Well-being of the Group’s people

Work-life balance policies

In order to ensure a good work-life balance for its employees, the Group has laid down rules and policies that are also useful for managing impacts, risks and opportunities relating to this issue, governed through the Code of Ethics and the Rules on flexible work, both aligned with national and international standards for the respect of human rights related to work-life balance (for example, ILO Declaration on Fundamental Principles and Rights at Work).

Within the Intesa Sanpaolo Group, the National Collective Bargaining Agreement, the Code of Ethics and the second-level bargaining agreement identify solutions aimed at ensuring a good work-life balance. All relevant legislation is aligned with national and international standards for respecting human rights (e.g. Declaration on Fundamental Principles and Rights at Work). The National Collective Labour Agreement, which represents the regulatory source through which the workers' trade unions and the employers' Associations jointly define the rules governing employment contracts, provides highly innovative and dynamic tools, capable of balancing people's personal and professional lives, in a context of profound and continuous transformation. Furthermore, as part of the renewal of the Group's second-level collective bargaining agreement, the Group's commitment to the full enhancement and well-being of the Group's people was confirmed through initiatives and tools targeted at them and their families. In an integrated Welfare context, the second level collective bargaining agreement contains agreements on “work-life balance” and work organisation (flexible work and training, 4-day working week and flexible hours).

As previously described, in the paragraph “The Group's commitment to human rights”, among the various principles set forth by the Code of Ethics, “respect for people” is emphasised with the aim of promoting policies that facilitate work-life balance, encouraging forms of flexibility and implementing initiatives to reconcile work and private commitments, in the awareness that such balance is fundamental in the pursuit of people's well-being. The Flexible Working Rules, which fall under the responsibility of the Relations With Workers' Representatives And Welfare and Labour Affairs & Policies structures, are available on the company's Intranet, within the HR regulatory section of the internal company platform (#People) and apply to all Group employees in the Italian scope. The Rules summarise all the current provisions relating to flexible working and in line with the principles of the Code of Ethics, with the aim of facilitating the balance between people's private and professional lives.

Policies relating to working hours

The Group places its people at the centre of the policies implemented, within which the protection of the rights of each individual takes on a predominant role. This person-centred approach is reflected in all the company's regulations issued from time to time, in which working hours are of particular importance, pursuing the objective of protecting workers' rights, promoting their professional development and growth and at the same time guaranteeing a healthy work-life balance.

The Bank operates within the regulatory and contractual framework defined by the relevant laws and by first-level national collective bargaining: the main reference legislation is represented by Legislative Decree No. 66 of 8 April 2003, as amended, as well as by Legislative Decree No. 81 of 15 June 2015, as amended.

The legal provisions are incorporated by the National Collective Bargaining Agreement (CCNL) for Executives and for the Professional Areas reporting to Credit, Financial and Instrumental companies, which governs issues such as working hours, intervening for example in the following areas: part-time working hours, disconnection, weekly rest, holidays and leave, Time Bank, student workers, methods of implementing extra-standard working hours in cases of social hardship, weekly hours, daily hours, shifts. The topic is also subject to further agreements at national level which constitute appendices to the afore-mentioned CCNL, including the Agreement Minutes on the subject of work-life balance, equal opportunities and corporate social responsibility.

Finally, it should be remembered that recently, on the matter in question, the agreement signed on 23 November 2023 for the renewal of the CCNL of 19 December 2019, amending Article 104, introduced the 37-hour working week, implemented with effective date as of 1 July 2024.

In addition to making reference to the National Bargaining Agreement, the Group has also adopted its own second-level collective bargaining agreement which governs, among other things, the legislation on the provision of professional services and working hours, including the regulation of part-time employment, flexible work and other work-life balance tools.

At an operational level, for the Group companies belonging to the Italian scope with employment contracts in the Credit sector, the matter relating to working hours is governed by three separate Policies: the “Rules on working hours, holidays and leave”, the “Rules on Flexible Work” and the “Rules on Part-time Work”, which are based on the provisions of the law, first and second level bargaining contracts and on the consequent company resolutions. The three Policies, like the entire regulatory framework of the Intesa Sanpaolo Group, are inspired by the principles set out in the fundamental documents that guide the Group's action, namely the afore-mentioned Code of Ethics, the Principles on Human Rights and the Principles on Diversity, Equity and Inclusion.
The three Policies represent a single set of regulations and govern the aspects of the employment contract relating to working hours as a whole and are constantly monitored and updated with the aim of ensuring timely alignment with national and supranational legislation, as well as with sector and company collective bargaining agreements.
All internal regulations are monitored within the scope of the Compliance processes in order to ensure their conformity also from the point of view of their application.

The “Rules on working hours, holidays and leave” apply to Group personnel with employment contracts in the credit sector (Italy) and cover general provisions concerning personnel classified in the categories of middle managers and professional areas such as:
- working hours (including weekly and daily working hours, service provision hours, including work activity divided into 4 days per week, and rest periods);
- holidays and former public holidays;
- paid and unpaid leave for family and personal reasons, or for studies;
- leave of absence due to studies, family and personal reasons or illness;
- parental protection;
- Time Bank;
- the voluntary suspension of the work activity;
- the right to disconnect (which means that outside of working hours and in cases of legitimate absence, personnel are not required to access and/or connect to the company's IT systems or activate the company's communication devices).

All these measures, in compliance with the law, are always inspired by the aim of avoiding any active or passive discrimination towards the Group's people.

Similarly, the "Rules on Part-Time Work" and the "Rules on Flexible Work" cover two particular work-life balance tools, respectively defining part-time work and the so-called agile working (i.e. the provision of the service for certain days a year at locations other than the assignment location, such as: home, "company hub" or "customer").

The “Rules on working hours”, as well as all those concerning the regulation of the contracts with the Group's people, fall under the responsibility of the Chief People & Culture Officer - Legal and Labour Advisory.

The “Rules on working hours” are made available to all Group personnel via the company intranet portal and in particular on the internal company platform (in the #Regulations section), in order to allow everyone to constantly align with the evolution of the company regulatory framework. In the event of significant amendments, for example as a result of their adaptation to relevant regulatory or contractual changes, the publication of the updated versions of the Rules is announced through specific news on the company portal (for example, the recent changes made following the introduction of the 37-hour weekly working hours within the scope of the Renewal Agreement of the National Collective Labour Agreement). Furthermore, once again for information purposes, the internal company platform (#People) contains explanatory regulatory information sheets of the main employment law provisions, including those relating to working hours. These information sheets also contain the information required to activate the request process for the regulated measures (for example, time off or a leave of absence) by explaining the role of the various players involved (for example, the applicant, hierarchical manager and Human Resources structure). The application of the provisions contained in the policies regarding working hours, as well as other policies regarding the management of the Group's Human Resources, is also facilitated by the presence of a dedicated section in the internal company platform (#People), as well as by an additional section of the company portal (#Support) through which it is possible to submit questions relating to Human Resources Services.

Processes relating to the involvement of its employees and their representatives

As set out in the section “Employment protection and industrial relations”, the Group, in agreement with the trade unions, constantly promotes dialogue between the parties. The dialogue with these organisations regarding the Group's projects is aimed at identifying shared solutions with respect to the different needs that arise for the parties.

Remediation processes for employees and their representatives and channels to submit complaints

Even with regard to aspects relating to working hours, the Group's people can first contact their reference human resources manager and make use of a specific support section within the intranet portal to receive technical support regarding the application of the relevant regulations. This is in addition to the option to make independent use of the various reporting channels made available to employees, i.e. the so-called active listening systems, which include:

- formal reporting to one's manager, to the Human Resources Department or to the reference company contact responsible for personal matters;
- the so-called "Whistleblowing"[120], governed by the Group rules on the internal reporting system of alleged violations;
- other procedures (including IT ones) dedicated to reporting to the relevant structures, including specialist ones, any non-application or incorrect or discriminatory application of the legislation relating to employment contracts (including in relation to working hours) with reference to particular thematic areas such as: the Code of Ethics, DE&I, sexual harassment, business policies, violations of the 231 Organisational Model.

Each Group company protects whistleblowers from any form of retaliation, discrimination or penalisation and ensures the utmost confidentiality, without prejudice to legal obligations.

The handling of complaints/reports by Group personnel is set out in the relevant company regulations, including those dedicated to specific channels (see for example the Rules on Whistleblowing) as well as in the Group's Internal Code of Conduct, which specifies the various ways in which it is possible to report even alleged violations, non-applications or discriminatory applications of the regulations concerning employment contracts, including working hours. Periodically, both voluntary and anonymous climate analyses are introduced to collect and analyse any impacts, also in order to implement the consequent improvement actions.

Objectives relating to work-life balance and working hours

The Group has defined a series of policies and actions to protect its employees in relation to work-life balance issues in order to support them in pursuing their psychological and physical well-being and in fulfilling their needs. To this end, specific initiatives are conducted and monitored, which make it possible to assess the effectiveness of the welfare solutions intended for the Group's people, even in the absence of a precise definition of quantitative and measurable targets in a limited time horizon.

Work-life balance actions

The Credit National Collective Bargaining Agreement provides for various forms of part-time work, with different ways of distributing working hours: vertical, horizontal, mixed, cyclical, both for fixed-term and permanent contracts, with weekly hours ranging from a minimum of 15 hours to a maximum of 32 and a half hours. Since 2015, flexible working has been the remote working model of the Intesa Sanpaolo Group. From the experimental phase to date, an ever-increasing number of people have been gradually involved, until it was decided to establish the availability of an annual ceiling of 120 days of flexible working from home. Starting in 2023, thanks to an agreement signed with the trade unions, the option to use the so-called short working week (4x9) was introduced in Intesa Sanpaolo, which allows its employees to work between Monday and Friday over 4 9-hour days with equal pay, and on a voluntary basis, in line with the company's organisation and technical and production requirements.

In addition to the provisions laid down by law and the collective bargaining agreement for the sector, the Group's second-level bargaining agreement has over time defined priority criteria for the acceptance of requests related to personal and/or family needs with a view to sustainability. The 2021 Group second-level collective bargaining agreement provides additional tools to

[120] For further information, reference is made to the paragraph “Whistleblowing policies, objectives and actions” in the ESRS G1 – Business Conduct chapter.

support parenting that complement the provisions already set forth at a regulatory level. For example, the following measures are worthy of note: paid leave for participation in childbirth preparation courses, for the settling of children in nursery schools or kindergartens, for attending the Emergency Room and additional unpaid days aimed at assisting minor children, additional leave/welfare initiatives to support parenting and caregiving. For fathers, specific additional paid leave is available following the birth of their children, as well as the entitlement to an allowance of 10% of the sum granted by law for parental leave, and the possibility of taking 10 additional days of parental leave.
The second-level collective bargaining agreement has strengthened inclusion and equal opportunities, extending parenting protection provisions to same-sex civil unions, de facto relationships and in favour of the spouse's children. In this context, a specific extraordinary paid leave was introduced on the occasion of birth or arrival into the family and an optional extraordinary leave for the care needs of the children of the spouse, civil partner or cohabitant, which can be taken up to the age of twelve with an economic treatment equal to that provided for parental leave for fathers and entirely paid by the Group (40% or 90% of the salary).

One of the work-life balance tools is the so-called "voluntary suspension", which allows to use up to 20 days a year of suspension of the work activity, which can be taken advantage of without having to justify its use, guaranteeing a salary equal to 35%, with payment of the corresponding social security contributions. It is also permitted to exceed the limit of 20 days per year for caregiving needs.

Another innovative tool provided by national and second-level collective bargaining agreements is the Time Bank, a reserve of time made available by the company and Group's people so they can provide greater support for employees in difficulty, even for brief periods, and give them more time. The Time Bank is set up annually with an initial ceiling of 65,000 hours and each person has the opportunity to donate some of their own paid leave or holidays, which the company implements with an equal amount of time, up to a maximum of 100,000 hours in total. As part of the Time Bank initiative, multiple corporate volunteering activities were launched in 2024, which led over 400 people to carry out volunteer work, on working days for external associations and bodies chosen by the Group across the national territory. A total of around 150,000 hours of leave were granted.
In 2024, over 40,000 hours were donated by the Group's people, in addition to the hours made available by the company, for a total of approximately 155,000 hours, also taking into account the hours made available for unused holidays by personnel who left the company pursuant to voluntary redundancy company agreements.

In 2024, the "People Care" initiatives were strengthened to promote and spread awareness of the importance of well-being in line with the 2022-2025 Business Plan and the Group's human resources strategy, with an increasingly broader vision, according to which not only personal but also organisational well-being is an integral part of the corporate culture, which is therefore "shaped" by it, and can significantly impact the Group's ability to attract new talent and consolidate stakeholder trust. By listening to people's needs, identified at multiple levels within the organisation and in different contexts and contact methods, diversified initiatives were therefore developed to promote people's well-being and improve their work-life balance, in synergy with support for diversity and inclusion, with corporate welfare and with new ways of working (Next Way of Working).

The Group continued to revisit office spaces in Italy, in synergy with the Next Way of Working project, as well as the food offering available in the company to promote habits geared towards individual well-being and to foster relationships. New "Energy corners" (lounges equipped with meeting spaces, food and beverage) were set up, which amount to 69 to date across 30 company locations. In addition, the company's restaurants were renovated and innovative and sustainable services were introduced, such as lockers for the purchase of high-quality fresh products. In order to promote psycho-physical well-being, the development of company gyms continued; as such, the locations in Brescia and Milan in via Gioia 22 saw the addition of Torino NCD, thus doubling the total number of users registered for the service, with further openings planned for 2025. Intesa Sanpaolo was awarded, for its headquarters in Piazza Ferrari in Milan, among the "Workplaces that promote health", as part of the Rete WHP - Workspace Health Promotion – Lombardia programme, promoted by the Health Protection Agencies (ATS) of the Lombardy Region.

The modular use of the new spaces described above made it possible to hold in-person wellness activities across various company locations: morning yoga sessions, meetings with wellbeing experts, as well as cultural and social initiatives such as film clubs and theatre. The first day dedicated to employees' family members and friends was also organised at the new headquarters in Milan in via Gioia 22.

The Group continued to engage in the organisation of in-person and streaming initiatives across the Italian territory, to be even closer to its people and spread awareness on well-being with a view to shaping the corporate culture and putting people increasingly at the centre:
- "Wellbeing Stories", a series of meetings with special guests to encourage reflection on balance, building, courage and kindness aimed at organisational wellbeing;
- "Respira. Coltiva il tuo equilibrio (Breathe. Cultivate your balance)", a five-stage journey scheduled every 21 days to practise mindfulness and promote well-being and balance in times of personal and work-related stress;
- "Food wellness workshop", four meetings to explore current topics such as detox nutrition, DNA and lifestyles, fake news, prevention;
- "Dialogue between experts", such as the one dedicated to Alzheimer's, bullying and cyberbullying, alcohol and smoking addictions;
- In-person "relational experiences" dedicated to individual structures or homogeneous clusters, to promote engagement through relational well-being, with dynamic formats and in locations that are disruptive to the work context.

Overall, over the course of the year, over 60 initiatives were organised in 17 locations across the country, involving a catchment area of approximately 22 thousand people. The initiatives were also made available in streaming.

Another important aspect is the Group's attention to people's health and mental well-being. In this context, the Group continued to provide its “Consultation and Support” activity, the psychological support service, available 24/7, 365 days a year, for the entire Group in Italy and abroad. In 2024, the service was enriched in Italy with the Social Care tool: in the psychological counselling area, a Social Care Manager can intervene to provide practical help to the Group's people in the search for local services in the caregiving sector (for example, child care, care for the elderly and/or people with disabilities). During 2024, the “Consultation and Support” service recorded a total of approximately 3 thousand accesses (Italy and abroad).

As regards CareLab, a workshop for the promotion of well-being that is divided into a structured offer of contents, tools and initiatives, both in digital form and in person, it implements new services or enriches itself with new opportunities:

- “Tecnogym app”, a tool with innovative services to encourage a healthier lifestyle, through training in all disciplines and personalised paths;
- “LianeCare”, a platform to source caring specialists - babysitters, carers, housekeepers and pet sitters - with the aim of supporting people in their search for qualified personnel;
- “Académia.tv”, the online platform featuring cooking courses created with renowned Italian and international chefs, but also nutritionists, biologists and dieticians;
- “4Fooding”, a web app for healthy eating, with daily and weekly menus, recipes and a team of nutritionists available for questions or personalised consultations;
- “21days”, a web app that encourages the adoption of virtuous behaviours for emotional well-being, was enriched with two new training courses on how to manage technostress and aging. It currently provides multiple training courses (10 in total) to also alleviate cognitive load, increase energy, promote positivity, boost concentration, manage time, enhance emotional intelligence or self-esteem, and cultivate quality relationships. In particular, three intensive courses, dedicated to cognitive load, technostress and aging were set up following the 2022 applied research project dedicated to the well-being of the Group's people and quality of life at work, an initiative born from the collaboration between People Care, Health and Safety and the Neuroscience Lab of Intesa Sanpaolo Innovation Center, with the support of the scientific partner Scuola IMT Alti Studi Lucca;
- “#Stepbystep”, an app that rewards an active lifestyle through steps, sports and challenges between colleagues, hosted “special initiatives in steps” that involve groups of people in achieving ESG goals: by transforming the steps taken into tangible actions, everyone was able to combine attention to well-being with support for environmentally-friendly initiatives or support for the most vulnerable people;
- “MasterClass CareLab”, a digital initiative entirely dedicated to a Regional Governance Centre (Veneto and Trentino-Alto Adige), to create engagement and involvement on wellness topics thanks to the gradual use of the platform's contents through specific wellness courses (anti-stress, energy, etc.).

As of 31 December 2024, there are 56 thousand people making use of CareLab services on platforms, apps and web apps.
CareLab continues to host initiatives of openness and attention to the issue of disability, in collaboration with Disability Management and Health and Safety, for example the first meeting of the series dedicated to the so-called "Invisible Diseases".
Within the International Banks Division (IBD), the process of extending the CareLab platform to all the Group's people was completed, according to the release plan established for the provision of the HR #People portal.

By leveraging on the experience gained in the emergency period and with the contribution of internal surveys, the banks within the scope of the International Subsidiary Banks Division (IBD) launched new flexible working projects and models, in line with the provisions laid down by local laws. The common threads of these initiatives are the identification of a number of days for flexible work, the redesign of the layout of company office spaces on the basis of the new needs and the extension of flexible working to a greater number of people. The situation in 2024 sees the application by all banks within the scope of the International Subsidiary Banks Division of a flexible working method for the head office departments, with extension also to the network for some of them.

With a view to improving employees' work-life balance, the Group designed the “Life grafted into work” course, involving 280 people from the Division's head office departments, with the aim of generating ideas followed by commitments to improve well-being. The banks within the scope of the International Subsidiary Banks Division also developed several activities aimed at improving the quality of working life, including: the institution of the sabbatical month, available at VUB for 3 months a year and at CIB for 1 month, the launch in VUB of the pilot project for the experimentation of the short working week in specific head office structures, with the option to request the use of the working week over four 9-hour days, for a maximum of 36 weeks a year. Also at VUB, a pilot project was carried out on 6 branches as part of the “Smart Working 2.0” project, allowing colleagues in the network to work more flexibly as well. A gradual extension to other VUB branches is planned starting from January 2025. Pravex also implemented the new Smart Working procedure on its head office structures since April.

As part of the “People First” programme designed in the Human Resources area, which puts people at the centre and guides them towards change, specific aggregation and reflection initiatives were created for the people of the Division's head office departments and for the entire scope of the International Subsidiary Banks Division.
With reference to the “People Make Places” initiative, cross-country well-being activities were carried out to extend well-being objectives to the Division with a view to social sustainability: in continuity with previous years, the “Emotionology” programme was launched across all IBDs, within “BeWell”, a project dedicated to the full well-being of company employees. The so-called Emotional Talks, monthly webinars dedicated to exploring emotional intelligence in its various components, are part of this programme. At the end of the course, participants, both from head office departments and banks, had the opportunity to represent their emotions in a creative artifact, a work of art to testify their emotional discoveries, taking the opportunity for a mutually beneficial cultural exchange. The colleagues' works were exhibited at the first IBD Art Exhibition at Gallerie d'Italia. In addition, in synergy with the Parent Company's People Care team, webinars dedicated to health were organised, with a focus on mental health, also thanks to the “Care Connect” service, equivalent to the Consultation and Support Service for international subsidiary banks.

Privacy of the Group's people

Policies relating to the privacy of the Group's people

The Intesa Sanpaolo Group has always maintained a high and constant commitment to protecting the personal data of the people with whom the Group interacts, ensuring the collection and processing of data in compliance with current legislative provisions.
The regulatory framework for personal data protection is represented by Regulation (EU) 2016/679 (so-called General Data Protection Regulation (GDPR) which came into force on 25 May 2018, whose new rules have been incorporated by the Group and formalised in the main internal governance documents consisting of the Code of Ethics, which outlines the principles and values on which the Group bases its choices and activities, and the Internal Code of Conduct, which defines the conduct that the Group's employees and collaborators are required to adhere to in order to ensure the correct processing of data.
Upon entering into an employment contract, employees and collaborators are provided with a privacy policy that clearly and transparently details which data is processed, the methods of collection, the legal bases and purposes of processing, the retention periods, the rights recognised by the GDPR and the contact details of the Data Protection Officer (DPO) in order to communicate to the data subjects all the necessary information to ensure the correct processing of their data.

Furthermore, its suppliers are required to comply with the policies, regulations and standards relating to personal data protection, defining their subjective role in the processing activities, assessing the existence of the necessary safeguards, formalising the contractual terms and conditions, and implementing compliance and adequacy assessments.
More specifically, the GDPR has introduced the accountability principle which requires the data controller to implement regulatory, organisational and technological measures aimed at ensuring that the processing of personal data takes place in compliance and in the light of the criteria laid down in the Regulation such as privacy by design, privacy by default, the appointment of the Data Protection Officer, privacy impact assessment, the record of processing activities, the subjective role of third parties and data breach management[121].

The Group, having companies located in various EU and non-EU countries, complies with the provisions expressly set forth by local regulations on the protection of personal data. The Group has issued specific governance documents which provide clear instructions on the conduct that employees and collaborators must maintain to ensure the correct collection, use and protection of personal data in compliance with current national and international legislation and the principles that guide the Group, formalised in the Code of Ethics and the Internal Code of Conduct. These provisions are set out in the Guidelines on the protection of personal data of natural persons and in the Corporate Rules for the processing and protection of personal data of natural persons.

The Guidelines define the model for managing the compliance risk in terms of personal data protection of all natural persons with whom the Group interacts, including employees and collaborators, laying down the general principles and setting out the roles and responsibilities of the corporate bodies and structures involved, the macro-processes for monitoring and controlling the risk, as well as the Group's guidance and coordination model. Furthermore, they lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions.
They are issued in compliance with external regulations, internal governance documents and in compliance with the provisions of the European Data Protection Board (EDPB), made up of representatives of the national supervisory authorities for personal data protection of the various European Member States. They apply to the Parent Company, its international branches and companies established in the European Union. The principles contained therein constitute a reference for the Group companies located outside the European Union. The Guidelines are generally reviewed on an annual basis and, before being approved by the Board of Directors, are subject to a concordance process involving the relevant corporate functions.

Pursuant to Art. 37 GDPR, the Board of Directors also appoints the Data Protection Officer who, in the fulfilment of his/her duties, is supported by the privacy function reporting to the Chief Compliance Officer Governance Area.

The following tasks are entrusted to the Data Protection Officer and the privacy function:
- monitoring and overseeing compliance with the GDPR;
- preliminary compliance check on new products, initiatives and services involving the processing of personal data;
- assessment of risks to the rights and freedoms of individuals when starting or changing any personal data processing activities (Privacy Impact Assessment) in accordance with Article 35 of the GDPR;
- assessment of the subjective privacy role played by Suppliers/Third Parties and preparation of the letter of appointment;
- management of customer requests regarding the exercise of the rights of the data subjects;
- management of replies to the Data Protection Authority and data subjects following reports or complaints lodged with the same Authority;
- guidance, coordination and control of the Group companies located in Italy and abroad (EU and non-EU);
- keeping and updating the Record of Processing Activities, as required by Article 30 of the GDPR, wherein all the personal data processing activities carried out are recorded. The Register shows the purposes of each processing, the data storage methods, the security measures applied and other information on the processing activities carried out;
- assessment of non-compliance events and personal data breaches;
- update of the list of third parties that process employee personal data;
- monitoring training courses on Privacy.

In line with the principles set forth by the Guidelines, the Corporate Rules for the processing and protection of personal data of natural persons detail the topics and provisions relating to the activities carried out by all authorised data processors, providing

[121] Data Breach refers to a 'breach of security leading to the accidental or unlawful destruction, loss, alteration, unauthorised disclosure of, or access to, personal data transmitted, stored or otherwise processed' (Art. 4, paragraph 12 GDPR)

precise operating instructions in order to comply with GDPR provisions. The Rules apply to the Parent Company, its international branches and the Group companies operating in Italy according to the centralised privacy governance model at the Parent Company.

The internal regulatory documents, including Guidelines and Rules, are published on a dedicated internal Group portal to which all employees and collaborators have access.

The privacy policy for employees has recently been restyled to ensure greater clarity and transparency, including through the use of specific graphics that facilitate its usability and ease of understanding. The document has been made available to all employees in a special reserved area. The document specifies that Intesa Sanpaolo processes personal data only for the purposes described and explicitly indicated in the same policy, made available to the data subjects, and that no processing is carried out for secondary purposes not explicitly indicated therein. When the contents of the privacy policy are updated, the document is sent to all employees and collaborators for their consultation.

Processes relating to the involvement of its employees and their representatives

The Code of Ethics defines the mechanisms for the adoption and governance aimed at integrating ethical principles and values into the corporate strategies, policies and procedures by sharing and disseminating the contents of the Code as widely as possible, and monitoring the related knowledge and awareness. Typically, employee involvement occurs indirectly and is guaranteed through trade union representation and governed by sector provisions and the industrial relations protocol.
In the privacy area, direct employee involvement is expected when entering into the employment contract, through the provision of the privacy policy by human resources and made available on the Group's internal portal. As required by the legislation and the Guidelines, the policy is drafted in a concise, transparent, intelligible, easily accessible form and with simple and clear language to communicate to the data subjects the necessary information to ensure correct and transparent data processing. When the contents of the privacy policy are updated, the document is sent to all employees and collaborators for their consultation and made available in the Group's internal portal.

Remediation processes for employees and their representatives and channels to submit complaints

In order to reduce risks and ensure full knowledge of the policies, the Group has issued specific Governance documents that provide clear instructions on the conduct that employees and collaborators must maintain to ensure the correct collection, use and protection of personal data, in compliance with current national and international legislation and the principles that guide the Group, formalised in the Code of Ethics and the Group's Internal Code of Conduct.
The Group has adopted a model for the management of critical events that defines the activities aimed at efficient incident management, requiring the involvement of different Functions depending on the nature of the specific case. In this scenario, the Data Protection Officer manages non-compliance events by providing assistance and collaboration to ensure the identification and implementation of actions to eliminate or mitigate the effects of the event. If the event constitutes a personal data breach, the Data Protection Officer is required to assess its impacts in terms of tangible risk for the rights and freedoms of natural persons, implementing the corporate processes defined by the Data Controller: if the risk is high, he/she notifies the Authority and, in the case of a particularly high risk, he/she also notifies the data subjects.

In 2023, the Guidelines on the protection of personal data of natural persons and the Corporate Rules for the processing and protection of personal data of natural persons were updated, outlining the management model for the compliance risk in the context of personal data protection, laying down the general principles and defining the roles and responsibilities of the Bodies and corporate structures involved. Furthermore, they lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions.
Failure to comply with external or internal regulations on privacy protection by a data controller will result in the activation of a procedure aimed at verifying the actual unlawful conduct. In the event of ascertained and unjustified violations, the relevant Functions are always informed for the initiation of disciplinary proceedings which normally end with the imposition of one of the measures provided for by the Disciplinary Code against the defaulting individual.

In case of reports concerning privacy issues or requests to exercise rights, employees can contact the DPO, whose contact details are included both in the policy provided to all employees, and on the Group's institutional website, Privacy section, and in the specific internal process guides published on the internal portal.
Requests can be sent electronically (e-mail, certified e-mail) or in hard copy, and are treated with an adequate level of confidentiality and protection of the data of the data subjects who use them. The monitoring of the receipt of requests falls under the responsibility of the privacy function, which manages the reports and requests received and guarantees their timely processing according to the terms laid down by the legislation.

As part of the integrated internal control system, the Control Functions carry out checks with diversified depth and frequency, relating to the compliance of the activities with the regulatory requirements on personal data protection and the correct implementation of the measures issued by the Data Protection Authority on these issues. The outcomes are reported to the Board of Directors.
In this context, the Chief Audit Officer carries out periodic control activities defined not only on the basis of specific regulatory obligations in the matter (audits conducted annually), but also from a risk-based perspective, also taking into account the findings reported by other corporate control functions.
Generally speaking, the independent checks of the Internal Audit are aimed at ascertaining the completeness, adequacy and functionality of the management model for the compliance risk in terms of data protection, reporting any irregularities relating to personal data processing to the competent corporate structures, to the DPO and reporting to the Board of Directors. The DPO, in compliance with the GDPR and the Guidelines, is tasked with preparing a report, at least annually, to report to the Board of Directors any data protection issues of particular importance. This commitment allows, through the adoption of appropriate measures, for the mitigation of reputational and non-compliance risks in the processing of personal data, also with respect to the

lawfulness and fairness of the processing, the purpose of the processing and its relevance, and the completeness and non-excessive nature of the data collected.

Objectives relating to the privacy of the Group's people

As mentioned in the previous sections, in addition to reporting targets on employment protection and industrial relations, diversity, equity and inclusion and training and development, the Group highlights a series of policies and actions to protect its own employees on issues relating to the Privacy of the Group's people (for example, Code of Ethics, Internal Code of Conduct, GDPR, awareness-raising activities, etc.).
In this context, the measures put in place by the Bank make it possible to monitor and address these issues on an ongoing basis, allowing the objectives set to be achieved even without a precise definition of quantitative and measurable targets in a limited time horizon.

Actions relating to the privacy of the Group's people

As already mentioned, the Data Protection Officer monitors the compliance risk according to a risk-based approach by ensuring the application of the principles of Privacy by Design aimed at determining from the outset the personal data protection rationale through the identification of potential risks for the rights and freedoms of the data subjects and the technical and suitable organisational measures for mitigating such risks, and the performance of a privacy impact assessment for the evaluation of the impact on data protection before proceeding with one or more processing activities that may present a high risk for the rights and freedoms of natural persons.

In 2024, awareness-raising activities targeted at the Group's employees and relating to data protection issues continued. This awareness is achieved through the provision of mandatory training e-learning courses which include a final test and the provision of new modules to allow personnel to learn the legislation in practice and to continuously update their knowledge. The Group, through specific tools, monitors course participation and pass rates of the related tests. For further information on mandatory training, see the "Training and Development" section.

ESRS S2 – Workers in the value chain

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS S2 – Workers in the value chain were identified taking into consideration the specific features of the Group. In particular, the mapping of such impacts, risks and opportunities was carried out on the basis of the context in which the Group defines and implements its business activities and relations (for example, internal Guidelines on environmental and energy policy, Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks), of the measures/actions implemented by the Group to contribute to the protection of workers' rights in the upstream and downstream value chain.

The types of value chain workers considered to be subject to material impacts, risks and opportunities include employees of the company being financed or in which the Group invests, workers employed in the supply chain, temporary or flexible staff and outsourced resources. These groups of people can be significantly affected by direct business operations and decisions made.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with competent internal units and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: an analysis was carried out on the indirect impacts conveyed through the exposures on the Group's portfolios and concerning in particular the workforce of counterparties/companies belonging to sectors/countries with a high impact from the point of view of the recognition/protection of workers' rights. In addition, relevant investment/lending criteria and strategies were taken into account by Intesa Sanpaolo in assessing the counterparties.

Following the impact materiality analysis, the following outcomes emerged: negative indirect material impacts were identified with reference to the downstream value chain. Specifically, the materiality is linked to exposures, within the Intesa Sanpaolo Group portfolio, towards counterparties belonging to sectors that may contribute negatively to the issue of working conditions (adequate wages, social dialogue, freedom of association, existence of works councils and rights to information, consultation and participation of workers, collective bargaining, work-life balance, health and safety).

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified. In identifying risks and opportunities that have or could have financial impacts, the Group also considers all dependencies thereof on the identified impacts. For example, a negative impact related to lending/investment in sectors/countries that are potentially more exposed to risks related to the protection of their employees' rights could lead to a credit/market risk arising from the portfolios to which the Group is exposed given the high concentration in these sectors/countries.

With reference to risks, the following assessments were made for the different scopes of reference identified:

- upstream value chain: the reputational risk to which the Group is potentially exposed was primarily assessed, in the event whereby it retains suppliers who adopt less structured measures with respect to this issue (for example, limitations on the renewal of employees' fixed-term contracts, inadequate preparation of company welfare/benefit systems);
- downstream value chain: credit risk and market risk related to detailed issues (for example: adequate wages, collective bargaining) were assessed. This would also give rise to reputational risk.

Following the analyses conducted for the purposes of financial materiality, the associated credit and reputational risks were identified as material, with reference to workers in the downstream value chain, specifically with regard to the adequacy of wages, social dialogue, freedom of association, including trade unions, work-life balance, health and safety. Reputational risks are also material with reference to the upstream value chain, with regard to salary adequacy and social dialogue, and freedom of association, including trade unions.

Based on the financial materiality analyses carried out and in consideration of the Group's business, no specific opportunities were identified with reference to the standard in question.

Management of sustainability matters related to workers in the supply chain

The Group's commitment to supply chain workers' rights

In line with its corporate strategies and objectives, the ISP Group establishes relations with suppliers aimed at safeguarding the principles of ethical, social and environmental responsibility and favours business relationships based on trust and transparency.
The Group's commitment is formalised in the Code of Ethics, which incorporates the Human Rights Principles that inspire the Group. This commitment is in line with the UN Universal Declaration of Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, other fundamental labour conventions, the UN Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises. Furthermore, the Group is a member of the UN Global Compact.
With reference to the Code of Ethics, the following principles were identified, which must be observed during the processes applied to govern the Group's procurement activities, with a view to transparency and fairness in the selection of suppliers and in the performance of the sourcing process:
- non-discrimination on the basis of gender, gender identity and/or expression, emotional-sexual orientation, marital status and family situation, age, ethnicity, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental condition or any other characteristic of a person, including those related to the expression of their thoughts;
- right to health and safety by avoiding business relations with suppliers involved in violations of applicable regulations;
- combating forms of child and forced labour, avoiding business relationships with suppliers involved in violations of this principle.

The Group, operating in line with the UN Guiding Principles on Business and Human Rights, is committed to ensuring respect for human rights also with reference to workers along the supply chain, as well as to identifying, reducing and, where possible, avoiding any negative repercussions of its activities on them.
The Group's Human Rights Principles therefore recognise the responsibility to verify, during the selection phase, that suppliers and sub-suppliers:
- base their activities on social and environmental sustainability;
- adopt the necessary measures and tools to minimise the possible negative impacts caused by their activity;
- guide their policies towards respect for human and workers' rights and environmental protection.

Policies relating to workers in the supply chain

The Group defined internal procurement guidelines that apply to all companies, with the aim of defining the roles and responsibilities of the Corporate Bodies and structures of the Bank and the Group companies in the procurement management process, as well as the principles and macro-processes to be observed during all management phases for the purchases of goods and services, in compliance with:
- the principles of the Code of Ethics referred to above and the provisions of the "Group Internal Code of Conduct";
- compliance with current guidelines on environmental, social and governance sustainability to ensure respect for the environment, human rights, working conditions and business ethics throughout the supply chain, also by evaluating specific local features;
- compliance with the regulations on health and safety in the workplace, including in relation to the risks to which service providers and suppliers in general who operate in premises available to a Group company are exposed.

Responsibility for approving these guidelines lies with the Board of Directors of Intesa Sanpaolo in its capacity as parent company. The structure responsible for their implementation is the Chief Cost Management Officer Governance Area.

The internal procurement regulations also describe the operating rules that must be applied to the procurement process for centralised classified purchases[122]. The main criteria underlying the procurement strategy concern first and foremost:
- transparency and tracking of the entire procurement process;
- formalisation of the agreement in compliance with the Group's standard regulatory conditions;
- attention in relations with third parties to the monitoring of operational risks, compliance with the Group's general guidelines on reputation and governance of environmental and social risks, as well as the overall sustainability of the choices adopted.

With reference to this last point, the supplier's choice must take into due consideration, in addition to its specialisation in the required product area and its economic/financial solidity, also its reputational and sustainability profile (ESG).

For the autonomous spending categories, the structures of the Parent Company and the Group companies are required to adhere to the general principles listed above and to adopt similar methodologies and operating standards to those provided for by the Group procurement guidelines; they are also required to operate in compliance with the guidelines in force within the Group on social and environmental sustainability.

In order to be included in the Group's Suppliers List, suppliers are subject to an initial due diligence that evaluates their economic/financial and reputational solidity and their propensity for social responsibility matters, through the compilation of specific questionnaires, determining the attribution of an overall score and a consequent qualification status. The overall score is therefore also influenced by sustainability matters. In particular, the ESG questionnaire is mandatory for all new suppliers; from the time of the supplier's qualification, the monitoring phase begins which, through a daily interface of a series of Group internal

[122] The Group's procurement model is divided into two models: (i) in the "centralised procurement" model, the designated head office structure carries out procurement activities directly for the Group entities or provides them with assistance, and (ii) in the "autonomous procurement" model, the Group entities carry out procurement activities independently, according to their own processes, in relation to the product categories not covered by the "centralised procurement" model. The principles and rules defined in the internal procurement regulations apply to both models.

and external input sources, detects any variations for better or worse of the qualification indicators, thereby updating the overall score and the qualification status.
The main policies that each supplier listed in the Group Register must adopt regarding workers' rights and human rights are disclosed within the Supplier Portal. The general approach to respecting these rights is based on the recognition of fundamental values from the very beginning of the contractual relationship. Suppliers listed in the Supplier Portal operating with the Intesa Sanpaolo Group must therefore declare that they have read the Code of Ethics, the Group's Internal Code of Conduct, the Anti-Corruption Guidelines, the Disclosure on the Diversity, Equity and Inclusion Principles, the Organisational, Management and Control Model and the General Supply Terms and Conditions. In the latter, particular attention is paid to compliance with labour law, immigration laws, adequate economic, salary, regulatory, social security and insurance treatment and workplace safety regulations, both with respect to its own workers and the personnel of any subcontractors. At the start of the relationship and upon each subsequent appointment, the General Supply Terms and Conditions are resubmitted for signature purposes. Violation of the above principles constitutes grounds for termination of the contract.
The disclosure of these principles to the entire supply chain falls under the responsibility of the suppliers in charge of the contract who, by signing the General Supply Terms and Conditions, take responsibility for ensuring that their employees and any subcontractors comply with the regulations and any reference principles.

As of 2025, a Procurement Code of Conduct will also be adopted, to be disclosed to all suppliers listed in the Group's Supplier Register, with a commitment to disclosing it in turn to all workers and ensure acceptance of the code by all suppliers with an impact on “green” and “social” categories by 2028.

Involvement and remediation processes

Given the type of goods and services purchased by the Intesa Sanpaolo Group, direct contact with individual workers is sporadic. Consequently, their involvement occurs indirectly through representatives, selected from time to time based on the type of service purchased and the complexity and size of the supplier company.
The contractual clauses establish that each party must appoint its own Operational Representative, who will be the only authorised interlocutor for the management of relations pertaining to the fulfilment of the contract.

With regard to the services purchased by the Bank, the assessment of the correct application of contracts regarding respect for workers' rights is provided for in specific contractual clauses, which entail the possibility of carrying out spot checks on the regular payment of wages, contributions and taxes, including, for example, the verification of the payment of wages and mandatory contributions by the supplier. For suppliers with registered offices in Italy and qualified in the Group Supplier Portal, the document certifying the regular payment of workers' social security and welfare contributions is constantly monitored.
Attention is paid to all workers in the supply chain, including the most vulnerable categories. The contractual clauses therefore provide for the appointment of a supplier health and safety representative, who is responsible for ensuring compliance with health and safety regulations, coordination with the Group and informing the personnel involved of any risks existing in the environment in which they will operate and of the procedures and regulations in force therein. The Standard Supply General Terms and Conditions also require the supplier to guarantee that the contractual activities are carried out in compliance with the accessibility requirements for websites and mobile applications laid down by the applicable regulations. Accessibility refers to the ability of information systems to provide services and information that can be used, without discrimination, even by those who, due to disabilities, require assistive technologies or special configurations.

In light of the monitoring activities of the qualification indicators of the suppliers listed in the Group Supplier Register, negative events may be detected which are associated with a risk level that may influence the supplier's final score to the point of making it no longer usable. Based on the severity of the cases, the remedial actions to be adopted are defined, which may lead to the termination of the contract. Where the information collected is deemed to be an obstacle to the start of a collaboration relationship, new engagements and/or the maintenance of existing relationships, the supplier will be placed on a blacklist, making it no longer eligible for engagement.

The Group provides its suppliers, including their workers, with various channels and internal procedures that can be used to collect, analyse and address reports of alleged incidents of non-compliance in relation to workers' rights, including those laid down by the Human Rights Principles adopted by the Group, as described in the above paragraphs. No cases of serious human rights incidents were identified in relation to these channels and procedures.

The afore-mentioned reporting channels, including the Code of Ethics inbox and the whistleblowing channel guarantee confidentiality and absence of retaliation to the whistleblower. As previously reported, suppliers listed in the Supplier Portal are required to read the Group's Code of Ethics and disseminate its principles to the entire supply chain, including their own workers.
For further information on the Code of Ethics reporting channel and the whistleblowing procedure, reference is made to the paragraphs “Corporate Culture” and “Protection of Whistleblowers” in the ESRS G1 – Business Conduct chapter .

Objectives and actions relating to the workers in the supply chain

During the year, the mapping of social, environmental and governance sustainability continued with the aim of strengthening the assessment and selection criteria of the best suppliers.
The actions put in place by the Group within its supply chain are aimed, for example, at preventing the negative impact generated by the potential exposure to suppliers who are more exposed to risks pertaining to the protection of their employees' rights.
Starting from 2023, an internal company platform (Qualification Portal 2.0) was set up for managing the qualification process and monitoring of suppliers listed in the Group's Supplier Register. This application allows to automate the collection of all the necessary information for the initial due diligence and subsequent monitoring of the counterparty, focusing the control activities on the most critical aspects. It also allows to evaluate suppliers on aspects concerning business ethics, respect for human rights, workers' rights and the environment, based on the declarations submitted when filling out specific questionnaires and/or on the possession of certain certifications.

Based on the information collected, an ESG score is assigned that expresses the supplier's quality on sustainability issues and can influence the choice of the best suppliers in relation to specific procurement requirements, including from a risk-based perspective. It follows that, in relation to specific product categories with a greater environmental or social impact, suppliers who fail to comply with the minimum requirements can be excluded from tenders.

In 2024, a total of over 2,400 criticality reports were analysed (attributable to approximately 13% of the suppliers qualified in the Register), in order to prevent the selection of suppliers not in line with the company's principles. Of these, approximately 240 were assessed as high risk and approximately 50 as medium risk, resulting in a reduction in the overall score. Following the critical issues identified, over 30 suppliers were blacklisted; this also includes counterparties who failed to provide the requested documents and/or who did not fill out the requested questionnaires.
In addition, approximately 23,800 compliance checks were conducted on documents uploaded to the Supplier Portal, including the document certifying the regular payment of tax and social security contributions. Suppliers showing irregular profiles are subject to a 30% reduction in their overall score for the entire duration of this condition and may consequently suffer limitations in the assignment of new contracts. The Group also launched a specific check on the regularity and correct updating of the ESG certifications uploaded to the Supplier Portal.
In line with the objective of achieving a complete measurement of the environmental and social sustainability of all active suppliers listed in the Group's Supplier Register by 2025, direct actions were launched during 2024 to encourage as many suppliers as possible to complete the ESG questionnaire. At the end of 2024, the ESG mapping coverage was overall 86% of the number of qualified and engaged suppliers.

As regards the commitment of the Chief Cost Management Officer Governance Area to pursue economic development through sustainable procurement, it is standard practice to launch competitive tenders through the Supplier Portal to assign new contracts with a high workforce impact; this allows to identify the target reference price, excluding the application of unfair rates, to offer each participant the same opportunities to participate and to ensure the traceability of the entire process. In certain contexts, the service specifications being tendered may refer to the rates of the relevant collective bargaining agreement.
The Chief Cost Management Officer Governance Area contributes to the input of the Risk Appetite Framework (RAF) for risks on supply relations: for example, supplies assigned to suppliers with a high-risk credit rating or at risk of default and suppliers for which the share of procurement is greater than 60% are identified. These indicators are constantly monitored and reported quarterly to the Risks and Sustainability Committee. With regard to the Group's exposure with reference to the social dimension, the RAF highlights an early warning threshold in relation to the Group’s exposure towards sectors characterised by significant issues, especially with regard to the social dimension, in line with the ESG sectoral strategy of associated credit disincentives.

At the end of 2024, a new element was gradually introduced into supply chain assessment practices: for all suppliers who are also Intesa Sanpaolo Group customers and who have been assigned a counterparty ESG score, the sustainability assessment carried out as part of the qualification processes was replaced in order to enhance the outcomes of this score during the selection phase. For further information on the counterparty's ESG score, reference is made to the following paragraph on Management of sustainability matters relating to employees of portfolio companies, as well as to the paragraph Strategy to combat climate change at portfolio level in the ESRS E1 – Climate Change Chapter.

In order to implement the Group's commitment within the scope of its supply chain and the workers involved in it, and to achieve the set objectives, the following main actions are planned for 2025:
- provision to suppliers of specific webinars related to supply chain employees;
- adoption of a Procurement Code of Conduct to be disclosed to all suppliers listed in the Group Supplier Register, with a commitment to disclosing it in turn to all workers;
- completion of mapping of all suppliers from an ESG perspective, identifying any suppliers that deviate from the model or that present critical aspects;
- definition of mitigation and support actions for the most critical categories from a social perspective.

Management of sustainability matters related to workers of portfolio companies

Policies and processes related to workers of portfolio companies

The Group takes into account the ESG risks associated with the activities of corporate customers and pays particular attention to the in-depth analysis of sustainability matters connected to the credit granting process. To this end, general exclusion criteria have been established in order to prevent the financing of activities and/or projects with particularly significant social impacts. Specifically, the Group undertakes not to finance companies and projects if, at the time of the assessment of the transaction, they are located in areas of active armed conflict, or if evidence emerges, such as penalties, legal proceedings and judgements, relating to human rights violations and forced or child labour practices. In formulating the internal guidelines on ESG risks, reference is made to the principles defined by international best practices and to the developments promoted and expressed by regulators and supervisory authorities at European and international level. In particular, inspiration is drawn from initiatives aimed at promoting the best sustainability practices in the banking sector which the Group has adhered to, including UN Global Compact, UN Environment Programme Finance Initiative (UNEP FI), UN Principles for Responsible Banking, UN Principles for Responsible Investment, UNEP FI Principles for Sustainable Insurance, and Equator Principles (EPs).

The Chief Risk Officer (CRO) Governance Area develops and maintains, in conjunction with other relevant structures, the Guidelines for the Governance of Environmental, Social and Governance (ESG) Risks and the related implementing rules and is responsible for the design, development and maintenance of the internal system for the management and assessment of the Group's reputational and ESG risks. For further information on these Guidelines, reference is made to the section Strategy to combat climate change at portfolio level in the ESRS E1 – Climate Change chapter.

The Group recognises the risk associated with investment, financing and lending services to customers in sectors that present higher social risks in their operations and/or supply chains and accordingly promotes thematic and impact investments through which it can play an active role in helping to mitigate social issues such as economic and social inequalities. Therefore, as emerged from the double materiality analysis, a negative impact linked to financing/investment in potentially less virtuous sectors/countries with regard to the protection of their employees' rights could entail a credit/market risk given the high concentration towards such sectors/countries. In addition to issuing the Group's internal regulations for the governance of environmental, social and governance (ESG) risks, an ESG score was introduced which also aims to evaluate the social profile of corporate customers[123] (including labour management and standards, health and safety at work, policies for the inclusion and enhancement of diversity and human capital development) and a dedicated ESG & Reputational Risk Clearing process was set up to assess these risks. For further information on the Risk Clearing process, reference is made to the ESRS E1 – Climate Change chapter.

Given the context, positioning and operations of the Intesa Sanpaolo Group as one of the leading Italian and European financial institutions, it is currently difficult to structure and apply a dedicated process for the direct involvement of workers employed at the companies in the Group's portfolios, or to provide them with specific reporting channels through which they can communicate to the Intesa Sanpaolo Group their concerns and any negative impacts suffered, as required by ESRS standards.

Currently, the engagement and remediation methods on sustainability matters related to the workers of such companies can be conducted by the Group through dialogue with the counterparty included in the portfolio. In particular, the risk measurement and monitoring activities conducted by the CRO Governance Area can be considered forms of remediation of negative impacts suffered by workers in the downstream value chain.

Objectives and actions related to the workers of portfolio companies

The Group conducts activities and initiatives to support and monitor ESG issues, particularly social ones, which may include (with direct or indirect impacts) also the employees of its portfolio companies, paying particular attention to sustainability matters related to sectors that are sensitive to ESG and/or reputational risks. These projects are also conducted without the definition of quantitative objectives relating to the management of impacts and risks inherent to the workers of the portfolio companies, mainly due to the limited availability of quantitative information that allows to measure the effectiveness of one's actions. Likewise, it is complex to establish specific actions to support workers in the portfolio companies, with relative detailed indication of (i) qualitative and quantitative monitoring of the effectiveness of such actions and (ii) the quantification of specific resources dedicated to these issues.

[123] At the end of December 2024, the ESG score covers approximately 249 thousand Intesa Sanpaolo corporate customers.

ESRS S3 – Affected communities

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

The impacts, risks and opportunities within ESRS S3 – Affected communities were identified taking into consideration the specific features of the Group. In particular, the mapping of such impacts, risks and opportunities was carried out on the basis of a process of analysis of the initiatives implemented by the Group to support, protect and enhance the local Community of the territory in which it resides and of the programmes and safeguards put in place in order to minimise the negative impacts connected to the issue in question, with reference to its own operations and to the upstream and downstream value chain, in addition to an assessment of the risks linked to the aspects of the local Community of the territory to which the Group could be exposed.
The communities analysed mainly include companies in the social fabric in which the Group conducts its business activities, as well as the communities of people affected by the Group's main activities.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: the impact assessment was carried out on the basis of qualitative drivers linked, among others, to the presence of initiatives intended to support communities through the protection/enhancement of the territory in which they reside;
- upstream value chain: an analysis of the Group's business context and the categories of suppliers used by the Group was carried out;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties belonging to high-impact industries on the local communities.

The impact materiality analysis revealed the following outcomes with respect to the above scopes:

- own operations: significant positive impacts were identified linked to the presence of initiatives intended to support communities (in particular, in the area of adequate housing and adequate food), through the protection and enhancement of the territory in which they reside (so-called impacts linked to the territory, for example: initiatives relating to educational inclusion, youth employability, protection of cultural rights, social inclusion and cohesion, fundraising initiatives also through crowdfunding, initiatives to promote the country's cultural heritage, etc.).
- upstream value chain: considering the Group's operations and type of business, which focuses mainly on financial activities and services, no material impacts of the Group conveyed through the supply chain emerged;
- downstream value chain: significant negative impacts emerged (impacts related to security and in the area of indigenous peoples' rights) attributable to exposures, within the Group's portfolio, to counterparties belonging to sectors that may have a negative impact on the reference topic.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified.
With reference to risks, the following assessments were made for the different scopes of reference identified with regards to:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks in relation to the topic in question were found;
- upstream value chain: in view of the specific features of the Group suppliers' business and following in-depth discussions with the dedicated structures, no risks were identified in relation to this issue;
- downstream value chain: credit risk and market risk with respect to indigenous peoples' rights and community safety impacts were assessed. This would also give rise to reputational risk.

From the analyses conducted, for the purposes of financial materiality, with reference to the downstream value chain, the credit risk was found to be material due to the Group's credit exposure to counterparties belonging to sectors that may contribute negatively on specific aspects such as impacts related to community safety and indigenous peoples' rights. As a result, the reputational risk arising from the negative impact of such credit risk on the Group's image was found to be material.

Finally, for the purposes of assessing the financial materiality of the opportunities, with reference to the scope of own operations, in-depth analyses were carried out with the dedicated structures and the presence of initiatives and KPIs in the Group's Business Plan relating to activities intended to support the community and the local territory was verified.

Following the analysis carried out, from a financial materiality perspective, with reference to the scope of own operations, material opportunities emerged linked to the improvement of brand reputation for initiatives connected to the topic of adequate housing and to the increase in stakeholder trust with regard to the topics of adequate food and impacts linked to the local territory (for example: initiatives to support young people, minors and vulnerable people to combat educational poverty and support social mobility, promotion of youth employability, female entrepreneurship, social inclusion projects, support for people in difficulty through facilitated access to public/private healthcare).
The Group's attention to community interests is reflected in the importance given to community social needs within the corporate strategy and the 2022-2025 Business Plan. In this sense, the Group defined objectives to support communities, to address their social needs, combat inequalities and promote their social, educational and cultural inclusion. The essential rights of every citizen, such as the availability of food and housing, access to care and medicines, and educational opportunities, including financial ones, are supported by the Group through an extensive policy of investments in the community. The local initiatives have the dual objective of generating a positive impact, responding to the needs of stakeholders, and pursuing material opportunities with a view to positioning itself among the leading global companies in terms of social impact, including through collaborations with non-profit sector entities.

Communities affected by own operations

Policies and processes relating to the communities affected by own operations

The Group's commitment to community rights

The Group places great importance on projects that promote growth and social, educational, cultural and civic inclusion in the communities where it operates, thereby contributing to the development of more innovative and inclusive societies. Support for groups of disadvantaged people, young people, the community and the territory, together with the promotion of Italy's artistic, cultural and natural heritage, are fundamental elements deeply rooted in the Group's history and operating practices.
The latter extends its commitment to human rights also within the communities, in particular with respect to the selection of beneficiary entities and the contributions that it intends to disburse and by promoting listening and dialogue with civil society. The formalisation of its commitment is contained within the Code of Ethics, which also integrates the Principles on human rights that inspire the Group, in alignment with the UN Universal Declaration of Human Rights, UN Guiding Principles on Business and Human Rights, OECD Guidelines for Multinational Enterprises, ILO Declaration on Fundamental Principles and Rights at Work and other fundamental Conventions on labour matters. The Group is also a member of the UN Global Compact.

In this sense, the Code of Ethics is the reference regulatory instrument with reference to relations with the local communities. In particular, the Code of Ethics and its principles are connected to the impacts and opportunities considered material for the Group, and more precisely to the issues of "Adequate Housing", "Adequate Food" and "Impacts on the territory". The principles recalled therein refer to the fulfilment of the material and cultural needs of the community and guide the Group's relations with local communities with respect to the following macro-areas:
- support to the non-profit sector for a fair and cohesive development of society, committing to supporting social enterprises and non-profit organisations through partnerships, promoting networks of social enterprises and creating replicable intervention models to promote inclusion and service to communities;
- support to communities and their material and cultural needs through donations, sponsorships and partnerships, ensuring consistency with the reference values and corporate strategies, and enhancing the historical, artistic, cultural and natural heritage;
- promotion of local economies and strong roots in Italy and abroad, effectively supporting the territory, combining economic results and respect for local values, supporting small and medium-sized enterprises and promoting initiatives with high social and environmental value.

The principles of the Code of Ethics apply to the activities of the Intesa Sanpaolo Group and concern all interventions dedicated to local communities, disadvantaged people, young people, the community and the territory as well as relations with social enterprises and non-profit organisations (NPOs) - such as Volunteer Associations, Social Promotion Associations (APS), Foundations and Consortia - through co-planning and partnership activities aimed at activating projects and initiatives in favour of the territories and the community. For further information on the application of the Code of Ethics and its alignment with the main existing national and international guidelines on corporate social responsibility, reference is made to the paragraph “Policies, objectives and actions relating to corporate culture” in the ESRS G1 – Business Conduct chapter.

Social impact on the community

In implementing the general principles and values described above, the Intesa Sanpaolo Group plays an active role in supporting the local territories and communities in which it operates, through multiple tools, initiatives and programmes.

The Articles of Association of the Parent Company Intesa Sanpaolo provide for the option to allocate a portion of distributable profits to charity, through the establishment of a special fund, called the "Allowance for charitable, social and cultural contributions" (hereinafter, "Charity Allowance"), which is headed by the Bank's Presidency.

Furthermore, the Articles of Association grant to the Board of Directors of Intesa Sanpaolo, among other things, the power to intervene with donations within the framework of an annual plan of interventions to support worthy initiatives, in the event of emergency events or to support specific situations in the local territory. In accordance with the relevant clauses of the Articles of Association, the Board of Directors ensures the coordination of such disbursements, approving the general regulation thereof, also in accordance with the Group's attention and responsibility towards environmental, social and governance issues. The Board of Directors, with the support of the Risks and Sustainability Committee, also defines the general criteria and lines of intervention for charitable donations and performs all strategic supervision duties.

The disbursements in support of these initiatives extend both to the Italian territory and to the foreign countries in which the Group operates. Donations are intended for non-profit organisations, including religious and non-commercial public entities.

Intesa Sanpaolo, with the aim of positioning itself among the world leaders in terms of social impact, implemented its organisational structure to strengthen its intervention strategy in favour of the country, local territories and communities and set up new Governance Areas to consolidate ESG activities and strengthen the ESG strategic direction. Within the new Chief Sustainability Officer Area, the Chief Social Impact Officer Governance Area, set up in April 2024, oversees, through Intesa Sanpaolo for Social Impact, the direction, governance and implementation of the Social Impact initiatives and projects carried out by the Group, ensuring the relationship with the main stakeholders and social players in coordination with the competent Group functions.
In this context, the Social Action Plan was developed, which, starting from the social ambition, identifies the lines of action conducive to the achievement of the Group's social objectives. Its definition is based on the analysis of the social context, current and latent needs, risks and emerging trends, and a set of social challenges identified also through ongoing dialogue and mutual exchange with the relevant social stakeholders. Intesa Sanpaolo for Social Impact, in line with the Group's objectives, defined the following 4 lines of action, called "Social Routes":

- combating material, financial and educational poverty and promoting access to employment;
- supporting access to health, care and treatment;
- promoting social integration, local development, the enhancement of unused assets and spaces and social housing;
- developing new social projects with public institutions and social players, transferring replicable and scalable skills.

The Social Action Plan, thanks to the 4 lines of action mentioned above, represents a plan of interventions in response to the impacts and opportunities considered material for the Group, with particular reference to the issues of "adequate housing", "adequate food" and "impacts on the territory". The Plan's action areas concern multiple stakeholders and beneficiaries, including young people and minors, women, people in poverty, seniors, vulnerable people, communities, immigrants and refugees, and involve public institutions and various social players, including non-profit organisations. The responsibility for defining the Social Action Plan is entrusted to Intesa Sanpaolo for Social Impact, the structure responsible for the strategic supervision of the Group's social activities, which promotes initiatives in favour of the territories and local communities with particular attention to combating poverty and inequalities and defining strategies to support inclusive education and the employability of young people and individuals. Intesa Sanpaolo for Social Impact also pursues the aim of spreading the social culture, ensuring the supervision and general direction of the impact finance governance process, coordinating the Group's commitment in the area of social housing, managing institutional relations with the players involved and implementing specific projects aimed at strengthening the Group's leadership position in terms of social responsibility. In support of the implementation of the Social Action Plan, the Group set up the Intesa Sanpaolo for Social Impact Observatory, whose task is to analyse and monitor the main current and emerging social scenarios, trends and needs, also in order to guide the Bank's social action. The Social Action Plan and the resulting initiatives are subject to a dedicated enhancement and communication strategy through a multi-channel dissemination of the social culture inside and outside the Group, through a dedicated section of the website, social media, events and communication platforms of the partner network.

Charity Allowance

The Charity Allowance aims to contribute to the achievement of the social objectives of the Intesa Sanpaolo Business Plan, providing support to the most vulnerable people also with a view to contributing to the achievement of the UN Sustainable Development Goals (SDGs) set by the UN 2030 Agenda for Sustainable Development.

The Charity Allowance operates on the basis of a Regulation and Guidelines. The Regulation, approved and issued in 2016 by the Board of Directors of Intesa Sanpaolo, governs the management of the Charity Allowance and defines the mechanisms for the selection of entities and projects, according to the principle of separating charitable initiatives from the pursuit of business interests. Only non-profit organisations, not involved in known legal disputes, in matters concerning organised crime and the failure to respect human rights, peaceful coexistence and environmental protection and whose reference values are consistent with those set forth in the Group's Code of Ethics, may access the resources of the Charity Allowance. The Regulation also excludes the following from the category of beneficiaries: private citizens; political parties, political movements and their organisational branches; trade unions and employers' organisations; regions, provinces and municipalities, except for specific initiatives of particular social, cultural or scientific significance.

With regard to the requests, only projects with a clear social impact are evaluated and the ability to achieve the declared objectives is reviewed through the analysis of the proposing entity's track record. Priority is given to requests with the best project structure, with the most significant results and social impact and with a more careful and effective use of resources.
Donations can be of different amounts and, depending on their purpose, are divided into two types:

- local donations, up to a maximum of 5 thousand euro, managed in a decentralised manner by the Banca dei Territori Division and provided to support small projects with a direct local impact, expressions of the community to which they belong;
- central donations, of an amount greater than 5 thousand euro, managed centrally by the Chair's Technical Secretariat and granted to medium-large projects, with a significant social impact.

The Guidelines identify the high-level strategic objectives and priorities that are intended to be pursued and define the thematic directions. They also identify some issues considered to be of particular importance and urgency with respect to current socio-economic problems, which are allocated a significant share (equal to at least 25%) of the resources that can be disbursed annually. The Guidelines are renewed every two years and are submitted to the Board of Directors for approval.
The Guidelines for the two-year period 2023-2024 were drafted after a careful analysis of the national and international context and the consultation of numerous information sources produced by the World Bank, FAO, ILO, Eurostat, OECD, ISTAT, Censis, Miur and specialist publications of accredited non-profit sector entities. Furthermore, a stakeholder engagement activity was

carried out, which gave rise to three round tables with specialised non-profit sector entities. These meetings made it possible to refine the drafting of the document.

The Board of Directors periodically checks the use of the allocated resources and the convergence of the planned initiatives with the objectives undertaken. The selection of projects falls under the responsibility of the Chair of the Board of Directors (upon the proposal of the Chair's Technical Secretariat), following consultation with the Managing Director, for all initiatives exceeding 5 thousand euro and up to 300 thousand euro, while the Board of Directors approves initiatives exceeding 300 thousand euro. Finally, the Chair of the Board of Directors is responsible for monitoring all supported initiatives. Each year, the Annual Plan of usable resources is also submitted to the Board of Directors, which is subsequently approved by the Shareholders' Meeting. Part of the Plan's resources is allocated to the Banca dei Territori to support initiatives that are the expression of local communities and for an amount not exceeding 5 thousand euro each.
The share of resources allocated to the Banca dei Territori, following the approval of the Plan by the Board of Directors and ratification by the Shareholders' Meeting, is assigned for direct management to the Head of the Banca dei Territori who subsequently delegates the Regional Governance Centres concerned. The extract of the Regulations and the Guidelines of the Charity Allowance can be consulted on the Group's institutional website. On the same pages it is possible to find comprehensive information on the use of the Charity Allowance broken down by name and amount disbursed, with reference to the previous year.

Traditionally, the Charity Allowance concentrates most of its resources in Italy, supporting the communities where Intesa Sanpaolo operates through its branch network. The resources are distributed across all regions and, in particular, in the areas of greatest need: suburbs, internal areas and contexts characterised by degradation and marginalisation. The Charity Allowance also intervenes at an international level, supporting medium-large projects and giving priority to interventions aimed at the development of the communities and territories in which the Intesa Sanpaolo Group operates with its companies, including through collaborations activated by the International Banks Division (IBD). The Chair's Technical Secretariat also carries out coordination activities with the competent charity Functions and the autonomous Foundations of the IBD division to ensure the standardisation of principles, rules and reporting methods.

Commitment to culture

In order to regulate the protection, conservation and enhancement of the historical-artistic assets and archival assets owned by the Group, as well as those belonging to third parties, to ensure their public use and sharing with the communities of reference with the ultimate goal of enhancing the cultural heritage of the country and its territories, the Intesa Sanpaolo Group has adopted internal regulatory tools. In particular, the following were defined:

- internal rules to be adopted for the management of both movable and immovable artistic assets (for example, archaeological finds, paintings, sculptures, drawings, ancient books, frescoes, artistic stained glass windows, etc.), as well as for the management of assets of the same nature belonging to third parties in the event of loans and loans for use;
- internal rules for the definition of principles and directives to be adopted for the management of the company's archive assets (paper or digital documentation, photographic collections, etc.);
- internal rules for the management of events and sponsorships;
- internal rules for the management of cultural patronage.

The documents are drawn up in accordance with the current Italian legislation relating to Cultural Heritage and in particular with Legislative Decree 22 January 2004, no. 42 (Code of Cultural Heritage and Landscape); for companies within the scope of the international subsidiary banks division, reference is made to the specific national legislation. The principles and guidelines set out in the documents apply to historical-artistic and archival assets owned by the Group as well as to assets of the same nature owned by third parties in the event of loans, loans for use and restoration, while their implementation falls under the responsibility of the Art, Culture and Heritage structure within the Chief Sustainability Officer Governance Area.

Engagement processes and reporting channels

The Intesa Sanpaolo Group shapes its relationship with the community through opportunities for listening and dialogue with the various spheres of civil society. The Group therefore promotes constant dialogue with organisations representing communities, recognising their strategic importance for the sustainable development of its activities. To this end, it is committed to:

- maintaining a constant channel of communication with organisations representing the interests of stakeholders and promoting structured dialogue with the aim of cooperating in relation to mutual interests;
- listening to and taking account of the expectations and proposals made by the various components of civil society;
- analysing needs and identifying areas of action with high social, cultural and civic impact for communities;
- developing actions consistent with the listening and dialogue activities carried out.

The Group carefully considers the point of view of the communities involved, promoting a structured and continuous dialogue and discussion with stakeholders and community representatives, including civil economy entities operating in the territories of reference. All this in order to identify areas of intervention and initiatives with a high social, cultural and civil impact, with which to act in order to combat inequalities, to support young people and employability and, in general, to promote inclusive and sustainable development.

The Group's involvement of the communities is achieved directly through meetings, organisation of events and through the activation of collaborations, partnerships, listening campaigns and exchange of information with the main local stakeholders. The implementation of the initiatives takes place in co-planning with non-profit organisations, thanks also to their ability to intercept the current and latent needs of the local communities involved, to structure inclusive and sustainable solutions and intervention models. The Group supports these organisations by making available resources, skills and its network of relationships which give rise to collaborations and real solidarity ecosystems.

To this end, Intesa Sanpaolo for Social Impact set up an "Observatory" aimed at intercepting the main social trends, also promoting the contents produced by the reference stakeholders (i.e. academic and scientific partners and foundations), and consequently guiding the Group's action in the social sphere. This is also thanks to the activity of the Observatory's Advisory Committee, also made up of authoritative external members with significant experience in the social field. The responsibility for the engagement process of the communities involved, including through public, private and private social entities, falls under the responsibility of the individual Group structures that activate the initiatives.

For the benefit of stakeholders, the ISP Group has activated various channels and internal procedures for collecting, analysing and addressing reports on cases of possible non-compliance in relation to community rights, including those enshrined in the Human Rights Principles adopted by the Group, as described in the paragraphs above. No cases of serious human rights incidents were identified in relation to these channels and procedures.

Among these channels, the Code of Ethics inbox is available for reporting cases of possible non-compliance. For further information on the Code of Ethics reporting channel, please refer to the section on "Policies, objectives and actions related to corporate culture" in chapter ESRS G1 – Business Conduct.

Objectives and metrics related to the communities affected by own operations

The Group's support to local territories and communities occurs through multiple methods, in terms of tools and initiatives. One initiative of particular importance is the "Cibo e Riparo per le persone in difficoltà" (Food and Shelter for the needy) programme. As the biggest plan ever to be activated by a private entity in Italy, it involves the widespread distribution of food, beds, medicines and clothing to people in need throughout national territory. In the four-year period of the 2022-2025 Business Plan, the programme consolidated its support action for the most vulnerable people, defining a new dimension of social intervention with multi-project and multi-stakeholder characteristics, and setting the target of implementing 50 million interventions. To this end, a variety of profit and non-profit partners were engaged to reach as many beneficiaries as possible.

Target: Food and shelter for disadvantaged people programme – Meals, Beds, Medicines, Clothing (number of initiatives in millions)

	Date	Value
Baseline[124]	31.12.2021	-
Final balance	31.12.2024	54.1
Target	2025	50

The target of implementing 50 million initiatives was set by the Board of Directors of Intesa Sanpaolo in the preparation of the 2022-2025 Business Plan, and represented an evolution compared to the social intervention targets already set in the previous 2018-2021 Business Plan. The implementation of the Programme takes place through partnerships with non-profit sector entities of national standing and capable of reaching every area of the country. These entities are selected from time to time on the basis of the social needs identified by the Intesa Sanpaolo for Social Impact structures through scenario studies; a joint project aimed at developing targeted actions is subsequently defined with them. Generally speaking, the Group defines specific objectives in advance together with the entities involved at the level of each individual initiative and monitors their progress through periodic reporting formats agreed with each partner. During the target monitoring phase, non-profit sector entities are involved in the implementation of the initiatives and in reporting the impacts generated. Approximately 17.3 million interventions were carried out in 2024. Overall, since the start of the Business Plan (2022-2024), the Group has completed a total of 54.1 million interventions, including 43.5 million meals, 3.9 million dormitories/beds, 6.1 million drug prescriptions and approximately 560 thousand items of clothing. The interventions conducted also involved activities in support of the humanitarian emergency in Ukraine resulting from the ongoing conflict.

The final figure highlights the achievement of the objective ahead of the Plan deadline and demonstrates the effectiveness of the initiatives implemented by the Group to support people in difficulty throughout the country.

Actions relating to the communities affected by own operations

The purpose of the collaboration between Intesa Sanpaolo for Social Impact and non-profit organisations and non-profit sector entities is to promote community well-being, inclusion and social cohesion through initiatives aimed at generating a positive impact. The Group thus demonstrates its commitment to inclusiveness by supporting projects that aim to combat poverty in its various dimensions, reduce inequalities and encourage youth employability and in general to promote sustainable and inclusive development, also through institutional initiatives. In this way, tangible support is provided to the communities involved, while contributing to strengthening the Group's reputation. The actions undertaken by the Group, described in the following sections, are divided into the following main areas:

- combating poverty;
- social cohesion and inclusion;
- youth education and employability;
- health and healthcare;
- crowdfunding platforms;
- Charity Allowance;
- education and spread of financial culture;
- commitment to culture;
- institutional initiatives in support of the community.

[124] Plan target that represents the planning of a new activity that does not have a base value.

Combating poverty

As part of the actions intended to combat poverty, the “Food and shelter programme for people in need” includes initiatives, developed according to the various areas of intervention throughout the Italian territory, targeted at communities and, in particular, children, the elderly, people staying in rehab community centres and individuals linked to the prison system.

Meals

Food poverty is one of the most dramatic aspects for people in fragile and destitute conditions. Intesa Sanpaolo has taken action to combat it with a widespread network of initiatives aimed at supporting communities with socio-economic difficulties, providing food and basic necessities to combat food poverty. To this end, Intesa Sanpaolo has entered into a partnership with Fondazione Banco Alimentare with the aim of strengthening and enhancing local networks in their ability to retrieve and distribute food products for local charities. The collaboration includes the “Ri-pescato” initiative, which involves the recovery and processing of illegal fish seized in Sicily by the Coast Guard, allocating it for distribution to charitable organisations. Furthermore, in support of the Business Plan objectives for the Programme, Intesa Sanpaolo collaborates with Fondazione San Patrignano by implementing the "Support and Prevent" project, which aims to guarantee the distribution of meals to people hosted in the community. In addition, to offer support to children with disabilities and serious illnesses, an active collaboration is in place between the Bank and Fondazione Dynamo Camp**,** aimed at ensuring free meals and beds for the children hosted at the Camp in the Tuscan territory who are offered recreational therapy courses, as well as a collaboration with Vidas ODV, aimed at offering free daily meals to the young patients and their families hosted at the Casa Sollievo Bimbi hospice in Milan. With reference to the provision of meals to people in need, an active collaboration is in place with the Semi di Vita cooperative, engaged in the free distribution of part of the harvest resulting from its partner's social and organic farming activities to charitable organisations in the Bari area, to minors and young people detained at the Fornelli Juvenile Detention Centre in Bari and young people subject to alternative detention measures in communities in the area, as well as a collaboration with Fondazione Cometa, for the implementation of the project "A tavola per Crescere Insieme (At the dinner table to grow together)”, in order to guarantee meals and snacks to children from families in difficulty who attend after-school care at the day centre of Società Cooperativa Sociale “Il Manto”. Thanks to the implementation of the initiatives supported by Intesa Sanpaolo's collaborations for line of action dedicated to food security, in the 2022-2024 period these agreements enabled the distribution of 43.5 million meals. The Charity Allowance also contributes to the implementation of the Programme through its own resources, made available by the Intesa Sanpaolo Chairmanship; overall, 2.4 million euro was disbursed for the distribution of approximately 1.4 million meals in a year, equivalent to approximately 3,800 meals per day. The Charity Allowance activities in this area are not limited to the distribution of meals, but also include the implementation of a series of additional activities aimed at helping the beneficiaries achieve their final goal of lifting them out of poverty.

Beds

The initiatives aimed at providing beds developed and implemented by Intesa Sanpaolo aim to enable a structured intervention that provides dignified shelter, but is also able to guarantee better access to healthcare and support for caregivers. This area includes the afore-mentioned collaborations with Fondazione San Patrignano, for which Intesa Sanpaolo supports the provision of beds to people hosted by the community, as well as with the collaborations with Fondazione Dynamo Camp and Vidas ODV, aimed at further supporting the facilities thanks to initiatives intended to increase the reception capacity for children and young people hosted there and for their families. Furthermore, in order to contribute to the development of support structures for people in difficulty, an active collaboration is in place with the association Di.Re – Donne in Rete contro la violenza (Women in Network against Violence), which supports women through their journey out of violence and promotes coordinated prevention and awareness-raising actions. For this initiative, the Group contributes to the reception and hospitality of women in the “Shelter Homes” of the Di.Re network by supporting the initial expenses for utilities and rent, as well as babysitting services during the search for a job or for the purchase of goods that can be used to start up work activities. These agreements ensured that 3.9 million beds were made available in 2022-2024.

Medicines

Access to healthcare is a right to which every citizen is entitled, and this also forms the basis for Intesa Sanpaolo's coordination action with Banco Farmaceutico for the extension of a national network for the collection and distribution of medicines. To this end, the “Pharma Links” project, born from the collaboration between Intesa Sanpaolo and Fondazione Banco Farmaceutico, aims to create and strengthen drug collection and distribution networks throughout Italy by strengthening the “Recupero Farmaci Validi” (Recovery of Valid Medicines) intervention model, aimed at collecting unused drugs and medicines to donate them to local charities. Another objective achieved through the collaboration with Banco Farmaceutico was the strengthening of the “BFOnline” platform, the foundation's management tool that underpins the drug collection and distribution process. These collaborations enabled the prescription of 6.1 million drugs in the 2022-2024 period.

Clothing

The distribution of items of clothing has become an opportunity to design a complex circular redistribution initiative to confirm the combination of sustainability and social issues. In this sense, Intesa Sanpaolo collaborates with Caritas Italiana and some of the Bank's corporate customers for the "Golden Links" project, an initiative aimed at the recovery and distribution of items of clothing, consisting of unsold items, returns, second choices, defective but usable products, to families suffering from financial hardship. The total amount of clothing items and other goods distributed in the 2022-2024 three-year period stands at approximately 560 thousand.

The effectiveness of the initiatives that make up the Programme is monitored on a quarterly basis through the reports received from the entities with which the partnerships are set up.

Social cohesion and inclusion

The Group values its support to the communities, including through initiatives aimed at developing local territories in favour of people in conditions of socio-economic fragility, with the aim of ensuring social cohesion and inclusion. The initiatives are concretely supported by Intesa Sanpaolo thanks to the financial support to non-profit sector entities and thanks to the co-planning and dissemination of know-how, in favour of needy people who are struggling to reach that minimum threshold of well-being and dignity that constitutes a right of all people. The effectiveness of the initiatives is periodically monitored by the Bank in synergy with the entities involved in the projects.

Numerous social cohesion and inclusion projects are being developed throughout the Italian territory, following the guidelines of the 2022-2025 Business Plan. In particular, several initiatives were implemented to combat the socio-economic poverty of the most vulnerable subjects. In this sense Intesa Sanpaolo, in collaboration with Caritas Italiana, supports the "Aiutare chi Aiuta (Helping the helpers)" programme aimed at supporting dioceses in promoting the social inclusion of the elderly and combating youth poverty by distributing meals, health kits and clothing**.** In 2024, Intesa Sanpaolo and Caritas Italiana strengthened their commitment to supporting young people and adults in prison and their families, distributing basic necessities, providing professional training to acquire skills that can be put to use in the labour market, and supporting job placement programmes to improve employability. During the year the programme implemented 31 projects in addition to those started in previous editions, for a total of 54 ongoing projects.

This also frames the context of the “QuBì initiative - La ricetta contro la povertà (The recipe against poverty)”, a project promoted by Fondazione Cariplo with the support of the Vismara, Invernizzi, Fiera Milano and Snam foundations that includes four lines of action: identification of families with children in poverty through the joint action of non-profit sector networks and public administration; provision of measures aimed at increasing access to shopping for families going through financial hardship; support for neighbourhood networks that promote shared responses to children's needs; implementation of specific and innovative actions to combat food poverty in Milan. As part of the initiative, support continued throughout the year for 3 Emporiums and 6 Solidarity Shops of Caritas Ambrosiana. For 2024, it is estimated that food support was provided to at least approximately 7,400 beneficiaries (of which approximately 2,700 minors), or approximately 2,400 families in economic difficulty.
Still in the area of social inclusion, Intesa Sanpaolo is strongly committed to supporting children aged 0 to 36 months hospitalised in the oncohematology departments of the main hospital centres in Italy. In this context, in collaboration with the Social Cooperatives partnering with Consorzio PAN, the Bank developed and continues to support the “Intesa Sanpaolo educational programme for children who are long-term patients” by providing young patients with a nursery service, the first of its kind, aimed at helping children overcome the social and psychological isolation resulting from illness, heavy treatments and long-term hospitalisation, promoting their cognitive and emotional development through appropriate programmes followed by qualified educators, providing educational materials and initiatives to furnish the spaces. Overall, since the beginning of the Programme to 2024, over 785 children – 100% of the age group for nursery school – attended nursery school in the hospital facilities involved.

The Bank promotes the growth of inclusive communities by supporting the “Comunità Amiche della Disabilità (Disability-Friendly Communities)” Project with the aim of defining the characteristics that make a territory inclusive for people with disabilities. The partnership includes support for the local extension of the project and support for the co-programming and strategic planning processes regarding the disability issue.

Concurrently, Intesa Sanpaolo is also committed on the national territory to combating energy poverty, that is, the situation in which a family unit is unable to pay for their primary energy services required to guarantee a dignified standard of living. In this context, in the Rione Sanità and in peripheral neighbourhoods of the city of Naples, the project “Sharing Energy - Rinnoviamo l’energia: produzione e distribuzione di Comunità” (Sharing Energy - Let's renew energy: production and distribution of communities) is active, which promotes the growth of a new model of energy sustenance, from renewable sources, with zero impact and low costs. The Project also involves the creation of Solidarity Renewable Energy Communities (CERS) and the distribution of energy produced for free or at a highly regulated price to vulnerable people. Similarly, the partnership between Intesa Sanpaolo and the philanthropic entity Fondazione della Comunità del Mediterraneo Sostenibile e Solidale per l’Inclusione e l’Accoglienza focuses on experiments in the area of solidarity energy communities, through the redevelopment of Fondo Saccà, a former shantytown transformed thanks to an innovative capacity building model. The activities aim to combat energy poverty through energy storage and sharing processes, managed through social algorithms. In terms of urban redevelopment, the Bank developed the initiative “La Bella Piazza”, aimed at combating social and urban abandonment and degradation through the activation of a process of regeneration, enhancement and care of public spaces in Piazza Garibaldi in Naples.

To intervene in contexts of social, financial and family hardship affecting young people and promote their inclusion in the job market, the Group plays an active role with “In Action ESG NEET”, an initiative that since 2022, thanks to the provision of dedicated training courses, aims to respond to the increase in demand for operators active in the context of quality assistance, social assistance and educational services. The initiative involved around 150 people so far, each of whom completed a curricular internship in social-healthcare or educational facilities. Based on the first available data, it is noted that 67% of people involved, i.e. NEET (Not in Education, Employment or Training, i.e. those who do not study, do not attend training courses and do not work) or, in a broader sense, people in conditions of social fragility, after a few months from the end of the course are able to find a job and/or resume a course of study. In response to the emerging critical issues regarding juvenile hardship and to promote the inclusion and development of positive behaviours in the area of civic education, the Group has activated “WeBecome”, the training programme targeted at primary school children that develops educational paths on various themes aimed at educational inclusion. The project involved over 3,460 schools and was proposed as an important teaching support, reaching over 4,000 users on the platform, including over 2,400 teachers.

In light of the persistence of a macroeconomic scenario of strong uncertainty and instability that further aggravated the fragile condition of a significant portion of Italian households, and the housing emergency for students living away from home, Intesa Sanpaolo implemented an action plan to strengthen social housing that entails, over the 2022-2025 Business Plan, the promotion of new homes and beds in student halls of residence. The initiative undertaken by the Bank is one of the most

extensive social housing programmes in Italy and is one of the tangible initiatives for inclusion and the reduction of inequalities. Its effectiveness is monitored throughout the implementation phase through an assessment of the underlying economic commitment and managerial effort in terms of attracting investors and project development. For this purpose, new partnerships were launched with Coima and Redo, leading operators in the sector, which gave new impetus to the “MilanoSesto” project, the largest urban regeneration project in Italy, which involves the implementation of programmes for subsidised, unrestricted social construction work (for approximately 27,000 sqm), in synergy with the creation of the “Città della Salute e della Ricerca” (City of Health and Research) under the leadership of the Lombardy Region, as well as commercial businesses, offices and an urban park. Intesa Sanpaolo also provided significant financial and advisory support to the Coima, Covivio and Prada consortium for the project of the former Porta Romana railway station in Milan where the Olympic Village is currently being built, which will later become one of the largest social housing projects in Europe, with 1,700 subsidised beds.
Furthermore, in 2024 Intesa Sanpaolo further strengthened its support for student housing development initiatives with investments in the iGeneration and Pitagora funds, managed by InvestiRe SGR and Finint Investimenti SGR respectively, and in the urban regeneration initiative managed by Redo SGR on the Montelungo-Colleoni military barracks in Bergamo, which will allow the development of over 4,800 beds.

Youth education and employability

Intesa Sanpaolo is also committed to supporting the community through initiatives dedicated to the training and job placement of people in situations of social or economic vulnerability. These initiatives are aimed in particular at young people from low-income families who have difficulties accessing quality education and employment, and who are therefore more exposed to the risk of social exclusion and poverty.
The aim is to support and relaunch the school system, promoting inclusive education, guidance for school-age children and the prevention of school dropouts. This approach intends to ensure equal learning and job placement opportunities for all new generations, regardless of their socioeconomic background, gender and abilities, and to promote a culture of respect and enhancement of diversity.

During the year, the Bank developed several initiatives and projects in this direction throughout Italy, in accordance with the objectives and principles of the 2022-2025 Business Plan. Intesa Sanpaolo directly supports these initiatives by providing both resources and its own know-how and expertise. In particular, such support is ensured by promoting collaboration between the profit and non-profit sectors, as well as by making available educational materials, skills, contents and tools to implement new educational and training approaches, aimed at the social and professional integration of young people and vulnerable people in general.

In this context, to combat the youth unemployment phenomenon and train the profiles that are most sought after by the job market, “Giovani e Lavoro” comes into play. The programme, born from the partnership between Intesa Sanpaolo and Fondazione Generation Italy ETS, a McKinsey & Company non-profit foundation, is aimed at matching job supply and demand in the most sought-after sectors (Hi-Tech, Precision Mechanical Industry, Sales, Hotel and Catering) and providing training courses nationwide, entirely supported by Intesa Sanpaolo, to young people aged between 18 and 29 who are neither studying nor working to develop their technical, attitudinal and behavioural skills, guaranteeing companies, including corporate customers, a pool of trained people to fill the positions that are most needed. Since 2019, the year the programme began, the following results have been achieved (figures at the end of 2024): over 4,850 students trained/in training, over 2,480 companies involved and a placement rate of young people above 80% after completing the course.

To promote the professional reskilling and repositioning on the job market for unemployed professionals over 40, the Bank is implementing the “Digital Re-start” programme, an initiative created in collaboration with Fideuram and organised by Talent Garden. The programme provides training and re-entry into the job market of unemployed people over 40, domiciled or resident in Lombardy, through scholarships for the master's degree dedicated to the development of new digital skills. In 2024, the 5th edition was launched, involving 50 beneficiaries in Rome and Milan.
In 2024, Intesa Sanpaolo launched new collaborations with key social players to promote the inclusion of people with physical and intellectual disabilities in the workplace. It offered programmes to enhance their skills and supported projects aimed at migrants and refugees, promoting their integration through training and work.

To further support talented young university students whose career potential is limited by external factors other than their own abilities, the “Generation4Universities” project, developed by Fondazione Generation Italy and McKinsey & Company with the support of Intesa Sanpaolo, offers talented university students a training programme focused on cross-cutting, behavioural, attitudinal skills and individual mentorship, as well as a two-week bootcamp with targeted sessions on employability and professional vocation seminars held by Managers and Executives of leading companies. In 2024, 90 students, 50 universities and 19 partner companies were involved.

With the “Zeta Lab” and “Offerta Modulare” training projects, the Bank's employees act as tutors to directly deliver courses dedicated to secondary school students in schools. These programmes can also be part of the cross-skills development and orientation activities and include modular training courses designed entirely within the organisation. The design is based on the analysis of the training needs collected, integrated with an experiential teaching methodology that aims to boost interaction and collaboration between participants. Over the course of 2024, a total of approximately 2,400 students were involved in over 40 Italian schools.

In order to combat female educational poverty and educational failure or early school leaving, the FUTURA Programme promoted by Save the Children, Forum Disuguaglianze e Diversità and Yolk, with the collaboration of Intesa Sanpaolo, continued to be implemented. The project intervenes in socially and economically disadvantaged areas of the territory and promotes growth and autonomy with personalised training courses for 300 girls and young women between the ages of 13 and 24, including 50 young mothers, through the achievement of a qualification and/or reintegration into the workplace. Approximately 320 educational plans have already been activated. Thanks to the contribution of a Scientific Committee composed of experts in the project's areas of action, "FUTURA" puts in place a specific plan for the evaluation of the tangible

impact of the interventions on the educational and emancipation path of the girls and young women involved, with respect to the skills acquired in a formal and informal context with the aim of making the methodology tested over the first two years replicable and scalable at a national level.
The project "Ecosistema Educativo per i giovani e le famiglie di Napoli Nord (Educational Ecosystem for Youth and Families of Northern Naples)" is an initiative launched and implemented by Istituto Mater Dei dell'Ordine delle Figlie della Carità di San Vincenzo de' Paoli of Naples in co-planning with the Campania Region. The project aims to reduce educational poverty and promote the social inclusion of young people between the ages of 13 and 25 who live in the areas of the municipalities of Caivano, Casoria and Salicelle, areas of the province of Naples where youth hardship is characterised by high school dropout and youth unemployment rates, as well as high levels of juvenile crime. The aim is therefore to promote the social recovery and job placement of young people who abandoned their studies prematurely. The project, which was inaugurated in September 2024 at the start of the new school year, entailed the creation of an educational hub with an integrated ecosystem of training, orientation and active labour policy services in the aforementioned territories of the province of Naples. The Group in particular contributed to supporting the extraordinary renovation works and the setting up of classrooms and laboratories inside the building belonging to the religious Institute. Students are offered three-year education and professional training courses and the local economic and production system is also involved. The offer is then completed with an information desk for the provision of guidance services on access to the job market and an experimental space for psychological support for young people and their families. The project, in addition to providing concrete support to the communities involved, is consistent with the Group's commitment to sustainable and inclusive growth in the territories in which it operates, through the fight against educational poverty and youth unemployment. The effectiveness of the action is measurable by the fact that, thanks to the Group's support, for the 2024/2025 school year, approximately 250 students were involved in the new training courses, as confirmed by the monitoring activity carried out by Istituto Mater Dei.

In addition, an Executive Master for non-profit sector operators was designed with 24ore Business School, offering 30 scholarships to address challenges such as digitalisation and new technologies. These initiatives aim to create social networks and structural alliances in the local territories.

Health and healthcare

It is estimated that in Italy approximately 30,000 boys and girls under the age of 18 suffer from chronic kidney disease (CKD), a disease that involves the progressive and irreversible loss of kidney function, which is unable to perform its vital functions properly. In children, CKD can be caused by congenital diseases, infections, trauma or blood diseases and often requires dialysis treatment with a high impact on the daily lives of the children affected and their families. In order to enable better care capacity and improve the quality of life of young patients undergoing this treatment, in 2024 the Group decided to support the construction of the new paediatric hemodialysis department at the Bambino Gesù Children's Hospital, the largest paediatric hospital and research centre in Europe. The project, which lasted 5 months and came to an end at the beginning of December 2024, included structural renovation works and improvements to the services provided for young patients and their families/carers. The project is consistent with the Group's commitment to institutions operating in the care, rehabilitation and assistance sectors, in order to guarantee continuity and efficiency of social and health services for vulnerable people. The effectiveness of the action is measurable by the fact that, thanks to the Group's support, the Bambino Gesù Children's Hospital will be able to continue to guarantee an improved paediatric dialysis service to approximately 100 patients (on an annual basis).

Crowdfunding platforms

To offer a direct contribution to the implementation of social initiatives of non-profit sector organisations, the Group promotes various fundraising tools.
In this sense, Intesa Sanpaolo's "For Funding" platform confirms, also in 2024, its leading role in Italy's crowdfunding sector, promoting the collection of donations for non-profit organisations across the country. The projects supported on For Funding cover different areas of intervention, including emergency and poverty, healthcare, social inclusion and community welfare, as well as environmental and cultural heritage protection. The use of the platform takes place at the request of non-profit organisations. The applicant NPOs follow a well-defined and structured selection process by the Bank. This process requires the involvement of the reference Branch and the relevant Credit and Risk Management structures which carry out in-depth due diligence before publishing the initiatives on the platform. Customers and donors can easily contribute via the Group's institutional website and the Intesa Sanpaolo app, and are periodically made aware of the possibility of donating via the Bank's communication channels (e.g. Direct e-mail marketing, Push notifications, etc.). Intesa Sanpaolo covers 100% of the operating costs, thereby guaranteeing free donations. The duration of the fundraising initiatives on For Funding can be customised, based on the specific needs of each supported project.

The For Funding activity is supported by the "Formula" programme, also accessible via the platform, which offers direct support for specific needs in favour of local Italian communities and stand-out projects at a national level. Every four months, with the involvement of Intesa Sanpaolo Regional Governance Centres and with the technical support of Fondazione CESVI ETS, 13 non-profit organisations that carry out significant initiatives in their territory are selected. These organisations, together with CESVI, develop a targeted project and, thanks to fundraising on the platform, also backed by Intesa Sanpaolo, receive the necessary support to achieve tangible objectives at a local level**.** Participation in the Formula programme is also an opportunity for participating NPOs to increase their capacity for planning and reporting initiatives, also thanks to the technical support provided by CESVI. In 2024, For Funding raised a total of approximately 8.7 million euro in donations. Of these funds, approximately 6.1 million euro was allocated to the Formula programme. To ensure the success of the campaigns, non-profit organisations are required to provide detailed reporting on the progress of their initiatives, while an impact tracking process is in place to evaluate the results achieved. The initiatives contribute directly to the needs of the communities, increasing the Group's support in the local territories where it operates.

Charity Allowance

The Chair's Technical Secretariat assists the Chair in the planning, implementation and monitoring of the Charity Allowance's initiatives through a dedicated office (Charity Allowance Office) made up of 8 resources. Furthermore, within the Banca dei Territori Division, Charity Representatives (23 people) have been identified who assist the Heads of the Regional Governance Centres in the evaluation and selection of initiatives up to 5 thousand euro. In terms of time commitment, the donations provide support for a period of one year and can be renewed - even non-consecutively - for a maximum of three years. Save for exceptional circumstances (e.g. pandemic), the duration of the project cannot exceed 18 months from the start date communicated to the Charity Allowance. In 2024, Intesa Sanpaolo's Charity Allowance disbursed approximately 23 million euro to support 814 projects carried out by non-profit organisations. Overall, about 934,000 direct beneficiaries were reached (net of medical research projects).
There are three main lines of action for 2024, closely linked to issues aggravated by the health, economic and social crisis of recent years, to which approximately 40% of the total disbursements have been allocated:

- combating educational poverty and the digital divide;
- support for the Not in Education, Employment or Training (NEET) and Early Leaving from Education and Training (ELET) population segment;
- support for women and children who are victims of violence and those who are victims of appalling discrimination.

Projects to combat educational poverty and the digital divide involve the entire school cycle; special attention is paid to students who have migrated from other countries and who have special educational needs. There are numerous digital education courses, with the aim of making minors responsible in their use of web platforms, guiding them in the recognition of any risks. Equally important are the workshops and courses focused on STEAM (Science, Technology, Engineering, Art and Mathematics). A key factor for the success of the initiatives is psychological support, to allow young people to deal with their emotional fragilities and the most delicate problems with the support of specialists. The methodologies adopted include the recovery of spaces to be used as places for personal development and training; they offer personalised support and help to improve learning skills, develop soft skills and to meet some of the youngsters' priority needs, involving families, educators and school staff, with a view to strengthening the support from the educational community in the long term. The expansion of the network of collaborations on the territory is key, as it sees the consolidation of Public-Private partnerships. At a geographical level, the actions focus on suburban areas and urban zones where there are clear examples of socio-economic marginalisation.
As regards NEETs and ELETs, there are numerous supported projects for identifying and engaging beneficiaries with the aim of helping them in reactivating and defining their life path, through renewed careers guidance, training and work tutoring. The personalisation of the actions and the offer of individual support are key to the success of the initiatives. The projects made it possible to address the recovery of young people through training courses and on-the-job training in social agriculture, communication professions and emerging professions. Particular attention was paid to NEET mothers with free initiatives to promote work-life balance.
The last focus is on combating violence and discrimination in all its forms. The beneficiaries of the projects are women victims of violence and their children, prisoners, first or second generation migrants, individuals with physical or cognitive disabilities and psychosocial fragilities, as well as people discriminated against because of their sexual orientation. The aim of the initiatives is to enable beneficiaries to free themselves from violence, gain or regain self-esteem, be included in their communities and achieve social and financial autonomy. Also important are awareness-raising and educational initiatives on the topic, particularly towards the new generations in schools, and training dedicated to front-line workers to prevent discriminatory phenomena.

The Charity Allowance supported projects covering other social issues, such as healthcare poverty and the fight against disease, disability, inclusive amateur sport and cultural projects that feature a range of positive social outcomes.
As regards medical research, 14 projects were supported (total donations of 1.6 million euro) by leading national institutions. The initiatives in this area were selected with the help of external experts who draw up detailed assessment sheets on qualitative and quantitative elements such as objectives and methodology, impact, research team and budget. As regards Social research, donations totalling 416 thousand euro were made to support 4 studies on: gender violence against foreign women in Italy; discrimination, harassment and violence against women and gender and sexual minorities; cardiovascular impact of domestic violence and the effects of chronic stress caused by it on the brain and heart; the effect of gambling on young people.

Collaboration with the International Banks Division continued with approximately 1.2 million euro disbursed (approximately half of the international donations) in the countries included in the Division's scope. The new Guidelines that will define the priorities for the two-year 2025-2026 period are currently being developed. The resources allocated to the initiatives planned during 2025 will be submitted to the Board of Directors with the 2024 Consolidated Financial Statements and subsequently approved by the Shareholders' Meeting. The checks carried out on the completed projects returned an overall very positive picture: most of the entities achieved and, in some cases, exceeded the objectives set, actively involving the reference communities in the development of the initiatives and expanding the local networks. The beneficiaries of the initiatives are in line with or, very often, higher than those expected at the project submission stage. Numerous collaboration networks between private social, institutions and other key players (schools, social services, etc.) were started or consolidated, evidence of the acquisition by the local territory of the experiences activated and guarantee of the sustainability of the initiatives over time. An example of this is Piazza dei Mestieri, which has had an active memorandum of understanding with the MIUR (Ministry of Education, University and Research) for years to implement initiatives aimed at containing school dropouts and youth hardship.

The impact of the supported projects is significant, in terms of employment generated, social inclusion, influence on public policies and regeneration of the territories in which they are located. Below are some examples:

- GOEL Cooperativa Sociale incubated several social economy activities in Siderno, Calabria, with a particular focus on the ethical fashion and organic fresh fruit sectors, offering an alternative to the deep-rooted control of the territory by the Calabrian Mafia ('ndrangheta). This work had a strong symbolic value of alternative and reappropriation in one of the poorest regions of our country and for the redemption of local communities, allowing the employment of approximately 40 young people and adults who were previously unemployed and/or in fragile situations;

- Cooperativa Sociale Il Mandorlo in Lecce reached out to 14 unemployed women selected through the proximity help desk and invited to participate in training courses in tailoring, ceramics and carpentry. At the end of the course, the young women started self-entrepreneurship initiatives, found a job or decided to go to university. The project was supported for three years starting from 2020;
- FOQUS Fondazione Quartieri Spagnoli developed the activities of Centro Argo in Naples, a non-medical centre for children, teenagers, young people and adults with cognitive disabilities. Approximately 60 beneficiaries reported an improvement in their social and personal skills and competences. Two of the older students started internships. Furthermore, a memorandum of understanding was signed with middle schools to activate therapeutic paths within the classes. The project, in its second year, came to an end in April 2024; it was then renewed for the third and final year;
- Fondazione Pangea welcomed 15 women victims of violence and their children into an emergency home in Rome, using an apartment seized from the Mafia. Of the women hosted, three have now left and are no longer at risk of violence, two are working and one returned home. The Foundation also launched a help desk for migrant women victims of violence that provided support to over 120 beneficiaries. The project made it possible to build and strengthen local networks and make Pangea's work known to institutions and public bodies. The ongoing relationship with local authorities and private social entities highlighted the need to give continuity to the actions started, representing a unique case in the reference territory. The project, in its first year, came to an end in June 2024; it was then renewed for a second year.

The project deadlines were mostly met, with the exception of physiological delays in the launch of the initiatives in the first year of operation and in the case of medical research, for which extensions are often requested to allow the publication of the results achieved.

Some additional difficulties were encountered in the implementation of international cooperation interventions in difficult socio-political contexts, which were overcome thanks to the ability of the institutions to reorganise themselves by leveraging a long-standing presence on site and a solid network of relationships woven in the reference territories. The allocated resources were used correctly. (Minor) budget adjustments during the implementation of the activities have always been agreed with the Charity Allowance.

Education and spread of financial culture

Museo del Risparmio (Savings Museum) is an innovative space where it is possible to become familiar with the concepts of saving and investing with a clear and simple language, in order to improve the level of financial literacy of the people to whom it is addressed. This is not a traditional museum, but rather an Edutainment project that facilitates learning through play. Founded in 2012 in Turin, thanks to the financial support of the Intesa Sanpaolo Group, of which it is part, it was a pioneer in the spread of financial education in Italy, so much so that it was the first museum in the world dedicated to this topic. Its mission is to help people consciously manage their personal finances and consequently improve their overall well-being level, counteracting situations of poor financial literacy that often contribute to a much wider phenomenon of social exclusion. During 2024, the Museum's educational initiatives reached 100,548 users.
The Savings Museum promotes social inclusion through the dissemination of financial skills and educational inclusion through a rich programme of educational initiatives, designed for both children and adults, who can join either on an individual basis or in groups through schools or non-profit sector associations.
Two programmes were added for schools following the mandatory inclusion of financial education in school curricula:
- “EduFin&Fun for primary and secondary schools”, consisting of three meetings during which to explore the history and functions of money, elements of personal budget management and safe use of the Internet and the first online purchases;
- “Percorso per le Competenze Trasversali e l’Orientamento del Risparmio (Path for Transversal Skills and Savings Orientation)” (PCTO), modules reserved for secondary schools, and consisting of a total of six basic financial education modules with a total duration of 60 hours that classes can choose and combine based on specific needs. In addition to the basic modules, special PCTO courses were made available, including ad hoc versions for Fashion and Design Schools and Sports-focused High Schools. In addition, digital educational content was made available to teachers on the Savings Museum website, such as educational video games.

Overall, a total of 286 classes, amounting to 5,640 students, joined the “Path for Transversal Skills and Savings Orientation” (PCTO) proposal in 2024.

Since 2017, the Savings Museum has set itself the goal of designing pilot initiatives specifically aimed at segments of the population which, for various reasons, can be considered socially vulnerable, such as women, migrants, prisoners, students from disadvantaged backgrounds, and people with mild cognitive disabilities. The main activities to support the development of financial education among the most socially vulnerable categories included:
- “Welcom-ed”: dedicated to migrants and foreign students from the Provincial Centres for Adult Education (CPIA) and to the youngest people of the Communities to raise their awareness of basic financial terminology, simple budgeting and planning techniques and the operation of the most widespread financial instruments;
- “Prometti di prenderti cura di te (Promise to take care of yourself)”: designed to provide women victims of violence with the basic economic knowledge and skills needed to achieve personal emancipation and economic independence;
- “LEI” and “Logos”: a programme for female inmates at the end of their sentence and ex-inmates designed to enhance their opportunities in the job market in the perspective of leaving prison and to prevent the phenomenon of recidivism.

Additional financial education activities and collaborations were conducted for individuals with cognitive or physical disabilities and for people with drug or gambling addictions. Overall, in 2024, the training activities of the Savings Museum aimed at vulnerable people reached approximately 730 individuals.
In addition to guided tours and structured itineraries, the Savings Museum is involved in various projects aimed at the school world through storytelling based on edutainment, contaminations and play. The following main actions were implemented:

- educational workshops, such as the ECO-quiz initiative during the International Economics Festival in Turin, where 1,650 secondary school students challenged one another in an exciting eduquiz on the topics of the correct evaluation of economic information;
- dedicated insight events, including: various workshops on the occasion of the Safer Internet Day and Cybersecurity Month for over 12 thousand students; "Cosa farò da grande (What will I do when I grow up)" and "Il mio posto nel mondo (My place in the world)" to raise awareness among younger kids on the importance of investing in their future, which involved over 8 thousand students from lower and upper secondary schools.

A total of approximately 8,550 children and young people participated in in-person activities and 80,184 were involved in remote learning activities, always accompanied by a tutor, for a total of over 1,070 hours of training provided.

Furthermore, in collaboration with the "Financial Literacy International Network" (FLITIN), a network of Financial Education Ambassadors belonging to the 11 international subsidiary banks of the Intesa Sanpaolo Group promoted by the Museum, educational workshops were organised that involved over 6,250 students with the aim of raising awareness of basic financial culture using a playful and engaging method. The Museum is active in the exchange of good practices and in discussions in specialised national and international fora such as the National Committee for Financial Education and the International Federation of Finance Museums (IFFM). At the same time, the outreach activity for the adult audience continued with a schedule of 56 digital and blended events which reached about 3,735 people and 2,900 on-demand views during the period considered. Among the new projects, it is worth noting the start of a collaboration between the Savings Museum and the Department for Youth Policies and the Universal Civil Service, with the aim of spreading financial education among young people between the ages of 18 and 35, holders of the Carta Giovani. Within the framework of the collaboration, the Savings Museum provided two cycles of the online training course "Riscalda i muscoli (Warm up your muscles)" for a total of 20 dates and 4,591 participants. In terms of accessibility, the Savings Museum worked to prepare content and guided tours accessible to users with hearing and visual disabilities, in collaboration with Ente Nazionale Sordi ("Italian National Agency for the Deaf") and Unione Italiana Cechi ("Italian Union for the Visually-impaired). There are several active collaborations in place with universities and research centres, with which activities are carried out to evaluate the effectiveness of the initiatives introduced. Market analysis companies are involved in the periodic sample survey activity designed by the Museum of Savings to analyse specific themes related to financial education. The main actions put in place consist of the preparation of contents and initiatives for the dissemination of financial culture, implemented through thematic guided tours, educational workshops, modular and structured training courses, and dissemination events held at the physical headquarters of the Savings Museum in Turin and online.
The actions have mainly national geographical coverage. Some specific educational initiatives ("Money Master Challenge"; "SAVE Ambassador"; "Cybersecurity Labs") are also proposed in other European and non-European countries through the Financial Literacy International Network (FLITIN). The initiatives are aimed at the entire community, but modulated according to the specific needs of the different groups of beneficiaries: children, young people, adults, schools, families, socially vulnerable groups (for example, migrants, women victims of violence, prisoners and ex-prisoners, young people at risk of dropping out of school, people with cognitive disabilities, etc.). The actions are planned on an annual basis and following the calendar of the reference school year.

In addition to training and information initiatives, the Museum regularly prepares new content and formats hosted at its physical location, or transmitted via its website and social networks. The aim is to reach all segments of the public in the most widespread way possible, conveying financial education concepts with a simple and engaging language.
In 2024, in particular, the following initiatives were developed:

- new interactive exhibit "Ammirare (Admiring)", a physical and virtual space that conveys economic concepts through some famous works of art with the aid of virtual reality;
- escape room "La Scalata (The Climb)", which simulates the climb of a team of mountaineers committed to solving a number of puzzles in the shortest time possible, thus conveying the basic concepts of financial planning;
- "Love station" video series for social networks, created in collaboration with Bank Station;
- book entitled "Un pizzico di economia (A pinch of economy)", by Giovanna Paladino, director and curator of the Savings Museum, and Luciano Canova, economist and populariser, with the collaboration of chefs Davide Caranchini and Barbara Girardi.

The actions developed by the Savings Museum are based on scientific surveys aimed at exploring the needs in terms of financial literacy of the different population targets. Every year the Savings Museum develops surveys in collaboration with public and private research centres, the results of which guide the design and provision methods of the training activities. The latest survey, which was released in November 2024, explores how optimism (or hope), happiness, and planning skills influence peace of mind when dealing with personal money issues.
In the pilot phase, the Museum's training projects are in many cases subject to an assessment of their effectiveness by specifically appointed third-party entities (for example, Universities or Research Centres).

Intesa Sanpaolo is committed to promoting a series of initiatives that support widespread access to art and culture, recognising the value that these elements bring not only to the individual, but to society as a whole. Through active collaboration with cultural institutions and organisations, the company aims to enrich the social context and promote the well-being of the reference community, creating opportunities for dialogue, learning and collective growth.

Commitment to culture

Intesa Sanpaolo supports the communities and territories in which it operates through a series of initiatives aimed at protecting and enhancing the historical, artistic and cultural heritage of both the country and the Group, primarily for the purpose of its public enjoyment for the benefit of the communities. In this perspective, the Bank has created the "Progetto Cultura (Culture Project)", a programme of initiatives conceived and implemented in dialogue with public and private, national and international entities and institutions, with which Intesa Sanpaolo expresses its direct and tangible commitment to promoting art and culture in the territories in which it operates, in the awareness of the strategic role of culture in promoting more innovative, sustainable and inclusive societies. The Project is made up of different initiatives, starting from "Gallerie d'Italia", considered one of the most important private museums in Europe. Furthermore, following a particular attention to sharing assets with the public, with "Progetto Cultura" the Group manages the art collections owned by the Bank and the materials that form part of the Historical Archives. The "Restituzioni" programme is also active, which contributes to the protection and enhancement of the country's artistic and architectural assets in collaboration with the Ministry of Culture. Finally, with "Progetto Cultura", the Group supports partnerships, sponsorships and grants with the aim of creating a network of collaboration with public and private, national and international players, with a view to promoting the country's cultural heritage. "Progetto Cultura", in addition to bringing positive effects to the local communities in which the Group is present in terms of enhancing the history, traditions and cultural identity, also represents a tangible opportunity for the Bank by increasing the trust of its stakeholders in the Group and contributing to the achievement of the objectives of the 2022-2025 Business Plan. Indeed, the initiatives of "Progetto Cultura" are developed according to a multi-year programme in accordance with the 2022-2025 Business Plan.

Gallerie d'Italia

One of the main components of "Progetto Cultura" is " Gallerie d'Italia", the Intesa Sanpaolo museum hub resulting from the transformation of historic buildings owned by the Bank into museums open to cities to share the corporate collection, exhibitions and initiatives of cultural and social value, linked to the territory and communities. The project involves 4 locations: Milan, Naples, Turin and Vicenza, for which the Bank has made its buildings available, transforming them from workplaces into museums open to the community. Overall, in 2024, Gallerie d'Italia proposed 12 major exhibitions with national and international partners (aimed in particular at enhancing seasons and authors of the artistic history of the territories in which the Galleries are located, or, for the photography exhibitions in Turin, created on commission to explore ESG-related themes). Around 4,300 free educational visits and workshops were organised, with almost 100 thousand children and young people participating from local schools of all levels and age groups: the broad and structured educational proposal offers interactive and engaging experiences, with the aim of bringing the youngest audiences closer to art, making them acquire greater awareness of the artistic and cultural heritage value and of belonging to a common history. The Gallerie also play an active role in the inclusion and attention to people exposed to situations of vulnerability, from the promotion of the rights of people with disabilities (physical, mental, cognitive and linguistic), to the inclusion of refugees and citizens from other countries and cultures, to attention to the issues of mental health and diseases with a strong personal and social impact such as Alzheimer's and Parkinson's: in the year, 690 courses were designed for people with disabilities or exposed to situations of vulnerability, with 8,300 participants. Among the numerous cultural initiatives, over 60 free meetings were held as part of the public programme #Inside, to delve deeper into the themes of the hosted exhibitions. Furthermore, the Gallerie d'Italia App was extended to the four locations, an innovative digital guide thanks to which users are able to access an "advanced" visit experience, with free audio and video content.

Art assets

Intesa Sanpaolo demonstrates a strong commitment to the care and enhancement of the Group's art collections, made up of 35 thousand works, which represent one of the most important corporate collections in Europe in terms of size and quality. The works are subject to constant protection, conservation, research and enhancement activities. In 2024, sharing took place not only in the Gallerie d'Italia, but also through the loan of 297 works to 72 exhibitions in Italian and international museums (from Scuderie del Quirinale in Rome to the National Gallery in London). 10 loans were signed for a total of 126 works entrusted to local entities (such as museums and foundations) and 253 maintenance and restoration interventions were carried out. Finally, enhancement initiatives were carried out in Italian territories of strategic importance for the Group, with particular attention to significant collections in terms of identity for the communities, in collaboration with local authorities, first and foremost the banking Foundations (in Pistoia with Fondazione Caript, in Arezzo with Fondazione Bruschi, in Jesi with Fondazione CR Jesi, in Mirandola with Fondazione CR Mirandola).

Restituzioni

Again within the scope of "Progetto Cultura", Intesa Sanpaolo, in dialogue with the Ministry of Culture and the bodies responsible for artistic heritage protection, has supported and managed the "Restituzioni" programme since 1989, dedicated to the restoration and enhancement of the national heritage. In 2024, the Group continued to organise the 20th edition of the programme, which involves the restoration of 122 works of art from the 20 Italian regions (in addition to a case of international collaboration between Italy and Belgium), belonging to 63 entities, including museums, churches, places of worship and archaeological areas; the restorations are carried out in collaboration with 51 protection entities of the Ministry of Culture and involve 57 restoration laboratories and hundreds of art historians and conservation scientists. For 35 years the Project has promoted two Italian excellences, art and restoration, and has as its objective the "restitution" to the communities of artistic assets – over 2,200 to date – that belong to history and collective identity.

Historical archive

"Progetto Cultura" also manages the Group's Historical Archive, one of the first and most important bank archives in Europe, a valuable heritage for reconstructing not only the history of the Bank, but also the history of the entire country. The archival activity involves over 20 linear kms of historical documentation and includes, among the photographic funds, the Publifoto Archive, which is subject to extensive activities for its protection, conservation, digitalisation, inventory, cataloguing and promotion, with the main objective of improving public access to the sources, also through the most advanced digital technologies (such as the innovative open format LinkedOpenData). The Archive also offers a portal dedicated to the consultation of digitalised documents. The results achieved in 2024 include the digitisation of a further 470 thousand pages of paper documentation (to date there are over one million pages available online) and the creation of 11 thousand new record cards as part of inventory projects (to date there are tens of thousands of record cards published); research and enhancement projects continued, also in collaboration with other institutions (such as the "Egeli Project" dedicated to the papers on the seizure of Jewish assets in 1939-1945 with Fondazione 1563); educational activities also play an important role to encourage university students and other students to become familiar with the Archive and its documents. As regards the Publifoto Archive, over 5 thousand new photos were digitised (to date there are approximately 60 thousand digitised photos, of which approximately 33 thousand are available online) and approximately 24 thousand new records cards were catalogued.

In addition, initiatives are carried out around the art collections and archival assets owned by the Bank in collaboration with other Bank structures that directly involve the Group's people, with particular reference to the issues of accessibility, inclusion, diversity enhancement, multiculturalism (Art & People project).
The production of original content on the websites and social media of Gallerie d'Italia and the Group also continued to enhance access, promotion and sharing of the assets owned, exhibitions and initiatives of Progetto Cultura.

Partnerships, sponsorships, donations

The Bank supports artistic-cultural, social and training initiatives through forms of collaboration with public and private entities, where its contribution often takes the form of sharing and co-designing contents, spaces and relationships. Among the synergies developed in 2024, the following are worthy of note: projects with banking foundations (for example, Compagnia di San Paolo, Cariplo, Cariparo, CR Firenze, CR Forlì); main partnerships of international fairs and exhibitions (for example, Miart in Milan, Artissima in Turin, Holy See Pavilion at the Venice Art Biennale, Salone Internazionale del Libro in Turin) as well as festivals for the promotion of art, archival assets, photography, music (for example, International Photography Festival in Cortona, Archivissima in Turin, Milano Musica Festival); synergies with museums in the country (including the Egyptian Museum in Turin, Poldi Pezzoli Museum in Milan, Palazzo Strozzi in Florence); support for the Christmas exhibitions of the Municipality of Milan and the Municipality of Vicenza; co-organisation of exhibitions in Cuneo with Fondazione CR Cuneo and in Merate with Fondazione Costruiamo il Futuro; Art bonus projects to support public cultural heritage (from the construction of the new venue for the GaMec museum in Bergamo, to the reconstruction of the church in Amatrice damaged by the earthquake, to the renovation of the internal courtyard of the Egyptian Museum, to the restoration of the Church of Sant'Aspreno ai Crociferi in the Rione Sanità of Naples, to the enhancement of the Historical Fund of the Municipality of Mondovì).

In 2024, Intesa Sanpaolo also promoted numerous institutional initiatives in collaboration with leading cultural entities and institutions, to bring new generations closer to opera, music, art and culture. These include collaborations with important Italian theatres such as Teatro alla Scala (for example, the project “La Scala UNDER 30”), projects and photographic exhibitions. It also supported cultural events, science dissemination festivals and film festivals (for example, the Turin Film Festival and BergamoScienza).

Higher education and enhancement of cultural professions

Intesa Sanpaolo promotes training and skill development projects in the arts and culture, with a particular focus on young people, in recognition of the potential of cultural heritage, also as a driver of economic and employment growth. The 4th edition of the Gallerie d'Italia Academy Executive course was held in 2024 “Management of artistic-cultural heritage and corporate collections ” in collaboration with Fondazione Compagnia di San Paolo, Fondazione Cariplo, the Ministry of Culture-Fondazione Scuola dei beni e delle attività culturali, and Fondazione 1563 per l’Arte e la Cultura: it involved 29 students and approximately 60 teachers including academics from Italian universities, professionals, culture and business managers, museum directors and officials, thanks to the granting of 8 scholarships and 162 hours of lessons in person and in webinar mode. The Bank makes available its museum venues (Milan and Turin) that host students for in-person lessons; the expertise and know-how of professionals, of the Bank and of the museum institutions with which it collaborates; for teaching purposes during the course. Furthermore, the Bank, through the “Alumny” community, provides ongoing training and networking opportunities among cultural operators. 2024 also marked the end of the “Euploos Project”, an interdisciplinary research programme of an educational nature, supported for three three-year periods, aimed at creating a digital catalogue of the drawings preserved in the Cabinet of Drawings and Prints of the Uffizi, curated by a group of young art historians, computer scientists and photographers (in 2024, 2,252 scientific record cards and 3,250 images were created; overall, since the beginning of the project, the catalogue has made over 73,500 works available for consultation, of which over 9,600 with scientific record cards). Other projects were developed with students from design schools (IED-Istituto Europeo di Design, IAAD-Istituto d’Arte Applicata e di Design). Finally, it is worth remembering that over 120 young art historians work at the Gallerie d'Italia under the collaboration with Civita Mostre e Musei.

Institutional initiatives in support of the community

Intesa Sanpaolo also strives to respect its own ethical, cultural and social values in its partnership and sponsorship initiatives, by selecting projects capable of conveying messages in line with the image and reputation of the Bank and the entire Group, not only in economic terms but also in civil, cultural and social terms.
The main areas of intervention in 2024 concerned culture, environment and sustainability, dialogue with the production fabric, social inclusion, sport and health promotion.

Social solidarity

Intesa Sanpaolo, in addition to being the driver of the country's economy, is an institution that sets out to make a real social contribution to the community in terms of inclusion. Some of the main initiatives include the Group's support to the “Costruiamo il Futuro (Let's Build the Future)” Award, which supports small non-profit sector organisations in Lombardy, engaged on a daily

basis in the inclusion and training of young people through sports and social life. In its 20 years of activity, the Award has supported more than 1,000 non-profit sector associations and entities. Another important initiative is the “Ponti” project, which promotes active citizenship through culture and theatre. The Bank also supports Fondazione Rava N.P.H. Italia Onlus to raise funds for the NPH Saint Damien paediatric hospital in Haiti, and is a member of Fondazione Severino and Fondazione Tender To Nave, which fight against inequalities and prejudices.
The “META INSIEME” project offers opportunities for redemption to juvenile detainees through sport. Intesa Sanpaolo also promotes the dialogue cycle “About Women”, a series of dialogues on the role of women in society and in the workplace within the context of the International Film Festival, on issues relating to the salary gap and gender discrimination in the professional sector and the “Women Value Company” award, promoted by the Bank with Fondazione Marisa Bellisario, dedicated to small and medium-sized enterprises that have stood out in the application of gender equality policies. The Bank participates in the “#Tuttomeritomio” Project, promoted by Fondazione CR Firenze and Intesa Sanpaolo with the University of Florence, the Regional Education Department and the Fondazione Golinelli with the aim of promoting the merit of students in socially and economically disadvantaged situations. Furthermore, it supports Concerto per il Giorno della Memoria (Holocaust Remembrance Day Concert), an annual event organised by the Giuseppe Verdi Conservatory of Milan, and the “Metamorfosi” project by Fondazione Casa dello Spirito e delle Arti, which crafts musical instruments made of wood from boats used by migrants and worked by the inmates of some Italian prisons with the help of expert luthiers. Intesa Sanpaolo supports the travelling exhibition of the “Progetto Genesi” Art Collection, the Special Olympics activities in Italy and the Campioni di Vita initiative, a 5-stage tour of events dedicated to high schools on the themes of inclusion and courage.

Environment

Intesa Sanpaolo is committed to building a sustainable future for the environment, young generations and an inclusive society, promoting initiatives such as: the collaboration with Fondo per l’Ambiente Italiano (Italian Environment Fund (FAI)) for the “I Luoghi del Cuore” project, the restoration of the vegetable garden of Convento del Redentore with the Venice Gardens Foundation, and the support to the “Sustainable Economy Forum” promoted by Fondazione San Patrignano. Furthermore, it supports the One Ocean Foundation for the protection of the oceans and the Daje de Alberi Association for the reforestation and urban regeneration of the city of Rome.

Health

Intesa Sanpaolo collaborates with organisations, foundations and healthcare institutions to promote healthy lifestyles and provide free medical prevention services to the community. Among the main initiatives, the Bank supports Friends for Health Onlus and other Italian healthcare excellences involved in the implementation of “Tennis & Friends”, an event that combines health, sport and solidarity, offering free health check-ups. Intesa Sanpaolo also participates in “Tour della Salute (Health Tour)”, a national roadshow aimed at raising awareness among citizens on the importance of a healthy lifestyle, prevention and health monitoring. Finally, it supports the European Epilepsy Conference to promote new information and research content regarding education and treatment of this disease.
Among other initiatives, sport is taking on an increasingly important role as a common good and collective heritage to be protected and shared. A significant example is the partnership with “CORRI LA VITA” (LIFE RUN), a sporting event created to help women affected by breast cancer and to finance projects for the prevention, early diagnosis and treatment of this disease.

Education and research

Intesa Sanpaolo places great attention on young people and their right to education, training and access to the job market, investing in education and research. Among the main initiatives, it is worth mentioning the support for 42Firenze, an innovative, inclusive and free programming school designed to develop technical and relational skills that respond concretely to the expectations of the job market, and the “Young Factor” project, promoted by the Osservatorio Permanente Giovani-Editori to promote financial education in schools and introduce young people to current economic issues. These projects aim to develop talent, combat school dropout rates and expand employment opportunities for young people.

Finally, with the aim of further supporting local communities, through partnerships and systemic actions with consolidated social players, Intesa Sanpaolo implemented a series of initiatives aimed at adopting a sustainable development model based on the circular economy throughout the country. In particular, through the “Donare per non sprecare” (Donate so as not to waste) initiative, the Bank continuously makes available furniture and hardware that is being decommissioned but is still in working order, to non-profit organisations in the non-profit sector to improve the efficiency of their organisation and customer support. The project results are aimed at implementing actions with social, environmental, institutional and economic value. In 2024, the project distributed 1,092 IT assets to 133 beneficiary entities and 3,170 pieces of furniture to 70 beneficiary entities.
The same area includes “Immobili che si muovono per il bene” (Properties that move for the good), the Bank's initiative that provides, for the purpose of developing new projects, the concession of properties by Intesa Sanpaolo to non-profit organisations, with facilitated formulas - such as rent at a regulated rate, free loan for use - that support the development of activities capable of self-sustaining in the medium to long term, the creation of new jobs, also by promoting the employment of people in vulnerable situations and, finally, the infrastructure of the organisations involved.
The two programmes are ongoing and are regulated by the Bank's process guides.

IBD Division initiatives

In order to address emerging needs in the local contexts where the Group operates, which affect the most vulnerable people in particular, the International Banks Division (IBD) is actively committed to supporting local communities, focusing on combating educational poverty among young people, promoting social inclusion and supporting the healthcare sector, thanks above all to important initiatives carried out by Nadacia VUB, VUB Banka Foundations in Slovakia and Intesa Foundation, Banca Intesa Beograd Foundation in Serbia.
IBD, through Nadacia VUB, financed projects in Slovakia totalling over 450 thousand euro, including the programme “Every child has a chance”, in support of 5 organisations active in assisting disabled children and their families, and numerous initiatives of the NGO “People in need”, aimed at assisting people and municipalities hit by the floods in Slovakia.
In Serbia, through Intesa Foundation established in March 2024, over 800 thousand euro was allocated for initiatives aimed at improving healthcare, facilitating learning for children with disabilities or in vulnerable situations and promoting support and social inclusion programmes for disadvantaged families, in collaboration with NGOs such as UNICEF and SOS Children's Villages.
Project monitoring, aimed at verifying effective implementation and achievement of the pre-established impact objectives, is developed within the context of ongoing dialogue with the entities and structures involved. The initiatives promoted not only respond concretely to the needs of communities in the health, education and social inclusion sectors but also represent a tangible opportunity at a reputational level for the Group towards the assisted territories.

Affected communities by the undertakings included in the Group’s portfolios

The Equator Principles (EPs) are international guidelines that the Intesa Sanpaolo Group voluntarily adhered to since 2007, applicable to the financing of infrastructure and industrial projects that could have negative impacts on the environment and people, and which pay special attention to the consultation of local communities, the protection of the rights of indigenous peoples and the preservation of the local cultural heritage. These principles are based on the Performance Standards (PS) on environmental and social sustainability of the International Finance Corporation of the World Bank, and on its dedicated guidelines on Environment, Health and Safety (EHS Guidelines).
The Equator Principles Guidelines apply to financial products[125] in support of the development of new projects issued by Intesa Sanpaolo and its subsidiaries that carry out financing activities falling within the scope of application of the Equator Principles, and are valid in all countries in which the Group operates and for all countries where the Group carries out financing activities.
The function in charge of overseeing the implementation of the Equator Principles, responsible for reviewing and monitoring their application, is located within the Risk Chief Officer Governance Area. The implementation process of the Rules concerning the Equator Principles can be found on the Group's website.
In addition to what is set forth by the Equator Principles, the Group also regulates these issues through internal policies such as Guidelines for ESG risk management and the ESG & Reputational Risk Clearing process. For further details on the above Guidelines and process, reference is made to standard E1 – Climate Change.
The application of the Equator Principles includes the assessment of social risks, including respect for the rights of local communities and indigenous peoples within the scope of the financed projects. During the project review phase, Intesa Sanpaolo assigns a risk rating that takes into account the impacts on human rights and potential critical issues related to the aspects considered by the afore-mentioned Performance Standards of the International Finance Corporation (so-called sensitive issues), which make specific reference to respect for indigenous communities. Based on the assigned risk, in addition to providing the necessary documentation, customers are required to engage the community, indigenous peoples, workers and stakeholders through an ongoing, structured and culturally appropriate process. Furthermore, customers are required to report the assessments of the potential negative impacts and human rights risks identified, in compliance with the UN Guiding Principles. In the case of a project that affects indigenous peoples, the process of application of the Equator Principles by Intesa Sanpaolo towards the customer requires that the involvement conducted by the latter is aimed at ensuring that the development of the project promotes full respect for the human rights, dignity, aspirations, culture and livelihoods based on the natural resources of indigenous peoples. Furthermore, if mitigation and compensation measures are implemented, they should take into account the laws, institutions and customs of these communities.
As described above, it is therefore the customer, or the financed entity, who maintains direct relationships with the communities involved or their representatives and carries out constant engagement, the methods of which are defined in line with the risk level determined for the transaction. The Bank receives specific documentation to support the performance of such engagement activities and monitors the correctness of the customer's operations with respect to the obligations connected to the application of the Equator Principles. In the event that the communities impacted by the financed project need to report serious issues or negative impacts on them, the Bank interfaces directly with its customer to verify that the implementation and effectiveness of the necessary remedial measures are ensured.

Furthermore, Intesa Sanpaolo is committed to monitoring, analysing and appropriately addressing reports that come through sharing reports or direct communications from non-governmental organisations or other entities acting as representatives of the communities concerned.

Since quantitative information on the actions towards communities impacted by the undertakings included in the portfolio is not yet available or obtainable, the Group has not set specific objectives in relation to this topic. However, monitoring the effectiveness of the actions undertaken is closely linked to the application of the Equator Principles as described above.

[125] Regardless of the customer’s industry, the EPs apply to the financial products listed below when they are used to support the development of new projects and meet specific criteria: Project Finance Advisory Services, Project Finance, Project-Related Corporate Loans, Bridge Loans and Project-related Refinancing and Acquisition transactions.

ESRS S4 – Consumers and end-users

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
    - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
    - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within ESRS S4 – Consumers and end-users were identified taking into consideration the specific features of the Group. In particular, the mapping of these impacts, risks and opportunities was carried by analysing the controls, internal policies and protection measures aimed at safeguarding/protecting and ensuring the confidentiality of customer data, also with a view to minimising the negative impacts related to the issue in question. This analysis was conducted with reference to the Group's own operations and the upstream and downstream value chain, as well as including an assessment of risks and opportunities related to consumer and end-user aspects to which the Group might be exposed.

As part of the dual materiality analysis, the Group has taken into consideration all categories of customers and end consumers that are or could be impacted in a material way by the Group and its products.

Customers and end consumers, who may be impacted in various ways, include institutional, corporate and retail customers, including private individuals.

For the purposes of impact materiality, the assessment of the identified impacts was conducted through interviews with internal structures and external stakeholders (e.g. interviews with experts in the sector), as well as through a detailed qualitative-quantitative analysis, carried out on the basis of the criteria required by the relevant legislation (i.e. scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: the assessment of impacts was carried out on the basis of qualitative drivers related, among others, to the Group's definition of internal policies and protection measures aimed at safeguarding/protecting and ensuring the confidentiality of customer data as well as safeguarding the health and physical safety of customers;
- upstream value chain: in view of the specific features of the issue and following in-depth discussions with the dedicated structures, no impacts were identified in relation to this issue;
- downstream value chain: the assessment was conducted taking into consideration the protection and safeguarding of consumers and customers in the context of the Group's offering of products and services (e.g. accessibility of the Group's official website, fair treatment of customers, promotion of ethical and transparent business practices). In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

The analysis revealed the following impact materiality outcomes with respect to the above scopes:

- own operations: material positive impacts were identified with regard to privacy protection, freedom of expression, health and safety of consumers and end-users, and security of a person.
- downstream value chain: material positive impacts relating to access to quality information, non-discrimination, access to products and services and to responsible business practices.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified.
With reference to risks, the following assessments were made for the different scopes of reference identified:

- own operations: the operational risk and compliance risk related to this issue were assessed. Which would also give rise to reputational risk;
- upstream value chain: in view of the specific features of the issue under analysis and following in-depth discussions with the dedicated structures, no risks were identified in relation to this issue;
- downstream value chain: the strategic risk related to this issue was assessed. This would also give rise to reputational risk.

Within the scope of the analyses conducted, with regard to financial materiality, the operational risk related to the issue of privacy was found to be material. As a result, the reputational risk arising from the negative impact of such operational risk on the Group's image was found to be material.

Lastly, for the purposes of assessing the financial materiality of opportunities, their connection with the impacts described above was taken into consideration, given that the presence of positive impacts, e.g. in terms of communication channels, may provide financial opportunities.
With regard to opportunities, analyses were conducted with reference to the following scopes:

- own operations: in-depth analyses were carried out together with the dedicated structures, in order to assess the Group's existing or planned initiatives and safeguards towards customers that could lead to an increase in the trust of the Group's stakeholders;
- downstream value chain: following in-depth analyses carried out together with the dedicated structures, the opportunity arising from the possibility of expanding the product range by guaranteeing access to all social groups, including the most vulnerable, was assessed.

The financial materiality analysis carried out, with reference to own operations, revealed material opportunities in connection with the adoption of internal policies and corporate strategies aimed at protecting the Group's customers and their freedom of expression; with reference to the downstream value chain, it revealed material opportunities relating to the offering and access of products/services dedicated to the Group's customers.

The Group also considers it essential to make the most of feedback, including complaints from customers, in order to make its commercial offer more effective for different types of customers, developing products and services that meet their actual needs. Listening and monitoring the quality of the service offered play a crucial role in this respect.

The Group's commitment to human rights

The Group believes that proper customer relations must be based on shared corporate values and respect for human rights in all products and services provided to customers.

As enshrined in its Code of Ethics, the Group considers it essential to maintain a continuous dialogue with customers, so as to better understand their real expectations, protecting the security of those customers, their assets and their information. The Group bases its relationship with its customers on the principles of fairness and transparency, placing them at the centre of its consideration through constant dialogue in order to understand their real expectations, with particular attention to the financial inclusion of the most vulnerable social groups.

To this end, in compliance with its Code of Ethics, the Group undertakes to:
- implement systematic dialogue tools, to gather suggestions from customers, consumer associations and associations representing specific categories of customers;
- ensure timely feedback on queries and complaints;
- protect people, valuables and assets, and information resources, including their digital identity, and adopt internal organisational measures designed to ensure the provision of a service meeting the highest standards of reliability, continuity and confidentiality;
- consistently observe transparency criteria in informing customers about their privacy rights and how their personal information is processed;
- not discriminate against customers on the basis of gender, gender identity and/or expression, emotional-sexual orientation, marital status and family situation, age, ethnicity, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental condition or any other characteristic of a person, including those related to the expression of their thoughts;
- carefully identify customer needs and risk profiles as a fundamental starting point for offering advice, services and products, in the knowledge that they play a key role in investment assistance, prudent management of savings, and responsible lending, in addition to offering insurance protection.

With regard to human rights, the Intesa Sanpaolo Group prevents human rights violations linked to its activities and promotes the protection of fundamental rights, setting out its responsibilities to customers.

For the benefit of stakeholders, the Intesa Sanpaolo Group has activated various channels and internal procedures for collecting, analysing and addressing reports on cases of possible non-compliance in relation to consumer and end-user rights, including those enshrined in the Human Rights Principles adopted by the Group. Among these channels, the Code of Ethics inbox is available for reporting cases of possible non-compliance. For more information on the Code of Ethics reporting channel, please see the section on Business Conduct in chapter ESRS G1 – Business Conduct. With reference to the aforementioned channels and procedures, no cases of serious incidents involving human rights, or constituting instances of non-compliance with the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work or the OECD Guidelines for Multinational Enterprises were detected.

Service Quality – Customer satisfaction and responsible sales

Policies on customer satisfaction and responsible sales

In a context of correct and transparent relationships between intermediaries and customers, the Intesa Sanpaolo Group makes the information it provides to its customers clear and comprehensible in all stages of their relationship through the simplicity of its language, transparent policy statements, and consistent terms and conditions among the various documents relating to the same products/services. The main offer documents, drawn up in line with the clarity and intelligibility requirements, can be found in branches and also on the Group's official website, under the "Banking Transparency" section. These include product and service information sheets, specific guides and information documents on the conditions offered to all type of customers. Respect for customers' rights at all stages of the contractual relationship is also ensured through organisational measures and checks on compliance with customer protection regulations and through behaviours based on transparency and fairness both in the placement phase and during the performance of the relationship.
In the area of investments, the Group offers customers the highest level of protection with its advisory service. As regards transactions relating to financial products or investment services, personalised recommendations are made in line with the customer's financial profile. In this sense, Group personnel are bound by a specific set of rules relating, in particular, to the provision of the advisory service and other investment services, which identify the conduct to be maintained and the safeguards applied in the provision of the advisory service to clients and other investment services. These rules are applied to Intesa Sanpaolo and transposed, to the extent of their application, by the other Group companies within Italy. They are issued by the Board of Directors upon the proposal of the responsible compliance area, through a process of concordance with all major Group structures.

Furthermore, these rules were drafted to be consistent and in line with the European Directives and the Italian laws transposing them. Lastly, these rules are available for consultation by employees and key stakeholders on the "#Legislation" portal, which can be accessed via the Group's intranet.
After the entry into force of the MiFID II Directive and European regulations in the area of investor protection, the regulatory infrastructure was strengthened in order to provide investors with higher levels of protection and increased transparency in negotiations on the financial instruments markets. On the basis of the provisions of the main Italian and European regulations on this topic, the Intesa Sanpaolo Group provides for obligations in terms of the governance of financial instruments, knowledge and expertise requirements for the Group's personnel responsible for providing investment services and ex ante and ex post information on the costs, charges and incentives of the products and services available. The model was further refined to introduce a new survey profile on sustainability preferences aimed at verifying the consistency of the percentage of ESG financial products/investment services with respect to the sustainability preferences expressed by customers during the profiling phase, which include, in addition to the minimum percentage of the portfolio to be allocated to investments aimed at meeting these preferences, the possibility of further implementing them in compliance with the provisions of ESMA's "Guidelines on certain aspects of the MiFID suitability requirements". In addition, the Group's processes have been supplemented in order to make available to staff and customers specific information relating to the sustainability of the investment instruments and, consequently, the reports periodically sent to customers have been supplemented with information regarding the preferences expressed and regarding the composition of the portfolio in terms of sustainable products.
With regard to advisory services, "Valore Insieme" continues to be a global consultancy solution provided by branch managers through an innovative relations platform that provides an advanced and personalised advisory service in all phases of the construction, protection and transfer of investment portfolios, also through dedicated investment products. It is a service aimed at those looking for an exclusive relationship that combines an innovative platform and ongoing professional support from a dedicated manager.

New products and services and their subsequent variations are subject to the Product Governance process, with the involvement of all Group structures entitled to express their compliance opinion through the assessment of product characteristics, also to clearly identify the target audience for which it is intended, with a view to protecting the end customer. This process is constantly subject to verification by the responsible compliance function to ensure substantial and formal compliance with internal and external regulations and the underlying assessments. The Product Governance process makes it possible to accurately manage and oversee the individual phases represented by the concept, feasibility analysis, clearing, approval and monitoring of products or services submitted for validation.
Each activity involves the participation of several structures in order to assess and validate the products and services, also from an ESG perspective, produced by both the Group and third-party manufacturers, as required by the legislation[126]. Periodic post-marketing monitoring of products and services allows consistency with target market parameters and predefined characteristics to be verified over time.

The compliance assessments of the Product Governance processes are carried out in accordance with the principles of fairness and protection of the interests of customers, and also relate to the quality of the information provided, the consistency of the services, products or transactions with the needs of the target customers.
The entire process is governed within the Group by a well-structured regulatory framework, represented by guidelines, regulations and specific process guides, through which activities, methods and parties involved are identified in detail.

The management of customers' requests, regulated by specific Group guidelines for Managing complaints, Protests to the Supervisory Authority and Appeals to alternative dispute resolution Bodies, is inspired by principles of transparency and fairness and is based on the verification of the circumstances reported by the customer and of the conduct of the personnel involved, aiming for the effective resolution of disputes, within the time limits prescribed by law. The guidelines, which are available in the #Legislation section of the corporate intranet, are issued by the Parent Company's Board of Directors and then implemented by the Group Banks and Companies, which adopt the necessary regulations to implement them, taking into account applicable local and sector-specific regulations. The Group's official website provides information on how a customer can lodge a complaint and the maximum timeframe in which the Group undertakes to provide feedback to the customer. The resulting assessments and determinations are based on the applicable external and internal rules and regulations and on the principles expressed in the Group's Code of Ethics.

The regulations issued by the Bank of Italy, Consob and IVASS provide for specific reporting obligations on the part of the responsible compliance function within the Group, with the aim of reporting to the corporate bodies and the authorities themselves - at least once a year - on the overall situation of complaints and other requests received, as well as on the adequacy of the procedures and organisational solutions adopted.

Customer engagement processes

The Group has adopted a service model structured by business area, with an organisational structure that ensures coverage in Italy and in the other countries in which it operates, with the task of developing the best service quality through various channels, in order to make the commercial offer more effective across the different types of customers. Customer satisfaction and service quality are monitored and overseen by the structures that deal with customer satisfaction and customer experience in the various business Divisions.

[126] Bank of Italy - supplement in 2019 to the Supervisory Instructions on "Transparency of the banking and financial transactions and services" with specific provisions on product governance; IVASS - Letter "Directive (EU) 2016/97 on insurance distribution and EIOPA preparatory guidelines on product governance and control by insurance companies and distributors of insurance products" dated 4 September 2017 and Regulation 45 laying down provisions on the governance and control requirements for insurance products in force since 31 March 2021; Consob - Intermediaries Regulation, amended by Resolution 21466 in force since 31 March 2021.

In this regard, to ensure a high level of customer satisfaction, the Banca dei Territori Division has developed a comprehensive feedback collection system, able to identify areas of improvement at an early stage and take concrete action. This system is based on key tools such as:

- NPS (Net Promoter Score): an effective synthetic measure of a customer's propensity to recommend the bank through a survey targeting specific segments. For more information, see the section "Metrics - Net Promoter Score";
- NSI (Net Satisfaction Index): measures the level of customer satisfaction at the key stages of interaction with the Bank;
- SEIok Programme: contributes to determining the Broad-based Short-Term Plan for the Network and concretely supports the continuous improvement of the level of customer service.

In addition, customers can also contact the Group through the complaint channels provided in the specific "Complaints and Dispute Resolution" sections of the Group's app and official website, as well as in the information sheets provided to customers and in the written agreements (e-mail address, certified e-mail, ordinary mail, fax).
The handling of complaints, the drafting and updating of these documents and the website contents are governed by specific internal regulations.

Remediation processes and channels to submit complaints

Complaints are handled by means of a dedicated IT procedure, which records the complaints and generates a "Complaint Register". This procedure tracks all the steps in the complaint handling process and monitors compliance with the applicable legislation on response times.

The procedures and solutions deployed to handle customer complaints are structured and governed by specific internal regulations, also in line with the guidance issued by the Bank of Italy, in particular in its communication of 18 March 2016 "Organisation and functioning of complaints offices: good practices and issues found through control activity".
Each complaint is duly examined, considering the various grounds for the customer's dissatisfaction. The answer must be drafted in simple, clear and comprehensible language and sent in a timely manner, and in any case by the time limits laid down in the legislation in force. When the complaint is received, the customer is notified that the matter is under examination. Where in-depth examination of complaint makes it impossible to issue a reply by the statutory time limit, the customer must be promptly informed by means of an ad hoc communication.

Once the case has been examined, the function responsible shall send the complainant a written response, drafted in accordance with the principles set out in internal Group guidelines on the handling of complaints, protests to supervisory authorities and appeals submitted to alternative dispute resolution bodies. The response must include:

- if the complaint is considered unfounded: a clear and comprehensive explanation of the reasons for rejecting it;
- if the complaint is considered to be wholly or partly well-founded: a description of the measures taken in the customer's favour, with details of the manner and timeframe for granting any reimbursement or compensation.

Targets related to customer satisfaction and responsible sales

One of the fundamental drivers of a service quality culture is the continuous process of improving the customer experience. The Intesa Sanpaolo Group has therefore designed a series of actions, in addition to its policies, to monitor the quality of the services provided. Thus, service quality is subject to constant monitoring and guidance. This makes it possible to achieve high standards of service quality, even without precisely defining measurable quantitative targets. Furthermore, the Group uses key tools such as the NPS in its customer engagement processes, as depicted in the "Customer Engagement Processes" and "Metrics - Net Promoter Score" sections, to monitor the effectiveness of its actions.

Actions on customer satisfaction and responsible sales

The Group monitors customer complaints and reiterations. In this regard, in order to promptly address any emerging phenomena, the responsible structure sends each month to the identified business owners a detailed list of the complaints pertaining to them, asking them to report on the actions taken or to be taken to mitigate the issues experienced by customers.
To ensure the continuous improvement of the customer experience, a "close the loop" system has been strengthened over time, i.e. closing the quality loop by selecting and implementing concrete actions.
The actions implemented include customer re-contact initiatives, which strengthen the relationship, put to good use the NPS data collected and reduce the risk of dissatisfaction and complaints through active listening. For example, customers who respond to surveys may expressly ask to be contacted back. The phone call is an opportunity to establish a relationship based on customer care and attention, as well as an opportunity to examine situations where expectations were not met.

The Banca dei Territori Division has further strengthened its monitoring of service quality, confirming the importance of the synergy between quality management and control. The aim is to support branches in raising awareness and disseminating the culture of quality as a value of the service offered to customers. The Division has also broadened the target audience of the "Customer Experience in Branch" portal, which provides an overview of the quality perceived by customers and supports operators in continuously improving their services. The portal, first released in 2023 for the Retail and Exclusive Business Areas, was also extended in 2024 to the Enterprise Business Area and to the Agribusiness and Impact Departments. In November 2024, the testing phase for the Digital Branch Department began, with release planned for early 2025.

With regard to the handling of complaints, regular alignment and training activities are carried out for the staff at the responsible structure; the applicable regulations are also available to staff on the company intranet.
The Group's annual report on the overall situation of complaints, disclaimers, protests to the Supervisory Authorities and appeals to Alternative Dispute Resolution Bodies describes the organisational set-up and examines its adequacy. In addition, the trend of customer complaints at Group level during the year is reported, including complaints and their possible reiteration ("customer appeals"), appeals to out-of-court dispute resolution bodies ("ADR appeals") and requests for clarifications made by

supervisory authorities in response to customer reports ("reports"). The Group's Complaints Report is sent to the supervisory authorities and an extract entitled "Complaints Management Report" is published on the Group's official website, as required by the relevant regulations.
The trends in complaints are also monitored on a quarterly basis, to verify compliance with the early warning thresholds, defined each year at Group level.
Complaint handling times are constantly monitored by the function responsible for overseeing compliance with the relevant regulations and are reported in the above-mentioned report, as well as in the subsequent section "Metrics - Response to customer complaints".

Metrics on customer satisfaction and responsible sales

Number of branches

To promote the quality of its service, the Intesa Sanpaolo Group is the largest banking group in Italy, with approximately 3,000 branches and a strategic international presence with over 900 branches, including subsidiary banks operating in commercial banking and an international network specialising in supporting corporate customers. The following table shows the number of branches broken down by geographical area covered by the Group, as well as the related Representative Offices.

	Number of Branches
Italy	2971 Branches
Other European countries	770 Branches + 1 Representative Office
America	2 Branches + 1 Representative Office
Asia	7 Branches + 6 Representative Offices
Africa	174 Branches + 1 Representative Office
Australia/Oceania	1 Branch

Net Promoter Score

The Net Promoter Score (NPS) is an indicator that expresses the likelihood of customers to recommend a product, service or company, calculated in index points (between -100 and +100) subtracting the percentage of detractors (dissatisfied customers) from the percentage of promoters (loyal customers) obtained. Overall, in 2024, at the level of the Banca dei Territori Division, the survey results, shown in the table below, can be attributed to approximately 657,000 total interviews carried out via telephone, e-mail, app or Internet Banking with Retail, Exclusive, Enterprise, Non-Profit Sector and Agribusiness customers.

Categories	Customer satisfaction index
NPS Retail	38
NPS Exclusive	34
NPS Enterprises	24
NPS Non-Profit Sector	33
NPS Agribusiness	24

Responding to customer complaints

As concerns the average complaint processing and response time, at the level of the Banca dei Territori Division, four types of complaints are shown below: Banking Services (ORD), Investment Services (SIM), Insurance Services and Products (ASS) and Payment Services (PAG). The average response time compared to the applicable legislation (NR) is calculated as the average number of days between the closing of the complaint and the day it was lodged. This time is calculated in terms of calendar days (note that the time limit under the relevant legislation is in calendar days, except for PAG, for which the time limit is in business days).

Type of complaint	Average processing times (calendar days)	Regulatory time limit (calendar days, business days for PAG)
Banking Services (ORD)	16	60
Investment Services (SIM)	35	60
Insurance Services and Products (ASS)	18	45
Payment Systems (PAG)	14	15

Service quality - Customer data protection

Policies on customer data protection

The Intesa Sanpaolo Group has always maintained a high and constant commitment to protecting its customers' personal data, ensuring that such data is collected and processed in compliance with current legislative provisions. The regulatory framework for personal data protection is represented by Regulation (EU) 2016/679 (General Data Protection Regulation (GDPR) which came into force on 25 May 2018, whose new rules have been implemented by the Group and formalised in the main internal governance documents consisting of the Group's Code of Ethics, which outlines the principles and values on which the Group bases its choices and activities, and the Internal Code of Conduct, which defines the conduct that the Group's employees and collaborators must adhered to in order to ensure the correct processing of data.
More specifically, the GDPR has introduced the accountability principle, which requires the data controller to implement regulatory, organisational and technological measures aimed at ensuring that the processing of personal data takes place in compliance with and in the light of the criteria laid down in the Regulation, such as privacy by design, privacy by default, the appointment of the Data Protection Officer, privacy impact assessment, the record of processing activities, the subjective role of Third Parties and data breach management. The Group protects the data of the persons with whom it interacts by implementing

the "privacy by design" principle, whereby the personal data protection logic is established from the outset by identifying the potential risks for the rights and freedoms of data subjects and the technical and organisational measures suitable for mitigating such risks. A further safeguard is the privacy impact assessment conducted before carrying out one or more data processing activities that may involve a high risk for the rights and freedoms of natural persons.
The privacy policy has been revised so as to make it clearer and more transparent, also by adding charts that make it easier to use and understand. The privacy policy, published on the official website, specifies that the Intesa Sanpaolo Group processes personal data only for the purposes described and expressly indicated in the policy itself, which is made available to data subjects. No processing is carried out for any secondary purposes not expressly stated. With regard to the processing of personal data for marketing purposes, the free, explicit and unambiguous consent of the data subject is required. If the data subject denies consent or does not make any choice, the data collected will not be processed and used for marketing purposes.
Failure by a data processor to comply with external or internal data protection regulations triggers a procedure to verify the actual unlawful conduct. In the case of ascertained and unjustified breaches, the relevant departments are always informed in order to start disciplinary proceedings, which normally result in one of the penalties under the disciplinary code being imposed on the author of the breach.

The Group, having companies located in various EU and non-EU countries, complies with the express personal data protection provisions of their domestic legislation. The Group has issued specific governance documents which provide detailed instructions on the conduct that employees and collaborators must adopt to ensure the correct collection, use and protection of personal data, in compliance with current national and international legislation and the principles that guide the Group, formalised in the Group's Code of Ethics and Internal Code of Conduct (for further details, see the Group's Internal Code of Conduct available on the Group's official website). These requirements are also set out in the Guidelines on the protection of personal data of natural persons and in the Corporate Rules for the processing and protection of personal data of natural persons.
The Guidelines establish the model for managing compliance risk with the data protection rules for all the natural persons with whom the Group interacts, including employees and collaborators. They lay down the general principles and set out the roles and responsibilities of the corporate bodies and structures involved, the macro-processes for monitoring and controlling risk, and the Group's guidance and coordination model. Furthermore, they lay down the requirements for personal data processing and protection, and penalties in the event of non-compliance with the provisions. The Guidelines are issued in compliance with external regulations, internal governance documents the provisions of the European Data Protection Board (EDPB), which is composed of representatives of the national data protection authorities of the EU Member States. The Guidelines apply to the Parent Company, its international branches and companies established in the European Union. The principles set out in the Guidelines therein serve as a reference for the Group companies located outside the European Union. The Guidelines are generally reviewed once a year. Before being approved by the Board of Directors, they undergo a concordance process with the relevant corporate functions.

In line with the principles of the Guidelines, the Corporate Rules on personal data processing and protection detail the topics and provisions on the activities carried out by all authorised data processors, providing precise operating instructions for ensuring compliance with GDPR provisions. The Rules apply to the Parent Company, its international branches and the Group companies operating in Italy according to the centralised privacy governance model at the Parent Company.

Pursuant to Article 37 GDPR, the Board of Directors also appoints the Data Protection Officer who, in performing his/her activities, is supported by the privacy function, which is located in the Chief Compliance Officer's Governance Area and comprises three offices, dealing respectively with privacy advisory, relations with the data protection authority and data subjects, and privacy governance.

The following tasks are entrusted to the Data Protection Officer and the privacy function:
- monitoring and overseeing compliance with the GDPR;
- preliminary compliance check on new products, initiatives and services involving the processing of personal data;
- assessment of risks to the rights and freedoms of individuals when starting or changing any personal data processing activities (Privacy Impact Assessment) in accordance with Article 35 of the GDPR;
- assessment of the subjective privacy role played by Suppliers/Third Parties and preparation of the letter of appointment;
- management of customer requests regarding the exercise of the rights of the data subjects;
- management of replies to the Data Protection Authority and data subjects following reports or complaints lodged with the same Authority;
- role of guidance, coordination and control of the Group companies located in Italy and abroad (EU and non-EU);
- keeping and updating the Record of Processing Activities, as required by Article 30 of the GDPR, wherein all the personal data processing activities carried out are recorded. The Register shows the purposes of each processing, the data storage methods, the security measures applied and other information on the processing activities carried out;
- assessment of non-compliance events and personal data breaches;
- updating the list of third parties that process customers' personal data;
- monitoring training courses on privacy.

As explained above, the Group is committed to ensuring maximum protection of customers' information and assets in order to strengthen their digital trust and provide a secure service. To this end, a cybersecurity process guide was drawn up, an internal regulatory tool that describes all processes for monitoring and managing customer issues. For each specific issue, the guide identifies the structures involved and the steps to be performed.
The scope of application of the policy is the Intesa Sanpaolo Group; responsibility for the guide and its updating is entrusted to the cybersecurity & business continuity management structure. The guide complies with the Organisational, Management and Control Model required by Legislative Decree 231/01, since it includes rules and processes specifically designed to manage sensitive areas, and identifies the activities potentially at risk of the offences set out in the Decree.
To ensure its principles are known by all the Group's people, the guide is made available on the corporate intranet.

In addition, the Chief Security Officer (CSeO) Governance Area was established in 2024. This Area is responsible for controlling cybersecurity, business continuity and physical security. Its mission is to define the Groupwide cybersecurity, business continuity (including business resilience), corporate security and physical security strategy, policies and models.

Customer engagement processes

The Group makes the privacy policy available to all the persons with whom it interacts. In particular, the Group publishes the customer data protection policy on its official website, providing all the necessary information on how it ensures correct data processing. The information provided includes the type of data processed, the purposes and legal basis of the processing, retention periods, the recipients of the data, the rights of the data subjects and how to exercise them, as well as the contact details of the DPO.

The privacy policy also specifies that the Group only processes personal data for the purposes described and expressly indicated in the privacy policy itself, which is made available to those concerned. No processing is carried out for any secondary purposes not expressly stated.
With regard to the processing of personal data for marketing purposes, the free, explicit and unambiguous consent of the data subject is required. If the data subject denies consent or does not make any choice, the data collected will not be processed and used for marketing purposes.

In 2023, the customer privacy policy was revised to make it clearer and more transparent, also by adding charts, taking on board customer feedback collected through dedicated focus groups.

Any data subjects wishing to submit data protection complaints or to exercise their rights, can contact the Data Protection Officer, using the channels described in the section “Remediation processes and channels to submit complaints”.

Remediation processes and channels to submit complaints

The Intesa Sanpaolo Group has adopted a critical event management model that sets out the steps for the efficient management of incidents. The model specifies the functions involved according to the type of event. It contributes to mitigating the reputational risks associated with personal data processing, also with respect to the lawfulness, fairness and purpose of the processing, as well as the relevance, completeness and non-excessive nature of the data collected.
In this scenario, the Data Protection Officer manages non-compliance events by providing assistance and collaboration to ensure the identification and implementation of actions to eliminate or mitigate the effects of the event. If the event constitutes a personal data breach, the Data Protection Officer is required to assess its impacts in terms of tangible risk for the rights and freedoms of natural persons; if the risk is high, the DPO notifies the Authority and, in case of particularly high risk, he/she also notifies the data subjects. For more details on this topic, please see the section “Customer privacy metrics”.

In 2023, the guidelines on the protection of personal data of natural persons and the corporate rules for the processing and protection of personal data of natural persons were updated. These documents lay down the model for managing personal data protection compliance risk, setting out the general principles and the roles and responsibilities of the Bodies and corporate structures involved. Furthermore, they lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions. To submit complaints on personal data protection issues or requests to exercise their rights, data subjects can contact the Data Protection Officer, using the contact details contained in the privacy policy provided to all data subjects and on the Group’s official website. Requests can be sent electronically (e-mail, certified e-mail) or in hard copy; in both cases, they are treated with an appropriate level of confidentiality and protection of the data of the data subjects who use them. The monitoring of the receipt of requests falls under the responsibility of the privacy function, which manages the reports and requests received and guarantees their timely processing according to the terms laid down by the legislation. The careful and timely handling of requests to exercise the data subjects’ rights is of crucial importance in consolidating the trust relationship and addressing critical situations. The Group has equipped itself to respond promptly to customers’ requests as required by Article 12 GDPR, under which the data controller must take appropriate measures to provide the data subject with all information concerning the processing, without undue delay and, in any case, within one month of receiving the request, or within two months in the cases provided for, informing the data subject.
As part of the integrated internal control system, the Control Functions carry out checks, of different depth and frequency, on the compliance of activities with personal data protection regulatory requirements and on the correct implementation of the measures issued by the Data Protection Authority on these matters. The results of the checks are reported to the Board of Directors in the manner defined by the control system.

In this context, the Chief Audit Officer carries out periodic control activities defined not only on the basis of the specific regulatory obligations on the subject (audits carried out annually), but also from a risk-based perspective, taking into account the evidence reported by the other corporate control functions. Generally speaking, the independent checks by the Internal Audit function are aimed at ascertaining the completeness, adequacy and effectiveness of the data protection compliance risk management model, reporting any irregularities in personal data processing to the competent corporate structures and the Data Protection Officer, and reporting on the matter to the Board of Directors.
In compliance with the GDPR and the guidelines, the Data Protection Officer must at least annually submit a report to the Board of Directors on the most significant data protection issues. This requirement makes it possible, through the adoption of appropriate measures, to mitigate reputational and compliance risks relating to personal data processing.

Targets related to customer data protection

The Intesa Sanpaolo Group has put in place a set of policies and actions to safeguard customer data, which ensure data protection is subject to constant monitoring and guidance. This makes it possible to achieve high standards of service quality, even without precisely defining measurable quantitative targets.
In addition, the Group has adopted a critical event management model that sets out the steps for efficient incident management and solutions that provide for the continuous analysis of incidents and threats, using metrics to assess the performance and effectiveness of its actions (described in the sections “Customer Privacy Metrics” and “Customer Protection Against Fraudulent Transactions Metrics”).

Customer privacy actions

Using a risk-based approach, the Data Protection Officer controls compliance risk by applying the principles of privacy by design, and privacy by default, to control of the risk of non-compliance with data protection legislation both at the stage when personal data processing is designed or significantly modified and during the data processing by adopting, as a default setting, the appropriate technical and organisational measures to ensure an appropriate level of security.
In 2024, awareness-raising activities targeted at the Group's employees and relating to data protection issues continued. This awareness is achieved through the provision of mandatory training e-learning courses which include a final test and the provision of new modules to allow personnel to learn the legislation in practice and to continuously update their knowledge. The Group, through specific tools, monitors course participation and pass rates of the related tests.

Third-party privacy monitoring continued in 2024, through the administration of privacy self-assessment questionnaires to 106 suppliers and on-site visits to 10 suppliers. Overall, both activities were successful, with most suppliers achieving a medium/high level of data protection controls. In 2025, higher priority and attention was focused on the suppliers that had failed to complete the privacy questionnaire and on those that had revealed a low level of data protection control in the self-assessment and on-site visits.
In terms of planning, the birth of the new Isybank entailed the fulfilment of data protection regulatory requirements and the concurrent definition of data protection processes and controls, which will continue in 2025.

Development work continued on the new integrated platform that will enhance controls on the Record of Processing Activities and the main corporate privacy processes. The development, testing and fine-tuning will continue until 2025. In relation to the activities carried out in the international scope, the guidance, coordination and control activity continued in relation to the EU companies with special meetings being held for the presentation of privacy processes, discussion about relevant issues, transmission and analysis of periodic information flows. In the non-EU context, controls on the international branches with a higher volume of personal data processing activities were tightened, to reduce compliance risk and strengthen risk governance.

Actions to protect customers against fraudulent transactions

The trend of fraudulent transactions in 2024 shows the use by fraudsters of increasingly advanced and complex techniques, which mainly include:
- fraud involving the use of mixed Phishing and Social Engineering techniques, aimed at stealing customer data in order to carry out fraudulent transactions, mainly affecting Retail customers;
- fraud perpetrated through the use of malicious software (malware), which mainly impacts corporate customers;
- swindles, i.e. manipulations carried out by the fraudsters against payers to induce them to make a payment to a payee whom they believe to be legitimate but who turns out to be fraudulent;
- Money Muling, whereby the perpetrator convinces the victim to make transfers of money received from a third party, in exchange for a commission.

To combat these frauds and swindles, the Intesa Sanpaolo Group uses specific solutions which, in brief, involve continuous analysis of events and threats to understand the risks and types of fraud in order to increase the ability to detect and prevent the phenomena; and initiatives and limitations to protect the customers most at risk. The main activities carried out during the year include:
- performance of Behavioural Customer Monitoring (BCM) to assess the riskiness of the customer's transaction based on their financial habits. This activity will continue in 2025;
- implementation of the Customer Security Enforcement (CSE) programme, which certifies the devices used by customers and phases out the use of SMS in favour of the dynamic logo, not transferable to fraudsters;
- analysis of fraudulent phenomena with monitoring and insertion of ad-hoc rules to prevent the malicious action of fraudsters (Rule Optimisation);
- implementation of data analytics logics and use of machine learning tools. These actions were started in 2022, have continued with periodic additions, and will continue until 2025.

Initiatives to combat Money Muling have been expanded in a structured manner since 2023. In particular, the current activities, which will continue until 2025, aim to raise customer awareness and to detect and prevent cases of Money Muling. Finally, since 2024 the Group has been engaged in initiatives at system level or with other industry players to strengthen anti-fraud supervision and prevent fraud at international level (e.g. active participation in the Fraud Pattern and Anomaly Detection project - FPAD).

Customer privacy metrics

In 2024, 186 cases (78 of which related to Intesa Sanpaolo) of loss or theft of Group customers' data (Data Breaches) were assessed in Italy, 171 of which (65 related to Intesa Sanpaolo) were not found to pose a risk to the rights and freedoms of the data subjects and therefore did not need to be notified to the Italian Data Protection Authority. For the remaining 15 cases (13 of which related to Intesa Sanpaolo), it was instead considered necessary or prudential to notify the Data Protection Authority; of these, 4 cases (all related to Intesa Sanpaolo, and 3 of which also related to Group employees) were also communicated to the data subjects.
Foreign companies based in the European Union reported a total of 85 incidents/events of alleged personal data breaches, 4 of which were reported to the local authorities; of these, 2 were also communicated to the data subjects. For the remaining 81 cases, the local Data Protection Officers did not detect a risk to the rights and freedoms of the data subjects. Consequently, no notification to the respective Data Protection Authority was necessary.

Metrics on the protection of customers against fraudulent transactions

During 2024, in response to attempted attacks involving the financial system, the Intesa Sanpaolo Group blocked fraudulent transactions[127] amounting to approximately 76.4 million euro for private customers and approximately 20.2 million euro for corporate customers. In this regard, it should be noted that starting in 2024, the Group calculates this figure on the basis of a monitoring system that makes it possible to distinguish between cases of fraud and swindles: in particular, blocked frauds amount to about 8.4 million euro for private customers and about 4.2 euro million for corporate customers, while swindles amount to about 68 million euro for private customers and about 16 million euro for corporate customers.

Customer health and safety

Policies on customer health and safety

Safeguarding the safety of customers and the security of their assets and information is not only a primary duty of the Group, but is also the foundation of developing a long-term trust-based relationship.

In particular, the Intesa Sanpaolo Group protects the health and safety of people, including customers and suppliers, by acting on two distinct but complementary levels.
At institutional level, the Group has joined the "Memorandum of Understanding for the Prevention of Crime against Banks and Customers", promoted by OSSIF (ABI's Anti-Crime Research Centre), endorsed by the Ministry of the Interior and signed in the Prefectures of the main Italian provinces.
The MoU defines the best practices for the prevention of both major threats against staff and assets held by banks, and fraud against customers, with a focus on senior citizens and less financially literate customers. The MoU identifies appropriate levels for preventing these threats, based on the best experience in the field: the Group is above the minimum adequacy thresholds, setting a benchmark on the national and international scene. In particular, in 2024, the Intesa Sanpaolo Group launched a wide-ranging training and information campaign for the prevention of fraud against weaker customer groups, which will continue in 2025 on various channels.

At Group governance level, corporate and physical security guidelines have been implemented. Their current version has been in force since November 2022, having been approved by the Board of Directors.
The guidelines set out clear principles, processes and responsibilities, to ensure the protection of personnel and assets, both at home and abroad. This generates significant positive externalities, inter alia, by helping to create a comfortable and safe place for customers. The guidelines complement the operational rules and the advanced technological measures to strengthen existing controls and measures that contribute to the physical integrity and safety of people. This framework is supported by Group initiatives and information tools for the dissemination of a safety culture.
The abovementioned internal regulations are inspired by constitutional and legal principles that emphasise the value and dignity of work and the individual.

Customer engagement and remediation and channels to submit complaints

One the key principles of the Code of Ethics is the value of the person: the Group takes care of people's health and safety to ensure their professional experience respects their physical and mental well-being.
In particular, the Intesa Sanpaolo Group protects the health and safety of all the people who work there and visit its premises by implementing operational rules and technological safety measures, supported by information materials promoting a health and safety culture. As the protection of people is an essential priority, corporate and physical security matters play a key role. They are governed by specific guidelines and internal rules that also protect customers, enabling everyone to operate effectively, efficiently and safely.

To this end, the Code of Ethics allows customers to file reports of possible non-compliance with its provisions through a specific e-mail inbox, guaranteeing a timely response to queries and complaints and aiming for an effective and not merely formal resolution of disputes.

[127] It should be noted that "fraudulent transactions" include both frauds and swindles.

Targets related to customer health and safety

The Intesa Sanpaolo Group has put in place a series of policies and actions to safeguard customer health and safety, which ensure the continuous monitoring and guidance of this issue, even without a precise definition of quantitative and measurable targets.

Actions relating to customer health and safety

With reference to the actions aimed at promoting customer safety, the Intesa Sanpaolo Group has launched widespread information activity to prevent fraud against weaker customers, such as seniors and those with limited financial education. In particular, the Group has joined a national campaign promoted by the Italian Banking Association (ABI) together with the Carabinieri Corps, which is one of many initiatives deployed by the Authorities to prevent fraud against vulnerable groups, which affects significant numbers and has devastating impacts on customers, often worsening their existing vulnerabilities, at times with irreversible outcomes.
In particular, at the end of 2024, the Group disseminated information material, produced by the Carabinieri, using all channels to reach retail customers: printed leaflets by post, for customers still preferring this medium, apps and the Group's official website. The campaign was extended to all retail customers and not just to the target groups, to emphasise and highlight the social relevance of fraud, the eradication of which requires the active involvement of the entire population and not only of the affected groups.
The Intesa Sanpaolo Group's action will continue in 2025 with a training project for branch staff to detect and prevent fraud against vulnerable customers.

As to actions to strengthen the security of personnel and assets, but which also have a potential indirect effect on customer protection, the Group designs its actions on the basis of risk analysis conducted by the corporate and physical security function, based on the ISO 31000 Guidelines.
These analyses provide input for designing appropriate prevention strategies and measures, ranging from training and organisational actions to the use of advanced technological solutions.

The remit of the corporate and physical security function covers the entire perimeter of the Group, partly under a centralised model and partly via decentralised support.
In particular, emergency security plans for personnel abroad were implemented in 2024, in cooperation with the competent functions.

Assessing the effectiveness of actions is an integral part of the process. The Group tracks data on all actual and attempted offences detected in Italy. The data for the current year show little or no change in the number of these events compared to previous years, which proves the positive impact of the measures taken.

Another key area for physical security is aggressions other than robberies, typically against Group staff. In this area, detection, analysis and containment actions have been in place for quite some time, also with a view to reducing the level of possible jeopardising of customers in financial activities involving contact with them.

Social inclusion and supporting production

Policies on social inclusion and supporting production

The Intesa Sanpaolo Group is committed to building relationships with its customers based on trust and meeting their expectations, offering high quality products and services, with an approach based on constant listening and dialogue. The Group champions inclusion and accessibility, avoiding all forms of discrimination and promoting solutions suitable for all social groups.
Access to credit and financial inclusion are fundamental tools for social progress. The Group is committed to supporting vulnerable customers and facilitating the launch of new business activities, promoting economic and social growth in the countries where it operates, supporting innovation, the ecological and digital transition, and the development of sustainable projects.
By launching specific initiatives, the Group also aims to promote gender equality and inclusion, recognising the social and production value of the role women play in the economy. Such initiatives, aimed at reducing inequality and supporting equality, contribute to strengthening the Group's role as a benchmark in social sustainability for Europe.
Furthermore, the ISP Group is committed to ensuring an inclusive and personalised customer experience, promoting the use of digital channels and providing a transparent and proactive advisory service.

In line with the above, the Intesa Sanpaolo Group, in its 2022-2025 Business Plan, reaffirmed its commitment to creating sustainable and inclusive economic value, allocating significant funds to social lending to facilitate access to credit for vulnerable groups.

Based on specific internal Group regulations on credit products and lending transactions classified as "sustainable", this section sets out sustainability-related products and offers, which include, for example, loans to support socio-economic advancement and empowerment. These internal regulations concern all companies belonging to the Group.
The definition of customer-facing products and services stems from a collaborative process between various relevant regulatory functions, with the aim of ensuring respect for rights, transparency and privacy. These functions are called upon to assess and validate product/service owner proposals, ensuring that they comply with internal regulations and processes.
Credit products and lending transactions are defined according to specific classification processes, which include assessing the purpose of the underlying investment, as well as any applicable agreements, covenants and KPIs, separate for each Business Division. These credit products and lending transactions are carried out in accordance with the ESG framework, classified into

specific categories, including: “environmental sustainability”, “social sustainability” and “other sustainability”. In particular, credit products are classified as sustainable when they are recognised as such by internal working groups, while lending transactions can be classified as sustainable if one of the following conditions is met:

- the loan is intended for investment in a specific economic activity falling within the classification categories;
- the loan is targeted at zero-emission sectors and economic activities;
- the loan will lead to the achievement of sustainability targets, linked to specific KPIs, which are in line with the company’s sustainability strategies.

The sustainability classification is made during the loan application phase. Following the disbursement of the loan, if relevant, the stability of the sustainability classification will be verified and monitored by the operational and business functions for the entire duration of the loan.

Customer engagement processes

The Group is committed to ensuring clear and transparent access to its channels, encouraging customer awareness in economic and financial management. Through organisational structures and in collaboration with industry associations, it develops products and services in response to evolving customer needs, while adhering to sector initiatives. For example, in the area of certificates, it participates in the annual surveys organised by ACEPI (Italian Association of Certificates and Investment Products), to ensure that the complexity of instruments is clearly classified and improve its advisory services.
In order to best respond to customers’ needs, advanced listening tools have been adopted to better understand emerging needs and assess the level of satisfaction with existing products and services. In this way, the Group can continue to offer products in line with both companies’ and individuals’ expectations. When designing agreements, loans and other customer initiatives, direct discussions are organised with the beneficiaries, incorporating feedback and suggestions for continuous improvement. As an example, the Social Impact Roadshow 2024 involved customers and partner foundations in in-person and remote sessions, with the aim of discussing and better representing the non-economic effects of the Group’s activities.

In particular, the Banca dei Territori Division’s commitment to creating socially oriented credit solutions is manifested through an inclusive approach, aimed at bridging some of the country’s social gaps, such as the low number of young people with university degrees. End customers’ needs are analysed based on market surveys (e.g. Istat, Eurostat) and the support of research institutes, with specific focus groups. Gamma Impact products, such as those aimed at students or the unemployed, are designed with favourable terms and extended repayment periods to facilitate access to credit even for those who do not meet the traditional requirements.
Right from the product design phase, customer behaviour and market benchmarks are analysed to identify latent needs. Annual customer satisfaction surveys and continuous customer experience surveys following interactions on physical and digital channels highlight areas of satisfaction and dissatisfaction, allowing prompt action to be taken to optimise the Group’s products and services.
As well as listening to customers, the staff in the Banca dei Territori Division also contribute by providing feedback on processes and services, suggesting improvements for more immediate usability and a more transparent relationship.

Remediation processes and channels to submit complaints

The Intesa Sanpaolo Group maintains a constant dialogue with its customers to ensure top-tier service. Customers have several possible options available for submitting complaints, such as online on the Group’s official website or through an application, by mail (also hand-delivered to operating points) or e-mail. Timely and careful handling of complaints is crucial to consolidate trust and resolve any critical issues. Current regulations require the responsible compliance function to provide regular disclosures, at least annually, on the overall handling of complaints and the effectiveness of the procedures adopted.
In addition, the Code of Ethics allows customers to file reports of possible non-compliance with its provisions through a dedicated e-mail inbox, guaranteeing a timely response to queries and complaints and aiming for an effective and not merely formal resolution of disputes.

Targets and metrics related to social inclusion and supporting production

The Group has set itself the objective of promoting ESG practices, included as a priority in the 2022-2025 Business Plan, by raising awareness among companies and their supply chains and helping them to understand their own level of sustainability, as well as in establishing a transition plan geared towards more responsible and innovative models, in line with the ecological transition of the NRRP. To this end, the ESG Workshop initiative continued in 2024. These are physical and virtual meeting spaces that offer workshops and advice from qualified partners on ESG (environmental, social and governance) issues.

The target of creating at least one workshop per Regional Centre has been far exceeded, with multiple workshops in some areas. Each workshop establishes common objectives and operating methods in order to propose a path designed to help companies identify their strengths and areas for improvement, stimulating change that generates value not only for the company, but also for the community and the environment.

The activities of the workshops are constantly promoted through the Group’s traditional channels, such as press releases, the official website and social media channels, but also through the communication initiatives of the founding partners (e.g. chambers of commerce, local authorities, institutions, universities, etc.). The initiative continues to expand, supported by institutions and technical partners, with the aim of making ESG practices a priority in business decisions and development strategies, making the ecological transition not only a necessity, but also an opportunity for innovation and growth.

Since 2021, when the first workshop was launched in Brescia, several workshops have been set up throughout Italy, from Padua to Genoa, including cities such as Milan, Turin, Bari and Palermo. As of 31 December 2024, there were 16 ESG workshops, as shown in the table below.

Target: Number of ESG Workshops	**Date**	**Value**
Baseline[128]	31.12.2021	-
Final number	31.12.2024	16
Target	2025	12

Actions related to social inclusion and supporting production

The Intesa Sanpaolo Group provides its customers with a wide range of medium- to long-term products with the aim of helping to find ESG solutions and supports the most vulnerable groups by promoting access to credit through specific projects and local partnerships. Among its various solutions, the Gamma Impact, powered by the Fund for Impact, offers financial solutions that respond to the country's social needs and are continuously updated on the basis of analyses and customer feedback.

In relation to social inclusion issues, the BdT Division has developed dedicated credit lines:

- S-Loan, to support small and medium-sized enterprises aiming to improve their sustainability profile. In particular, the S-Loan Diversity line, to support SMEs' investments and reward their efforts towards empowering women, such as promoting female participation in their company, recruiting new female staff, gender equality policies and welfare for female employees, in line with European gender equality goals. The S-Loan line, aimed specifically at corporations, including non-profit social enterprises and cooperatives, also includes the S-Loan ESG line, for companies that want to improve their all-round sustainable performance;
- "Finanziamento Microcredito Imprenditoriale" (Business Microcredit Financing), to support start-up and development projects by undertakings, freelancers and unrecognised associations struggling to access credit, using the special Microcredit section of the SME Guarantee Fund;
- the Business Gemma loan, aimed at supporting any type of investment or liquidity need related to the professional economic activity of female-led businesses and self-employed women;
- anti-usury loans, disbursed in accordance with the terms established by agreements with Foundations and Associations registered in a special list of the Italian Ministry for the Treasury. These institutions, responsible for managing the resources provided for by Law 108/96 on behalf of the State, offer guarantees to banks to facilitate access to credit for individuals who are considered worthy of financial support but who, however, would not be able to access finance according to the traditional criteria for assessing creditworthiness. The guarantees financed by the Fund for the Prevention of Usury, established by the above-mentioned law, facilitate the disbursement of loans to combat the financial exclusion of vulnerable individuals, reducing the risk of them turning to illegal credit channels. Since this funding is intended for people in serious economic hardship, the impact on the lives of the beneficiaries and their families is considerable. The number of anti-usury loans granted during the year is monitored by a dedicated structure, which each month reports on the number of exposures covered by guarantees. This data serves to estimate the benefit generated in the various regions in which the organisations affiliated with the Group operate. Personal loans and anti-usury mortgage loans are intended for consumers, professionals and sole proprietors operating for personal or family purposes, outside their business or professional activities, and residing in the areas covered by the foundations and associations affiliated with the Intesa Sanpaolo Group;
- Credit for Community Development (Cre.S.Co.), an initiative developed through individual calls for proposals or other forms of collaboration with specific partners, which establish a guarantee fund to facilitate access to credit for Non-Profit Organisations (NPOs). This instrument aims to support the development of socially beneficial projects in the areas in which the partners pursue their statutory objectives. The mechanism allows the partners, such as foundations, to enter into an agreement with the ISP Group and issue a call to select the projects to be funded. In this context, the partners provide a guarantee fund and/or a fund to cover all or part of the borrowing costs associated with the selected projects. Both secular and religious NPOs, including those set up in aggregative forms such as Temporary Special-Purpose Associations (Associazioni Temporanee di Scopo - ATS), which have their legal and operational headquarters in Italy, may participate in the calls for proposals. Both organisations already active at the time of the call and NPOs newly established as a result of mergers or integrations between pre-existing bodies are eligible, provided that they fall within the sectors, types of intervention or areas defined by the partner. Cre.S.Co. is an instrument offering subsidised loans for new investments or liquidity needs, aimed in particular at non-profit organisations with the objective of supporting the growth of small organisations, which often lack their own equity;
- Gamma Impact, through the Fund for Impact, a credit line dedicated to social impact activities set up in 2019 and confirmed in the 2022-2025 Business Plan, enables the development of credit initiatives aimed at categories of people who have difficulty accessing traditional credit, despite having high potential. The Fund for Impact credit products provide subsidised rates and extended repayment periods of up to 30 years; around 110 million euro was disbursed in 2024. The main programmes include:
  - "Per Merito", an unsecured loan for university students with a disbursement of approximately 107 million euro in 2024;
  - "mamma@work", a loan for new working mothers, with about 2 million euro disbursed.

  Other more recently introduced products include "Obiettivo Pensione", which supports unemployed persons in their voluntary pension contributions, "Per Crescere", a loan for low-income families to access education, "Per avere Cura", to support the care expenses of disabled or dependent persons, and "Per Esempio", aimed at young people who have participated in the Universal Civil Service and are entering the world of work for the first time.

These products, developed under the Gamma Impact range, are characterised by social and inclusive features, allowing people to access credit who would normally struggle to obtain it, such as students and the unemployed. The aim is to generate a positive impact, helping these groups to succeed through financial support. In addition, the Division has introduced a system for

[128] Plan target that represents the planning of a new activity that does not have a base value.

measuring social impact through the "impact detector" (RIM) questionnaire, which is mandatory for all Fund for Impact products, and which allows the impact generated both qualitatively and monetarily to be calculated.

The BdT Division pays special attention to retail customers and their needs, offering dedicated mortgage lines for specific requirements, including:

- "Mutuo Giovani": an offer that facilitates young people (under 36) with a house purchase by accepting requests of up to 100% of the property value, providing for subsidised rates and application fees, elimination of instalment collection costs and elimination of expenses for flexibility and suspension options that can be used to handle contingent hardship situations. Workers with non-standard and increasing protection employment contracts can also apply for it. The "Mutuo Giovani" has thus gained a positioning on the market which sees the Group as the main lender of this target customer group.
- Guarantee Fund for Main Home Purchases: the Intesa Sanpaolo Group participates in the Guarantee Fund for Main Home Purchases, established by the 2014 Italian Stability Law. The "Sostegni-bis" Decree published in May 2021 refinanced the Fund for the years 2021 and 2022, also extending the benefits for 2023 with Decree Law 132/2023. The BdT Division therefore offered mortgages to individuals identified as being priority borrowers (for example young people under 36 years old or single-parent households with children) on favourable terms ranging from exemption/elimination of the substitute tax, to the possibility of accessing high Loan To Value (LTV) features also with State guarantees and the benefit of highly competitive rates.

In order to safeguard its customers, the Intesa Sanpaolo Group scrupulously follows the Consumer Credit Rules, with the aim of protecting the final borrower. Automated mechanisms and control systems, such as usury rate monitoring and debt-to-income ratio monitoring, have been implemented to ensure compliance with the regulations and prevent over-indebtedness. In addition, the Group has developed a strong capability to handle customer complaints, responding promptly to potential negative impacts on products and processes. Thanks to a structured process for developing new products, the ISP Group minimises risks by ensuring access to credit for specific categories. This process is supplemented by automated tools and procedures to ensure that the data provided is reliable and transparent, measuring the impact of products and processes on end customers.
The BdT Division's initiatives to promote financial inclusion include "Finanza Insieme", an online platform launched in September 2023, which is free and open to everyone, customers and non-customers alike. With this initiative, the ISP Group wants to support people in improving their level of financial awareness and their relationship with money. Through simple language and an interactive/edutainment approach, Finanza Insieme offers a customised learning and training path with more than 350 topics and exercises. The topic modules cover seven main areas of bancassurance: Savings, Investment, Risk, Insurance, Pensions, Credit, Inheritance.
The seven topic modules are also organised into different sections:

- "Understanding": main socio-demographic trends, useful to decode context;
- "Getting to know others": main strategies to recognise and prevent major biases;
- "Training": experiential and logical exercises to train the development of more conscious decision-making;
- "Going into depth": topical economic and financial content to understand the market and how it changes over time.

Alongside the commercial offering of products and services, outlined above, the Division promotes a number of initiatives aimed at fostering economic development and the dissemination of a culture of sustainability and social rights:

- the Women Value Company programme, implemented in collaboration with the Marisa Bellisario Foundation, dedicated to SMEs that implement concrete and innovative policies and strategies to guarantee men and women equal opportunities and equal recognition in their careers;
- the Resto al Sud initiative, to support the establishment and development of new entrepreneurial and freelance activities in southern Italy;
- Crescibusiness, aimed at micro, small enterprises and freelancers, which provides a pathway to ESG growth;
- Imprese Vincenti, the initiative that highlights the paths of growth, digital transformation and business models developed by companies also with regard to ESG;
- Programma Sviluppo Filiere (Supply Chain Development Programme), to facilitate access to credit and a better understanding of companies' needs as part of a supply chain. It supports not only the individual, but the entire team with a unified vision of all supply chain players, and has been supplemented with the introduction of the Programma Sviluppo Filiere – Filiere sostenibili (Supply Chain Development Programme – Sustainable supply chains) with the specific objective of promoting virtuous approaches to ESG for supply chain companies.

In addition, the following initiatives are made available to corporate customers to raise awareness of ESG topics:

- Group training programmes with a focus on ESG topics;
- ESG workshops, in-person and remote venues offering workshops and consultancy on environmental, social and governance issues.

Initiatives to support individuals, non-profit and third sector organisations, with a focus on positive social impacts, include:

- Negative EVA impact ceiling: introduced in 2023, this is an innovative governance tool designed to support lending transactions having significant social impact, even in the absence of an immediate economic return for the Group. This tool, which is reviewed each year by the Steering Committee, makes it possible to offer short-, medium- and long-term loans on favourable terms to vulnerable individuals and third sector organisations, often having no access to traditional lending channels;
- Impact Assessment (RIM): the results of loans granted are assessed by means of an impact measurement process, covering:
    - "impact products", i.e. loans granted to disadvantaged individuals;
    - loans to the non-profit sector, where the Group's impact is indirect, and is applied to new loans of no less than EUR 50,000 with maturities of no less than six months.
- The RIM questionnaire is used to collect from managers and customers useful information for measuring benefits. The data thus collected are then analysed to calculate the benefits on people (outcome) as well as the effects of the initiatives on the lives of individuals and their communities (social impact). Finally, an SROI - Social Return On Investment - is calculated, i.e. a measure of the change effected in ways relevant to the people and organisations experiencing or contributing to it.

Concretely, appropriate monetary values are applied to the measured social, environmental and economic outcomes. This makes it possible to calculate a benefit-cost ratio.

For "impact products", ex-ante questionnaires are currently administered to customers, to assess the expected improvement compared to possible alternatives, if any. In the future, ex-post questionnaires will also be introduced, to measure actual results against expected results.
For loans to the non-profit sector, the assessment is conducted at the time of the loan application. Ex-ante questionnaires are currently being used to collect customers' expectations about the social impacts of the financed initiatives. In this case, an ex-post assessment is already planned to measure concrete results against initial expectations. At the end of the process, the customers concerned receive a copy of the statements made in the respective questionnaires.
In addition, with regard to loans to the non-profit sector, both physical and virtual presentations have been organised for individual customers or selected client groups, describing the results of the assessments. These meetings take place as part of the normal relationship activity between manager and customer, or during special road shows that include group and individual discussions.

The ISP Group participates in the Agreement for Women Victims of Violence, which the Italian Banking Association (ABI) and the main trade unions have signed in favour of women included in certified protection schemes for victims of abuse, enabling these women to request the suspension of mortgage and personal loan instalment payments for 18 months. To provide even more support, the Group also grants suspension of the entire instalment in addition to the principal amount covered by the agreement. The agreement has already been extended and is valid until 25 November 2025.
The Banca dei Territori Division pays special attention to young people and their needs, offering them a wide range of dedicated solutions. Below are the main initiatives and solutions offered to them:
- XME Conto UP! (reserved for minors) offers a zero-fee current account, plus free debit card, bank transfers and ATM withdrawals, and with stamp duty paid by the Group;
- The pre-paid "Flash Up Studio" card for students attending the partner Universities. This account can be requested free of charge directly via the App: it can be used to make payments, receive scholarships and any remuneration. Where applicable, it also allows the holder to use university services and access University premises.

In addition, the Division is planning other ad hoc initiatives to respond to specific social needs, such as the management of remittances. In continuity with the past, the Group continues to provide the option to send money abroad to meet the specific needs of the ISP Group's migrant customers, through the Money Transfer service, in partnership with Western Union.

With regard to the IMI Corporate & Investment Banking Division, the financial offer available to the Division's customers includes the main ESG solutions: Sustainability-linked, i.e. general purpose solutions, with conditions linked to the policyholder's sustainability performance, and solutions with income linked to specific investments.
In particular, in terms of sustainability-linked solutions, in 2024 the Group supported its customers with loans, bonds, guarantees, securitisations and hedging activities, while the operations with earmarked income include Green loans, Green, Social and Sustainable bonds, Green Convertible Bonds as well as Project Finance dedicated to renewable energy (wind, photovoltaic, biomass, hydroelectric). In addition, the IMI Corporate & Investment Banking Division offers a wide range of advisory services focused on the sustainable transition: an ESG Advisory Team was established in 2023 to assist the customers served by IMI Corporate & Investment Banking in developing customised ESG tools that are often linked to their transition strategies and plans.

The International Banks Division (IBD) supports individuals in vulnerable conditions through a dedicated offer. In particular, Bank of Alexandria (Egypt) places microfinance at the centre of its strategy as a driver for poverty reduction and the country's social and economic development. Bank of Alexandria positions itself as a reference for financial inclusion in Egypt, economic empowerment and income support for small businesses and customers with no access to banking, with a greater focus on small farmers, livestock farmers and craft workers. in 2024 the Bank, which offers a diversified catalogue of products (in particular in the field of Agribusiness), also developed in line with the guidelines of the Central Bank of Egypt, granted loans for an overall amount of approximately 34 million euro, also providing customers with training services, in collaboration with the World Food Programme (WFP) and entering into partnerships and collaborations with NGOs, Ministries and private entities.
Within the IBD perimeter there is furthermore a targeted offer for young people for purchasing their first home, also making use of State support programmes for the young. This offer is active in six entities: CIB Bank, Eximbank, ISP Slovenia, ISP Albania, BiH and VÚB Banka; in 2024, a total of approximately 263 million euro was disbursed.

In addition, there are products to support women and young people in business, also developed in cooperation with multinational banks, such as the Women in Business programme of the European Bank for Reconstruction and Development (EBRD), active in 2024 in Serbia. The aim is to support micro, small and medium-sized enterprises run by women or young people in the Western Balkans by providing favourable financial terms, technical advice and know-how. In 2024, around 22 million euro were disbursed. In five geographic areas of the Division (Serbia, Bosnia, Moldova, Croatia and Egypt), products dedicated to pensioners are distributed; the amount disbursed during 2024 was approximately 113 million euro.
With regard to training activities for the sales network and customers, four webinar sessions on "Circular economy/Green and S-Loan financing" and a further in-person session were organised, with Group colleagues from eight banks of the International Banks Division participating. In addition, workshops were held on analysis to align transactions to the European Taxonomy and the impact of sustainability in the E-mobility and food and beverage sectors.

Moreover, as explained above, in the current context it is essential to support the production sector as well as the economic and social growth of the communities in which the Group operates, by offering products and services in the field of environmental, social and other sustainability (see the section "Sustainable finance metrics" for details). For a comprehensive description of the products and services offered for this purpose, with particular reference to climate/environmental topics, see also the section on "Climate Change Actions and Resources at the Portfolio Level" of ESRS E1.

Sustainable finance metrics

For the purpose of greater internal and external transparency with respect to products and transactions deemed sustainable, the Group has decided to draw up specific rules for the classification of sustainable credit products and lending transactions, approved at the end of 2022. From 2023, reporting complies with these rules, including loans in the categories of environmental sustainability, social sustainability, and other sustainability.

Specifically:
- environmental sustainability: this category includes targeted lending products and transactions considered sustainable according to the "environmental" classification, and includes loans to Individuals, Businesses and the Non-Profit Sector, and Corporate & Project Finance;
- social sustainability: this category includes targeted lending products and transactions considered sustainable according to the "social" category, and includes anti-usury loans, products for vulnerable social groups, loans to the Non-Profit Sector and other social loans;
- other forms of sustainability: this category includes non-targeted transactions associated with sustainable covenants/KPIs towards Businesses and the Non-Profit Sector, as well as Corporate & Project Finance.

The total amount disbursed during the financial year 2024 is summarised below, broken down by type of loan.

Type of loan	Loans disbursed in 2024	€/billion
Loans in the environmental sustainability field		7.6
Loans in the social sustainability field[129]		4.5
Loans falling under "other sustainability"		7.0

A breakdown at stock level is given below.

Type of loan	Stock 2024	€/billion
Loans in the environmental sustainability field		20.3
Loans in the social sustainability field		20.1
Loans falling under "other sustainability"		15.8

The stock and disbursement figures of loans in the area of environmental sustainability were calculated using accounting balances for the Parent Company component (including the IMI C&IB Division) and operational balances for the IBD component. The stock and disbursement figures for loans in the social sustainability area and included in the other sustainability category were calculated entirely using operational balances.

Sustainability-conscious investment products and sustainable insurance

The Group considers it essential to maintain an ongoing dialogue with customers, as a fundamental starting point for offering advice, services and products, in the knowledge that it plays a key role in investment assistance, prudent management of savings, and responsible lending, in addition to offering insurance protection. To this end, the following paragraphs outline policies, objectives, actions and metrics in asset management, private banking and insurance.

Sustainability-conscious investment products

Policies on sustainability-conscious investment products - Asset Management

As part of its fiduciary commitment to the Group's customers and investors, the Asset Management Division (hereinafter, also "AM Division"), being a financial market participant, also has a fiduciary commitment to its clients and investors and, more generally, to stakeholders. This requires the AM Division to effectively address sustainability issues, with particular reference to the performance of its financial products and to the issuers in which it invests on behalf of its managed assets, based on the assumption that issuers that implement high environmental, social and corporate governance standards can generate sustainable performance in the long term.

In this regard, in line with the requirements of the EU laws on sustainability-related disclosures in the financial services sector, in particular Regulation (EU) 2019/2088 (hereinafter also referred to as the "SFDR Regulation"), the AM Division has defined within its Sustainability Policy specific methodologies for selecting and monitoring financial instruments, aimed at integrating sustainability risk analysis and management within the investment process for collective asset management and portfolio management services, in addition to the recommendations made as part of the investment advice service. The AM Division also takes into account the main negative effects of investment decisions on sustainability factors, pursuant to Articles 4 and 7 of the SFDR Regulation, and integrates sustainability risks into its remuneration policies pursuant to Article 5 of the SFDR Regulation.

The Sustainability Policy addresses all types of assets ("asset classes") held by the products managed - mutual funds and portfolio management - that in the respective pre-contractual disclosure:
- integrate sustainability risks into investment decisions, in accordance with the transparency requirements of Article 6 of the SFDR Regulation; or
- promote, inter alia, environmental and/or social characteristics, provided that the investee companies comply with good governance practices, in accordance with Article 8 of the SFDR Regulation; or
- have sustainable investment objectives, in accordance with Article 9 of the SFDR Regulation.

[129] Please note that this figure does not include loans disbursed to support natural disasters and for urban regeneration purposes.

Portfolio management mandates characterised by the presence of specific indications within the respective investment policies do not fall within the scope of application, in light of the lower degree of discretion in the selection of financial instruments.

With regard to shareholder engagement, the reference documents are the following:
- the "Commitment Policy", which describes the conduct adopted to foster dialogue with the issuers in which Eurizon Capital SGR S.p.A. invests, the methods and topics of discussion; and
- the "Strategy for the exercise of intervention and voting rights regarding the financial instruments pertaining to assets under management", which governs participation in the investee issuers' shareholders' meetings.

In order to promote the proper implementation of its sustainability policies, Eurizon Capital SGR S.p.A. has defined and adopted a specific internal governance model that envisages the involvement of the corporate bodies and structures having specific roles and responsibilities in the monitoring and management of sustainability risks. Specifically:
- the Board of Directors (BoD): among other tasks, acting on proposals from the CEO and General Manager, it defines the Sustainability Policy and regularly checks its correct implementation;
- the CEO and the General Manager: with the support of the ESG Committee, they make proposals to the Board of Directors on (i) how to integrate sustainability risks into the investment process of Eurizon Capital SGR S.p.A. and into the remuneration and incentive policies, and (ii) identifying the main negative effects of investment decisions on sustainability factors. In addition, the ESG Committee regularly monitors the implementation of the Sustainability Policy;
- the ESG Committee supports the CEO in (i) defining proposals to be submitted to the Board of Directors on sustainability policies, (ii) monitoring the implementation of strategies involving the negative screening of issuers, the positive screening of ESG factors, the analysis, selection and composition of the managed portfolios, and monitoring external corporate governance activities;
- the Financial, Credit and Operational Risk Committee is a collegial body tasked with monitoring the risk exposure of managed products, including sustainability risks;
- the Sustainability Committee's main task is to ensure that management decisions comply with the ethical principles set out in the regulations of the funds;
- the Compliance & AML Function monitors compliance with the Sustainability Policy, overseeing the correct application of the controls governed by external and internal regulations.
- the Risk Management function monitors the sustainability risk of managed products.

Moreover, in order to pursue its customers and investors' best interests and to support the implementation of its Sustainability Policy, the Asset Management Division, also through its parent company Eurizon Capital SGR S.p.A., actively participates in:
- national and international initiatives that promote the development of best practices in the ESG area, the integration of sustainability principles in the financial sector and the adoption of responsible investment principles;
- training events and conferences, aimed at sharing experiences and spreading the culture of sustainability.

Through Eurizon Capital SGR S.p.a, the Asset Management Division participates in numerous international initiatives and working groups: for example, it is a signatory of CDP (since 2004), of the Italian Stewardship Principles promoted by Assogestioni (since 2014) and of the UN Principles for Responsible Investment - UN PRI (since 2015). In addition, it is a member of the International Corporate Governance Network - ICGN (since 2016), the Institutional Investors Group on Climate Change - IIGCC (since 2021), the Net Zero Engagement Initiative (NZEI), promoted by IIGCC and the Net Zero Asset Managers Initiative - NZAMI (since 2021)[130].

For further information on the initiatives joined, see the "Sustainability" section of Eurizon Capital SGR S.p.A.'s official website, where you can also access the Sustainability Policy Summary document.

The sustainability policies are reviewed each year by the ESG & Strategic Activism structure of Eurizon Capital SGR S.p.A., in coordination with the Compliance & AML function, to assess the consistency of the methodologies adopted by Eurizon Capital SGR S.p.A. with the evolution of best practices at national and international level.

Policies on sustainability-conscious investment products - Private Banking

Fideuram Intesa Sanpaolo Private Banking, in line with the Intesa Sanpaolo Group's commitment to sustainable economic development, in accordance with the principles outlined in the Group's Code of Ethics and aware of the importance of allocating resources according to social and environmental sustainability criteria for long-term value creation, has adopted policies on the integration of sustainability risks and information on the main adverse impacts on sustainability factors when selecting issuers, creating the financial product catalogue and providing investment advice and insurance distribution services (hereafter, these services are jointly referred to as "Advice").
These policies are made available to all Division employees via the company intranet in the internal regulations section; they are also published on the Division's website and can be viewed by customers. The contents of the policies are described below.
With regard to the decision-making process for selecting product companies, Fideuram Intesa Sanpaolo Private Banking analyses counterparties with respect to sustainability risk, consideration of PAIs (Principal Adverse Impacts) and compliance with the applicable legislation. Accordingly, it analyses the degree of compliance and implementation of sustainability issues by the companies whose products may be included in its product catalogue, investigating the controls adopted by Asset Managers and Insurance undertakings in relation to the following topics:
- ESG principles/codes: adherence to ESG principles and/or codes at national and global level (such as, for example, the Net Zero2 initiative, Stewardship Principles, Climate Action 100+ and Nature Action 100, which Fideuram Intesa Sanpaolo Private Banking has joined through its subsidiaries FAM and FAMI);

[130] On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context. As the initiative undergoes the review, activities to track signatory implementation and reporting have been suspended.

- corporate governance and organisation: implementation of an ad hoc internal regulatory framework and definition of internal bodies or structures focused on sustainability;
- adoption of policies to integrate sustainability risks into investment and remuneration processes;
- range of sustainable products pursuant to the SFDR Regulation (as amended by Regulation (EU) 2020/852, the “Taxonomy Regulation”): complete product documentation complying with the reference legislation, description of any processes for updating and adapting products with respect to sustainability, how information on the products’ sustainability characteristics is made available (e.g. by compiling the European ESG Template - EET file);
- use of environmental, social and governance or sustainability-related terms: adoption of an internal regulatory framework to ensure that fund documentation and marketing communications comply with the “Guidelines on funds’ names using ESG or sustainability-related terms” issued by ESMA on 14 May 2024;
- consideration of PAIs, as defined in the regulatory technical standards for the SFDR Regulation.

The analysis, carried out on all existing counterparties is performed during the onboarding of the product company with which a new distribution or brokerage agreement is to be signed, and is formalised within the Product Governance processes. This analysis is also regularly updated.

In connection with the above, as part of the procedures adopted to provide the Advisory service, Fideuram Intesa Sanpaolo Private Banking handles the following:
- collecting information from customers during profiling about any interest they might have in investment solutions that value environmental, social and good governance factors;
- defining internal rules for the selection of products that can be considered consistent with the sustainability preferences expressed by customers.

Fideuram Intesa Sanpaolo Private Banking has adopted a classification model for the financial products included in its range of offers, applied across primary and secondary market operations differentiated according to the type of financial instrument.
The service model provides for a check to verify the consistency between the preferences indicated by customers during profiling and the financial products included in its range of offers or traded on the secondary market. If the transaction is not consistent, the reasons for the inconsistency are explained to the customers so that they can assess whether to adjust their sustainability preferences in relation to the specific transaction and conclude it.

Fideuram - Intesa Sanpaolo Private Banking, through a Sustainability Governance system based on important organisational controls, builds and pursues an integrated corporate strategy that focuses on business results but also on human, social, relational and environmental capital. Specifically:
- the Sustainability Manager has a role of integrated and comprehensive oversight of the ESG initiatives, also in liaison with the Intesa Sanpaolo Group initiatives;
- the “Sustainability (ESG)” session, within the Fideuram’s Steering Committee, identifies sustainability issues at least once a quarter and defines strategic initiatives, assessing their financial feasibility and impact;
- the ESG & Strategic Activism team ensures proper management of ESG issues in the Group’s asset management companies.

The Chief Compliance Officer of Intesa Sanpaolo is ultimately responsible for implementing policies on the integration of sustainability risks and information on the main adverse impacts on sustainability factors in the provision of investment advice services and insurance distribution. Fideuram adopts the centralised model as set out in the Integrated Internal Control System Regulation.
Policy monitoring is embedded within Product Oversight Governance processes with specific metrics related to both product scope and consistency of investment proposals with sustainability preferences.

Targets and metrics on sustainability-conscious investment products - Asset Management

As part of the definition of the Intesa Sanpaolo Group’s 2022-2025 Business Plan, Eurizon contributed to the Group’s expressed commitment to achieving global climate objectives, by committing to foster the transition to a low-carbon economy, starting with the evolution of its product range. To this end, Eurizon has declared it intends to strengthen and broaden its offer of sustainability-conscious products by increasing the share of products pursuant to Article 8 and 9 of the SFDR Regulation with respect to the total Assets under Management (AuM), as shown in the tables below.

Target: AuM UCIs pursuant to Article 8 and 9 SFDR out of total AuM UCIs (Eurizon) - absolute	**Date**	**Value**
Baseline	31.12.2021	110 billion euro
Final number	31.12.2024	156.6 billion euro
Target	2025	156 billion euro

Target: % AuM UCIs pursuant to Article 8 and 9 SFDR out of total AuM UCIs (Eurizon)	**Date**	**Value**
Baseline	31.12.2021	46%
Final number	31.12.2024	76%
Target	2025	60%

Targets and metrics on sustainability-conscious investment products - Private Banking

In order to measure the percentage penetration of sustainability-focused assets under management, it was decided to monitor the percentage incidence of (AUM) products classified as Article 8 and 9 SFDR in the total AUM held by customers, as shown below.

Target: % incidence of products classified under Articles 8 and 9 on total assets under management		
	Date	**Value**
Baseline	31.12.2021	19%
Final number	31.12.2024	78%
Target	2025	70%

Actions on sustainability-conscious investment products - Asset Management

As part of its Sustainability Policy[131], the Asset Management Division has defined special methodologies for selecting and monitoring financial instruments aimed at integrating sustainability risks into the AUM Investment Process. These methodologies provide for the adoption of specific financial instrument selection processes, duly calibrated according to the characteristics of the individual products managed, briefly summarised below:

- Negative screening - it involves the application of restrictions on issuers most exposed to sustainability risks, with the aim of avoiding investment in financial instruments most exposed to the risk of loss of value due to the occurrence of an environmental, social or corporate governance event or condition. For corporate issuers, these restrictions are defined according to the issuer's sector of operation ("SRI Binding screening"), the company's conduct in terms of adverse impacts on the environment and society itself ("PAI Binding screening"), and the greater exposure to ESG risks, identified on the basis of the issuer's sustainability rating ("ESG Binding screening"); for government issuers, these restrictions are established according to the country's carbon intensity, in relation to GDP, and whether the country is included in the black list of the Financial Action Task Force (FATF);
- Positive screening - it involves, subject to compliance with good governance practices: (i) the integration of ESG factors into the analysis, selection and composition of the assets under management ("ESG Integration") or (ii) the pursuit of sustainable investment objectives;
- Stewardship or Active Ownership - Engagement - proactive interaction with issuing companies through the exercise of participation and voting rights and discussion, fostering effective communication with the relevant corporate bodies and/or senior management and their representatives.

Compliance with these ESG/SRI strategies is monitored by the Risk Management function with the support of the Compliance & AML function.
At the end of 2024, the Asset Management Division has a broad and diversified range of sustainability-conscious funds with assets of approximately 156.56 billion euro in products that, in accordance with good governance practices, promote environmental and/or social characteristics in accordance with Article 8, or have sustainable investment objectives in accordance with Article 9 of the SFDR Regulation.
In particular, in 2024, most of the UCIs launched by Eurizon Capital SGR S.p.A., Eurizon Capital SA and Epsilon SGR S.p.A. integrated ESG factors into the investment analysis, selection and monitoring process; the main strategies adopted concerned (i) products with different time horizons that provide for the protection of invested capital, (ii) flexible "step-in" strategies, with different levels of target equity exposure, to gradually invest in equity markets, and (iii) "buy&watch" funds to manage bond portfolios with decreasing duration.

Also with reference to institutional mandates, the investment process takes into account the integration of ESG criteria in its investment choices in accordance with the provisions of the SFDR Regulation. In particular, all mandates comply with the negative screening criteria. A specific ESG report is regularly produced on a large number of mandates (50 mandates with a value of 12.5 billion euro managed), indicating the positioning of the portfolio with respect to the reference benchmark. In addition, and at the customers' request, a report is regularly offered showing the engagements made during the period with the issuers included in the managed portfolios. The AM Division manages a total of 37 mandates relating to 22 non-captive customers for approximately 9.5 billion euro (of which 7 belong to the scope of the subsidiary Eurizon Capital Real Assets SGR S.p.A. and 1 to Epsilon SGR S.p.A.) on which specific investment restrictions are implemented and/or support is provided to customers within the engagement and corporate governance activities. At the level of insurance mandates and captive open pension funds, the AM Division manages a total of 82 mandates for approximately 48 billion euro in assets under management, on which specific ESG integrations under Article 8 are implemented.

Actions on sustainability-conscious investment products - Private Banking

Regulatory developments envisaged by regulators and the civil society's continued attention to the transition to a more sustainable economy have led the Group to further intensify its commitment, initiatives and improved approach to sustainability, confirming the focus and strategic importance of the ESG Programme launched in June 2021. The project is ambitious and transversally involves all company functions, aiming to integrate sustainability into all aspects of business management and operations.
In line with the objective stated in the 2022-2025 Business Plan relating to the development of ESG advisory services, in 2023 Fideuram supplemented its service model based on customised advice to manage the sustainability preferences of its customers, which since2021 have been collected by using the MiFID profiling questionnaire. Since the end of 2024, a new questionnaire has been adopted where sustainability preferences are further detailed, as required by the policies.

[131] Last updated November 2024

In order to ensure the dissemination of ESG products among customers, the Division has set progressively more challenging goals for the period 2022-2025, both with respect to the number of asset management products on the market classified as Articles 8 and 9 in relation to the total number of products being placed, and with respect to the number of new asset management products classified as Articles 8 and 9 on the total number of new products being placed. Also in 2024, the new offer was strongly directed to solutions that reflected the criteria adopted by the Division in terms of ESG with an incidence of over 85% of the products pursuant to Articles 8 and 9 SFDR on the total of new products.

As part of the Company's products and services already offered, in 2024 too from Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.A. carried out significant activity, bringing 44 portfolio management lines in line with Article 8 SFDR (2 Fogli Fideuram, 17 Fideuram Omnia and 25 Wealth Collections). Within the scope of Portfolio Management Schemes, the investment universe of "Il Mio Foglio ESG" (Article 8 SFDR) has also been enriched; the latter allows the customer to build their own portfolio starting from a specific list of strategies that have strong ESG characteristics (all classified under Articles 8 or 9 SFDR) or to use predefined model portfolios ("guided pathways") broken down by level of risk and built according to a "High Conviction" approach, linked to the tactical selection of specific ESG topics.

Lastly, Fideuram Asset Management Ireland dac expanded its range of funds classified as Article 9 SFDR, launching in June the Fonditalia Clean Energy Solutions fund, and introduced the ETF D-X platform featuring 6 equity and bond solutions (7 ISINs) classified as Article 8 SFDR.
As an addition to the Group's product offering according to the Guided Open Architecture approach to meet even the most sophisticated needs, customers can also find third-party ESG products on offer in the catalogue in collaboration with leading international investment houses.
The ESG investment approach is a distinctive and quality factor in the asset management industry. Similarly, an understanding of the ESG investment logic is crucial in financial advisory service provision so that its value points can be shared with customers. During the year, the Group, also with a view to supporting the expansion of the ESG product offering, launched a number of educational and training activities.
In the area of training/information, the role of "ESG Ambassador" was created: consultants called upon to promote, in their respective territories, the culture of sustainability with a twofold purpose: disseminate ESG matters and sustainable behaviour, and listening to the needs of customers and other Private Bankers. The pilot phase was completed in 2024 with full implementation in 2025.

In particular, a new event of the pilot phase took place in mid-2024 to give voice to the ESG Ambassadors who - divided into working groups - drew up and presented their proposal for the evolution of the ESG role, sales support and marketing, and training materials. The Parent Company and Private Banking Division structures have also started to be involved in the launch of the "Fideuram for the Environment" initiative. At the end of the year, the proposal for the evolution of the role of the fully operational phase was drawn up and presented to top management.

Sustainable insurance

Policies on sustainability-conscious insurance products - Insurance

In line with the Intesa Sanpaolo Group's strategic objectives and the materiality that the integration of ESG factors has assumed for the financial and insurance sector, the Intesa Sanpaolo Assicurazioni Group (hereinafter also referred to as the "Insurance Group") has continued its development of environmental and social matters over the years, implementing concrete actions and initiatives aimed at increasingly consolidating internal governance and at the same time generating a concrete and material impact on its customers. In this regard, the Insurance Group has prepared tools for the monitoring of Governance and risk management in the field of ESG through the attribution of roles and responsibilities, the definition of policies, processes and dedicated initiatives, also in line with the evolution of national and international legislation. The Insurance Group has long had a "Sustainability Policy" that defines specific sustainability guidelines to ensure the integration of Environmental, Social and Governance (ESG) factors into business processes, identifying strategies for the pursuit of sustainable development goals. The policy not only outlines the overall governance, management, control and disclosure framework on sustainability, but also describes the pillars of sustainability by translating them into concrete environmental, social and governance commitments, with the aim of strengthening the integration of sustainability principles within the insurance strategy. This policy is subject to review and possible update by the relevant corporate functions and structures whenever regulatory update requirements, interventions by the Supervisory Authority, business strategies or changes in the context (significant changes in corporate processes, significant structural reorganisations, significant changes to the IT platforms used) so require. In addition, it is submitted to the Intesa Sanpaolo Assicurazioni Board of Directors for approval and is adopted by the Boards of Directors of all the Insurance Group companies. For more details, please refer to the document "Sustainability Policy of the Intesa Sanpaolo Assicurazioni Group", which can be viewed on the Insurance Group's official website.

In the investment field, the Intesa Sanpaolo Assicurazioni Group has adopted the "Policy for the integration of ESG sustainability factors in the investment process", which defines the sustainability principles and standards that guide the responsible management of investments and a monitoring of the impacts (in terms of the presence in the portfolio of counterparties that do not adopt safeguards on: climate adaptation, GHG emissions and the use of non-renewable energy sources) and opportunities (in terms of increasing the number of ESG investment options under management) generated by its activities, linked to the investment sphere. This policy envisages both engagement activities with issuing companies aimed at verifying the adoption of environmental objectives and policies, with a focus on long-term transition plans to reduce emissions, and exclusion strategies for issuers operating in sectors considered "not socially responsible" and/or "critical". In addition, the policy is subject to continuous monitoring in order to integrate any new initiatives that allow for an ever greater integration of sustainability standards into the investment process; the principles contained therein are defined by the Insurance Group and more specifically by the Board of Directors and apply to all Intesa Sanpaolo Assicurazioni Group companies.

In the non-life sector, the Intesa Sanpaolo Assicurazioni Group has adopted an "Underwriting Policy" that applies to the Intesa Sanpaolo Protezione company with the aim of establishing the principles and macro-processes that guide the identification, assessment, management, monitoring and reporting activities related to underwriting risks. The goal of the policy is to set out the criteria for guiding underwriting activity having regard to technical ESG risks. Top Management is responsible for the overall implementation, maintenance and monitoring of the corporate governance system, in accordance with the directives of the Board of Directors and in compliance with the roles and tasks assigned to it.

Lastly, the Intesa Sanpaolo Assicurazioni Group expresses its commitment to ESG, taking into consideration the UN Sustainable Development Goals (SDGs) and the Principles for Sustainable Insurance (PSI), signed in 2019, as well as initiatives such as UN Global Compact, UNEP FI, Equator Principles. In addition, again as evidence of this commitment, at the end of 2021 the Intesa Sanpaolo Assicurazioni Group joined the Net Zero Asset Owner Alliance (NZAOA) through the Last Italian Parent Company - USCI Intesa Sanpaolo Assicurazioni, and in April 2024 joined the Forum for Insurance Transition to Net Zero (FIT).

Actions on sustainability-conscious products - Insurance

The Intesa Sanpaolo Assicurazioni Group is committed to supporting the transition to a net-zero-emission future, strictly complying with the IPCC's scientific indications and the objectives of the Paris Agreement and the NZAOA Protocol. In this context, a target was set for a 50% reduction in EVIC-weighted carbon intensity by 2030 (compared to 2021 levels) with the aim of achieving climate neutrality by 2050 and limiting the global temperature increase to 1.5°C. This commitment is based on scientific pathways that ensure a concrete contribution to achieving global climate goals, while promoting an equitable and inclusive transition.
The Insurance Group has defined emission reduction strategies through the following decarbonisation levers and initiatives formalised within the "Policy for integrating ESG sustainability factors into the investment process":

- exclusion strategies of corporate issuers based on environmental criteria that provide for criteria aimed at excluding from its investment scope issuers operating in sectors deemed "not socially responsible" (hereinafter also "Not SRI") and/or "critical" with particular reference to companies that:
  - have obvious direct involvement in the manufacture of unconventional weapons (Not SRI);
  - derive at least 18% of their turnover from mining or power generation activities related to thermal coal (Not SRI);
  - present new thermal coal-related projects (Not SRI);
  - derive at least 10% of their turnover from unconventional oil&gas extraction activities (Not SRI);
  - have a lower ESG sustainability rating on the infoprovider scale (critical);
- active engagement strategies aimed at analysing companies operating in sectors with a high environmental impact. The Intesa Sanpaolo Group promotes proactive engagement with issuers by exercising participatory and voting rights, including through Delegated Managers and by engaging with investees, encouraging effective communication with the Management of the companies i.e. "active ownership – engagement". To this end, the Insurance Group has planned bilateral discussions with the 20 most polluting issuers in its investment portfolio. These engagements consist of a series of meetings during which both qualitative and quantitative requests are made to verify the counterparties' commitment to reducing greenhouse gas emissions. At the same time, the Intesa Sanpaolo Assicurazioni Group is committed to engaging in dialogue with oil & gas companies and third-party operators to promote a sustainable transition, encouraging companies to set emissions reduction targets based on scientific research, publish detailed transition plans, align corporate strategy and investments with decarbonisation goals, combat fugitive methane emissions, avoid dependence on unconventional, carbon-intensive oil and gas, and forego new investments in drilling in sensitive areas such as the Arctic;
- measurement and monitoring indicators: the Insurance Group uses a series of indicators to measure/assess the company's selection of all investments.

Actions relating to exclusions, investment options classified as Articles 8 and 9 under Regulation (EU) 2019/2088 (SFDR) and the use of specific indicators are applied on an ongoing basis.

In the non-life sector, the Insurance Group monitors the emissions of its portfolio companies where there is data available to calculate them. Furthermore, the Intesa Sanpaolo Assicurazioni Group is actively committed, including through participation in major national and international initiatives, to promoting greater awareness of ESG issues and disseminating best practices that encourage a culture of sustainability and the adoption of tools to support the transition. In particular, these initiatives are geared towards developing new solutions and strengthening the relevant processes.

Furthermore, it should be noted that the Intesa Sanpaolo Assicurazioni Group offers both non-life and life insurance policies.

Life business products can be subscribed mainly by natural persons and, for specific products, also by legal persons. The Insurance Group aims to offer products that promote environmental or social characteristics within the meaning of the SFDR. The Insurance Group offers insurance, pension and financial products aimed primarily at Intesa Sanpaolo Group customers. In particular, the company's business model includes the two aforementioned non-life and life business lines. The life business is based on insurance investment, pension and protection products while the non-life business is based solely on protection products. In the life business sector, the Insurance Group operates through Intesa Sanpaolo Vita (renamed "Intesa Sanpaolo Assicurazioni" on 1 December) and Fideuram Vita, offering a wide range of products with a focus on sustainability (classified as Article 8 SFDR), integrating ESG criteria and targeted solutions for specific customers such as family members of disabled people, minors and incapacitated persons who need a Guardianship Judge and "non-profit sector" entities. In the non-life business, the Insurance Group operates through the company Intesa Sanpaolo Protezione, offering a wide range of products dedicated to protecting people (illness and accident) with a particular focus on the most fragile categories, homes (theft, fire, etc.), vehicles and the needs of SMEs and the Corporate segment. Among the proposed solutions are those designed to promote sustainable and environmentally friendly mobility, such as specific breakdown services for electric vehicles or policies that reward reduced vehicle use, based on distance driven. In addition, the non-life business products already include cover against catastrophic risks and natural events, aimed at retail customers as well as small and medium-sized enterprises, with a specific focus on climate damage and products dedicated to safeguarding renewable energy plants. Through its product offering, the Insurance Group also supports companies in their digitalisation and ecological transition.

Governance information

ESRS G1 - Business Conduct

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS 2 – General disclosures: Materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:
- impact materiality, which considers, from an inside-out perspective, the Group's impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS G1 – Business Conduct were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and implements its business activities and dealings and the internal controls concerned, in place to minimise the negative impacts connected with the topic under consideration in own operations and in the upstream and downstream value chain, along with an assessment of the risks to which the Intesa Sanpaolo Group may be exposed.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal structures and external stakeholders (such as interviews with experts in the sector) and an in-depth qualitative and quantitative analysis based on the metrics envisaged by relevant legislation (namely scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:
- own operations: the impacts were assessed on the basis of qualitative drivers relating to the Intesa Sanpaolo Group's establishment of internal controls such as the dissemination of a conscious and adequate corporate culture (e.g. promotion of ethical and responsible practices);
- upstream value chain: the impact assessment involved the ESG questionnaire provided by the Group and administered to suppliers, along with an analysis of their feedback;
- downstream value chain: an analysis was carried out on the indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration the Group's exposure to counterparties/undertakings belonging to high-impact industries in terms of business ethics (e.g. respect for human rights and compliance with external and internal regulations, fight against tax evasion, money laundering and anti-competitive behaviour). In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

The analysis revealed the following impact materiality outcomes:

- own operations: a number of material positive impacts have been identified with regard to the adoption of internal policies and corporate strategies aimed at spreading a corporate culture within the Group inspired by the principles of integrity, whistleblower protection, political engagement and lobbying activities, and the fight against corruption and bribery;
- upstream value chain: material positive impacts have emerged from the adoption of ethical policies and practices in managing relationships and dialogue with suppliers, including responsible management of payment practices;
- downstream value chain: material indirect negative impacts have emerged from exposures in sectors having the highest impact with respect to corporate culture and supplier relationship management.

To assess financial materiality, the materiality of risks and opportunities was assessed using a dual quantitative and qualitative approach, applied to the scopes identified.

Specifically, with regard to risks, the following analyses were conducted:
- own operations: operational risk, non-compliance risk and reputational risk were assessed, mainly related to cybersecurity aspects and potential sanctions linked to the Group's operations;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the topic in question (e.g. publication of the "Code of Ethics", definition of anti-corruption policy, etc.);
- downstream value chain: the assessment focused on credit risk, market risk and strategic risk connected with the topic in question. This would also give rise to reputational risk.

It should be noted that, specifically in the process of identifying and assessing risks related to business conduct, the Intesa Sanpaolo Group has adopted an integrated approach that considers specific criteria relating to location, type of business, sector and structure of the operations performed. In particular, in relation to own operations, potential penalties arising from violations of regulations and procedures are monitored; in relation to the upstream value chain, suppliers are monitored and selected according to criteria that promote corporate soundness and compliance with ethical standards; and in relation to the downstream value chain, counterparties' legal compliance is checked before providing them with products and services. These analyses also take into consideration the countries and activity areas in which the Group, its suppliers and the counterparties it finances and in which it invests mainly operate.

The analyses conducted have identified the following risks as having financial materiality:
- with regard to own operations: operational risk and the associated reputational risk related to corporate culture;
- with regard to the upstream value chain: the reputational risk related to the topics of protection of whistleblowers (Whistleblowing) and corruption and bribery;
- with regard to the downstream value chain: credit risk and reputational risk arising from business relationships with counterparties that have elements of potential risk related to corporate culture and management of relationships with (their) suppliers.

With regard to the financial materiality of opportunities, the analyses have focused on the company's own operations relating to business conduct. The financial materiality analysis found that none of the mapped opportunities was material.

Policies, targets and actions related to corporate culture

Policies related to corporate culture

Corporate culture is the foundation of the Intesa Sanpaolo Group's identity and strategies. Guided by principles of integrity, sustainability and social responsibility, corporate culture informs business decisions and daily behaviour, creating value for customers, employees, shareholders and communities.
Tools such as the "Code of Ethics" and the "Internal Code of Conduct" ensure compliance with international standards and promote an ethical and inclusive environment. Investing in corporate culture enables the Group to meet global challenges, strengthening its leadership role in the banking sector also on sustainability topics.

The "Code of Ethics" (hereinafter also referred to as the Code) is a voluntary self-regulatory instrument adopted by all the Group's
companies and is an integral part of the sustainability management model. The Code sets out the Group's mission, corporate values and principles governing relations with stakeholders. For some particularly important areas (e.g. human rights, employment protection, environmental protection and fight against corruption) it lays down rules and principles in line with the main international standards.

The Code and any updates thereto are approved, with the support of the Risks and Sustainability Committee (SRC), by the Board of Directors (BoD) of Intesa Sanpaolo S.p.A., in its capacity as Parent Company, and brought to the attention of the competent bodies of the subsidiaries for their implementation. Compliance with the principles and values of the "Code of Ethics" is monitored by the Chief Sustainability Officer Area and the Chief Audit Officer's structures, the latter on the basis of the annual risk-based audit programme. Finally, an independent third party may be tasked with analysing implementation of the principles of the "Code of Ethics", in line with the requirements of UNI EN ISO 26000:2020. In this context, it should be noted that the BoD, the Risks and Sustainability Committee (RSC), the Management Control Committee (MCC) and the Surveillance Body receive a report on the implementation of the Code and the principles of social and environmental responsibility (for more details, see ESRS 2, "Sustainability governance" section).

The "Code of Ethics" is also inspired by the main national and international guidelines on corporate social responsibility (in addition to those mentioned in the section "The Group's commitment to human rights" in the ESRS S1 standard) including:
- OECD Due Diligence Guidance for Responsible Business Conduct;
- OECD Guidelines for Multinational Enterprises on Responsible Business Conduct and The Ten Principles of the UN Global Compact (ten fundamental principles, including anti-corruption);
- Council of Europe Convention on Preventing and Combating Violence Against Women and Domestic Violence (also known as the Istanbul Convention);
- Charter of Fundamental Rights of the European Union.

In cases of non-compliance with this Code, reported by any stakeholder, the Group reserves the right to take the appropriate measures, based (in cases other than fraudulent conduct or acts infringing specific laws, contracts or regulations) on a constructive approach, including via training programmes, to reinforce the Group people's awareness of and compliance with the values and principles laid down in this Code.

To promote the dissemination of its principles, the "Code of Ethics" is published on the Group's intranet and official website so as to be accessible to all stakeholders. In addition, the Code is provided to each Director, employee or external collaborator upon appointment, hiring or start of the collaboration. On receiving the Code, the persons concerned sign a document declaring that they have received and read it, and pledge to comply with its principles. In this regard, as an additional guarantee for all stakeholders, a Code of Ethics email address (codice.etico@intesasanpaolo.com) is available to anyone wishing to report any non-compliance, with a guarantee of confidentiality and non-retaliation.

The Chief Sustainability Officer (CSO) area actively contributes to awareness-raising initiatives aimed at disseminating the culture and values of the "Code of Ethics", both within the Group and to the various stakeholders. The values, principles and commitments contained in the Code are shared within the Group through specific compulsory training activities that translate ethical principles into consistent strategic choices and practical conduct during daily operations. In particular, training courses are created with content suitable to the role of each person and developed according to a process that will complete their professional training and foster personal growth. In addition, training contents were revised during 2024, maintaining a general part and three levels of in-depth analysis of the requirements for compliance with all corporate rules. For more details, see the document "Code of Ethics" available on the Group's official website.

The Group has also adopted an "Internal Code of Conduct" (hereinafter also referred to as the Internal Code), which is supervised and monitored by the competent governance and control functions. The "Internal Code" is the document that, drawing inspiration from the values expressed in the "Code of Ethics", indicates the conduct to be maintained or avoided in order to pursue with professionalism, diligence, honesty and fairness the interests of the company, customers, shareholders and society as a whole, as it defines the essential rules of conduct to be followed by all Group personnel. The Internal Code is also addressed to management and supervisory bodies, non-employee financial advisors, agents, external collaborators and interns. In this context, the Chief People & Culture Officer Area is responsible for updating the Internal Code of Conduct and obtaining its approval by the Risks and Sustainability Committee (SRC) and the Board of Directors (for further details, see ESRS 2, "Sustainability Governance" section).

In light of the above, the subsidiaries must adopt the "Internal Code" by resolution of their competent Corporate Bodies. At that time, they may make additions and amendments, to add stricter solutions or take into account the specific features of the subsidiaries. Any such changes must be submitted to the Parent Company for prior approval. As regards branches and offices of the Intesa Sanpaolo Group located in foreign countries, the "Internal Code", without prejudice to its principles, may undergo adaptations to align it with local regulatory requirements. For more details, see the document "Group Internal Code of Conduct", available on the Group's official website.

With reference to cybersecurity aspects, considered for the purposes of carrying out the financial materiality analysis for the own operations perimeter, see ESRS Standard S4 - Consumers and End-Users, the section on Customer Data Protection.

Targets related to corporate culture

As illustrated in the section "Policies on Corporate Culture", the Group closely monitors corporate culture issues through a series of policies and actions. Although the Group has not yet defined specific quantitative targets for corporate culture, to ensure the effective implementation of the provisions of the Code of Ethics and the Internal Code of Conduct, specific and detailed training is provided to Group employees on the values enshrined in the two codes, as well as safeguards to protect against any breach of those values.

Actions related to enterprise culture

The "Code of Ethics" has been drawn up on the basis of a context analysis and external benchmarking and involving the Parent Company's Sustainability Managers, all the Governance Functions and Business Divisions.

To ensure compliance with the values and principles set out in the "Code of Ethics", the Group delivers compulsory digital and classroom-based training courses to its people on an ongoing basis. Courses are permanently available on the company's internal platforms to all Group personnel (in Italian, English and local languages), including the banks of the International Banks Division (IBD).

In addition, to further strengthen the supervision of training, there are mechanisms linked to the incentive system for people who do not complete their compulsory training within the required timeframe, as set out in the Group's rules on participation in compulsory training. For more details, see the "Training and Development" section of ESRS S1. In particular, training courses on the "Code of Ethics", "Internal Code of Conduct", "Corruption Risk" and "Whistleblowing" are systematically updated, strengthening the message on the values that characterise the Group and inspire all its processes, initiatives and corporate culture.

Policies, targets and actions related to the prevention of corruption

Policies related to the prevention of corruption

The Group carries out its activities with the aim of providing banking and financial services to its customers in compliance with the value of integrity, which in turn is embodied in the principles of professionalism, diligence, honesty, fairness and responsibility, and in accordance with the values and restrictions contained in the "Code of Ethics", the "Group Internal Code of Conduct" and the "Organisational, Management and Control Model" adopted pursuant to Legislative Decree 231/2001.
In this context, the "Group Anti-Corruption Guidelines" (hereinafter referred to as the "Anti-Corruption Guidelines") identify principles and sensitive areas, establish the roles, responsibilities and macro-processes for managing the risk of corruption, and define the commitment to comply with regulatory provisions aimed at combating corruption in all its forms (the "zero tolerance" principle). In this sense, the policy impacts on active cooperation in the fight against corruption and the mitigation of its risks. In particular, these activities concern the areas at highest risk identified by the "Anti-Corruption Guidelines" and establish management and organisational safeguards in the respective areas of activity. With reference to international standards, the Group has identified the following areas exposed to the highest risk of corruption, or which may be exploited to engage in corruption

- gifts and entertainment expenses;
- charitable donations and sponsorships;
- relations with third parties (suppliers and other parties that provide their services to the Group);
- purchase, management and disposal of equity investments and other assets;
- staff hiring;
- purchase, management and disposal of real estate.

In addition, the Guidelines enable the Group to know better the parties with which it deals in the performance of its activities and to maintain its credibility and trust with all stakeholders.
The process of monitoring the principles of the "Anticorruption Guidelines" comprises the following activities:

- analysis of the evolution of the legal framework;
- risk assessment;
- definition of first- and second-level controls;
- verification of implementation of the Guidelines;
- quality assurance.

These activities allow the Group to also monitor the transactions in which it acts as a mere executor of customer instructions, using the money laundering risk and terrorist financing risk control system, set up to comply with the requirements of Legislative Decree 231/2007.

To emphasise the materiality of this topic, the “Anti-Corruption Guidelines” must be complied with by corporate officers and all Group personnel, and apply to all Group companies and all the countries in which the Group operates, with the exception of entities that perform only ancillary services and research activities. The “Anti-Corruption Guidelines” are also addressed to external parties (suppliers, agents, consultants, professionals, business partners, self-employed or para-subordinate workers, etc.) who cooperate with the Group in the performance of its activities (i.e. “third parties”). For this reason, they are made available to all stakeholders through the Group’s official website and to counterparties who are beneficiaries of charitable or sponsorship initiatives, as well as to third parties that collaborate with the Group, when formalising the relevant relationships.

With respect to the functions involved, the “Anti-Corruption Guidelines” are approved by the Corporate Bodies. The topic falls under the supervision of the Chief Compliance Officer Governance Area.

At the operational level, Group personnel must immediately report any violations of the provisions of the “Anti-Corruption Guidelines” to their supervisor, who in turn must forward the report received to the Company’s Anti-Corruption Officer and to the internal audit function for assessment. This is without prejudice to the possibility of using the reporting systems established under the rules on internal whistleblowing. For more information, see the following section “Whistleblowing Policies”.

In this context, it should be noted that the Group's approach to fighting corruption is inspired by the fundamental principles contained in the relevant conventions by international best practices (OECD, Convention on Combating Bribery of Foreign Public Officials in International Business Transactions; UN, Convention Against Corruption, Global Compact; Council of Europe, Criminal Law Convention on Corruption and Civil Law Convention on Corruption). The Group is also certified by an external company under UNI ISO 37001:2016 Anti-corruption management systems, which is the international standard in this field (valid until 2025).

Targets related to the prevention of corruption

As reported in the paragraphs in this section, the Intesa Sanpaolo Group has implemented a number of policies and actions to monitor corruption topics, including an anti-corruption policy and dedicated assessments in the ESG & Reputational Risk Clearing processes, carried out on the portfolio, for social and governance topics, although it has not yet established specific quantitative targets in this governance area.

In this context, the Group has put in place effective controls to continuously monitor and govern these topics, thereby pursuing the goal of preventing corruption and achieving the Group’s objectives with honesty, fairness and responsibility, in full and effective compliance with the rules, professional ethics and the spirit of the agreements signed, even without a precise definition of quantitative and measurable targets within a limited time horizon.

Actions related to the prevention of corruption

The main actions implemented in the area of corruption prevention consist of the constant revision of the “Group Anti-Corruption Guidelines” (last update approved by the Board of Directors in 2024), the updating of the rules on the management of gifts and entertainment expenses, and the planning of compliance with the recommendations of the certification body for ISO 37001:2016. It should be noted that the Group will renew the above certification in 2025.

The “Anti-Corruption Guidelines” are reviewed annually, usually by December of each year.

To prevent any instance of corruption, the Group adopts a risk assessment model that takes into account the operational and business features of each company, based on a qualitative-quantitative methodology derived from an assessment of the residual risk in relation to the risk inherent in the vulnerability of the organisational and control system:

- the assessment of inherent risk is based on seven risk factors consistent with the areas identified by the Guidelines, plus the geographic factor, assessed on the basis of a set of quantitative indicators (e.g. value of orders to third parties);
- the assessment of the vulnerability of the organisational and control systems is based on thirteen vulnerability categories developed on the basis of a qualitative questionnaire that refers to the macro-processes defined in the “Anticorruption Guidelines” and a set of quantitative indicators developed by correlating the risk mitigation elements (e.g. number of employees who completed training courses).

For the purposes of obtaining the ISO 37001:2016 certification, six-monthly audits on the areas of greatest risk of corruption are conducted by the Chief Compliance Officer Area. These audits include both level one checks (including enhanced due diligence) and level two checks.

The Group monitors the transactions in which it acts as an executor of customer instructions, using the money laundering risk and terrorist financing risk control system.

At the same time, the internal reporting systems, the person responsible for them, the processes for analysing the reports, the structures involved and the methods for reporting to the corporate bodies are governed by specific Group company rules on internal systems for reporting violations, as well as by the “Organisational, Management and Control Model” adopted by each Group company pursuant to Legislative Decree No. 231/2001, which ensure the confidentiality of the reporter, excluding the risk of retaliatory, unfair or discriminatory behaviour.

If the Chief Audit Officer, who is separate and autonomous from the audited structures, receives reports of any unlawful conduct or indicating a strong suspicion of a breach of anti-corruption principles or legislation, he/she shall promptly inform the Corporate Anti-Corruption Officer and take the action deemed most appropriate.

In this context, reporting to corporate bodies on anti-corruption matters is an integral part of the reports prepared by the Chief Compliance Officer Area on the basis of the information flows established under the "Regulation on Integrated Internal Control Systems and other communications". These include, on an annual basis, the identification, risk assessment and planning of management actions, as well as, on a six-monthly basis, the description of the activities carried out, the issues detected and the remedies identified.

Finally, the Group arranges for specific training initiatives on the subject, for the benefit of corporate officers and staff. The planned training initiatives are compulsory and traceable; specifically, they aim to strengthen understanding of the key concepts of the anti-corruption legal framework and application of the Guidelines in order to promote conduct consistent with the provisions they contain.

In support of this theme, training is also provided whenever the "Anti-Corruption Guidelines" undergo a significant revision. This is done by providing specific updating training, which is preferably delivered in digital mode, to ensure that the perimeters and functions/resources of the entire Group are reached, in the form of compulsory training and with an impact on the Broad-based Short-Term Plan (PVR) in the event of failure to attend the training.

The content of the training incorporates the rules in force at a general level ("Anticorruption Guidelines") and in response to the operations of the Business Units (rules and processes); in the event of updates during the year, the necessary additions are made available. In this context, the Group provides training to 100% of the structures involved in the sensitive areas identified as having a higher risk of corruption (identified above).

In addition, specific training to top management, called "Tone from the Top" is delivered annually. The objectives are similar to those defined for all anti-corruption training: in particular, the aim is to disseminate a corporate culture based on the values of honesty and integrity and the principle of lawfulness. The training is delivered via online sessions (virtual classroom with remote connection). This training consists of:

- induction for members of the parent company's Board of Directors;
- "board members programme", for members of the corporate bodies and top management of the Italian and international subsidiaries as well as top management of the foreign perimeter.

Metrics related to the prevention of corruption

There have been no convictions and/or penalties for violations of anti-corruption and anti-extortion laws; consequently no fines or sanctions have been imposed on the Intesa Sanpaolo Group.

Whistleblowing policies, targets and actions

Whistleblowing policies

The Group has an internal whistleblowing system relating to both national and European regulations which harm the public interest or the integrity of Intesa Sanpaolo and the Group Companies (for example: administrative, accounting, civil or criminal offences; unlawful conduct pursuant to Legislative Decree no. 231/01; rules governing banking activities; conduct giving rise to conflicts of interest) or relating to internal company policies and/or procedures, which the whistleblower has discovered in the work context.

The reference internal rules on the matter, which are the responsibility of the Chief Audit Officer Area, are set out in a specific Group rules document on internal whistleblowing systems and are available for consultation by all persons working for the Intesa Sanpaolo Group on the company intranet. In addition, a summary description is also available on the Group's official website.

In this context, the system is reserved for: employees and self-employed workers who work or have worked for the Group; persons who have a professional collaboration relationship with the Group; workers or collaborators who provide goods or services or perform work for third parties and work or have worked for the Group; freelancers and consultants who work or have worked for the Group; volunteers and trainees; shareholders (natural persons); and persons with administrative, control, supervisory or representative functions.

These individuals may report a violation via channels available 24 hours a day (e-mail or voice messaging) available on the Group's official website and on the Group's intranet portal, in Italian or English (international language of reference), or in the language of their country.

In addition, the Group puts in place appropriate controls to protect all those involved. In particular, it protects the confidentiality of the information received and the identity of the whistleblower, which is known only to those authorised to access the dedicated channels and can be disclosed only with the whistleblower's consent, and protects the whistleblower from retaliatory or discriminatory conduct, including attempts or threats of such conduct, as a result of the whistleblower's report.

With respect to the perimeter and the main figures involved, the head of the whistleblowing systems for the Parent Company and the Service Companies is the Chief Audit Officer. Said Officer is appointed by the Board of Directors of Intesa Sanpaolo S.p.A. and is assisted by a Delegated Manager who supports him/her in process supervision and reporting and by a specific team.

Targets related to Whistleblowing

The Group has adopted rules, procedures and conduct regarding whistleblowing systems and, in addition, provides mandatory training on whistleblowing. In addition, the Group handles the examination of reports and provides a response within set deadlines, while ensuring the whistleblower is protected from possible retaliation. Finally, despite the lack of a precise definition of quantitative targets within a specific time horizon, the set of policies and actions adopted by the Group is effective and appropriate to protect whistleblowers and manage their reports efficiently.

Actions related to Whistleblowing

Mandatory training courses (one for the Italy perimeter, one for the Insurance business and one for a first portion of the international branches) were prepared and delivered during 2024. The course syllabi covered the characteristics, channels and safeguards related to whistleblowing, as well as the steps to manage the whistleblowing process.

In 2024, a specific training initiative was also carried out, in line with the provisions of Legislative Decree 24/2023, for the staff members who receive whistleblowing reports. The training, delivered by an external lawyer specialised in the subject, examined in depth the different areas of the whistleblowing process, from multiple perspectives.

A total of about 73,000 employees attended training courses on the subject.

Supply chain management policies, targets and actions

Supply chain management policies

With respect to supply chain management strategy and actions, the Group has several policies and rules that it applies in a timely manner.

Through the "Code of Ethics", the Group aims to promote conduct consistent with the highest international and national ethical standards in the performance of its activities and in the management of its business. The Code also includes sustainability principles, acknowledging them as fundamental to guiding the corporate strategy and ensuring a positive impact on the future of the planet and society, in the knowledge that considering social concerns also contributes to minimising exposure to risks and strengthening the Group's reputation, in line with the sustainable development principles and adhering to important international initiatives (e.g. UN Global Compact).

In this context, the "Organisational, Management and Control Model" is a valid tool for raising the awareness of all those who work on the Group's behalf, leading them to operate with integrity and transparency, and is also more effective in preventing the risk of the offences and the administrative breaches covered by the reference legislation being committed.

The objective is to make all those who work on behalf of the Intesa Sanpaolo Group on activities susceptible to the offences referred to in Legislative Decree 231/01 aware that infringing the provision may result in disciplinary/contractual consequences and to reiterate that such forms of unlawful behaviour are strongly condemned by the Group.

The "Internal Code of Conduct" recalls the set of values and principles set out in the "Code of Ethics" on appropriate conduct, as well as the ways in which the Group intends to pursue its mission in compliance with legal and social obligations. It sets out the rules of conduct to be observed both in the workplace and externally, i.e. pursuing the Group's interests with professionalism, diligence, honesty and fairness, and acting in any case with transparency and full respect for people's dignity and integrity. The exercise of decision-making powers and activities must therefore always be guided by the aforementioned values and principles, following traceability criteria.

In addition, the section on "Policies and processes related to supply chain workers" in ESRS S2 refers to the Internal Guidelines on Group Procurement, which aim to define the roles and responsibilities of the corporate bodies and structures of the Parent Company and Group Companies in the process of managing Group purchases, as well as the principles and macro-processes to be observed during all management phases of the procurement of goods and services.

Supply chain management targets

As explained in this section, through continuous monitoring and targeting of these topics, the Group has a number of policies in place to oversee supply chain management topics such as the adoption of a supplier portal and ESG assessments of suppliers, although it has not yet established specific quantitative targets in this governance area.

Supply chain management actions

Suppliers registered in the "Group Supplier List" are also assessed with regard to their ESG propensity. This is done through a specific ESG questionnaire in use since 2022. During 2024, supplier mapping with regard to social, environmental and governance sustainability continued, with the aim of strengthening the assessment and selection criteria of the best suppliers. All new suppliers are required to complete the questionnaire. The ESG score, calculated on the basis of the aforementioned questionnaire and the possession of certain certificates in line with the Group's criteria, expresses the supplier's quality with regard to ESG issues and can influence the selection of the best suppliers in relation to specific procurement needs. It follows that, in relation to specific product categories with a greater environmental or social impact, suppliers who fail to comply with the minimum requirements can be excluded from tenders.

For further information, please refer to the ESRS E1 section on "Strategy to combat climate change at supply chain level".

With regard to measuring the ESG propensity of suppliers, the aim is to achieve an overall assessment of active suppliers by 2025. In this context, specific webinars will be promoted on the subject of “workers in the value chain” for all the suppliers that have access to the Group Supplier Portal.

In addition, the Group plans to adopt, starting in 2025, a “Procurement Code of Conduct” to be provided to all the suppliers registered on the Group Supplier Portal and engaged by Group Procurement. The suppliers will be required to disseminate the Code among all their workers. The aim is to achieve acceptance of the Code by all suppliers impacting the “green” and “social” categories by 2028.

Lastly, the “Procurement Code of Conduct” will be published on the Group Supplier Portal, among the documents the supplier must declare to have read when registering.

Supply chain management metrics

During the 2024 financial year, the Intesa Sanpaolo Group had an average time of 10 business days to pay invoices received. This figure represents the average number of days elapsed from the start of the contractual or legal payment term until actual payment.

In this regard, it should be noted that there is no single payment standard: in particular, for Intesa Sanpaolo and Isybank, the practice is for payments to be negotiated contractually and, unless otherwise specified, the payment term is 60 days.

It should also be noted that the Intesa Sanpaolo Group was not involved in any legal proceedings concerning the late payment of invoices due by it.

It was deemed appropriate to consider, as a representative sample of the Group, the suppliers present on the procurement cycle platform, which is managed by the Parent Company. This sample consists of the companies Intesa Sanpaolo S.p.A. and Isybank S.p.A., whose invoices are administered through the above-mentioned system, and which account for most of the volumes in terms of number of value of invoices at Group level.

Policies, targets and actions related to political engagement and lobbying activities

Policies on political engagement and lobbying activities

The Intesa Sanpaolo Group’s internal policies provide that political parties and movements may not be recipients of donations and sponsorships, as set out in the Group’s “Anticorruption Guidelines” in the section “Policies related to the prevention of corruption”. In particular, specific Group rules state that the only form of new loan granted to political parties, connected associations and individual candidates, which can be authorised only by the Board of Directors, consists of the advance on an annual basis of the “2x1000 contribution” against the assignment to the Group, to be reported in accordance with the law, of said contribution when received by the political parties. In this regard, it should be noted that the Intesa Sanpaolo Group did not grant any loans of this kind in 2024.

In addition, the Intesa Sanpaolo Group adopts a structured system of internal regulations to govern the management of relations with institutions in the legislative, regulatory and operational fields. These rules support the coordination and consistency of the Group’s activities, ensuring compliance with legal provisions, the protection of corporate interests and the promotion of transparent and effective practices in relations with institutions, regulatory authorities, market partners and relevant stakeholders. This approach helps to strengthen the Group’s strategic positioning in a constantly evolving regulatory environment.

Specifically, the Group has put in place rules governing its interactions with the Supervisory, Resolution and Regulatory Authorities, to ensure regulatory compliance and protect the Group’s strategic positioning. These rules cover the entire scope of the Group’s activities, with a small number of exceptions relating to specific operational interactions, the criteria for which are detailed in specific internal Group regulations.

There are two main actors that are competent and responsible for interactions with the regulatory and supervisory authorities:
- firstly, the internal regulations identify “pivot structures”, i.e. structures belonging to the Parent Company that are tasked with coordinating communications with each supervisory and regulatory authority and the consistency of such communications across the Group. A single structure is identified to avoid risks of inconsistency in communications with the authority and is optimal for effectively managing communications, ensuring a single point of contact and a comprehensive response. By way of example, the Institutional Affairs Head Office Department is responsible for managing official correspondence with Italian and international antitrust authorities, for all matters concerning competition and market protection legislation;
- the second actors are the “functional owners”, i.e. Group structures engaged and identified by the pivot structure on the basis of the subject or scope of the individual contact or topic addressed, according to the competence identified from time to time. The functional owners, among other things, identify potential initiatives to mitigate negative impacts or to seize opportunities.

The regulatory framework adopted by the Group adheres to the standards and initiatives of the European Central Bank (ECB), the European Commission and the Financial Stability Board.

The needs of key stakeholders, including consumers, regulatory authorities and market partners, are all taken into consideration when establishing internal regulations.

Targets related to political engagement and lobbying activities

As explained in this section, the Intesa Sanpaolo Group has implemented a number of policies and actions to monitor lobbying issues (e.g. policies on relations with political parties, advocacy activities). However, the Group has not yet established specific quantitative targets in this governance area.

Actions related to political engagement and lobbying activities

The Group plays a proactive role in regulatory processes, monitoring regulatory proposals (and, where appropriate, actively participating in related discussions through advocacy) for topics that may have a direct and indirect impact on the Group, particularly with regard to banking, financial and insurance legislation and the European ESG regulatory framework. In particular, advocacy work was carried out with regard to the initiatives reported in the metrics section on ESG issues (e.g., at the European level, some legislative initiatives related to the EU Green Deal strategy) and financial issues.

For all issues, including sustainable finance and direct environmental impacts, Intesa Sanpaolo cooperates with the relevant trade associations at all levels (national, European or international). For example, for sustainability aspects, there is ongoing collaboration with the Italian Banking Association (ABI) within specific working groups, to raise awareness in the financial and non-financial sectors on environmental sustainability topics and the forthcoming impact of regulatory developments, especially those on ESG disclosures.

At the European level, the Intesa Sanpaolo Group has interacted with lawmakers, the main trade associations and other stakeholders to promote and represent the various environmental sustainability initiatives of the Group. The Group, through its European Regulatory and Public Affairs structure, which is part of the Institutional Affairs Head Office Department, brings its best practices to the attention of policymakers, informs European officials about any technical aspects of the financial topics supporting sustainability, and describes the specific features of its context so that they can be taken into account during the legislative process.

Metrics related to political engagement and lobbying activities

In the context of transparency on the activities and commitments related to the Group's exercising of its political influence, it should be noted that as of 31 December 2024, no Director had held a position in the public administration comparable to a position in administrative, management and supervisory bodies in the two years prior to assuming their current mandate.

Furthermore, as at 31 December 2024, the Group was registered in the EU Transparency Register, with registration code 24037141789-48.

Below is a non-exhaustive list of some of the Group's main lobbying activities during 2024, divided into ESG legislation and legislation not strictly related to ESG issues.

ESG legislation

Directive (EU) 2024/1275 of the European Parliament and of the Council of 24 April 2024 on the energy performance of buildings, published in the OJEU on 8 May 2024
The directive provides for the decarbonisation of residential and non-residential buildings in Member States territories by 2050 and updates the existing regulatory framework to reflect a higher climate ambition combined with social actions. The Intesa Sanpaolo Group believes that the Energy Performance of Buildings Directive supports improvements in the energy efficiency of new and existing buildings, positively influencing their value and the achievement of environmental objectives. The Group, together with trade associations, suggested some regulatory adjustments to ensure the banking sector's ability to support the financing of EU building stock improvements in favour of the climate transition.

Directive (EU) 2024/1760 of the European Parliament and of the Council of 13 June 2024 on corporate sustainability due diligence and amending Directive (EU) 2019/1937 and Regulation (EU) 2023/2859, published in the OJEU on 5 July 2024
The directive requires companies and their partners to prevent, mitigate or bring to an end the adverse effects of their activities on the environment and human rights. The Intesa Sanpaolo Group welcomed this directive as it promotes sustainable and responsible corporate conduct along value chains, with respect to human rights and the environment. Together with the financial sector, the Group contributed to the drafting of a document with trade associations to identify potential critical issues and proposed pragmatic solutions.

Regulation (EU) 2024/3005 of the European Parliament and of the Council of 27 November 2024 on the transparency and integrity of Environmental, Social and Governance (ESG) rating activities, and amending Regulations (EU) 2019/2088 and (EU) 2023/2859, published in the OJEU on 12 December 2024
This regulation introduced a common regulatory approach to strengthen the integrity, transparency, comparability where possible, accountability, good governance and independence of ESG rating activities. Given the importance of ESG ratings in investment decisions, the Intesa Sanpaolo Group views this regulation positively, as it contributes to promoting a culture of transparency on companies' impact on people and the environment, while reducing greenwashing and promoting sustainable investments. The Group collaborated with industry associations by responding to consultations and submitting written contributions to promote a clearer framework of transparency and supervision for ESG rating providers.

Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector, published in the OJEU on 9 December 2019 ("SFDR")

In view of the SFDR revision scheduled for 2025, in 2024 the ISP Group contributed to drafting a letter from the trade associations requesting the European Commission to postpone the adoption of amendments to the Regulatory Technical Standards (RTS) in order to avoid a potential misalignment between the RTS and the future revised text of the regulation.

Commission Delegated Regulation (EU) 2023/2486 of 27 June 2023 supplementing Regulation (EU) 2020/852 of the European Parliament and of the Council by establishing the technical screening criteria for determining the conditions under which an economic activity qualifies as contributing substantially to the sustainable use and protection of water and marine resources, to the transition to a circular economy, to pollution prevention and control, or to the protection and restoration of biodiversity and ecosystems and for determining whether that economic activity causes no significant harm to any of the other environmental objectives and amending Commission Delegated Regulation (EU) 2021/2178 as regards specific public disclosures for those economic activities, published in the OJEU on 21 November 2023

The "Environmental Delegated Act" incorporates revisions of the "Disclosure Delegated Act (EU 2021/2178)" and includes mandatory reporting templates in the corresponding annexes. The Intesa Sanpaolo Group generally supported the adoption of the Delegated Act, but identified some critical issues, specifically related to the calculation of the Green Asset Ratio. The Group, together with the financial sector and trade associations, contributed to drafting a document on this topic to encourage, among other things, a more symmetrical structure of the ratio between numerator and denominator and the inclusion of exposures to special purpose vehicles (SPVs) in the calculation of the ratio.

Regulations not strictly related to ESG issues

Regulation (EU) 2024/1623 of the European Parliament and of the Council of 31 May 2024 amending Regulation (EU) No 575/2013 as regards requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor, published in the OJEU on 19 June 2024 ("CRR III")

CRR III introduced changes regarding requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor. Together with the banking sector and trade associations, the Intesa Sanpaolo Group encouraged, among other things, the one-year postponement of the application of the Fundamental Review of Trading Book (FRTB) rules in order to ensure a level playing field with banks operating in non-EU jurisdictions.

Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) 2016/1011 as regards the scope of the rules for benchmarks, the use in the Union of benchmarks provided by an administrator located in a third country, and certain reporting requirements, COM/2023/660 final ("Benchmark Regulation")

The Benchmark Regulation regulates the indices used as benchmarks in financial instruments and financial contracts, and provides rules on the use of non-EU benchmarks. The Group welcomed the objectives of the reform proposal to ensure continued access to benchmarks while maintaining a sufficient level of investor protection. Together with industry and trade associations, the ISP Group followed the legislative phase of the measure during 2024, taking a special interest in developments in the parliamentary work.

Proposal for a Directive of the European Parliament and of the Council amending Directives (EU) 2009/65/EC, 2009/138/EC, 2011/61/EU, 2014/65/EU and (EU) 2016/97 as regards the Union retail investor protection rules, COM/2023/279 final; Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 1286/2014 as regards the modernisation of the key information document, COM/2023/278 final ("Retail Investment Strategy")

The "Retail Investment Strategy" regulatory package includes a proposal for an omnibus directive amending the Markets in Financial Instruments Directive (MiFID), the Insurance Distribution Directive (IDD), the Solvency II Directive, the Directive on undertakings for collective investment in transferable securities (UCITS) and the Alternative Investment Fund Managers Directive (AIFMD), and (ii) a proposal for a regulation amending the PRIIPs (packaged retail and insurance-based investment products) regulation. The Intesa Sanpaolo Group considers the absence of a total ban on inducements to be positive and has carried out advocacy activities, engaging in talks, where deemed necessary and/or appropriate, with relevant stakeholders.

Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 806/2014 as regards early intervention measures, conditions for resolution and funding of resolution action, COM/2023/226 final; Proposal for a Directive of the European Parliament and of the Council amending Directive 2014/59/EU as regards early intervention measures, conditions for resolution and financing of resolution action, COM/2023/227 final; Proposal for a Directive of the European Parliament and of the Council amending Directive 2014/49/EU as regards the scope of deposit protection, use of deposit guarantee schemes funds, cross-border cooperation, and transparency, COM/2023/228 final ("Crisis management and deposit insurance framework - CMDI")

The proposed reform of the current regulatory framework for bank crisis management and deposit guarantee schemes consists of three texts: the Single Resolution Mechanism Regulation (SRMR) (Regulation (EU) No 806/2014), the Bank Recovery and Resolution Directive (BRRD) (Directive 2014/59/EU), and the Deposit Guarantee Schemes Directive (DGSD) (Directive 2014/49/EU). The Group welcomed the objectives of the reform to preserve financial stability and protect taxpayers' money, protect the real economy from the impact of bank failures, and improve protection for depositors. Advocacy work was carried out both with trade associations and through direct dialogue with representatives of institutions. The main focus of the advocacy was the provisions of the legislation with respect to the establishment of irrevocable payment commitments.

Regulation (EU) 2017/2402 of the European Parliament and of the Council of 12 December 2017 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation, and amending Directives 2009/65/EC, 2009/138/EC and 2011/61/EU and Regulations (EC) No 1060/2009 and (EU) No 648/2012, published in the OJEU on 28 December 2017

In view of the announced publication of a legislative proposal to reform the European securitisation framework scheduled for 2025, in 2024 the ISP Group responded - directly and via trade associations - to the consultation published by the European Commission on this topic.

Proposal for a Regulation of the European Parliament and of the Council on the establishment of the digital euro, COM/2023/369 final

On 28 June 2023, the European Commission published a regulatory proposal establishing the legal framework for a possible digital euro to supplement euro banknotes and coins. However, it will be up to the European Central Bank (ECB) to decide whether and when to issue it. The objective of this proposal, according to the European Commission, is to ensure that central bank money with the status of legal tender remains available to the general public, while offering a state-of-the-art and cost-efficient means of payment, ensuring a high level of privacy in digital payments, maintaining financial stability and promoting accessibility and financial inclusion The proposal is currently being examined by the European Parliament and the EU Council. The Intesa Sanpaolo Group is following the proposed regulation, which, if adopted, will have significant impacts on the payments world, and taking part in the legislative debate, both directly and through trade associations.

Proposal for a Regulation of the European Parliament and of the Council on a framework for Financial Data Access and amending Regulations (EU) No 1093/2010, (EU) No 1094/2010, (EU) No 1095/2010 and (EU) 2022/2554 COM/2023/360 final

On 28 June 2023, the European Commission published a regulatory proposal on a framework for financial data access (open finance) that establishes rights and obligations for managing the sharing of certain financial data of customers, with their permission, beyond payment accounts. The Group is monitoring the ongoing legislative process and participating in the legislative debate, in particular through trade associations. The concerns raised by the proposal relate to the competitiveness of European banks, the level playing field and data security and protection.

On the other hand, as regards the international scope (Non-EU), as of 31 December 2024, the Group monitors lobbying activities in the various countries by dialoguing with national and supranational institutions. In particular, the non-EU countries include Algeria, Australia and Kenya.

8	**Total amount and proportion of taxonomy-non-eligible economic activities in the denominator of the applicable KPI**	**4,545**	**92.17%**

TEMPLATE ANNEX X: TEMPLATES FOR KPIs OF INSURANCE AND REINSURANCE UNDERTAKINGS

Template: The proportion of the insurance or reinsurance undertaking's investments that are directed at funding, or are associated with, Taxonomy-aligned in relation to total investments

(millions of euro)

2024	
The weighted average value of all the investments of insurance or reinsurance undertakings that are directed at funding, or are associated with Taxonomy-aligned economic activities **relative to the value of total assets covered by the KPI**, with following weights for investments in undertakings per below: Turnover-based: **2.01%** Capital expenditures-based: **3.42%**	The weighted average value of all the investments of insurance or reinsurance undertakings that are directed at funding, or are associated with Taxonomy-aligned economic activities, with following weights for investments in undertakings per below: Turnover-based: **1,867** Capital expenditures-based: **3,187**
The percentage of assets covered by the KPI relative to total investments of insurance or reinsurance undertakings (total AuM). Excluding investments in sovereign entities. Coverage ratio: **50.82%**	The monetary value of assets covered by the KPI. Excluding investments in sovereign entities. Coverage: **93,080**
Additional, complementary disclosures: breakdown of denominator of the KPI	
The percentage of derivatives relative to total assets covered by the KPI. **0.86%**	The value in monetary amounts of derivatives. **805**
The proportion of **exposures to financial and non-financial undertakings not subject to Articles 19a and 29a of Directive 2013/34/ EU** over total assets covered by the KPI: **56.48%** For non-financial undertakings: **40.37%** For financial undertakings: **16.11%**	Value of **exposures to financial and non-financial undertakings not subject to Articles 19a and 29a of Directive 2013/34/EU**: **52,569** For non-financial undertakings: **37,571** For financial undertakings: **14,998**
The proportion of **exposures to financial and non-financial undertakings from non-EU countries not subject to Articles 19a and 29a of Directive 2013/34/EU** over total assets covered by the KPI: **46.09%** For non-financial undertakings: **33.76%** For financial undertakings: **12.33%**	Value of **exposures to financial and non-financial undertakings from non-EU countries not subject to Articles 19a and 29a of Directive 2013/34/EU**: **42,902** For non-financial undertakings: **31,426** For financial undertakings: **11,476**
The proportion of **exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU** over total assets covered by the KPI: **27.70%** For non-financial undertakings: **12.23%** For financial undertakings: **15.47%**	Value of **exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU**: **25,780** For non-financial undertakings: **11,383** For financial undertakings: **14,397**
The proportion of **exposures to other counterparties and assets** over total assets covered by the KPI: **14.96%**	Value of **exposures to other counterparties and assets**: **13,926**
The proportion of the insurance or reinsurance undertaking's investments other than investments held in respect of life insurance contracts **where the investment risk is borne by the policy holders**, that are directed at funding, or are associated with, Taxonomy- aligned economic activities: **37.02%**	Value of insurance or reinsurance undertaking's investments other than investments held in respect of life insurance contracts **where the investment risk is borne by the policy holders**, that are directed at funding, or are associated with, Taxonomy-aligned economic activities: **34,454**
The value of all the investments that are funding **economic activities that are not Taxonomy- eligible** relative to the value of total assets covered by the KPI: Turnover-based: **91.42%** Capital expenditures-based: **90.21%**	Value of all the investments that are funding **economic activities that are not Taxonomy- eligible**: Turnover-based: **85,096** Capital expenditures-based: **83,965**
The value of all the investments that are funding Taxonomy-eligible economic activities, **but not Taxonomy-aligned** relative to the value of total assets covered by the KPI: Turnover-based: **6.57%** Capital expenditures-based: **6.37%**	Value of all the investments that are funding Taxonomy-eligible economic activities, **but not Taxonomy-aligned**: Turnover-based: **6,117** Capital expenditures-based: **5,928**
Additional, complementary disclosures: breakdown of numerator of the KPI	
The proportion of **Taxonomy-aligned exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU** over total assets covered by the KPI: For non-financial undertakings: Turnover-based: **1.62%** Capital expenditures-based: **2.96%** For financial undertakings: Turnover-based: **0.39%** Capital expenditures-based: **0.47%**	Value of **Taxonomy-aligned exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU**: For non-financial undertakings: Turnover-based: **1,508** Capital expenditures-based: **2,753** For financial undertakings: Turnover-based: **359** Capital expenditures-based: **434**
The proportion of the insurance or reinsurance undertaking's investments other than investments held in respect of life insurance contracts **where the investment risk is borne by the policy holders**, that are directed at funding, or are associated with, Taxonomy- aligned: Turnover-based: **1.06%** Capital expenditures-based: **1.79%**	Value of insurance or reinsurance undertaking's investments other than investments held in respect of life insurance contracts **where the investment risk is borne by the policy holders**, that are directed at funding, or are associated with, Taxonomy-aligned: Turnover-based: **986** Capital expenditures-based: **1,666**
The proportion of **Taxonomy-aligned exposures to other counterparties and assets** over total assets covered by the KPI: Turnover-based: **0.00%** Capital expenditures-based: **0.00%**	Value of **Taxonomy-aligned exposures to other counterparties and assets** over total assets covered by the KPI: Turnover-based: **-** Capital expenditures-based: **-**

Breakdown of the numerator of the KPI per environmental objective		
Taxonomy-aligned activities – provided 'do-not-significant-harm'(DNSH) and social safeguards positive assessment:		
1) Climate change mitigation	Turnover: **1.84%** CapEx: **3.04%**	Transitional activities: **0.16%**; **0.21%** (Turnover; CapEx) Enabling activities: **0.89%**; **1.32%** (Turnover; CapEx)
2) Climate change adaptation	Turnover: **0.05%** CapEx: **0.17%**	Enabling activities: **0.03%**; **0.09%** (Turnover; CapEx)
3) The sustainable use and protection of water and marine resources	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
4) The transition to a circular economy	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
5) Pollution prevention and control	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
6) The protection and restoration of biodiversity and ecosystems	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)

Template: The underwriting KPI for non-life insurance and reinsurance undertakings

(millions of euro)

	Substantial contribution to climate change adaptation			**DNSH (Do No Significant Harm)**					
Economic activities	**Absolute premiums, year t**	**Proportion of premiums, year t**	**Proportion of premiums, year t-1**	**Climate change mitigation**	**Water and marine resources**	**Circular economy**	**Pollution**	**Biodiversity and ecosystems**	**Minimum safeguards**
	Currency	**%**	**%**	**Y/N**	**Y/N**	**Y/N**	**Y/N**	**Y/N**	**Y/N**
A.1. Non-life insurance and reinsurance underwriting Taxonomy-aligned activities (environmentally sustainable)	-	-	-	-	-	-	-	-	-
A.1.1 Of which reinsured	-	-	-	-	-	-	-	-	-
A.1.2 Of which stemming from reinsurance activity	-	-	-	-	-	-	-	-	-
A.1.2.1 Of which reinsured (retrocession)	-	-	-	-	-	-	-	-	-
A.2 Non-life insurance and reinsurance underwriting Taxonomy-eligible but not environmentally sustainable activities (not Taxonomy-aligned activities)	41	2.75%	2.12%	-	-	-	-	-	-
B. Non-life insurance and reinsurance underwriting Taxonomy-non-eligible activities	1,474	97.25%	97.88%	-	-	-	-	-	-
Total (A.1 + A.2 +B)	**1,515**	**100.00%**	**100.00%**						

TEMPLATE ANNEX IV: TEMPLATE FOR THE KPI OF ASSET MANAGERS

Standard template for the disclosure required under Article 8 of Regulation (EU) 2020/852 (asset managers)

(millions of euro)

2024	
The weighted average value of all the investments that are directed at funding, or are associated with taxonomy-aligned economic activities **relative to the value of total assets covered by the KPI**, with following weights for investments in undertakings per below: Turnover-based: **2.08%** CapEx-based: **3.37%**	The weighted average value of all the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, with following weights for investments in undertakings per below: Turnover-based: **4,402** CapEx-based: **7,127**
The percentage of assets covered by the KPI relative to total investments (total AuM). Excluding investments in sovereign entities, Coverage ratio: **60.14%**	The monetary value of assets covered by the KPI. Excluding investments in sovereign entities. Coverage: **211,680**
Additional, complementary disclosures: breakdown of denominator of the KPI	
The percentage of derivatives relative to total assets covered by the KPI. **0.84%**	The value in monetary amounts of derivatives: **1,785**
The proportion of **exposures to EU financial and non-financial undertakings not subject to Articles 19a and 29a of Directive 2013/ 34/EU** over total assets covered by the KPI: For non-financial undertakings: **7.28%** For financial undertakings: **1.87%**	Value of **exposures to EU financial and non-financial undertakings not subject to Articles 19a and 29a of Directive 2013/34/EU**: For non-financial undertakings: **15,400** For financial undertakings: **3,963**
The proportion of **exposures to financial and non-financial undertakings from non-EU countries not subject to Articles 19a and 29a of Directive 2013/34/EU** over total assets covered by the KPI: For non-financial undertakings: **49.07%** For financial undertakings: **2.53%**	Value of **exposures to financial and non-financial undertakings from non-EU countries not subject to Articles 19a and 29a of Directive 2013/34/EU**: For non-financial undertakings: **103,861** For financial undertakings: **5,362**
The proportion of **exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU** over total assets covered by the KPI: For non-financial undertakings: **13.52%** For financial undertakings: **11.52%**	Value of **exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU**: For non-financial undertakings: **28,624** For financial undertakings: **24,384**
The proportion of **exposures to other counterparties and assets** over total assets covered by the KPI:**13.37%**	Value of **exposures to other counterparties and assets**: **28,301**
The value of all the investments that are funding **economic activities that are not taxonomy-eligible** relative to the value of total assets covered by the KPI: Turnover-based: **91.49%** CapEx-based: **90.26%**	Value of all the investments that are funding **economic activities that are not taxonomy-eligible**: Turnover-based: **193,676** CapEx-based: **191,069**
The value of all the investments that are funding taxonomy-eligible economic activities, **but not taxonomy-aligned relative to the value of** total assets covered by the KPI: Turnover-based: **6.43%** CapEx-based: **6.37%**	Value of all the investments that are funding Taxonomy-eligible economic activities, **but not taxonomy-aligned**: Turnover-based: **13,602** CapEx-based: **13,484**
Additional, complementary disclosures: breakdown of numerator of the KPI	
The proportion of **Taxonomy-aligned exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU** over total assets covered by the KPI: For non-financial undertakings: Turnover-based: **1.82%** Capital expenditures-based: **3.07%** For financial undertakings: Turnover-based: **0.26%** Capital expenditures-based: **0.30%**	Value of **Taxonomy-aligned exposures to financial and non-financial undertakings subject to Articles 19a and 29a of Directive 2013/34/EU**: For non-financial undertakings: Turnover-based: **3,855** Capital expenditures-based: **6,504** For financial undertakings: Turnover-based: **547** Capital expenditures-based: **623**
The proportion of **Taxonomy-aligned exposures to other counterparties and assets** over total assets covered by the KPI: Turnover-based: **0.00%** Capital expenditures-based: **0.00%**	Value of **Taxonomy-aligned exposures to other counterparties and assets**: Turnover-based: **-** Capital expenditures-based: **-**

Breakdown of the numerator of the KPI per environmental objective Taxonomy-aligned activities:		
1) Climate change mitigation	Turnover: **2.02%** CapEx: **3.22%**	Transitional activities: **0.15%; 0.21%** (Turnover; CapEx) Enabling activities: **1.03%; 1.47%** (Turnover; CapEx)
2) Climate change adaptation	Turnover: **0.06%** CapEx: **0.15%**	Enabling activities: **0.02%; 0.06%** (Turnover; CapEx)
3) The sustainable use and protection of water and marine resources	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
4) The transition to a circular economy	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
5) Pollution prevention and control	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
6) The protection and restoration of biodiversity and ecosystems	Turnover: CapEx:	Enabling activities: (Turnover; CapEx)
