MESSAGE FROM THE CHIEF EXECUTIVE OFFICER

Paulo Moita de Macedo

Vice-chairman of the board of directors
and Chief Executive Officer

It is with great pride that I present Caixa Geral de Depósitos' Sustainability Report concerning an unmatched year such as 2024. This document represents not just a completed stage but a milestone in the ongoing journey of integrating sustainability into our operations and organisational culture, embodied in the conclusion of the 2021-2024 strategic cycle. This performance is closely linked to a solid and sustained business growth at Caixa, presenting the best financial results ever, as well as the full repayment to the State of the Caixa recapitalisation plan executed in 2017.

Over the last few years, we have worked to consolidate Caixa as a leader in sustainable financing in Portugal. Our 2021-2024 Sustainability Strategy, supported by over 231 actions, has enabled us to achieve significant milestones across various ESG dimensions. The completion of 96% of the planned actions demonstrates our commitment to promoting a low-carbon economy, supporting projects with positive social and environmental impact, and contributing to achieving the United Nations Sustainable Development Goals.

The benefits of integrating sustainability are clear: better risk control, a more robust affirmation in financial markets, and greater credibility with our stakeholders, including clients, investors, regulators, and supervisors. The definition of the 2050 Carbon Neutrality Transition Plan, the evolution of the ESG Rating Model, and the issuance of three sustainable debts are clear examples of our path and commitment to ensuring that sustainability principles guide our operations, business activities, and risk analysis. With these initiatives, we not only improve our performance and resilience but also encourage more responsible and inclusive business practices among our customers and other stakeholders.

This report also reflects Caixa's alignment with the expectations of regulators and supervisors, such as the European Banking Authority, the European Central Bank, and the Bank of Portugal, regarding climate and environmental risk management. In a European context of strong regulatory and legal demands regarding sustainability reporting, Caixa has adopted the Corporate Sustainability Reporting Directive (CSRD) as its new reporting benchmark, anticipating the new reporting requirements. I would also like to highlight the results of the key ESG indices that impact the variable remuneration of Caixa's management and employees – MSCI, CDP, and Sustainalytics, which serve as evidence of our commitment to providing transparent and comparable information about our performance.

We maintained our commitment to the development of our employees and the recognition of merit, through an investment of €3.7 million in training and development, representing a 26% increase compared to the previous year. Also noteworthy is the annual holding of the internal merit and excellence awards, an initiative which, over its eight editions, has already rewarded a total of 337 employees.

We believe that Diversity, Equity, and Inclusion foster innovation, talent attraction, retention, and promotion. The publication of Caixa's Equality Plan enables the definition, implementation, monitoring, and annual review of initiatives that ensure a humane, innovative, and sustainable organisational culture.

In 2024, our social investment in areas such as education, culture, and social support reached approximately €19 million, resulting in numerous projects with a positive social impact in areas such as the third sector, education, support for vulnerable individuals, and culture.

Looking to the future, we reaffirm our commitment to continue leading by example. We are determined to strengthen our sustainability practices across all international entities where we operate, expand our social responsibility actions, and consolidate our position as an agent of positive change in society, even when sustainability appears to be out of fashion.

Sustainability is not just an ambition; it is an integral part of the business, a driver of transformation, and a factor of innovation and adaptation to new social, environmental, and governance challenges. The holding of the first Caixa Group Sustainability Week in 2024, which involved the participation of eight international entities, is a clear example of its contribution to strengthening the sustainability culture across the entire Group.

Sustainability is currently integrated across the board into the processes and activities of the CGD Group's various departments and entities and is therefore everyone's responsibility.

Looking to the future and despite a possible slowdown in regulation and a reduction in the ambition of some countries in what concerns sustainability issues, Caixa reaffirms its commitment to sustainable development. In the new 2025 - 2028 strategic cycle, Caixa will remain committed to implementing responsible business practices that create a positive impact on society and the environment.

I would like to thank our customers, employees and other stakeholders for their commitment and dedication, which make it possible for us to achieve our vision. Together, we will continue to build a sustainable future, with an appropriate governance, where every action reflects our commitment to both the growth of our institution and the growth of Portuguese institutions, with responsibility and excellence.

4.2 Sustainability Highlights - 2024

Completion of the Strategic Cycle 2021 - 2024
with 96% implementation of the sustainability strategy

More than €2.3 billion in ESG financing
2021 - 2024 production

Carbon Neutrality Transition Plan
Disclosure of intermediate carbon reduction targets

6th edition of the Caixa Social Awards
+1 M€ awarded to 44 third-sector projects

Organisation of Sustainability Week 2024
To promote greater corporate ESG alignment

Climate and Environmental Risk Management
Implementation of initiatives to comply with the expectations of the ECB guide

6th Edition of the Caixa Mais Mundo Awards
480 students supported with 600 m€

10 Years of the Environmental Management System
Certified according to ISO 14001

Publication of the 2025 Equality Plan
Showcasing Diversity, Equity, and Inclusion initiatives at Caixa

Caixa in the top 9% of the industry, with a rating of 13.4 (Low Risk)
At ESG Risk Rating from Sustainalytics

Distinction 'Europe's Climate Leaders 2024'
One of 600 companies leading the fight against climate change

Publication of the Allocation and Impact Report
Updated and referring to the issuance of sustainable debt

4.3. 2021 - 2024 Sustainability Strategy

Caixa's 2021 - 2024 Sustainability Strategy, with a national scope, was implemented through an evolving and dynamic action plan that involved the collaboration of various internal structures, aiming to integrate ESG concepts across the business. This plan reflected Caixa's commitment to becoming a leader in sustainable financing in Portugal, promoting the transition to a low-carbon economy and financing projects with a social impact on people's lives. This section presents the assessment of the 2021 - 2024 Sustainability Strategy.

The strategy was based on five strategic areas of action:

1) **Sustainable and Inclusive Financing** – Financing the transition to a low-carbon economy in a fair and inclusive way;

2) **Climate Risk Management** – Accelerating the transition to a more sustainable and resilient economy by efficiently managing climate risks;

3) **Equity, Digital, and Financial Inclusion** - Being an inclusive bank that prioritises the well-being and development of employees and society;

4) **Transparent Government Models** – Adopting efficient governance models that drive performance in a responsible, diverse, and transparent manner;

5) **Disclosure of Sustainability Information** – Making regular and transparent disclosures on ESG performance in accordance with best reporting practices and applicable regulations.

The 2021 - 2024 Sustainability Strategy has made a significant contribution to Caixa's transformation process and to creating impact in the ESG dimensions. Supported by 231 actions, the Sustainability Strategy reinforces Caixa's commitment to a more sustainable future. These initiatives covered a range of topics from the development of sustainable products, the creation of climate transition plans, employee training and capacity building, to the strengthening of internal ESG policies.

In order to measure the strategic ambition of the 2021-2024 cycle, five targets have been set associated with the five strategic pillars, which are monitored annually against the objectives set.

The institution's strategic investment plan

The institution's strategic investment plan, which embodies the shareholder's vision of a benchmark institution in the financial system and leader in the Portuguese banking sector, constantly striving to boost its competitive advantages and guarantee levels of solidity, profitability, service and efficiency in line with the best practices in the European banking sector, is vast and comprehensive, seeking to ensure Caixa's ambition as materialized in its 2021-2024 Strategic Plan.

Caixa's Investment Plan amounted to approximately 241 million euros in 2024 (with emphasis on the expenditure related to the deed of the new head office, amounting to approximately 78 million euros), based on a set of guidelines that include monitoring technological developments in the financial sector, both at the level of the Institution, ensuring adaptations to keep Caixa competitive in a dynamic and aggressive financial market and maintain its leading position in digital banking in Portugal, as well as in its relationship with customers, financing investment in innovation and the technological development of companies.

With the aim of innovation and digital transformation in various fronts – number of digital customers, remote operations, digital business, namely in contracting products and services online, evolution and development of apps that boost digital transformation and the open banking market – , Caixa has been investing in segments that leverage the digital strategy, boosting levels of service and efficiency in the context of the customer journey (technological development and innovation and digital banking segments amounting to approximately 65 million euros in 2024).

4.3.1. Material Topics and Main Sustainable Development Goals (SDGs) Impacted.

To support the development of the Sustainability Strategy, a materiality analysis was conducted in 2021 based on a dialogue process with nine stakeholder groups, which allowed for understanding their expectations and concerns regarding Caixa's ESG performance. This process resulted in the identification of nine topics deemed relevant to both GGD's internal and external stakeholders.

The table identifies the main Sustainable Development Goals and targets associated with each of the topics identified.

MAIN TOPIC	KEY SDGs AND ASSOCIATED TARGETS
Financing the low-carbon economy: Funding the transition to a climate neutral economy in a fair and inclusive way.	8.4; 11.3/11.6
ESG governance practices and ethical conduct in business: Ensuring the integration of ESG principles into governance practices ensuring the highest standards of ethics and transparency	16.5/16.6/16.7
Sustainable management of operations in the value chain: Promoting the development of projects and initiatives that contribute to reducing the environmental impact associated with CGD's operations, influencing the value chain.	13.1/13.3
Equity, development and well-being of employees: Promoting the development and well-being of employees, safeguarding a culture of diversity and equal opportunities	5.5; 10.3/10.4
Investment in the community: Supporting the development of the communities in which CGD operates, contributing to creating social and economic value.	1.4/1.5; 17.17
Accessibility and financial inclusion: Accelerating digital transformation as an agent promoting the population's inclusion and financial literacy and reducing inequalities in access to financial products and services.	8.10; 17.17
Environmental risks and climate action: Ensuring an efficient climate risk management and the incorporation of ESG factors into funding and investment policies and analyses.	13.1; 13.2
Job creation and development of the business fabric: Providing products and services that meet the needs of Portuguese families and the development and resilience of the business sector.	8.3
Cybersecurity and data protection: Ensuring the confidentiality, integrity and security of customer data as well as the management of cyber risks.	16.10

SUSTAINABLE DEVELOPMENT GOALS

Caixa considers the Sustainable Development Goals to be an important framework to guide its strategy, goals, and activities. In order to direct its action and focus towards the challenges in which it can effectively make a greater contribution and have a greater impact, Caixa has outlined a set of quantitative and qualitative goals that contribute to achieving the SDGs, namely:

1 NO POVERTY	GOAL: Investing €40 million in the community (2021-2024) STATUS: €58.96 million invested (2021-2024)	11 SUSTAINABLE CITIES AND COMMUNITIES	GOAL: Developing a new finance solution that promotes investment in more energy-efficient real estate (green mortgages) by 2022. STATUS: Completed (Casa + Eficiente Campaign) (2022)
5 GENDER EQUALITY	GOAL: Reaching 38% of women in management positions by 2024. STATUS: 35% (2021) - 35.5% (2025)	13 CLIMATE ACTION	GOAL: Setting a goal for reducing greenhouse gas emissions (GHG) aligned with the Science-Based Target initiative (SBTi) methodology by 2022. STATUS: Completed (2023)
8 DECENT WORK AND ECONOMIC GROWTH	GOAL: Issuing a sustainable bond by 2021. STATUS: Completed (2021)	16 PEACE, JUSTICE AND STRONG INSTITUTIONS	GOAL: Incorporating ESG metrics into the variable remuneration of the Board of Directors by 2024. STATUS: Completed (2022)
10 REDUCED INEQUALITIES	GOAL: Reaching 525,000 active customers (>45 years old) with access to digital platforms by 2024. STATUS: Completed (2024)	17 PARTNERSHIPS FOR THE GOALS	GOAL: Calculating and publicly disclosing scope 3 GHG emissions – category 15 (investments) by 2021. STATUS: Completed (2021)

4.3.2. Implementing the Sustainability Strategy

In this context, and to achieve this, Caixa has implemented a dynamic action plan that cuts across all areas of the Bank, with the aim of executing the 2021 - 2024 Strategic Plan. This plan is based on 37 macro initiatives, which in turn are broken down into 231 actions.

PILLAR	IMPLEMENTATION	INITIATIVE	STATUS	NEXT STEPS
Sustainable and Inclusive Funding	100%	Developing an environmentally and socially responsible framework of financial products	Completed	-
		Issuing Green/Social Bonds or Sustainability linked Bonds	Completed	-
		Advising customers on sustainable debt operations	Completed	-
		Developing ESG products and financing lines, in line with the requirements of the Taxonomy Regulation	Completed	-
		Developing a framework for green/brown activities specific to Caixa, aligned with the Taxonomy	Completed	-
		Integrating ESG performance analyses of all assets under management	Completed	-

		Outlining the Sustainable Financing Policy aligned with Caixa's ESG strategy	Completed	-
		Reducing the environmental impact associated with banking	Completed	-
		Managing exposure to Climate Risk and other ESG risks in the supply chain	Partially completed	**Initiatives to be completed:** • Including environmental requirements in contracts with critical suppliers; • Analysing the results and assigning the suppliers' scoring; • Including the weighting of performance evaluation in market consultations for more environmentally critical services; • Promoting engagement with suppliers with potential for improvement to assist in risk management and enhance their environmental performance.
		Integrating ESG criteria in customer financing	Completed	-
		Evaluating the use of renewable energy in Caixa's own consumption	Completed	-
Climate Risk Management	89%	Evaluating the exposure of the customer portfolio to Climate Risks	Completed	-
		Assessing the materiality of climate and environmental risks and integrating it into risk appetite	Completed	-
		Aligning the low-carbon programme with carbon neutrality ambitions	Partially completed	**Initiatives to be completed:** • Developing collaboration protocols regarding the preservation of biodiversity and ecosystems; • Developing collaboration protocols for projects to offset Caixa's carbon footprint.
		Preparing the emergency response to Climate Change phenomena	Completed	-
		Roll-out of the Carbon Neutrality Transition Plan	Partially completed	**Initiatives to be completed:** • Setting financed emission reduction targets for the Group's Entities in the sectors identified as priorities (commercial real estate, energy, and cement).

		Responding to the supervisor regarding climate and environmental risk management	Completed	
Equality, Diversity, and Financial and Digital Inclusion	94%	Supporting digital and financial inclusion programmes and promoting financial literacy concepts	Completed	-
		Promote new digital solutions for financial inclusion for customers	Partially completed	**Initiatives to be completed:** • Dematerialising the asset subscription process (78%).
		Promoting gender equality and equal opportunities	Completed	-
		Promoting employee support programmes and initiatives	Partially completed	**Initiatives to be completed:** • Reinforcing health, safety, and physical and psychological well-being programmes for all employees through the implementation of the Health and Well-being Plan.
		Developing internal training courses on ESG challenges and opportunities	Partially completed	**Initiatives to be completed:** • Launching the Sustainability Concepts course on the e-learning platform for international organisations (e-learning): Climate and Environmental Risks, Energy Transition, and Sustainable Financing).
		Promoting support for education and knowledge for secondary and higher education students	Completed	-
		Supporting the local community and the third sector to develop projects with a high social impact	Completed	-
		Corporate social responsibility initiatives	Completed	-
Governance Models	100%	Establishing policies and practices that encourage alignment with Caixa's ESG strategy	Completed	-
		Establishing a Corporate Climate and Environmental Risk Management Policy	Completed	-
		Promoting corporate balance and leadership for gender equality	Completed	-
		Raising top management awareness on ESG issues	Completed	-

		Establishing the Caixa Gestão de Ativos Engagement Policy, applicable to portfolio companies managed in terms of sustainability	Completed	-
Disclosure of Sustainability Information	100%	Aligning sustainability reporting with best practices	Completed	-
		Responding to ESG indices from rating agencies	Completed	-
		Evaluating compliance with sustainability commitments	Completed	-
		Raising awareness in society and among customers about ESG challenges and opportunities	Completed	-
		Reinforcing responsible communication in line with ESG criteria	Completed	-
		Gauging the expectations of stakeholders and identifying material topics	Completed	-
		Double materiality approach, in line with the Corporate Sustainability Reporting Directive	Completed	-

In the fourth and final year of this strategic cycle, the completion rate of the actions planned for the 2021-2024 period was 96%, demonstrating Caixa's commitment to sustainability and the integration of responsible practices into its activities.

In this context, several actions were carried out that contributed to integrating ESG factors into the business, namely:

1) Sustainable and Inclusive Financing

- In July 2021, Caixa developed its first Sustainable Finance Framework, which allows the issuance of financial instruments that contribute significantly to the sustainable development of the economy and society. Aligned with the Green Bond Principles, Social Bond Principles, and Sustainability Bond Guidelines, this framework provides investors with a clear view of Caixa's sustainability strategy and its commitment to responsible financial practices.

- Publication of the Sustainable Financing and Energy Transition Policy, which establishes a set of principles and general rules to be followed in the context of sustainable financing at Caixa and within the Caixa Group entities. This policy contributes to the achievement of the Paris Agreement goals and the United Nations Sustainable Development Goals, while also responding to international commitments such as the Principles for Responsible Banking and the Net Zero Banking Alliance.

- Caixa made three ESG bond issuances, becoming the first Portuguese bank to do so:
    - Initially, it successfully completed a senior preferred debt issuance worth €500 million. This issuance, with a six-year term, was aimed at refinancing and financing activities with a positive environmental and socio-economic impact. The operation reflects Caixa's

  - commitment to sustainable financing. The funds raised were allocated to projects that promote energy efficiency, job creation in disadvantaged areas, and other initiatives aligned with the United Nations Sustainable Development Goals.
  - Caixa also issued two green bonds, totalling €800 million. These issuances were specifically aimed at financing residential properties with class A+, A or B energy performance certificates. This effort reflects Caixa's commitment to promoting sustainable practices in the real estate sector, encouraging the construction and renovation of energy-efficient homes. Caixa's green bond issuances not only contribute to reducing its carbon footprint but also support the United Nations Sustainable Development Goals, promoting more sustainable cities and communities.

- Caixa has also launched several specific financing lines to support environmental and social projects, namely:

  - **Caixa ESG Line:** A credit solution aimed at all types of companies, designed to support investments that contribute to the transition to a more efficient business model and improve sustainability performance, with a focus on enhancing their ESG rating, through medium and long-term financing operations, real estate leasing, furniture and automotive leasing, and confirming.

  - **MLP BPF InvestEU Sustainable Investment**: A multisectoral credit line with a guaranteed protocol with Banco Português de Fomento, aimed at supporting investment in carbon footprint reduction and the adoption of circular economy principles in business activities through medium to long-term financing operations.

  - **Decarbonisation and Circular Economy Line**: Aimed at modernising and enhancing the competitiveness of industrial and tourism sector companies by implementing measures that reduce energy consumption and transition from fossil to renewable energy sources. The objective is to contribute to the targets set in the National Energy and Climate Plan (PNEC 2030) and accelerate the transition to a circular economy, thereby supporting the redesign of processes, products, and new business models.

  - **Leasing of hybrid and electric vehicles**: Aimed at supporting investment in hybrid and electric vehicles as part of Caixa's sustainability policy, financing companies with environmental concerns.

  - **Caixa Invest EU Green**: Aimed at supporting investment needs in tangible and intangible assets, as well as working capital, which contribute to the green and sustainable transformation of companies, namely those related to i) climate change mitigation; ii) climate adaptation; iii) the transition to a circular economy; iv) environmental impact management and the sustainable use of natural resources; v) the protection and restoration of biodiversity and ecosystems; vi) the sustainability of agricultural and forestry activities; and vii) improving accessibility to services, products, and infrastructures for customers and employees, through financing operations. Includes Business Transfers, consisting of the purchase of equity stakes in companies.

- Caixa Gestão de Ativos, the Caixa Group's asset management company, has been continuously promoting the integration of ESG aspects into the portfolios it manages, positioning itself as a benchmark in Socially Responsible Investments, particularly by complementing its fundamental analysis process with ESG considerations. The Caixa Socially Responsible Investment Multi-Asset Fund has been reclassified as an Article 9 fund under the Sustainable Finance Disclosure Regulation (SFDR), now explicitly pursuing a sustainable investment objective.

- Caixa was included in the Sustainable Banking Revenues 2023 ranking of The Banker magazine, published by the Financial Times Group. It ranks 63rd in the world and 5th in the Iberian Peninsula.

2) Climate Risk Management

- In 2021, Caixa became the first bank in Portugal to implement an ESG rating model. This innovative model was developed to support companies in their transition to a greener and more inclusive economy, providing them with valuable insights to improve their performance in ESG dimensions. With this rating, Caixa helps companies redirect their capital flows toward sustainable financing strategies, fostering stronger risk management and greater business transparency. This model covers all sectors of activity and reflects Caixa's commitment to a more sustainable and responsible future.

- In 2023, Caixa developed and publicised its Carbon Neutrality and Climate Risk Management Transition Plan. This plan encompasses the definition of energy efficiency measures, the launch of financial products and services that support the energy transition, and a customer engagement plan aimed at aligning its portfolio with improved climate performance. It sets ambitious greenhouse gas reduction targets to be achieved by 2030. The main objective is to contribute to limiting the maximum global temperature increase to 1.5ºC by 2100, compared to pre-industrial levels, in alignment with international commitments to combat climate change.

- In line with the Environmental Principles, Caixa took a significant step by implementing and certifying an Environmental Management System at its Head Office Building, in accordance with the ISO 14001 standard. This commitment to sustainability was upheld and reinforced throughout the four-year 2021-2024 strategic cycle, during which Caixa maintained this certification.

- The expectations of the ECB Guide for Climate and Environmental Risk Management were implemented both at Caixa and within the main Entities of the Group. These measures included a detailed Business Environment Scan, which ensures an analysis of the external context that influences how Climate and Environmental (C&E) factors may impact the business model of the Caixa Group. In this regard, this study compiles a set of: a) academic and economic publications; b) regulatory initiatives; and c) market trends that should determine the speed and impact of C&E aspects. This approach enabled the consolidation of C&E factor trends and impacts for Caixa, analysed across the following dimensions: a) political (or public policy) issues, b) economic issues, c) social issues, d) technological issues, e) regulatory issues, and f) competitive environment. The conclusions of this study enabled a prioritised classification of the most relevant C&E topics to be monitored by Caixa, leading to a strengthened approach to the aspects addressed in the Materiality Assessment exercise.

- Caixa Geral de Depósitos took part in the 2022 Climate Risk Stress Test exercise, the main aim of which was to provide the European Central Bank with more information on climate risk and prepare banks for the upcoming regulatory challenges surrounding climate risk. The results obtained by Caixa were above average compared to the other banks, attesting to the importance that Caixa Geral de Depósitos has given to fighting climate change and the progress that has been made in this direction. During the year, Caixa stood out in terms of data quality, business model sustainability and the flood scenario.

- In 2023, Caixa Geral de Depósitos took part in the European Union-wide stress test, carried out as a diagnostic exercise based on the application of adverse shocks to the Balance Sheet and Profit and Losses, in order to assess Caixa's solvency for the next 3 years. The adverse stress test scenario was defined by the ECB/ESRB and covered a three-year time horizon (2023-2025). The application of the adverse scenario resulted in a Common Equity Tier 1 capital ratio of 17.97% at the end of 2025, a reduction of 76 b.p. compared to the starting point of 18.73% at the end of 2022, comparing favourably with the figures of 288 and 497 b.p. from the past financial years of 2021 and 2018, respectively. Caixa was the 3rd banking group with the lowest capital reduction among the 70 banks included in the EBA's stress test of the largest groups in the sector, which together account for 75% of banking assets in the European Union, and the 1st banking group among the banks supervised by the ECB.

3) Equity, Digital, and Financial inclusion

- Three editions of the Caixa Social Awards have been held, an initiative aimed at financing and developing innovative social projects, promoting social inclusion and solidarity. Across these three editions, 106 projects have been awarded, receiving over €2.2 million in funding.

- The first Social Impact Assessment Report for the 5th Edition of the Caixa Social Awards was published in 2023, highlighting the impact this edition had on society.

- Four editions of the Caixa Mais Mundo Awards have been held to recognise the academic merit of students who completed secondary education, encouraging them to continue their studies and promoting equal opportunities in access to higher education. In these four editions, 1,130 students were awarded scholarships, totalling €1.35 million.

- Caixa has organised various volunteer initiatives, such as the Volunteering and Active Citizenship Week, where volunteers engaged in solidarity actions ranging from food distribution to beach clean-ups, demonstrating a strong commitment to the social and economic development of local communities.

- Caixa's Donation programme supported various social solidarity institutions through the donation of goods. Between 2021 and 2024, more than 16,000 office furniture items (cabinets, chairs, desks, drawer units) and 1,565 pieces of IT equipment were donated.

- Caixa's 'Sou Cidadão' programme aims to facilitate the social integration of homeless individuals by providing them with essential identification documents, such as a citizen card and passport. This programme, in collaboration with social and official entities, ensures that these individuals can access fundamental rights, benefits, and services that promote their social and economic inclusion. Between 2021 and 2024, Caixa ensured the issuance of 298 identification documents (Citizen Card, Passport, Residence Permit).

- Caixa's Equality Plan was published, outlining concrete measures to promote gender equality and equal opportunities within the corporate environment. The plan reflects Caixa's commitment to diversity, equity, and inclusion, addressing areas such as recruitment, training, work-life balance, and female representation in leadership positions.

- Caixa continued to place great importance on attracting and retaining talent, as well as on developing the skills of its employees. The Talent Management Programme was launched in 2022. This ongoing program includes the High Flyers Management Programme, aimed at high-performing employees, and was expanded to include the Top Performers Management Programme, directed at employees who stand out as Top Performers. This initiative reflects Caixa's ongoing commitment to investing in the growth and development of its employees.

- Caixa has made several e-learning programmes available to train its employees in key areas of sustainability, including the following courses: Climate Risks; Sustainability: a strategic approach; Diversity, Equity, and Inclusion | Equality Makes the Difference and Sustainability in Investment Funds. These initiatives reflect Caixa's commitment to promoting a comprehensive understanding of ESG criteria and aligning organisational culture and practices with sustainability principles.

4) Transparent Governance Models

- A total of 15 Sustainability Committees were held during the 2021-2024 strategic cycle. This committee is responsible for overseeing the management and guiding the implementation of Caixa's Sustainability Strategy, playing a crucial role in promoting sustainable practices within the organisation.

- Review of the Corporate Sustainability Policy, which defines the governance model, guiding principles, and specific activities, as well as the key stakeholders and their respective responsibilities in managing Sustainability within Caixa and the Group Entities covered.

- Definition and implementation of the ESG expansion plan for the Caixa Group, based on the implementation of a set of instruments, including the adoption of corporate policies and governance models that incorporate ESG principles and expectations, as well as the definition of specific action plans.

- Publication of the corporate Climate Risk Management Policy, which establishes procedures that integrate the global risk management system, considering internationally recognised best practices in climate and environmental risk management, and contributes to the institution's response to the objectives set in international agreements (such as the 2015 Paris Agreement), European Union environmental policies (e.g., the European Green Deal), and local and national policies.

- Review of the Remuneration Policy for the Members of Caixa's Governing Bodies to incorporate ESG criteria into variable remuneration.

- Review of Caixa's Employee Remuneration Policy to incorporate ESG criteria into variable remuneration.

5) Disclosure of Sustainability Information

- Publication, in 2023, of the Allocation and Impact Report associated with two sustainable debt issuances, with the aim of detailing how the funds were allocated and the environmental and social impact of the projects financed.

- Publication, in 2021, of the first Allocation and Impact Report associated with the sustainable debt issuance, with the aim of detailing the allocation of funds and the environmental and social impact of the projects financed. The second Allocation and Impact Report associated with the sustainable debt issuance was published in 2024.

- Alignment of information reporting with the recommendations of the TCFD, in order to provide clear and consistent information on the financial risks and impacts related to climate change.

- Caixa has responded to various sustainability indices, demonstrating an ongoing commitment to ESG practices. For example, over the four years of the 2021-2024 strategic cycle, the evolution of Sustainalytics' ESG Risk Rating showed significant progress. In 2021, Caixa obtained a rating of 21.3 (medium risk), which improved to 20.2 in 2022 (medium risk), 13.8 in 2023 (low risk), and 14.3 in 2024 (low risk). In 2025, Caixa also obtained a rating of 13.4 (low risk), which places CGD among the 10% top ranking Banks in terms of ESG Risk Rating. In addition, Caixa participated in other external sustainability indices and assessments, including:

    - CDP - Climate Change 2024 (B) (02/2025).
    - MSCI - MSCI ESG Ratings - A (06/2024).
    - Financial Times - Europe Climate Leaders 2024 - Top 500 European companies (04/2024) | as well as Europe Climate Leaders 2021, 2022, and 2023.
    - Moody's - V.E - 52/100 (01/2024).

4.4. Sustainability Statement

4.4.1. General disclosures

4.4.1.1. Basis for Preparation

Disclosures Regarding Specific Circumstances

The Corporate Sustainability Reporting Directive (CSRD) aims to ensure that companies disclose sustainability information that is reliable, comparable, and relevant for stakeholders to assess the non-financial performance of companies.

The preparation and disclosure of Caixa's sustainability report follows the new regulatory guidelines arising from the implementation of the CSRD. Although the CSRD has not yet been transposed into national legislation, Caixa has made its best efforts to meet the requirements outlined in the directive, aligning with the recommendations of supervisory and regulatory bodies. For this reason, and considering that this is the first year of reporting according to this new framework, it is not feasible to provide comparative information for most indicators against the previous year. Nevertheless, it is important to note that there have been no material changes compared to the sustainability information reported in the previous year that are not directly related to the implementation of the CSRD and the ESRS standards.

Caixa used the exemption provided in the CSRD regarding the phase-in period for the indicators, which will be reported in 2025 and 2027, or within the timeframe to be defined following a review of the applicable regulations. In order to provide stakeholders with an objective view of Caixa's ESG performance, whenever the identified material topics do not have specific ESRS standards, Caixa discloses its own indicators or other frameworks such as the Global Reporting Initiative (GRI).

Caixa acknowledges that it is not obligated to disclose classified or sensitive information, even if such information is considered material. However, no need has been identified to withhold information related to intellectual property, know-how, or innovation results. Additionally, the exemption to withhold the disclosure of imminent facts or ongoing negotiations has not been applied.

The information reported in the 2024 Sustainability Report was prepared in a consolidated manner to reflect the structure and key activities of the Caixa Group, including Commercial Banking, Asset Management, Investment Banking, and Venture Capital, as outlined in Chapter 1.3.3. Caixa Group in the 2024 Management Report and Accounts. Considering the type of activities carried out and their low materiality, no specific information is included about Caixa Imobiliário, Imobiliária Caixa Geral, Imobci, and Caixa Participações, SGPS. The scope of consolidation is the same as that of the financial statements, with the exception of the entities mentioned. The Group's subsidiaries included in the consolidated perimeter of the sustainability report are exempt from presenting individual sustainability reports. In line with the relevant topics, this document discloses information on Caixa's own activities as well as its upstream and downstream value chain.

It is worth noting that the content of this report contributes to meeting the sustainability requirements defined by the Technical Unit for Monitoring and Oversight of the State-Owned Business Sector (UTAM) and to responding to the commitments made by Caixa, such as the United Nations Principles for Responsible Banking.

With regard to changes in the preparation and disclosure of sustainability information compared to the previous reporting period, the following indicators have undergone changes in their calculation methodology:

- Scope 3 emissions (category 15): the calculation of these emissions for the group's entities was included.
- Scope 3 emissions (categories 5 and 6): given the materiality analysis carried out on scope 3, these categories are no longer reported.

Caixa opted to adopt the ESRS transitional provision for most indicators, according to which it is not obliged to disclose comparative figures in the first year of application of the directive.

No metric disclosed in the report has been validated by an external body other than the guarantee provider.

Double Materiality Analysis

Considering the CSRD guidelines, in 2024, a double materiality analysis was conducted, taking into account the main business activities of the Caixa Group - commercial banking, asset management, investment banking, and venture capital - with the participation of the most representative entities of the Caixa Group.

The time horizons used for the double materiality analysis were defined as short term (0-2 years), medium term (2-5 years), and long term (> 5 years). In some specific exercises, particularly for the definition of climate and environmental (C&E) risk scenarios, the timeframes used were: short term (≤ 3 years), medium term (3-5 years), and long term (> 10 years). The time horizons are aligned with the deadlines defined in internal regulations and those used by Caixa in other internal exercises.

Strategic Alignment of the Caixa Group

For the first time at the Bank, the strategic importance of Sustainability and Social Responsibility was recognised, and as such, in the Caixa 2021-2024 Strategic Cycle, it was integrated as one of the six key areas of focus:

1. Service quality and innovation;
2. Leadership and value proposal;
3. Sustainability and social impact;
4. Profitability and efficiency;
5. Consolidation of the governance and risk management model;
6. People, culture and transformation.

Through its 2021-2024 Strategic Plan, Caixa set out to:

- Meet the financial needs of Portuguese families and companies by being present in their day-to-day lives and supporting their medium- to long-term projects, with particular emphasis on the area of sustainability;
- Focus on excellence and simplicity in customer service, innovative solutions, and a comprehensive value proposition;
- Pursue a business model aligned with the best practices in terms of profitability and environmental, social and governance sustainability, consolidating its leadership position in banking in Portugal.

It is possible to observe a connection between the material topics identified above and the scope of the strategic vectors 'people, culture, and transformation,' 'sustainability and social impact,' and 'service quality and innovation', which demonstrates the alignment of these topics with the company's business model and strategy. Throughout the document, the main objectives, policies, actions, and respective metrics for each of the material topics identified are briefly described.

Considering the national and international objectives of achieving a carbon-neutral economy, sustainable financing emerges as one of the main challenges for the financial sector. Caixa aims to support the construction of a more sustainable society by providing products and services that contribute to the decarbonisation of businesses and families, as well as the gradual integration of ESG dimensions into risk assessment models.

To this end, Caixa has developed the 2021 - 2024 Strategic Sustainability Plan, supported by five areas of action, namely:

1) Sustainable and Inclusive Financing;
2) Climate Risk Management;
3) Equity, Digital and Financial inclusion;
4) Transparent Governance Models;
5) Disclosure of Sustainability Information.

As part of the definition of the 2021-2024 Sustainability Strategy, Caixa outlined a set of objectives and KPIs within each of the ESG dimensions, contributing to specific Sustainable Development Goals.

For the 2025 - 2028 strategic cycle, Caixa will continue to promote the continuous improvement of its reporting disclosures through the use of key ESG frameworks and the reduction of estimates from external sources that may potentially generate some level of uncertainty.

Business Model and Value Chain

Caixa operates based on a universal banking perspective, with a clear commitment to leading in its ability to provide services that meet the specific needs of its customers. In 2024, Caixa Geral de Depósitos (Caixa) consolidated its leadership in Portuguese banking, with a 6% increase in the number of digital customers, 2.4 million, and a 10% increase in the number of mobile customers, reaching 1.9 million. At the corporate level, Caixa achieved net income of €1.735 billion, a 34% growth compared to the previous year. Consolidated turnover stood at €165 billion, an increase of €9.5 billion, driven by the strong support for the economy and families in Portugal.

The Corporate and Institutional Loan portfolio grew by 6.2%, demonstrating Caixa's support for the economy, while the mortgage loan portfolio increased by approximately €1 billion. In Portugal, Caixa outpaced the market growth in Loans and Advances to Customers (5.0% vs 3.1%) and Deposits (7.5% vs 6.5%).

Additionally, Caixa maintained its market leadership in core sectors such as specialised credit, trade finance, debit and credit cards, mutual investment funds, and financial insurance. At the end of 2024, Caixa had 10,817 employees, of which 6,067 were in Portugal.

In terms of ESG, Caixa has been investing in the development of new specific financing lines with the purpose of funding projects with environmental or social goals, as well as supporting other financing instruments such as sustainable bonds. No material changes have been identified compared to the previous year regarding the range of financial products and services offered.

In accordance with its Sustainability and Energy Transition Policy, Caixa offers pricing benefits on financing products for businesses and institutions that contribute to environmental or social goals. Regarding financing for individuals, the pricing strategy should, in addition to the risk assessment component, also consider the purpose of the financing and/or its collateral, allowing for a cross-cutting commercial approach that contributes to Caixa's goal of supporting the transition to a low-carbon economy and financing projects with a social impact on people's lives.

As part of the definition of the 2021 - 2024 Sustainability Strategy, Caixa set the goal of achieving €1.5 billion in financing (accumulated until 2024) for ESG products in Portugal, meaning products that contribute to specific environmental and/or social objectives. This goal mainly impacts corporate customers and individual customers. Also within the scope of sustainability, various Group entities have been defining commercial approaches tailored to their specific reality.

The Caixa Group offers its customers nearly all financial services specialisations, including, for example, Commercial Banking, Asset Management, and Investment Banking.

Through a strong international presence in regions such as Europe, Africa, America, and Asia, the Caixa Group also commits to international business as a strategic pillar of its sustained growth and, equally important, its key role in the recovery and internationalisation of the Portuguese economy.

Caixa's value chain consists of various banking and support activities that underpin market, supervisory and regulatory requirements. Upstream, there are investors and suppliers, who ensure the availability of capital and the products and services necessary for the bank's operations. Among the main types of suppliers are information and communication technology services, the management of own facilities, and payment services.

Downstream, customers are identified as the main stakeholders, as they use the financial products and services provided by Caixa. This dynamic reinforces the bank's role as an agent of economic development, attracting resources and channelling them to customers through its lending activities, investment, and other banking services. In addition, Caixa maintains an ongoing relationship with the community and other stakeholders, highlighting its role as a socially and environmentally responsible bank.

Although the business model is evolving, the branch network, commercial and central departments represent the essential workforce in a financial institution's value chain.

In terms of governance, Caixa's Sustainability Committee stands out as an advisory body to the Executive Committee, overseeing management and guiding decisions regarding the implementation of the Sustainability Strategy from a corporate perspective. It includes participants from various departments involved in different components of the business model and value chain, such as marketing, risk, corporate support, resources and means, or financial markets. This composition promotes a multifaceted vision and the contributions of various functions within the institution in sustainability matters.

Risk management and internal controls for sustainability reporting

The risk management and internal control system concerning sustainability follows Caixa's global internal control and risk management model. Given that this is the first year of reporting in accordance with the new framework, the identification of risks and the respective controls related to material distortion in Sustainability Disclosure is in an evolving phase. Once the risk identification and respective controls phase is complete, the conclusions of the assessment will be gradually integrated into the relevant internal processes and functions and communicated to the administrative, management and supervisory bodies through the Sustainability Committee.

4.4.1.2. Double Materiality Assessment

Caixa conducted its double materiality process based on a structured approach, aligned with the requirements of the ESRS 2 standard of the CSRD, with the aim of identifying the most relevant impacts, risks, and opportunities (IROs) for the organisation, considering both impact materiality and financial materiality.

The process followed the steps below:

1. **Identification of sustainability topics and subtopics** - Caixa identified an initial set of relevant sustainability topics through sectoral benchmark analysis, analysis of ratings and international frameworks, both cross-sectoral and sector-specific, international reporting standards, and also took into account relevant internal documentation published to date.

   For each potential material topic and subtopic, a compilation of impacts, risks, and opportunities was made, considering their respective definitions outlined in the ESRS standards. The IROs were identified through desk research and benchmark analysis, including the use of the list of topics present in the ESRS 1 AR16 standard. For each impact, risk, and opportunity, relevance was identified along the value chain (downstream, upstream, own operations) and the time horizon (short, medium, and long term, or current). The identification process consisted of a series of iterations and reviews with various Caixa stakeholders to arrive at the final IRO list.

   The impacts, risks and opportunities related to business conduct were identified based on criteria such as the financial sector in which Caixa operates, geographical location, main areas of activity and the structure of business transactions, including direct banking services for individuals and transactions between companies.

2. **Stakeholder consultation** – An external consultation was conducted with 14 stakeholder groups, including customers, shareholders, regulators, employees, suppliers, civil society organisations, public authorities, and institutional investors, with the aim of gathering perceptions on the bank's material impacts on society and the environment. To ensure a comprehensive and representative analysis, two consultation methods were used:

   a) Direct consultation – Conducted through surveys, providing a quantitative view of stakeholders' perceptions and expectations. This consultation involved all Caixa Group entities, with 2,301 survey responses collected.

   b) Interviews – Conducted with selected stakeholder groups, offering a qualitative approach to deepen the understanding of the identified material impacts.

Additionally, in the consultation process, stakeholders were differentiated into 'interested' and 'affected', allowing for a better understanding of the impact of Caixa’s activities on each of these groups.

In addition to the external stakeholder consultation, internal experts were also consulted to provide direct assessments of the identified impacts, risks, and opportunities. A total of 19 Caixa departments in Portugal and 11 national and international entities participated, ensuring a comprehensive technical and strategic perspective.

IRO Prioritisation

The methodology for assessing impacts, risks and opportunities (IRO) took into account the requirements of the ESRS standards and the Group's strategic objectives.

- Impacts: The process identified significant impacts on people and the environment resulting from Caixa's activities and its value chain, considering both current and potential impacts.
- Risks: Risks associated with environmental, social, and governance (ESG) factors that may impact Caixa financially were analysed, including climate and regulatory risks, for example. The assessment of the financial impact focused primarily on a qualitative evaluation.
- Opportunities: Caixa identified opportunities related to various sustainability topics, such as those associated with the transition to a more sustainable business model, including new opportunities for sustainable financing and innovation in financial products.

Evaluation criteria, methodology, and thresholds were defined to establish an evaluation framework for impacts, risks, and opportunities and to determine material topics. The evaluation criteria follow the guidelines of the official ESRS documents, ensuring methodological compliance and comparability in reporting.

Methodology for Evaluating Impacts, Risks, and Opportunities

Impacts: These were assessed according to the criteria set out in the ESRS standards, which include severity for actual impacts, and additionally, for potential impacts, the probability. The severity of the impacts includes scale, which relates to the gravity or benefit caused, scope, which concerns the extent of the impact, and irreversibility, which assesses the ability to reverse negative impacts.

Caixa has assessed how the impacts of its operations depend on external factors, such as natural resources or relationships with employees and customers, and vice versa. Assessing impacts and dependencies is a starting point for identifying links to risks and opportunities.

Risks and opportunities: Risks and opportunities were analysed based on their magnitude and probability, using assessment criteria defined internally by Caixa, each with four different levels. Magnitude reflects the potential financial effects resulting from risks and opportunities, considering the impact on the achievement of the company's commercial and/or strategic objectives, liquidity, capital, and reputation. Probability measures the expected occurrence of each risk or opportunity, allowing a clear distinction between events with varying degrees of recurrence. Financial risks and opportunities were classified based on the expected impact on Caixa's operations, using a heat map.

For each evaluation criterion, Caixa adopted a four-level scale, ensuring alignment with other internal risk assessment exercises, allowing for comparability of the results obtained. The process of identifying, assessing and managing IROs was carried out at the end of the reporting period, and the feasibility of gradually integrating this process into internal risk assessment models will be analysed.

The double materiality exercise will be reviewed in alignment with the definition of the strategic cycle or whenever significant structural changes occur in the internal or external context.

Double Materiality Consolidation and Final Calibration

Consolidating the results involved a critical analysis of the responses obtained from surveys and interviews, checking the consistency and representativeness of the identified topics. The contributions from stakeholders were cross-referenced with the technical assessments from internal experts.

Caixa consolidated and calibrated the results of the materiality analysis using a weighted approach, combining the assessments from internal focal points and stakeholder perceptions. In assessing financial materiality, Caixa's focal points played a central role, given their technical understanding of economic impacts.

Integration in Strategic Management

The results of the double materiality analysis will be integrated into Caixa's next strategic cycle and taken into account when defining key sustainability commitments and monitoring metrics.

The double materiality process took into account the main activities and geographies where Caixa conducts its business operations, providing a comprehensive view of the associated negative impacts and risks. Caixa also analysed how its impacts emerge directly from its activities or result from its business relationships, ensuring a comprehensive view of the value chain.

Double Materiality Results

Based on the above process, it was possible to obtain the double materiality results and define material topics at Group level:

- Climate Change
- Community Support
- Human Resources Management
- Customer Relations
- Digital Transformation and Innovation
- Corporate Governance
- Ethics, Conduct, and Compliance
- Sustainable Financing and Investment
- Risk Management
- Privacy and Information Protection

The result of the double materiality analysis exercise shows that the topics covered by ESRS E1, ESRS S1, ESRS S3, ESRS S4 and ESRS G1 are considered material. The following topics and subtopics were identified as material: referring to ESRS Standard S1, the topic “Human Resources Management” and subtopics “Attracting and Retaining Talent”, “Training and Development”, and “Occupational Health and Safety”; referring to ESRS Standard S3, the topic “Community Support” and subtopic “Social Value and Community Development”; for ESRS Standard S4, the topic “Customer Relations” and subtopic “Responsible Marketing and Commercialization”; for ESRS Standard E1, the topic “Climate Change” and subtopics “Adaptation to Climate Change in Own Operations”, “Mitigation of Climate Change” and “Decarbonization of the Portfolio”; and for ESRS Standard G1, the topic “Ethics, Conduct and Compliance” and subtopic “Compliance Management”.

It was determined that the sustainability topics covered by ESRS E2, ESRS E3, ESRS E4, ESRS E5 and ESRS S2 are not considered material.

4.4.1.3. Material Impacts, Risks and Opportunities

The double materiality analysis allowed for the identification and prioritisation of significant impacts associated with Caixa's direct operations and its value chain, covering both positive and negative effects, current and potential. Identifying impacts, risks, and opportunities is an important contribution to strategic definition, as it enables the organisation to anticipate challenges, mitigate risks, and proactively seize opportunities.

The approach adopted for the evaluation of each IRO took into account various criteria, with a focus on:

1. Assessing whether the impact is current (current and actual effect the company has on the environment and/or people) or potential (effect with a high, medium, or low probability of occurrence that the company may have on the environment and/or people).
2. Level of significance of the impact (very high, medium, or low);
3. Scope of the impact (global, generalised, moderate, and minimal);
4. Irreversibility of the impact (reversible in the short term, reversible in the medium term, reversible in the long term, and irreversible damage).
5. Probability of the impact occurring (low, medium, high, and very high);
6. Identifying the stage of the value chain, namely activities that have an impact on stakeholders upstream (e.g. suppliers) or downstream (e.g. customers) of the value chain. Own operations encompass the direct impact of operational activities, including on employees.

Caixa determines which sustainability issues are material based on an evaluation scale, considering as material the IROs that obtain a consolidated score of more than 4.

Negative impact

- Topic Climate change. Subtopic: Climate Change Mitigation

Caixa recognises that greenhouse gas emissions associated with its financing portfolio and value chain (scope 3) represent a current negative impact, both in its direct operations and upstream and downstream of the value chain. These emissions contribute to increasing the impact of climate change, driving global temperature increases, changes in weather patterns, more frequent natural disasters, and impacts on ecosystems and biodiversity. To mitigate this impact, the Caixa Group is strengthening decarbonisation strategies and sustainable financing and investment, promoting a gradual alignment with global climate targets.

Positive impact

- Topic: Human Resources Management. Subtopic: Talent Attraction and Retention

Attracting and retaining talent has a positive impact on both Caixa's operations and its value chain (upstream and downstream). By creating internal job opportunities and investing in the development of its employees, Caixa contributes to job creation, professional development, and career progression.

- Topic: Community Support. Subtopic: Social Value and Community Development

Caixa plays an active role in the social and economic development of the local communities where it operates, promoting initiatives that generate a positive social impact, both through the Bank's operations and downstream in its value chain. Support for social, economic, or environmental projects and programmes contributes to a more resilient, responsible, and equitable society.

- Topic: Customer Relations. Subtopic: Responsible Sales and Marketing

Adopting responsible and transparent marketing and sales practices generates a positive impact, both on Caixa's operations and downstream in its value chain. By promoting clear and accessible information, Caixa empowers its customers to make more informed and conscious decisions, strengthening their financial literacy and trust in financial institutions, while ensuring alignment with principles of transparency and business ethics.

- Topic: Sustainable Financing and Investment; Subtopic: ESG Investment and Financing

Investing in projects with solid ESG criteria represents a potential positive impact, both on Caixa's operations and downstream in its value chain. Through sustainable financing, Caixa directs capital to companies and projects that promote environmental management, social equity, and responsible governance practices, fostering medium- to long-term value creation and driving the transition to a more sustainable economy.

Material Risks Identified

Caixa's double materiality analysis identified a set of risks with potential financial impacts on the organisation. These risks were classified according to their time horizon and are distributed across different topics, including climate change, human resources management, and ethics, conduct, and compliance.

- Topic: Climate Change. Subtopic: Adapting to Climate Change in Own Operations

The exacerbation of physical risks arising from climate phenomena, both chronic (rising temperatures, rising sea levels) and acute (extreme weather events such as storms and floods), may pose a risk to Caixa's infrastructure and operations in the medium term.

- Topic: Climate Change. Subtopic: Climate Change Mitigation.

In the medium term, failure to meet greenhouse gas emission reduction targets could result in additional costs related to offsetting emissions and possible regulatory sanctions.

- Topic: Climate Change. Subtopic: Portfolio Decarbonisation.

The transition to a low-carbon economy can bring significant challenges associated, among other things, with regulatory changes, economic crises, new stakeholder demands, and shifts in consumer behaviour. These factors may impact Caixa's portfolio decarbonisation strategy, requiring adjustments to its financing and investment models.

- Topic: Human Resources Management. Subtopic: Talent Attraction and Retention

In the short term, increased employee turnover may impact operational continuity and raise recruitment and training costs, affecting the organisation's day-to-day operations.

- Topic: Human Resources Management. Subtopic: Intensification of Talent Shortage.

The growing competition for specialised talent could make it more challenging in the medium term to recruit and retain qualified professionals, especially in areas that are critical to Caixa.

- Topic: Ethics, Conduct, and Compliance. Subtopic: Compliance Management).

The rapid evolution of sustainability regulatory requirements may increase the risk of non-compliance, potentially leading to reputational and financial impacts for Caixa in the short term.

Material Opportunities Identified

Caixa's double materiality analysis identified a number of strategic opportunities with potential benefits for the organisation, its operations, and its value chain.

- Topic: Climate Change. Subtopic: Portfolio Decarbonisation.

In the medium term, Caixa can drive the decarbonisation of its loan and asset portfolios, reducing its carbon footprint and aligning with global climate targets. This opportunity encompasses both Caixa's own operations and the downstream value chain.

- Topic: Human Resources Management. Subtopic: Talent Attraction and Retention

In the short term, Caixa may strengthen its ability to attract and retain talent, contributing to enhanced competitiveness and productivity. This opportunity is related to the organisation's own operations.

- Topic: Human Resources Management. Subtopic: Training and Development.

The expansion of career development programmes represents an opportunity for Caixa in the short term, contributing to employee development and training. This opportunity is associated with own operations.

- Topic: Human Resources Management. Subtopic: Occupational Health and Safety.

In the short term, strengthening psychosocial support can improve employee wellbeing and contribute to building a healthier and more productive working environment. This opportunity is related to Caixa's own operations. Promoting a better work-life balance may also contribute to improving the organisational climate.

- Topic: Customer Relations. Subtopic: Responsible Sales and Marketing.

In the short term, Caixa may strengthen the alignment of its products and services with customer needs and expectations, contributing to improved satisfaction and increased loyalty levels. This opportunity encompasses both Caixa's own operations and the downstream value chain.

- Topic: Digital Transformation and Innovation Subtopic: Digital Transformation and Artificial Intelligence.

The increased use of Data Analytics and Big Data represents a short-term opportunity, allowing Caixa to improve service personalisation and enhance operational efficiency. In the short term, the expansion of artificial intelligence and automation may optimise internal processes and enhance customer experience. This opportunity is related to the organisation's own operations.

- Topic: Corporate Governance. Subtopic: Disclosure of Non-Financial Information.

In the short term, Caixa may strengthen the disclosure of ESG information, aligning with best practices and international standards. In a context of increasing regulatory requirements regarding non-financial disclosure, it is also essential to meet the expectations of various stakeholder groups, especially investors, who regularly require robust and transparent ESG information. This opportunity is related to the organisation's own operations.

- Topic: Sustainable Financing and Investment Subtopic: Development of ESG Financial Products.

Market differentiation through the development of sustainable financial products represents an opportunity in the short term, both in own operations and downstream in the value chain. By offering sustainable products, Caixa responds to the expectations of a new generation of consumers who are more aware of the environmental and social impact of their purchasing decisions, while also strengthening its reputation as a responsible brand.

- Topic: Sustainable Financing and Investment. Subtopic: ESG Investment and Financing.

Reinforcing the integration of sustainability principles in the selection of assets for investment and financing makes it possible to increase the resilience of Caixa's portfolio. The transition to a low-carbon economy also presents business opportunities, allowing Caixa to actively support companies in their transition to more sustainable business models and capitalise on new business opportunities associated with the climate transition. This opportunity is related to the organisation's own operations.

- Topic: Risk Management. Subtopic: Managing ESG Risks and Other Systemic Risks

In the medium term, Caixa may strengthen the gradual integration of ESG dimensions into its risk assessment model, improving its resilience and ensuring alignment with the expectations of regulators and supervisors. This opportunity is associated with own operations.

- Topic: Privacy and Information Protection; Subtopic: Privacy and Data Protection

In the short term, Caixa may strengthen its organisational approach to privacy and data protection, contributing to building a relationship of trust with its customers and reducing the risk of breaches in this area. This opportunity encompasses both the organisation's own operations, upstream and downstream in the value chain.

4.4.1.4. Governance Model for Sustainability

Governance Model

Caixa is a public limited company and a public enterprise. The shares representing its share capital, including those that may be issued in future capital increases, are fully owned by the Portuguese State and are held by the Directorate-General for the Treasury. Therefore, all shareholder resolutions are, by definition, made by unanimous decision.

Caixa's activity is regulated in compliance with the law and in accordance with its articles of association, pursuant to the provisions of the Commercial Companies Code (CSC) and the General Framework of Credit Institutions and Financial Companies (RGICSF). Any plans to amend its Articles of Association must be duly substantiated and approved by the shareholder and authorised in advance by the supervisory authorities, depending on the matters to be amended.

The governance model adopted by Caixa follows the Anglo-Saxon model, comprising a Board of Directors, an Executive Committee, and, in the supervisory component, an Audit Committee and a Statutory Auditor (SROC).

The Caixa Group operates in an environment regulated by Portuguese and European legislation, comprising a number of national and international companies across various sectors, including commercial banking, investment banking, venture capital, asset management, specialised credit, and the real estate market.

The approach to Sustainability within the Group is based on the implementation of a set of instruments, which include the adoption of corporate policies and governance models that incorporate environmental, social, and governance principles and expectations, as well as the definition of specific action plans.

Caixa's Sustainability Governance model includes the Governance Committee, which monitors the definition of the Corporate Sustainability Strategy and its implementation; the Risk Committee, which is specifically responsible for climate and environmental risks; and the Sustainability Committee, chaired by the CEO, an advisory body to the Executive Committee that oversees management and guides decisions regarding the implementation of the Sustainability Strategy.

At Caixa, the Chief Risk Officer specifically oversees ESG risks and sustainability issues. The Corporate Support Department (DSC), which includes the Sustainability Area, is responsible for defining, driving, and monitoring the Corporate Sustainability Strategy - applicable to Caixa and Caixa Group Entities, both in Portugal and abroad - ensuring compliance with the United Nations Global Compact Principles, alignment with the Sustainable Development Goals, the Principles for Responsible Banking, and all commitments made to governmental and non-governmental organisations, as well as best practices and national and international guidelines, along with the coordination of the Corporate Sustainability Program and the Environmental Management System.

The sustainability governance architecture of the Caixa Group follows a corporate approach, ensuring that various governance models are adopted in a proportional and appropriate manner to the context and activities of each Group Entity, namely BCGA – Angola. BCI - Mozambique; BNU - Macau; BI and BCA - Cape Verde; the CGD France Branch, and the CGD East Timor Branch.

These models, however, share common elements, such as the appointment of local Sustainability Officers, who report to the respective Boards of Directors or General Management (in the case of branches) and liaise with Caixa's DSC, or the allocation of responsibilities related to Sustainability to Boards of Directors, Committees, specialised Commissions, or Working Groups.

Responsibilities, Composition, and Expertise of the Governing Bodies

The Board of Directors delegates the day-to-day management of the company to an Executive Committee, defining the limits and conditions of the delegation. This day-to-day management includes the processes of governance, controls, monitoring, management, and oversight of impacts, risks, and opportunities, with particular emphasis on defining the Sustainability Strategy, Strategic Plan, Corporate Policies, among other internal regulations.

In turn, the Executive Boards are decision-making bodies dependent on Caixa's Executive Committee, which delegates powers to them, functioning as intermediate decision-making bodies: Executive Board for Costs and Investment; Executive Board for Capital, Asset, and Liability Management; Executive Board for Products; Executive Board for Rating; Executive Board for Data Governance and Information Security; Executive Board for Business Continuity, Operational Risk, and Internal Control; Executive Board for Model Validation; Executive Board for IT Development.

The Audit Committee is responsible for supervising the Board of Directors, monitoring Caixa's compliance with the law and the articles of association, verifying and monitoring the independence of the SROC in accordance with the law and, in particular, verifying the suitability and approving the provision of services other than auditing services. The SROC is appointed by the General Meeting on a proposal from this Committee.

Caixa's Board of Directors, supported by the Risk Committee and the Audit Committee, establishes the risk appetite, which is implemented by the Executive Committee with the support of the Risk Management Department and the control and business areas. The Board of Directors is also responsible for aligning the risk appetite with the bank's strategic priorities for sustainable finance and climate action.

The Executive Committee is responsible for the overall risk management of Caixa, namely by managing and executing its risk appetite, monitoring risk metrics and ensuring consistency between risk appetite and the corporate strategy for sustainable finance and climate action.

The Governance Committee ensures compliance with the principles of internal governance and the assessment of sustainability strategies and policies, proposing guidelines on sustainability and social and environmental responsibility to the Board of Directors.

In a complementary manner, the Risk Committee monitors the management policy for all the risks related to Caixa's activity, including climate and environmental risks, and the risk measurement and own funds calculation models adopted internally, as well as the Community Directives and the guidelines of the Bank of Portugal and the European Central Bank on this matter. This Committee analyses, among other things, the reports presented by the Risk Management Department on climate and environmental risk and is responsible for monitoring the policies for managing both financial and non-financial risks.

Committees have also been set up, which are structures dependent on the Executive Committee, with no deliberative powers, serving as a privileged forum for debate and advisory support for decision-making, through the adoption of recommendations, or for the presentation and discussion of cross-cutting themes. In this context, the Sustainability Committee (CSU) supervises management and guides decisions regarding the definition and implementation of the Sustainability Strategy. As an advisory body, it also informs the Governance Committee about the planning and annual compliance with the Sustainability Strategy. This Committee submits to the Executive Committee matters identified as structural and important actions for the evolution of sustainable development and the management of climate and environmental risks at Caixa.

Chaired by the Chief Executive Officer, the Sustainability Committee has included, since 2022, the directors responsible for ESG matters, including the Chief Risk Officer, as well as a director responsible for a commercial area (executive directors). This ensures a management model that promotes the development of cross-cutting ESG projects and their continuous monitoring by the administration.

Caixa's Sustainability Committee operates from a corporate perspective, covering the Caixa Group's Branches and Subsidiaries. Caixa's Sustainability Policies, which are transposed by the Group Entities covered, specify the responsibilities of their administrative and top management bodies. In addition, there are also specific bodies in certain Entities where these matters are monitored locally.

The coordination and reporting of the Group Entities with Caixa 'parent company' on Sustainability matters are carried out continuously through monitoring by the Corporate Support Division, which interacts with locally appointed Sustainability Officers, as well as through the actions of the governing bodies.

According to the articles of association, the Board of Directors must be composed of a minimum of eleven and a maximum of seventeen members, including a Non-Executive Chairman and a Vice-Chairman, elected by the General Meeting for four-year terms. Caixa's Board of Directors elected for the 2021-2024 term is composed of seventeen members, of which eight are executive directors and nine are non-executive directors (seven of whom are independent non-executive directors, corresponding to 41.18%).

Regarding diversity in the Board of Directors, Caixa is firmly committed to greater gender diversity and parity in its composition, ensuring that it equally provides a balance of knowledge, skills, qualifications, and professional experience. It is the responsibility of the CNAR, with regard to Caixa's administrative and supervisory bodies, among other functions, to identify and recommend candidates for positions in these bodies, evaluate their composition in terms of knowledge, skills, diversity, and experience, prepare a description of the roles and qualifications for the positions in question, and assess independence and availability for the role.

In this context, the majority of the members of the Board of Directors possess extensive professional and academic experience in the fields of sustainability and risk management. Moreover, Caixa has been monitoring the progress made in recent years in the field of Sustainability and, therefore, has been offering various training programmes on the subject to both members of the board and other employees. Caixa complies with the provisions of Law No. 62/2017 concerning the objectives and targets for balanced representation between women and men in governance and supervisory bodies and applies its Diversity, Equity, and Inclusion Policy for Caixa and its Group Entities (OS 14/2023). This policy establishes the principles applicable to Diversity, Equity, and Inclusion for Caixa and Caixa Entities employees, also defining the diversity objectives and balanced gender representation targets in the Board of Directors and Supervisory Board.

Caixa's Diversity, Equity, and Inclusion Policy is corporate in nature and establishes the principles applicable to the employees of Caixa and its Group Entities. It also defines diversity objectives and targets for balanced gender representation in Caixa's Board of Directors and Supervisory Board.

At the same time, the Policy for the Evaluation of Suitability for the Selection of Members of Caixa's Board of Directors and the Supervisory Board requires that, in the collective evaluation of the governing and supervisory bodies, it is verified whether their composition collectively meets the necessary knowledge, skills, experience, professional qualifications, and sufficient availability to fulfil the respective legal and statutory functions in all relevant areas of activity, as well as to understand Caixa's operations, including the main risks to which it is exposed. Additionally, the composition of Caixa's Board of Directors follows the principles set out in its Succession and Suitability Evaluation Policies for the selection of members of the governing and supervisory bodies, the legal requirements, and best applicable guidelines, ensuring an appropriate composition in terms of the necessary knowledge and experience, including risk management, for the sound and sustainable management of Caixa and the Group.

The election of Caixa's governing bodies for the 2021-2024 term, as well as the appointment of the members of the Executive Committee, exceeded by 1.7 percentage points the minimum threshold of 33.3% for the underrepresented gender, in accordance with Law No. 62/2017. In terms of gender diversity, a diversity ratio of 54.5% was achieved.

The composition of the Board of Directors and the Supervisory Board in office as of 31 December 2024, ensures the appropriate knowledge, skills, and experience in managing Caixa, with a particular emphasis on banking and financial markets (extending to the various business segments of the Caixa Group), as well as the legal and regulatory requirements applicable to the Caixa Group's activities, extended to the various geographies where the Caixa Group operates. The individual details can be consulted in the educational backgrounds of Caixa's Directors.

In 2024, as part of the Permanent Education Programme (PEP), a permanent training programme for the members of Caixa's Board of Directors, both executive and non-executive directors attended a series of training sessions, including those offered by ISEG (in partnership with Columbia Business School), Stanford University Graduate School of Business, Wharton University of Pennsylvania, and Universidade Católica Portuguesa (in partnership with Kellogg School of Management), namely the Strategic Leadership Program, Executive Program in Strategy and Organization, The Strategic Chief Sustainability Officer Program, RMA Wharton Advanced Risk Management Program, and the Advanced Management Program, respectively.

Also within the scope of the Strategic Management in Banking Programme (PEP Programme 2), the members of Caixa's Board of Directors attended several sessions, among which stands out the session held by Eng. Jorge Moreira da Silva, KPMG, and PwC, with topics related to Sustainability and ESG, such as 'The Challenges of Sustainable Development and International Cooperation in a Context of Poly-Crises,' 'Integrating ESG in Core Banking Processes: a Practical Approach,' and 'Navigating Change: Effective Ways to Accelerate the ESG Value at CGD Group'.

It is worth mentioning that within the scope of this programme, sessions were also held that addressed the topics of Cybersecurity and Culture within the Caixa Group.

The experience and knowledge of the members of the Board of Directors are relevant to the impacts, risks, and opportunities identified by Caixa, generally relating to the material sustainability topics, such as, for example, people management, customer relations, digital transformation and innovation, risk management, corporate governance, ethics, conduct and compliance, or privacy and information protection.

Provision of Information and Approach to Sustainability Issues in Governing Bodies

The material impacts, risks, and opportunities (IROs), identified within the scope of the adaptation process to the CSRD requirements, were approved by the Executive Committee and are listed in section 4.4.1.3. Material Impacts, Risks, and Opportunities. The IROs identified will be taken into account in the development of the new strategic sustainability plan for 2025–2028. In order to ensure the existence of due diligence measures, the monitoring of the results achieved and the assessment of the effectiveness of the policies, actions, metrics and targets adopted, the regular monitoring of the IROs will be carried out by the Sustainability Committee once the new strategic cycle has been defined.

Additionally, it is important to highlight that the IROs identified encompass various topics that have already been addressed in Caixa's strategic sustainability management, such as climate change mitigation, social value and community development, portfolio decarbonisation, and the development of ESG financial products.

Specifically in terms of Sustainability, the Sustainability Committee (CSU), as an advisory body to the Executive Committee, plays a central role in providing information in Caixa's sustainability area. The existence of a robust, transparent management model is ensured, promoting the development of cross-cutting ESG projects and their continuous monitoring by the administration.

The CSU held four meetings in 2024. The CSU has been including in its agenda the monitoring of various projects relevant to the implementation of the 2021 - 2024 Sustainability Strategy, with some of its key competencies being as follows:

- Ensuring compliance with the governance model for Sustainability, as well as the means and resources for efficient and effective performance;
- Supervising the preparation of sustainability reports and other relevant information in this area - namely ratings and external audits - for Caixa, Caixa Group Branches and Subsidiaries;
- Checking the performance of the Environmental Management System, the respective Environmental Management Plan, and the achievement of the objectives and responsibilities reflected therein under the international standard ISO 14001;

- Checking Education for Sustainability, as well as the communication of good practices and results, in order to contribute to a leading position in this area and to positively reinforce Caixa's reputation, visibility, and trust.

Within the scope of climate and environmental risks:

- Monitoring the development and implementation of the Caixa Group's strategic guidelines for climate action;
- Promoting corporate alignment of sustainable financing in the light of climate and environmental risks;
- Monitoring and promoting the implementation of measures to mitigate and adapt to climate and environmental risks;
- Monitoring and promoting the measurement of the carbon footprint and transition plans;

Within the scope of Sustainable financing:

- Appraising the measures proposed under Caixa's Sustainable Financing Action Plan, with a view to maximising business opportunities and market leadership in this area;
- Monitoring alignment between all functional structures, branches, and subsidiaries in identifying solutions that accelerate the transition to a low-carbon economy.

Consideration of Sustainability Issues in Variable Remuneration

According to the Remuneration Policy for the Members of Caixa's Governing Bodies, the remuneration of the executive members of the Board of Directors consists of a fixed component, to which a non-guaranteed variable remuneration may be added. In the case of Non-Executive Directors, the remuneration consists exclusively of a fixed component, determined by a decision of the Remuneration Committee of the General Assembly (CRAG) at the beginning of the term, without prejudice to the provisions regarding those among these Directors who are part of the Special Committees of the Board of Directors and/or the Audit Committee, in relation to the determination of the corresponding remuneration, also decided by the CRAG.

The aforementioned Remuneration Policy takes into account, among other principles, consistency with the management of sustainability risks, particularly through the incorporation of metrics related to environmental, social, and governance risks in the process of allocating variable remuneration, considering the responsibilities and functions assigned.

Thus, the determination of variable remuneration takes into account three evaluation dimensions: Profitability and Risk; Commercial Performance and Regulatory Performance and Sustainability. If variable remuneration is awarded to Executive Directors, its value cannot exceed the fixed remuneration earned by each Director during the evaluation period, ensuring that the fixed component represents a sufficiently high proportion of the total remuneration. This approach allows for the application of a fully flexible Remuneration Policy regarding the variable component, including the possibility of not awarding or paying it.

The award or payment of variable remuneration depends on the thorough verification of compliance with the criteria defined for this purpose in the Remuneration Policy, to be carried out by the CRAG, in collaboration with the Appointment, Assessment and Remuneration Committee or other Special Committees of Caixa's Board of Directors.

In addition, a corporate Remuneration Policy for Caixa Group Employees has also been established, and it is up to Caixa's Entities to adopt the aforementioned Order of Service and transpose it into their respective internal regulations, with the necessary adaptations based on their circumstances, taking into account the specifics of the applicable local legislation and regulations, with prior confirmation from Caixa.

In fact, Caixa's Entities, within the scope of the review of the Remuneration Policy for the Members of the Governing and Supervision Bodies, adopt some of the principles and provisions set out in the aforementioned Corporate Remuneration Policy for Employees, with the necessary adjustments, particularly considering specific legal and regulatory requirements.

The aim of the Employee Remuneration Policy is to ensure an adequate balance between the fixed and variable components of remuneration, considering market practices and ensuring that this balance respects the legitimate rights and interests of customers, as well as the guidelines set by Caixa's Board of Directors. The policy allows for flexibility in variable remuneration, including the possibility of not paying any variable remuneration.

The Employee Remuneration Policy contains various provisions on matters related to Sustainability, such as:

- The Policy aims to adopt the best remuneration practices, including, among others, considering the environmental and social impacts related to Caixa's activities, seeking to promote behaviours and outcomes aligned with Caixa's sustainability goals;

- The Remuneration Policy aims to comply with the limits set in the Risk Appetite Statement (RAS) defined for Caixa and Caixa Entities, taking into account all risks, including reputational risks and risks arising from the abusive sale of products (mis-selling), and also considering environmental, social, and governance risk factors;

- The Remuneration Policy aims to ensure non-discrimination, being gender-neutral, covering all employees, and promoting the principle of equal pay in terms of gender, including the conditions for awarding and paying both fixed and variable remuneration;

- The awarding of variable remuneration considers, among other dimensions, regulatory performance and Sustainability, ensuring that it is not exclusively tied to a quantitative target for the marketing or provision of banking products and services; and it does not promote the marketing or provision of a specific product, or category of products, that are more profitable for Caixa or its employees, to the detriment of the legitimate interests of customers;

As part of the process of defining objectives, there are guidelines for the inclusion of specific cross-cutting KPI categories, including the 'Sustainability' category. This includes individual and Group performance KPIs on environmental, social, and governance topics, aiming to consider the impacts of the Group's activities on the environment and society in the objectives related to remuneration.

The Caixa Group's Balanced Scorecard is a component of variable remuneration, in accordance with the model approved by the Executive Committee, and applies to Caixa, Group Entities within the domestic perimeter, and the International Entities for different groups of Employees. At Caixa, the definition of Scorecard/KPI applies to all individuals in Executive Roles and all Employees, while at the Group Entities within the domestic perimeter, the definition applies to all individuals in Executive Director roles and Executive functions, as well as all Employees. In the International Entities, this definition is made on an entity-by-entity basis. The Balanced Scorecard incorporates a set of Corporate KPIs, defined centrally and applicable across the entire organisation, and a set of Individual Specific KPIs defined by each Division / Entity for each of its Employees. Since 2022, the Corporate KPIs group has included a KPI related to the ESG topic.

The Employee Remuneration Policy also establishes the rules applicable to Caixa's Incentive System, which aims to promote the achievement of commercial objectives set in alignment with Caixa's Strategic Plan and Budget. It serves as a key tool to guide and enhance sales efforts while ensuring effective risk management, discouraging excessive risk-taking, and promoting and encouraging the pursuit of activities within the risk appetite criteria (RAS) established by Caixa's Board of Directors. The incentive scheme does not apply to the members of the governing and supervisory bodies but rather to the Commercial Network.

The remuneration of the executive members of the Board of Directors is made up of a fixed component and a variable component, the latter of which is not guaranteed. The fixed component of the remuneration represents a sufficiently high proportion of the total remuneration of the executive members of the Board of Directors to allow the application of a fully flexible policy with regard to the variable component, including the possibility of its non-payment. The variable component is indexed to the achievement of specific objectives and qualitative criteria in line with Caixa's long-term interests.

The total amount of the variable component of the remuneration to be awarded to the executive members of the Board of Directors based on their performance is determined by the shareholder, on a proposal from CRAG. The award of each portion of the variable component of the remuneration, in the deferred part, depends on fulfilling the Access Condition (as defined in the Remuneration Policy, available on Caixa's institutional website), the Deferral Period (5 years from the Award Date) and verification of the non-applicability of *malus* and clawback arrangements, in accordance with the Remuneration Policy and the regulations and guidelines in force.

The variable remuneration of the members of the management bodies is directly related to the performance of strategic objectives, one of which is sustainability. The ESG KPI in the Corporate BSC has a weight of

12.5% in the total assessment, and is made up of three indicators: Sustainalytics, CDP and MSCI ESG Rating, with a weight of 33.3% each.

The variable component of remuneration is paid in instruments through the issue of commercial paper, in accordance with the applicable legal and regulatory framework, without being linked to the value of CGD’s shares. Payment is deferred for a period of 5 years.

Stakeholder Engagement

In the development of Caixa's activities, engagement with various stakeholders is essential for the pursuit of its mission, not only because they play a key role in business development but also because they are affected by its activities.

This importance is clear, starting with the principles established with partners, notably the Code of Conduct, which enshrines the need for the institution and its employees to guide their practices in relations with customers and other stakeholders based on a set of established principles of conduct and values. Similarly, the 2021-2024 Strategic Plan was focused on serving Portuguese families and businesses, emphasising excellence and simplicity in customer service, and aligning with the best environmental, social, and governance sustainability practices.

Caixa has been disclosing various aspects of its relationship with stakeholders, particularly in its Sustainability Reports, including communication methods such as the Intranet and performance evaluation for employees; the Caixa Website, social media, the Commercial Network, and 'Fora da Caixa' meetings for customers; shareholder meetings/assemblies; meetings with investors and analysts - with Caixa appointing a representative for market relations (Investor Relations) - the business platform and contract management with suppliers, or social responsibility projects with the community. Caixa also maintains contact with supervisory and regulatory authorities, making the necessary reports, participates in sector association activities, and engages with the media.

In 2024, regarding engagement with stakeholders, particular importance was given to the stakeholder consultation conducted as part of the double materiality exercise, carried out in alignment with the requirements of the Corporate Sustainability Reporting Directive, with the aim of identifying the most relevant impacts, risks, and opportunities for the institution.

This consultation was conducted with 14 stakeholder groups, including customers, shareholders, regulators, employees, suppliers, civil society organisations, public authorities, and institutional investors, with the aim of gathering perceptions on the institution's material impacts on society and the environment.

To ensure a comprehensive and representative analysis, two consultation methods were used: direct consultation, carried out through surveys, and interviews, conducted with selected groups of stakeholders. The stakeholder groups were also differentiated between 'interested' and 'affected,' allowing for a better understanding of the impact of Caixa's activities on each of these groups. The double materiality process took into account all the activities and geographies where Caixa conducts its business operations.

The consolidation of the results involved a critical analysis of the responses obtained from the surveys and interviews, including cross-referencing the contributions from stakeholders with the technical assessments from internal experts.

Based on the double materiality process, which is more detailed in section 4.4.1.2. 'Double Materiality Assessment' of this Report, which included stakeholder consultation, allowed the results of the double materiality to be obtained and the material topics at the Group level to be defined.

The results of the double materiality analysis were presented to the relevant governing bodies, namely the Executive Committee and the Governance Committee. They will be integrated into Caixa's next strategic cycle and considered in the definition of key sustainability commitments and monitoring metrics.

4.4.2. Environmental information

4.4.2.1. Climate change (ESRS E1 - Climate change)

As a leading financial institution in Portugal, Caixa has robustly integrated climate challenges into its overall strategy and risk management model, in response to the expectations of the supervisor and regulator in these matters. Environmental sustainability has become a key pillar of the corporate vision and banking activity, aligning with Portugal's and the European Union's commitment to reducing carbon emissions and combating climate change.

Caixa's vision, focused on creating sustainable value and risk management, reflects the understanding that climate change is not only an environmental risk but also has social and financial impacts. The materialisation of climate risks impacts credit institutions both directly on their activities, operations, or infrastructure, and indirectly through transmission channels to the real economy, their counterparties, financial assets, and the markets in which they operate. These risks manifest in the 'traditional' categories of prudential risks (credit risk, market risk, operational risk, and liquidity risk). The mechanisms by which climate risks affect the banking system are highly complex, impacting the financial system and, in general, the real economy in a differentiated manner. Thus, Caixa is committed to being a transformative agent, actively contributing to the transition to a carbon-neutral economy and encouraging more sustainable business practices among its customers and partners.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, the following impacts, risks, and opportunities were identified:

- **Negative impact**: i) Greenhouse gas emissions associated with the portfolio and value chain contribute to climate change;
- **Risk:** i) The effects of an increased severity of physical climate risks may impact the Bank’s activities, ii) Failure to meet the Bank’s GHG reduction targets may impact costs related to GHG emissions offsetting, and iii) Transition risks may impact the Bank’s portfolio decarbonisation process.
- **Opportunity**: i) Decarbonisation of loan and asset portfolios.

The identified negative impact is primarily related to financing carbon-intensive sectors that have a substantial contribution to greenhouse gas (GHG) emissions. Therefore, the development of a transition process to more sustainable business models is crucial.

The escalation in the severity of physical climate-related risks poses a substantial threat to business operations and investments. Climate change has the potential to cause damage to infrastructure, increase operational costs, and affect the availability of natural resources. Sectors such as agriculture may experience decreases in productivity, impacting the supply chain and financial stability. Additionally, vulnerability to climate risks may result in higher insurance premiums and difficulties in obtaining adequate coverage.

Caixa may also face challenges in adapting to new environmental regulations, which will require investments in sustainable technologies and improved risk management practices.

Transition risks may impact the decarbonisation process, as consumers may choose to purchase alternative products, or goods/services may become more expensive due to carbon taxes.

Policies and Other Related Corporate Documents

In 2020, the European Central Bank released the Guide on Climate and Environmental Risks related to risk management and disclosure. The Guide includes 13 expectations, covering aspects from governance to risk management and reporting. The supervised institutions were invited to submit an assessment of the status, as of December 2024, of the implementation of the 13 expectations for climate and environmental risk management. Caixa, as a supervised bank, has implemented an Action Plan across all material entities within the Caixa Group in order to align governance principles and policies in this area.

The European Banking Authority (EBA) has also issued guidelines on minimum standards and reference methodologies for identifying, measuring, and monitoring environmental, social, and governance (ESG) risks.

The EBA guidelines set out the requirements that institutions must adopt for managing internal ESG risk processes, particularly for climate and environmental risks, in order to ensure the resilience of the business model and the risk profile of institutions in the short, medium, and long term.

Based on these same guidelines, Caixa has been developing an approach to managing climate and environmental risks supported by the following policies:

- **Climate and Environmental Risk Management Policy:** it establishes the principles and governance model for managing climate risks, including the responsibilities of the three lines of defence, procedures for identifying and assessing climate risks, the integration of these factors into business processes, which are intrinsically linked to business strategies and risk appetite, and finally, monitoring and communication procedures.

- **Sustainability Policy:** it defines the governance model, guiding principles, and specific activities, as well as the key stakeholders and their respective responsibilities in managing Sustainability within the Caixa Geral de Depósitos Group. At the climate and environmental level, the following principles of action stand out:
    - Environmental Dimension: Caixa is committed to adopting a proactive approach and measures for pollution prevention and the continuous improvement of environmental performance, alongside compliance with regulatory obligations;
    - Business and Products: The development of commercial activity should be based on promoting the transition to a low-carbon economy and considering environmental, social, and governance factors in decision-making on credit, investment, and the provision of financial products and solutions, in line with the defined internal strategies, policies, and regulations;
    - Risk and Internal Control: Risk management and internal control systems must integrate environmental, social, and governance factors into decision-making, in line with the defined internal strategies, policies, and regulations. Caixa conducts its activities in compliance with the ethical and conduct standards it has adopted, in addition to the legislation and regulations applicable to sustainability matters.

- **Carbon Neutrality Transition Plan 2050:** defines the commitments to reducing carbon emissions related to its own activities and financing activities for three priority sectors, as well as the action strategy for achieving these objectives.

- **Environmental Management System Governance Model:** defines the structure, responsibilities, and coordination model between the Divisions (OE)/Caixa Group Entities involved in the Environmental Management System.

The Environmental Management System Governance Model is available to employees via Caixa's internal regulation system. The Sustainability Policy and the Climate and Environmental Risk Management Policy are available via Caixa's internal standards systems and institutional website. The Carbon Neutrality Transition Plan can be consulted on Caixa's institutional website.

Actions and Initiatives Implemented

Caixa identifies, assesses, and analyses its risks and associated risk factors, considers actions to manage, address, or mitigate the assessed risks, reports and monitors these risks, and, when necessary, manages residual risk exposure (e.g., through risk appetite limits or capitalisation).

Materiality Identification and Assessment

Climate and environmental risk is considered a cross-cutting risk that impacts the various risks to which Caixa is exposed. The management of climate and environmental risks begins with the application of approaches that enable the identification, understanding, and assessment of the impacts of these risks on other categories and on the Caixa Group's business model. Given the characteristics of these risks, this understanding is based on short-, medium- and long-term frameworks, allowing all the dynamics related to the materialisation of their impacts to be explored.

In accordance with the Bank's C&E risk management policy and adopting its respective strategic guidelines, the timeframes for the scenarios are short-term (≤ 3 years), medium-term (3-5 years), and long-term (> 10 years). These time horizons are used in the materiality assessment: to determine materiality, both quantitative and qualitative approaches are employed to assess the risk level in relation to predetermined limits, which are then aggregated to draw conclusions about the Group's strategic objectives.

In 2024, Caixa conducted a Business Environment Scan (BES) analysis, taking into account a wide range of external factors and trends that shape the business conditions in which the institution operates, based on its main geographical business exposures, namely: key macroeconomic variables, competitive landscape, policies and regulations, technology, social/demographic developments, and geopolitical trends.

In addition to the BES topics, all relevant climate and environmental factors were subject to a materiality assessment. This comprehensive assessment ensured that the most critical sustainability issues were identified and prioritised.

Caixa conducts the materiality assessment process for C&E risks at least annually in June (with data from December of the previous year) and, if necessary, a reassessment in December (with data from June of the same year), with the aim of assessing and inventorying the risks of concern to the Bank.

Materiality Assessment: Scenarios

The scenarios from the Network for Greening the Financial System (NGFS) were used as input in the materiality assessment methodologies, specifically addressing the subtypes of transition risk. In general, the NGFS adopts three narratives: orderly transition narratives, disorderly transition narratives, and 'No Transition' narratives, also known as the 'Hot House World'.

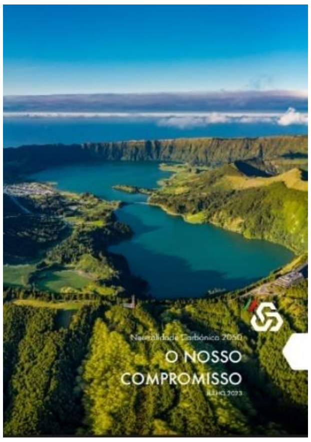
The use of different scenarios is particularly relevant for understanding the sensitivity of the business strategy to various climate and economic pathways. However, for the purposes of the materiality assessment of C&E risk, it is necessary to draw conclusions based on a 'central scenario.' The scenario chosen for this exercise is based on:

- The applicable regulatory requirements establish the Net-Zero 2050 scenario as the relevant one for methodologies related to transition risks. This is the case for GHG reduction targets, which are part of Caixa's decarbonisation initiatives.
- Furthermore, to better determine the economic effects of climate discussion (i.e., transition impacts) within time horizons still compatible with business and management cycles, the Net-Zero scenario is the most relevant (otherwise, economic effects would only be visible in a very long-term horizon).
- Therefore, for the assessment of transition risks, the projections of the Net-Zero 2050 scenario for the year 2030 are assumed as central for the C&E Materiality Assessment exercise.
- The Net-Zero 2050 scenario provides a limited basis for assessing physical risks (i.e., this is a scenario compatible with mitigating the impacts of climate change). The current performance is more aligned with the perspective of a delayed transition.
- Thus, assessing physical risks, the conservative view of the Current Policies scenario is adopted.
- To test the sensitivity of the results obtained in this exercise, the Delayed Transition scenario is also considered.

The results obtained should guide business and risk management approaches to address the main risk concentrations. In practice, Caixa will implement controls and conditions that will prevent or mitigate the risk exposures projected for 2030.

Carbon Neutrality Transition Plan[7]

In 2021, Caixa joined the Net Zero Banking Alliance (NZBA) commitment with the aim of achieving carbon neutrality by 2050, following an approach consistent with the goal of limiting the maximum temperature increase to 1.5ºC by 2100, compared to pre-industrial levels. In July 2023, after its approval by the Executive Committee and the Board of Directors, Caixa (Portugal) published intermediate carbon reduction targets (2030) based on the SBTi tools, for its own activities and for three priority sectors: electricity generation, commercial mortgages, and cement.



- Own activities (scope 1 and 2): - 42% (ton CO_2eq), compared to 2021.
- Electricity generation (Corporate): -71% by 2030 (ton CO_2eq/MWh), compared to 2022.
- Electricity generation (Project finance): - 71% by 2030 (ton CO_2eq/MWh), compared to 2022.
- Cement manufacturing: - 21% by 2030 (tonnes CO_2eq/ton cement), compared to 2022.
- Commercial real estate (Residential segment): - 53% by 2030 (ton CO_2eq/m^2), compared to 2022.
- Commercial real estate (Services segment): - 64% by 2030 (ton CO_2eq/m^2), compared to 2022

Following the release of the Carbon Neutrality Transition Plan established at the national level, voluntary reduction targets were set for the entities within the Group whose sectors were applicable.

Subsequently, in accordance with the reporting requirements set out under Pillar III, adopted in the Market Discipline reporting (Pillar III), requirements came into force mandating the financial sector to publish financed emissions reduction targets at a prudential level for eight carbon-intensive sectors: electricity generation, fossil fuels, aviation, cement, chemicals, maritime and land transport, steel, and aluminium.

After analysing the portfolio and its materiality, Caixa set intermediate carbon reduction targets (to be achieved in 2026) and disclosed the distance to 2030 according to the International Energy Agency Net Zero Emissions 2050 (IEA NZE 2050) scenario for the prudential perimeter. These targets focus on the most representative sectors of the eligible reporting portfolio: electricity generation, fossil fuels, air transport, and cement:

- **Electricity Production**:

- Intensity 2023: 155.0 gCO_2/kWh
- Target 2026: 155.0 gCO_2/kWh (Caixa has committed to at least maintain the intensity);
- Distance 2030 (IEA): -30% (in 2023, Caixa already displayed a lower portfolio intensity - 155 gCO_2/kWh – than that estimated by the IEA for 2023 – 223 gCO2/kWh);

- **Fossil Fuels**:

- Intensity 2023: 71.6 kgCO_2/GJ
- Target 2026: 69.9 kgCO_2/GJ);
- Distance 2030 (IEA): 33%;

- **Cement, Clinker, and Lime Production**:

- Intensity 2023: 663.3 kgCO_2/t
- Target 2026: 629.5 kgCO_2/t;
- Distance 2030 (IEA): 47%;

- **Transport - Aviation**:

- Intensity 2023: 111.1 gCO_2/km

[7] It should be noted that when calculating carbon intensity in the electricity generation and cement, clinker, and lime production sectors, there are methodological differences between those defined in the Transition Plan and those of Market Discipline (Pillar III) and, for this reason, there are differences in the trajectories obtained in these sectors.

- Target 2026: 105.1 gCO_2/km;
- Distance 2030 (IEA): 31%.

The achievement of the established carbon reduction targets depends on an increase in sustainable financing through the launch of financial products and services that support the energy transition, as well as on building relationships with customers to align their portfolios with the best climate performance.

To this end, Caixa has defined the climate strategy monitoring manual, which outlines the framework, processes, and governance that ensure that strategic implementation is monitored in a rigorous and transparent manner. Additionally, it establishes a set of implementation measures as well as performance indicators (KPIs) and risk indicators (KRIs) that allow the defined targets to be monitored and the need for mitigation measures to be assessed in the event of material deviations.

Caixa Gestão de Ativos - Adherence to Climate Action 100+

In 2022, Caixa Gestão de Ativos joined the Net Zero Asset Managers Initiative, a global initiative that brings together the efforts and commitment of international asset management firms signatories to the decarbonisation of managed portfolios, thereby contributing to the goal of achieving net-zero greenhouse gas emissions by 2050. In December 2023, it published its initial emissions reduction commitments associated with the managed portfolios.

The strategy was strengthened in October 2024 with the adherence to Climate Action 100+, an international initiative of investors that focuses on direct engagement with issuers who, on a global scale, stand out negatively due to the level of greenhouse gas emissions associated with their activities.

Caixa Gestão de Depósitos - ESG Award

In 2024, Caixa launched the first edition of the Caixa ESG Awards, which recognised companies that stand out for integrating ESG best practices into their management within their economic sector.

With this distinction, Caixa acknowledges the work of Portuguese companies that embrace and tailor good environmental, social, and governance indicators in their management, thus demonstrating a high level of commitment to the sustainable development goals.

CGD awarded prizes in 3 different categories:

- Caixa ESG *Awards*: based on Caixa's 2023 ESG rating and the eligibility and ranking criteria agreed upon, prizes were given to the companies with the best ESG rating in each of the 25 economic sectors, as well as to all companies with a 'strong' ESG rating;
- Caixa Supply Chain Award: based on market evidence valued by Caixa, to distinguish a company that stands out in incorporating ESG concerns into its value chain, promoting ESG practices with suppliers/customers and granting associated advantages;
- Caixa Environmental Transparency and Performance Award:: based on the Carbon Disclosure Project (CDP) 2023 rating, to distinguish companies that voluntarily disclose the carbon emissions they produce (A, A- and B ratings are eligible).

Environmental Management

In 2024, the Head Office Building celebrated 10 years of certification for its Environmental Management System. Obtaining and renewing this certification over the years demonstrates the Bank's commitment to promoting a set of policies, practices, and processes aimed at mitigating, managing, and controlling the environmental aspects associated with its activity.

The Environmental Management System has played a key role in promoting the continuous improvement of processes that impact the reduction of energy consumption and, consequently, the reduction of carbon emissions associated with the maintenance of the Building.

Reinforcing Caixa's commitment to Sustainability, the Environmental Management System team was involved in the working group for developing the requirements for the new Head Office Building. Thus, contributing to ensuring that the new Head Office Building is based on inherent characteristics of sustainability, well-being, and comfort.

The building is currently under construction and aims to achieve BREEAM sustainability certifications at the Excellent level and Passive House certification, in the Core & Shell component. Given the building's certification level, Caixa has strengthened its interest in evaluating LEED and WELL sustainability certification options for its fit-out project, aiming to achieve the Platinum level .

According to the energy certificate for the new building, the estimated consumption will be 5,368 MWh/year. The consumption of the current Head Office building in 2024 was 17,443 MWh, whose consumption associated with Caixa corresponds to 13,117 MWh, so, taking into account the services that will remain in the current building, a reduction in consumption of around 16% is estimated. In terms of emissions, this is estimated to be a reduction of around 322.80 tCO_2.

For the 2024 financial year, Caixa has invested 122 million euros in implementing this action plan. The costs mentioned correspond to the items recorded under “Other Tangible Assets” in the individual and consolidated financial statements in notes 14 and 16, respectively. Caixa expects future resources to be allocated to the action plan in the amount of 118 million euros.

Management of own properties

In order to efficiently manage its own properties and increase the number of assets suitable for sale, Caixa has developed a strategy which involves, on the one hand, direct contact with analysts and decision-makers from public bodies, presenting concrete proposals for regularizing assets, and on the other hand, intensified collaboration with external providers specializing in regularizing the most complex cases. In order to inform the market in advance about the assets that would be made available for sale, those that were still in the process of being regularized were published on Caixa Imobiliário's website.

In 2023, as a result of the regularization processes, CGD had an increase in assets for sale of €29.4 million, representing 38% of the real estate portfolio under regularization. In 2024, this figure amounted to €20.8 million, corresponding to 49% of the portfolio.

Banco Comercial do Atlântico - Renewable Energy Generation

BCA has implemented several measures to drive the decarbonisation of its own activities, including:

- the installation of photovoltaic systems at the Support and Logistics Division buildings in Santiago and at the BCA unit on the Island of Sal, with installed capacities of 40 kWp and 35 kWp, respectively, resulting in a significant reduction in electricity costs and energy consumption from non-renewable sources.
- Support for the microgeneration of renewable energy, promoting sustainable practices and reducing dependence on fossil fuels, particularly among families and microenterprises.

Banco InterAtlântico - Decarbonisation Measures

BI has implemented various initiatives aimed at reducing GHG emissions and promoting environmental sustainability. These actions include the installation of solar panels on the Head Office Building to generate clean, renewable energy, as well as the gradual replacement of the car fleet with electric vehicles, in line with the energy transition and the reduction of the carbon footprint.

Banco Nacional Ultramarino Timor - Installation of Solar Panels

On 01/11/2024, solar panels were installed at the head office of the Timor Branch. This is an energy efficiency measure and, furthermore, a way for BNU Timor to set an example for the community and its partners.

This measure had an impact in terms of savings on electricity bills for November and December.

Targets and Metrics

For the first time, Caixa estimated the carbon emissions associated with the 15 scope 3 categories related to its activities in Portugal, as of December 2023. This exercise revealed that the materiality of emissions is associated with the financing portfolio (category 15), which accounts for 99.5% of scope 3 emissions. The detailed analysis is shown in the table below:

Category (scope 3)	% GHG emissions (Dec 2023)
C1 - Purchased Goods and Services	0.01%
C2 - Capital Goods	0.05%
C3 - Fuel- and Energy-Related Activities	Not applicable
C4 - Upstream Transportation	0.00%
C5 - Waste	0.00%
C6 - Business Travel	0.05%
C7 - Employee Commuting	0.16%
C8 - Upstream Leased Assets	0.19%
C9 - Downstream Transportation	0.00%
C10 - Third-Party Processing of Products Sold by the Organisation	Not applicable
C11 - Use of Products Sold	0.01%
C12 - End of Life of Products Sold	0.00%
C13 - Downstream Leased Assets	0.02%
C14 - Franchises	Not applicable
C15 - Investments	99.51%
Scope 3 (Total)	**100%**

With the aim of improving the environmental performance of the investments of the Group Entities, Caixa has been monitoring Scope 3 Greenhouse Gas emissions (category 15) related to the activities of its loan and investment portfolio. The analysis, regarding the portfolio as of 31 December 2024, was conducted using the methodology established by the Partnership for Carbon Accounting Financials (PCAF), with the key results summarised in the tables below.

		Total exposure amount (€M)	Scope 1 + 2 emissions (tCO_2e)	Scope 3 emissions (tCO_2e)	Carbon intensity Scope 1+2 ($tCO_2/€M$)
Absolute emissions by sector (Portugal)					
A	Agriculture, livestock, hunting, forestry and fishing	316	189,545	547,261	600
B	Mining industries	136	9,313	544,744	69
C	Manufacturing industries	3,740	1,452,836	4,247,131	388
D	Electricity, gas, steam, hot and cold water and cold air	1,414	47,408	48,427	34
E	Water collection, treatment and distribution; sewerage, waste management and depollution	258	302,310	158,947	1,174
F	Construction	1,254	107,854	112,069	86
G	Wholesale and retail trade and repair of motor vehicles and motorcycles	2,236	58,834	321,360	26
H	Transportation and storage	1,166	312,790	135,836	268

Total		5,394	205,959	576,827	38[9]

Regarding the monitoring indicators associated with the implementation of the Carbon Neutrality Transition Plan, focusing on the reduction of greenhouse gas emissions, there are estimated data for indirect sources, particularly for Scope 3 emissions (category 15), as they partly depend on external sources, such as the Bank's customers. The calculation of emissions based on primary sources (PCAF 2) was 36%.

[8] It reflects the ratio between the scope 1 and 2 emissions of the counterparties and the amount of exposure to the Business Loans segment with associated emissions (i.e., excluding sectors K - Financial and Insurance Activities, and O - Public Administration and Defence; Mandatory Social Security, and no associated CAE) in Portugal (on-balance exposure amount of €16.077M).

[9] It reflects the ratio between the scope 1 and 2 emissions of the counterparties and the amount of exposure to the Business Loans segment with associated emissions (i.e., excluding sectors K - Financial and Insurance Activities, and O - Public Administration and Defense; Mandatory Social Security, and no associated CAE) in Portugal (on-balance exposure amount of €5.394M).

For additional information regarding the calculation process associated with greenhouse gas emissions, as well as other relevant indicators, please refer to Annex A - Sustainability Indicators.

For other financial or non-financial metrics or indicators, any potential sources of measurement uncertainty, assumptions, or estimates are described in Annex A - Sustainability Indicators.

Chapter "39. Disclosures relating to financial instruments" provides details of the gross carrying amount as December 2024. It should be noted that the adjusted NACE of the counterparties is used for calculating carbon emissions and the denominator for calculating carbon intensity only considers the amount of exposure with an associated emissions calculation (as detailed in Annex A - Sustainability Indicators).

Caixa does not have any GHG removal projects underway using carbon credits to offset emissions. No internal carbon pricing schemes are applied.

Monitoring the Transition Plan

The section below presents information regarding the monitoring of emission reduction targets set by the Carbon Neutrality Transition Plan. The reduction targets were set for scope 1 and 2 emissions (own activities) as well as for scope 3 emissions relating to the electricity generation and cement production sectors and those associated with the bank's Commercial Real Estate portfolio.

Own operations (perimeter of CGD, S.A., Portugal)

Emission Scope	Starting Point 2021	Metric	Status 2024	Target for 2030	
Scope 1 and 2 (*location-based*)	**8 410** tons CO_2 eq	Absolute	**7 059 (-16%)** tons CO_2 eq	**-42%**	4 878 tons CO_2 eq

Own activities (scope 1 and 2)

The target set in the transition plan for reducing absolute emissions generated by Caixa's own activities was 42% by 2030, starting from 2021 (8,410 tCO_2 eq). Caixa's scope 1 and scope 2 emissions (Portugal) are considered - determined according to the location-based methodology. In 2024, scope 1 and scope 2 emissions totalled 7,059 tCO_2eq, a 16% reduction compared to the starting point. This reduction is mainly due to lower fuel consumption in the company's own fleet, as well as lower electricity consumption.

There are emissions that are considered to be locked in over time, since Caixa uses equipment with F-gases that are replaced as they become obsolete, so the emissions related to them, although residual, may remain constant during the useful life of the defined objectives. In terms of electricity consumption in Madeira and the Azores, taking into account the emission factors of local suppliers, it is estimated that these will remain constant over time. Regarding natural gas, despite the useful life of the equipment, Caixa is evaluating the relocation of natural gas-consuming buildings (Leiria and Aliados).

Financing activities (perimeter of CGD, S.A., Portugal)

Activity sector	Emission Scope	Starting Point 2022	Metric	Status 2024	Target for 2030	
Electricity Generation *Corporate*	Scope 1 and 2	**0.149** ton CO_2 eq/MWh	Relative intensity	**0.085 (-43%)** ton CO_2 eq/MWh	**-71%**	0.043 ton CO_2 eq/MWh
Electricity Generation *Project Finance*	Scope 1	**0.305** ton CO_2 eq/MWh	Relative intensity	**0.147 (-52%)** ton CO_2 eq/MWh	**-71%**	0.088 ton CO_2 eq/MWh
Cement Manufacturing	Scope 1 and 2	**0.637** ton CO_2 eq/ ton cement	Relative intensity	**0.662 (+4%)** ton CO_2 eq/ ton cement	**-21%**	0.505 ton CO_2 eq/ ton cement
Commercial Real Estate Residential segment	Scope 1 and 2	**0.011** ton CO_2 eq/m²	Relative intensity	**0.005 (-54%)** ton CO_2 eq/m²	**-53%**	0.005 ton CO_2 eq/m²
Commercial Real Estate Services segment	Scope 1 and 2	**0.059** ton CO_2 eq/m²	Relative intensity	**0.036 (-39%)** ton CO_2 eq/m²	**-64%**	0.021 ton CO_2 eq/m²

Project Finance electricity generation

The target set in the transition plan for this sector is a 71% reduction in physical carbon intensity by 2030, starting from 2022 (0.305 tCO_2/MWh). In 2024, the physical intensity of the portfolio associated with this segment was estimated at 0.147 tCO_2/MWh, representing a 52% reduction compared to the starting point and a 40% reduction vis-à-vis the expectable curve for 2024. Intensity was calculated by measuring financed emissions (tCO_2e) and financed generation (MWh) associated with the portfolio of companies in this asset class. The reduction was based on a decrease in exposure to fossil fuel-based electricity generation. The absolute financed emissions for electricity generation in Project Finance were estimated at 60 $ktCO_2e$ in 2024.

Commercial Real Estate (Residential Segment)

The target set in the transition plan for this sector is a 53% reduction in physical carbon intensity by 2030, starting from 2022 (0.011 tCO_2/m^2). In 2024, the physical intensity of the portfolio associated with this segment was estimated at 0.005 tCO_2/m^2, representing a 54% reduction compared to the starting point and a 47% reduction compared to the trajectory for 2024. The estimate was based on the most recent active exposure data associated with commercial property collateral in the commercial mortgages sector (residential segment) and the most recent issuance factors made available by the PCAF. These emission factors are based on the year 2020. Absolute financed emissions in this segment were estimated at 0.5 $ktCO_2e$ in 2024.

Commercial Real Estate (Services Segment)

The target set in the transition plan for this sector is a 64% reduction in physical carbon intensity by 2030, starting from 2022 (0.059 tCO_2/m^2). In 2024, the physical intensity of the portfolio associated with this segment was estimated at 0.036 tCO_2/m^2, representing a 39% reduction compared to the starting point and a 26% reduction compared to the trajectory for 2024. The estimate was based on the most recent active exposure data associated with commercial property collateral in the commercial mortgages sector (services segment) and the most recent issuance factors made available by the PCAF. These emission factors are based on the year 2020. Absolute financed emissions in this segment were estimated at 44 $ktCO_2e$ in 2024.

Electricity Generation (Corporate Segment)

The target set in the transition plan for this sector is a 71% reduction in physical carbon intensity by 2030, with 2022 as the starting point (0.149 tCO_2/MWh). In 2024, the physical intensity of the portfolio associated with this segment was estimated at 0.085 tCO_2/MWh, which means a reduction of 43 % compared to the starting point and 29% compared to the 2024 target. The estimate was based on carbon intensity information provided by some of the companies in the portfolio, data from the IEA (International Energy Agency) and the reduction in the Portuguese electricity generation sector by the end of 2024 (Source: APREN). The absolute financed emissions for electricity generation (corporate) was estimated at 39 $ktCO_2e$.

Cement manufacturing

The target set in the transition plan for this sector is a 21% reduction in physical carbon intensity by 2030, with 2022 as the starting point. In 2024, engagement was carried out with customers in the portfolio to collect their actual data. Taking into account the real information shared, the simulation was adjusted, significantly reducing the carbon intensity of the starting point (0.637 tCO2/ton cement). The physical intensity of the portfolio associated with this sector was 0.662 tCO_2/ton cement, which means an increase of 4% compared to the starting point and 9% compared to the expected value for 2024. Absolute financed emissions in cement manufacturing were estimated at 749 $ktCO_2e$ in 2024.

Monitoring Pillar 3 objectives

As mentioned above, Caixa has disclosed its metrics for reducing carbon emissions financed under Market Discipline (Pillar III), for the electricity generation, fossil fuels, cement and air transport sectors. These targets, with a starting point on the reference date of 31.12.2023, guide the decarbonization initiatives of CGD Group's financing and investment portfolios, and are reviewed and updated annually, according to the following logic:

- The reduction targets are guided by the objectives projected by the International Energy Agency (IEA) for 2030, according to a Net-Zero 2050 climate scenario. Under Market Discipline, the distance from these targets is calculated at each reference date.
- Caixa projects a target point for accumulated (decarbonization) performance over the following three years, allowing these commitments to be managed on the basis of medium-term guidelines.

Thus, in 2023 it projected the 2026 target point. In 2024, it will project the 2027 target point (to be disclosed in the Market Discipline of 31.12.2024).

The annual update exercise referred to in the previous paragraphs includes calculating the carbon intensities for the respective reference periods, recalculating the distances from the IEA targets for 2030, and confirming the target points (or intermediate targets) for the next three years.

In this context, we present below the developments recorded in relation to the last reference period, as well as the potential deviation from the theoretical trajectories defined.

Electricity generation sector

In the electricity generation sector, Caixa increased its intensity from 155 gCO_2/kWh on 31.12.2023 to 221.5 gCO_2/kWh on 31.12.2024. This increase is justified by Caixa's financing of companies located in geographies whose energy matrix is still highly dependent on non-renewable energy sources. Nevertheless, Caixa has been increasing its financing to companies and projects linked to the production of energy from renewable sources. Although the carbon intensity has increased, the curve is below the IEA value for 2030 (222.73 gCO2/kWh).

Fossil fuel sector

In the fossil fuel sector, there has also been a reduction in the carbon intensity of financing and investments (from 71.6 $kgCO_2/GJ$ on 31.12.2023 to 70.0 $kgCO_2/GJ$). This reduction is the result of a more favourable estimate of carbon emissions compared to those observed last year with relevant clients and counterparties.

Cement manufacturing sector

In the cement manufacturing sector, the carbon intensity shows an increase in 2024 as a result of increased exposure to companies with reported climate information (from 663.3 kgCO2/t to 701.8 $kgCO_2/t$). This real climate information contrasts with the estimated carbon intensity averages, which are automatically imputed to companies without climate information available. In this case, checking the actual performance of the companies resulted in a higher intensity compared to the estimates available on the market.

Air transport sector

The air transport sector's carbon intensity increased from 111.1 gCO_2/km on 31.12.2023 to 122.5 gCO_2/km. This increase is the result of the amortization, and consequent exit from the portfolio, of significant exposure to companies with environmental performance above the sector average.

4.4.2.2. EU Taxonomy

With the increased exposure to climate risks, the European Commission adopted the Taxonomy Regulation [Regulation (EU) 2020/852], 'Taxonomy Regulation', thus establishing a mechanism to identify environmentally sustainable economic activities, in conjunction with Directive 2014/95/EU of the European Parliament and of the Council (i.e. Non-Financial Reporting Directive - NFRD).

In addition, Delegated Regulations 2021/2139, 2022/1214, and 2023/2486 determine the criteria to be met by credit institutions in order to consider economic activities in line with the Taxonomy. An economic activity is considered to be aligned with the taxonomy when the significant contribution of this eligible economic activity to at least one of the environmental goals is confirmed, based on the technical criteria specified through the Delegated Acts.

In the case of credit institutions, the reporting requirements of the Taxonomy are based on the disclosure of the Green Asset Ratio (GAR), which corresponds to the proportion of the Group's assets that comply with the technical criteria of the Taxonomy. This indicator is measured according to the degree of alignment of the turnover or capital expenditure (Capex) of the counterparties in which the Group invests. In addition to reporting the proportion of alignment of the portfolio of assets covered, it is necessary to disclose the proportion of alignment relating to off-balance sheet exposures.

For Taxonomy reporting, Caixa collected information on the consolidated asset portfolio and categorised it into (i) financial companies, (ii) non-financial companies subject to the NFRD reporting obligation, (iii) households, (iv) non-financial EU companies not subject to NFRD disclosure obligations, (v) non-financial non-EU companies not subject to NFRD disclosure obligations, (vi) central, sovereign and supranational banks. In addition, it aggregated information by asset type, such as derivatives, loans and advances, debt securities, interbank spot loans, equity instruments and the trading portfolio.

In order to determine eligibility, the percentage of eligibility communicated by the corporate counterparties in segments (i) and (ii), applied to gross assets, the residential real estate loan portfolio, as well as loans secured by household real estate assets (iii) and car loans granted to households (iii) as of January 2022, were considered eligible.

In order to determine the alignment of corporate counterparties (i and ii) and based on the European Commission's (EC) clarifications[10], the data published by financial and non-financial companies regarding climate change mitigation and adaptation objectives were taken into account. This information was obtained from a national data provider. The reported alignment is, therefore, limited to the information provided by the supplier, which at this stage only contains data from listed Portuguese companies for the two objectives mentioned.

With regard to the household segments (iii), Caixa analysed the alignment of its real estate and vehicle portfolio in accordance with the technical requirements set forth in the regulations, taking into account real estate data (energy certificate, carbon emissions, year of construction, location) and vehicle data (type of vehicle, carbon emissions) obtained through Caixa's internal processes. Given the limitations of data on financed properties and vehicles (or acquired as collateral), the Caixa Group will strengthen its information collection processes in order to improve the information reported.

It should be noted that, given the lack of information on the portfolio held by the Group's entities, only the portfolio of Caixa (Head Office) was considered for the climate mitigation objective.

In order to apply the DNSH (Do No Significant Harm) criterion for business counterparties, it is considered that the proportion of sustainable activities reported by companies already includes this analysis. With regard to households, the application of the criterion is observed by the Caixa Group's climate risk management practices, namely by measuring the physical risk (e.g. floods, fires, earthquakes) to which properties are exposed. The financed real estate portfolio is, therefore, considered to comply with the DNSH criterion for the mitigation objective.

It should be noted that, according to the EC's clarifications, it has been confirmed that credit institutions do not have to verify compliance with the minimum safeguards for the retail segment.

Analysing the results obtained for December 2024, which are shown in the table below, it can be seen that approximately 59.1% of the Group's assets are covered by GAR. A total of 4.0% of the covered assets are aligned, with household financing being the segment that contributes most to the indicator.

Metrics based on turnover	Asset amount (in M€)	% Eligible assets	% Assets aligned with environmental taxonomy (Green Asset Ratio)
(i) Financial companies	5,252	38.7%	**0.1%**
Non-financial companies	20,671	2.8%	**1.6%**
(ii) of which subject to non-financial reporting obligations (NFRD)	4,707	12.1%	**6.9%**
(iv and v) of which other non-financial companies	15,964	-	**-**
(iii) Families	31,857	91.920%	**6.9%**
of which mortgage loans	29,274	100.0%	**7.5%**
of which car loans	9	100.0%	**38.0%**
Other assets contributing to the indicator (excluded from the numerator)	4,977	-	**-**

[10] According to the draft made available on 21 December 2023, *'DRAFT COMMISSION NOTICE on the interpretation and implementation of certain legal provisions of the Disclosures Delegated Act under Article 8 of the EU Taxonomy Regulation on the reporting of Taxonomy-eligible and Taxonomy-aligned economic activities and assets (third Commission Notice)',* the information disclosed must be obtained from real information and not based on estimates.

Metrics based on turnover	Asset amount (in M€)	% Eligible assets	% Assets aligned with environmental taxonomy (Green Asset Ratio)
Total contribution to GAR	**62,758**	**50.8%**	**4.0%**
(vi) Central governments, supranational issuers, and central banks	42,961	-	-
Trading portfolio	476	-	-
Total assets excluded from GAR[11]	**23,288**	**-**	**-**
Total assets	**106,195**	**-**	**-**

For more detail on the breakdown of the assets that make up GAR by environmental objective and sector of activity, the disclosure tables can be found in Annex c, in accordance with the template required by the Taxonomy.

Comparing alignment with the taxonomy with reference to 2023, where the GAR was 2.3%, the increase of 1.7 percentage points was due to:

- Greater coverage of information for the alignment of corporate counterparties (i and ii), which made it possible to obtain an alignment percentage of exposures represented in the portfolio;

  It can be seen that, for these corporate counterparties (i and ii), it is expected that there will be an increase in the alignment of their economic activities with the technical criteria of the Taxonomy over time, both due to improvements in data quality that allow for a better assessment of alignment, and in the alignment of the companies' strategic objectives with the EU's sustainability objectives.

- Revision of the processing of mortgage lending data, which allowed refining the analysis and increasing alignment in this segment of the portfolio.

It is worth highlighting that Caixa is in the process of designing and implementing a strategy for data collection and analysis to support the various disclosures under sustainable finance, relating to business counterparties, real estate, and vehicles.

In addition, the Group aims to continue working on the evolution of its strategic positioning, namely:

- Progressing in the development of new sustainable financing lines and products in line with the technical criteria of the Taxonomy Regulation. Of particular note is the Caixa ESG Credit Line, whose eligibility criteria already include concerns about alignment with the European Taxonomy Regulation at company level and at operation level (e.g. financing the purchase of new or existing buildings in the top 15% of national energy performance);

- Advancing the implementation of technological tools that support collection, evaluation, monitoring, management and reporting that are 100% compliant with the needs arising from European legislation applicable to the financial sector in terms of ESG.

Summary of the key performance indicators (KPIs) to be disclosed by credit institutions under Article 8 of the Taxonomy Regulation (with reference to December 2024)

		Total environmentally sustainable assets	KPI****	KPI*****	% coverage (over total assets)***	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)
Main KPI	**Green asset ratio (GAR) stock**	2.515.387.100,88	4%	5%	59%	5%	41%

		Total environmentally sustainable activities	KPI	KPI	% coverage (over total assets)	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)
Additional KPIs	***GAR (flow)***	1.050.823.359,76	4%	3%	0%	n/a	n/a
	*Trading book**	n/a	n/a	n/a

	*Fees and commissions income***	n/a	n/a	n/a			

[11] As described in the introductory paragraph 13 and Article 7(1) of the Commission Delegated Regulation (EU) 2021/2139, since there is no suitable method for calculating these positions.

4.4.3. Social information

4.4.3.1. Human Resources Management (ESRS S1 - Own workforce)

For Caixa, the existence of a management system focused on human resources and on a responsible leadership should involve all of the company's hierarchical levels, promoting the creation of an environment of respect, equity and inclusion, allowing the development and well-being of its employees.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, the following impacts, risks, and opportunities (IROs) were identified:

- **Positive impact**: i) By creating internal job opportunities, the Bank contributes to job creation and economic growth in society.
- **Risk**: i) High employee turnover.
- **Opportunity**: i) Strengthening talent attraction and retention strategies, ii) Strengthening career development programmes, and iii) Strengthening psychosocial support and work-life balance.

All Caixa Group employees[12] who may be materially impacted are included within the scope of disclosure.

Policies and Other Related Corporate Documents

The ability to attract, develop, and retain top talent ensures an efficient response to the challenges of the evolving and highly competitive sector. Therefore, in Caixa's strategy, talent management goes far beyond simply hiring qualified professionals. It is about investing in the continuous growth of teams, fostering the development of skills that are aligned with Caixa's needs and the expectations of each employee.

Talent Attraction and Retention

- **Recruitment and Selection Policy for Caixa Group Employees:** establishes the principles and criteria applicable to recruitment and selection for all employees[13] of the Caixa Group (including branches and subsidiaries in the international perimeter), with the exception of executive and non-executive governing bodies. The policy aims to achieve a balance between the strategic objectives of the Caixa Group in identifying internal competencies and hiring employees with a view not only to meeting short-term needs but also medium and long-term needs. Caixa's recruitment and selection process is based on the candidate's knowledge and experience, by defining the profile of the professional to be hired and using selection processes such as interviews, behavioural psychotechnical tests, ethical assessments, and function-specific evaluations.
- **Mobility Policy:** it is intended for all Caixa Group employees[6] and serves as an essential tool for implementing of the retention strategy by organising employees with potential for development into other roles, promoting mobility as a motivational tool.

Training and Development

- **Training Plan 2024:** designed to ensure a path of continuous and progressive development of skills for each function, along with the potential for career development and adaptation to current and future contexts, consolidating the structuring programmes for the bank's critical functions, anticipating the necessary follow-up actions, ensuring mandatory training for Caixa's activities, defining certifications by function and business areas that ensure Caixa's knowledge and quality of service, reinforcing the transversality, innovation, and alignment of training with the business, in accordance with the ongoing Strategic Plan.
- **Training and Talent Development Policy:** With a view to the development of all employees[7] at Caixa Group entities, the definition of this policy is a critical success factor, with the goal of having

[12] Permanent employees refer to employees with fixed-term or permanent employment contracts. Data on the Caixa Group's non-salaried employees will be reported in the next reporting period.
[13] Members of governing bodies, employees, trainees, and permanent or occasional representatives, regardless of the nature of their relationship with CGD.

qualified employees, with updated knowledge and competencies aligned with the development of Caixa's activities, enabling their professional progression.

- **BNU Staff Career Path:** updated in September 2024, it was designed to align the progression of BNU Macau employees with their professional skills, experience, and performance.

Occupational Health and Safety

- **Work Organisation Model at the Caixa Group:** establishes the general principles and framework, within the Caixa Group, for the different working methods to be implemented - In-person, Hybrid, and Teleworking, outlines the concepts, assumptions, and eligibility criteria for access to each working system, clarifies the responsibilities of Employees and their hierarchies, and defines the process for formalising, approving, and renewing the respective access requests. This model applies to employees and trainees of Caixa Geral de Depósitos and the entities of the Group within the domestic perimeter.

Other Corporate Policies or Documents on Human Resources

- **2024 Equality Plan and Diversity, Equity, and Inclusion Policy (DEI):** Caixa adopts policies that promote equal opportunities, diversity, and inclusion in the workplace. These measures include the implementation of an Equality Plan, which aims to eliminate discrimination and promote the reconciliation of personal, family, and professional life, as well as the DEI Policy, which establishes principles to ensure an inclusive and equitable work environment.

- **Declaration of Commitment to Human Rights**: It reinforces Caixa's commitment to respecting human rights in its relations with stakeholders.

- **Code of good conduct for preventing and combating harassment at work**: It is a guiding framework for everyone working at Caixa and complies with the developments in the law and the Labour Code to strengthen the legislative framework for preventing workplace harassment.

The corporate policies described above can be consulted in the Internal Regulation System (SNIS). The Executive Committee is responsible for implementing and monitoring these policies.

Actions and Initiatives Implemented

Talent Attraction and Retention

The profile of the new generations, combined with the implementation of new ways of working, has challenged the Bank to find alternative and creative ways of attracting and retaining talent. To this end, a set of initiatives has been developed aimed at potential and current employees, from attracting and recruiting them in the market to their retention, in particular:

1. Talent Attraction and Retention

- **'Geração Caixa' Internship Programme (PGC)**: between 2020 and 2024, 15,550 applications were received, with 793 (5%) recent graduates and/or master's degree holders were admitted as trainees, assigned to different business units of the Bank across the country. Of these, 374 (61%) were hired. In 2024, 5,415 applications were received (a 46% increase compared to the previous year), of which 172 (3%) were admitted (a 10% increase compared to the previous year).[14]

- **Mentoring Programme:** in 2024 the Mentoring programme was extended to all new employees, hired in the Bank, as well as to employees who were appointed to new positions, namely customer managers, technicians, managers, coordinators and/or directors, sharing the professional experience and know-how of the mentor with the mentee, in a culture of proximity and mutual help.

- **1st Open Day**: in 2024, Caixa held its first Open Day in Lisbon and Porto, with the aim of raising awareness of the Caixa brand among university students. The initiative involved the participation of around 250 students and 100 Caixa employees ('Caixa Ambassadors').

[14] Since the programme lasts for 1 year, the percentage of conversion to a contract can only be assessed in 2025.

- **Summer Academy:** During the months of July and August 2024, Caixa aimed to provide university students with work experience in the banking sector, enabling them to acquire new professional and personal skills. In this edition there were around 850 applications, of which 42 were selected.

- **Participation in Job Fairs:** Caixa has been actively participating in initiatives aimed at enhancing its employer brand and fostering direct relationships with university students from various leading academic institutions. During the ISEG Career Forum 2024, Caixa established contact and created a database with CVs from 150 students who expressed interest in learning about career opportunities at Caixa.

- **Career days:** BNU Macau actively participates in university events, promoting job opportunities and liaising directly with recent graduates and/or master's degree holders.

2. Talent Retention

After a highly demanding recruitment and selection process, candidates who fit the profiles identified by Caixa immediately gain access to a wide range of initiatives, namely:

- **Merit and Excellence Awards:** allowing the Caixa Group to recognise and reward Employees who have excelled within the Organisation and/or in the performance of their duties and have made the most significant contributions to Caixa's results. This initiative has been running for 8 editions and has honoured a total of 337 employees. In the 2025 edition, Caixa honoured 60 employees, the highest number per edition to date.

- **Internal Mobility Programmes:** between 2017 and 2024, Caixa recorded an average employee mobility rate of 18%, corresponding to an annual average of 1,261 employees who changed placement (inter and intra-OE). In 2024, 1,181 employees changed placement, resulting in a mobility rate of 19%.

Training and development

Developing and managing employee talent is a short-, medium- and long-term priority for Caixa, specifically reflected in Caixa's 2021-2024 Strategic Plan, which, being geared towards business transformation, positions training and skills development as one of the key pillars for driving change management. During 2024, €3.7 million (an increase of 26% increase compared to the previous year) was invested in training.

Caixa has a dedicated training team responsible for designing and implementing training programmes tailored to the Bank's functions, namely:

- **'100% Caixa' Programme:** through this programme, Caixa ensures the onboarding and integration of all the Bank's new employees by providing a structured training path that includes introductory sessions for each of Caixa's business areas, team building activities, hands-on experience in the commercial network, and on-the-job training with guidance from a mentor and supervisor;

- **Caixa's Talent Management Programme:** a programme with customised training paths based on an assessment of three different dimensions (performance, potential, and motivation), ensuring that each employee's expectations are taken into account. In 2024, a total of 6,378 training hours were delivered under the High Flyers and Top Performers programmes. The second phase of each programme was launched, continuing the development of the talent identified in previous years;

- **Support for Executive MBA Programmes**: between 2021 and 2024, a total of 54 employees received support, with a 30% increase recorded in the last year;

- **Learning Hub by Caixa Academia**: under the motto 'Today is a Good Day to Learn,' the aim is to reinforce a culture of lifelong learning, supported self-learning, and, above all, enable each employee to develop skills of personal interest beyond the organisation’s needs, covering topics such as ESG, health and well-being, among others;

- **Leadership Strengthening Initiatives:** in 2024, a total of 8,500 hours of training were dedicated to leadership development, with a particular focus on the Directors' Programme, the Coordinators' Programme, and the Managers' Programme, ensuring training for all employees in these roles. The focus was also on sessions led by members of Caixa's Board of Directors, including breakfasts with the CEO and Leadership Spotlight sessions, which provided opportunities for experience-sharing with employees;

- **Upgrade Programme:** it is aimed at all Customer Managers and Sales Assistants, with 1,437 participants and a total of 35,000 hours of training;

- **Employee Certification:** it is worth noting that 75% of Caixa's human capital holds at least one internationally recognised certification in areas ranging from compliance, auditing, project management, agility tools, ESG, business continuity, to information security;

- **Permanent Education Programme (PEP):** during 2024, the members of Caixa's board of directors (executive and non-executive) attended a series of training courses, including sessions on Sustainability and ESG;

- **Pilot Programme with GEN AI:** planning and launch of a structuring pilot programme with GEN AI, aimed at enhancing skills related to technology and artificial intelligence, which will be implemented in 2025;

- **BNU Macau training programme:** in 2024, 20,614 hours of training were provided in order to equip employees with the necessary skills and knowledge.

Caixa Group's 1st Sustainability Week

The main aim of organising the 1st Sustainability Week was to promote strategic alignment among Caixa group entities and to train employees on ESG-related topics. This initiative was structured around four strategic pillars:

1) Capacity building and skills development: Ensuring the dissemination of knowledge about sustainability with a focus on employee training and alignment with best ESG practices ;

2) Alignment of the entities within the Caixa Group: Ensuring the alignment of the entities within the Caixa Group in terms of Sustainability, strengthening the implementation of corporate ESG policies and achieving the organisation's strategic objectives;

3) Organisational culture: Consolidating an internal culture that prioritises sustainability as a core value, encouraging collaboration, the sharing of experiences, and the integration of ESG practices into daily activities;

4) ESG Performance: Promoting the continuous improvement of Caixa's ESG performance, as well as ensuring alignment with the Sustainable Development Goals and the disclosure of information that meets stakeholder expectations.

Held in Lisbon, at Caixa Geral de Depósitos Foundation - Culturgest, over five days, from 23 to 27 September, it coincided with National Sustainability Day, on 25 September, and was attended by the heads of ESG from the main geographies where Caixa operates: Angola, Brazil, Cape Verde, France, Macao, Mozambique, and Timor.

The initiative has had significant impacts at various levels, with the following key results:

- 545 participants in the training sessions;
- 2,800 hours of training;
- 8 international group entities present (Angola, Brazil, Cape Verde (2), France, Macau, Mozambique, and Timor);
- 15 Divisions (OEs) and 5 national group entities participating;
- Access to sessions streamed to 8 countries (including Portugal).

Occupational health and safety

Caixa actively seeks to implement various family and professional responsibility measures to promote the psychosocial support of its employees, as well as to foster a balance between personal/family and professional life, namely:

- **PAC - Employee Support Programme:** carried out by the Social Action Unit (UAS) - DPE, it consists of interventions in the family, professional, economic, health, and social responsibility areas. In 2024, the UAS supported 575 employees;

- **Health and Wellbeing Programme:** which encompasses a series of initiatives aimed at enhancing the physical and mental health of employees, with access to benefits and partnerships with external organisations for sports and other recreational activities for the entire family;

- **Birthday Leave:** Caixa allows its employees to take the day off on their birthday. Starting in 2025, this measure will be implemented for BNU Macau employees;

- **Telework:** in line with Law 83/2021 (Art. 166A), Caixa stands out for its support in the field of parenting (situations of employees with children up to the age of 8, as well as children with disabilities, chronic illnesses, or cancer), always taking into account the employee's position, and involving the hierarchies. This tool has also been important in the case of employees with the status of secondary informal caregivers;

- **Hybrid Labour:** employees can benefit from up to 2 days per week of remote work, thus enabling a better balance between professional and personal life, bringing gains in terms of cost and time. As at 31 December 2024, 867 employees (14%) were benefiting from this measure;

- **Mobility / Transfers with a social focus:** whenever possible, geographical and functional mobility is adjusted to the personal and/or family needs of employees, based on the principle of aligning the interests of the company and/or employee;

- **Digital Talks #54 - Life Balance:** in October 2024, a virtual initiative was held where practical strategies were presented for finding a better balance between professional and personal life, from flexible working hours to encouraging productive breaks and providing support in managing priorities;

- **Corporate Volunteering Programme:** Caixa promotes the engagement of its employees in volunteer work, reinforcing the organisational culture and the values of citizenship and social responsibility;

- **Additional vacation day for employees aged 55 and with 30 years of effective service:** within the framework of work-life balance, the Bank grants an additional vacation day as provided for in the Collective Bargaining Agreement;

- **Extending maternity leave from 70 to 90 days:** starting in 2025, BNU Macau will extend the duration of maternity leave from 70 to 90 days;

- **Healthy Enterprise Programme:** by participating in this programme, organised by the Health Bureau (SSM), BNU Macau promotes a healthy work environment.

Diversity, Equity and Inclusion

Caixa's Diversity, Equity, and Inclusion Policy is based on four key perspectives that guide the organisation's approach:

- **Equality and equity -** Promoting fair treatment so that everyone, despite their differences, has access to the same opportunities.
- **Culture & diversity -** Understanding and respecting the different characteristics that make an individual or group different from another.
- **Caixa Generations & Knowledge -** Thanks to its history, Caixa's workforce has a unique pool of knowledge and know-how that stands out in the market.
- **Inclusion -** Fostering a culture where everyone feels welcome to contribute and participate, being accepted and respected for their differences.

The main risks associated with the implementation of the DEI Policy are related to three key areas:

I. Change management, which requires the involvement and commitment of all employees. Its management is ensured through a communication and awareness plan on DEI topics and the provision of training to all employees.
II. Knowledge management – ensuring a strong component of on-the-job training and sharing of best practices.
III. Career management - ensuring opportunities for all and prioritising the underrepresented gender under equal circumstances.

The Equality Plan, published in October 2020, has been revised annually and the 2025 Plan has been published since September 2024. The Plan is monitored quarterly and has 118 initiatives in place and 14 under implementation.

The maturity of the initiatives implemented results in strengths for CGD's Gender Equality Plan, highlighting the commitment of top management, the appreciation and interest in the topic at CGD and the existence of global programs and initiatives already underway.

In the 2023/24 period under review, the internal assessment of CGD's maturity in this area reveals an index of 92%, an increase of 2pp compared to the same period last year. The improvement in this index has been achieved by focusing on the increase in promotions of women in management positions, the absence of harassment processes and the focus on employee health and well-being (launch of workplace gymnastics, HR talks, life balance, emotional intelligence training).

For 2025, CGD is developing initiatives so that it can be recognized as a family-responsible company that promotes health, well-being and work-life balance, continuing to focus on four major objectives:

i. Increasing the % of women in management and senior management positions;

ii. Greater overall internal knowledge/involvement on the subject of equality, particularly for management positions;

iii. Strengthen the promotion of reconciling family and professional life

iv. Increasing CGD's external visibility on the subject of equality.

Specific Human Rights Policies

With regard to specific human rights policies, we highlight the Statement of Commitment to Human Rights, a document that aims to reinforce Caixa's commitment to respecting internationally recognised human rights in the development of its relations with employees, customers, suppliers and the communities in which it operates, seeking to prevent or mitigate the direct or indirect adverse impacts of its activity.

This statement is in line with the values and principles of action set out in Caixa's Code of Conduct, namely those referring to compliance with legal, regulatory and conduct obligations, to the contribution to sustainable development and non-discrimination, tolerance, and equal treatment.

Targets and Metrics

As part of the development of the 2025-2028 Sustainability Strategic Plan, a series of corporate targets will be developed related to human resources management.

In 2024, the investment in training and development reached €3.7 million.

Currently, although there are no set targets, the Bank actively monitors, through the Sustainability Committee, a set of aforementioned indicators to assess the progress and effectiveness of actions and policies related to the management of impacts, risks, and opportunities (see *Actions and Initiatives Implemented).*

4.4.3.2. Community Support (ESRS S3 – Affected communities)

Banks have the capacity to act as catalysts for positive change in communities by supporting initiatives that promote sustainable growth and social inclusion. Through partnerships with local organisations, it is possible to support projects aimed at improving social support, creating job opportunities, and promoting education. In addition, corporate social responsibility programmes allow for investment in important causes, such as environmental preservation and the fight against poverty. By adopting a proactive and committed approach to community well-being, it is possible to strengthen reputation while also playing a vital role in building more just and resilient societies.

The social activities developed by the Caixa Group have the ability to create a positive impact on the community throughout its value chain, with a particular focus downstream on communities, such as third-sector entities or vulnerable citizen groups.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis carried out in accordance with the requirements of the CSRD, the following positive impact was identified:

- **Positive impact**: i) Development and/or support for programmes and projects that promote the economic, social, and environmental development of local communities.

The development of programmes and projects that promote economic, social, and environmental development are crucial for creating a positive impact on the local community, reinforcing the commitment to Human Rights and the 2030 Agenda, among others. Support for the community also has a positive impact on employees, increasing their motivation and sense of belonging as they identify their employer as a company with social concerns, as well as increasing their engagement, fostering a corporate culture that is more aligned with ESG challenges.

Caixa adopts a strategic approach to community support, particularly through its inclusion in the 'Sustainability and Social Impact' pillar of the 2021-2024 Strategic Plan and the 'Equity, Digital, and Financial Inclusion' pillar of the 2021-2024 Sustainability Strategy. Sustainability strategies for the Group, Caixa, and other Caixa Entities are defined and reviewed considering the identification of relevant topics, risks, and opportunities in environmental, social, and governance matters, as well as the expectations of stakeholders for sustainable development.

The effectiveness of ESG-related policies and actions regarding community support is assessed through the Sustainability Committee, which monitors the development and implementation of the Caixa Group's strategic guidelines for sustainable development. The Sustainability Committee is chaired by the Chairman of Caixa's Executive Committee and meets at least quarterly.

The indicators used to assess the effectiveness of the actions implemented vary depending on the type of project.

Policies and Other Related Corporate Documents

Sustainability is a critical issue for society globally, with companies, and particularly financial institutions, playing a very important role in its pursuit, as evidenced by the growing expectations of various stakeholders (e.g., customers, employees, investors, supervisory authorities, third-sector organisations). Caixa has been developing a management approach to community support underpinned by various policies and other relevant documents in this area, namely:

- **Sustainability Policy:** It defines the governance model, guiding principles, and specific activities, as well as the key stakeholders and their respective responsibilities in managing Sustainability at Caixa and the entities within the group, adopting as a guiding principle support for the communities where it operates and measuring the social impact of its actions.
  The Sustainability Policy includes a specific chapter related to the social aspect, which defines Caixa's objective of supporting the communities in which it operates and measuring the social impact of its corporate social responsibility actions. This document applies directly to Caixa and all its Divisions (OEs), as well as the Group entities identified in it. The Board of Directors is responsible for approving the Sustainability Policy.

  This aforementioned policy reinforces Caixa's commitment to different standards or third-party initiatives, namely: Net Zero Banking Alliance, Principles for Responsible Banking, Women's Empowerment Principles, 10 Principles of the UN Global Compact, Lisbon Commitment to the European Green Capital 2020, Portuguese Diversity Charter, Commitment to Timely Payment, and the 2030 Agenda for Sustainable Development.

- **Corporate Volunteering Policy:** It establishes that Caixa should encourage the active participation of its employees in the implementation of the policy and in the practice of corporate volunteering with vulnerable communities. The Volunteering Programme represents the set of initiatives by Caixa geared towards the community, namely through the provision of knowledge related to the business area and the skills of its employees, alongside the willingness to address other challenges and areas of intervention equally important for the social, economic, and environmental sustainable development of the country.
  It applies to active employees with an employment relationship with Caixa and is also applicable across Caixa Group entities. The Board of Directors is responsible for approving the Corporate Volunteering Policy.
  Caixa thus reinforces its commitment to the 2030 Agenda for Sustainable Development and the 10 Principles of the UN Global Compact.

The Sustainability Policy can be consulted on Caixa's website and in the internal regulation system. The Corporate Volunteering Policy can be consulted in the internal regulation system.

Declaration of Commitment to Human Rights

Through this declaration of commitment, Caixa undertakes to respect internationally recognised Human Rights in the development of its relationships with employees, customers, suppliers, and the communities in which it operates, seeking to avoid or mitigate the adverse impacts, both direct and indirect, of its activities. The Declaration of Commitment to Human Rights is in line with the values and principles of action enshrined in Caixa's Code of Conduct, particularly those related to compliance with legal, regulatory, and conduct obligations, contributing to sustainable development, and upholding non-discrimination, tolerance, and equal treatment.

With this Declaration, Caixa has committed to respecting Human Rights as outlined in the Universal Declaration of Human Rights, adopted by the General Assembly of the United Nations (UN), the International Covenant on Civil and Political Rights, and the International Covenant on Economic, Social, and Cultural Rights. In addition to these instruments, Caixa adopts other international declarations and guidelines as references, such as the 10 Principles of the UN Global Compact. Caixa subscribed to the 10 Global Compact Principles based on the areas of human rights, labour practices, environmental protection and anti-corruption and aims to integrate them into the company's strategy and operations. With the aim of evaluating the integration process of the 10 Principles of the Global Compact, Caixa submits the Communication on Progress (CoP).

Regarding the supply chain, the implementation of Ethical Principles and Good Business Practices has been ensured in order to instil sustainability practices among its suppliers, covering topics such as the promotion of labour practices that respect human rights. As part of the social actions and initiatives developed in 2024 to support the community, there were no known cases of human rights violations affecting the communities involved.

Actions and Initiatives Implemented

As a public bank, Caixa must respond to those who need it the most, according to the most pressing social emergencies. Thus, the work carried out aims to positively impact vulnerable communities in Portugal, whether they are near a Caixa branch, within a community established at any point in the value chain, or within the immigrant community in Portugal, with a focus on the following areas of activity:

- Projects to Support Third-Sector Organisations;
- Projects to Support Education;
- Projects to Support Vulnerable Citizens;
- Promoting Culture

On a corporate level, the Caixa Group acknowledges that there are communities with specific characteristics (e.g., ethnic groups) or in particular contexts (e.g., homeless individuals) that are more affected and in situations of greater vulnerability. Therefore, various types of support are developed to reach these specific communities. Caixa seeks to create positive impacts within the community in Portugal, as well as in the various geographies where the Caixa Group is present.

The strategic promotion of community support programmes is carried out by the Sustainability area of Caixa's Corporate Support Division (DSC). Depending on the type of project or geographical context, the People Management and Development Division (DPE), the Communication and Brand Division (DCM), the Retail and Corporate Marketing Division (DMPN), Caixa's Social Services, the Caixa Geral de Depósitos - Culturgest Foundation, and other national and international entities may also participate.

Some of the main initiatives to achieve the objectives of the identified Policies are detailed below. Considering that the next strategic cycle for 2025 - 2028 is still under definition, future initiatives are not disclosed in this chapter.

PROJECTS TO SUPPORT THIRD-SECTOR ORGANISATIONS

Caixa - Caixa Social Awards

Aiming to address social issues and fight poverty and social exclusion through economic development and innovation, Caixa promotes the Caixa Social Awards with the mission of supporting initiatives undertaken by third-sector entities, characterised by innovation and replicability.

In the 6th edition, the social projects submitted were focused on the following areas of intervention:

1) Social Integration and Solidarity;
2) Prevention and Health Care;
3) Education, Training and Capacity Building.

A total of 365 applications were analysed, and 44 social projects were awarded a total of €1,006,630, representing nationwide coverage. In 2024, Caixa increased the value of the Caixa Social Award by more than €240,000.

Since its launch in 2019, the Caixa Social Awards have recognised 180 social projects, with a total investment of over €3.7 million.

The projects were evaluated by an independent jury chaired by the Chairman of the Board of Directors of Caixa Geral de Depósitos, António Farinha Morais, and composed of Isabel Mota, Maria del Carmen Gil, Filipe Almeida, and Filipe Santos. It is important to highlight that during the application period, entities were asked to identify corporate volunteering opportunities and needs for office and/or IT equipment, in order to create synergies with the two Caixa projects: the Corporate Volunteering Programme and the Goods Donation Programme.

The award ceremony for the 6th edition of the Caixa Social Awards took place on 14 October 2024, at the Caixa Geral de Depósitos Foundation - Culturgest, with the presence of representatives from the distinguished social institutions.

At the end of 2024, the Impact Assessment Report was also released, detailing the follow-up conducted on the 36 winning projects from the 5th edition (2023).

Caixa - Corporate Volunteering Programme

Caixa's Volunteering Programme promotes a spirit of solidarity and teamwork among employees, fostering a culture of corporate social responsibility for engagement in social and environmental projects and causes.

In 2024, a series of volunteering initiatives were carried out in different areas and locations, involving around 827 volunteer employees who contributed to supporting more than 47 social institutions with more than 2,254 hours, among which we highlight:

- Volunteering and Active Citizenship Week, with the celebration of Caixa Volunteer Day - 37 volunteering activities were carried out by 806 employees and 147 family members;
- Caixa Social Awards Evaluators' Pool – To handle the number of applications for the 6th edition of the Caixa Social Awards and implement the new evaluation methodology (two evaluators per application), around 20 Caixa employees volunteered to assist in the application evaluations, receiving prior training;
- Celebration of International Volunteering Day with a Caixa Group-wide volunteering action involving six geographies.

Caixa - Goods Donation Programme

Caixa presents a goods donation programme, in which it promotes the reuse of discontinued equipment and materials for the benefit of local communities, educational institutions, and underprivileged citizens who will give them a new use and value, giving them a new purpose and value. The programme prioritises material reuse, reducing waste, waste generation, and environmental footprint.

In 2024, Caixa contributed to addressing the needs of various entities and promoting the reuse of materials and equipment by donating more than 2,098 office furniture items, such as cabinets, drawer units, chairs, desks, shelves, among others, to over 48 institutions. A total of 271 pieces of IT equipment were also donated.

Caixa - Christmas Campaign

In 2024, Caixa launched a Christmas campaign that involved, for the first time, the entire Caixa Group. The campaign consisted of two areas of support: i) an external component where a financial donation of €281,583 was made to 43 social institutions, and ii) an internal component with the following activities:

- volunteering initiatives in six geographies (including Portugal) of the Caixa Group, marking International Volunteer Day on 5 December;
- collection of goods and volunteering activities by national entities and companies, which helped support 46 selected social institutions;
- other activities included a Christmas market, a solidarity workshop, nationwide blood donations, and participation in the Christmas Party of "Comunidade Vida e Paz".

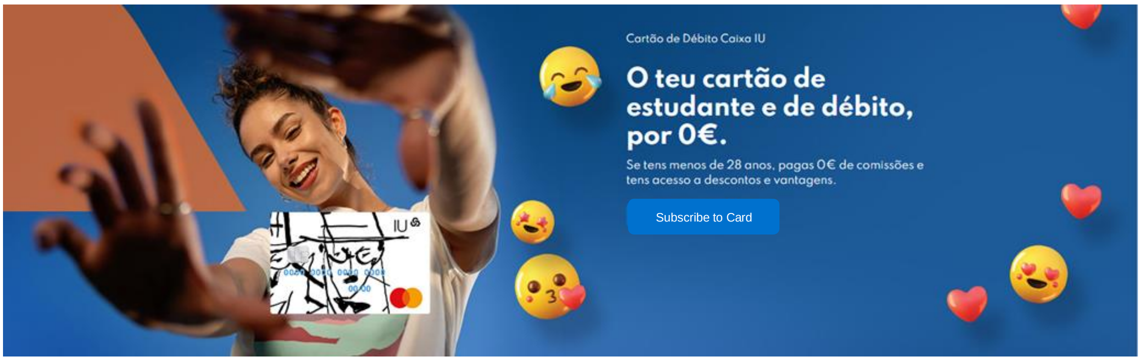
BCI - Partnership with Girl Move Academy

Banco Comercial e de Investimentos strengthened its support for the Girl Move Academy, a UNESCO-recognised institution that promotes female education and empowerment based on an intergenerational circular mentoring model, with the aim of training women leaders in Mozambique.

Over the years, the Girl Move Academy has impacted more than 17,000 girls, helping them discover their potential and create a better future for themselves and their communities.

PROJECTS TO SUPPORT EDUCATION

Caixa - Caixa IU Programme - Institutes and Universities



Caixa's support for the university segment has been strengthened over the years, contributing to the development of higher education in Portugal. There are currently more than 120 higher education institutions that, under the Caixa IU - Polytechnic Institutes and Universities programme, received an investment of €10.1 million from Caixa in 2024.

Caixa provides the university segment access to a package of products and services tailored to their life cycle and designed to facilitate the management of their daily lives.

Using digital customer onboarding processes and fast, effective contracting, the evolution of the sales and after-sales process was adapted to customers' expectations and continues to be Caixa's brand image in the university market. A simplification in sales, in line with the wishes of a generation for which time is a critical success factor. The development of these competences is also possible due to close cooperation between Caixa and the partner institutions.

Caixa awarded more than 360 merit prizes, research grants, scholarships, and recognition of innovation projects, fostering closer ties with higher education. Support is also provided in different areas such as entrepreneurship, employability, economy, innovation, and technology, ensuring Caixa's presence and support for the academic community and higher education institutions.

Caixa - Caixa Mais Mundo Awards

With the aim of supporting students from disadvantaged socio-economic backgrounds to continue their higher education, Caixa organised the Caixa Mais Mundo Awards for the sixth consecutive year, with a total of €600,000. A total of 480 Merit Awards and Scholarships were awarded, recognising the academic merit of students admitted through the national access competition, at public higher education institutions and private higher education institutions (HEIs) that have agreements with Caixa, for the 2023/2024 academic year.

These prizes are awarded in the following categories:

- Academic Merit Awards;
- Scholarships for underprivileged students;
- Scholarships for disadvantaged students awarded in the 2023 edition (promoting and supporting the continuation of studies)
- Merit awards for students in vocational courses;
- Merit awards for students from PALOP countries who have completed regular secondary education in Portugal and have enrolled in undergraduate or integrated master's degree programmes at Portuguese HEIs.

In 2024, for the first time, a wide range of personalities with notable contributions to the socioeconomic, cultural, political and scientific development of the country, in recent decades, have associated with this Award, namely: Américo Amorim, André Jordan, Aníbal Cavaco Silva, António Ramalho Eanes, Eduardo Paz Ferreira, Eduardo Souto Moura, Emílio Rui Vilar, Fernando Namora, Francisco Pinto Balsemão, Gonçalo M. Tavares, Jorge de Mello, Jorge Sampaio, José Manuel de Mello, José Manuel Durão Barroso, José Saramago, José Silva Lopes, José Tolentino de Mendonça, Júlio Pomar, Leonor Beleza, Manuel António Mota, Manuel Clemente, Manuel de Oliveira Violas, Manuel Violas, Maria de Jesus Barroso, Maria Helena Vieira da Silva, Mário Soares, Rui Nabeiro, and Sophia de Mello Breyner.

Over the course of six editions, Caixa has already supported 1,410 students, with a total investment of €1.6 million, thereby creating opportunities for more students, including those from more financially vulnerable social groups, to pursue higher education, contributing to the construction of a fairer, more supportive, and sustainable society, offering equal opportunities to all and preparing the citizens of the future.

Caixa - EPIS Social Grants

The Entrepreneurs for Social Inclusion Association (EPIS) has developed initiatives aimed at creating employment opportunities and social reintegration for individuals, families, or groups at risk of social exclusion, with a particular focus on promoting social inclusion for young people through academic success and professional integration.

In 2024, Caixa contributed to awarding 19 social scholarships to prize-winning students in higher education, both undergraduate and master's degrees, along with 5 professional internships. For the 14th consecutive year, the EPIS Social Scholarship programme continues to ensure the significant involvement of companies and individual donors as a response to the inequality of opportunities in accessing higher education, rewarding young people from socio-economically disadvantaged backgrounds with high academic merit.

Caixa also supported the following EPIS projects:

- EPIS programmes for empowering academic success;
- Development of the manual for the professional integration of young people with disabilities ('Jovens Especiais' Initiative);
- Volunteer tutoring programme for students in the municipality of Moura ('Vocações EPIS');
- Campaign to donate 25 computers;
- EPIS 2024 Volunteers Meeting.

BNU Macau - Support for Education and Teaching

Support for education and teaching is a central pillar of BNU Macau's activities, both by awarding scholarships to students at Macau's main universities and by supporting training activities and seminars.

One example is the award of scholarships to students at the University of Macau in 2024.

PROJECTS TO SUPPORT VULNERABLE CITIZENS

Caixa - 'Sou Cidadão' Programme

Since 2018, Caixa has been supporting those in need and the homeless population by being part of the Implementation, Monitoring and Evaluation Group (GIMAE) of the National Strategy for the Integration of People Experiencing Homelessness (ENIPSSA), which aims to promote socio-economic inclusion and combat poverty.

This support becomes reality thanks to the Sou Cidadão Programme, which Caixa continues to develop and promote, financially supporting the issue and allocation of identification documents (Citizen's Card, Passport, Residence Permit) to homeless people who are able to carry these documents, thus promoting the social inclusion and dignity of homeless people.

In 2024, Caixa ensured that 106 identification documents were issued to homeless individuals, helping to restore their 'identity' and access to basic rights, as well as reducing the number of situations of socio-economic exclusion. Since 2019, Caixa has already ensured the issuance of 397 identification documents, totalling €15,365.

Caixa Social Services - Blood Donor Group

The Caixa Social Services Blood Donor Group (GDS) scheduled 77 blood donation collections for 2024, but a total of 103 blood donations and 6 initiatives to promote blood donation were carried out. For this, the Blood Donor Group partnered with the Blood Centres of Lisbon, Porto ,and Coimbra, IPO (Cancer Institutes) of Lisbon and Porto, and 18 Hospitals.

In 2024, the Group achieved:

- 14,929 registered members, an increase of 8.4% compared to 2023;
- 1,666 active internal donors, an increase of 1.5% compared to 2023;
- 10,759 active external donors, an increase of 11.6% compared to 2023;

Blood donation drives recorded 3,674 participants, representing a 16% increase compared to 2023.

Notably, there were 3,167 successful donations, equivalent to approximately 1,583 , supporting 9,501 patients.

Caixa - Support for Refugee Students

APGES - the Global Platform for Higher Education in Emergencies - is designed to support students from countries affected by conflict or humanitarian crises by providing them with scholarships to complete their higher education and assisting in their integration into the host society. Caixa made a donation to fund two master's degree scholarships (covering 2 academic years) for refugee students.

Nexus 3.0 - Association for the Promotion of Education, Science, Art, and Culture in Contexts of Fragility, Conflict, and Violence - aims at supporting female students from war-affected countries to promote equal opportunities in education. Notably, the 'Farol da Esperança' project was created to 'combat the ban on Afghan girls attending higher education.'

In 2024, Caixa approved a donation to support two Afghan students enrolled in the MBA programme at Porto Business School.

Timor Branch - Natal ba Povu

The annual 'Natal ba Povu' initiative has become a symbol of solidarity, inclusion, and national unity in Timor-Leste. The event took place on 22 December 2024, with the aim of providing a Christmas celebration for everyone and distribute Christmas gifts to children, primarily from Dili, many of whom face significant daily challenges.

This initiative aimed to promote values of peace and social inclusion while celebrating the country's cultural and artistic diversity. BNU Timor supported the event by purchasing school supplies that were distributed to Timorese children on the day of the event.

PROMOTING CULTURE

Caixa Geral de Depósitos Foundation - Culturgest - Artistic and Cultural Participation

Over the last 31 years, the Caixa Geral de Depósitos - Culturgest Foundation has developed an intensive and consistent programme, focused on its mission of democratising cultural, artistic and scientific initiatives, which is implicit in the social responsibility policy of its founder.

The activities carried out in 2024 reflect this approach, as we believe that it is within this contemporary, multidisciplinary and cosmopolitan matrix that Culturgest fulfils its purpose, continuing to make a significant contribution to the national cultural fabric and adding value to the cultural offer in the cities of Lisbon and Porto, where complementarity and specialisation guarantee a rich and plural cultural offer.

Supplementing its artistic goals, Culturgest's main goal is to increase and diversify its audiences. In 2024, Culturgest welcomed 115,000 visitors and attendees to its in-person activities.

The online audience - counted separately from the in-person audience - has grown consistently since the creation of this offer: from around 64,000 visitors in 2020 to over 140,000 in 2024.

The Caixa Geral de Depósitos - Culturgest Foundation has been consistently committed to its social responsibility mission, which is reflected in various aspects:

- Affordable Pricing Policy: Culturgest continued its affordable pricing policy, developed on an ongoing basis, offering tickets for shows, exhibitions, and other cultural events at accessible prices for everyone (e.g., 50% off for individuals under 30, people with disabilities, deaf or neurodivergent individuals and their companions, and unemployed individuals).
- Social Inclusion: Since 2023, Culturgest has been part of the European consortium Common Stories, under the European Union's Creative Europe programme. This project aims to help create a more open and receptive professional context to welcome and listen to a greater diversity of voices and perspectives. In 2024, in collaboration with UNA – União Negra das Artes, the second working session was held to collaboratively think about how to create an anti-racism handbook for the arts and education.
- Accessibility: In 2024, Culturgest significantly increased its commitment to accessibility, with the goal of welcoming diverse audiences and artists, including people with disabilities, deaf individuals, and neurodivergent individuals, continuously throughout the year. Also in this year, the Caixa Geral de Depósitos Foundation - Culturgest became part of the European project 'Europe Beyond Access II', co-financed by the European Union's Creative Europe programme. 'Europe Beyond Access' is the world's largest transnational project supporting disabled and deaf artists to break down barriers in contemporary dance and theatre. The European consortium consists of 10 cultural organisations from 10 different countries - Sweden, the Netherlands, Greece, Italy, Germany, Norway, Poland, Ireland, Spain, and Portugal.

  Regarding physical accessibility, it is worth highlighting that in 2024, the Small Auditorium became accessible to individuals with limited mobility by allowing the removal of the first row of seats to provide space for wheelchair users and their companions. In addition, a lift has been installed to access the stage to accommodate speakers and artists with limited mobility.

Caixa - Caixa Cultura Programme

Throughout its history, Caixa has maintained close ties with the community and has constantly intensified its support to cultural activities.

The Caixa Cultura Programme was created to support artistic and cultural initiatives with the aim of financially promoting national projects of unequivocal quality and creativity in the following categories: Theatre, Dance, Music, Visual Arts, Cinema, Literature, Performance, Conference, and Debates. This programme is intended for Portuguese citizens, or those residing in Portugal, aged 18 or older, as well as for collective entities engaged in activities related to the identified areas.

In the 5th edition, out of the 270 applications received, seven projects were awarded, with a total global funding of €100,000.

Caixa - Caixa Alfama Festival

The Caixa Alfama Festival took place on 27 and 28 September, featuring over 50 artists spread across 11 stages located in the most iconic spots in the Alfama district in Lisbon. The 2024 edition aimed to bring Fado, recognised as Oral and Intangible Cultural Heritage of Humanity by UNESCO, closer to a younger audience, while also engaging them in the experience of Portuguese cultural traditions.

BCGA - Caixa Fado Festival 2024

The organisation of the 7th edition of the Caixa Fado Festival by Banco Caixa Geral Angola is an important initiative for promoting cultural development in Angola.

The Caixa Fado Festival also contributes to strengthening musical ties between Angola and Portugal and to the artistic growth of both countries.

Targets and Metrics

As part of the Sustainability Policy, a target has been set for community support for the 2021-2024 strategic period in Portugal: 'Investing €40 million in the community (2021-2024).' The methodology used to set the target was based on the indicator “Development and impact of investments in infrastructure and services provided”.

In 2024, €18.9 million were invested, with a total of €59.9 million invested between 2021 and 2024.

It is important to highlight that, due to the diversity of actions and initiatives implemented, the indicators used to assess their individual effectiveness vary depending on the type of project in question. However, the investment made in these initiatives directly contributes to the target set.

As part of the development of the 2025 - 2028 Strategic Sustainability Plan, corporate targets and metrics will be developed on the subject of community support.

4.4.3.3. Customer Relations (ESRS S4 - Consumers and end-users)

Caixa's mission is to generate value for Portuguese society, providing quality banking services to both retail and corporate customers, hence contributing towards improving the well-being of Portuguese families and towards developing the corporate sector. To fulfil this commitment, it is essential to maintain a close and ongoing relationship with customers, understanding their expectations and needs.

This approach allows Caixa to dynamically adapt its commercial offer and develop financial solutions that meet market demands. In this way, Caixa strengthens its role as a reference bank, making a positive impact on the economy and the lives of its customers.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, the following impacts and opportunities were identified:

- **Positive impact**: i) The adoption of responsible marketing and sales policies and practices allows customers to make more informed and conscious decisions;
- **Opportunity**: ii) Ongoing adaptation of products and services to customer needs and expectations.

The positive impact identified is related to the type of business model and activities carried out by Caixa, with particular emphasis on retail and corporate customers. Considering that the Caixa Group operates from a universal banking perspective, with all financial service specialisations, consumers and end users are not exposed to products harmful to health or that increase the risk of illness. However, they may be subject to impacts related to privacy and the protection of personal data, as the institution handles sensitive information. Additionally, they rely on accurate and accessible information about financial products and services, as it is essential to ensure transparency and clarity in communication, mitigating the risks for customers with low financial literacy.

At the same time, the constant adaptation of Caixa's offer is crucial in order to respond to a new type of consumer and a constantly evolving market. With innovative solutions tailored to customer expectations, the institution strengthens consumer trust and promotes the creation of value for society.

Caixa takes a strategic approach to customer relations, particularly through its inclusion in the 'Service Quality and Innovation' pillar of the 2021-2024 Strategic Plan and the 'Sustainable and Inclusive Financing' pillar of the 2021-2024 Sustainability Strategy.

The effectiveness of ESG policies and actions related to customer relations is analysed by the Executive Board for Products, which includes the analysis of suggestions and complaints regarding products and services, enabling the necessary corrections and improvements to be made to increase customer satisfaction.

The Executive Board for Products is also responsible for approving the launch of products and services and checking their compliance with the regulations in force and the guidelines issued by supervisory bodies. This council is chaired by the director responsible for the Compliance Division and meets on a monthly basis.

Policies and Other Related Corporate Documents

The European Supervisory Authorities have set out a set of high-level principles on product oversight and governance that should be observed in internal product approval processes, with the aim of strengthening consumer protection by enhancing controls as part of the process which precedes marketing. These principles cover responsibilities in organisational and risk management processes, functions and strategies concerning the design, operation and marketing of products, as well as their monitoring throughout their life cycle.

Caixa has been developing a management approach to customer support underpinned by various policies and other relevant documents in this area, namely:

- **Product Governance, Approval and Monitoring Policy:** It establishes the principles, strategies, functions, and internal processes aimed at creating and/or distributing products on the market, with the aim of ensuring that:
  - It is in line with the Caixa Group's strategy and respects the risk appetite set forth by the Board of Directors, and,
  - The interests, objectives and characteristics of the clients are taken into account, avoiding their potential detriment, as well as minimising potential conflicts of interest.

- **Internal Regulations on Customer Complaints and Suggestions:** It establishes the procedure for customers to file complaints regarding situations related to the services provided by Caixa that did not meet their expectations, as well as the responsibilities of various areas of the Bank in handling these complaints and the service levels associated with the customer response process. This document reflects how Caixa is committed to enhancing the handling of customer complaints and suggestions as a means to improve the quality of the service it provides.

  In 2024, the complaints received and handled by Caixa concerned specific aspects of the service provided, which Caixa promptly sought to clarify and, where applicable, remedy. It is worth mentioning that, in this regard, no cases related to human rights violations were reported.

- **Quality Policy:** It defines Caixa's commitments and principles with regard to quality management and expresses the organisation's commitment to customer satisfaction and the improvement of its products, services, and processes.
  The across-the-board implementation of Quality Management Systems at Caixa contributes to the internal optimisation of processes, aiming to meet customer needs and expectations, with a direct impact on the quality of the service provided.

  The Quality Policy is based on the following principles:

  - A relationship of commitment and partnership with all stakeholders, with a view to identifying, integrating, and meeting their requirements;

  - Rigour, quality and continuous process improvement, always geared towards customer satisfaction;

  - Sustainability of processes and management of their risks in line with the Organisation's objectives;

  - Excellence and innovation in the development of efficient means to serve the customer through the provision of new products and services;

  - Developing a culture of quality, ensuring that employees understand their responsibilities through awareness-raising activities;

- Adoption of best management practices through employee involvement and development, encouraging responsibility and individual capacity for adaptation and problem-solving;
- Compliance with applicable legal and regulatory requirements.

The Governance, Approval, and Monitoring Policy for Products and the Service Order for Customer Complaints and Suggestions are available to employees via Caixa's internal regulation system. The Quality Policy is available to employees via the intranet and for consultation by the general public via Caixa's website.

Although the aforementioned Policies do not identify alignment with internationally recognised instruments relevant to consumers and/or end-users, including the United Nations (UN) Guiding Principles on Business and Human Rights, Caixa has specific commitments regarding human rights deemed relevant to consumers and/or end-users, with a focus on the human rights declaration of commitment. This document aims to reinforce Caixa's commitment to respecting Human Rights in the development of its relationships with employees, customers, suppliers, and the communities in which it operates, seeking to avoid or mitigate the adverse direct or indirect impacts of its activities.

Actions and Initiatives Implemented

In 2024, Caixa Group maintained its commitment to customer satisfaction by developing a series of initiatives. Considering that the next strategic cycle for 2025 - 2028 is still under definition, future initiatives are not disclosed in this chapter.

The strategic activation of the projects and activities presented, aimed at enhancing customer relations, is carried out by the product team of the Retail and Corporate Marketing Division (DMPN) and the Corporate Marketing Division (DME), as well as by the Customer Excellence Area of the Operations Centre (CO). Depending on the type of project or geographic context, the Digital Banking Division (DBD), the Communication and Brand Division (DCM), and other national and international entities also participate.

Enhanced customer experience and satisfaction

In 2024, Caixa identified and implemented a wide range of initiatives aimed at improving customer experience and satisfaction, based on information gathered from the analysis of customer complaints and a series of satisfaction studies regularly conducted with customers (both relational in nature and related to specific processes, services, or touchpoints).

For the 2024 financial year, Caixa invested 17.6 million euros in the implementation of this action plan. The costs mentioned correspond to the items recorded in the "Other Tangible Assets" section of the individual and consolidated financial statements of note 14 and 16, respectively.

This approach covered various aspects, including the Bank's organisational structure, product and service offerings, channels, and process optimisation. Below are some examples of the actions taken:

- Integrating customer service units (complaints), customer experience, and process governance, quality, and standards within the same area to enable a more holistic view of the customer and the service provided, fostering continuous improvement;
- Implementing a new service management system in branches;
- Scaled programme for migrating transactions to virtual teller machines, with the modernisation of the machine network available to customers;
- Instant issuance of debit cards via the app and web, PIN recovery via the app, and automatic alerts in case of card capture;
- Automatic alerts with information on highly sensitive processes (e.g. seizures);

- Centralising and optimising the certification of heirs process;
- Simplifying customer data update processes and account closure procedures;
- Simplifying the mortgage renegotiation process (pre-approved drafts and immediate proposal presentation);
- Continuing to develop the corporate loan platform, enhancing the agility and efficiency of the process;
- Continuing to develop the cross-cutting for strengthening information systems;
- Continuing to strengthen and train the contact centre;
- Improving processes and tools for preventing, identifying, and combating fraud.

The entities of the Caixa Group have also implemented several measures to improve customer experience, such as BNU Macau, BNU Timor, and Banco Comercial do Atlântico.

- To improve the quality of its services, BNU Macau regularly monitors customer feedback. One of the main suggestions from customers was to use Google Wallet as a payment method. In response to this suggestion, Google Pay was successfully launched, thus expanding online payment options and enhancing customer convenience.
  In addition, BNU Macau regularly assesses the quality of its services and products. This continuous assessment allows for better adaptation to the evolving needs and preferences of customers, ensuring a clear customer-centric approach. In this context, it is important to note that 69% of customers rate BNU Macau's quality of service as excellent (16%) or good (53%).

- BNU Timor launched its first mobile bank branch (BNU Móvel) in East Timor. This innovative service operates with the full capabilities of a bank branch in a vehicle specifically equipped for this purpose. BNU Móvel serves as a mobile bank branch, where any customer can open bank accounts, make deposits and withdrawals, check bank transactions, order transfers, request personal and business loans, cheques, debit and credit cards, and bank guarantees.

BNU Móvel regularly travels around the Municipality of Dili, bringing BNU Timor closer to the population and providing services in areas with limited access to banking services.

BNU Timor intends to expand the activities of BNU Móvel to the municipalities of East Timor where there is limited or no access to banking services. In the long history of BNU in East Timor, this is yet another achievement that demonstrates the institution's commitment to the economic development of the Democratic Republic of East Timor and its citizens, as well as to the strengthening and modernisation of the country's banking and financial sector, in an effort to democratise access to banking services.

- Customer relations are a strategic priority for Banco Comercial do Atlântico, which is committed to providing excellent service by promoting proximity, transparency, and trust. Banco Comercial do Atlântico has invested in innovative projects to strengthen its relationship with customers, including the new customer reception management solution - Nha Bex, which allows for the remote management of tickets, helping to reduce waiting times at branches.

Caixa - 'Encontros Fora da Caixa' Monthly Cycle

Since March 2017, this cycle of events, chaired by Caixa's Executive Committee, has been bringing topics of national interest and regional relevance to all of Portugal's districts. It includes the presence of the regional business community, interventions from key figures, and coverage by a media partner.

It encourages the discussion of challenges, opportunities, and success stories, contributing to a collective vision of the country and strengthening the institution's ties with its customers, especially with the business sector.

Analysing the product and service offer

In the current context, where customer preferences are rapidly evolving, it is essential for Caixa to develop products and services tailored to their needs, also considering expectations for sustainable solutions. However, it is essential to ensure that the internal processes for product design and development are robust, efficient, and aligned with market and regulatory requirements.

Through the Executive Board for Products, Caixa ensures the continuous analysis of its product and service offer, as well as their compliance with regulations and internal procedures. Considering the growing concern of consumers regarding Sustainability, Caixa has been investing in the development of specific products and services, such as the launch of the Caixa ESG line.

In 2024, 66 products were approved by the Executive Board for Products.

In order to mitigate the risks of greenwashing associated with the marketing of savings or structured products that highlight sustainability attributes, whenever deemed relevant, Caixa's Sustainability Area is consulted for support in interpreting ESG concepts to guide the design and classification of these products.

On a monthly basis, the product team of Caixa's Retail and Business Marketing Division evaluates the compliance and opportunities for improvement in the conditions of its offer. To this end, the maximum rates imposed quarterly by the regulator, the macroprudential recommendations for consumer credit, the conditions practiced by competitors, and customer and commercial network feedback are taken into account.

This assessment is carried out by the Marketing Division and is tactically coordinated with other structures such as the Information Systems Division, the Compliance Division, or the Operations Centre.

No situations were identified where customers were exposed to the risk of harm due to subscribing to Caixa's products and services, considering the regulations inherent to them, which set limits to the bank's actions (examples: solvency analysis of customers or maximum limits on loan terms).

Financial Literacy

The challenge of financial literacy is a crucial issue in society, given its potential to impact people's ability to make informed decisions about their personal finances.

Saldo Positivo is Caixa's financial literacy portal. This is a pioneering project in the national banking context, created to help increase the levels of financial literacy among the Portuguese.

The portal covers a wide range of audiences, including families, children, young people, university students, seniors, and entrepreneurs. It addresses cross-cutting themes that reflect the country's social, economic, technological, and banking reality.

It works on and updates content on environmental awareness, new technologies, family budget management, taxation and laws, training, mobility, among many other articles aimed at exercising a responsible and enlightened citizenship.

Saldo Positivo contributes to building a future that promotes the customers' financial and digital empowerment. Some of the results achieved are highlighted below:

- Average monthly publication of 27 to 30 articles;
- 6 million visits to the Saldo Positivo portal in 2024, which points to a retention in the number of visits compared to the previous year (google Analytics measurement);
- 8.6 million views (google Analytics measurement);
- An average of 500,000 visitors per month;
- Facebook profile with 136,000 followers.

Management of complaints/suggestions

Caixa's Operations Centre (OC), which includes the complaints area, is a department certified for quality under the NP EN ISO 9001 standard: 2015, so it has implemented monitoring, control, and reporting mechanisms and ensures the continuous improvement of the suggestions and complaints management process in alignment with the requirements of the standard.

In planning and managing the complaints and suggestions management system, the strategic guidelines and priorities issued by the Executive Committee, the evolution observed in the external environment, the risks and opportunities and the inputs resulting from monitoring and improvement processes are considered. Within its scope, the guidelines of the suggestions and complaints management activity, the objectives and goals to be achieved are set, also identifying possible changes to be implemented. Close monitoring is kept regarding the activity, the degree of achievement of objectives and the progress of corrective and improvement actions identified.

Systematic and periodic reports are prepared, providing statistical information on the management of customer suggestions and complaints. Information is shared with supervisors and other external entities/institutions, and details regarding complaints are disseminated to Caixa's remaining structure (e.g., Risk Management Division, Internal Audit Division, Compliance Division). Additionally, content is managed on internal and external communication platforms in this context.

In 2024, complaints had a heterogeneous distribution throughout the year. A higher concentration of complaint entries occurred in the first half of the year (55% of the total compared to 45% in the second half), and December ended with a 31% reduction in the number of complaints received YoY.

In 2024, the continued trend of reducing the average response time to customers stands out, currently averaging below four working days, well below the legal limit.

The most frequently addressed topics by customers were service, fraud, and the certification of heirs, representing 9%, 5%, and 5% of the total complaints, respectively. In terms of customer service, we would highlight waiting times and the quality of service, with several initiatives developed in this regard, including the reorganisation of service processes, the implementation of a new management system for the branch network, and the expansion of the transactional capabilities of automated machines. The area of Fraud includes incidents occurring in digital channels and with cards. The process for the Certification of Heirs was completely restructured.

The follow-up of customer suggestions and complaints is also a very important topic for the Caixa Group. BNU Macau, for example, received an average of 32 customer complaints per quarter in 2024, reflecting a 6% decrease compared to the same period in 2023. The main categories of complaints are related to service at the branches, with behavioural issues and employee attitudes being the most cited. In response, BNU Macau implemented continuous behavioural training for the sales teams throughout the year.

Engaging stakeholders in process improvement.

As part of the continuous improvement process that Caixa undertakes in light of the quality certification of this process and with the aim of increasingly meeting customer needs, the Bank collects suggestions for improvement, which represent a significant contribution to incorporating changes to processes. There is also a regular presentation of the progress of the service to Caixa's top management, whose contributions are included in the review and improvement of the process.

CO-Complaints also collaborates in managing the information made available on Caixa's institutional website. This online space provides both customers and non-customers with relevant information, frequently asked questions, safety recommendations, and information on the various contact channels, namely the possibility of making requests for information, complaints, suggestions, and compliments.

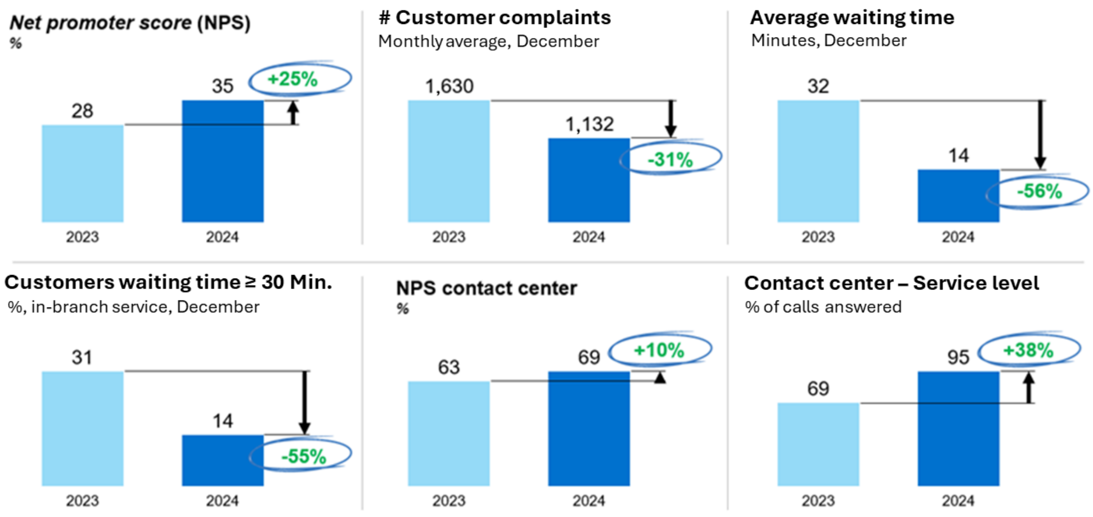
It is also worth noting the reception and forwarding of customer suggestions for processing.

Targets and Metrics

Monitoring metrics related to customer complaints, as well as customer experience and satisfaction is essential for assessing the impact of the several initiatives, identifying areas for improvement, and enhancing the supply of products and services.

Within this scope, in 2024, December ended with a number of complaints received 31% lower compared to the year before.

Also in 2024 a positive evolution in the main metrics for assessing customer experience was observed.



As part of the development of the 2025-2028 Sustainability Strategic Plan, corporate targets and metrics related to customer relations will be developed.

4.4.4. Governance information

4.4.4.1. Corporate Governance (ESRS G1 – Business conduct)

In the financial sector, the existence of a robust governance model plays a key role in promoting transparency, especially with regard to the cross-cutting integration of the ESG strategic vision within the Bank and the respective disclosure of its performance to stakeholders.

Solid corporate governance lays the foundations for effective ESG disclosure practices. Boards of Directors, aware of ESG challenges, ensure that ESG policies are integrated into daily operations and organisational culture through a committed Executive Committee. Furthermore, a robust governance structure ensures that the disclosed information is accurate, relevant, and aligned with the expectations of investors, supervisors, and regulators.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, the following opportunity was identified:

- **Opportunity**: i) Disclosure of ESG information in accordance with best practices and benchmarks.

Caixa takes a strategic approach to Corporate Governance, notably through its inclusion in the 'Sustainability and Social Impact' pillar of the 2021-2024 Strategic Plan, as well as in the 'Transparent Governance Models' and 'Disclosure of Sustainability Information' pillars of the 2021-2024 Sustainability Strategy.

The effectiveness of ESG-related policies and actions regarding this topic is assessed through the Sustainability Committee, which monitors the development and implementation of the Caixa Group's strategic guidelines for sustainable development. The Sustainability Committee is chaired by the Chairman of Caixa's Executive Committee and meets at least quarterly.

Caixa has been basing its sustainability reporting on some of the main ESG reporting frameworks, some of which are voluntary, such as the Global Reporting Initiative (GRI) and the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). These frameworks provide the market with greater consistency and credibility in the disclosed information, enabling a more transparent assessment of the Bank's impact.

The use of voluntary ESG reporting frameworks also allows Caixa to anticipate and respond more effectively to growing regulatory requirements. In 2024, Caixa began reporting in accordance with the European Sustainability Reporting Standards.

Policies and Other Related Corporate Documents

Caixa has been developing a governance approach to sustainability reporting underpinned by various policies and other relevant documents in this area, namely:

- **Code of Conduct:** It enshrines the values, principles of action, and standards of professional conduct observed in and by Caixa in the exercise of its activity and defines transparency (providing services and communicating both externally and internally in a truthful, clear, and objective manner) as one of its fundamental values.

- **Sustainability Policy:** It defines that when reporting and disclosing information related to sustainability, the best practices of responsible communication should be adopted, in addition to compliance with applicable legislation and regulations. The divisions involved in sustainability communication and reporting must act in accordance with the principles set out in the Code of Conduct regarding the provision of truthful, clear, relevant, and up-to-date information on Caixa's activities.

- **Internal Regulation on the Management Report and Accounts:** It establishes that the content to be disclosed in the context of financial reporting must make public information that allows for an assessment, based on criteria of transparency, accuracy, and efficiency, of the institution's actions towards sustainable development in the financial, economic, social, and environmental domains, as well as a comparison with key competitors.
  Caixa must inform stakeholders about how its mission has been pursued, the degree of achievement of its objectives, as well as the key initiatives developed in the context of the implementation of its sustainability strategy.

- **Internal Corporate Regulation on Executive Boards and Committees:** It formalises the constitution of Executive Boards and Committees and describes their rules of operation, competences, composition, and respective support structure. Details the scope of the Sustainability Committee as an advisory body to the Executive Committee that oversees management and guides decision-making regarding the implementation of the Sustainability Strategy.

The Sustainability Policy and the Code of Conduct are available internally in the Internal Regulatory System and to other stakeholders of Caixa at cgd.pt.

Actions and Initiatives Implemented

In 2024, the Caixa Group maintained its commitment to implementing governance practices that ensure the disclosure of ESG information in accordance with best practices and benchmarks, namely:

Supervision of ESG performance by Management

Non-financial reporting presents a set of challenges for companies subject to regulations in this area, such as the Environmental Taxonomy, the Sustainable Finance Disclosure Regulation, or the Corporate Sustainability Reporting Directive. Driven by the increasing regulation in these matters, Caixa's sustainability strategy has one of its strategic pillars associated with the 'disclosure of non-financial information'.

In 2024, Caixa continued to monitor the key developments in ESG information disclosure across several of its main committees and commissions, namely: the Board of Directors, the Executive Committee, the Sustainability Committee, and the Governance Committee.

Here are some examples of ESG documents that have been analysed in these fora:

- **Approval of the 2023 Management Report and Accounts:** Caixa believes that the simultaneous disclosure of both financial and non-financial information is essential to provide an integrated view of a company's performance and impact. Its integration promotes informed decision-making, enhances transparency, and demonstrates how financial results are aligned with responsible and sustainable practices.
  The 2023 Management Report and Accounts was approved at the General Meeting on a proposal from the Board of Directors.

- **Update of the report responding to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD):** Caixa believes that the disclosure of the TCFD Report helps its stakeholders understand the financial implications associated with climate change and the Caixa Group's efforts in mitigation and adaptation to promote investment in more sustainable and resilient solutions, opportunities, and business models. The publication of the new version of the report on Caixa's website was approved in 2024 by the Executive Committee.

- **Publication of the Allocation and Impact Report associated with the issuance of sustainable debt:** Caixa recognises that the disclosure of allocation and impact reports allows investors, regulators, and society in general to understand how the funds raised have been invested and the respective environmental and/or social impact generated by the financing. The publication of the Allocation and Impact Report associated with the issuance of sustainable debt was approved in 2024 by the Executive Committee.

- **Adaptation to CSRD requirements:** Reporting information in line with the CSRD contributes to the harmonisation and comparability between companies, thus enabling greater alignment with stakeholder expectations. Caixa's process of adapting to the requirements of the CSRD was monitored in various internal fora, such as the Sustainability Committee and the Governance Committee. Also noteworthy is the approval of impacts, risks, and opportunities by the Executive Committee.

- **Publication of the Social Impact Assessment Report for the 5th edition of the Caixa Social Awards:** Social impact assessment reports allow for the objective evaluation of the specific impact of certain projects implemented in the community. Measuring and communicating social impact also encourages the development of increasingly effective and long-lasting projects. Caixa's Social Impact Assessment Report was approved in 2024 by the Executive Committee.

Identifying the Main Reporting Challenges

Based on the process of preparing this Sustainability Report, the main challenges have been identified that need to be addressed to ensure continuous improvement in this reporting, as well as alignment with reporting requirements and stakeholder expectations. These challenges include the need to strengthen internal data collection processes required by ESRS standards, the coexistence of regulations, commitments, and standards with specific requirements and timeframes, as well as the level of familiarity with the CSRD in the different geographies of the Group.
These challenges were presented, in a concise manner, to the Governance Committee, whose responsibilities include overseeing the definition and implementation of the Sustainability Strategy. They will be addressed after the completion of the first reporting cycle conducted with the aim of aligning with the CSRD directive.
Also as part of the process of preparing the Sustainability Report, specific support tools have been developed

that foresee the identification of controls associated with the information collected from the Group's divisions and entities.

Alignment with Supervisor Expectations

In line with the expectations of the supervisor, and in response to the regulation issued by the European Central Bank / Bank of Portugal, the supervisory activities carried out by the Joint Supervisory Team, and the guidelines issued by organisations such as the European Banking Authority, Caixa ensures the disclosure of related information, such as in Market Discipline (Pillar 3) and in the Sustainability Report itself.

Furthermore, Caixa prepares and adapts its processes to meet the guidelines published by the European Banking Authority or the European Central Bank, as was the case with the 'ECB Guide on Climate and Environmental Risks Management'. In this context, for example, commercial processes and risk assessment frameworks have been strengthened in these areas.

Internal Control System

Caixa, both as an individual institution and as the parent company of the Group, implements and monitors the internal control systems at both the individual and Group levels. Internal control systems are a crucial tool for banks, as they help ensure compliance with regulations and legal standards, minimising risks and potential infractions.

Caixa's risk management and internal control framework is based on the 'three lines' model, with the Internal Audit Function, as the third line, operating independently from the first and second lines.

The management of sustainability is integrated into the Internal Audit activity plan across various dimensions, including the evaluation of the governance model, control procedures for data collection, compliance of reporting, the environmental management system, and the framework for climate stress testing. In this context, internal audit actions on these topics have already been carried out at Caixa (Head Office).

Regarding the future audit plan, the focus is on continuing to conduct ESG-related audits at Caixa (Head Office) and strengthening audits related to the ESG governance model and reporting within Caixa Group entities.

Stakeholder Engagement

Listening to stakeholders and identifying material topics is a key component in ensuring that sustainability reporting is aligned with stakeholders' expectations and needs. This process makes it possible to concentrate the disclosure of non-financial information on the most relevant ESG issues, contributing to more concise, relevant, and market-oriented reports.

Caixa has been regularly conducting various stakeholder consultation processes, with the identified topics being addressed in its annual sustainability report. This participatory approach ensures that reporting reflects a holistic view of the Caixa Group's operations.

In 2024, Caixa conducted a consultation process directed at 14 groups of internal and external stakeholders, using two consultation methods: direct consultation (surveys) and interviews.

This process, which involved eight Caixa group countries (Portugal, France, Angola, Cape Verde, Mozambique, Macau, East Timor, and Brazil), received 2,301 responses.

Internal Training and Capacity Building

Continuous training in sustainability reporting is essential to develop and disclose robust information to the market, aligned with best practices. With the increasing complexity of the regulations associated with ESG reporting, it is essential that the internal teams involved have up-to-date knowledge.

In 2024, as part of Caixa Group's Sustainability Week, a workshop was held on the CSRD Directive and Double Materiality. This session contributed to a greater understanding of reporting requirements within the Caixa Group. It is also important to highlight the implementation of a Permanent Education Programme (PEP) titled 'Integrating ESG in Core Banking Processes: A Practical Approach,' which addressed some of the key challenges related to data and reporting, and was directed at Caixa's top management.

Both sessions were attended by external experts.

Targets and Metrics

The Sustainability Committee is the advisory body to the Executive Committee that oversees management and guides decision-making regarding the implementation of the Sustainability Strategy, incorporating the principles of sustainable development, responsible banking, and sustainable finance into Caixa's day-to-day operations, in line with the Institution's Strategic Plan and stakeholder expectations.

In line with the internal regulations on boards and committees, the objective was set to hold the Sustainability Committee on a quarterly basis. In 2024, four Sustainability Committees were held, addressing specific ESG reporting topics.

- I CSU: 02/02/2024 (Example of topic covered: 2023 Sustainability Report);
- II CSU: 07/06/2024 (Example of topic covered: European Taxonomy);
- III CSU: 31/10/2024 (Example of topic covered: Corporate Sustainability Reporting Directive);
- VI CSU: 17/12/2024 (Example of topic covered: Allocation and Impact Report).

4.4.4.2. Ethics, conduct and compliance (ESRS G1 – Business conduct)

The policies and processes that guide banking activities ensure compliance with legal requirements and promote responsible business practices, based on high ethical standards. They are particularly critical for companies, and in particular for the financial sector, and are a material topic for Caixa.

In fact, the risk of legal or regulatory non-compliance, particularly regarding sustainability and ESG-related issues, represented a financial risk for Caixa. Therefore, the adoption of an ethical organisational culture and responsible conduct constitutes good business practice and risk mitigation. In this context, compliance management was identified as a subtopic to be highlighted from a materiality perspective, referring to the existence of systemic approaches that ensure compliance with laws, regulations, and policies through the development, implementation, and monitoring of internal standards.

Policies and Other Corporate Documents

Caixa's Board of Directors is responsible for promoting an organisational culture based on high ethical standards, actively participating in the definition, implementation, and promotion of the principles of business conduct contained in the Code of Conduct.

The values, ethical principles, and rules of professional conduct that govern the actions of Caixa and its employees are disclosed at Caixa through this Code of Ethics, which serves as a fundamental tool in managing ethics within the institution. It is a self-regulatory and mandatory document to be observed internally at Caixa, and by Caixa in its relationship with stakeholders, contributing to:

- Harmonising reference standards in the face of ethical dilemmas;
- Affirming the values, operating principles, and rules of conduct that guide the relationship with various stakeholders;
- Promote an organisational culture of legal compliance and compliance with the values and principles that are adopted; and
- Develop best practices of corporate governance and ethical conduct.

The Code of Conduct is reflected and developed in a series of internal regulations that guarantee its implementation, reflecting the values, ethical principles, and rules of professional conduct.

Both the principles of action and the rules of professional conduct give rise to policies, most of which are applicable to the entire Caixa Group, with the Board of Directors being responsible for approving, complying with, and implementing them throughout the Institution.

The Code of Conduct is available for consultation on Caixa's Intranet and institutional website.

In order to ensure and make an effective contribution to business conduct regarding the institutional mission and activity, Caixa's Board of Directors approved the Code of Conduct Management Model, which includes: (i) a set of initiatives and areas of intervention necessary not only for the implementation and operationalisation of the Code, but also for its maintenance and continuous improvement, and (ii) a set of indicators (assessed annually) whose purpose is to assess compliance with the Code of Conduct.

As part of its internal control system, Caixa has also implemented permanent measures to prevent and repress the crime of corruption and related offences, which are reflected in various internal procedures and regulations, in addition to the Code of Conduct:

- **Policy on the Prevention of Corruption and Related Offences**: It determines the guiding principles for the detection and prevention of corruption practices and related offences, the potentially more vulnerable areas, the preventive measures to be taken up and the responsible entities, as well as the rules applied to the monitoring, assessment and update of the Policy itself. It is complemented by the Plan for the Prevention of Corruption and Related Offences.

- **Global Policy on the Prevention and Management of Conflicts of Interest**: it covers circumstances that may lead to conflicts of interest at both the Employee and Institutional levels and establishes the internal procedures that should be adopted in relation to such conflicts.

- **Policy on the Acceptance or Offer of Gifts and Hospitality:** it establishes the principles of action and rules of professional conduct to be observed by employees when, in the course of their activities and duties, they are faced with the possibility of accepting or offering gifts and other benefits, including hospitality**.**

- **System for the Internal Reporting of Irregular Practices:** It establishes the characteristics, handling of communications, the communication circuit and the parties involved in the system.

In addition to the instruments above, Caixa's internal control system also has specific mechanisms for the prevention and repression of offences that may be related to acts of corruption, such as money laundering, market abuse and breach of secrecy.

The internal regulations that govern the System for the Internal Reporting of Irregular Practices (SCIPI) aim to ensure, among other things, the existence of adequate means for reporting and dealing with irregular practices, ensuring the confidentiality of information and the identity of the whistleblower, when known.

Communications relating to the following topics may be carried out through the SCIPI:

j) Potential or actual breaches of Caixa's obligations under its financial intermediation activities, in particular those set out in Regulation (EU) no. 600/2014 of the European Parliament and of the Council;

k) Offences or irregularities already committed, being committed or which, in the light of the available information, may be expected to be committed, concerning the following matters:

    i. Financial instruments, public offers of securities, organised forms of trading of financial instruments, settlement and clearing systems, central counterparty, financial intermediation, credit securitisation companies, venture capital companies, venture capital funds or entities legally authorised to manage venture capital funds, insurance contracts linked to investment funds, individual membership contracts of open pension funds, risk rating and the regime of information and publicity concerning any of these matters;

    ii. Entities operating regulated markets, multilateral or organised trading facilities, settlement systems, clearing houses, centralised securities systems, initial registration or administration of centralised registration systems, central counterparties or holding companies to these entities and providers of data communication services;

    iii. The market abuse scheme.

l) Complaints related to the quote submission process that may compromise the integrity of the Euribor benchmark;

m) Serious irregularities concerning Caixa's administration, accounting organisation and internal supervision;

n) Serious indications of breaches of the duties laid down in the RGICSF, namely regarding rules of conduct, relations with clients, professional secrecy, own funds, reserves, corporate governance, internal capital, risks and disclosure and information duties;

o) Serious evidence of breaches of duties provided for in Regulation (EU) no. 575/2013 of the European Parliament and of the Council, in particular regarding own funds, risks, liquidity, leverage and disclosure of information;

p) Violations of Law no. 83/2017, of 18 August, establishing measures to combat money laundering and terrorist financing;

q) Violations of the regulations implementing Law no. 83/2017, mentioned in the previous paragraph;

r) Violations of internally outlined policies, procedures and controls regarding the prevention of money laundering and the financing of terrorism, namely the Service Orders on Prevention of Money Laundering and Combating the Financing of Terrorism, Prevention of Market Abuse, Prevention of Money Laundering - Entity Filtering System and Correspondent Banking.

In addition to the matters listed in the preceding paragraphs, anonymous reports made through the SCIPI on irregularities or violations of legal provisions or regulations produced by the supervisors in matters related to the exercise of the banking activity or practice must also be admitted.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, a risk was identified associated with the topic Ethics, Conduct and Compliance, consisting of the risk of non-compliance with ESG regulations.

The topics of Ethics, Conduct, and Compliance are related to the 'Risk Management' pillar in Caixa's 2021-2024 Strategic Plan, as well as to the 'Transparent Governance Models' pillar in the 2021-2024 Sustainability Strategy.

If irregularities or shortcomings are identified by the Compliance Division or by Supervisory Entities as part of Behavioural Supervision, the Compliance Department assesses the respective action plans outlined by the intervening areas, recommending the adoption of new measures if deemed necessary, in order to ensure full compliance with the legislation and regulations applicable to Caixa.

At Caixa, the Policy for the Prevention of Corruption and Related Offences establishes as key principle the rejection of all forms of corruption and zero tolerance for any evidence or sign of the phenomenon. As such, the risks of corruption and related offences will be associated with all events that may jeopardise the objective of complying with this principle and acting in accordance with that Policy.

The risks related to corruption prevention are managed through the implementation of the Plan for the Prevention of Corruption, which is updated incorporating the guidelines and recommendations issued by the relevant bodies and supervisory entities, as well as the new duties arising from the legislation.

As defined in that Policy, and according to the aforementioned Plan, each division identifies the corruption risks associated with their activities and specifies the measures adopted to mitigate their occurrence. This Policy also contains information on how it is updated and monitored and identifies the people responsible for managing the plan. All Caixa structural bodies, as part of their area of intervention and with a view to continuous improvement, are responsible for adopting the initiatives necessary for its implementation.

The Policy for the Prevention of Corruption and Related Offences identifies the areas potentially most exposed to the phenomenon of corruption and related offences also identified in the Plan for the Prevention of Corruption and Related Offences, which was drawn up and published on Caixa's institutional website in 2022. It also includes measures to be implemented and action plans to mitigate Caixa's risk regarding this phenomenon. The implementation of these measures and actions is monitored through the Annual Report on the Implementation of the Plan, drawn up in April 2023 with reference to 2022, in April 2024 with reference to 2023, and in April 2025, with reference to 2024.

In order to protect its reputation and meet legal and regulatory obligations, Caixa adopts responsible measures to minimise the risk of fraud throughout its organisation. In this context, fraud risks are outlined internally and appropriate internal controls are implemented in a timely manner to prevent, detect and respond to them. The main goal of Caixa's Fraud Prevention and Management action is to prevent and manage fraud incidents, in order to reduce Caixa's exposure to risk situations by adopting suitable containment/mitigation measures for the fraud incidents that occur.

The Compliance Division promotes the development of a compliance culture based on high ethical standards and ensures the control of compliance with internal policies and ethical norms. Caixa's Code of Conduct establishes that requests for clarification regarding the interpretation or application of the Code, as well as the duties of conduct covered by it, should be addressed to the Compliance Division, which assesses the need for intervention by other divisions at Caixa.

Ideally, the presentation of concerns related to responsible corporate culture, including issues of ethics and conduct, should be made via the dedicated mailbox managed by the Compliance Division. Caixa also has a system for the internal reporting of irregular practices (SCIPI), regulated by its own internal regulation, which should be used for raising concerns if they fall within one of the topics covered by its scope. The reporting of situations covered by the SCIPI is investigated by the Compliance Division, which considers all available sources of information.

The reporting of concerns that constitute disciplinary offences is subject to investigation by the People Management and Development Division and the Internal Audit Division (which requests the intervention of the Compliance Division whenever necessary). The Compliance Division is always informed about the conclusion of investigations involving unlawful behaviour or actions contrary to its Code of Conduct.

Compliance Risk Management Within the Group

In order to promote a culture of integrity, ethics, and transparency across the entire Caixa Group, it is ensured that all areas have a Compliance Officer with the mission of reinforcing awareness of best practices and behaviours in line with the principles of the compliance culture.

At Group Entities, the compliance function is independently managed by the local compliance structures, led by Compliance Officers (CO), who, functionally reporting to the Head of Compliance at Caixa, in line with the best high-level international practices defined for the role, ensure, in close collaboration with the Compliance Division, the coordination of compliance risk management in the respective Caixa Entities and applicable regulation.

To monitor and control compliance risk in the Caixa Group's international structures, an Entity Compliance Monitoring and Reporting Model has been established. This model includes the activities carried out by the Compliance Division to effectively monitor the Entities, as well as the obligations of the Entities towards the Compliance Division, particularly regarding the fulfilment of information duties related to various compliance topics that must be followed and monitored by the parent company, ensuring the reliability and timeliness of the reported information.

The Entity Compliance Monitoring and Reporting Model has the primary objectives of ensuring effective oversight of the Group's Entities, enabling the ongoing evaluation and monitoring of risks within its perimeter, contributing to the timely adoption of corporate policies, promoting the prompt resolution of deficiencies with compliance risk, and enhancing the control and monitoring of the execution of the annual compliance plan and budget. .

To achieve those goals, we highlight the permanent monitoring and risk assessment activities, the resolution of deficiencies with a compliance risk and the management of policy changes.

Ongoing Risk Monitoring and Assessment

The Compliance Division has defined a model that allows assessing a set of legal, regulatory, and best practice requirements applicable to the compliance function at an international level, regularly visiting the Caixa group entities to evaluate the degree of compliance risk management. These requirements are organised by major topics, and, within each topic, specific issues are identified, thus making it possible to structure the diagnosis made by the parent company.

As a result of the assessment carried out, each Entity is given an overall mark of its degree of compliance, which will allow for conclusions to be drawn on the Group's risk profile, as well as for identifying possible shortcomings and opportunities for improvement that will strengthen the organisational culture and the risk management, governance and internal control systems with regard to compliance risk.

Resolution of Deficiencies with Compliance Risk

The Compliance Division records the compliance risk weaknesses of the entities identified by the authorities and supervisory bodies, the internal and external audits and the on-site compliance visits made to the entities.

Each weakness is assigned a level of risk, a deadline for implementing the action plan associated with it, as well as the person responsible for implementing the action plan, with a view to its regular follow-up and timely resolution, in accordance with the Corporate Policy for Managing Internal Control Deficiencies applicable to the entire Group.

Corporate Regulations Management

As part of the corporate responsibilities of the Compliance Division, it is its duty to promote the ethical culture and principles of action of the Caixa Group, as well as to disseminate the best practices for the compliance function and encourage the sharing of experiences and communication between the various entities of the Group. This also includes assisting Caixa entities in adopting corporate internal regulations and overseeing this implementation.

In order to achieve that objective, it is necessary to set forth the corporate regulations regarding the compliance function, as well as the Entities that must transpose those regulations and the deadline for transposition. Each Entity is responsible for transposing the corporate regulations ensuring their adaptation to the legal and regulatory requirements of their jurisdiction. All corporate regulations for the compliance function must be approved by the Head of Compliance (HoC) prior to their approval and subsequent publication, thus contributing to implementing a coherent compliance function pursuant to the internal rules and procedures outlined for the entire Group.

Actions and Initiatives Implemented

Caixa's Code of Conduct was first formally issued in 2008 and underwent a comprehensive review in April 2020 to strengthen the provisions related to ethical matters. It also underwent minor changes in 2024, where a provision related to the conduct of Employees on social media was included (new paragraph 3 in Article 13).

It is worth mentioning that, in 2024, the Portuguese Association of Business Ethics awarded Caixa the 'Creating Value with Values' prize, which recognises the good practices and ethical principles established by Caixa.

Also in 2024, and with the aim of promoting and raising awareness among Caixa employees of the International Day Against Corruption established by the UN on 9 December, a message reaffirming Caixa's commitment to the active rejection of all forms of corruption was published on Caixa's intranet. It was also reminded to all employees that they should not engage in situations that could potentially lead to acts associated with corruption.

Caixa Honoured with 'Creating Value with Values' Award

Caixa was recognised by the Jury of the 1st Edition of the 'Creating Value with Values' Programme of the Portuguese Association of Business Ethics ('APEE'), an entity that aims to support Sustainable Development based on 'Ethical Principles and Values, on an environmental level through harmony with the Planet and the resources it provides, on a social level through inclusion, diversity, and the pursuit of happiness, leaving no one behind.'

The award was presented in May 2024 during the Ethics Congress of the Portuguese Association of Business Ethics (APEE) and serves as recognition of the good practices and ethical principles established by Caixa.

In 2024, Caixa provided training to the Compliance Officers of the Caixa Group Entities, particularly on topics such as 'Compliance Opinions - Methodology and Operationalisation of Compliance Risk Assessment' and 'Compliance Testing.' Additionally, the Compliance Division also promoted the dissemination of news on Caixa's Intranet page regarding various topics that are part of Caixa's compliance culture.

Furthermore, throughout 2024, several training programmes were made available to Caixa employees, with key topics including:

- Climate Risks;
- Sustainability - A Strategic Approach;
- Dematerialising Operations - Digital Signature (Signpad);
- Diversity, Equity, and Inclusion | Equality Makes the Difference;
- Public Disclosure Duties;
- Cybersecurity and Information Protection 2024;

Training sessions were also available to that contributed to deepening the culture of compliance at various levels:

- Governance:
    - Resolution Plan at Caixa;
    - SGCN - Business Recovery Teams;
    - Subcontracting;

- Employees:
    - Ethics and Conduct;
    - Prevention and Management of Conflicts of Interest;
    - Prevention of Corruption and Related Offences 2023;
    - Self-protection Measures;
    - Performance Management at Caixa.

- Marketing of Products and Services:
    - Credit Insurance:
    - Payment Services Directive | PSD2;
    - Trade Finance Fundamentals.
    - FATCA - Foreign Account Tax Compliance Act;

- Information and Communication Systems and Technologies:
    - Information Systems Quality Management System
    - Information Security - Identity and Access Management
    - Mobility and Safe Use of ICT

- Personal Data:
    - Data Protection Culture at Caixa (GDPR)
    - Governance and Data Quality

Regularly, the Caixa Group also disseminated internal regulations and procedures aimed at reinforcing the culture of compliance, particularly those focused on providing information and reports to Supervisors and Competent Entities.

It should be noted that, to raise awareness among employees about Caixa's values and the applicable rules of conduct, all Caixa employees (including members of governing bodies) participate in training sessions when they take up their duties. These sessions are renewed every two years or whenever there are significant updates to the content of the Code of Conduct. In coordination with the Management and People Development Division, the Compliance Division ensures the content used in training sessions. It is worth noting that the Management and People Development Division is the owner of the Training Plan within Caixa.

Training the members of Caixa's Board of Directors in business conduct is crucial to ensure an organisational culture based on principles of ethics and transparency. In this regard, Caixa has invested in the continuous training of its Board members in order to ensure high standards of governance. By 2024, 76% of the members of the Board of Directors had completed the Ethics and Conduct course.

In May 2024, the internal regulation governing the System for the Internal Reporting of Irregular Practices (SCIPI) was updated, and Caixa employees were reminded, through a notice published on Caixa's Intranet page, of the procedures to be followed when making a report through SCIPI.

In 2024, several fraud situations were analysed, identified based on the alert systems in place, reported through internal channels, or by External Entities. The need for additional preventive measures was assessed, as well as the existence of possible systemic effects and behavioural patterns in coordination with relevant Divisions and/or External Entities to identify new behavioural patterns, potential contamination of occurrences, and new procedures to be adopted.

Caixa has defined and implemented control mechanisms and procedures to mitigate the risk of fraud, which translates into potential losses with negative impacts on results or capital, resulting from activities with fraudulent intent.

In the period in question, news, alerts or recommendations were also published with a view to monitoring trends and new fraud typologies, with the primary goal of containing incidents and preventing future situations.

Targets and Metrics

Caixa and its employees carry out their activities and duties in accordance with high ethical and deontological principles, guiding their practice in relations with customers and other stakeholders by the values defined in the Code of Conduct.

In this regard, Caixa is committed to actively rejecting all forms of corruption, and it is worth noting that, in 2024, it was the target of a monitoring action carried out by the Inspectorate-General of Finance. As a result of this action, Caixa received an excellent rating regarding compliance with the standards and obligations set out in the General Regime for the Prevention of Corruption and the General Regime for the Protection of Whistleblowers, fulfilling nearly all legal parameters in this area.

In order to ensure the effective contribution of the Code of Conduct to Caixa Geral de Depósitos' mission and activity, Caixa has a Code of Conduct Management Model in place. This Model lists a series of initiatives and areas of intervention required, creating a set of indicators (assessed annually) whose purpose is to assess compliance with the Code of Conduct. In 2024, a new set of metrics was designed and implemented to quantify the main indicators of the Code of Conduct Management Model, making it possible to identify the areas of the Code of Conduct with the greatest weaknesses.

As a result of the implementation of the Code of Conduct Management Model, an annual report on this model is prepared by the Compliance Division, which is presented at the highest level within Caixa, including the defined indicators.

Additionally, starting in July 2024, Caixa began reporting monthly to the National Anticorruption Mechanism ('MENAC') regarding the (non)existence of failures or irregularities in complying with regulations (i.e., the Plan for the Prevention of Corruption and Related Offences, the Code of Conduct, the training programme, and the whistleblowing channel), identifying them if so, as well as the corrective measures taken or to be taken.

The aforementioned obligation for Caixa to send a monthly report to MENAC arises from the control and supervision duties under the General Regime for the Prevention of Corruption, specifically regarding the quality, effectiveness, and updating of the regulatory compliance tools for the prevention of corruption and related offences.

As part of the responsibilities assigned to the Compliance Function as the 2nd line of defence in the Internal Control System, Caixa is implementing a series of initiatives aimed at enhancing its operations, particularly under the Compliance Testing Programme (Article 28(1)(n) of Notice No. 3/2020 from the Bank of Portugal), which is regularly reviewed and adapted to processes with higher compliance risk, following the annual Risk Assessment exercise .

The implementation and execution of the Compliance Testing Programme is also a source of identifying indications that may justify conducting compliance visits on matters that are deemed to require further investigation.

In 2025, Caixa will review its Corruption Prevention Plan and assess the need to identify new areas potentially more exposed to the risk of corruption. The Code of Conduct will also be reviewed to identify and/or further develop new areas that should be included in it.

4.4.5. Other material topics

4.4.5.1. Sustainable Financing and Investment

The Paris Agreement, adopted in 2015, is a historic milestone in the fight against climate change, setting ambitious targets to limit global warming to well below 2°C, preferably 1.5°C, compared to pre-industrial levels. Naturally, each country's national commitments, public policies, and financing strategies are drivers of success in controlling greenhouse gas emission levels.

The European Commission has been issuing a series of policies, regulations, and laws that promote sustainable financing, such as the Action Plan for Financing Sustainable Growth, which establishes, among other things, the creation of reference benchmarks aligned with the Paris Agreement, promoting the transition to a low-carbon economy.

Similarly, the European Green Deal, launched in 2019, is the EU's growth strategy aimed at transforming Europe into a fair and prosperous society with a modern and competitive economy. It also lays the foundations for achieving a greenhouse gas emissions-neutral economy. This pact supports measures in all economic sectors, including energy, transport, industry, agriculture, and sustainable finance

The contribution of the financial sector as a pillar in financing the economy and economic development is vital for this transition process. As a leading institution in the financial sector, one of Caixa's priorities is to support the transition to a carbon-neutral economy through its financing and investment activities.

However, it is also necessary to ensure that the transition process is carried out in a fair, responsible, and inclusive manner, taking into account social risks.

Managing Material Impacts, Risks, and Opportunities

Following the doublemateriality analysis conducted in accordance with the requirements of the CSRD, the following impacts and opportunities were identified:

- **Positive impact**: i) Creating a positive environmental and social impact on society by channelling capital to companies and projects that promote environmental management, social equity, and responsible governance practices.

- **Opportunity**: i) Strengthening market differentiation by developing sustainable products; ii) reinforcing the integration of sustainability principles in the selection of investment funds, and iii) seizing business opportunities associated with the transition to a carbon-neutral economy.

These results reinforce Caixa's role in promoting sustainable development, namely by financing its customers' transition to more sustainable and inclusive business models, as well as developing products and services that take ESG factors into account.

Caixa takes a strategic approach to sustainable financing and investment, namely through its framework in the 'Sustainability and Social Impact' pillar of the 2021 - 2024 Strategic Plan and in the 'Sustainable and Inclusive Financing' pillar of the 2021 - 2024 Sustainability Strategy.

The effectiveness of ESG-related policies and actions regarding sustainable financing and investment is assessed through the Sustainability Committee, which monitors the development and implementation of the Caixa Group's strategic guidelines for sustainable development. The Sustainability Committee is chaired by the Chairman of Caixa's Executive Committee and meets at least quarterly.

Policies and Other Corporate Documents

Caixa has been developing an approach to managing sustainable financing and investment supported by various corporate policies and other relevant documents, including:

- **Caixa's Sustainable Financing and Energy Transition Policy**: It establishes a set of principles and general rules that must be observed in the context of sustainable financing at Caixa and Caixa Group entities. It also provides an important contribution to the implementation of Caixa's climate transition plan and to the process of transforming the bank and society towards carbon neutrality.

- **Caixa's Sustainable Finance Framework:** Document aligned with the Green Bond Principles and the Sustainability Bond Guidelines published in June 2021 by the International Capital Markets Association**.** It also provides relevant information on the areas of activity and eligibility criteria for environmental and social financing activities.

- **Caixa's Exclusion and Sectoral Limitation Principles**: It acknowledges the existence of sectors of activity or projects that may contribute negatively towards sustainable development and, therefore, establishes a list of principles underpinning activities and projects that are excluded, or restricted under certain conditions, from its credit policy.

- **Socially Responsible Investment Policy for Caixa Gestão de Ativos**: It aims to ensure compliance with the provisions of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019, on the disclosure of sustainability-related information in the financial services sector.
  It also encompasses the nature of the various products managed by Caixa Gestão de Ativos, including, on the one hand, products that promote, among other aspects, environmental or social

characteristics and that, under the regulation, may fall under Articles 6 and 8 of the aforementioned regulation, and, on the other hand, those that pursue a sustainable investment objective and are classified under Article 9, as specified in the pre-contractual information for each product. Furthermore. the Socially Responsible Investment Policy also extends, under the same terms, to the discretionary management and investment advisory services provided by Caixa Gestão de Ativos.

- **Engagement Policy for Caixa Gestão de Ativos**: The general principles outlined in the Engagement Policy aim to define Caixa Gestão de Ativos' approach to engaging with the companies in which it invests on behalf of the funds it manages and its discretionary management customers on ESG-related matters. Caixa Gestão de Ativos aims to engage with these companies by encouraging the adoption of best environmental, social, and corporate governance practices, enabling them to ensure long-term sustainable development in both financial and non-financial terms.

- **Socially Responsible Investment Policy for CGD Pensões:** It also aims to ensure compliance with the provisions of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019, on the disclosure of sustainability-related information in the financial services sector. It encompasses the nature of the various products managed by CGD Pensões, which promote, among other aspects, environmental or social characteristics and that, under the regulation, may fall under Articles 6 and 8 of the aforementioned regulation, as specified in the pre-contractual information for each product.

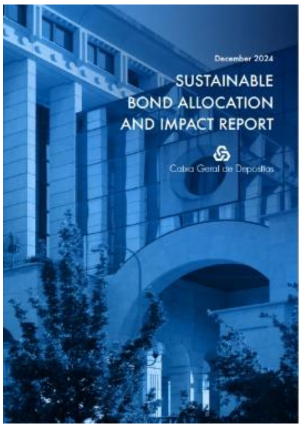
- **Statement on the Due Diligence Policies of Caixa Gestão de Ativos**: It covers the due diligence policies implemented at Caixa Gestão de Ativos, namely the Socially Responsible Investment Policy, the Engagement Policy, and the Voting Rights Exercise Policy, which outline the strategy for integrating Socially Responsible Investment risks into Caixa Gestão de Ativos' investment decision-making process.

The aforementioned documents are available internally in the Internal Regulatory System (SNI) and to other Caixa stakeholders at cgd.pt.

Actions and Initiatives Implemented

In 2024, the Caixa Group maintained its commitment to implementing sustainable financing and investment practices by developing a series of initiatives:

Assessment of the environmental and/or social impact associated with the issuance of sustainable debt



The publication of the 2nd Allocation and Impact Report associated with Caixa's Sustainable Debt Issuance allowed for a transparent and objective demonstration to stakeholders of the allocation of eligible funds and the corresponding quantification of their environmental and social impact, namely:

- 9,475 small and medium-sized enterprises supported in economically disadvantaged areas, impacting 30,876 jobs;
- 43,085 tonnes of CO_2 avoided.

In the 2nd Allocation and Impact Report, an amount greater than the total issuance was allocated to account for amortisations and potential early repayments. A total of €2.2 billion were allocated to financing operations that directly contribute to supporting the implementation of four United Nations Sustainable Development Goals (SDGs), namely SDG 7 - Affordable and Clean Energy (financing amounting to €84 million), SDG 8 - Decent Work and Economic Growth (financing amounting to €1.85 billion), SDG 9 - Industry, Innovation, and Infrastructure (financing amounting to €175.6 million), and SDG 11 - Sustainable Cities and Communities (financing amounting to €103.9 million).

In the 2021 - 2024 strategic cycle, Caixa has already issued three sustainable debt issuances, totalling €1.3 billion.

Support in structuring sustainable debt instruments

In the ESG aspect, on which Caixa - Banco de Investimento (CaixaBI) has been placing significant emphasis, the involvement of CaixaBI in leading 21 sustainable debt operations stands out. These include seven in the green format, one in the social format, and 13 in the sustainability-linked format, including:

- Subordinated issuance of Green Bonds by EDP, amounting to €750 million, with a maturity in 2054 and a call option in six years, conducted in May, aimed at financing the EDP Group's green project portfolio, which includes renewable energy production projects;
- Issuance of RT1 Green Bonds by Fidelidade, amounting to €500 million, with a perpetual maturity and a call option in 5.5 years, conducted in May. This represents Fidelidade's inaugural issuance in the sustainable format, following the publication of its Green Financing Framework, with the funds primarily allocated to green buildings;
- Issuance of Green Bonds by REN, amounting to €300 million and maturing in 2032, conducted in February, aimed at financing green assets, particularly within the framework of the National Transmission Network, as outlined in REN's Green Financing Framework;
- Issuance of Solar Bonds by GALP, amounting to €200 million, with a 7-year term, conducted in December, aimed at refinancing a portfolio of photovoltaic parks;
- Issuance of Green Bonds by Greenvolt, named Greenvolt Green Bonds 2024-2029, amounting to €100 million, with a 5-year term, conducted in February under the company's Green Bond Framework and carried out through a public subscription offer. This constitutes Greenvolt's second green issuance, with placement in the Portuguese retail market.

Socially Responsible Investments - Classification of Financial Products

As an integral part of the Caixa Group, Caixa Gestão de Ativos adheres to the principles inherent in sound business management. Several regulations are in place regarding social responsibility and sustainable development policies, promotion of environmental protection, respect for principles of legality and business ethics, gender equality in treatment and opportunities, human resources development, as well as economic responsibility and the safeguarding of the company's competitiveness.

In 2024, the evolution of the 'Caixa Ações Europa Socialmente Responsável' Fund and the 'Caixa Investimento Socialmente Responsável' Fund stands out, moving from Article 8 to Article 9 in accordance with the Sustainable Finance Disclosure Regulation (SFDR). In 2024, 93.1% of the investment funds were classified as Article 8 or Article 9 according to the SFDR regulation, totalling a global amount of over €6.3 billion.

The Socially Responsible Investment strategy outlined by Caixa Gestão de Ativos is in line with Caixa's Corporate Sustainability Programme, which aims to align with international trends and best practices in the field of sustainable development.

Integrating ESG criteria into pension fund management

The process of integrating sustainability factors in addition to fundamental analysis is followed in the selection of assets regardless of the type of customer considered.

In this context, all Pension Funds managed by CGD Pensões, Sociedade Gestora de Fundos de Pensões of the Caixa Group, consolidated their sustainability approach in 2024, for a total amount of €874.9 million. Among those, we highlight the open pension funds classified as Article 8 of the SFDR Regulation, for a total amount of €118.9 million, namely the Open Pension Funds Caixa Reforma Defensivo, Caixa Reforma Moderado and Caixa PPR Rendimento Mais.

Caixa Gestão de Ativos - Implementation of the Principles of Responsible Investment

In August 2024, Caixa Gestão de Ativos participated in the annual questionnaire of the Principles of Responsible Investment (PRI), with reference to the activities carried out during 2023, The evaluation, disclosed at the end of November, highlights:

- a 5* rating (improvement from the 4* received the previous year), corresponding to an absolute score of 93%, compared to 80% in the previous assessment, was achieved in the area of Policy Governance & Strategy. This validates the adequacy and correctness of the approaches Caixa Gestão de Ativos has been following in ESG matters, and it positively compares with the relative evaluation against the median of PRI signatories;
- Positive assessments in PRI's analyses of Caixa Gestão de Ativos' investment activities in equities, sovereign bonds, and corporate bonds, with improvements of 2pp, 4pp, and 3pp, respectively, in all analyses. This resulted in an additional star in the Equities classification (5*) compared to the previous rating of 4*;
- Improvement in assessments associated with the specific topic of climate and the assessment of sustainability risks.

Strengthening the ESG commercial offer

Caixa - Caixa ESG Line

In 2024, Caixa launched the Caixa ESG credit line, aimed at all types of companies, to support investments that contribute to the transition to a more efficient business model and improve their ESG performance, through medium/long-term financing (MLP) and Financial Leasing. The Caixa ESG line also includes a subline specifically for companies in the real estate sector, aimed at the development of projects and construction of sustainable buildings.

This line offers tangible benefits for the customer, including a reduced interest rate, longer terms and larger amounts, and discounts on the main commissions.

Caixa - BPF InvestEU Sustainable Urban Mobility Line

In 2024, the InvestEU Sustainable Urban Mobility Credit line was launched with a guarantee protocol with Banco Português de Fomento, which aims to support investment in the adoption of sustainable passenger transport methods, fleet renewal, and the purchase of 100% electric vehicles by land transport companies.

This line offers tangible benefits for the customer, resulting from mutual guarantees and discounts on the main commissions.

Caixa - BPF InvestEU Sustainable Investment Line

A multisectoral credit line with a guaranteed protocol with Banco Português de Fomento, aimed at supporting investment in carbon footprint reduction and the adoption of circular economy principles in business activities.

This line, launched in 2024, offers tangible benefits for the customer, resulting from mutual guarantees and discounts on the main commissions.

Banco Caixa Geral Angola – ESG Car Leasing.

With the aim of supporting Banco Caixa Geral Angola's retail and corporate customers in adopting good sustainable practices and transforming their business model to promote a more sustainable, low-carbon economy, Banco Caixa Geral Angola has launched the ESG Car Leasing product.

This financing solution offers tangible benefits for the customer through a reduced interest rate.

BNU Macau - Eco-Car Loans Campaign

BNU Macau's Eco-Car campaign promotes the adoption of more environmentally responsible vehicles. This campaign runs until 28 February 2025 and aims to encourage customers to choose transportation options with lower greenhouse gas emissions.

Banco Comercial e de Investimentos - Eco-Environmental Line

By financing sustainable solutions, Banco Comercial e de Investimentos is positioning itself as an active local agent for promoting sustainable development in Mozambique.

The Eco-Environmental line offers attractive conditions for financing projects focused on renewable energy generation and the purchase of energy-efficient equipment, achieving at least a 15% energy savings or reduction in CO_2 emissions, or involving the use of renewable energy sources.

Banco Comercial do Atlântico - BCA Renewable Energy Business Credit Line

BCA's Renewable Energy Protocol aims to encourage the state of Cape Verde to subsidise interest on loans for families, micro and small businesses that fall within the low-voltage consumption brackets, in order to facilitate investments and access to bank loans for the purchase of self-production systems under the renewable energy micro-generation scheme.

Timor Branch - BNU 'Uma' Environmentally Friendly Line and MLP ESG Line - BNU Green Land

The Timor Branch recognises that the creation of ESG financial products is crucial for generating a positive impact on the environment and society. In this context, the Timor Branch launched two new products with the following characteristics:

- BNU 'Uma' Environmentally Friendly Line A product aimed at retail customers who want to contribute to sustainable environmental practices. This is a financing line designed to support investment in sustainable energy solutions as a means of transitioning to greener and more environmentally friendly solutions;
- MLP ESG - BNU Green Land: A product aimed at companies that focus on projects related to green and sustainable practices. This financing line is aimed at all types of businesses seeking to invest in a more efficient business model and improve their performance. It supports initiatives such as clean electricity - particularly the installation of solar panels - building decarbonisation, and other environmentally sustainable projects.

France Branch - Sustainable Offer

To support credit production for individuals and professionals, the France Branch launched the marketing of four types of green loans in October 2024:

- Green auto loan, aimed at retail and corporate customers;
- Loan for energy renovation work, aimed at retail and corporate customers;
- Green real estate loan dedicated to the purchase of real estate with better energy efficiency certificates, aimed at retail and corporate customers;
- Loan for renewable energy generation, aimed at corporate customers.

Caixa's Exclusion and Sectoral Limitation Principles

The Caixa Group acknowledges the existence of sectors of activity or projects that may contribute negatively towards Sustainable Development and, therefore, establishes a list of principles underpinning activities and projects that are excluded, or restricted under certain conditions, from its credit policy. To ensure that the financing granted is aligned with sustainability principles, Caixa does not finance projects that use child or forced labour, in accordance with international conventions on human rights and decent work.

In environmental matters, Caixa restricts its financial support to companies and projects that use scarce natural resources, whose exploitation or extraction could cause a negative environmental impact and that do not fulfil conditions defined in national or international regulations in this area.

For these sectors, Caixa establishes specific rules (under credit risk and compliance policies) to ensure that socio-environmental risks are properly identified and mitigated.

Consulting partnerships to support applications for European funds.

Caixa has strengthened the capabilities of the portal dedicated to presenting the Annual Notice Plan of the PT 2030 Programme (caixaprrpt2030.pt), which ensures that corporate customers have access to a network of expert partners to support the submission of investment project applications.

Having the incentives to be received by companies paid into Caixa gives them access to a number of benefits, such as more favourable conditions for issuing declarations of support for applications and benefits in new financing, both for anticipating incentives and for supplementing support for the overall costs of investment projects.

Targets and Metrics

The setting of ambitious and transparent targets for sustainable financing and investment not only aligns the Caixa Group's operations with the objectives of the 2030 Agenda for Sustainable Development and the Paris Agreement, but also enhances various opportunities associated with the climate transition.

As part of the definition of the 2021 - 2024 Sustainability Strategy, Caixa set the goal of achieving €1.5 billion in financing (accumulated until 2024) for ESG products in Portugal, meaning products that contribute to specific environmental and/or social objectives.

Between 2021 and 2024, Caixa reached an accumulated value of €2.37 billion in ESG financing.

As part of the development of the 2025-2028 Sustainability Strategic Plan, a series of corporate targets will be developed related to sustainable financing and investment.

4.4.5.2. Digital Transformation and Innovation

Digital transformation and innovation play a key role in the evolution of the banking sector, reshaping the way financial institutions operate and interact with their customers.

Caixa recognises that innovation is a continuous and accelerated process that requires determination, creativity, and strategic vision. To this end, Caixa has been driving the continuous improvement of its mobile applications, the development of new digital platforms, process automation, and the use of artificial intelligence.

Investment in digital transformation and innovation not only enhances the user experience but also contributes to increasing operational efficiency, reducing costs, and strengthening competitiveness in an increasingly dynamic and demanding market.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, the following opportunities were identified:

- **Opportunities**: i) Strengthening the use of data analytics and big data; ii) Strengthening the use of artificial intelligence and automation.

The use of data analytics and big data processes enables Caixa to optimise strategic decision-making and enhance the personalisation of banking services. The ability to analyse large volumes of data in real time makes it possible to identify market trends, anticipate risks, and offer solutions that are more in line with customer needs.

On the other hand, the increased use of artificial intelligence and automation will bring significant gains in efficiency and innovation. The implementation of automated solutions, such as virtual assistants, streamlines customer service, reduces response times, and frees up resources for higher-value tasks. This approach not only enhances the user experience, making services more accessible and personalised, but also increases Caixa's competitiveness.

Caixa takes a strategic approach to customer relations, particularly through its inclusion in the 'Service Quality and Innovation' pillar of the 2021-2024 Strategic Plan and the 'Equity, Digital and Financial Inclusion' pillar of the 2021-2024 Sustainability Strategy.

The Digital Banking Division is responsible for leading Caixa's digital transformation process across the organisation. It is responsible for defining and developing the strategy and management of Caixa's non-physical channels by implementing innovative projects in terms of new technologies that drive business growth, ensuring the integrated management of the digital communication platform and content.

It is also important to highlight the Analytical Intelligence Centre, an entity within Caixa whose mission is to drive, develop, and implement best practices and innovative solutions in the field of analytical intelligence and new cognitive solutions, with the aim of optimising and accelerating the capture of value from available data and, in this way, generating a significant impact on Caixa's business.

The Digital Banking Division and the Analytical Intelligence Centre report directly to the Executive Committee.

Policies and Other Related Corporate Documents

- **Code of Conduct:** It enshrines the values, principles of action, and standards of professional conduct observed in and by Caixa in the course of its activities and defines innovation (focusing on technological progress, leading digital banking in Portugal, with open architecture solutions, in a multichannel response to the evolution of customer expectations and preferences) as one of its fundamental values.

Caixa takes a strategic approach to digital transformation and innovation, particularly through its inclusion in the 'Service Quality and Innovation' pillar of the 2021 - 2024 Strategic Plan.

Actions and Initiatives Implemented

In 2024, Caixa Group maintained its commitment to digital transformation and innovation by developing a series of initiatives.

Digital Assistant

CAIXA is the Smart Digital Assistant of the Caixadirecta app, which allows Caixa customers to manage their personal finances by voice in real time, 24/7.

Supported by Artificial Intelligence, it is able to understand and hold conversations, answer questions, provide information and perform customer requests.

Activated in natural language, it allows an experience close to human interaction, being capable of answering customer queries, providing information, making payments, performing transfers, checking balances and account transactions, requesting and activating debit and credit cards, and reactivating home banking services.

More recently, the assistant has integrated new functions such as registering personal loan applications, making it an even more complete tool for those looking for simple access to their bank.

For customers, this solution simplifies their relationship with the Bank, boosting proximity and improving the digital experience. This simplification also allows us to promote the digital inclusion of people who find it more difficult to use technology.

Caixa is available on the Caixadirecta app and adapts to the context of the customers, enabling conversations similar to human speech.

This solution ensures a unique user experience and is supported by a robust data security and privacy system. Additionally, it was developed to ensure greater proximity between customers and the bank, retain and attract new customers, reduce calls to the contact centre, and ensure greater accessibility, improving customer experience and satisfaction.

In 2024, it helped accelerate the digital business (subscription to products and transactions, such as express credit or cards) and reduce the gap for customers with a lower digital engagement.

Throughout the year, Caixa's customers used the Digital Assistant as follows:

- Around 6 million conversations (+3%) year-on-year;
- more than 245,000 homebanking service unblocks (+16%) year-on-year;
- more than 235,000 balance and movement enquiries (+18%) year-on-year;
- and more than 100,000 transactions.

Caixa Metaverse

Caixa launched its presence in the Metaverse in 2024, offering a new dimension of interactivity and accessibility through an immersive and sensory experience in a virtual, three-dimensional environment, open to all. In line with emerging trends in Artificial Intelligence and virtual reality, Caixa reaffirms its commitment to Innovation by entering a new digital realm that promises to transform the way the Bank engages with the future.

Through the use of technologies such as voicebots and virtual assistants, which are already part of Caixa's offer, and the use of artificial intelligence to enhance customer support and simplify banking operations, Caixa's entry into the Metaverse contributes to opening up new horizons through a three-dimensional, virtual, immersive, and sensory space, enabling new forms of collaboration between teams, as well as greater interaction with customers and partners.

In the Caixa Metaverse, users are greeted by the Chairman of the Executive Committee, Paulo Moita de Macedo, as the central figure of the experience. They are invited to explore various interactive areas, such as:

- **The Future of Your Company**, dedicated to the Corporate segment;
- **Your Future**, focused on university students entering the labour market;
- **ESG**, including the 2050 Carbon Neutrality Transition Plan, the ESG Rating Model, and the Caixa Mais Mundo Awards;
- **Since 1876, the interactive map of Lisbon** where we tell part of our history and where visitors can explore the different Head Office Buildings, with an emphasis on the one that will be our next Head Office Building;
- **About Us**, where we define four Values and their importance for Caixa, such as Future, Innovation, Sustainability, and Trust;
- **Culturgest**, an immersive experience with a virtual exhibition of some of the works from Caixa's art collection.

Digital talks

This initiative continued in 2024, with the aim of disseminating and furthering internal knowledge about the main digital trends. To this end, the scope of the topics was broadened, and in addition to those related to 'Digital', topics such as management methods, new technologies, the impacts of these technologies, and human resources were also covered.

As changing mindsets is a significant natural barrier within organisations, this initiative aims to help break down these 'cultural' barriers and foster the development of a more comprehensive and in-depth holistic view of the topics. This approach allows for quicker results, achieved in a timely and consistent manner. This change supports the much-desired culture of transformation within the company, in addition to bringing employees closer to key topics that are essential for keeping the organisation up to date and equipped with knowledge.

Since participation is voluntary, the challenge of engaging someone to attend involves ensuring that the topics are interesting and relevant to the internal audience. The main focus of each Talk is to ensure that, regardless of the topic, each employee understands how they can integrate the knowledge gained into their daily work.

The range of topics aims to diversify interest and keep up with trends, providing information on changes that are already having an impact in other geographies and are expected to reach our reality.

The Digital Talks are 100% online, led by renowned experts (national and international) who involve the public in a session lasting approximately 50 minutes, which can take the form of a conference or a panel discussion. At the end, the audience is given the opportunity to ask questions, and after the session, feedback is requested through an evaluation.

Dematerialisation of operations on the OTC platform

The journey of digital transformation of operations carried out via the branch network is focused on bringing greater efficiency, security, and service quality to our customers, namely by investing in the expansion and continuous integration of services in the solution for collecting digital signatures from customers, using tablet devices (signpad) and citizen card readers, available at all branches (eliminating the consumption of paper, printing (e.g., ink cartridges), and logistical materials for storing physical files).

In 2024, a remarkable internal milestone was achieved with the dematerialisation of over 11 million documents, thus making a significant contribution to the ongoing commitment to sustainability and the modernisation of services.

Also noteworthy is the 84% usage rate of the digital signature option at branches with signpads.

New customer access platform

With the implementation of the CIAM (Customer Identity and Access Management) project, Caixa no longer relies on the matrix card, which is not compliant with the revised Payment Services Directive (PSD2), and now requires the use of new authentication methods, including transaction approval via the app.

The use of transaction approval via the app offers several benefits compared to the use of the matrix card. Firstly, the app is more convenient, allowing approvals to be made from anywhere and at any time, without the need to have the matrix card on hand. In addition, the app provides an extra layer of security, as it typically includes multifactor authentication, reducing the risk of fraud. The app's interface also tends to be more intuitive and user-friendly, streamlining the approval process and enhancing user experience. Finally, the app allows for better tracking and recording of approvals, facilitating auditing and control of operations.

Additionally, this change means that hundreds of thousands of plastic cards will no longer be issued, everything will be automated, and there will be no need for plastic production, packaging, and the respective mailings to customers.

Artificial intelligence and sustainability

The financial sector has a crucial role to play in the transition to a more sustainable economy, and artificial intelligence is emerging as an indispensable tool for achieving this goal.

With the growing demand for responsible investments, AI enables financial institutions to analyse large volumes of ESG data, support strategic decision-making, and support personalization of sustainable financial products.

As an example, Next Best Action (NBA) stands out, a solution that contributed to improving the customer experience and optimizing their relationship with Caixa. Integrated with Salesforce, this solution provides the commercial network with actions to perform on customers, thus optimizing their workflow.

At the heart of this solution is the Next Best Offer (NBO), which provides a priority list of products to capture or retain for each customer. This list is formulated with churn and propensity models already in place, ensuring personalized and relevant interactions.

While NBO ensures product selection, NBA emphasizes customer engagement through non-necessarily commercial interactions. This solution enables more informed business decisions, strengthens customer relationships, and increases conversion and retention rates, ultimately increasing the organization's bottom line. NBA enables the Bank to anticipate customer needs, giving it a competitive advantage by proactively responding to customers.

Targets and Metrics

The definition of metrics helps Caixa to objectively assess the impact of digital transformation and innovation on the Bank. Indicators such as the number of digital customers allow Caixa to assess the level of adoption of digital solutions provided to customers.

By 2024, Caixa had 2.4 million active digital customers.

As part of the development of the 2025-2028 Sustainability Strategic Plan, corporate targets and metrics related to digital transformation and innovation will be developed.

4.4.5.3. Risk management

In a context characterised by geopolitical fluctuations and a rapid worsening of climate change, the existence of a robust risk management culture, supported by an effective governance model and policies that ensure compliance with applicable regulations, becomes a fundamental component for any company.

For Caixa, ESG risks, particularly climate and environmental risks, have the potential to cause negative impacts on the Bank's results or capital, as they are sources of structural changes that affect economic activity.

The integration of environmental, social, and governance risks into financial decisions ensures that the Caixa Group is capable of facing challenges and seizing opportunities in the transition to a low-carbon economy.

Managing Material Impacts, Risks, and Opportunities

Following the double materiality analysis conducted in accordance with the requirements of the CSRD, the following material opportunity was identified:

- **Opportunity**: strengthening the gradual integration of ESG dimensions into the risk assessment model.

The identified opportunity reflects the importance of gradually integrating ESG dimensions into Caixa's risk assessment model, allowing the alignment of its loan and investment portfolio with sustainable development standards, reducing financial losses associated with non-traditional risks, and ensuring a more resilient and responsible approach.

The Caixa Group's risk management system is based on the existence of (i) an independent unit with sufficient positioning and authority, dedicated to risk management and control in each of the group's subsidiaries and branches; (ii) a central governance structure for risk management; (iii) formal accountability frameworks for the management and control of financial and non-financial risks; (iv) effective reporting and communication mechanisms for risk-related information, promoting centralised knowledge and monitoring of risk-related topics; (v) global risk management policies and procedures, implemented consistently and uniformly across the organisation; and (vi) common technological foundations.

Caixa's Chief Risk Officer (CRO), who is a member of the Executive Committee, is ultimately responsible for the Risk Management function. Caixa's CRO is globally responsible for monitoring the Group's risk management framework and, in particular, for ensuring that the Risk Management Function operates properly and effectively.

With regard to competent bodies, the Caixa Group's Risk Management Function is supported by a governance model which aims to adhere to best practices in the area, as outlined in the 'Guidelines on Internal Governance under Directive 2013/36/EU' (EBA/GL/2021/05), and ensure the robustness and effectiveness of the system for identifying, measuring, monitoring, reporting, and controlling the various risks incurred by the Group.

The Board of Directors (CA) defines, supervises, and is responsible, within the scope of its powers, for implementing governance systems that ensure effective and prudent management, including the separation of functions within the organisation and the prevention of conflicts of interest.

The CA, supported by the Risk Committee (CR) and the Audit Committee (CAUD), establishes the risk appetite, which is implemented by the Executive Committee (EC) with the support of the Risk Management

Function (DGR) and the control and business areas. The CA is also responsible for aligning the risk appetite with the bank's strategic priorities for sustainable financing and climate action.

Therefore, the identification, assessment, and monitoring of risks are the responsibility of the DGR, which, under the coordination of the CRO, advises on the approach to managing and controlling them. Nonetheless, control functions are essential to ensure compliance, effective risk management, and the integrity of operations.

Boards of directors are responsible for defining general policies and guidelines, while internal audit functions monitor and assess the effectiveness of internal controls, ensuring that operations are in compliance with applicable rules and regulations. In parallel, compliance functions ensure that each entity is aligned with local and international laws and regulations, preventing legal and reputational risks.

Risk management functions play a crucial role in identifying, assessing, and mitigating the risks that may impact each structure. These functions work closely with other areas, as well as with Caixa, to implement risk mitigation strategies and ensure organisational resilience

Policies and Other Corporate Documents

The risk management approach is supported by various corporate policies and other relevant documents, including:

- **Risk Appetite Governance Model**: It regularly monitors risk indicators and their tolerance limits. Information on Climate and Environmental (C&E) risks is presented quarterly in the Caixa Group's RAS Dashboard, which is submitted monthly for review by the Risk Committee, the Executive Committee, and the Board of Directors.

- **Risk Taxonomy**: It categorises the different risks into 14 distinct categories and 59 subcategories of risk. C&E risks are currently included in the Caixa Group's risk taxonomy as a level 1 risk category, along with three risk subcategories (climate risk from transition events, climate risk from physical events, and biodiversity risk and other environmental risks). Through this taxonomy specification, Caixa recognises the growing importance of these risks, maintaining the view that they have a cross-cutting impact on the Caixa Group's risk profile, influencing the other risk categories to which Caixa is exposed.

- **Climate and environmental risk management policy**: It defines the guiding principles for C&E risk management, establishing the responsibilities of the three lines of defence and specifying the procedures for identifying, assessing, monitoring, and controlling this type of risk, including its integration into business processes while respecting the commercial strategy and the established risk appetite framework. It also establishes the corporate scope and the applicable principles of replicability and auditability.

- **Credit Risk Policy**: It establishes the general framework for credit and financial operations at Caixa and its foreign units within the Caixa Group, with a focus on credit risk prevention. It details the principles and rules for granting and restructuring credit, including criteria for risk mitigation (guarantees) and the specification of interest rates and commissions.
  Recognising the importance of climate and environmental risks, this policy establishes guidelines for credit granting, such as the consideration of ESG ratings in credit decision procedures, the prohibition of financing projects that negatively contribute to sustainable development, and the restriction of support for projects that use scarce natural resources or cause negative environmental impacts. It is further added that financial support for projects in carbon-intensive sectors is informed by and takes into account the decarbonisation targets and objectives set forth in Caixa's Carbon Neutrality Transition Plan.

- **Guidelines for 'Healthy' Origination Aligned with Risk Appetite**: It establishes guidelines for analysing and making decisions on credit operations, highlighting the importance of carefully analysing the customers' financial situation, especially in times of crisis. In addition, it incorporates considerations on climate and environmental risks, in line with Caixa's Sustainable Financing Policy.
  In the credit analysis and decision-making process, Caixa prioritises solutions that support transition plans geared towards carbon neutrality, particularly in critical sectors. In this context, obtaining sustainability reports from customers is essential for assessing environmental impact and climate, physical, and/or transition risks.
  The guidelines explicitly state that all credit operations must comply with Caixa's risk appetite.

- **Exclusion and sectoral limitation principles**: a set of principles underlying activities and projects that are excluded or restricted under certain conditions of Caixa's credit policy.

The aforementioned documents are available to Caixa employees via the internal regulation system. The Climate and Environmental Risk Management Policy is available to stakeholders on the cgd.pt website.

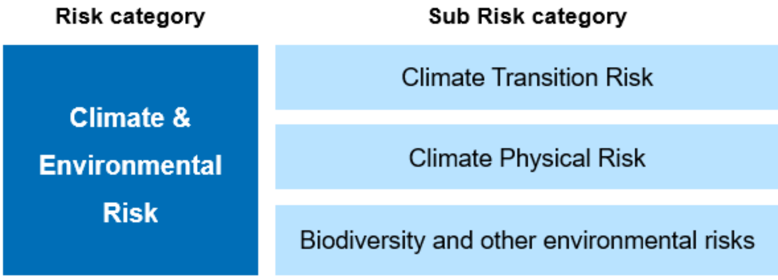
Actions and Initiatives Implemented

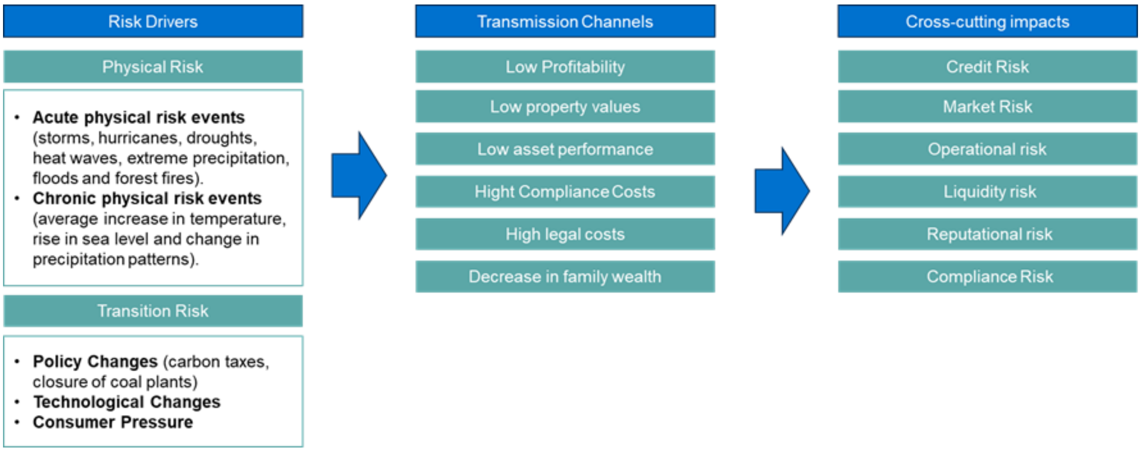
In 2024, the Caixa Group developed a series of initiatives that contribute to more robust risk management, including:

Integrating climate risks into risk culture

According to the review conducted in August 2024, Caixa Group's taxonomy classifies Climate and Environmental (C&E) risk as a level 1 risk category, with 3 specific risk subcategories: climate risk from transition events, climate risk from physical events, biodiversity and other environmental risks.

Through this taxonomy, Caixa recognises the growing importance of these risks, maintaining the view that they have a cross-cutting impact on the Group's risk profile, encompassing other existing risk categories (commonly referred to as cross-cutting risks).





C&E Risk Management Process

Caixa identifies, assesses, and analyses its risks and associated risk factors, considers actions to manage, address, or mitigate the assessed risks, reports and monitors these risks, and, when necessary, manages residual risk exposure (e.g., through risk appetite limits or capitalisation).

Risk identification is generally understood as the process of defining the risks and their risk factors (including ESG) to which Caixa is exposed in order to pursue its business strategy. To ensure adequate coverage of risk identification, categories are often subdivided into various types of risk, such as credit risk, market risk, operational risk, reputational risk, liquidity risk, and compliance risk.

Risk assessment refers to the overall analysis of risks, typically consisting of evaluations and analyses of the likelihood and severity of certain risks, or risk factors, to which Caixa is exposed. The aim is to help prioritise risks based on their materiality. The underlying assessments are categorised similarly to the risk identification process, into different risk categories, as the type of assessment required differs, for example, for credit risk and operational risks. A key component here is the applicability and availability of data, which is at the core of the work that is being carried out. Data plays a significant role in the ability of banks to analyse and assess their risks, directly feeding into risk management processes such as customer risk assessments, scenario analysis, and stress testing.

The integration of risk management into Caixa's business strategy typically considers all the policies and procedures established to manage risks in Caixa's activities, and the quantification and monitoring of risks allows Caixa to monitor its portfolios in line with the defined business strategy.

Caixa conducts the materiality assessment process for C&E risks at least annually in June (with data from December of the previous year) and, if necessary, a reassessment in December (with data from June of the same year), with the aim of assessing and inventorying the risks of concern to the Bank.

In this regard, the latest C&E Materiality Assessment was conducted in June 2024, and a review was conducted in December 2024 to better align it with the ECB's expectations. In this context, a number of improvements have been made in the review of the Assessment, namely:

1) The assessment is quantitative: materiality is based on the quantification of the exposure considered 'sensitive' to the influence of C&E's risk factors. Following the internal risk appetite limits, any significant concentration of exposure was classified as material.

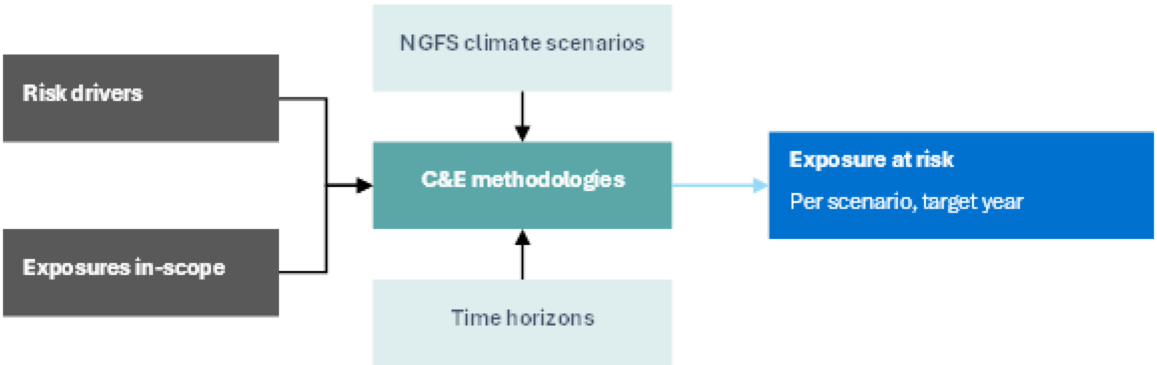
2) This assessment is prepared by Group entity, by portfolio, and by traditional risk category. In addition, 92% of the Group's assets and 97% of Caixa's assets have been assessed. The assets that were not assessed were considered non-sensitive to C&E factors (e.g., tax assets).

3) A specific risk assessment methodology was developed and applied to capture other environmental risks (nature-related topics). In addition, a social risk assessment approach was applied. To address exposures to sovereign risk, a sovereign risk assessment was conducted (based on ESG factors).

4) The main risk methodologies (transition, physical) are sensitive to climate scenarios - based on projections, different amounts of risk are calculated.

Projected C&E Methodologies

According to the ECB, 'institutions should understand how C&E risk factors affect their business environment in the short, medium and long term (...).' To this end, climate scenarios are considered which present risk estimates by scenario and time horizon. The way climate scenarios (and their respective time horizons) were considered can be seen in the graph below:



The projected C&E methodologies are applied to each of the underlying types of C&E factors (i.e., transition, physical, other environmental) and relevant portfolios to produce results determined according to climate scenarios.

In practice, modelling the impact of the main risk factors ensures that the results stem from the projection/forecast of the factors under a given scenario and target year (which can range from 2025 to 2050). The following forecasts/projections are considered for the C&E methodologies:

- Carbon prices (transition risk).
- Energy prices (transition risk).
- Green capex needs (transition risk).
- Severity of physical risk factors (physical risk).

As a result, a forward-looking approach is adopted to determine the amount considered at risk (i.e., the set of exposures or business activities for which there are strong expectations that the risks may be material), which will be contingent on the scenario and target year.

Assessment of Biodiversity Risk and Other Environmental Risks

Biodiversity is essential for the health and stability of natural capital and sustains ecosystem services, which in turn support economic activity. Natural capital is the stock of natural resources, such as plants, animals, water, soils, etc., while ecosystem services consist of the flows of benefits that people obtain from natural resources and are generally divided into four categories:

- Provisioning ecosystem services provide all the materials that human society needs, such as food, water, and fuel, for example.
- Regulatory ecosystem services include air temperature and quality, and water quality.
- Cultural services encompass the intangibles of human society, such as knowledge systems, aesthetic values, and social relationships.
- Supporting ecosystem services facilitate the delivery of other types of essential services, such as soil formation.

None of these systems can exist in isolation, as they all contribute together to the overall provision of benefits for people. The loss of biodiversity can result in the loss of ecosystem services and benefits for businesses, including the financial sector. Despite the vital importance of protecting biodiversity, the rapid economic growth observed over the last 50 years has had devastating consequences for biodiversity. According to IPBES, in terrestrial ecosystems, more than 85% of wetlands have been lost, and 32% of the world's forest area has been destroyed. In ocean ecosystems, 50% of the world's coral reef system has been destroyed. It is also estimated that around 1 million species are already facing extinction, and the global extinction rate of species is at least tens to hundreds of times higher than the average over the last 10 million years.

The economy depends on ecosystem services and natural capital and is impacted by them (through economic activity). In fact, human interactions with nature, whether directly, through phenomena such as pollution and deforestation, or indirectly through climate change, are depleting natural capital at an increasing rate. This excessive use of natural capital affects its ability to continue providing the ecosystem services on which the economy depends, potentially leading to disruptions in production.

Like climate-related risks, nature-related risks are also typically classified into two types of risk:

- Physical Risks: these encompass potential setbacks in production, service delivery, and a company's financial position, resulting from direct shocks associated with the loss of nature. They can be acute (e.g., pests affecting a crop) or chronic (e.g., reduced capacity of the ecosystem to provide protection against floods and fresh water due to deforestation).
- Transition Risks: these refer to an institution's financial loss resulting from a misalignment between a company's business model/strategy and a more environmentally sustainable economy.

These risks are transferred to the financial system, as financial institutions are exposed to natural capital risks through the companies they lend to, insure, or invest in. Therefore, it is crucial for financial institutions to assess their biodiversity and natural capital risks, as this can provide valuable insights into the potential impact on the financial quality of loans and investments, as well as the impact of these on ecosystem services, which is typically an unaccounted negative externality.

The classification of nature-related risks in portfolios is based on the integration of three key components: (i) the impact of sectoral vulnerability on nature; (ii) the sectoral dependence on ecosystem values and services; and (iii) the geographical exposure of activities, and covers four risk variables: (i) Biodiversity; (ii) Agroforestry; (iii) Water resources; and (iv) Air quality. These variables are determined by the average of the rankings for both sectoral impact and dependence, as well as geographical exposure.

To account for this dynamic, the ENCORE tool (developed by the Natural Capital Finance Alliance) involves cross-referencing the scores of dependency materiality assessments and impact materiality assessments. In total, the analysis considers 25 dependency factors and 13 impact factors.

Social Risk Assessment Methodology

The social component plays a crucial role in assessing the sustainability and ethical behaviour of companies and investments, covering several dimensions:

- Human Capital Management: Fair labour practices, diversity, well-being, and talent development.
- Stakeholder Engagement: Effective relations with employees, customers, suppliers, and the community.
- Community Impact: Corporate philanthropy and community development.
- Ethical Practices: Transparency and Fairness in Business Operations.
- Brand Reputation and Value: Positive influence on brand reputation and value.

The social risk methodology adopts a holistic approach at country level, complemented by a sectoral view, considering social risk in value chains. In this regard, the social categories, presented in the graph below, are assessed in the methodology.

The social risk model

Risk indicators categories	Nr. of metrics
Freedom of Association	5
Forced Labor	3
Discrimination	4
Child Labor	3 + 1*
Occupational Health & Safety	6 + 2*
Armed Conflicts	6

Final Risk Level

The country's final risk score is calculated by summing the scores of all indicators. The final score is then categorized into one of four risk levels: No risk, Low risk, Medium risk, or critical.

*For these categories, there are sector-specific aggravating factors (NACE level 1, e.g. A, B, C)

The social risk score represents a country-sector rating, calculated by combining (i) a country-based score and (ii) sector-specific aggravating factors for relevant risk categories. Subsequently, the social risk score is applied to the Bank's customers based on the country of incorporation and business activity, as identified by the relevant NACE code.

Business Environment Scanning

The analysis should provide an understanding of the key macroeconomic variables within which the relevant entity, product, or segment is being assessed or will operate, including gross domestic product (GDP), unemployment rates, interest rates, and housing price indices.

The competitive landscape and how it is likely to evolve, considering the activities of the peer group (e.g., expected growth of the target market, such as the residential mortgage market, as well as the activities and plans of key competitors in the target market), and general market trends that may impact the performance and profitability of institutions.

The business context study reflects a comprehensive analysis of Caixa's business environment, focusing on climate and environmental (C&E) risks that may impact Caixa's business model. The analysis is conducted based on the PESTLE methodology, which covers the political, economic, social, technological, legal, and environmental dimensions

In line with the supervisor's expectations, Caixa developed this study with the aim of formalising a comprehensive assessment of the key external factors that, associated with C&E topics, may impact Caixa's business in the short, medium, and long term.

The PESTLE analysis was carried out on the following dimensions:

- **Political**: Includes issues such as the political agenda and macroprudential policy, with expected impacts from the US elections, new industrial policies, and carbon-related adjustments;
- **Economic**: Focused on the costs of climate transition, structural impacts on economies, especially in African geographies, and new geopolitical tensions;
- **Social**: Addresses the need for financial support for sectors and populations that are most in need to undertake the climate transition, and the role of banks in financing society;
- **Technological**: Highlights the ongoing digital revolution, the need for new skills, and the cross-cutting impacts of transition costs;
- **Legal**: Involves regulatory progress on ESG topics, particularly on reducing the risk of greenwashing and increasing attention to practices that have a negative impact on the environment;
- **Competitive**: Analyses the preparedness of competitors to monetise climate transition incentives and the emergence of new competitors, such as development banks in Africa.

The results of the context study were integrated into the C&E materiality assessment, determining the application of risk techniques appropriate to Caixa's risk profile. Furthermore, they inform the discussion of future strategic planning, assuming that the study is an essential tool to ensure that Caixa understands and properly plans for the impacts of climate and environmental risk factors on its business, also considering relevant mitigation actions, including raising awareness among our customers about the management and reduction of the risks to which Caixa is exposed through its loan portfolio.

Caixa has carried out an analysis to identify the financial effects arising from risks and opportunities in its financial statements. During the reporting period, and in line with best risk management practices, post-model adjustments were made to the Group's collective impairment model for customer credit risk, in order to reflect the potential impacts of transition risks (e.g. adjustment to a low-carbon economy) and physical risks (e.g. exposure to natural phenomena) amounting to approximately 84 million euros.

Materiality Assessment

The process of identifying the risk profile is framed by a governance model that ensures the involvement of the Board of Directors, the Audit Committee, the Executive Committee, and the Risk Committee.

The assessment of the materiality of climate, environmental, social and reputational risks was carried out during the second half of 2024 involving various internal teams (Risk, Rating, Credit, Marketing, and Sustainability). The assessment was conducted by Group entity, by portfolio, and by traditional risk category, integrating data from Caixa Group entities. This exercise was reviewed to fully meet the supervisory expectations applicable to this matter. It is a quantitative assessment and refers to data from June 2024, based on the quantification of sensitive exposure to C&E risk factors.

The scope of the assessment covered 92% of the Group's assets and 97% of the assets within the national perimeter. A specific methodology was developed to identify and assess other environmental risks, such as biodiversity risks, particularly through the use of the methodology that measures vulnerability using the ENCORE (Exploring Natural Capital Opportunities, Risks, and Exposure) classification. It defines four variables of dependency and pressure: 1) Habitat stability - degree of disturbance to ecosystems; 2) Water security - reflecting the dependence and risks of water availability; 3) Provision of food and other goods - assessment of dependence on ecosystem products; 4) Air quality and local climate regulation - assessing sensitivity to atmospheric conditions.

Different climate scenarios were also considered to assess transition and physical risks, with the central Net-Zero 2050 scenario being adopted, including projections for the year 2030.

The consolidated results demonstrate that transition risks are material to Caixa's business due to the high financial costs associated with the necessary adjustments for the transition to a low-carbon economy, in alignment with the goals of the Paris Agreement. The main impacts occur in credit exposures to companies and in real estate assets, not yet considering potential mitigation measures, which will need to be identified at a later stage.

With regard to physical risks, there are costs associated with the physical impacts of climate change on infrastructure and real estate assets, resulting from the increasing frequency and severity, in the short to medium term, of acute (material risk) and chronic (immaterial risk) weather events.

With regard to biodiversity risks and other social risks, the consolidated results demonstrate that they are 'non-material' risks and are associated with the dependence on natural resources and natural capital services, as well as the existence of impacts on nature resulting from the activity of companies in specific, carbon-intensive sectors.

The concentration of exposures sensitive to C&E factors was considered material as it exceeds the limits set in the risk appetite exercise.

As future actions, it will be necessary to integrate the results into various internal analyses and reflections, define appropriate mitigation measures, and implement control procedures to prevent or mitigate the risk exposures projected for 2030.

Climate Stress Tests

C&E risks have been playing an increasingly important role for society, supervisors, and governments. In this regard, Caixa, as the largest Portuguese banking institution, seeks to address expectations in the assessment, management, and mitigation of these types of risks, having developed a climate Stress Test tool.

This tool aims to assess C&E risks and their impacts in the short, medium, and long term, both in terms of transition risks, referring to the institution's financial losses resulting directly or indirectly from the adjustment process towards a low-carbon economy, and physical risks, arising from the financial impact of climate change, including the more frequent occurrence of extreme weather events, as well as gradual climate change and environmental degradation.

The climate Stress Test methodologies primarily focus on the risk categories where climate impact is most materialised at Caixa, such as credit risk, market risk, and operational risk.

The impact of climate risk on credit risk projection was assessed by incorporating climate drivers into the models, such as the carbon emissions of customers, their ESG rating, or the energy performance certificate (EPC) of real estate properties, leading to economic, financial, and macroeconomic impacts on credit factors, such as Probability of Default (PD) and Loss Given Default (LGD), i.e., the probability of default and the expected loss in that case, respectively.

The results of this tool enabled an analysis of the sectors in the portfolio most susceptible to climate risks, as well as assessing the bank's exposure to potential operating losses and devaluation of assets at fair value in the portfolio.

With regard to credit risk in the transition risk aspect, an increase in PDs was observed in the most polluting sectors in terms of carbon emissions in the short term (2027). In the medium term (2030), the qualitative assessment conducted by Caixa showed that the most substantial changes resulted from the application of the Net Zero 2050 scenario, which requires more rapid and demanding changes compared to the other scenarios. Finally, in the long term (2050), there was a pattern of significant increases in PDs under the disordered transition scenario (Delayed Transition), across the various sectors analysed.

The impact of C&E risks on Residential Real Estate is not considered material. Nevertheless, considering that transition risk is directly related to the energy efficiency of properties, the most significant variations in LGDs were observed in energy classes G, F, and E, both for residential and commercial properties.

As for physical risk, specifically considering a drought and heatwave scenario, there was a notable increase in terms of PDs, although the results are heterogeneous at sectoral level. In the real estate sector, affected by an acute flooding event, the results varied significantly depending on the flood susceptibility of the NUTS III region where the property is located. As expected, the highest increases in LGD were recorded for locations with a higher risk of flooding, which, in the case of Portugal, corresponds to the Leiria region. Additionally, the increases were more significant in the residential real estate sector compared to the commercial sector, regardless of the flood vulnerability in the property's region.

To incorporate the climate effect into market risk, a methodology was defined and implemented for the financial instruments in the portfolio whose counterparty is a company. Specifically, in the case of corporate stocks and bonds, the revaluation of the asset portfolio was estimated based on a shock applied to the credit spreads. This shock varies depending on the NACE sector of the counterparty.

Additionally, with the gradual increase in the frequency and severity of climate events over time, it is expected that the Bank will experience higher operational losses. Consequently, a methodology was defined to estimate the losses resulting from operational climate events, such as partial destruction of the Group's buildings due to flooding, fires, and hurricanes, as well as fines and litigation related to climate issues.

The institution has integrated all these results into the various aspects of its activity, in order to inform Management about current and latent vulnerabilities, as well as to assist in making strategic decisions. C&E risk is already integrated into the stress testing framework, with results that influence and are an integral part of various planning exercises, such as the Budget, ICAAP, Recovery Plan, and Caixa's Transition Plan, which, in turn, impact the Bank's results and are taken into account for strategic management actions.

As part of the 2024 Budget estimate, the results of the climate stress test have already been considered and integrated into the Credit Projection Model, combining macroeconomic and climate effects. To analyse customers and sectors, the model can also be used individually, considering a 'climate classification.' This means that each customer or sector can be assessed in terms of vulnerability to potential climate effects.

As a management tool, the model is currently used by the Rating and Internal Control Division (DRT) and the Commercial areas to identify customers whose rating could be downgraded due to potential climatic effects. To this end, Caixa has enhanced its ICAAP exercise to account for the forward-looking nature of C&E risks, addressing both transition risks and physical risks.

ESG Rating Model

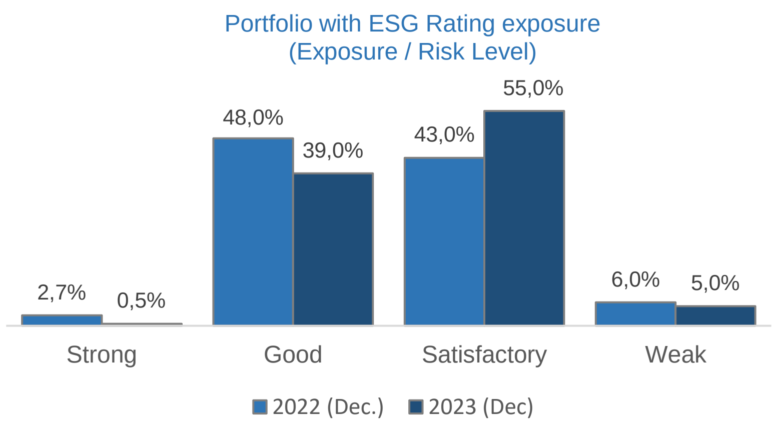
The ESG Rating is intended to complement the financial rating information, considering non-financial aspects equally important in terms of risk impact and feasibility, contributing to a prospective view of companies' economic and financial situation and consequently to a more holistic and robust risk management. The ESG rating is, to a certain extent, a preview of the evolution of the financial rating from a medium-term perspective, considering that the ESG criteria will be expressed in the companies' balance sheet and financial statements.

Aiming to ensure the maximisation of value for the various stakeholders, it is worth highlighting as an ESG Rating goal the strengthening of the customer-centred vision, creating opportunities for dialogue and awareness between commercial areas and companies, promoting counselling and anticipation of needs, in order to better support companies in the process of transition to a greener and more inclusive economy.

The ESG rating methodology implemented by Caixa weighs up various criteria in each dimension and makes it possible to assess and prioritise companies in terms of sustainability, according to a qualitative rating scale of 4 levels: Strong, Good, Satisfactory or Weak.

A new version of the ESG Rating Model was implemented in March 2024, which aimed to strengthen and update the existing model by incorporating new indicators, including environmental indicators related to water consumption and waste treatment.

The results for December 2023 (which assessed and ranked around 400,000 companies, along with €23 billion in bank credits in terms of sustainability), considering the dimensions analysed by company, namely environmental, social and governance, show that exposure to ESG risks remains acceptable, with main exposure at the 'Good' and 'Satisfactory' levels (55% and 39% respectively, with 'Strong' being the best level and 'Weak' the worst one).



In order to support commercial activity, four sustainable funding strategies ('Weighting', 'Capturing', 'Enhancing' and 'Divesting') were developed and implemented complementarily, using as inputs the correlation between the funding rating and the ESG rating, thus enabling the identification of customers with greater development and placement potential and customers at risk, with the main goal of enhancing the commercial relationship and meeting the companies' needs.

The information resulting from the application of the ESG Rating Model and the methodology relating to the outlining of sustainable funding strategies has been incorporated into the following processes:

- Provision of information on the rating systems to the commercial, marketing, and credit origination areas to support the prioritisation and differentiation of commercial action according to the customers' risk level, contributing to a holistic and integrated view of risk in decision-making;
- Providing inputs to the risk management function;
- Contribution to fulfilling regulatory requirements, in particular the supervisor's expectations;
- Assessment of the Vulnerability of Caixa's Own Assets to Physical Risk.

As part of the evolution of the ESG Rating Model, a geolocalised physical risk simulator was developed based on data from the Civil Protection InfoRisks Platform, which considers 11 physical risks (river flooding, coastal flooding, landslides, tsunami, extreme heat, urban fires, rural fires, earthquakes, water scarcity, strong winds, and blizzards) by parish.

In May 2024, Caixa was honoured in the Sustainable Finance category at the 4th National Sustainability Awards for its ESG Rating model, its underlying sustainable financing methodologies, tools and strategies, such as the Physical Risk Simulator by geolocation and the availability of the ESG Rating Report on Caixadirecta.

The impacts and contributions of Caixa's ESG Rating Model were analysed and recognised, as were its benefits and beneficiaries, results, customer-centred vision and, additionally, the complementary tools developed with environmental, social, and governance criteria.

Availability of the ESG Rating on CaixaDirecta Empresas

The detailed ESG Rating report is available on CaixaDirecta Empresas. By making ESG Ratings available to corporate customers, CGD is pioneering the provision of a tool that supports companies in their transition to a 'greener', more inclusive and more responsible economy, seeking to improve their positioning in ESG dimensions and helping them make decisions on more sustainable business models.

Strengthening the Credit Risk Framework

In 2024, Caixa strengthened its credit risk framework with actions aimed at:

- Aligning with the metrics defined by Caixa and published in the Market Discipline report, in accordance with Regulation (EU) 2022/2453, for a set of carbon-intensive sectors. Thus, in the context of credit proposals, for companies belonging to the sectors listed in the framework guidelines of Regulation (EU) 2022/2453, an additional due diligence will be required, ensuring that the commercial area includes indicators of the potential transition risk associated with climate change. Additionally, whenever possible, for the sectors listed in the framework guidelines of Regulation (EU) 2022/2453 with reported metrics exceeding the intermediate targets set by Caixa, the commercial areas must complement their proposals with additional information regarding the transition plan towards carbon neutrality.

- Strengthening the integration of physical risks into the credit risk process, based on the assessment of these risks in Caixa's credit portfolio, as well as the conclusions of the Bank of Portugal's assessment of physical risks for the Portuguese banking sector. Thus, in a number of sectors, for companies more vulnerable to physical risk, credit proposals must include the existence of mitigating factors for its impacts, and, specifically, for physical risk, the existence of (i) a Prevention plan; (ii) a Business continuity plan, and/or (ii) Insurance covering these risks, preferably including EIB/EIF Guarantees or Mutual Guarantees that enable risk-sharing.

- Reviewing the Guidelines for 'Healthy' Origination and Alignment with Risk Appetite.

Assessment parameters for granting mortgage loans (LTV)
When granting mortgage loans, the relationship between the loan value and the appraised value (LTV – Loan-to-Value) is assessed, among other parameters, in accordance with the macro-prudential rules of the Bank of Portugal and the criteria defined by Caixa.

The growth of mortgage loans, as seen in 2024, continued to be guided by compliance with prudent criteria in their granting, as evidenced by the favourable evolution of this indicator compared to previous periods of crisis, both in terms of production (68% in 2024 vs 77% in 2010) and the credit portfolio (59% in 2024 vs 74% in 2010).

Incorporating the ESG Component into Venture Capital Activities

In 2024, Caixa Capital continued the process of incorporating the ESG component into its venture capital activities, particularly in the due diligence aspect, both in approaching new investment opportunities and in managing its equity portfolio.

At the decision-making level for new direct investments, the inclusion of sustainability parameters (environmental, social, and governance) stands out, through a questionnaire specifically focused on these topics, although with flexible classification goals tailored to the stage of the life cycle and the expected outcomes of each project under analysis.

With regard to indirect investments in venture capital funds and other equivalent vehicles, in addition to the Sustainability theme already present in the global due diligence questionnaire, the weighting of the ESG component has been reinforced in the scoring methodology implemented since 2023. Additionally, during 2024, the ESG assessment process was strengthened through the enhancement of the completeness and updating of surveys regarding the ESG status, both for portfolio holdings and potential investment opportunities, as well as for their respective business partners.

Assessing Risks and Opportunities in Sustainable Investment

In order to evaluate the risks and opportunities that environmental, social and governance factors bring to the selection of securities for investment, Caixa Gestão de Ativos defined an integration strategy that coordinates the following ESG dimensions:

1) Exclusion, where companies with a relevant level of revenue (values above 20%) exposure to industries deemed socially controversial (notably non-conventional arms, coal mining, pornography, gambling and tobacco) will not be considered eligible for investment. Additionally, in the selection of assets, the exclusions set forth in Article 12(1) of Regulation (EU) 2020/1818 will also be considered. Specifically, for Article 8 Funds under the SFDR Regulation, a minimum exposure level of 90% will be observed to assets that, according to the analysis of the Management Company, do not meet the quantitative exclusion criteria defined for the EU Climate Transition Benchmarks. For Article 9 Funds under the SFDR Regulation, there will be no exposure to assets that, according to the analysis of the Management Company, fall within the quantitative exclusion criteria defined for the EU Paris Aligned Benchmarks;
2) Best-in-Class, favouring, in each of the sectors of activity, companies with a higher ESG rating, reflecting the effort made by these companies regarding the different dimensions of Sustainability; and
3) Engagement, a dimension in which, based on the terms set out in CXA's Engagement Policy and Policy on Exercising Voting Rights, we aim to deepen the scope of shareholder interaction and voting in the companies that are most represented in our Customers' portfolios.

The incorporation of ESG factors into CXA's investment process is taken into account alongside the incorporation of traditional financial analysis factors. To this end, as a complement to the fundamental analysis that has been applied, CXA developed an internal rating methodology known as CXA Sustainability Rating. This rating consolidates different analysis approaches according to the underlying asset class in a score obtained through the weighted average of the ESG ratings of each asset by its relative weight, ranging between 0 and 10 and falling within a rating range between CCC (minimum) and AAA (maximum). In the case of investment in alternative funds and real estate funds, specific procedures related to the characteristics of the investment in question are adopted.

Additionally, the Management Company, as part of its management processes, continuously monitors the Main Adverse Impacts, established in accordance with the SFDR legislation, and selected for the analysis of the managed assets, using an internal methodology, which considers the existing and recognised limitations to the quality and reliability of the information currently provided by the Issuers.

In terms of opportunities, as this is one of the inputs considered in asset selection, the Management Company's approach involves considering the issuers' positioning on sustainability matters, particularly those related to their activities, practices, and approach to sustainability. Naturally, these considerations are also relevant inputs for determining CXA's sustainability score.

Targets and Metrics

The climate and environmental risk management strategy was established based on the Risk Appetite Statement (RAS), which formally establishes the Caixa Group's risk appetite, detailing the maximum level of risk that the bank is willing to take for each risk category regarded as material.

Risk monitoring and control is also supported by a corporate governance model and incorporates the disclosure of information by means of an internal reporting system that includes the regular holding of Delegated Boards/Committees and the disclosure of reports to various Group structures.

The Group's response to climate and environmental risks involves optimising the bank's adaptive and dynamic capacity in the face of emerging national, international, political and regulatory developments on these risks. This effort is being made by all the Caixa Group's divisions, according to a holistic and forward-looking approach.

The DGR regularly monitors and tracks climate and environmental risk indicators and their respective tolerance limits. This information on climate and environmental risks is presented quarterly in Caixa's Risk Appetite Dashboard, which is submitted monthly for review by the Risk Committee, the Executive Committee, and the Board of Directors.

The Risk Appetite Statement includes climate and environmental risk metrics that are continuously monitored, such as:

- Revenues generated from interest, fees, and commissions from companies in sectors with high Greenhouse Gas (GHG) emissions;
- Loans secured by real estate with low energy performance (<= EPC E);
- Non-financial companies with a 'Weak' ESG rating;
- Exposure to companies with significant dependence on or impact on biodiversity.

As part of the development of the 2025-2028 Sustainability Strategic Plan, corporate targets and metrics related to risk management will be developed.

4.4.5.4. Privacy and information protection

Recognising the importance of robust information security practices that ensure the integrity and confidentiality of data associated with its operations, Caixa has been promoting an organisational culture geared towards information protection that demonstrates its commitment to regulatory compliance and digital security.

Information, as well as the information and communication technologies (ICT) that support Caixa's activities, are critical assets for the institution and require high levels of protection and preservation. Cybersecurity aims to preserve and protect the confidentiality, integrity, authenticity, and availability of information and ICT against cyber threats and other risks. Cybersecurity is a pillar of Caixa's sustainability and operational resilience, as well as an ethical, legal, regulatory, and contractual imperative for the Institution in relation to its customers, supervisors, employees, and other stakeholders.

To strengthen this approach, Caixa has invested in cybersecurity measures to ensure an appropriate level of security for the needs and imperatives of the business, as well as continuous monitoring of the global cybersecurity threat landscape, making the regular reassessment and reinforcement of security measures essential.

In addition, Caixa closely monitors the evolution of the regulatory framework, anticipating changes and adjusting its policies to ensure high standards of compliance and security, as well as developing training and awareness programmes, ensuring that all employees are aligned with the best data protection practices. These initiatives not only strengthen the trust of customers and other stakeholders but also consolidate Caixa as a benchmark in the financial sector.

Managing Material Impacts, Risks, and Opportunities

During the double materiality analysis process conducted in accordance with the requirements of the CSRD, the following opportunity was identified:

- **Opportunity**: Strengthening the organisational culture of data protection.

Data protection is a fundamental pillar of Caixa's strategy, reflecting the institution's commitment to the privacy and security of its customers' and employees' data. Caixa adopts a rigorous and proactive approach to data protection management, integrating practices to comply with the General Data Protection Regulation (GDPR) and promoting an organisational culture of responsibility and continuous awareness. This commitment protects the institution against cybersecurity risks, ensuring the integrity and confidentiality of information across all its operations.

Policies and Other Corporate Documents

Caixa has been developing an approach to privacy management and information protection supported by various policies and other relevant documents in this area, namely:

- **Personal Data Protection and Privacy Policy**: It specifies the terms under which Caixa processes customers' personal data, as well as the rights they can exercise, in accordance with the GDPR and other applicable national legislation. It is intended to provide public information on how Caixa processes the personal data of data subjects with whom it interacts, also serving as public evidence of compliance with the CNPD. The policy was updated on 13 December 2024, including the processing of data consistent with the 'Definition of Profiles.'

- **Internal Corporate Standard regarding the Data Protection Regulation**: The Data Protection Regulation aims to operationalise the Personal Data Protection Policy and the Privacy Policy, defining high-level responsibilities and guidelines for the identified stakeholders. This regulation establishes methods for institutional monitoring and reporting, as well as specific data management processes, ensuring compliance with applicable legislation and strengthening the trust of its customers and employees.

- **Internal Corporate Standard regarding the Caixa Group Internal Regulation System - SNI**: To ensure compliance with data protection, the DPOffice reviews proposals for the development and updating of internal, corporate, and Caixa regulations, originating from the Caixa's Divisions, and identifies whether such proposals involve or relate to the processing of personal data by Caixa.

- **Global Cybersecurity Policy**: This corporate policy formalises the current strategic and programme definitions approved by Caixa's Board of Directors on this matter. This Policy is based on the cybersecurity and resilience controls and requirements enshrined in the international references ISO/IEC 27002 and NIST Cybersecurity Framework and the National Cybersecurity Reference Framework (QNRCS). It also takes into account Regulation (EU) 2022/2554 on Digital Operational Resilience (DORA) and other requirements and good practices relevant to the Institution.

- **Information Classification Policy**: Ensures that all employees use information appropriately, according to its sensitivity and importance. This policy is aligned with the Global Cybersecurity Policy and defines rules, criteria, and responsibilities to prevent misuse or unauthorised access to information. These guidelines must be followed by all employees to ensure the protection of information.

- **Information Security Incident Response Policy**: It regulates the response to cybersecurity events, incidents, and vulnerabilities, in accordance with the global directives of the Global

Cybersecurity Policy, with the aim of structuring Caixa's essential capabilities and courses of action in the face of such occurrences.

The Privacy and Personal Data Protection Policy is available on Caixa's official website cgd.pt as well as on the internal regulation system. The other policies and standards are available for consultation by employees on the internal regulation system.

In terms of governance model, the topic of privacy and information security has been monitored by the Executive Board for Business Continuity, Operational Risk, and Internal Control (CDCRC), which is the decision-making body of the Executive Committee responsible for coordinating, evaluating, and discussing matters related to the management of operational risk and internal control deficiencies at the Group level, as well as issues concerning the monitoring and management of Data Protection and reputational risk monitoring. The CDCRC is delegated with making structural decisions to ensure data protection management, enforcement by senior management and empowerment of the DPO and DPOffice in day-to-day management.

This Executive Board meets on a monthly basis, considering a shared agenda between matters relating to business continuity, operational risk and internal control, and extraordinary meetings may be called, particularly in cases of personal data breaches by the Data Protection Emergency Team. This Board met 18 times in 2024 to consider and make decisions on data protection issues arising from the pursuit of the banking business, the optimisation of internal processes, technological innovations and corporate governance support activities.

Actions and Initiatives Implemented

In 2024, Caixa upheld the institution's commitment to privacy and information protection, implementing several initiatives in this regard, including:

Internal Awareness-Raising and Training

Since the full implementation of the General Data Protection Regulation in May 2018, Caixa has ensured that employees receive awareness and specific training (both in-person and e-learning) on data protection. Additionally, the institution has updated the FAQs on data protection, complementing the creation of the Data Protection Guide.

In 2024, Caixa developed the following training initiatives:

- **E-Learning - Personal Data Breach**: On 26 September 2024, an e-learning course was launched for all Caixa employees on Personal Data Breaches. Its main objectives are to learn the concept of personal data breach, its legal framework, knowledge of related internal regulations, distinguishing it from other security incidents, identifying technical and organisational measures, understanding who is responsible for reporting a personal data breach, knowing the role of the Personal Data Protection Emergency Team (EUPD), identifying situations that require notification to the CNPD and communication to data subjects, and understanding the consequences of non-compliance with data breach obligations;

- **Employee Onboarding**: In September and December, onboarding sessions were held for new employees at Caixa, with data protection culture being one of the topics addressed in the onboarding plan;

- **Institutional Cooperation**: On 29 November 2024, a plenary meeting of DPOs and Data Protection Pivots - Caixa Group was held to maintain institutional cooperation and the functional coordination of DPOs and Data Protection Pivots within the Caixa Group;

- **International Data Protection Day**: To mark International Data Protection Day (28 January), a news article was published on Caixa's internal channels, highlighting the importance of collective commitment to data protection and the privacy of individuals.

External Awareness-Raising and Training

- **Online Services and Electronic Payments**: CGD maintains continuous communication with customers regarding the safe use of its online services and electronic payments, keeping track of the evolution of key threats and fraudulent campaigns. Alerts regarding phishing (email), smishing

(SMS), or vishing (phone) campaigns, along with recommendations on fraud protection, safe internet use, and the security of Internet Banking services, personal computers, and mobile phones, among others, are periodically published across various online services.

- **Customer Privacy and Security**: Whenever justified, this communication is carried out in a targeted manner via SMS, secure message, and push notifications regarding new modus operandi that could compromise customer privacy and security.
- **Safety Warnings**: CGD's security alerts for its customers can be accessed in the dedicated section of CGD's institutional website.

Responding to the exercise of data subjects' rights

Caixa, as the controller of personal data, has been safeguarding the exercise of rights by the data subjects. Caixa's DPO and the DPOffice have collaborated in this matter whenever their intervention was requested, either by ensuring direct contact with the data subjects or by issuing opinions or guidance for the data controller. Complaints are another way in which data subjects have exercised their rights, in which data protection issues have been analysed and addressed by Caixa's dedicated teams.

Monitoring Regulatory Developments

To monitor regulatory developments, Caixa conducts research on legislation, regulations, and guidance on data protection issued by European and national authorities, with the aim of anticipating and preventing any negative impacts for Caixa resulting from changes in the regulatory framework.

Regulatory monitoring is carried out through daily consultations of the websites of the following national entities: Comissão Nacional de Proteção de Dados, Banco de Portugal, Associação Portuguesa de Bancos, Centro Nacional de CiberSegurança, Diário da República, and international organisations: the European Data Protection Board, the European Data Protection Supervisor; the Official Journal of the European Union, the International Association of Privacy Professionals, the, Commission Nationale Informatique & Libertés (France), Agencia Española de Protección de Datos (Spain), the Information Commissioner's Office (United Kingdom), and the European Banking Federation.

GDPR Anniversary

Caixa was present at the 6th anniversary of the GDPR at the Bank of Portugal on 27 May 2024, where the Chief Risk Officer, João Tudela Martins, participated in the debate panel 'GDPR as a Risk Management Tool.' He highlighted the connection between the various risk categories of the Caixa Group and the protection of personal data, with a particular emphasis on financial crime prevention, but also regarding credit risk and reputational risk. The importance of preventing both internal and external fraud in the context of the GDPR was also addressed.

DSI Meeting

The event, held on 25 June 2024, was attended by 215 employees from the Information Systems Division (DSI) and IT from external entities, with the aim of updating employees on tactical and strategic plans, sharing the main results achieved, and proposing improvements to other initiatives. It also aims to promote discussions on relevant topics such as: System Robustness: Operational and Organisational Model – Support; Cybersecurity: Motivation and Resilience in Handling Cybersecurity Incidents; Business: Customer Service; Data: Data Platforms Roadmap; Processes and People: 'Viver o Cliente' Programme, People & Culture.

Privacy By Design and By Default

The DPO and the DPO office monitored several strategic projects included in Caixa's digital transformation activities, thus contributing to the compliance with 'Privacy by Design' and 'Privacy by Default,' foundational principles established by the General Data Protection Regulation.

Emergency Data Protection Team (EUPD)

This team ensures the efficient management of security incidents that may constitute a data breach, including the adoption by the Division responsible for data processing, of the appropriate (technical and organisational) mitigation measures to guarantee the rights and freedoms of data subjects. The activity of the EUPD is documented and evidenced to comply with the principle of accountability, particularly before the national supervisory authority, the National Data Protection Commission (CNPD).

At Group level, international organisations have also carried out initiatives aimed at promoting and raising awareness among employees regarding privacy and information security issues, with examples including BNU Macau and Banco Interatlântico.

- Annually, BNU Macau conducts cybersecurity training to strengthen defences against potential cyber threats, based on best practices for data protection, recognising phishing attempts, and responding to various cybersecurity threats. In this way, it ensures that its employees are prepared to protect confidential information and maintain the integrity of the bank's systems. The training was attended by a total of 462 employees, as well as 25 new employees who completed the training during the orientation day.

  Additionally, all new employees receive training on personal data protection. The Personal Data Protection Services Division was also invited to deliver a presentation on Personal Data Protection for employees of the Personal Banking Division and the Organisation and Procedures Department from 5 to 7 November 2024. To enhance transaction security for its customers, BNU Macau has introduced a feature that allows cardholders to set transaction capabilities and limits for online purchases made with their cards. This empowers customers with greater control over their financial transactions, thereby reducing the risk of unauthorised use. This personalised approach not only enhances security but also fosters greater trust in digital banking services.

- Banco Interatlântico has also implemented several best practices regarding privacy and information security, including:
  - Creation of a dedicated mailbox for reporting security incidents;
  - Monthly meetings between BI and Caixa's Chief Information Security Officer (CISO) to review ongoing processes and discuss improvements to be implemented at BI in line with the best practices of the Caixa Group;
  - Mandatory training for all new BI employees on information security, cybersecurity concepts, and how to identify and report potential attack attempts to BI's security team.

Targets and Metrics

The monitoring of objective metrics is essential to ensure the assessment of Caixa's performance in Privacy and Information Protection.

One of the indicators used to monitor Caixa's performance is the indicator “Total number of confirmed complaints regarding the breach of privacy and loss of customer data”.

In 2024 Caixa recorded 34 cases of customer privacy breaches.

As part of the development of the 2025-2028 Sustainability Strategic Plan, a series of corporate targets will be developed related to this matter.

4.4.6. Annexes

4.4.6.1. Annex A - Sustainability Indicators

Characteristics of Caixa Group employees

Number of employees by gender (Caixa Group)

Gender	Number of employees in 2024 (headcount)	Average number of employees in 2024
Male	4,349	4,364
Female	6,468	6,500
Other	-	-
Not reported	-	-
Total number of employees	10,817	10,864

Methodologies and assumptions

The information regarding employees reported in this statement has the same scope as the Annual Report, as per the Caixa Group section.

Number of Employees

The number of employees corresponds to the count of the number of employees in active service, including seconded employees, as of 31 December of the reporting period. This number is based on data extracted from Caixa's Human Resources Management System.

Average number of employees by gender

The average number of employees is calculated as the average of the number of permanent employees at the end of the previous year and in the reporting year, broken down by gender.

Number of employees by gender

The number of employees by gender refers to the number of men, women, others, and those not reported in the total employee population as of 31 December of the reporting period. The categorisation by gender is based on data extracted from Caixa's Human Resources Management System.

Average number of employees by gender

The average number of employees by gender is calculated as the average number of men, women, others, and those not reported at the end of each month during the reporting year.

Number of employees per country (>10% of the headcount of the Caixa Group)

Country	No. of employees in 2024 (headcount)	Average number of employees in 2024
Portugal	5,704	5,861
Mozambique	2,775	2,776
Total number of employees	8,479	8,637

Number of employees per country (<10% of the headcount of the Group)

Country	Number of employees in 2024 (headcount)
Brazil	60
Angola	501
Cape Verde	567
France	554
Timor	140
Spain	1
Germany	5
Belgium	3
Luxembourg	3
United Kingdom	4

Switzerland	5
South Africa	2
Venezuela	2
Canada	3
India	3
China	485
Total number of employees	2,338

Methodologies and assumptions

Number of employees per country (> 10% of the headcount of the CGD Group)

The number of employees by country refers to the number of employees in countries where Caixa has more than 50 employees, representing at least 10% of the total number of employees as of 31 December of the reporting year. The categorisation by country is based on data extracted from Caixa's Human Resources Management System.

Average number of employees per country

The average number of employees is calculated as the average number of permanent employees at the end of each month during the reporting year.

Number of employees by type of contract by gender (Caixa Group)

	2024				
	Male	**Female**	**Other**	**Not reported**	**Total**
No. of employees (headcount)	4,349	6,468	-	-	10,817
No. of permanent employees (headcount)	4,253	6,361	-	-	10,614
No. of temporary workers (headcount)	96	107	-	-	203
No. of non-guaranteed working hours (headcount)	2	2	-	-	4

Methodologies and assumptions

Number of employees by type of contract and gender

The number of employees by type of contract and by gender is based on the number of permanent employees, temporary employees, and employees with non-guaranteed working hours in the total universe of employees as of 31 December of the reporting period. The categorisation of the type of contract and gender was extracted from Caixa's Human Resources Management System.

Talent Attraction and Retention (Caixa Group)

	Unit	2024	2023
No. of employees who left the Bank	Headcount	645	905
Turnover rate	%	5.96%	8.30%

Methodologies and assumptions

Number of employees who left the Bank

The number of employees who left the Bank corresponds to the number of employees who left the organisation during the reporting period, voluntarily, through resignation, retirement, or death in service. The number of workers who left the bank was extracted from Caixa's Human Resources Management System.

Turnover rate

The turnover rate is calculated based on the number of employees at the end of the reporting period and the number of employees who left the Bank during the reporting period.

Characteristics of the Bank's self-employed workers

Number of self-employed workers by type of worker (Portugal)[6]	2024
Self-employed (ETC)	0
Workers supplied by 'employment activities' companies (ETC)	1,139
Total number of self-employed workers (FTE)	1,139

Methodologies and assumptions

Number of self-employed workers by type of worker

The number of self-employed workers is reported in Full-Time Equivalents (FTE) and refers to the number of self-employed workers as of 31 December of the reporting period. The methodology used is based on the percentage of the workload recorded on the last day of each month.

Training and development

Training and development (Portugal)[15]	2024
Employees who participated in regular performance and career development reviews (%)	99%
Average number of training hours per employee	89

Methodologies and assumptions

Employees who participated in regular performance and career development reviews

The percentage of employees who took part in performance reviews is calculated based on the number of employees who completed a performance evaluation for the previous year during the reporting period, divided by the total number of employees as of 31 December of the reporting period.

Average number of training hours

The average number of training hours is based on the total number of training hours during the reporting period and the total number of employees as of 31 December of the reporting period.

Energy consumption

Direct energy consumption in infrastructures (Caixa Group)

	Unit	Caixa	BI	BCA	BCI	BCGA	BNU Timor	BNU Macau	France Branch	BCGB	Total	% 23/24
Diesel	MWh	36	22	49	2,107	979	29	0	0	0	3,222	20
Natural gas	MWh	392	0	0	0	0	0	0	0	0	392	6
Total	MWh	428	22	49	2,107	979	29	0	0	0	3,614	17

[15] The metrics presented refer only to data from Caixa Geral de Depósito S.A., CGD Pensões - Soc. Gest. Fundos de Pensões, S.A, Caixa Serviços Partilhados, A.C.E., Caixa Gestão de Ativos, SGFI, Caixa Banco de Investimento, Serviços Sociais da CGD

Fuel consumption by own fleet (Caixa Group)[16]

	Unit	Caixa	BI	BCA	BCI	BCGA	BNU Timor	BNU Macau	France Branch	BCGB	Total	% 23/24
Diesel	MWh	2,211	102	137	2,570	244	113	0	1	0	5,379	-17
Petrol	MWh	3,512	37	891	139	181	18	70	141	31	5,020	40

Total	MWh	6,319	139	1,028	2,709	425	131	70	142	31	10,994	3

Electricity consumption (Caixa Group)

	Unit	Caixa	BI	BCA	BCI	BCGA	BNU Timor	BNU Macau	France Branch	BCGB	Total	% 23/24
Electricity	MWh	34,726	430	1,567	23,608	1,083	691	2,864	1,161	46	66,176	-6
Total	MWh	34,726	430	1,567	23,608	1,083	691	2,864	1,161	46	66,176	-6

Renewable energy generation (Caixa Group)

	Unit	Caixa	BI	BCA	BCI	BCGA	BNU Timor	BNU Macau	France Branch	BCGB	Total	% 23/24
Thermal Energy[17]	MWh	726	0	0	0	0	0	0	0	0	726	-27
Photovoltaic electricity	MWh	0	22	0	0	0	0	0	0	0	22	-
Total	MWh	726	22	0	0	0	0	0	0	0	748	-25

Electricity consumption from nuclear sources (Caixa Group)

	Unit	Caixa	BI	BCA	BCI	BCGA	BNU Timor	BNU Macau	France Branch	BCGB	Total
Nuclear energy	MWh	0	0	0	0	0	0	126	1,052	1	1,179
Total	MWh	0	0	0	0	0	0	126	1,052	1	1,179

Methodologies and assumptions

Nuclear energy consumption

Initially, the presence of nuclear production worldwide was assessed: https://www.iea.org/data-and-statistics/charts/share-of-nuclear-energy-in-total-electricity-generation-by-country-2023. It was found that the geographies whose production mix includes nuclear energy are France (https://www.edf.fr/en/the-edf-group/producing-a-climate-friendly-energy), Macau (https://www.iea.org/data-and-statistics/charts/electricity-generation-mix-for-selected-regions-2024) and Brazil (https://www.epe.gov.br/pt/abcdenergia/matriz-energetica-e-eletrica). The respective percentage of nuclear energy was applied to electricity consumption.

[16] Electric vehicles are charged at Caixa's buildings and accounted for in electricity consumption.

[17] The building's occupancy per capita for 2024 was applied, resulting in a reduction in the production associated with Caixa.

Carbon emissions

Scope and Category	GHG emissions (2023) (tCO_2)	GHG emissions (2024) (tCO_2)	GHG emissions (%) (2024)	2024/2023 (%)	2026[18]	2030[19]	Annual % target/base year

Mobile vehicles	-	3,969	-	-	65
Scope 3 – Category 15 emissions	2,968,271	3,381,894	100%	14%	
Total emissions (Scopes 1, 2 e 3) (Market-based) (does not include biogenic emissions)	2,981,353	3,391,668		14%	
Total emissions (Scopes 1, 2 e 3) (Location-based) (does not include biogenic emissions)	2,982,829	3,396,424		14%	

GHG intensity per net revenue (tCO_2/m€)[24]	**2023**	**2024**	**2024/2023 (%)**
Total GHG emissions (location-based) per net revenue (tCO2eq/Monetary unit)	2,32	1,96	-15,73
Total GHG emissions (market-based) per net revenue (tCO2eq/Monetary unit)	2,32	1,96	-15,65

23 Methodological change stemming from robustness of information in the system.

24 Ratio calculated taking into account the net results of the income statement (consolidated), from subchapter 1.4.4 Consolidated activity.

Methodologies and assumptions

Stationary combustion (combustion in stationary equipment – i.e. non-mobile equipment, such as boilers, furnaces or gas heaters)

In Portugal, natural gas is used for heating and diesel for running emergency generators. In Cape Verde, Mozambique, Angola, and Timor there is fuel consumption in infrastructure. In the case of Brazil, there are 5 generators with a unit capacity of 1,000 litres, but there are no mechanisms to estimate actual consumption.

After quantifying the above consumptions, the conversion factors shown in the table below are applied for each year:

CGD				
		Unit	**2024**	-
Natural Gas	PCI (heat of combustion)	GJ/((N)m^3 x 10^3	38.2	APA (2024) National Inventory Report - Portugal (p. 84 table 3-9)
Diesel	PCI (heat of combustion)	GJ/ton	42.7	
	Density	kg/l	0.84	APA (2024) National Inventory Report - Portugal (p. 144 table 3-51)
Petrol	PCI (heat of combustion)	GJ/ton	43.8	APA (2024) National Inventory Report - Portugal (p. 144 table 3-51)
	Density	kg/l	0.75	APA (2024) National Inventory Report - Portugal (p. 144 table 3-51)
	Density	kg/l	0.75	APA (2024) National Inventory Report - Portugal (p. 144 table 3-51)

BCA, BCI, BI, BCGA, BNU Macau, Timor and France Branches, BCG Brazil				
Diesel	PCI (heat of combustion)	GJ/t	43.0	GHG Protocol (March 2024) http://www.ghgprotocol.org/calculation-tools/all-tools
	Density	kg/l	0.91	
Petrol	PCI (heat of combustion)	GJ/t	43.8	
	Density	kg/l	0.75	

Then, these values are converted into emissions by applying the emission factors (EFs) listed below:

BCA, BCI, BI, BCGA, BNU Macau, Timor and France Branches, BCG Brazil				
			2024	-
Natural Gas	EF	kg CO_2/GJ	56.4	APA (2024) National Inventory Report - Portugal (p. 175 table 3-83)
Diesel	EF	kg CO_2/GJ	74.1	

Mobile combustion (non-electric means of transport owned by the organisation)

With regard to Caixa's fleet in Portugal, the figures include fuel consumption by its own fleet (Galp cards) and by other vehicles used by the company, whose expenses are reimbursed upon presentation of an invoice. In this second case, in 2024 the value of litres consumed was estimated based on the average price per litre of the fuel used:

CGD			
	Unit	**2024**	**Source**
Regular Diesel	€/litre	1.579	https://precoscombustiveis.dgeg.gov.pt/estatistica/preco-medio-diario/#download (DGEG)
Regular 95 petrol	€/litre	1.715	
LPG Auto	€/litre	0.853	

Caixa's fleet includes hybrid and electric vehicles, which are charged at Caixa buildings and accounted for in electricity consumption.

Energy consumption within the organisation was converted into energy units (GJ) and the emission factors listed below were applied to calculate the associated carbon emissions:

CGD, S.A				
		Unit	**2024**	**Source**
Diesel	EF	kg CO_2/GJ	69.8	APA (2024) National Inventory Report 2023 Portugal (p. 653 table B-3)
Petrol	EF	kg CO_2/GJ	70.6	
LPG	EF	kg CO_2/GJ	64.0	
BCA, BCGA, BCG Brazil, BCI, BI, BNU Macau, Timor and France Branches				
Diesel	EF	kg CO_2/GJ	74.1	GHG Protocol (March 2024) http://www.ghgprotocol.org/calculation-tools/all-tools
Petrol	EF	kg CO_2/GJ	69.3	

Fugitive emissions (due to gas leaking from refrigeration equipment, air conditioners, fire extinguishers, sulphur hexafluoride or nitrogen trifluoride)

In the case of F-gas leaks, the global warming potential of the gas was considered. At CGD, S.A. (Portugal), leaks from air conditioning systems in central buildings and the branch office network are included (extinguishing equipment is excluded). BI, BCGA, BCI, Timor Branch, France Branch and BCG Brazil do not have standardised methods for collecting this information.

CGD, BCA, BNU Macau			
Gas	**Unit**	**2024**	**Source**

R32	kgCO_2eq/kg gas	675	

The electricity supply for CGD (Mainland Portugal) was provided by Iberdrola (99.9%) and CELER (0.1%). The contract with Iberdrola had associated Guarantees of Origin and corresponded to 97% of the electricity consumed in Portugal. In the Autonomous Region of the Azores the electricity supplier was Eletricidade dos Açores (EDA) and in the Autonomous Region of Madeira, Empresa de Eletricidade da Madeira (EEM).

The figures shown do not reflect the losses associated with the distribution and transport of electricity in the grid, as well as the losses inherent to limitations of efficiency associated with the generation processes that are at the origin of the electricity consumed.

The following table presents the emission factors used to perform the conversion of associated emissions:

Emission factors	Unit	2024	Source
			CGD
Iberdrola	kg CO_2/kWh	0.000	CGD bought 100% renewable energy from this supplier.
Celer	kg CO_2/kWh	0.000	https://aceler.pt/documents/Energia/Rotulagem_de_energia_eletrica/Folheto_Rotulagem_2023.pdf
EDA (Electricity from Azores)	kg CO_2/kWh	0.455	https://www.eda.pt/Regulacao/Rotulagem/Paginas/Resultados.aspx
EEM (Electricity Company from Madeira)	kg CO_2/kWh	0.475	https://www.eem.pt/media/1071512/2024.pdf
Location-based	kg CO_2/kWh	0.149	IEA Emission Factors 2022 (2021)
			BI and BCA
Africa	kg CO_2/kWh	0.542	International Energy Agency (2022), Emission Factors 2022 (2021)

For BI, BCA, BCGA, BCI, Mozambique, Timor and Brazil there is no information available to calculate emissions using the market-based method.

Category 15: Financing Portfolio

CGD calculated emissions associated with its credit portfolio in the following categories: business loans, project finance (electricity generation projects), residential mortgages, commercial mortgages (real estate), and motor vehicle loans and other vehicles, in accordance with the PCAF standard guidelines.

Corporate Finance - Credit and Investment Portfolio

The calculation of emissions for CGD's credit and investment portfolio was carried out according to the PCAF methodology for the 'business loans' category and based on the following PCAF options:

PCAF option	Calculation formula	PCAF Score
2a	$\sum_c \frac{Outstanding\ amount_c}{Total\ equity + debt_c} \times Unverified\ company\ emissions_c$	2
3a	$\sum_c \frac{Outstanding\ amount_c}{Total\ equity + debt_c} \times Revenue_c \times \frac{GHG\ emissions_s}{Revenue_s}$	4
3b	$\sum_c Outstanding\ amount_c \times \frac{GHG\ emissions_s}{Assets_s}$	5

Scope: CGD, S.A (Portugal)

Data used in the calculation: i) The outstanding amount corresponds to the amount owed by each counterparty (excluding off-balance sheet items); ii) Data on 'equity, debt, and revenues of each counterparty were used (internal data from the bank, whenever available); iii) The sector-specific emission factors used (for Score 4 and 5) were calculated based on the most recent information available on the INE, Pordata, Eurostat, and DGEG websites. A national average value for emissions associated with the Portuguese electro-generating sector provided by the International Energy Agency (IEA) for Portugal was also used (gCO_2/kWh); iv) Public information from counterparties with disclosed emissions data (for the year 2023) was consulted to calculate Score 1 and 2 emissions.

Scope: Group entities (BI, BCA, BCI, BCGA, Timor Branch, France Branch, BNU Macau, BCG Brazil)

Data used in the calculation: i) The outstanding amount corresponds to the amount owed by each counterparty (excluding off-balance sheet items); ii) The sector-specific emission factors used were based on the sector-specific emission factors associated with assets for Portugal, and a proxy was made based on a proportional comparison between Portugal's energy consumption and that of other countries. Energy consumption (source: World Bank and EPE) and the electricity emission factor (source: IEA) by country were used to calculate this proportion.

'Project Finance' category (electricity generation projects)

Emissions from electricity generation projects in project finance were calculated according to the PCAF methodology relative to this category and according to the option below:

PCAF option	Calculation formula	PCAF Score
2b	$\sum_p \frac{Outstanding\ amount_p}{Total\ equity + debt_p} \times Production_p \times Emission\ factor$	3

Scope: CGD, S.A (Portugal)

- Data used in the calculation: i) Internal data from the Bank related to electricity generation projects, whenever available (amounts owed (€), total equity + debt (€), and production in 2024 (MWh); for some unavailable values, proxies were used); ii) Emission factors provided by ERSE (Energy Services Regulatory Authority) by production technology.

Commercial Mortgages' category

Issues of housing mortgages and real estate mortgages are calculated using the PCAF methodology for these types and in accordance with the following options:

PCAF option	Calculation formula	PCAF Score
2a	$\sum_{b,and} \frac{Outstanding\ amount_b}{Property\ value\ at\ origination_b} \times Estimated\ energy\ consumption\ (from\ energy\ labels_{b,e}) \times Floor\ area_b \times Average\ emission\ factor_e\ )$	3
2b	$\sum_{b,and} \frac{Outstanding\ amount_b}{Property\ value\ at\ origination_b} \times\ Estimated\ energy\ consumption\ (from\ statistics_{b,e}) \times Floor\ area_b \times Average\ emission\ factor_e$	4

Scope: CGD, S.A (Portugal)

- Data used in the calculation: i) Amounts owed 'on balance' (€), valuation value (€), energy certificate level of properties (internal data from the Bank), and area of properties (m²); ii) Emission factors by property type (tCO_2/m^2) extracted from the PCAF database 'European Building Emission Factor Database' according to the energy certificate level and property type.

- Note: The calculation of the carbon footprint of Commercial Mortgages was not based on the actual GHG emissions of the assets, so emissions are 100% estimated based on the data mentioned above.

- Scope: Group entities (BI, BCA, BCI, BCGA, France Branch,)

- Data used: i) Amounts owed 'on balance' (€); ii) Estimated emission factors calculated based on a proportional relationship between the price per m² in Portugal and the price per m² in other geographies (Source: FipeZAP (Brazil), DSEC (Macau), CAHF (Cape Verde), Numbeo (Angola, Mozambique, Timor). Specifically for France, the emission factors per building or per property area extracted from the PCAF database were used 'European Building Emission Factor Database'.

Mortgage Loans

Residential mortgage issues are calculated using the PCAF methodology for this typology and according to the following options:

PCAF option	Calculation formula	PCAF Score
2a	$\sum_{b,and} \frac{Outstanding\ amount_b}{Property\ value\ at\ origination_b} \times Estimated\ energy\ consumption\ (from\ energy\ labels_{b,e}) \times Floor\ area_b \times Average\ emission\ factor_e$	3
2b	$\sum_{b,and} \frac{Outstanding\ amount_b}{Property\ value\ at\ origination_b} \times\ Estimated\ energy\ consumption\ (from\ statistics_{b,e}) \times Floor\ area_b \times Average\ emission\ factor_e$	4

Scope: CGD, S.A (Portugal)

- Data used: i) Amounts owed 'on balance' (€), valuation value (€), energy certificate level of properties (internal data from the Bank), and area of properties (m²); ii) Emission factors by property type (tCO_2/m^2) extracted from the PCAF database 'European Building Emission Factor Database' according to the energy certificate level and property type.

Scope: Group entities (BI, BCA, BCI, BCGA, France Branch, BNU Macau)

- Data used: i) Amounts owed 'on balance' (€); ii) Estimated emission factors calculated based on a proportional relationship between the price per m² in Portugal and the price per m² in other geographies (Source: FipeZAP (Brazil), DSEC (Macau), CAHF (Cape Verde), Numbeo (Angola, Mozambique, Timor). Specifically for France, the emission factors per building extracted from the PCAF database were used 'European Building Emission Factor Database'.

- Only products for real estate credit purposes were considered and the following assumptions were followed based on geography:

- For France, PCAF FEs were used per property or per area (when area information was available). Information from Energy Certificates A, B, C, D, E, F and G was taken into account.

- Mozambique, Cape Verde (BI), Macau: For cases where area data were available, FE per m^2 was used, with a proportional with PT based on the electricity emission factor and the country's fossil fuel consumption compared to Portugal. In cases where there was no area data, an FE per M€ financed was used, with a proportional to the PCAF emission factor for PT based on the price per m^2.

- Angola: An FE per M€ financed was used, with a proportional to the PCAF emission factor for PT based on the price of m^2.

Car loan

Car loan issues are calculated using the PCAF methodology for this type of loan and according to the following options:

PCAF option	Calculation formula	PCAF Score
3a	$\sum_{t,f} \frac{Outstanding\ amount_v}{Total\ value\ at\ origination_v} \times Distance\ travelled_r \times Efficiency_{t,f} \times Emission\ factor_f$	4
3b	$\sum_{a,f} \frac{Outstanding\ amount_v}{Total\ value\ at\ origination_v} \times Distance\ travelled_r \times Efficiency_{a,f} \times Emission\ factor_f$	5

Scope: CGD, S.A (Portugal)

A conservative approach was taken and a 100% allocation factor was considered until the loan was paid off, since the acquisition value of the vehicles was unknown (according to the PCAF recommendation; PCAF (2022). The Global GHG Accounting and Reporting Standard Part A: Financed Emissions. Second Edition. , p. 104).

- Data used: i) type of vehicle (passenger, light goods, heavy goods, buses and motorbikes) and fuel type of the vehicles financed (internal bank data); ii) Emission factors by fuel type per km travelled (gCO2/km) taken from NIR2023 for petrol, diesel, GPL and hybrid vehicles. For electric vehicles, an estimated emission factor was used based on average consumption of electric vehicles (kWh/km) and the national average value for emissions associated with the Portuguese electro-producing sector provided by the International Energy Agency (IEA) for Portugal (gCO_2/kWh); iii) The distances travelled by type of vehicle were estimated using NIR2023; iv) the number of vehicles was estimated based on the amount of exposure and on average vehicle prices per type.
- • In 2024, as a result of the strengthening of information in the system, there was a methodological change in the calculation of emissions associated with vehicles. It is possible to determine or estimate the number of vehicles financed through each of the operations. Therefore, no comparison is made with the previous year.
- Scope: Group Entities (BI, BCGA)
- Data used in the calculation: i) type of vehicle (passenger, motorcycles); ii) Emission factors by vehicle type per km driven ($kgCO_2$/km) taken from DEFRA (average car and average motorbike); iii) The distances travelled by vehicle type were estimated using NIR2023 (proxy); iv) the number of vehicles was estimated based on the amount of exposure and average vehicle prices by type.

4.4.6.2. Annex B - ESRS table (European Sustainability Reporting Standards)

List of ESRS Disclosure Requirements met in the preparation of the sustainability statement following the outcome of the materiality assessment

For more information on the way Caixa has established the material information to be disclosed, please refer to chapter “4.4.1.3. Material impacts, risks and opportunities”.

Table 10 – Nuclear and Fossil Gas KPI

Template 1 - Nuclear and fossil gas related activities

Nuclear energy related activities	Yes/No
The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle	No
The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	No
The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades	Yes
Fossil gas related activities	**Yes/No**
The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	Yes
The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	No
The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels	No

Template 2 Taxonomy-aligned economic activities (denominator)

Economic activities	Turnover						Capex					
	CCM+CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)		CCM+CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)	
	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.26 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.27 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.28 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.29 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.30 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.31 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI												
Amount and proportion of other taxonomy-aligned economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	2,515,387	4.0%	2,470,198	3.9%	45,190	0.1%	3,155,491	5.0%	2,998,637	4.8%	156,854	0.2%
Total applicable KPI	2,515,387	4.0%	2,470,198	3.9%	45,190	0.1%	3,155,491	5.0%	2,998,637	4.8%	156,854	0.2%

Template 3 Taxonomy-aligned economic activities (numerator)

Economic activities	Turnover						Capex					
	CCM+CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)		CCM+CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)	
	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.26 of Annexes I and II to Delegated Regulation 2021/2139 in the numerator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.27 of Annexes I and II to Delegated Regulation 2021/2139 in the numerator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.28 of Annexes I and II to Delegated Regulation 2021/2139 in the numerator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.29 of Annexes I and II to Delegated Regulation 2021/2139 in the numerator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.30 of Annexes I and II to Delegated Regulation 2021/2139 in the numerator of the applicable KPI												
Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.31 of Annexes I and II to Delegated Regulation 2021/2139 in the numerator of the applicable KPI												
Amount and proportion of other taxonomy-aligned economic activities not referred to in rows 1 to 6 above in the numerator of the applicable KPI	2,515,387	4.0%	2,470,198	3.9%	45,190	0.1%	3,155,491	5.0%	2,998,637	4.8%	156,854	0.2%
Total amount and proportion of taxonomy-aligned economic activities in the numerator of the applicable KPI	2,515,387	4.0%	2,470,198	3.9%	45,190	0.1%	3,155,491	5.0%	2,998,637	4.8%	156,854	0.2%

Template 4 Taxonomy-eligible but not taxonomy-aligned economic activities

Economic activities	Turnover						Capex					
	CCM+CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)		CCM+CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)	
	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%
Amount and proportion of taxonomy-eligible but not taxonomy-aligned economic activity referred to in Section 4.26 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI		0.0%										
Amount and proportion of taxonomy-eligible but not taxonomy-aligned economic activity referred to in Section 4.27 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI		0.0%										
Amount and proportion of taxonomy-eligible but not taxonomy-aligned economic activity referred to in Section 4.28 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI	6,228	0.0%	6,228	0.0%			1,557		1,557	0.0%		
Amount and proportion of taxonomy-eligible but not taxonomy-aligned economic activity referred to in Section 4.29 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI	1,557	0.0%	1,557	0.0%								
Amount and proportion of taxonomy-eligible but not taxonomy-aligned economic activity referred to in Section 4.30 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI		0.0%										
Amount and proportion of taxonomy-eligible but not taxonomy-aligned economic activity referred to in Section 4.31 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI		0.0%										
Amount and proportion of other taxonomy-eligible but not taxonomy-aligned economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	29,360,975	46.8%	29,186,203	46.5%	174,772	0.3%	29,490,254	47.0%	29,427,147	46.9%	63,108	0.1%
Total amount and proportion of taxonomy eligible but not taxonomy-aligned economic activities in the denominator of the applicable KPI	29,368,760	46.8%	29,193,988	46.5%	174,772	0.3%	29,491,812	47.0%	29,428,704	46.9%	63,108	0.1%

Template 5 Taxonomy non-eligible economic activities

Economic activities	Turnover		Capex	
	Amount (Thousands Eur)	%	Amount (Thousands Eur)	%
Amount and proportion of economic activity referred to in row 1 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.26 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI				
Amount and proportion of economic activity referred to in row 1 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.27 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI				
Amount and proportion of economic activity referred to in row 1 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.28 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI				
Amount and proportion of economic activity referred to in row 1 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.29 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI				
Amount and proportion of economic activity referred to in row 1 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.30 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI				
Amount and proportion of economic activity referred to in row 1 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.31 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI				
Amount and proportion of other taxonomy-non eligible economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	30,873,982	49.2%	30,110,827	48.0%
Total amount and proportion of taxonomy-non eligible economic activities in the denominator of the applicable KPI	30,873,982	49.2%	30,110,827	48.0%
