Sustainability Reporting

Section 1 - General Information

[ESRS 2]

Basis for presentation

General Criteria for the drawing up of the Sustainability Report

This Sustainability Report (hereinafter also referred to as the "Report") is prepared on a consolidated basis, in compliance with Directive (EU) 2022/2464 on corporate sustainability reporting ('CSRD'), with Commission Delegated Regulation (EU) 2023/2772 (European Sustainability Reporting Standards) and with Legislative Decree 125/2024, which transposed the aforementioned EU Directive into Italian law.

The consolidation perimeter of the Sustainability Report coincides with the consolidation perimeter of the Consolidated Financial Statements and therefore includes the Parent Company (hereinafter also the "Bank") and the subsidiaries consolidated on a line-by-line basis within the Consolidated Financial Statements (together referred to hereinafter as the "Group"). For more details on the companies included in the Report's consolidation scope, please refer to Part A - Section 3 of the Notes to the Consolidated Financial Statements on the scope of consolidation.

Subsidiaries included in the consolidation are exempt from individual sustainability reporting in accordance with the provisions of Legislative Decree 125/2024, Article 7, paragraph 1, as they are included in the consolidated sustainability report of the Parent Company.

Sustainability Reporting covers the main segments of the Group's value chain - upstream, downstream and own operations - and takes into account the related assessment of identified impacts, risks and opportunities ("IRO").

The Group did not opt:

- to omit a specific disclosure related to intellectual property, know-how or innovation results (see ESRS 1, Section 7.7 Classified and sensitive information and information on intellectual property, know-how or results of innovation)
- to use the exemption from disclosure of information concerning upcoming developments or matters concerning trading, pursuant to Articles 19-bis (3) and 29-bis (3) of Directive 2013/34/EU.

The Reporting contains information only on the data points required by the ESRS identified as material following the double materiality analysis and therefore mandatory under the ESRS. *The table of contents on page 33 gives references to the specific sections of the Report where they are dealt with. Wherever possible, the Group has made use of the principle of "Incorporation by Reference" to ensure its integration within the Consolidated Report on Operations.*

The Report is subject to limited assurance.

The Report also contains the information considered appropriate to be disclosed to the United Nations Global Compact Agency (UNEP) and the progress made in implementing the Principles for Responsible Banking following the Group's voluntary adherence in 2019.

Disclosure in relation to specific circumstances

Value chain estimation

The metrics reported within the Report that include estimated value chain data and are estimated through indirect data concern Scope 3 greenhouse gas emissions, reported within Section 2 - Environmental Information. The direct calculation of these emissions requires data and information on the Group's customers, suppliers and business partners. According to the reporting principles, where direct value chain information cannot be gathered through reasonable efforts, it must be estimated using information from indirect sources.

Below are the limitations on the value chain data underlying the Group's decision to use estimated data:

- Regulatory limitations on data and information to be considered for financial institutions belonging to the Group's value chain;
- Restrictions on access to and sharing of information related to actors in the value chain;
- Limitations on the reliability and quality of information about the actors in the value chain related to the possible lack of technical expertise of the actors involved.

Sources of estimation and outcome uncertainty

For more details on the estimation methodology used in the calculation of Scope 3 indirect emissions, including sources of information, assumptions made and conversion factors used in the calculation, please refer to what is described in the paragraph "Methodology for calculating own direct and indirect (Scope 1 and 2) and Scope 3 indirect emissions" in Section 2 - Environmental Information.

Errors and changes in the preparation or presentation of sustainability information

As this is the first year that the provisions of Legislative Decree 125/2024 have been adopted, there are no changes in the preparation and presentation of information. In addition, in accordance with ESRS 1 - General Requirements paragraph 136, in the first year of preparing the Sustainability Report in accordance with ESRS, no comparative information with the previous year is reported.

Disclosures required by other disclosures

The Report includes the disclosure required by Article 8 of Regulation (EU) 2020/852 (EU Taxonomy) within Section 2 "Environmental Information". Comparative data are not subject to limited review for the current year.

Incoporation by reference

All inclusions by reference made by the Group to other documents and contained within the Report meet the requirements of ESRS 1 - General Requirements paragraphs 119 and 120. Specifically, the disclosure requirements included by reference in the Report are as follows:

- ESRS 2 BP-1: to identify the companies included in the scope of consolidation in this Report, please refer to scope of consolidation described in Part A Section 3 - "Scope and Methods of Consolidation" of the Notes to the Consolidated Financial Statements;
- ESRS 2 IRO-1: for more details on the framework for monitoring potential environmental risks, please refer to the "ESG Risks" section of Part E - "Information on risks and related hedging policies" of the Consolidated Notes to the Financial Statements;
- E1 – ESRS 2 SBM-3: For a description of the analysis process to identify climate change risks, please refer to the "ESG Risks" section of Part E - " Information on risks and related hedging policies " of the Consolidated Notes to the Financial Statements.

Governance

The role of the administrative, management and supervisory bodies

The Bank, in its role as Parent Company, performs functions of direction, governance and control over the Group's Companies, as part of the more general guidelines set out by the Board of Directors and in the interest of the Group's stability.

The governance system of the Bank, which has a traditional structure, is composed of the Board of Directors, the Board of Statutory Auditors, the Shareholders' Meeting, the Chief Executive Officer (who, at present, also holds the position of General Manager) and five Board committees:

- Appointments Committee;
- Remuneration Committee;
- Risk and Sustainability Committee;
- Related-Party Transactions Committee;
- IT and Digitalisation Committee.

The Board of Directors was appointed by the Shareholders' Meeting on 20 April 2023, on the basis of lists submitted by the shareholders, for the 2023-2024-2025 financial years and thus until the date of the Shareholders' Meeting to approve the financial statements as at 31 December 2025.

On 11 April 2024, the Shareholders' Meeting of Banca MPS resolved to appoint Raffaele Oriani as Director, to replace Marco Giorgino, terminated by resignation on 13 November 2023; On 17 December 2024, five non-executive and independent directors resigned and, subsequently, on 27 December 2024, the Board of Directors appointed five new members by co-option. On 23 January 2025, the Bank proceeded, within the terms of the law, to verify the eligibility requirements of the co-opted directors, in compliance with regulations in force. The evaluation process by the Supervisory Authorities is ongoing.

Considering that the substantial changes in the composition of the Board of Directors relate only to the last 15 days of 2024, the information provided in the following section, including the percentages on the shares of independent directors and the percentages on the specific competences of the Board members, refer to the composition of the Board prior to these changes.

Where the information refers to the composition of the current Board of Directors, this is specifically indicated.

The composition of the Bank's Board of Directors, from its appointment in April 2023 until 31 December 2024, did not include employee/worker representatives, whose appointment to the corporate bodies is not, however, provided for by Italian law, nor by the Bank's Articles of Association.

All Board members elected during the term of office have been recognised as meeting the requirements and eligibility criteria set forth in the applicable regulations in force, and as at 31 December 2024, 11 out of the 15 directors (i.e. 73.33% of the Board members) were assessed as independent in accordance with Article 15 of the Articles of Association.

The CEO is the only executive member, while there are 14 non-executive members on the BoD. The following summary table lists the members of the Board of Directors[18].

18 Please note that the composition of the Board Committees changed in February 2025 For the new composition of the Committees see Press Release of 6 February 2025 *https://www.gruppomps.it/media-e-news/comunicati/cs-06022025.html*

The current Board of Statutory Auditors was appointed by the aforementioned Shareholders' Meeting of 20 April 2023 for the 2023-2024-2025 financial years and thus until the date of the Shareholders' Meeting to approve the financial statements as at 31 December 2025.

The Shareholders' Meeting of 11 April 2024 resolved on the integration of the Board of Statutory Auditors following the resignation of Alternate Auditor Piera Vitali (on 2 May 2023) and Standing Auditor Roberto Serrentino (on 15 May 2023). In accordance with the statutory and regulatory provisions in force, in compliance with the principle of necessary representation of minorities and the principle of gender balance provided for by the legislation in force at the time, the above-mentioned Shareholders' Meeting of 11 April 2024 resolved to appoint Giacomo Granata to the position of Standing Auditor and Paola Lucia Isabella Giordano to the position of Alternate Auditor, for the remainder of the current term of office; Pierpaolo Cotone, who took over as Standing Statutory Auditor on 15 May 2023 following the resignation of the previous Standing Statutory Auditor Roberto Serrentino (as sole Alternate Auditor), returned to the position of Alternate Auditor as of 11 April 2024.

The following table shows the composition of the current Board of Statutory Auditors.

	Members	Office
1.	Ciai Enrico	Chairperson
2.	Linguanti Lavinia	Standing Auditor
3.	Granata Giacomo	Standing Auditor
4.	Cotone Pierpaolo	Alternative Auditor
5.	Giordano Paola Lucia Isabella	Alternative Auditor

None of the members of the Board of Statutory Auditors is related to other members of the Board of Statutory Auditors, the members of the Board of Directors, the Financial Reporting Officer, the General Manager and the main executives of the company. The Sustainability Reporting Officer coincides with the Financial Reporting Officer.

The number and the type of duties covered by the statutory auditors is in line with the regulations governing the limits on the maximum number of positions for members of Control Bodies, as set forth in Title V-bis, Section V, Item II of Consob Issuers' Regulation and Article 17 of MEF Decree no. 169/2020.

Diversity in governance bodies

The composition of the Bank's corporate bodies in 2024 - for the Board of Directors was 53% male and 47% female, and for the Board of Statutory Auditors, 2 male standing auditors and 1 female standing auditor, and alternate auditors, 1 male and 1 female - complied with primary and supervisory regulations on gender balance. Please note that in December 2024, independent director Paola De Martini was appointed as Lead Independent Director.

With reference to the composition of the Board of Directors, the Board Committees and the Board of Statutory Auditors in terms of gender diversity, age and managerial and professional expertise, it should be noted that, as a listed bank, the Bank applies specific relevant provisions of the applicable legal and regulatory frameworks[19], as well as the principles and recommendations contained in the Corporate Governance Code, endorsed by the Bank. Lastly, the Articles of Association of the Bank contain specific provisions on gender diversity (Articles 15 and 25), calling for compliance with the regulations in force both at the appointment stage and during the term of office.

The Bank, in compliance with its Code of Ethics, the BMPS Sustainability and ESG Guidelines[20] and the Group's Gender Equality Policy, recognises and promotes the benefits of diversity in the overall composition of its Corporate Bodies in all respects, including gender, age and seniority in office, skills and the educational and professional profile of its members, in order to ensure sound governance, and a critical discussion of issues with a variety of viewpoints and experiences as recommended by supervisory regulations.

In the overall composition of the Corporate Bodies, differences in the areas mentioned above are therefore valued, promoting diversity as an indispensable value for a cooperative climate and an open approach to the inclusion of all diversities and attainment of "equal opportunities". People are guaranteed the same opportunities regardless of age, sexual orientation, religious belief, gender, ethnicity and different abilities, ensuring the absence of any discrimination[21].

In concrete terms, the application of the diversity criteria adopted[22] to define a composition of the governing bodies deemed optimal, ensured, in 2024:

- a gender balance in terms of a level of representation in line with that provided for in legislation;
- a diversification by age (of directors, with a minimum age of 48 and a maximum age of 71, an average age of 59, and with two directors aged under 50; of auditors, ranging in age from a minimum of 38 years to a maximum of 74 years, with an average age of 61 years), and by length of tenure (for directors, with 1 member in their third term, 4 members in their second term, 10 members in their first term; for statutory auditors, with the Chairman in his second term and four statutory auditors in their first term);
- the presence of requisites and compliance with the eligibility criteria necessary to perform the position (educational background, professional experience, independence of judgement, time available, prohibition on interlocking), which are periodically assessed both with regard to the individual representative and with regard to the overall structure of the governing bodies.

19 For example, the TUF, Supervisory Provisions on corporate governance, Ministerial Decree 169/2020.
20 Available on the Group's institutional website under the name "Sustainability and ESG Guidelines".
21 It should be noted that on 24 February 2025, the Board of Directors approved the "DIVERSITY POLICY FOR THE COMPOSITION OF THE BANCA MONTE DEI PASCHI DI SIENA S.P.A.'S CORPORATE BODIES", published on the website *www.gruppomps.it*
22 These aspects, which are an integral part of a governance structure of diversity aligned with best practices, were taken into account when renewing the corporate bodies at the Shareholders' Meeting of 20 April 2023, which appointed the Board of Directors and the Board of Statutory Auditors, as well as at the Shareholders' Meeting of 11 April 2024, which, *among others*, resolved to appoint Raffaele Oriani as Board Director, Giacomo Granata as Statutory Auditor and Paola Lucia Giordano as Alternate Auditor.

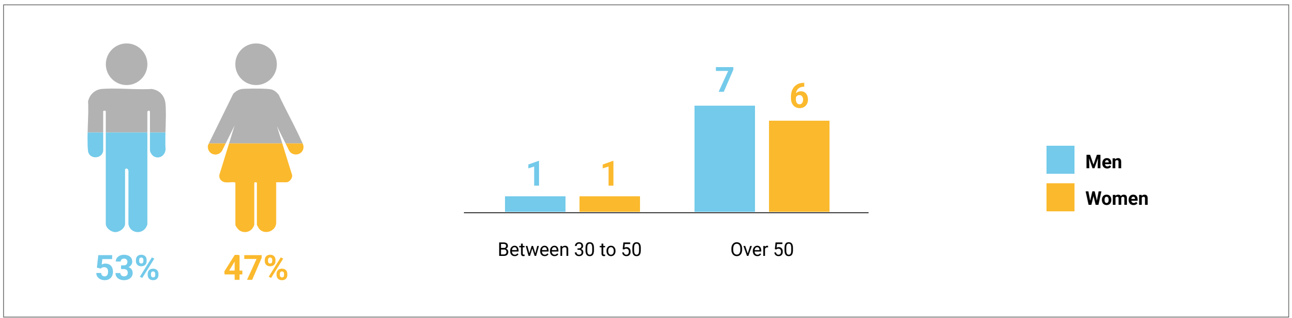
The qualitative and quantitative criteria on the ideal composition of the Board of Directors are disclosed to the shareholders before the renewal of the corporate bodies.

The Board of Statutory Auditors

The Board of Statutory Auditors ascertains on an annual basis or in the case of significant events, (i) the existence of the independence requirements for its members, and (ii) the correct application of the assessment criteria and procedures adopted by the Board of Directors to assess the independence of its non-executive members. The outcome of these checks shall be disclosed to the market in the corporate governance report or in the supervisory body's report to the Shareholders' Meeting".

Composition of the Board of Directors by gender and age

As at 31 December 2024, the gender diversity ratio of the board of directors, calculated as the average ratio of female to male members, was 88%.



With reference to the Board of Statutory Auditors, as at 31 December 2024, the Board of Statutory Auditors was composed of 3 regular auditors (2 male and 1 female) and 2 alternate auditors (1 male and 1 female)[23]. The age of the auditors ranges from a minimum of 38 years to a maximum of 74 years, with an average age of 61 and one auditor under 50.

23 Following the resignation of a statutory auditor and an alternate auditor in 2023, the Shareholders' Meeting of 11 April 2024 appointed a new statutory auditor and a new alternate auditor, pursuant to Article 2401 of the Italian Civil Code.

Responsibilities of bodies with strategic oversight, management and control functions with regard to impacts, risks and opportunities

The Bank's governance system provides for specific responsibilities regarding sustainability issues, distributed among the Bank's bodies and functions according to four areas (strategy, actions and policies, risk factor management, monitoring and reporting). In detail, the main responsibilities for sustainability are as follows:

Board of Directors	approves the sustainability and ESG strategies and policies and the Sustainability Plan in line with the values, principles and rules of conduct defined in the Code of Ethics, the commitments deriving from adhesion to voluntary initiatives, taking into account the impacts of ESG (environmental, social and governance) factors; approves the Group Sustainability and ESG Policy and monitors its implementation; assesses the integration of ESG factors into corporate strategy setting and decision-making processes; approves participation in national and supranational sustainability initiatives; verifies the presence of adequate ESG risk factor controls within the overall risk management framework, integrating them into the existing risk assessment, management, monitoring and control processes, defining the Group Risk Appetite; evaluates and approves the findings of the dual materiality analysis (with its identified impacts, risks and opportunities); approves the policy guidance and coordination on the Sustainability Report; approves the Sustainability Report, subject to the opinion of the Risk and Sustainability Committee.
Board of Statutory Auditors	ensures that the Sustainability Report is drawn up and published in compliance with the relevant regulatory provisions and supervises the adequacy of the organisational, administrative and reporting and control system adopted in order to allow for a correct and complete representation in the consolidated sustainability report of the information necessary for understanding both the impact of the company on sustainability issues and the way in which sustainability issues affect the company's performance, results and situation.
Risk and Sustainability Committee	evaluates proposals for strategic sustainability guidelines and macro-objectives, checking their consistency with the strategic guidelines; formulates proposals for environmental and social strategy, annual objectives and targets and monitors their implementation over time; oversees the evolution of sustainability also in the light of the relevant international guidelines and principles, monitoring its performance; reviews and approves sustainability issues, including the validation of the double materiality analysis for the purpose of drafting the Sustainability Report; supports the Board of Directors by gathering information, making proposals and providing advice in evaluations and decisions related to sustainability and ESG risk management; monitors the positioning of the Group with regard to Sustainability; supervises compliance with the provisions established pursuant to Legislative Decree No. 125 of 10 September 2024 with regard to the preparation of the Sustainability Report.
Remuneration Committee	has the power to formulate guidelines and recommendations on the remuneration of personnel whose remuneration and incentive systems are decided by the Board of Directors; periodically assesses the criteria adopted for the remuneration of executives with strategic responsibilities, monitoring their application.

Chief Executive Officer	ensures the implementation of the Board's resolutions and the pursuit of the integrated strategic lines of the sustainability profile, through the support of the Steering Committee[24]; oversees sustainability-related activities and actions to be implemented, monitoring and ensuring the achievement of defined objectives.
Steering Committee	through the specific session 'ESG and Sustainability', supports the Chief Executive Officer in defining strategic guidelines and sustainability policies and in finalising the initiatives of the Sustainability Plan; monitors the evolution of the Sustainability Plan initiatives by ensuring adequate sponsorship of initiatives and addressing the resolution of critical issues in order to achieve the Group's strategic objectives.
CFO	He is responsible for the Sustainability function, the promotion and integration of ESG issues into the overall strategy. He also define ESG strategies with the support of the other parent company functions and involves the Steering Committee - ESG Session to share the sustainability strategy and policies as well as to address critical issues related to the implementation of the ESG strategy and the Sustainability Plan.
ESG and Sustainability Function	supports the Head of Sustainability, outlines the ESG strategy, the Sustainability Plan and ensures the consistency of strategic initiatives with the Group's overall ESG strategy. outlines policies and coordinates the drafting and publication of sustainability reporting; carries out the double materiality analysis with related identification of Impacts, Risks and Opportunities, with subsequent approval by the Risk and Sustainability Committee and the Board of Directors.

The process for preparing the Sustainability Report is an integral part of the financial reporting process and is based on a structured system of controls aimed at ensuring the quality and reliability of the information reported. The ESG and Sustainability Department, through interaction with the various Bank entities, coordinates the reporting process and ensures that controls are properly integrated into operational activities. In this context, checks on the Sustainability Report, including those on impacts, risks and opportunities, are incorporated into the control systems of the other functions, ensuring a consistent approach aligned with existing controls.

The responsibilities of the Board of Directors, the Board Committees and the Board of Statutory Auditors are described and formalised in the Report on Corporate Governance and Ownership Structures, drawn up pursuant to Article 123-bis of the TUF and approved on 6 March 2025 in compliance with current regulations and the Articles of Association.

The administrative, management and supervisory bodies: experience and expertise

All the directors and statutory auditors elected in 2023 and in April 2024 were assessed by the Supervisory Authority (European Central Bank - ECB) as fit to hold office following the specific verification process, and were therefore also recognised as possessing the basic knowledge and experience required by the regulations in force in relation to the sectors (banking and financial) and products (banking and financial) in which the Bank operates, by virtue of the skills acquired through corporate offices, executive or managerial positions, work or professional activities or academic and research roles. Specifically, also taking into account the results of the self-assessment process, it appears that in 2024, Board members with specific expertise represented around 83% with reference to banking and financial markets and around 77% with specific reference to banking/financial products.

With reference to geographic areas, considering that, at present, the Bank does not operate significantly in the international market and mainly conducts its business in Italy, it should be noted that all elected directors are Italian nationals. Some of these directors have educational experience gained internationally, either through work, professional activities or academic roles, or having held corporate/managerial/management positions in foreign banking, insurance or financial undertakings, or in similar Italian companies, but operating significantly in an international dimension. In addition, with reference to the composition of the Board of Directors and Board of Statutory Auditors in 2024, the presence of individuals with specific competences in risk governance and banking governance, legal and regulatory competences (for the Board of Directors: percentage of around 87%) - predominantly members with an academic or legal profession profile.

24 The Steering Committee is a management committee consisting of the Chief Executive Officer, the Deputy Chief Commercial Officer, all Department heads and the Financial Reporting Officer.

The overall composition of the Board of Directors and the Board of Statutory Auditors in 2024 shows diversity in terms of the education, professional and managerial characteristics, technical expertise and knowledge, experience and specialisations of the members, which are different and complementary, contributing to enriching the decision-making process also in the area of sustainability, climate risks and ESG, and to guaranteeing that the Board of Directors has a collective level of knowledge, expertise and experience adequate to understand the main risks and opportunities, including their impacts.

In 2024, Bank directors with expertise in Sustainability, due to their experience gained as board committee members, with tasks in the field of Sustainability (also in the Bank), as members of ESG Commissions, through their participation in academic studies (coordination of Masters' courses and publications), the preparation of ESG guidelines for other industrial sectors, and knowledge acquired through specific training activities in the field of Sustainability provided by external entities, accounted for approximately 37%.

For the sake of completeness, it should be noted that with the appointments of December 2024, the collective suitability and knowledge of the administrative body was strengthened through the addition of professionals who have practical experience as Board members and statutory auditors and of other particularly qualifying contexts; also with reference to the management of ESG issues and related climate and environmental risks - including a focus on the ESG impacts on the Bank, also in the light of recent legal developments, alignment with regulatory requirements and the consolidation of sustainability practices, the collective knowledge has been strengthened by the presence of directors with practical experience gained also in companies that have a strong focus on ESG issues, including ESG risks, as substantial elements of their business strategies.

The Sustainability-related skills and expertise held by the Board of Directors and the Board of Statutory Auditors, as a whole, are also specifically considered in the annual self-assessment process, and specifically addressed with reference to material targets and impacts, in relation to the Bank's Business Plan.

To continuously update and develop the Board's expertise on sustainability, a Board Induction meeting was held on 29 January 2024 on *"Sustainability governance and the evolution of sustainability reporting"*, and an information session was held on 7 November on *"Sustainability Reporting 2024: Double Materiality Analysis"* with participation open to all members of the Board of Directors and the Board of Statutory Auditors. Furthermore, it should be noted that new Board Induction sessions are being implemented starting in January 2025

With reference to training activities, the members of the Board of Statutory Auditors, in order to ensure the continuity and preservation of the Board's experience and to continuously deepen an adequate knowledge of the sectors in which the Bank and its Group operate, during the 2024 financial year, also participated in advanced training plans organised by "ABI Formazione" for the members of the Board of Statutory Auditors of the Banks and pertaining to the following topics: The governance of sustainability and climate risk; The governance of IT and Cyber risk.

Roles and responsibilities of management bodies in exercising oversight of the process for managing material impacts, risks and opportunities

Governance bodies are informed about material impacts, risks and opportunities through regular information flows and control mechanisms. The Board of Directors, with the support of the Risk and Sustainability Committee, reviews and approves the results of the Double Materiality Analisys, evaluating the effectiveness of the policies adopted and their contribution to ESG risk management and opportunity enhancement.

As part of its functions to provide preliminary information, recommendations and advice, the Risk and Sustainability Committee oversees sustainability issues related to the Bank's activities and its relations with stakeholders, assessing the consistency of ESG strategies and guidelines with general strategic guidelines. In addition, it makes proposals on environmental and social strategy, setting targets and monitoring their implementation over time. Specifically, the information flows submitted to the Risk and Sustainability Committee are defined in line with the provisions of supervisory regulations in the "Information Flows" linked to the Group Policy on the internal control system and in applicable laws in force at the time. The Committee, as part of its support functions to the Board of Directors, identifies any further information flows to be addressed to it on the subject of risks (establishing subject, format, frequency, etc.).

When reviewing corporate strategy, the Board of Directors integrates ESG factors into the decision-making processes, ensuring that material impacts are considered in the development of strategies and in the definition of the Risk Appetite. The Risk and Sustainability Committee supports this process through constant monitoring activity, ensuring that actions taken are in line with long-term objectives and the applicable regulatory framework, thus contributing to integrating sustainability into corporate strategies.

The list of Impacts, Risks and Opportunities found to be material and subject to the Board of Directors' approval are summarised in the chapters that discuss each ESRS in detail. These chapters represent, for each sustainability issue defined by the regulations, the IROs found to be material, the relative time horizons (i.e. short-, medium- and long-term) and the boundary (e.g. Own Operations, Downstream Value Chain, Upstream Value Chain) found to be relevant in the context of the applicable ESRS.

Role of the Supervisory Board in the Monitoring of Sustainability Reporting

The Board of Statutory Auditors monitors compliance with the provisions of the regulations on consolidated corporate sustainability reporting and the sustainability reporting process, with the support of the corporate control functions. As part of this activity, as an internal control and audit committee, the same Body must also ensure that the internal control and risk management system is adequate to identify, monitor and mitigate ESG risks.

To this end, the Board of Statutory Auditors acquires knowledge from the structures in charge of the sustainability reporting process and verifies (i) the adequacy of the organisational structure in charge of sustainability reporting in terms of human resources, economics and information systems; (ii) the existence of operational guidelines, procedures and practices adopted by the company to ensure that consolidated sustainability reporting is both timely, complete and reliable, it being understood that the Board of Directors remains responsible for structuring the sustainability reporting process.

The Board of Statutory Auditors monitors the adequacy of the administrative and accounting system also for the purpose of sustainability reporting and supervises the implementation and receipt of adequate periodic information flows, both quantitative and qualitative, for the purpose of sustainability reporting.

The Board of Statutory Auditors performs an overall control to verify the correctness of the process on the basis of which the consolidated sustainability reporting is prepared, and obtains a specific certification from the Delegated Administrative Body and the Sustainability Reporting Officer.

Within the scope of its supervisory duties, the Board of Statutory Auditors acquires information on the activities planned and then carried out (i) by the Sustainability Reporting Officer in charge of issuing the internal certification that the Reporting has been prepared in accordance with the reporting standards, including the information to be provided under the so-called Taxonomy Regulation; (ii) by the second level control functions, with particular regard to the implementation of the risk identification and management system, and third level control functions (Internal Audit) on sustainability reporting.

The Board of Statutory Auditors monitors the certification activity of the consolidated sustainability report by setting up a regular exchange of information flows with the auditing firm in charge of certifying the Sustainability Report, in order to acquire information on the planning of the related activities and the extent of the verifications on the data included in the ESG report.

Lastly, the Board of Statutory Auditors monitors compliance with the reporting disclosure requirements, verifying that the consolidated sustainability report included in the report on operations, as well as the report certifying compliance pursuant to Article 14-bis of Legislative Decree No. 39, of 27 January 2010, are published in the manner and within the time limits set forth in Articles 2429 and 2435 of the Italian Civil Code and on the Bank's website.

In its Report to the Shareholders' Meeting, the Board of Statutory Auditors shall report on the supervisory activities carried out with regard to sustainability reporting pursuant to Article 10, paragraph 1 of Legislative Decree No. 125/2024 and, where applicable, also in those cases in which such reporting was not prepared in accordance with the provisions of the law; It also reports the issuance by the independent auditors of the certification on the conformity of the sustainability reporting pursuant to Article 8, paragraph 1 of Legislative Decree No. 125/2024.

Integration of sustainability-related performance in incentive schemes

Remuneration policies

The Group's remuneration policies are geared towards the creation of sustainable value over time, the enhancement of merit, the growth of all employees, entirely in keeping with the risk governance and diversity and inclusion policies. The remuneration policies promote fair and competitive remuneration, in compliance with regulations and market practices, and a balanced ratio between fixed and variable remuneration components (the so-called Pay Mix) in order to avoid conflicts of interest in the achievement of long-term objectives.

Main characteristics of incentive systems

In compliance with supervisory provisions, the remuneration packages for Group senior managers and personnel may consist of a fixed and a variable component. Where requirements are met, the fixed component may be supplemented by a variable incentive component, the conditions of which are established in advance for each personnel sub-category, in compliance with related provisions, in order to discourage a conduct that trends towards excessive risk-taking. Furthermore, with reference to the scorecards intended for the Chief Executive Officer and General Manager and all the Key Staff[25], including Key Management Personnel, there remains a correlation with economic, financial, ESG and risk-related objectives. With reference to non-executive directors and members of the Board of Statutory Auditors, the principle of no connection with the economic results achieved by the Group and that no incentive plans of any nature are to be assigned to them, as previously approved by the Shareholders' Meeting, was reconfirmed.

In determining remuneration, the Bank takes the following aspects into account, in addition to position weighting and benchmarking: skills and commitment; location of service and relative cost of living; level of education; scarcity of personnel available in the job market for specialised positions; the nature of the employment agreement; duration of professional experience; professional certifications.

Variable incentive remuneration is based on economic-financial and qualitative objectives, weighted and defined ex ante. Since 2023, the Group has integrated ESG objectives, related to the strategic objectives in the Business Plan, into its remuneration policies. The implementation of ESG objectives is integrated into the initiatives of the Sustainability Plan approved by the Board of Directors and updated annually.

The remuneration of the Chief Executive Officer and General Manager of the Bank is composed of a fixed component and an annual variable component disbursed, once the achievement of the objectives assigned *ex-ante*, has been verified, over a long-term time horizon. The Chief Executive Officer/General Manager is the recipient of the "2024 Incentive System" in accordance with regulatory requirements, investor guidelines and the interests of wider-ranging stakeholders, according to the scorecard consisting of economic-financial (80%), risk management (10%) and ESG objectives (10%).

The ESG priorities and related objectives defined for 2024 are closely related to the goals of the Sustainability Plan approved by the Board of Directors in the month of February 2024. In detail, the ESG KPI consists of the following indicators:

- ESG volumes disbursed to the target;
- % of achievement of the ESG Programme;
- % of the less represented gender in positions of responsibility;
- Definition of the ESG strategic road map.

Among the main changes in 2024 over the previous year is that the composite ESG KPI as described, for the other relevant entities/functions consists of at least three shared indicators and indicators for specific business aspects, defined in line with the Sustainability Plan.

Incentive systems - climate considerations

The definition of the composite ESG KPI for the CEO/General Manager, and all relevant personnel, includes considerations and sub-objectives related to climate change.

The indicator of Financing Volumes with ESG characteristics disbursed towards targets is divided into sub-targets related to Green Volumes to support the decarbonisation strategy. More specifically, the percentage achievement indicator of the ESG programme includes:

- objectives related to the implementation of initiatives linked to the definition of decarbonisation targets, the related climate transition plan and associated monitoring;

25 Key Staff members, those whose professional activities have or may have a material impact on the risk profile of the Bank or the Banking Group, identified as such by the Parent Company in accordance with the applicable legislative and regulatory provisions.

- implementation of actions to support the achievement and progressive structured integration of climate and environmental risks into the broader risk management framework as well as credit standards and processes;
- structuring of the group ESG DB.

The ESG strategic roadmap indicator similarly includes the definition of strategies related to the decarbonisation approach and support for climate change. Similarly, business-specific indicators include considerations and sub-targets related to the climate change strategy.

Climate considerations are included in the scorecard within the plus percentage of ESG goal achievement (10%).

Approval and updating of incentive systems

The remuneration policies for 2024 were approved at the Shareholders' Meeting of 11 April 2024.

The responsibilities of each body relating to the approval and updating of incentive systems are set out below:

Ordinary Shareholders' Meeting	Article 13 of the Articles of Association assigns to the Ordinary Shareholders' Meeting the task of approving the remuneration and incentive policies and the plans based on financial instruments in favour of board directors, employees and other business partners - not bound by employment contracts - with the Bank. Only if envisaged in the Articles of Association, the Supervisory Provisions also assign power to the Shareholders' Meeting, when approving the Group's remuneration and incentive policies, to decide on any changes to the limit of 1:1 (and at most 2:1) between the variable and fixed remuneration components[26].
Board of Directors	It is the task of the Board of Directors (Circular 285 and Articles 17 and 26 of the Articles of Association) to draw up and submit to the Shareholders' Meeting the remuneration and incentive policies and implement them once approved by the Shareholders' Meeting, primarily with regard to the remuneration of directors who hold special offices (including the Chief Executive Officer and the directors who are members of board committees) and of the General Manager (after hearing the opinion of the Board of Statutory Auditors). The framework of the responsibilities of the Board of Directors in this regard, taking into account the indications of Circular 285 (37th Update - First Part, Title IV, Chapter 2, Section II, Roles and responsibilities of the shareholders' meeting and corporate bodies), also envisages that the Board: • defines the remuneration and incentive systems for at least the following persons: executive directors; general managers; co-general mangers, deputy general mangers and similar figures; the heads of the main business lines, corporate functions or geographical areas; those who report directly to the bodies with strategic supervision, management and control functions; managers and personnel in charge of the company control functions. In particular, it ensures that these systems are consistent with the overall decisions of the Bank in terms of risk assumption, strategies, long-term objectives, corporate governance structure and internal controls. • Furthermore, it ensures that the remuneration and incentive systems are suitable to guarantee compliance with legal, regulatory and statutory provisions as well as any codes of ethics or conduct, promoting the adoption of compliant behaviour.

26 At 31 December 2024, the Articles of Association of the Bank do not provide the right for the Shareholders' Meeting to resolve, at the time of approval of the remuneration and incentive policies, on any proposal by the Board of Directors to set a limit on the ratio between the variable and fixed components of individual remuneration higher than 1:1, in compliance with the limits indicated by the Supervisory Provisions in force. In the case of groups, the Shareholders' Meeting that is competent to decide on the proposal to set a limit of more than 1:1, is that of the bank in which the personnel to which the decision refers operates. The Parent Company may only vote in favour of the proposed limit increase submitted to the Shareholders' Meeting of a Group bank if the Group remuneration policy (approved by the Shareholders' Meeting of the Parent Company) allows Group banks to raise this limit or if the Shareholders' Meeting of the Parent Company has in any event voted in favour of such action.

Remuneration Committee	The Remuneration Committee, is responsible - also with the support of the Risk Management function, which sees the Chief Risk Manager involved as necessary in Remuneration Committee meetings - for expressing an independent opinion on remuneration policies and practices and for submitting proposals to the Board of Directors regarding remuneration of the figures whose remuneration structure, according to the Articles of Association, is decided solely by the Board of Directors. The Remuneration Committee, pursuant to the current provisions of law and the Articles of Association, also carries out the following activities: • periodically evaluates the criteria adopted for the remuneration of Managers with strategic responsibilities, supervising their application and making general recommendations on the matter to the Board of Directors (Articles of Association, art. 17, paragraph 4, letter a); • directly supervises the correct application of rules on the remuneration of the managers of corporate control functions, in close cooperation with the body with control functions (Circular 285, 37th Update - First Part, Title IV, Chapter 2, Section II, Roles and responsibilities of the shareholders' meeting and corporate bodies); • arranges preparation of the documentation to be submitted to the strategic supervisory body for related decisions (Circular 285, 37th Update - First Part, Title IV, Chapter 2, Section II, Roles and responsibilities of the shareholders' meeting and corporate bodies).

The Compliance, Risk Management and Internal Audit functions ensure that remuneration policies comply with regulatory requirements and the commitments made to stakeholders, with particular attention paid to the proper management of customer relations, supporting the Human Resources function and corporate bodies in designing remuneration policies, intervening in their implementation to make them consistent with the Bank's risk appetite.

Statement on due diligence

The Group's due diligence process is fully integrated into its business model and the overall strategic framework adopted by the bank, although it does not constitute a separate, formalised procedure. This process includes steps to identify, manage, and report on current and potential negative impacts caused and contributed to by the Bank on the environment and people.

In particular, as part of the 2024 Double Materiality Analisys, the Bank identified for each topic, sub-topic and sub-sub-topic, material impacts, risks and opportunities. The material negative impacts identified are summarised below:

In detail, the core elements of due diligence are reflected in some of the disclosure requirements of ESRS 2 and the topical ESRSs, such as:

Basic elements of the duty of care	**References**
Integration of duty of care into governance, strategy and business model	**General information** - Roles and responsibilities of management bodies in exercising oversight of the process for managing material impacts, risks and opportunities **General information** - Integration of sustainability-related performance in incentive schemes **General information** - Step 2 - Identifying Impacts, Risks and Opportunities
Stakeholder Involvement	**General information** - Step 3 - Assessing potentially material IROs and stakeholder engagement **General information** - Roles and responsibilities of management bodies in exercising oversight of the process for managing material impacts, risks and opportunities
Identification and assessment of negative impacts on people and the environment	**Climate change** - Impacts, risks and opportunities **Workers in the value chain** - Impacts, risks and opportunities **Consumers and end-users** - Impacts, risks and opportunities **Business conduct** - Impacts, risks and opportunities
Measures to address negative impacts on people and the environment	**Climate change** - Decarbonisation levers and key actions for reducing indirect emissions from the credit portfolio; Actions relating to own transactions; Climate change actions in relation to the downstream value chain **Workers in the value chain** - Actions **Consumers and end-users** - Privacy - Actions **Business conduct** - Corporate culture - Actions
Monitoring the effectiveness of actions taken	**Climate Change** - Transparency and monitoring progress Climate change targets on own operations Climate change targets in relation to the downstream value chain Metrics **Workers in the value chain** – Objectives **Consumers and end-users** – Privacy - Actions **Business Conduct** - Corporate Culture - Objectives

Risk management and internal controls over sustainability reporting

The process of preparing the Sustainability Report is integrated into the financial reporting process and is the responsibility of the Sustainability and ESG Function, in interaction with the Bank/Group's various entities.

Under the organisational model, oversight of sustainability reporting regulations, the implementation and monitoring of related projects and coordination of disclosure preparation are centralised with the Parent Company.

The Group has adopted a model for carrying out controls on the Sustainability Report common to all Group Companies, according to the requirements in the Internal Control System (governed by Bank of Italy Circular no. 285/2013, Title IV Chapter 3 - *The Internal Control System)*, which provides for a structured and permanent organisation for controls, with effective procedures in place capable of promptly reporting the occurrence of anomalies.

This control model is based on the identification of:

- of the functions, identified within the Departments of Banca Monte dei Paschi di Siena, responsible for carrying out direct line controls aimed at ensuring that the information provided for the purposes of preparing sustainability reporting is complete, correct, reliable and timely. These functions, within the scope of their operations, ensure the monitoring of compliance with regulatory principles of the sections of the sustainability report under their responsibility, through the execution of first-level controls;
- the subsidiaries, belonging to the reporting perimeter, are responsible for carrying out direct line controls aimed at ensuring that the information provided for the purposes of preparing sustainability reporting and its compliance with regulatory requirements is complete, correct, reliable and timely. The Sustainability Reporting contribution is subject to approval by the Board of Directors of the subsidiary;
- of the Sustainability and ESG Function, which annually performs, in compliance with the requirements of the CSRD and the methodological document issued by EFRAG on the guidelines for the preparation of the materiality analysis "IG1 Materiality Assessment Implementation Guidance*",* the double materiality analysis in order to identify the so-called relevant data-points and subject of reporting, playing an active role in identifying, addressing and coordinating the definition of Policies, Actions and Targets to be adopted; of the corporate control functions entrusted with control activities in their area of responsibility include:
  - The Chief Risk Officer Department which, with reference to the management of ESG risk factors, i) integrates ESG risk factors into the risk management frameworks and the definition of the Group's risk appetite; **ii)** integrates information on ESG risk factors into its internal reporting on aggregated risks, thus enabling designated corporate bodies to make informed decisions; iii) carries out the risk materiality assessment on ESG risks and shares the results with the Sustainability Department
  - The Chief Compliance Executive Department that, within its scope of supervision and in compliance with the responsibilities assigned to the other second level Corporate Control Functions in the policy on the Internal Control System (D00793) i) supports the Board of Directors in order to ensure compliance with external national and European regulations; ii) assesses the possible impact of any changes in the sustainability-related legal and regulatory environment on the "Group's" activities and applicable compliance framework; iii) monitors and supervises the correct application of internal and external regulations on sustainability
  - The Chief Audit Executive Department, with reference to ESG actions, policies and procedures, assesses the adequacy of the internal control system and safeguards in place to manage sustainability issues and ESG risk factors
- of the ICT Function, which oversees the process for the Information Technology component, ensuring data integrity;
- the Financial Reporting Officer and the CEO express an opinion, in a compliance statement, on the compliance of the Sustainability Report with the reporting standards applied pursuant to Directive 2013/34/EU of the European Parliament and of the Council of 26 June 2013 and Legislative Decree no. 125 of 6 September 2024. It is also the subject of certification that the Sustainability Report was drawn up in accordance with the specifications adopted pursuant to Article 8(4) of Regulation EU 2020/852 of the European Parliament and of the Council of 18 June 2020.

The **methodological approach** adopted at Group level for the verification activities carried out by the Law 262 Control Function in support of the certification by the **Financial Reporting Officer** is based on a **"mixed" operational model**.

This model envisages the adoption in a joint and complementary manner of an **analytical** approach (adequacy and effectiveness checks carried out directly by the Law 262 Control Function and acquisition of the results of the checks carried out by the other corporate Functions with control tasks) and a **synthetic** approach (check-list process and sub-certification by the Contributing Departments and Subsidiaries).

This approach makes it possible to mitigate the risks inherent in the Sustainability Reporting process, among which the risk of sustainability reporting not complying with the provisions of the above-mentioned external regulations, including with reference to the qualitative characteristics defined by ESRS1 (relevance, faithful representation, comparability, verifiability understandability), and the risk inherent in incomplete, incorrect data processing, storage and transfer.

After these controls have been completed, the **Financial Reporting Officer assesses the Internal Control System on Sustainability, Accounting and Financial Reporting, overall**, and defines the actions to mitigate the critical aspects detected, **formalised** in a **"Report for Issuing Certification"**.

The corporate control functions also report regularly to the administrative, management and control bodies (Board of Directors and Board of Statutory Auditors) on the results of the risk assessment and the internal control system relating to sustainability reporting, for areas under their responsibility.

These bodies also examine the Report for the issuing of certification by the Financial Reporting Officer, which formalises the results of the auditing of the internal control system relating to the process to prepare the financial statements and corporate accounting information, including sustainability reporting, for the purpose of issuing the relevant certification.

Strategy, business model and value chain

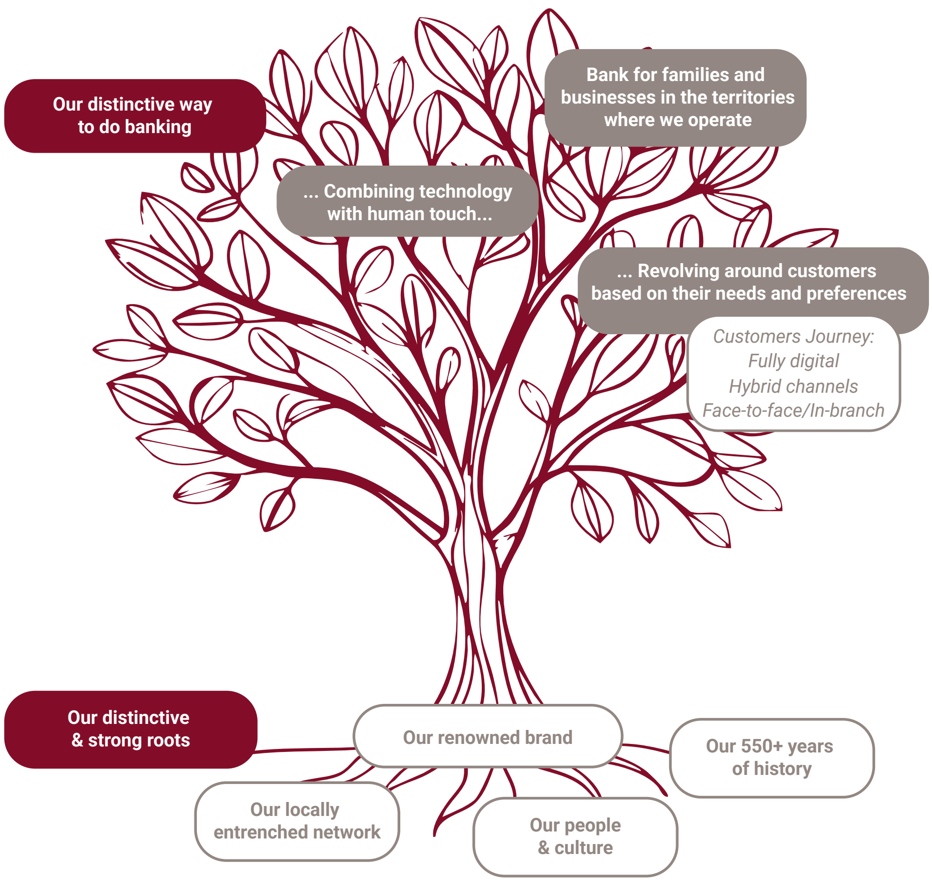
Strategy

Consistent with its historical focus as a bank that revolves around the needs of families and the territories in which it operates, the Group recognises the connection between economic development, social development and environmental protection in order to generate sustainable value over time.

Our Purpose:
*The **good** of the **Customer** and the **Local areas** is our **guiding light***

is to build a future where the well-being of people, territories and sustainability are at the centre of our strategic decisions. Taking advantage of the opportunities arising from the transition to more sustainable practices, paying particular attention to climate change and environmental protection, consolidating the positivity of its social role, contributing to the development of its customers, the environment, local areas and society in which it operates and at the same time to the management of associated risks, are all essential factors for the purposes of the Group.

Therefore, the Group has always oriented its actions towards the creation of shared long-term value, combining technology and the human touch and business development and financial strength with social, environmental and governance sustainability.



With the growing importance of sustainability issues for all stakeholders and the related transparency, the Group has embarked on a path of progressive and structural integration of ESG factors into its corporate strategy and business model, voluntarily adhering to various sustainability initiatives and embracing the global objectives of international bodies aimed at preserving the planet, society and the interests of future generations.

The Group pursues the integration of ESG principles into its business strategy and activities with reference to the three dimensions of sustainability:

- Environmental Sustainability (E): definition of general criteria, guidelines and measures that guarantee the reduction of the direct and indirect environmental impact of its activities, the improvement of environmental performance indicators the alignment of the Group's strategy with the objectives of combating climate change, financial support to customers for the transition to sustainable business models, the development of products and services consistent also with the Sustainable Development Goals and with the Paris Agreement, as well as the management of climate and environmental risk factors;
- Social Sustainability (S): Definition of general criteria, guidelines and measures to ensure equity, access to services, well-being for all individuals within a society, while respecting cultural, economic and social diversity. In this context, a key pillar is to ensure the well-being and respect for the talents of our people, promoting an inclusive, skills-based working environment, professional growth and personal development as well as the dissemination of our sustainable culture. This not only helps to preserve the environment, but also creates a deep connection with the community and our stakeholders;
- Governance Sustainability (G): definition of general criteria, guidelines and measures to ensure the spread of our historic culture of sustainability in the organisation and of corporate management inspired by good practices, increasing the level of awareness of the possible impacts that these issues may have on the Group's operational processes and helping to create a deep connection with the community and our stakeholders and to preserve the environment.

Sustainability, an integral part of the strategy outlined by the Group, is further reinforced in the 2024-2028 Business Plan "A Clear and Simple Commercial Bank, Revolving Around Customers, Combining Technology With Human Touch", which develops the dimensions of Sustainability with reference to the Group's entire business and value chain.

As part of its Sustainability Strategy, the Group has identified actions to pursue its targets, including:

- In the **environmental field** by supporting the decarbonisation of its own activities and its downstream value chain with:
  - Accession to the Net Zero Banking Alliance (NZBA) in January 2022 and the definition of
    - » an approach to reduce the Group's direct environmental impacts externally with the goal of achieving net zero by 2030 (Scope 1 and 2 market-based),
    - » a decarbonisation strategy for its investment portfolio based on CO_2 emission reduction targets for the financed sectors considered to be emission-intensive and with a high environmental impact, set on the basis of scientifically recognised long-term climate scenarios and the pursuit of the supporting **Transition** Plan. In this regard, the Group's commitment has been present since 2022, the date of accession to the NZBA, through, the formal introduction from 2023 of the Phasing-out from the coal sector (a target already achieved), the definition of NZBA targets, communicated externally, with transition plans for the first three priority sectors with high emission intensity (published in August 2023) supplemented with further targets, related to two other sectors considered as priorities (defined in February 2025) and the definition of management targets for non-priority sectors;
  - the Group's lack of direct operations in the fossil fuel (coal, oil and gas) and chemical production sectors and consequently not having revenues associated with these activities; the adoption, with reference to credit exposures, of **exclusion and/or** more restrictive criteria in the granting of loans to projects and counterparties characterised by particularly damaging impacts in terms of emissions and in terms of the consequences on the balance of ecosystems due to the use of coal and in favour of the gradual **abandonment of fossil fuels** and **unconventional oil and gas**. These criteria apply to the Electricity Production, Marketing and Distribution and Oil & Gas sectors;
  - the adoption of general minimum screening criteria in the evaluation process of counterparts and projects financed, consistent with the principles of the Code of Ethics and the overall environmental protection objectives. In this context, the Group therefore undertakes not to provide funding to counterparties and projects for which, during the evaluation phase, evidence emerges of a negative impact on World Heritage Sites (UNESCO), wetlands according to the Ramsar Convention and protected or sensitive areas for the preservation of biodiversity (IUCN Category I-VI Areas);
  - supporting the transition of small and medium-sized enterprises to renewable energy sources with a special focus on the agrifood sector;
  - enrichment of the offering of financing and investment, funding and insurance products in favour of climate change mitigation and to support the pursuit of global objectives related to other environmental issues;

  For more details on the exclusion policies, restrictions applied by the Group, policies, actions and targets defined in the environmental field, please refer to the relevant Section 2 - Environmental Information.

- In the **social area** by consolidating its role in supporting the transition to a more equitable and inclusive society and by leveraging our people and network, the group's distinctive assets, with:
  - the promotion of a work environment geared to ensuring wellbeing, safety, the development and enhancement of skills and the work-life balance, with the provision of specific programmes and paths also dedicated to the dissemination of corporate culture and Diversity and Inclusion issues;
  - the adoption, with reference to credit exposures, of more restrictive evaluation criteria when granting loans to projects and counterparties characterised by their harmful impacts on the welfare of individuals and society. These criteria apply to the areas of tobacco cultivation and production, gambling and controversial weapons;
  - the adoption of minimum general screening criteria in the evaluation process of counterparties and funded projects, consistent with the principles of the Code of Ethics and relevant international, European and national conventions such as the International Labour Organisation (ILO). In this respect, the Group is therefore committed to not disbursing loans to counterparties and projects if any elements should emerge that confirm a negative impact with regard to: violation of human rights and of health and safety regulations; violation of fundamental rights at work and of regulations on child labour and forced labour; fraud in financial and non-financial reporting, money laundering, corruption or terrorist financing; the non-presence of direct Group activities in the area of controversial weapons, tobacco cultivation and production, and gambling, and consequently the absence of any revenues associated with these activities;
  - the offering of products dedicated to the Group's current and prospective customers in order to finance the transition of companies towards more equitable and inclusive business models;
  - the offering of products dedicated to individuals and companies from disadvantaged sectors and categories together with financial education programmes.

  For more details on the exclusion policies, restrictions applied by the Group, policies, actions and targets defined in the environmental field, please refer to the relevant Section 3 - Environmental Information.

- In **governance** through:
- the promotion of ESG culture within the Group through specific recurring training sessions and through the provision of variable remuneration systems also linked to the achievement of ESG objectives;
- The adoption of credit policies and risk measurements that are increasingly integrated with ESG evaluation and risk factors and consistent with overall strategic ESG objectives;

  the further strengthening of ESG data quality and monitoring processes integrated into business processes to foster transparency on our ESG strategy as well as on the results of implemented actions. For more details on the defined policies, actions and targets, please refer to the relevant Section 4 - Governance Information of this Report.

In order to implement its strategy and the actions described above, to respond to regulators' indications (contained, for example, in the ECB Guidelines on Climate and Environmental Risks) and to voluntary commitments (Sustainable Development Goals, Principles for Responsible Banking, Net Zero Banking Alliance), the Group has therefore defined the initiatives to be developed with the aim of pursuing a structural integration of ESG factors in the business model, decision-making processes and commercial, lending and risk management strategies through a coordinated and integrated management of all the initiatives identified, given the high interdependence between them. All identified initiatives are reflected in the Sustainability Plan, approved by the Board of Directors and subject to annual update, and in the ESG Programme. This cross-functional programme has its own hierarchical, operational and monitoring structure that ensures overall consistency with the Group's ESG strategy and the achievement of ESG strategic objectives in line with the Group's Business Plan, while guaranteeing full compliance with relevant regulations. The Sustainability Plan identifies priority initiatives, deadlines and responsibilities to achieve the defined objectives in the medium to long term through actions that are concrete, measurable and can be monitored. These initiatives have mainly been set out in specific project areas, included in the ESG Programme, that allow for a consistent and structured implementation and effective monitoring. The top bodies are periodically informed of the progress and the Steering Committee - ESG session addresses any critical issues and identifies mitigating actions in case of deviation from the defined path.

For the purposes of this Report, the prospective information is used in accordance with the ESRS. Directors are required to prepare this information on the basis of assumptions, described in the specific sections of this document, about events that may occur in the future and about possible future actions by the Group. Because of the uncertainty associated to the realization of any future event, both in terms of the materialization of the occurrence and with regard to the extent and timing of its occurrence, deviations between actual values and the prospective information could be significant.For the purposes of this Report, the prospective information is used in accordance with the ESRS. Directors are required to prepare this information on the basis of assumptions, described in the specific sections of this document, about events that may occur in the future and about possible future actions by the Group. Because of the uncertainty associated to the realization

of any future event, both in terms of the materialization of the occurrence and with regard to the extent and timing of its occurrence, deviations between actual values and the prospective information could be significant.

Business model

Banca MPS is a commercial bank characterised by a business model strongly rooted in the reference territories, which combines the solidity and expertise of the branch network with an advanced digital platform in order to guarantee a hybrid customer experience and value in step with available technologies. Technological innovation and talented people are the pillars of this transformation, geared towards ensuring an efficient, personalised and accessible service. The value creation strategy consists of five key guidelines:

- the adoption of new service models focused on high value-added activities, revolving around real needs, for private and business customers;
- the optimisation of the digital platform based on the interaction between physical and digital channels pursuing high security standards and ensuring inclusive accessibility of services;
- and a “zero-based” approach to risk management, centred around advanced analysis and monitoring tools;
- the development of “fee-based” products and services to diversify revenue sources and strengthen the Bank’s advisory role;
- the enhancement of loan products for households and the development of specific solutions for SMEs, with a focus on sustainability and innovation;

The main inputs of the business model include financial resources, technology, digital infrastructure, and specialised expertise. These inputs are collected through a network of suppliers and partners selected on the basis of reliability and security criteria laid down in the Group’s policies.

Thanks to this vision, the Group remains a reference point for customers and communities, with a sustainable, resilient and long-term growth-oriented business model.

The Group does business primarily in Italy, mainly providing traditional retail & commercial banking services. The Group is also active in business areas such as factoring, corporate finance and investment banking. The insurance-pension sector is covered by a strategic partnership with AXA while asset management activities are based on the offer of investment products of independent third parties. More specifically, the Group, which as at 31 December 2024 employed 16,727 active human resources, operates in several strategic areas of the financial sector, with a wide range of products and services, mainly targeting the following consumer groups:

- **Retail:** individuals and households, offered savings solutions, investment products, mortgages, personal loans and innovative payment instruments.
- ***Private Banking:*** individuals with significant assets, offered customised asset management services and advanced financial advice.
- **Companies:** small, medium and large companies, offered financing services, cash management, leasing, factoring and dedicated insurance products.
- ***Large Corporate:*** large companies for which a customised commercial offering is envisaged, characterised by high value-added financial services, lending, funding and operational flow management operations.

The commercial offering for individuals and companies has been expanded over time with ESG products aimed at fostering sustainable practices. These fall into three main categories:

- ***Sustainability Linked Loan:*** financial products that incentivise the customer’s achievement of ambitious and set goals in terms of sustainability performance.
- ***Green/Social Loan:*** loans intended exclusively for the financing or refinancing of new and/or existing projects with a green or social purpose.
- **Taxonomy Aligned Loan:** a special type of Green Loan intended exclusively for the financing or refinancing of new and/or existing projects that comply with the principles and technical requirements of the European Taxonomy.

These products were developed consistent with the main reference guidelines, such as the Loan Market Association's (LMA) Green and Sustainable Lending Glossary of Terms and the EU Taxonomy EU Regulation 2020/852).

The offering of savings insurance products also evolved during the year thanks to the revision of the funds / open-end investment company (SICAV) combined with unit-linked and multi-segment policies, also characterised by the inclusion of additional solutions in the ESG segment.

In the **E-money** sector, the Group extended the audio guide function of the Bank's ATMs to cover cards on the international circuit. This innovation allows blind or visually impaired customers to access main functions, such as querying current account balances and movements and withdrawals. The enabling of the Google Pay and Apple Pay digital payment wallets was also extended to credit cards issued by Banca Widiba.

The business model is therefore pervaded transversally by sustainability objectives and logics, identifying, for the various areas of activity, indicators, targets and processes that are adequate and consistent with the sustainability strategies described above, assisted by appropriate cascading and monitoring mechanisms that guarantee the achievement of the expected results, confirming the Group's commitment to a sustainable growth model, responding to the needs of the various customer segments and contributing to the creation of long-term value.

For more details on the range of products and services that support sustainable practices, see the relevant Sections 2 - Environmental Information and Section 3 - Social Information of this Report.

For further details on the Group overview, customer assets and distribution channels, please refer to the relevant sections in the Consolidated report on Operation.

Value chain

The Group value chain can be broken down into two main segments: upstream and downstream, which together describe the processes and players involved in the Group's creation of value.

<table>
<tr><th></th><th>UPSTREAM</th><th colspan="3">OWN OPERATION</th><th>DOWNSTREAM</th></tr>
<tr><td>Definition</td><td>They represent all operational processes of the Bank with reference to the supply chain (Value chain - Upstream). Upstream actors (such as suppliers) provide the products or services used in the development of the Bank's own products or services.</td><td colspan="3">They represent all the operational processes of the Bank as a company, regardless of the Business. They include activities, resources and relationships that are part of the Bank's own operations, such as human resources.</td><td>They represent all the Bank's business processes and related supporting processes, including business relationships (Value chain - Downstream). Downstream parties (e.g. customers) receive the Bank's products or services.</td></tr>
<tr><td>Perimeter</td><td>• Suppliers
• Commercial partners (es. AXA)
• Not commercial partners (Associations and third-party entities not customers)</td><td>RESOURCES
• Employees
• Property
• Hardware</td><td>PRODUCTS
• Credit
• Wealth Management
• Bond issuances BMP3</td><td>SERVICES
• Payment
• Consulting
• Deposit
• Digital</td><td>• Customers (deposits, loans)
• Distributors (agents, agency networks, promoters)</td></tr>
</table>

The Group's position within the value chain is mainly related to the provision of financial services, but also to the support of companies and individuals, acting as an intermediary between the various economic actors and consequently linking capital providers with companies and individuals by offering financial solutions and services.

Upstream Segment

The upstream segment groups the players involved and the processes aimed at collecting the resources needed to carry out business operations. In other words, upstream actors provide the functional products and services for the development and delivery of the Group's products and services.

In detail, the main players in the Upstream segment of the value chain include:

Suppliers: include providers of operational and infrastructure services (provision of hardware and software, electricity and gas supply, maintenance and management of real estate), technology and digital services (providers of IT systems and digital infrastructure), technology providers to support banking infrastructure, such as payment systems, online platforms, risk management software, financial and insurance services (services aimed at financial risk management, insurance of corporate assets, and legal, tax and advisory services), logistics and administrative services, and outsourcing services for non-core activities.

Business partners: the Group works with several strategic business partners, whose services and expertise help to complete and enrich the offering. Specifically, these partners offer the following main types of products and services:

- Insurance policies (life, non-life and credit-related insurance) for private and corporate customers;
- Insurance advisory services offering customised asset protection and savings solutions;
- Payment and card services including prepaid cards, contactless payment solutions, international payments and real-time transactions through the provision of electronic payment systems (e.g. SEPA[27] and Swift[28]) and *mobile payment systems*;
- Promotion of real estate financing through partnerships with real estate agencies and real estate companies.

Non-commercial partners: the Group is part of a framework of cooperation with associations and public financial institutions to foster the country's economic growth and financial stability. In this context, it is active in the management of public funds and financing for economic and infrastructure development projects, in the placement of government bonds as well as in the support of regional development policies and interventions linked to government programmes, such as European funds or financing for digitalisation and sustainability.

Downstream Segment

The downstream segment groups together the players involved and the business processes, as well as the related support processes aimed at operations involving the direct provision of banking services, the distribution of financial products, customer relationship management, loan disbursement and the finalisation of investments.

The main actors involved in the downstream value chain include:

Customers: the customer category includes both parties from whom the Group raises capital (funding) and parties to whom the bank provides financing (customers).

Distributors: included in the aggregate are financial advisors, financial agents, credit brokers and reporters.

27 Single Euro Payments Area
28 Society for worldwide interbank financial telecommunication

Double materiality analysis

Over the past few years, the double materiality analysis, consistent with the evolution of the concept of sustainability, has become increasingly important, requiring the gradual integration of sustainability considerations into corporate strategies, risk management and investment decisions of companies. Being a core activity for the Group, the methodologies were consequently changed to ensure resilience and long-term sustainability.

In 2022, the impact analysis methodology was introduced to replace the previous Single Materiality methodology and in 2023, the first reflections on Double Materiality were introduced, consistent with the GRI Standards[29]. Subsequently, in the course of 2024, a new methodology for the double materiality analysis was introduced, aligned with the regulatory requirements of the *European Sustainability Reporting Standards* (ESRS), reference guidelines and internal Group developments.

The double materiality analysis was carried out, consistent with the reference standards, according to **impact materiality** logics, through the evaluation of the positive and negative, current and potential impacts that the company generates on society, the economy and the surrounding environment linked to the performance of its activities and its business relations, and of **financial materiality**, through the evaluationof risks and opportunities that have, or are expected to have, material financial effects on the Group or on its financial position, economic result, cash flows, access to financing and cost of capital. This process was developed in line with the Group's business context and through active engagement with stakeholders.

According to the above-mentioned approach, a sustainability issue is considered material when it meets the criteria of impact relevance or financial relevance, or both. The results of the analyses conducted and, consequently, the issues found to be material contribute to further consolidating and finalising the Group's strategy and related operational processes, managed through the development of specific policies, actions and objectives, as detailed in the dedicated sections.

To determine the materiality of impacts, risks and opportunities, the Group has adopted a structured decision-making process consisting of the steps detailed below:

- Step 1 - Understanding the organisation's context and defining the boundary: this step includes a review of the Group's own activities, business relations and the context in which they take place;
- Step 2 - Identifying potentially material impacts, risks and opportunities (hereinafter also IROs): this step consists in mapping the positive and negative, actual and potential impacts on the reference context (e.g. people, environment, economy) and the risks and opportunities generated by the external environment;
- Step 3 - Assessing potentially material IROs and stakeholder engagement: this step takes the form of ananalysis based on qualitative-quantitative metrics aimed at identifying material impacts, risks and opportunities for the Group. The Group's internal structures (hereinafter also referred to as Stakeholder Management) and external stakeholders (hereinafter also referred to as Stakeholder Engagement) are involved in conducting and validating the analyses;
- Step 4 - Identifying and validating material topics: this step consists in aggregating the findings resulting from the assessment of impacts, risks and opportunities in order to define which of the areas defined by the regulations are material for the Group, as well as their sharing and approval by the control bodies.

Step 1 - Understanding the context

Understanding the context consists of identifying the scope of the Group's own activities, business relationships and the context in which they take place, and defining the necessary inputs for identifying impacts, risks and opportunities. Consistent with regulatory requirements and reference guidelines[30], the context analysis was conducted considering:

- The Group's strategy set out in the 2024-2028 Business Plan and its objectives;
- Material issues assessed by analysts, investors and rating agencies and feedback received through face-to-face interviews and (unsolicited) questionnaires from leading ESG rating agencies;
- The contextual elements related to the mapping of Italy's environmental, social and economic needs identified during the analysis in keeping with the Principles for Responsible Banking guidelines and Italy's positioning on the path towards achieving the Sustainable Development Goals (SDGs) and the EU recommendations to Member States on the actions to be implemented to achieve the 2030 Agenda;
- International, European and national regulations (Taxonomy[31], ESRS Standards[32], CSRD[33], Regulation 2019/2088[34], ECB Guidelines on Environmental and Climate Risk Management, etc.)

29 GRI (Global Reporting Initiative) Universal Standards (2021)
30 Commission Delegated Regulation (EU) 2023/2772 of 31 July 2023 and the EFRAG Guidelines (EFRAG IG 1: Materiality Assessment Implementation Guidance
31 EU Regulation 2020/852
32 Delegated Regulation (EU) 2023/2772
33 Directive No. 2022/2464
34 Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability reporting in the financial services sector

- Internal regulations on sustainability issues (e.g. Sustainability and ESG Directive, Environmental Policy, Inclusion Plan and Rules);
- The benchmark analysis carried out on the banking sector in relation to material aspects and relevant stakeholders (Sustainability Report/Consolidated Non-Financial Statements and further public documentation of other national and international financial groups).

Based on the aforementioned analysis, the Group defined the boundary for the double materiality assessment, including activities, resources and relationships that are part of its value chain broken down as follows:

- ***Own Operations:*** the company's own operations, such as human resources;
- ***Upstream Value Chain:*** procurement processes, such as the purchase of materials and services;
- ***Downstream Value Chain:*** marketing and distribution processes, such as the sale of products and services.

Step 2 - Identifying Impacts, Risks and Opportunities

An effective identification of potentially material impacts, risks and opportunities with reference to short-, medium- and long-term time horizons cannot disregard an understanding of the internal and external dynamics that may affect the business, while providing a clear view of emerging challenges and opportunities, constituting a key step in guiding the review of processes, policies and objectives. A proactive approach to managing impacts, risks and opportunities improves the Group's resilience and fosters positive contributions to communities and the environment. It also requires an assessment of market trends, social, economic and regulatory dynamics and the expectations of the parties, the characteristics of the Bank's activities and the type of customers it serves and their expectations and needs.

The Group has identified its impacts - actual and potential, positive and negative - on the reference context, including on human rights, risks and opportunities considering the maximum level of granularity of the issues defined by the ESRS (i.e. Sub-Topics and Sub-Sub-Topics, where available), without proceeding to identify entity-specific issues. These IROs were also brought within the scope of the value chain).

In the process adopted for mapping IROs, the Group identified the following connections among impacts, risks and opportunities:

- an impact related to initiatives linked to the non-profit sector (e.g. community support initiatives) could contribute, with reference to opportunities, to improving the Group's brand reputation and/or increase stakeholders' trust;
- an impact related to ESG financing strategies could favour, with reference to opportunities, the expansion of product offerings through the development of solutions aligned with sustainability goals;
- an impact related to financing in sectors potentially exposed to ESG issues could generate financial risks (e.g. Credit Risk, Market Risk) resulting from such a significant concentration.

Step 3 - Assessing potentially material IROs and stakeholder engagement

Each impact, risk and opportunity was analysed using qualitative and quantitative information, taking into account the assessments developed as part of the contextual understanding and engagement process of internal and external stakeholders.

If a quantitative approach is adopted to determine the relevance of the identified IROs, the data required for the analyses are collected consistent with the Group's specific business aspects, existing processes and actual availability of information. If, on the other hand, the qualitative approach is adopted, the assessment of the relevance of IROs is based on the analysis of internal initiatives, policies and strategies implemented or planned by the Group.

The engagement of stakeholders, both internal and external, is also envisaged in the consolidation stage of the IRO assessment conducted.

Assessing potentially material Impacts

The assessment of impacts involved the use of the following metrics defined in relevant legislation:

- Entity: the severity of the impact, in the case of a negative impact, or the extent of the benefit from the impact, in the case of a positive impact;
- Extension: the spread or extent of the impact;
- Irreparability: this metric, applicable to negative impacts only, indicates how complex it is to remedy the damage resulting from the impact or to neutralise that negative impact;
- Probability: this metric is to be assessed only with reference to potential impacts and indicates how likely it is that an impact will be generated in a given period of time.

Materiality is identified by scoring the above metrics as described below:

- The relevance of positive actual impacts is given by the significance (average of the Scale and Scope) according to a certain threshold;
- The relevance of actual negative impacts is given by the significance (average of Scale, Scope and Irreparability) based on a given threshold;
- The relevance of potential positive impacts is given by the significance (average of Scale and Scope) and probability based on a given threshold;
- The relevance of potential negative impacts is given by the significance (average of Scale, Scope and Irreparability) based on a given threshold.

In order to promote the comparability and transparency of information, consistent with the requirements of the reporting standard, the materiality threshold for the sustainability statement was set to include all topics that had an impact rating of more than 3.

After conducting the materiality assessment, material impacts on the Group from both its own activities and its business relations were identified.

Assessing Potentially Material Risks and Opportunities

Within the framework of financial materiality, risks and opportunities are analysed taking into account the specific characteristics of the Group's financial intermediation activity. In particular, the risks identified are assessed in accordance and in line with the traditional risk management and monitoring system currently adopted by the Group and the regulations in force. Each risk is detailed, where relevant, with reference to the sustainability topic examined, considering it at the highest level of detail envisaged by relevant legislation (so-called Sub-Sub-Topic). Opportunities, on the other hand, are identified and analysed taking into account the ESG initiatives, policies and strategies adopted by the Group that could lead to an expansion in the product offering and customer portfolio, a strengthening of the brand reputation and an increase in stakeholder trust, as well as the ability to attract new talent.

Risks and opportunities are analysed, considering the specific aspects of the Group's core business activities, on the basis of assessment parameters defined by ESRS: the magnitude, which measures the potential magnitude of financial effects associated with risks or opportunities, and the probability of occurrence, which measures the likelihood that a financial risk or opportunity will materialise.

In order to assess the magnitude and likelihood associated with the identified risks and opportunities, consistent with the EFRAG Guidelines[35], qualitative and quantitative analyses and metrics already present within the Group have been taken into account, supplementing them, where necessary, with additional assessments, which are assigned a score, with a scale of 1 to 5, in order to assess and prioritise them. The final score is derived from the average of the above-mentioned magnitudes and, for the purposes of the sustainability statement, all risks and opportunities with a rating above 3 were considered material.

The risk materiality assessment was conducted by adopting, where possible, estimates and assessments made by the Group as part of its ordinary risk analysis activities. These analyses included the assessment, where appropriate, of the Group's exposure in terms of current and prospective assets or costs, adopting an inherent risk logic in line with the guidelines. Internal and well-established approaches, metrics and methodologies within the Group were appropriately supplemented with additional analyses, to bring them into line with the greater granularity required by the CSRD.

With regard to opportunities, on the other hand, the assessment of the financial effects was based on the current and prospective impacts related to the provision of specific products within the scope of the topics investigated.

Stakeholder Engagement

The Group's engagement with stakeholders is a crucial step of the double materiality assessment; through an ongoing dialogue with stakeholders, it allows for a deeper understanding of industry trends, expectations related to social, environmental and governance aspects, significant impacts related to the Group's business and its value chain, and to gather Stakeholder perceptions also on risks and opportunities related to sustainability issues for financial institutions and the Group, in a flexible and customised way.

The priority Stakeholder categories for the Group, i.e. those whose interests could be or are positively or negatively affected by the Group's activities, were identified based on the characteristics of the business, the business context, the sustainability strategy and initiatives undertaken and the main sustainability trends and evolutions in the global context, and according to a two-pronged approach:

35 "EFRAG IG 1: Materiality Assessment Implementation Guidance"

- Stakeholder Management: is based on involving, through interviews, the Group's internal structures that maintain an ongoing dialogue with relevant stakeholders in order to identify and assess the relative impacts, risks and opportunities. With this approach, the customers, employees and suppliers of the Group were indirectly involved;
- Stakeholder Engagement: is based on the direct involvement, through one-to-one interviews, of external Stakeholders, in order to assess and share the relevance of the impacts, risks and opportunities identified by the Group. Stakeholders from academia, sustainability associations and associations representing the Group's customers were involved in one-to-one interviews during 2024.

The issues discussed with individual stakeholders relate to the sustainability aspects addressed in the relevant ESRS. Stakeholder engagement allows the Group to gather input and new points of view closely related to its operations and has helped support the process of assessing and consolidating the relevance of sustainability issues, integrating analyses conducted on the basis of data available within the Group and externally on the basis of benchmarking activities and the analysis of regulatory developments.

Step 4 - Identifying and validating material topics

The relevance of sustainability issues was determined in a manner consistent with relevant regulations. In particular, if at least one impact, risk or mapped opportunity is material to the analysis area, that issue is material to the Group.

The following is a list of the sustainability issues found to be material for the Group:

Topic	Sub/Sub sub topic	Materiality Outcome		
		Impacts	Risks	Opportunities
E1 - Climate change	Climate Change Adaptation	✓	✓	✗
	Climate Change Mitigation	✓	✓	✓
	Energy	✓	✓	✓
E5 – Circular Economy	Resource outflows related to products and services	✗	✗	✓
S1 - Own workforce	Secure employment	✓	✗	✓
	Working time	✓	✗	✓
	Adequate wages	✓	✗	✓
	Social dialogue	✓	✗	✓
	Freedom of association/ Collective bargaining	✓	✗	✓
	Work-life balance	✓	✗	✓
	Health and safety	✓	✗	✓
	Gender equality and equal pay for work of equal value	✓	✗	✓
	Training and skills development	✓	✗	✓
	Employment and inclusion of persons with disabilities	✓	✗	✗
	Measures against violence and harassment in the workplace	✓	✗	✓
	Diversity	✓	✗	✓
	Privacy	✓	✗	✗
S2 – Workers in the value chain	Secure employment	✓	✗	✗
	Working time	✓	✗	✗
	Adequate wages	✓	✗	✗
	Social dialogue	✓	✗	✗
	Freedom of association/ Collective bargaining	✓	✗	✗

	Work-life balance	✓	✗	✗

	Forced labour	✓	✗	✗
	Privacy	✓	✗	✗
S3 – Affected communities	Land-related impacts	✓	✗	✓
S4 – Consumers and end users	Privacy	✓	✓	✓
	Freedom of expression	✓	✗	✓
	Access to (quality) information	✓	✗	✗
	Health and safety	✓	✗	✗
	Non-discrimination	✓	✗	✗
	Access to products and services	✓	✗	✓
	Responsible marketing practices	✓	✗	✗
G1 – Business Conduct	Corporate culture	✓	✓	✗
	Protection of whistle-blowers	✓	✗	✓
	- Prevention and detection including training - Incidents	✓	✗	✗

The details of the IROs identified as material for the Group, their reference time horizons and the relative scope of materiality are described in the following chapters devoted to the individual ESRS standards of reference.

In this context, the resilience of the Group's strategy and business model is reflected in its ability to deal with material risks and impacts that have arisen, as well as to take advantage of identified opportunities. This resilience is ensured by the consistency of the analyses performed in the context of the double materiality assessment with Stakeholder Engagement activities, with the 2024-2028 Business Plan and with the analyses of the impact of ESG risk factors on the intermediary's traditional risks.

The process adopted for the purpose of conducting the double materiality assessment has a greater degree of detail than the analysis presented in the '2023 Consolidated Non-Financial Statement'. This is because the mapping and assessment of impacts, risks and opportunities was conducted in accordance with regulatory requirements and CSRD disclosure guidelines. In addition to a more granular identification of the sustainability issues being addressed, the new standards also in fact require the assessment of risks and opportunities.

Validation of material topics

The process of mapping and assessing impacts, risks and opportunities was shared and consolidated by the competent Group Entities through the Stakeholder Management process mentioned above. After conducting the materiality assessment, the list of issues found to be material for the Group was shared with the Group's management in the ESG session of the Management Committee, the Risk and Sustainability Committee, the Board of Statutory Auditors and the Board of Directors.

In-depth study of non-material topics

Following the analyses conducted, the following issues were found not to be material for the Group:

- ESRS E2 - Pollution
- ESRS E3 - Marine Waters and Resources
- ESRS E4 - Biodiversity and ecosystems

The assessment of the above standards and related sustainability issues is consistent with the approach described in section “1. Double Materiality Assessment”. In particular, the IROs mapped with reference to own operations and the upstream and downstream value chain were assessed using qualitative-quantitative approaches that also included one-to-one comparisons with experts in the areas under investigation and the use of consolidated internal analyses.

In particular, with reference to the E2 standard, the assessment of impacts focused on the Group’s negative contribution, in the downstream value chain, to air, water and soil pollution through financing and investment in companies with less structured controls in this area. Operational and Reputational Risk arising from the absence of robust controls to prevent potential pollution events with reference to the Group’s own operations and Credit, Market and Liquidity Risks arising from the high exposure to similar possible risks with reference to counterparties were also analysed. The analysis of opportunities, on the other hand, focused on the potential expansion of the product range in order to meet the needs of counterparties.

As regards the E3 standard, the Group’s potential inefficient use of water in Own Operations was analysed, against a lack of internal policies and corporate strategies aimed at the responsible use of water. With reference to the downstream value chain, the possible contribution to wasting water resources and causing damage from discharges through financing and investment to companies with less structured controls in this area was assessed. The Operational and Reputational Risk arising from non-virtuous behaviours regarding water resources by the Group and Credit, Market and Liquidity Risks arising from the high exposure to similar potential counterparty risks were also assessed. The analysis of opportunities, on the other hand, focused on the potential expansion of the product range in order to meet the needs of counterparties.

Lastly, with regard to the E4 standard, the negative contribution to the impact on biodiversity was analysed, with reference to own operations, through the presence of branches and operating sites in areas characterised by a significant biodiversity heritage, and the positive contribution to the reference ecosystems through the definition of internal policies and initiatives aimed at combating climate change, over-exploitation of land and species, and the introduction of animal and plant species that can threaten the balance of ecosystems. With reference to the downstream value chain, the contribution to biodiversity loss was assessed through the process of providing credit to companies operating in sectors with potential direct negative impacts on biodiversity, the abundance of a species and the general conditions of an ecosystem. With regard to risks, the Operational and Reputational Risk arising from the absence of safeguards against possible climate change events and the risk of species extinction and the Credit, Market and Liquidity Risks arising from the high or possible high exposure to potential risks in this area with regard to these counterparties were analysed. The analysis of opportunities, on the other hand, focused on the potential expansion of the product range in order to meet the needs of counterparties.

The financial materiality assessment relating to environmental issues, according to E2, E3 and E4, did not reveal any risk elements deemed material for reporting purposes.

The analysis was carried out considering the Group’s exposure to direct environmental risks (related to its own operations) and indirect environmental risks (i.e. arising from the upstream and downstream value chain) in the value chain.

Through its own risk assessment activities, the Group carefully monitors any aspects that could involve it in the above issues and has put in place prudential safeguards, in order to constantly monitor and address any anomalous aspects, also by identifying internal risk thresholds related to environmental issues that will be constantly monitored in the Group’s 2025 Risk Appetite Statement (RAS). In particular, two specific KRIs have been defined that will be monitored in the 2025 RAS relating to E-non-climate Transition Risk and E-non-climate Physical Risk and the corresponding operational limits on the overall exposure to these risks of the Group’s non-financial corporate portfolio (Downstream Value Chain).

While we do not therefore see any specific risk elements that need to be represented and reported here, the Group’s particular attention to and awareness of environmental issues is noted, which is also reflected, as described above, through a dedicated framework for monitoring potential related risks. For more information, see Part E of the Notes.

Table of Contents

Section	ESRS topic	Duty of disclosure	Page number
Section 3 - Social Information	S1 Own workforce	ESRS 2 SBM-2 Interests and views of stakeholders	144

Section 2 - Environmental Information

Climate change

[ESRS E1]

This section provides, in relation to the management of "climate change", a description of the impacts, risks and opportunities found to be material from the double materiality analysis. Next, the section outlines the Group's transition plan, policies and actions taken to manage and mitigate adverse impacts and risks related to climate change and to seize material opportunities, as well as targets set and the metrics used to monitor the effectiveness of the measures taken.

Impacts, Risks and Opportunities

The process to map impacts, risks and opportunities with reference to this standard takes into account the specific aspects related to the Group's operational and commercial activities and its decarbonisation strategies. In particular, for mapping purposes, documentation both internal and available on the Group's website was analysed (e.g. Environmental Policy, ESG Directive, Credit Policies, Risk Governance Directive). In fact, the Group has put in place safeguards, both with regard to its own operations and with reference to the value chain, to ensure appropriate adaptation and mitigation of climate change and the management of energy-related issues. Interaction with counterparties in the value chain may entail risks for the financial institution, in view of the counterparties' difficulty in dealing with climate change, but also opportunities to expand the product range to facilitate and support the transition, by fostering customers' awareness of the actions to be implemented in favour of the transition. Lastly, the Group's setting of targets to manage climate change could generate opportunities for the Group to improve its reputation.

After conducting the double materiality assessment, the following aspects were found to be material:

- **Positive impacts** on the *Upstream Value Chain*, attributable to supplier awareness-raising activities due to the use of selection criteria that include the evaluation of climate change adaptation and mitigation policies and safeguards, and on the *Downstream Value Chain*, related to customer awareness-raising activities on the need to accelerate the climate transition and on commitments related to climate change mitigation and adaptation and reduction of energy consumption, due to the use of the ESG questionnaire, which summarises the assessment of the customer's ESG profile, including the environmental one, and sharing the results, directs the commercial proposition, combining the overall assessment and the customer's real needs, and in line with the Group's ESG decarbonisation and credit strategy;
- **Negative impacts** related to own operations associated with direct emissions (Scope 1 and 2) in the normal course of business (e.g. heating, fossil fuel-based company fleet and low use of hybrid/electric cars) and the Group's direct energy consumption. In response to these impacts, the Group has adopted internal policies and corporate strategies to reduce its emissions and direct energy consumption. Negative impacts also emerged with regard to the downstream value chain due to the possible financing of highly emissive counterparties that have not defined transition plans and emission reduction initiatives;
- **Risks** pertaining to the Downstream Value Chain and, in particular, Credit Risk related to the deterioration of the counterparty's creditworthiness as a result of financial losses related to the failure to align with the transition and damage due to acute and chronic events, to its plants and production sites. This risk was deemed material with reference to "Climate Change Adaptation", "Climate Change Mitigation" and "Energy" and Reputational Risk with reference to the financing of highly emissive counterparties with no transition plan;
- **Opportunities** with reference to the expansion of the product range (*Downstream Value Chain*) with regard to the topics "Climate Change Mitigation" and "Energy" and the opportunity to improve brand reputation (Own Operations) with regard to the topic "Climate Change Mitigation".

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
E1 Climate Change	Climate change adaptation			
	Climate change mitigation			
	Energy			

Relevant scope Our operations

Impact positive/negative

Relevant scope Upstream Value Chain

Relevant scope Downstream Value Chain

For these issues, the relevant Policies, Actions and Targets defined by the Group on climate change are described in the following paragraphs.

Resilience analysis

The process of identifying and assessing risks related to climate change, with respect to the taxonomy areas defined as Climate Change Mitigation (or CCM) and Adaptation (CCA), was developed as part of a process undertaken in the wake of the November 2020 ECB Guidelines, and within the broader Risk Management Framework with the risk factors related to the topic under analysis.

The analysis of risk factors related to the Topic of Climate Change and impacting the Bank's core financial and non-financial risks was carried out for **Physical Risk** (Climate Change Adaptation) and **Transition Risk** (Climate Change Mitigation), according to a pathway that includes:

- the identification of possible transmission channels and analysis of their materiality for the main risks (core risks);
- the preparation of exposure measures and definition of key exposure indicators for risks that are considered material;
- analysis of the impact on the profit and loss account and/or on the value of the Group's assets, mainly through scenario analysis;
- the definition of attention thresholds (tolerance) and related operational limits, assigned to organisational entities capable of operationally having an impact on the level of the indicators, with appropriate escalation processes aimed at intervening in the event of overruns and restoring the overrun levels to normal.

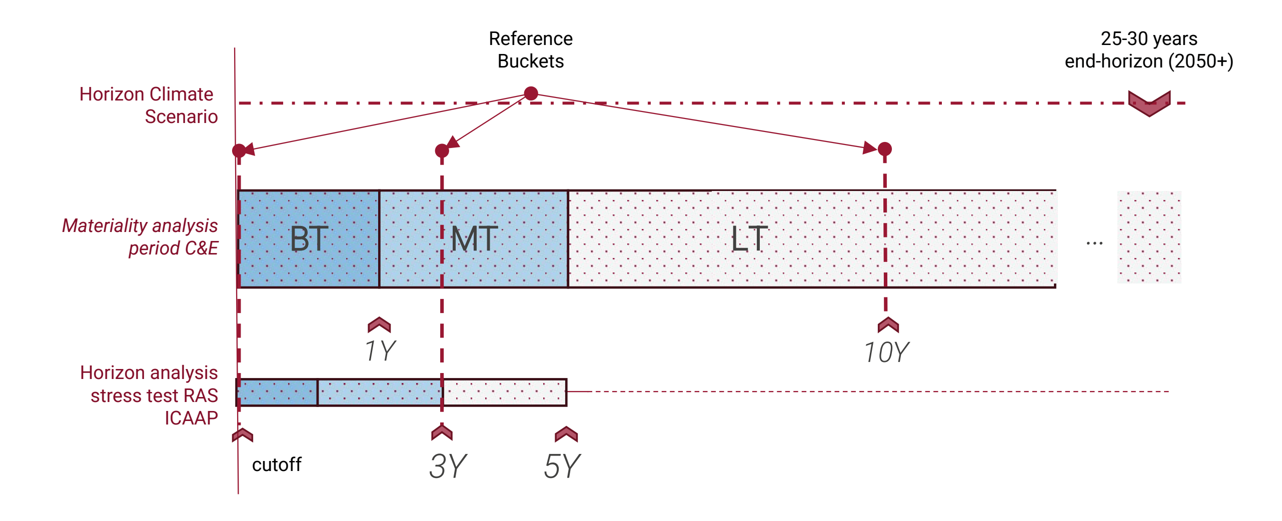
As part of the evolution of management models, variables linked to physical and transition risk were integrated into simulation processes to determine risk add-ons. These add-ons, calculated through the Probability of Default (PD) and/or Loss Given Default (LGD), take into account the physical and transition risks of the counterparties analysed.

The C&A risk management approach includes the definition of a tolerance margin based on adverse scenario analyses conducted in internal and institutional climate stress testing programmes. Within this dimension, operational risk exposure limits are established and assigned to business structures to ensure a balance between risk containment and the business focussed on mitigation strategies. If ESG limits are exceeded, an escalation process is triggered for the decision-making bodies, which take the necessary corrective measures to bring the exposure back within the set limits or to avoid an increase in risk.

The identification and assessment of climate risk exposure is based on scenarios with high physical and transitional risks. The climate scenarios used for physical risk are based on Open Data (ISPRAmbiente, IPCC, Copernicus) and commercial sources (Cerved Spa), with medium- to long-term impact projections according to "Current Policies" models (Hot House World). For transition risk, scenarios are used that envisage a drastic reduction in greenhouse gas emissions, such as "Net Zero 2050", in line with the Paris Agreement.

C&A risk analyses are structured over three time horizons, consistent with those used for RAS purposes:

- **Short-term (ST):** up to 1 year, with reference to the cut-off date.
- **Medium.term (MT):** between 1 and 5 years, with reference buckets at 3 years.
- **Long-term (LT):** over 5 years, with reference buckets at 10 years.



The materiality analyses, for the time horizons described above, were carried out on the basis of projections of updated risk maps, expanded with the inclusion of any worsening trends detected by sectoral or scientific studies.

From its analysis of climate risk factors, the Group has identified the following risks as material and subjected them to continuous monitoring:

- Physical climate risk for credit risk in non-financial corporate portfolios.
- Physical climate risk for credit risk in portfolios of mortgages to retail customers.
- Transition climate risk for credit risk in non-financial corporate portfolios.
- Transition climate risk for credit risk in portfolios of mortgages to retail customers.
- Climate transition risk for operational and reputational risk (related to the exposure of controparties operating in brown lending[36] and the perception of risk by the Bank's stakeholders).

All these factors are relevant over all time horizons and, as such, have been associated with Key Risk Indicators (KRIs) defined in the Risk Appetite Statement (RAS) with the relative identification of operational limits. The RAS KRI and related operational limits of these indicators are monitored quarterly and reported periodically to the Bank's top management as part of Risk Appetite Monitoring.

The integration of climate risk factors into risk management and strategic processes reinforces the Bank's commitment to support the transition to climate neutrality, while ensuring risk mitigation, financial stability and resilience to emerging risks.

For a description of the analysis process carried out to identify climate change risks, please refer to the Notes to the Financial Statements, Part E - Information on risks and hedging policies.

Transition plan for climate change mitigation

Aware of the important role of financial institutions in supporting the transition to a zero net emission economy by 2050 through their financing, investment and product and service offerings, the Group is committed to doing its part to mitigating climate change.

As a financial institution, 99% of the Group's total CO_2 emissions can be attributed to indirect emissions related to the downstream value chain (Scope 3 related to the Lending to non-financial corporations portfolio) and 0.05% can be attributed to own activities and own consumption (Scope 1, 2).

Consistent with the characteristics of its emissions profile, the Group has defined its own decarbonisation strategy for financed emissions linked to the loan portfolio, following the guidelines of the Net-Zero Banking Alliance (NZBA), which the Group has joined since 2022. The NZBA, a UN-sponsored initiative to accelerate, according to a shared framework, the pathway to zero net emissions, is based on the definition of intermediate targets to 2030 and specific actions to support the transition, through the use of scientifically recognised climate scenarios.

36 Brown loans are loans granted to sectors or companies with a high negative environmental impact, (i.e. activities with high levels of CO_2 emissions and not aligned with the ecological transition).

Furthermore, with regard to its own direct and indirect emissions (Scope 1 and Scope 2 - market-based), the Group has already implemented a series of initiatives in previous years aimed at reducing its environmental impact, using 2017 data as a baseline for setting targets and monitoring progress. In this context, the Group has implemented actions to reduce the use of fossil fuels, such as oil, actions to dematerialise its internal customer-facing processes, energy efficiency initiatives, and the use of 100% electricity from renewable sources. When defining the 2024-2028 plan, the Group strengthened its target to support the commitment by planning to achieve zero Scope 1 and Scope 2 - market-based emissions by 2030, for which the Group will identify further actions during 2025.

The NZBA interim emission reduction targets financed up to 2030 were defined on the priority sectors with high emission intensity, in line with the Net Zero Banking Alliance (NZBA) guidelines, based on scientifically-recognised climate scenarios (IEA and NGFS) and in line with the Paris Agreement's goal of limiting the temperature to +1.5°C towards pre-industrial levels. In particular, the Group has set and communicated targets for five emission-intensive sectors (of which announced in August 2023: Oil & Gas, Power Generation & Distribution and Iron & Steel sectors; of which communicated in February 2025: the Cement and Aluminium sectors) as well as the already achieved target of *phase-out* from the Coal sector. The NZBA targets, set and communicated to the market, cover about 90% of the financed emissions of the emission-intensive sectors (so-called NZBA Sectors).

For details on the methodology and the definition of the NZBA targets, please refer to the section on targets.

In addition, in 2024 the Group set further interim management targets to 2030 for emission reductions financed on non-priority emission-intensive residual sectors and sectors with a high climate/environmental impact, adopting, where available, the same methodology used for setting the NZBA targets.

For these sectors, sector-specific transition/decarbonisation levers have been defined, on which the Group develops credit policies and integrates its commercial and service offerings. The Group's decarbonisation strategy is aligned with the global climate change goals of the Paris Agreement, national and European decarbonisation policies and targets, and the specific guidelines of the Net Zero Banking Alliance (NZBA).

The transition plan and related decarbonisation targets, defined to support climate change mitigation, the Group's decarbonisation process and the management of climate and environmental risks, were shared and discussed in the Steering Committee - ESG Session and approved by the Board of Directors, subject to the binding opinion of the Risk and Sustainability Committee. The latest update of the transition plan was approved by a resolution of the Board of Directors in January 2025.

The decarbonisation strategy defined by the Group is consistent with the climate risk exposure assessments determined by the Group's Risk Management Function on the basis of an internal methodology and aims, at the same time, to manage and mitigate physical and transition risk also by integrating the transition and physical risk exposure indicator for each counterparty into its lending processes. The monitoring of the decarbonisation strategy and exposure to climate and environmental risks, carried out at regular intervals by the Risk Management Function and the Sustainability Function and shared quarterly with top management, allows for the timely identification of any deviations from defined trajectories and the identification of mitigation actions.

In addition, the decarbonisation targets and the description of the transition plan defined for the NZBA-target sectors are monitored in accordance with NZBA guidelines and reported to UNEP and published in the section "Sustainability - Reports" of the Group's *https://www.gruppomps.it/en/* institutional website.

The implementation of this strategy has entailed a progressive integration of credit policies, processes and standards with indicators related to sector targets and the Climate and Environmental (C&E) risk profile of each counterparty, as well as commercial process policies and the development of new support tools, which has been carried out since 2023 through the activation of the ESG Project, composed of a cross-functional team that annually identifies and implements initiatives to support the decarbonization strategy from an evolutionary and incremental perspective. This project is subject to monitoring that is shared quarterly with top management. For further details, please refer to the "Strategy, Business Model and Value Chain - Section 1 - General Information" section of this document.

The Group believes that the management of environmental impacts related to its activities can contribute to the transition to a net-zero economy and has already implemented several initiatives in recent years to reduce its environmental impact, with reference to its own direct and indirect emissions (Scope 1 and Scope 2 - market based), setting quantitative targets. For the purpose of target setting and progress monitoring, it has adopted as a baseline the performance highlighted at the end of 2024. In this context, the Group has implemented actions to reduce the use of fossil fuels, such as oil, in favor of less emissive fuels, actions to dematerialize its internal and customer-facing processes, initiatives to reduce the use of paper and waste, energy efficiency initiatives as well as the use of approximately 100 percent electricity from renewable sources. When defining the 2024-2028 plan, the Group further strengthened its goal by planning to achieve zero Scope 1 and Scope 2 - market based emissions by 2030, for the achievement of which it will identify further actions during 2025.

Decarbonisation levers and key actions for reducing indirect emissions from the credit portfolio

The Group has developed an organic approach to support its customers' transition to climate neutrality in order to pursue its goals of reducing emissions from its lending portfolio to non-financial corporations while managing the risks associated with climate change and climate adaptation and the resilience of its business model, differentiated by climate/environmental-intensive priority sectors, climate/environmental-intensive non-priority sectors and other sectors. This approach reflects the Group's conviction that all sectors can contribute to the climate transition, so it has defined transition levers across all sectors and some specific ones for priority sectors with high emissions intensity on the basis of their respective characteristics. These levers focus on the transition to renewable energy sources, more energy-efficient production processes that prioritise the use of renewable-energy based technology and of recycled materials, and emission offsetting and capture. The activation of these levers is made possible by the:

- **Engagement with customers** to make them aware of the importance of the transition and support them in defining actions to support the transition by sharing the customer's ESG profile with a focus on the customer's emission and environmental profile. This sharing takes place through the administration of questionnaires aimed at assessing the ESG profile and consequently allows for the modulation of the customer's needs and reliance framework;
- **Offering of green products** linked to green performance indicators (so-called Sustainability Linked Loan) and/or aimed at financing green projects/activities (so-called Green loan, Taxonomy aligned), providing differentiated pricing in order to incentivise companies with green transition plans and commitments and optimise the loan portfolio according to the emission intensity of the counterparties;
- **Definition of protocols and guidelines** to support and involve institutions and trade associations to accelerate the transition;
- **Establishment of credit policies and processes based on ESG criteria**, which integrate counterparty assessment with counterparty emission profile (ESG score), transition risk exposure and emission intensity in its decision-making processes by defining credit guidelines consistent with the group's broader decarbonisation strategy.

Transparency and monitoring progress

To effectively support the transition to a sustainable economic model, the Group has adopted a number of integrated measures aimed at fostering the dissemination of climate strategies, the achievement of set targets and the use of dedicated operational levers.

In particular, the following actions were implemented:

- Targeted training and ESG skills creation with the activation of specific training courses differentiated according to the role played within the organisation and the establishment of cross-cutting teams of ESG experts to support the network and to ensure adequate knowledge and awareness of sustainability issues;
- Structured collection and analysis of data on financed emissions with preparation of monitoring and reporting systems;
- Periodic meetings with the Commercial Departments, the Sustainability and ESG Function, the Credit Department and the Chief Risk Officer Department aimed at sharing monitoring results, identifying timely corrective actions and developing additional initiatives to support the decarbonisation strategy;
- Simulation tools and definition of KPIs for the purposes of the definition of ESG KPIs for green products.

These measures reflect an integrated and proactive approach, which aims to address the strategic and operational areas essential for the transition to a low-carbon economy and for pursuing the decarbonisation strategy and support from a cross-functional team, consisting of the ESG, ESG RISK and Sustainable Finance team, to Relationship managers in defining and structuring Green operations and solutions for Corporate and SME clients.

As part of the management of the transition plan, the Group has allocated specific investments for the integration and monitoring of ESG factors, to ensure that environmental variables are adequately managed in business processes. Investments are attributable to the project initiatives included in the Bank's ESG Programme. It should be noted that the financial resources allocated to share plans (CapEx and OpEx) are insignificant expenditures.

Investments in CapEx during 2024 focused on the internal development of the centralised ESG database and related dashboards, with the aim of improving internal and mandatory monitoring and reporting (e.g. CSRD, Pillar 3, Social and Green Bond, NZBA reports) on the implementation of ESG technology infrastructure in order to structure green products and ensure their correct identification and monitoring of KPIs in line with regulatory developments. Further investments relate to the development of applications for internal climate risk management models, which are essential for monitoring C&E risks, the Climate Stress Test Programme and compliance with current regulations.

At the same time, investments in OpEx include the purchase of external databases, which are crucial for obtaining the information needed to develop and monitor decarbonisation targets, as well as to support the issuing and tracking of ESG financial instruments, and expert support for the definition of the decarbonisation strategy and the broader transition plan. These are complemented by training and awareness-raising initiatives for internal resources, with the objective of enhancing awareness and knowledge of climate risk management and the ESG transition. Finally, further activity concerns the definition of the ESG framework, with the support of an external provider to configure the governance and dedicated business processes.

These investments aim to strengthen the Bank's commitment to the transition to a sustainable economy by integrating ESG principles into its risk management and reporting processes, in line with the objectives of compliance with ESRS and European sustainability legislation.

The Group belongs to the financial sector, which is included in the EU benchmark indices aligned with the Paris Agreement, because it plays a vital role in financing the transition to a low-carbon economy.

Policies, Actions and Targets relating to climate change

This section includes a description of the policies the Group has adopted in relation to climate change mitigation and adaptation, actions and targets in relation to both its own operations and the value chain.

Policies

The Group adopts an organisational model that aims to progressively integrate the principles of environmental, social and governance sustainability into the definition of its strategy, business model and corporate policies in line with the changing with the changing regulatory framework and the context in which it operates.

The Group's commitment to the issues of climate change mitigation and adaptation is reflected in the Group's sustainability policies, within which it defines the areas of commitment with which the Group, considering its activities and characteristics, can best and concretely contribute to generate a positive impact on the environment and support the transition towards sustainable and net zero emissions models.

The Group's sustainability policies are defined in line with regulatory obligations and international standards, contributing to long-term value creation and promoting the climate transition. All the policies adopted were approved by the Board of Directors following the opinion of the Risk and Sustainability Committee and debated with the Management Committee - ESG session.

In this context, the Group Guideline on Sustainability and ESG (hereinafter "the Guideline") sets out how the Group is committed to making a positive contribution to sustainable development and climate transition and to incorporating environmental principles into its business strategy. In particular, the Guideline provides a definition of the Group's areas of commitment in relation to environmental impacts by identifying the objective of measuring and progressively reducing its Scope 1, Scope 2 and Scope 3 climate-changing emissions and using energy from renewable sources as the main action directives to be pursued in order to achieve its objectives. Furthermore, the Directive defines the Group's commitment to support the transition of companies towards sustainable models through products and services with high environmental and social added value and the gradual introduction of ESG products in the Group's commercial offering, through three strategic strands:

- provision of green credit, i.e. by adopting a credit assessment process based on strategies and, credit standards integrated with ESG criteria, and by offering financing products and solutions dedicated to and fostering the transition of companies towards sustainable development and net zero-emission models;
- investment services, progressively implementing the offer of advise and of investment and insurance products with underlying strategies related to sustainability and to the;
- issuance of green bonds.

For a detailed description of the sustainable financing products offered by the Group, please refer to the section on "Climate Change Actions in Relation to the Downstream Value Chain".

The Code of Ethics also identifies the environment as a primary asset that the Group is committed to safeguarding, seeking a balance between economic initiatives and the unavoidable needs of the ecosystem and taking into account the rights of future generations. The Group manages its impact on the environment in an organised manner and with increasing efficiency by defining general criteria, guidelines and measures that guarantee the reduction of the direct and indirect environmental impact of its activities, the improvement of environmental performance indicators the alignment of the Group's strategy with the objectives of combating climate change, financial support to customers for the transition to sustainable business models, the development of products and services consistent also with the Sustainable Development Goals (SDG's)[37] and with the Paris Agreement[38], as well as the management of climate and environmental risk factors. Setting out the principles of the "Code of Ethics" within the Group has made it possible to develop several policies aimed at mitigating climate change impacts within the activities carried out, with particular reference to climate change mitigation and adaptation and energy efficiency.

In this context, mention should also be made of the environmental policy and the Policy governing an environmental management model, which defines the guiding criteria to be followed, consistent with the Code of Ethics, in order to optimise the management of activities that may have a material impact on the environment, and the organisational model adopted by the Group to oversee procedures aimed at complying with environmental protection regulations. The operational management of the model is the responsibility of various specialised functions within the Group. In particular, within and the Policy governing an environmental management model, the Group defines the principles it intends to pursue in its internal operating contexts and in its relations with the market, with respect to which the Group is committed to developing credit policies that also take into account the possible environmental impacts of corporate customers and their projects; support customers in their goals to save and optimally manage natural resources, support and promote investments in the areas of environmental protection.

In defining the contents of these policies, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

37 In September 2015, the UN General Assembly endorsed the 17 Sustainable Development Goals (SDGs), also known as the 2030 Agenda for Sustainable Development, recognising the strong interconnection between the conservation of natural systems, human wellbeing and economic development. In fact, the Sustainable Development Goals cover a range of issues, including the fight against poverty, hunger, the right to education, the promotion of sustainable patterns of production and consumption, as well as urbanisation and social equality.

38 At the end of November 2015, the 21st session of the Conference of the Parties (COP 21) to the United Nations Framework Convention on Climate Change took place in Paris. Recognising the need for an effective and progressive response to the urgent threat of climate change, it concluded with an agreement to limit global warming to below 2°C. On the basis of this agreement, each adhering country adopted an action plan and reports to the Conference of the Parties every five years on its contribution to achieving the common goal. This establishes a concrete contribution and monitoring mechanism aimed at climate change mitigation and sustainable development.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on Sustainability and ESG	The Policy defines the organisational model adopted by the Group to address the integration of sustainability principles along the three lines of environmental, social and governance (ESG) in the definition of the strategy, business model and corporate policies pursued in the conduct of its business. In particular, the document defines the principles, guidelines and relevant sustainability issues that are identified, implemented and monitored in order to respond to all stakeholders. In relation to environmental sustainability, the Policy defines of general criteria, guidelines and measures that guarantee the reduction of the direct and indirect environmental impact of its activities, the improvement of environmental performance indicators the alignment of the Group's strategy with the objectives of combating climate change, financial support to customers for the transition to sustainable business models, the development of products and services consistent also with the *Sustainable Development Goals* and with the Paris Agreement, as well as the management of climate and environmental risk factors.	The Policy is addressed to the Parent Company and all Group Companiesand covers own operations and value chain downstream and upstream.	The Policy is submitted to the Board of Directors for approval, subject to the advice of the relevant Internal Risk and Sustainability Committee and of the and the ESG Session Steering Committee. The Policy is classified as a strategic document which needs to be updated at least every three years or less if significant changes to the internal or external framework occur.	The Policy, in defining the areas of commitment, was made consistent with the initiatives of international organizations and European authorities such as: - Sustainable Development Goals (2015) - Paris Agreement (2015) - Action Plan for Financing Sustainable Growth (2018); - European Green Deal (2019); - PNIEC; - EU Taxonomy Regulation (852/2020): and in the area of product development and distribution, is carried out in consistency with: - Insurance Distribution Directive (hereinafter also "IDD Directive"); - Directive (EU) 2016/97; - EU Delegated Directive 2021/1269 (hereinafter also MiFID 2 ESG).); - SFDR (Reg. EU 2019/2088):	It is available in the Sustainability section of the Group's corporate website.
Code of Ethics	The objectives of the Code of Ethics are: - Define standards of "good conduct" for corporate policies and procedures; - Inform employees of the behaviours required of them; - Contribute to implementing the Group's sustainability policies; - Help align the Group's objectives with the interests of civil society.	The Code of Ethics applies to Directors, Statutory Auditors, company executives, and employees of the Group at all levels.	The Code of Ethics and any amendments thereto are subject to the approval of the Parent Company's Board of Directors.	The Group is committed to complying with external codes and agreements, including international agreements, self-regulatory codes, sector-specific codes of conduct, the United Nations Global Compact, the Universal Declaration of Human Rights, the United Nations Environment Programme – UNEP FI, and the Principles for Responsible Banking – UNEP FI.	It is available in the Sustainability section of the Group's corporate website.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Directive on Environmental Management System Oversight	The Policy defines the organisational model adopted by the Group for the Environmental Management System Oversight Process (EMS – Environmental Management System). This aims to ensure compliance with environmental protection regulations.	The Policy is addressed to the Parent Company and all Group Companies.	The document is approved by the Board of Directors. Also, the Policy contents are verified as the need arises or in any case once a year, during the Management Review, and updated if necessary. Any new version of the document is submitted for approval by the Board of Directors.	The Policy is implemented in compliance with binding regulations and the UNI EN ISO 14001 Environmental Management Systems Standard.	Available to all employees on the corporate intranet
Environmental	The Environmental Policy sets out the guiding principles that the Group, in line with its Code of Ethics, commits to following in order to optimise the management of activities that may have a significant environmental impact.	The Policy is addressed to the Parent Company and all Group companies.	The Policy is subject to approval by the Board of Directors, following the opinion of the relevant Board Committees and the Management Committee. The Environmental Policy is overseen by the Parent Company, which, through the relevant functions, coordinates the implementation of all related projects.	The Policy is implemented in compliance with all applicable environmental protection regulations, including externally issued codes of conduct to which the Group Companies adhere, such as the UNEP Declaration of Financial Institutions on the Environment and Sustainable Development and the United Nations Global Compact.	It is available in the Sustainability section of the Group's corporate website.
Group Policy on Safety and Environment	The Policy defines the corporate models and rules adopted at the Group level regarding Safety and Environment.	The Policy applies to the Parent Company and all Group Companies. The rules established in this Group Policy must also be followed by all third parties (suppliers, consultants, etc.) operating within the Group, in relation to their respective areas of activity.	The Policy is subject to approval by the Board of Directors, following the opinion of the relevant Board Committees and the Management Committee.	The policy is implemented pursuant to the regulatory provisions of Legislative Decree 152/2006 (c.d. “Environmental Code”) and Legislative Decree 121/2011, as well as the UNI EN ISO 14001:2015 International Standard.	Available to all employees on the corporate intranet

Climate-change actions relating to own transactions

The Group has specific actions aimed at managing the climate change mitigation related to its business. More details on this can be found in the section “Transition Plan for Climate Change Mitigation”. It should be noted that the Group has been pursuing the reduction of direct Scope 1 and Scope 2 impacts for years by implementing initiatives aimed at reducing the use of fossil fuels, reducing overall energy consumption and increasing the use of energy from renewable sources. In this context, it should be noted that since 2012 the Group has set an objective to use 100% energy from renewable sources and to zero its Scope 2 - market-based emissions. Below are some detailed initiatives pertaining to the scope of own operations, the timing of which is consistent with the defined objectives, for the measurement of which it has set as a baseline the environmental performance highlighted at the end of 2017.

The Group, in pursuit of its broader goal of reducing energy consumption, from 2019 draws up the Measurement & Verification Plan (M&V) in line with the International Performance Measurement and Verification Protocol (IPMVP), with the aim of verifying the results of energy efficiency, water efficiency and renewable energy projects according to a consolidated framework. The IPMVP adopted by the Group is the leading international protocol for verifying energy saving results.

The M&V Plan is founded on construction of the baseline (2019) for comparison using engineering calculations that lead to ordinary adjustments (e.g., due to changes in climate conditions, etc.) and extraordinary adjustments (e.g., due to changes in operating hours, technological equipment, number of employees, etc.). The use of the M&V Plan certified by Tor Vergata University of Rome, allowed a reduction in project-related consumption of 6,018 MWh) to be recorded for 2024, compared to the 2019 baseline.

During 2024, the network **energy management platform** (EMP) was consolidated, resulting in significant electricity savings through the implementation of the real-time monitoring programme of energy consumption and environmental parameters, already installed at more than 1,200 branches. Through Artificial Intelligence and machine learning systems, the platform monitors the correlation of environmental parameters with the operating set-points of the air-conditioning systems and predictive maintenance of the Heating, Ventilation and Air Conditioning (HVAC) systems. The platform is active in branches throughout the country.

2024 also saw the continuation of actions to limit energy consumption through accurate monitoring of climate conditions using defined instruments, then taking action to adjust climatic systems accordingly. This was in line with the energy saving indications in the "National plan to reduce natural gas consumption", pursuant to Italian Decree no. 383 of 6 October 2022, even if no longer valid.

The Group joined the two energy saving initiatives in 2024: on 16 February, it joined Italy's initiative "M'illumino di meno" (Using less light) and on 18 February the International Energy Saving Day. On these two occasions, most of the illuminated signage was turned off and night lighting was minimised in the registered office at Piazza Salimbeni 3, Siena.

Climate change actions in relation to the downstream value chain

The Group has identified specific actions aimed at managing negative impacts on climate change mitigation consistent with the objectives of its Transition Plan, for details of which see the section "Transition Plan for Climate Change Mitigation". These actions take the form of defining strategic actions differentiated by sector of economic activity, emission intensity and exposure to climate risks, exclusionary and/or more restrictive guidelines for certain sectors and economic activities, credit strategies and processes and standards aimed at assessing the client's ESG profile and directing the provision of credit, and offering credit products and advisory services aimed at encouraging the transition of counterparties and the underwriting of nationally planned climate and environmentally friendly measures.

Strategic Actions differentiated by sector

The Group has divided its business sectors, based on indicators assessing aspects of emission intensity, exposure to climate risk, and available technologies on climate change and impact on the Group's emission profile, into three clusters: priority sectors with high emission intensity (Oil and Gas; Electricity Production and Distribution, Iron and Steel, Cement and Aluminum), non-priority sectors with high emission intensity (Real Estate, Transportation, Automotive, and Agriculture) and high climate impact (Chemicals), and other sectors. For the first two clusters, it has defined intermediate decarbonization targets to 2030, consistent with NZBA guidelines, the availability of climate scenarios and the 'portfolio approach, and specific directions in credit and trade policies to be achieved with delivery through the ESG products and services made available. On the other hand, for the third cluster, characterized by lower transition risk and lower emission intensity, it has defined cross-cutting strategic actions according to a per-counterparty approach that, based on the ESG profile, can take advantage of the Group's commercial ESG offering.

Guidelines and/or exclusion criteria:

The Group, in addition to the strategic actions differentiated by sectors, has also introduced restrictive exclusion criteria for certain sectors, due to their high impact on the environment and inconsistency with national and European climate action plans, in order to minimize exposure to projects and counterparts that could undermine climate and environmental objectives. The exclusion criteria apply particularly to sectors related to coal mining, coal-intensive power generation and distribution, and the oil and gas industry with respect to the establishment of new unconventional oil and gas production sites. These criteria are governed by the Sustainability and ESG Guideline, also published on the Group's corporate website, and summarized below.

- **Coal Extraction**: Consistent with the Paris Agreement and the National Integrated Energy and Climate Plan (NIPEC), the Group excludes any new exposure to companies operating in the coal mining sector, in line with the target for phase-out by 2025. The main measures taken are:
  - Exclusion of new funding for the exploration and creation of new coal mines;
  - Exclusion of funding for the development or expansion of existing coal mines;
  - No renewal of existing active exposures at natural maturity, leading to the complete phase-out of the sector.

  However, the Group could grant funding for projects for the redevelopment and reclamation of mining sites, provided that the environmental objectives and benefits are clearly assessed and documented through specific due diligence.
- **Production, Marketing and Distribution of Electricity (Power Generation)**: Energy production represents an opportunity from a Net-Zero perspective, in view of the growing importance of renewable energies. It should be noted that the power generation sector is considered to be highly emission-intensive, due to the predominant use of fossil fuels and high greenhouse gas emissions, and in this regard subject to regulations and rapidly developing technologies.

In this context, the decarbonisation levers defined by the Group include financial solutions designed to promote the use of renewable energies with the aim of leading its customers on paths of improvement in emissions and confirming the Net-Zero path undertaken.

If the Group identifies, despite the efforts and activities aimed at the conversion and transition of counterparties, specific situations in which there are critical elements that may significantly limit the path of emission reductions in a structural manner, were defined criteria for counterparties who plan to expand coal-fired power generation capacity, who intend to build new coal-fired power plants, or who produce more than 30% of their power from coal without a transition plan consistent with the goals of the Paris Agreement, or who do not have transition plans to increase the share of renewable energy to at least 40% of production by 2030.

- **Oil & Gas**: The oil and gas sector causes significant impacts in terms of environmental pollution and greenhouse gas emissions; Nevertheless, there is a blanket commitment by companies operating in this field to reduce emissions. This sector is characterised by strong investment trends and overall policies of the major players that are implementing progressive strategies aimed at reconversion towards technologies with lower climate impact and based on the exploitation of fewer GHG-intensive resources.

In this context, the Group offers financial solutions, such as Sustainability-linked loans and Green Bonds, and consultancy to facilitate the transition of counterparties to low-carbon technologies.

If the Group identifies, despite the efforts and activities aimed at the conversion and transition of counterparties, specific situations in which there are critical elements that may significantly limit the path of emission reductions in a structural manner, specific actions have been defined to reduce the Group's exposures.

In particular, exclusion criteria are identified for the financing of counterparts and projects aimed at the construction, expansion or expansion of unconventional oil and gas exploration and production sites such as fracking, tar sands, extraction in the Arctic region, in the "Amazon Sacred Headwaters" area, and in ultra-deep waters. These exclusion criteria also apply to companies that generate more than 20% of their revenues from activities related to the extraction or transportation of unconventional oil and gas, or that undertake activities related to new oil exploration and the construction of new oil infrastructure (consistent with the COP-28 agreement in Dubai (2023). For further information regarding the actions taken to contain emission levels concerning the downstream value chain, refer to the section Decarbonization levers and key actions for reducing indirect emission related to the loan portfolio in this chapter.

ESG strategies, processes and credit standards

Since 2022, the Group has introduced an additional assessment element called the "ESG outlook" for the purpose of defining its credit strategies, which are divided into three levels: ordinary strategy, ESG guidelines, and specific strategic guidelines. The ESG Outlook summarizes the sectoral alignment to climate transition (indicator of exposure to transition climate risk) and the ESG profile of the counterparty (ESG score), defined on the basis of the ESG questionnaire. Counterparties with Negative ESG Outlook are expected to adopt conservative assumptions in the business plan assessment (sensitivity add-on) and provide financing aimed at improving the client's emission profile. The ESG Outlook, in combination with the standard strategy, determines the overall measure of stress to be applied to a business plan.

The ESG questionnaire makes it possible to collect information on the individual Client's ESG profile in a timely manner and, in addition to enriching the Bank's information assets, helps to optimally define the ESG profile and manage the Client's risk profile. It is integrated into the Group's operating system, although it is constantly evolving, as it integrates the analysis of the client's ESG profile, with exposure to transition risk and physical counterparty risk.

Green product and service offerings

Financing products

The Group has actively contributed to activately supporting its customers in the transition towards more sustainable economic models by developing and promoting financial products that comply with sustainability and green criteria. The Group's Sustainability and ESG Directive sets out the Group's ESG business offering, which includes different types of loans, financing and credit lines aimed at encouraging greener and socially responsible corporate and individual practices. The design of these products is consistent with the main guidelines on the subject: Loan Market Association's (LMA) "Green and Sustainable Lending Glossary of Terms" and EU Taxonomy. These products are divided into three main categories, which differ in their purpose, requirements and reporting methodology:

- **Sustainability Linked Loan (SLL):** Generic financing that rewards companies for achieving predetermined sustainability targets. These loans are linked to specific ESG KPIs that incentivise the sustainable performance of counterparties, including KPIs related to climate change mitigation issues;
- **Green Loan:** Loans aimed at financing projects with positive impacts on the environment and/or society. These loans can be used for projects supporting the green transition, such as increasing the production and use of renewable energy, sustainable mobility and sustainable agriculture;
- **Taxonomy Aligned Loans:** A type of Green Loan that meets the requirements of the **European Environmental Taxonomy**, which provides a framework for determining whether a project is sustainable according to EU environmental criteria.

During 2024, the Group disbursed about EUR 904.5 mln in green finance, of which EUR 424.5 mln was Sustainability Linked Loan and about EUR 480 mln green loans.

Measures to support SMEs

Nuova Sabatini measure - Operating assets ceiling - access to credit for investments

In order to support access to the facilitating measures, provided at national level, in favour of companies engaged in investment programmes in capital goods with a low environmental impact, the Group adheres to the Capital Goods Measure ("Nuova Sabatini") that from 1 January 2023 introduced the new type of contribution known as "Green" designed to support low environmental impact investment in programmes to improve the environmental sustainability of products and production processes.

The facilitation offered by the Group is structured as follows:

- the Group grants SMEs a bank loan or finance lease, with recourse as appropriate to specific funds made available by Cassa Depositi e Prestiti S.p.A. as part of the ABI-CDP-MIMIT Agreement (so-called Capital Goods ceiling);
- the loan must be for an amount between EUR 20,000 and EUR 4,000,000 with a maximum 5-year term, and can be backed by the "SME Guarantee Fund" for up to 80% of the total amount of the loan;
- agreed by the MIMIT as an operating grant commensurate with the interest on the loan. This grant is equal to the total interest calculated, as normal, on a 5-year loan for an amount corresponding to the investment, at an annual interest rate of:
  - 2.75% for ordinary investments;
  - 3.575% for 4.0 investments;
  - 3.575% for green investments.

During 2024, a total of around EUR 47.5 mln was disbursed for this measure, of which EUR 30 mln for 4.0 investments and EUR 3.2 mln for green investments.

SACE Green New Deal

Since 2022, the Group has entered into the Green New Deal agreement with SACE, the Italian Export Credit Agency that has been supporting Italian companies in export and internationalisation projects for over forty years. Under the Green New Deal, it issues public guarantees for green projects to give a new impetus to the country's sustainability. The Group has disbursed EUR 232.8 mln since 2022, of which EUR 40.4 mln in 2024.

Green bonds

The Group also support large corporate clients in the structuring and placement of green bonds for institutional investors. complying with international standards and the ICMA Sustainable Finance Guidelines and the EU Taxonomy of Sustainable Finance. The bonds issued are intended to finance or refinance projects with green or social purposes, or to finance activities that achieve specific sustainable KPIs. During 2024, in coordination with other banks, it supported the placement of EUR 500 mln of green bonds.

UCITS funds and asset management

In the course of the year, more than 130 new UCITs were issued in accordance with the ESG classification provided for in Articles 8 and 9 of the SFDR (Sustainable Finance Disclosure Regulation), and at the end of the year about 74% of the number of funds in the product catalogue were consistent with Articles 8 and 9 SFDR. In addition, the Group had 40% of ESG funds at the end of 2024 compared to total funds placed (stock data) of approximately EUR 10 bn, consistent with the business plan target of maintaining at least 40% over the period 2024-2028.

With regard to ESG asset management investments, of which the Group is a producer, in order to respond in an increasingly consistent and precise manner to regulatory dictates, on the one hand, and to any preferences expressed by customers, on the other, the Group has initiated the development of rules dedicated to assessing the ESG characteristics of the individual UCITS products included in the asset management schemes: In this context, on 2 January 2024, four Asset Management lines were modified and developed with an ESG perspective, adopting strategies that aim to enhance ESG investment and changing the benchmark. This was followed in June 2024 by the launch of a further six ETF fund lines and two ESG bond lines (four dedicated to Retail customers and four dedicated to Premium customers).

Insurance products

In 2024, the offering of insured products was expanded with the launch of a new multi-branch investment policy called InvestiSemplice with a single premium or recurring premiums whose benefits are directly linked to a segregated management and the performance of a selection of funds investing in responsible and sustainable companies.

In the area of protection products dedicated to companies, the Group has introduced new insurance coverage of “catastrophic risks” (CAT Guarantee) was provided, in response to companies’ obligation to take out compulsory insurance against natural catastrophic risks as provided for by the 2024 Budget Law, to support their commitment to mitigate the negative impact of climate change adaptation.

Objectives

Climate change targets on own operations

Since 2012, the Group has embarked on a journey to reduce its own emissions in order to limit its negative impact on climate change and has identified, with an evidence-based approach, progressive targets to reduce direct and indirect emissions from its operations, initially setting a target to reduce Scope 1 emissions by 60 percent by 2026 compared to 2017 and to adopt 100%[39] electricity from renewable sources, and subsequently to pursue Net Zero Operation (Scope 1 and Scope 2 market based) on its own operations by 2030. The Group has therefore taken concrete measures, implementing initiatives to improve the energy efficiency of its facilities, to reduce the use of fossil fuels, progressively supporting the shift from the use of diesel to less polluting fuels such as gas and petrol, and to encourage the use of renewable energy sources. On this path, the Group set the year 2017 as a baseline for both the determination of its objectives and the monitoring of results, achieving the results described below:

- **direct Scope 1 emissions:** about 75% reduction towards the 2017 baseline exceeding the target of 60% reduction by 2026 set in its business plan. This reduction is partly related to the 48% reduction in overall fossil fuel consumption towards 2017, and partly to the gradual shift away from oil use in favour of gas and petrol. In addition, the Group uses the purchase of carbon credits as an additional Scope 1 hard-to-abate emission reduction action, offsetting about 69% of the emissions from the use of natural gas in 2024. It should therefore be noted that the reduction target described above includes the benefit from the use of carbon credits;
- **indirect emissions from Scope 2 market-based energy use:** during 2024, the Group achieved the target of 100% renewable electricity use for the Group’s scope of consolidation envisaged when the target was set[40], zeroing out Scope 2 market-based emissions related to energy use. The Group has taken initiatives to reduce total energy consumption and implemented energy efficiency initiatives showing a 35% reduction in energy consumption compared to 2017 and a scope 2 - location based reduction of 36%;

39 The Group has set the target of using energy from renewable sources at 100% in the 2022-2026 Business Plan with reference to the Group’s entire scope of consolidation excluding MPS Banque.

40 The Group has set the target of using energy from renewable sources at 100% in the 2022-2026 Business Plan with reference to the Group’s entire scope of consolidation excluding MPS Banque.

- **direct and indirect Scope 1 and Scope 2 market-based emissions:** In reviewing its targets during 2024, the Group further strengthened its climate change commitments by setting a target in its 2024-2028 business plan to achieve net zero Scope 1 and Scope 2 market-based emissions related to its business by 2030. As at 31 December 2024, the Group showed a 15% reduction in Scope 1 and 2 emissions, delivering on its commitment to achieve a year-on-year reduction on 2023.

These achievements are also the result of the adoption of robust environmental policies implementing an environmental management system conforming to ISO 14001, with certification awarded from 2003 and confirmed in subsequent years through the continuous improvement of environmental management practices and the ongoing commitment to energy management, supervised by a qualified Energy Manager, a position introduced by 2009. For more details on the policies adopted regarding climate change management, please refer to the dedicated section in this chapter.

The identification of objectives takes into account the factors analysed as a result of the policies adopted, including assessments associated with stakeholder opinions.

Climate change targets in relation to the downstream value chain

The Group has embarked on a path to contribute to the goals of the Paris Agreement by aligning its financial activities with the trajectory of limiting global warming to 1.5°C. In line with its commitment as a member of the Net Zero Banking Alliance (NZBA), it has set interim decarbonization targets in terms of financed emissions to 2030 for exposures to non-financial companies in the most emissions-intensive priority sectors (so-called NZBA Targets), shown in the table below: Oil & Gas (Oil & Gas); Electricity Generation (Power Generation); Iron & Steel (Iron & Steel); Coal mining (Coal); Cement (Cement); and Aluminum (Aluminum), with an approach based on scientific data and credible climate scenarios, defining different baselines. Targets on the Cement and Aluminum sector were defined during 2024 and reported in February 2025, and monitoring of them is planned, consistent with NZBA guidelines, from the end of 2025. With reference to the Coal sector, the target has been defined in terms of financial exposure.

The definition of the NZBA targets and management targets took place in two separate phases:

- the first completed in August 2023 with the release of the funded emission reduction targets, cd NZBA targets, on the first emission-intensive sectors (oil and gas; power generation and distribution; iron and steel) and the phase-out target from the coal sector,
- the second, concluded in February 2025 with the reporting of intermediate targets to 2030 of funded emission reductions, cd NZBA targets, on the other two priority emission-intensive sectors (cement and aluminum) and intermediate management targets to 2030 of funded emission reductions, on the remaining non-priority emission-intensive sectors. Monitoring of the NZBA target is reported consistent with NZBA guidelines. Management targets are subject to internal monitoring.

and consisted of the following steps:

- **analysis of the Group's portfolio of exposures to non-financial companies** (including bonds and equity) and definition of the baseline: a careful analysis was conducted of the emissive profile of counterparties for each sector of economic activity, the availability and quality of data on the emissive profile of counterparties, and the maturity characteristics, and therefore the levers that can be activated, of the sectors themselves with respect to the ecological transition. Next, the boundary was identified in terms of NACE codes to be included in the sector, including companies operating in the upstream and downstream sectors, and in terms of scope, opting to include scope 3 only for certain sectors of economic activity, and finally the baseline was defined. For this analysis, data, provided by an external provider, of the issuance profile of all counterparties in the financing perimeter (including bonds and equity) to non-financial companies, for the totality of sectors were used consistently with NZBA guidelines. Following considerations of sector characteristics and sector weight relative to the Group's total emissive profile, emission-intensive sectors were identified and divided, between priority and non-priority;
- **Climate scenarios and definition of alignment paths to Net Zero:** definition of emission trajectories based on climate scenarios for all emission-intensive sectors and identification of the target. Specifically:
  - for the Oil & Gas, Power Generation and Iron & Steel sectors, Net Zero 2050 scenarios published by NGFS (Network for Greening the Financial System) with baseline 2022 were used;
  - for the Cement and Aluminum sectors, the IEA NZE2050 scenarios with baseline 2023 were used.

Emission-intensive priority sectors with NZBA Target

The table below shows the details of the NZBA targets, their baselines, and the progress shown at the end of 2024.

	Oil and Gas Sector (Oil&Gas)	Power Gen Sector	Iron and Steel Sector (Iron & Steel)	Coal Sector (Carbon mining)	Cement Sector (Cement)	Aluminium Sector
Sectoral perimeter	Companies operating in the sectors Upstream: B06 - B09 Core: C19 - C20 Downstream: D35	Companies operating in the sectors Upstream: C33 Core: D35 Downstream: F43	Companies operating in the sectors Upstream: G46 Core: C24 Downstream: C25	Companies operating in the sectors Upstream: B05 - B08.92	Companies operating in the sectors Upstream: B08 Core: C23	Companies operating i n the sectors Core: C24

Data as at 31 December 2024	(+264% vs baseline 2022	(73% vs baseline 2022)	(-69% vs baseline 2022	0 euro mln	-	-
TARGET 2030	th 391 tCO_2e (-40.0%)	th 45 tCO_2e (-77.0%)	th 762 tCO_2e (-29.0%)	0 euro mln	th 349 tCO_2e (-23.6%)	th 99 tCO_2e (-9.1%)

In July 2024, consistent with NZBA guidelines, the first monitoring report and transition plan related to the emission reduction targets financed on the first priority emission-intensive sectors (oil and gas; power generation and distribution; iron and steel) and the phase-out target from the coal sector was published.

In particular, with reference to the achievement of the NZBA objectives, the three NZBA priority sectors (Oil & Gas; Power Gen; Iron & Steel), for which the target for the reduction of financed emissions has already been communicated, show a path of reduction of the same towards the 2022 baseline with the exception of the Oil & Gas sector which instead shows a significant increase in financed emissions compared to the baseline of +264% vs a 2030 reduction target of -40%. The positive trend of the Power Gen and Iron & Steel sectors is determined by the increase in exposures to counterparties that show lower emission intensity, thanks to the increase in the share of renewable energy in their production mix and the financing of counterparties with lower emission intensity.

The trend highlighted by the Oil & Gas sector, consistent with the NZBA approach, was partly influenced by the volatility of the metric adopted to estimate the emission profile of the counterparties, based mainly on estimate data and linked to economic variables strongly influenced by inflation dynamics, as well as to a progressive improvement in the quality of the data relating to the emission profile of the counterparties. In this sector, the Group has identified mitigation actions to be implemented over the following years in order to achieve the 2030 emissions reduction target, which include the integration of the tools adopted to assess the customer with information relating to the emission profile, exposure to transition risk and specific levers that can be activated in order to identify financing solutions to support and accelerate the transition.

In support of the entire decarbonisation strategy towards these sectors, the Group introduced new transition guidelines at the beginning of 2024 and the exclusion of financing towards activities related to unconventional Oil & Gas or new deposits. At the same time, an active dialogue was started with high emission intensity counterparties, with the aim of supporting their transition through financing linked to emissions reduction KPIs and the development of renewable energy and activated close monitoring of exposures towards this sector. In line with the NZBA guidelines, the targets will be reviewed at least every five years, or sooner if necessary, in line with the evolution of the database or the scenarios adopted, ensuring adequacy with respect to scientific and regulatory developments. The Group will continue to monitor emission performance and promote significant investments towards clean energy and innovative solutions for the transition.

In order to achieve its strategy and NZBA decarbonisation objectives and to support the broader sustainable transition of its customers, the Group has set itself the following objectives:

- 7.6% of green loans on total financing to NZBA sectors (in terms of stock) by 2028, to support the transition to a net zero emissions economy of customers in high emission intensity sectors through the provision of green finance;
- 30% of ESG volumes disbursed compared to total annual volumes disbursed by 2028 to support the broader transition to a sustainable and net zero emissions economy. At the end of 2024, the Group highlights 18% of financing disbursed with ESG purposes compared to total annual volumes disbursed, for a total of EUR 1,858 mln, of which EUR 904 million with green purposes and EUR 954 mln with social purposes;
- 25% of Green and Social Bonds issued on total issues in the period 2024-2028: during 2024 the Group issued social bonds for EUR 750 mln, equal to 25% of total issues.

The identification of the objectives takes into account the factors analyzed as a result of the policies adopted, including the assessments associated with the opinions of stakeholders.

Climate change targets in relation to the upstream value chain

The Group has not, to date, defined specific targets to manage climate change with reference to the upstream value chain.

However, the effectiveness of the policies and actions adopted in this regard is ensured through the monitoring of specific indicators in order to ensure supply chain management aimed at respecting the principles of environmental sustainability. In this sense, the verification, in the years following those of the first contractualisation, of the existence of the requisites for registration in the Group's Supplier Register, as well as the controls carried out by the Control and Audit functions, guarantee the effectiveness of the policies and actions undertaken by the Group. During 2024, 100% of the new suppliers (114 in total) were assessed according to environmental criteria, in accordance with international standards.

Metrics

Energy consumption and mix

Energy consumption and mix	2024
1) Consumption of fuel from coal and coal products (MWh)	-
2) Fuel consumption from crude oil and petroleum products (MWh)	7.007
3) Fuel consumption from natural gas (MWh)	29,747
4) Fuel consumption from other non-renewable sources (MWh)	-
5) Consumption of electricity, heat, steam and cooling from fossil sources, purchased or acquired (MWh)	1,211
6) Total energy consumption from fossil sources (MWh) (sum of rows 1 to 5)	37,966
Share of fossil sources in total energy consumption (%)	28.04%
7) Consumption from nuclear sources (MWh)	506
Share of nuclear sources in total energy consumption (%)	0,4%
8) Fuel consumption for renewable sources, including biomass (also includes industrial and municipal waste of biological origin, biogas, renewable hydrogen, etc.) (MWh)	-
9) Consumption of electricity, heat, steam and cooling from renewable sources, purchased or acquired (MWh)	96,144
10) Consumption of self-produced renewable energy without fuel (MWh)	707
11) Total energy consumption from renewable sources (MWh) (sum of rows 8 to 10)	96,851
Share of renewable sources in total energy consumption (%)	71.58%
Total energy consumption (MWh) (sum of rows 6, 7 and 11)	135,322

Data on energy consumption at the end of 2024 were collected from each Group company for each building included in the scope of consolidation. In addition to the ordinary consumption of natural gas and electricity, the data also include the fuel consumption of the instrumental and fringe benefit cars (appropriately weighted) used by the Group’s employees, as well as the diesel used for heating purposes. The data reported refer to energy consumption in MWh related to its own operations and were expressed from the documentation made available by the suppliers of the individual services reported (reports, invoices, etc.).

Energy intensity based on net revenues

	2024	PARENT COMPANY MONTE DEI PASCHI DI SIENA S.P.A.	WIDIBA WISE DIALOG BANK SPA	MONTE PASCHI FIDUCIARIA S.P.A.	MPS TENIMENTI POGGIO BONELLI E CHIGI SARACINI SOCIETÀ AGRICOLA SPA	MAGAZZINI GENERALI FIDUCIARI DI MANTOVA SOCIETÀ PER AZIONI	MPS BANQUE

Energy intensity based on net revenues

Energy intensity versus net revenue	2024
Total energy consumption of activities in high climate impact sectors compared to net revenues from these activities (MWh/Mgl euro)	56,80%

The possible inclusion of the Group's activities among the high-impact sectors was carried out by verifying the correspondence of the ATECO/NACE sectors of the Parent Company and its subsidiaries to the sectors listed in Annex I, Sections A to H and L of Regulation 1893/2006. The analysis led the following subsidiaries to be classified as high-impact companies: MPS Tenimenti, MPS Magazzini Fiduciari Mantova and the two subsidiaries of MPS Banque: Monte Paschi Conseil France Société par Actions Simplifiée and Immobiliere Victor Hugo s.c.i. More specifically:

- MPS Tenimenti - Grape Growing (Nace: 01.21);
- MPS Magazzini Fiduciari Mantova - Warehousing and Storage (52.10);
- Monte Paschi Conseil France Société par Actions Simplifiée - Real estate brokerage agencies (68.31);
- Immobiliere Victor Hugo s.c.i. - Management of real estate for third parties (68.32).

Reconciliation of net revenues from activities in high climate-impact sectors

Below is a reconciliation of the net revenues from activities in high climate-impact sectors used to calculate the energy intensity rate with the relevant disclosure in the Consolidated Financial Statements:

euro thousands	2024
Net revenues from activities in high climate impact sectors used to calculate energy intensity	5,709
Net revenue (companies not operating in high-impact sectors)	6,917,319
Net revenue non-current assets held for sale and disposal groups (balance sheet)	50,042
Total net revenue (balance sheet)	6,872,986

The Group obtained revenues for activities in high-impact sectors from the following line items:

- Line item 10: Interest income and similar revenues;
- Line item 40: Fee and commission income;
- Line item 70: Dividends and similar income;
- Line item 80: Net profit (loss) from trading;
- Line item 90: Net profit (loss) from hedging;
- Line item 100: Gains (losses) on disposal/repurchase;
- Line item 110: Net profit (loss) from other financial assets and liabilities measured at fair value through profit and loss;
- Line item 230: Other operating income/expenses (positive components only);
- Line item 250: Gains/Losses on equity investments (only positive components);
- Line item 280: Gains/losses on disposal of investments (positive components only).

Gross Scope 1, 2, 3 Greenhouse Gas Emissions (GHG)

In relation to the Group's own emissions, compared to the data reported in previous years, the Group has expanded the reporting perimeter by bringing it in line with CSRD requirements and thus aligning it with financial reporting. In addition, the collection of data on energy consumption was extended further. Finally, it should be noted that Scope 3 emissions reporting has been extended by increasing the emission reporting categories.

For the calculation of own issues, taking into account that the Group's reporting period is aligned with the entities in the value chain, there were no significant events or changes occurring between the reporting date of the entities included in the value chain of the MPS Group and the reporting date and this Sustainability Report.

For the 2030 Net Zero targets, progress is reported in the “NZBA Target Setting Methodology and Monitoring” section.

Total GHG emissions disaggregated by Scope 1 and Scope 2 and by Scope 3 significant category	2024
Scope 1 GHG emissions	
Gross Scope 1 emissions (tCO_2eq)	9,341
Percentage of Scope 1 GHG emissions covered by regulated emissions trading schemes (%)	-
Scope 2 GHG emissions	
Gross location-based Scope 2 GHG emission (tCO_2eq)	29,924
Gross market-based Scope 2 GHG emissions (tCO_2eq)	244
Significant Scope 3 GHG emissions	
Total gross indirect GHG emissions (Scope 3) (tCO_2eq)	20,398,726
1. Goods and services purchased	72,258
2. Operating assets	5,523
3. Fuel and energy-related activities (not included in Scope 1 or 2)	3,274
4. Upstream transport and distribution	11
5. Waste generated during operations	6
6. Business travel	749
7. Employee commuting	-
8. Upstream leased assets	-
9. Downstream transport	11
10. Processing of products sold	-
11. Use of products sold	-
12. End-of-life treatment of products sold	-
13. Downstream leased assets	3,129
14. Franchising	-
15. Investment	20,313,765
Total GHG emissions	
Total GHG emissions (location-based) (tCO_2eq)	20,437,991
Total GHG emissions (market-based) (tCO_2eq)	20,408,311

Please note that for the purposes of calculating Scope 3 emissions, estimates of 99.98% were used.

The Group remains committed, in line with the 2024-2028 Business Plan targets, to using approximately 100% energy from renewable sources, for utilities registered in the Group’s name, through the purchase of guarantees of origin. Compared to total electricity consumption, the share of renewable electricity certified through guarantees of origin for 2024 is 98.5%.

As at 31 December 2024, the Group had no biogenic CO_2 emissions deriving from the combustion or biodegradation of the biomass for Scope 1, Scope 2 or Scope 3.

Methodology for calculating direct and indirect own emissions (Scope 1 and 2) and Scope 3 indirect emissions

Scope 1 and Scope 2

For the purpose of calculating direct Scope 1 and indirect Scope 2 emissions for 2024, conversion factors from the “ABI Lab Guidelines” (December 2024 version) were used. The gases included in the calculation - and specified in the Guidelines - are CO_2, CH_4, N_2O. In addition, for the purpose of calculating CO_2 equivalent emissions, the emission factors contained in the ISPRA document “Italian Greenhouse Gas Inventory 1990 - 2022 - National Inventory Report 2024” were used, while for CH_4 and N_2O, the Global Warming Potential (GWP) was used, as reported in the IPCC report “Climate Change 2021: The Physical Science Basis”, as indicated by ABI in the document “ABI Lab Guidelines” (version December 2024). Note that for cars for personal and business use, the value is equivalent to the total litres consumed multiplied by a coefficient of 0.70 (% of company use of fringe benefit cars).

To calculate indirect Scope 2 emissions, consistent with the Location-Based methodology, the contribution of the average emission factors of the distribution network used by the organisation was considered. Therefore, the total amount of electricity purchased, from renewable and non-renewable sources, is considered in the calculation of emissions. To calculate indirect Scope 2 emissions, in accordance with the Market-based methodology, related to its own electricity consumption, the contribution of specific emission factors related to the contractual forms used for purchasing adopted by the organisation was considered. In this case, the amount of electricity covered by the guarantee of origin will have an emission factor of 0.

To calculate direct Scope 1 and indirect Scope 2 emissions of the subsidiary MPS Banque, the methodology set out in the ADEME Guide was used, based on the data for the 3 scopes collected annually by the Bank’s Functions in charge of this matter and applying an emission factor to each element of the data collected to determine the value of greenhouse gas (GHG) emissions

Scope 3

In calculating the Group’s indirect Scope 3 emissions, all companies in the consolidated scope are taken into account and the following categories are included (GHG Protocol).

The following table details the Scope 3 Categories included in the calculation, the methodologies used for each category and the conversion factors used:

Categories included	Calculation methodology	Conversion factor
Category 1 **Purchased goods and services**	The spend-based methodology was used, using the EEIO coefficients per NACE code as a conversion factor. For this purpose, suppliers were grouped according to their NACE code (source: internal database and Chamber of Commerce records) and the amounts invoiced to the Group.	EEIO coefficients
Category 2 **Capital goods**	The spend-based method was adopted using the amounts of the capital goods purchased and entered in the asset book in 2024. The goods purchased were allocated by type to an NACE business segment, with EEIO coefficients then applied.	EEIO coefficients
Category 3 **Fuel and energy-related activities (not included in Scope 1 or 2)**	Data collected at Group level for direct and indirect consumption were used and multiplied by the DEFRA emission factor. Consumption attributable to apartment block utilities. Starting from the economic data of reimbursements made to apartment blocks and related to utilities, the consumption of apartment block systems was estimated, using the average costs of commodities at national level.	The offsetting coefficients used to obtain Scope 3 emissions are taken from the Department for Environment, Food & Rural Affairs (DEFRA 2024).
Category 4 **Transport and upstream distribution**	The figure reported relates only to MPS Tenimenti, as it was not possible to retrieve data on the transport costs of goods purchased for the Group. For this reason, the transport costs were included in category 1 data.	EEIO coefficients
Category 5 **Waste**	The data collected at Group level for waste and its disposal methods were used and multiplied by the DEFRA factor.	The offsetting coefficients used to obtain Scope 3 emissions are taken from the Department for Environment, Food & Rural Affairs (DEFRA 2024)
Category 6 **Business travel**	The mileage of the Group’s vehicles (in km and a distinction in the type of vehicle motorisation) and the rail and air transport of staff (depending on the route concerned) were taken into account	The offsetting coefficients used to obtain Scope 3 emissions are taken from the Department for Environment, Food & Rural Affairs (DEFRA 2024)
Category 9 **Downstream transport**	Only for subsidiaries MPS Tenimenti and MPS Banque	EEIO coefficients

Categories included	Calculation methodology	Conversion factor
Category 13 **Downstream leased assets**	Property owned and leased to third parties Consumption of real estate owned by the Group and leased to third parties. Reporting is based on estimates that take into account the surface area, climate zone and characteristic activity of the lessor The Group owns leased properties that fall into four categories that can be differentiated by type of use (tertiary use, garage/warehouse use, industrial use, residential use). All consumption related to this type of use was considered to be from non-renewable sources. The four identified categories are characterised by a different consumption and therefore one or more coefficients were identified for each of them by clustering, in order to define specific consumption. The clustering was carried out on the basis of the typical activity of the lessor, the surface area and, for the tertiary sector (most populated cluster) the climate zone. The chosen coefficients and their reference sources are illustrated below: • Residential housing: - Electricity: 2700 kWh per year consumption of an average family, assuming average housing of 100m^2 for a specific consumption of 27 kWh/m^2 *https://www.enel.it/it/supporto/faq/consumo-medio-energia-elettrica* - Natural gas: 1400m^3 per year consumption of an average family, assuming average housing of 100m^2 for a specific consumption of 14 kWh/m^2 *Gas: substantial stability, -0.2%, for consumption in May - Arera* • Garage/warehouse: - Electricity: use of the Group's average specific consumption for buildings with the same use - Natural gas: n.r. • Industrial sector (leather processing): consumption data provided directly by users were considered when available; when not available, the specific consumption parameter of users who provided the data was considered to estimate the data. • Tertiary sector: by analogy, data were deemed to be comparable to the consumption of the banking sector's operating assets. For both electricity and natural gas, the specific consumption coefficients in the table in the report 'BANKING SECTOR ENERGY CONSUMPTION BENCHMARKS' produced by AbiLab during 2022, on actual data for the year 2021 were used.	For natural gas and electricity consumption, conversion factors from the 'ABI Lab Guidelines' (December 2024 version) were used, and specifically for electricity the location-based methodology was used.
Category 15 **Financed emissions**	Financed emissions are calculated by the Partnership for Carbon Accounting Financials (PCAF) Standard, December 2022 edition, in relation to the business loans and unlisted equity asset class with Score 2 option 1b, using the following formula: financed issues per counterparty = (Gross Carrying Amount of counterparty/total assets of counterparty) * unverified company issues of counterparty. For details of the calculation methodologies used, please refer to the section on "Scope 3 - Category 15 estimation methodology". The Group, while waiting for the consolidation of a common practice in the industry, has considered calculating only emissions on loans to non-financial corporations because, for the other asset categories in its portfolio, it considered the data insignificant. The Group is constantly striving to expand the coverage of the emission profile for other asset categories as well, the quality of the data and estimation approaches used.	The attribution factor calculation considered the counterparty financials, value of the company and credit exposure recorded in the financial statements.

In addition, as at 31 December 2024, the Group had no biogenic CO_2 emissions deriving from the combustion or biodegradation of the biomass included in Scope 3 emissions.

The following categories were excluded from the calculation of Scope 3 GHG emissions:

Category 7. Employee commuting: The figure was calculated for the year 2023 but could not be replicated for the year 2024, in addition, the figure was only for locations with more than 100 employees.

- Category 8. Upstream leased assets - already included in Scope 1
- Category 10. Processing of products sold: not material for the Group
- Category 11. Use of sold products not material for the Group
- Category 12. End-of-life treatment of products sold: not material for the Group
- Category 14. Franchises which are not material for the Group

Calculation methodology - estimated data focus

Scope 1 and Scope 2 - methodology for estimating consumption

In relation to the scope of reported consumption, details are given of the calculations and estimates made by the Group for the following consumption:

- consumption attributable to apartment block utilities. Starting from the economic data of reimbursements made to apartment blocks and related to utilities, the consumption of apartment block systems was estimated, using the average costs of commodities at national level;
- consumption of residual utilities, such as LPG and district heating;
- consumption of real estate owned by the Group and leased to third parties. Reporting is based on estimates that take into account the surface area, climate zone and characteristic activity of the lessor.

Residual utilities (LPG and district heating)

Some of the Group's properties use LPG or district heating.

The consumption figures for the two sources were taken from the billing documents, however, these still do not cover the entire year being reported.

Therefore, where the monthly consumption value of some months was not available because it had not yet been billed, it was estimated using the missing month/available month ratio of the natural gas source of Parent Company and Banca WIDIBA.

By way of example, December represents 27% of consumption for the months from January to November: where consumption data for the month of December is not available for a utility, this estimation coefficient was applied to the consumption values recorded up to November in order to obtain the total value for the year.

District heating consumption was considered based on whether from renewable or non-renewable sources depending on the individual source of the buildings' systems. In particular, consumption from renewable sources was considered to be provided by the following systems:

- Turin - Corso Siracusa 154/B:
  energy mix: Renewable
  source: primary waste (waste-to-energy)
  http://www.comune.torino.it/ambiente/energia/fonti_rinn/integrazione-edificio-impianto.shtml
  https://trm.to.it/funzionamento/
- Ferrara - Via Padova 29/31:
  energy mix: Renewable
  source: primary geothermal hot water
  https://heracomm.gruppohera.it/cambiamenti/cultura-della-sostenibilita/ferrara-citta-calda-per-natura
- Ferrara - Corso della Giovecca 50:
  energy mix: Renewable
  source: primary geothermal hot water
  https://heracomm.gruppohera.it/cambiamenti/cultura-della-sostenibilita/ferrara-citta-calda-per-natura
- Monterotondo Marittimo – Via L. Bardelloni 62:
  energy mix: Renewable
  source: primary geothermal steam
  https://www.comune.monterotondomarittimo.gr.it/home/servizi/servizio~e28f204c-577c-47d5-a2aa-2f61e3b6574d~.html
- Pomarance – P.za Sant'Anna 4:
  energy mix: Renewable
  source: primary geothermal steam
  https://www.geoenergyservice.it/impianto/

Regarding the last two properties, as billing is on a lump sum basis, no consumption data are available. Therefore, the data were estimated starting from the indoor surface area to which the average Bank value of 51.0324913 MWh/m^2 was applied.

Indirect Scope 3 category 15 emissions - estimation methodology

For the calculation of counterparties' funded emissions (Scope 1, Scope 2, Scope 3), the absolute emissions data of counterparties are provided by an external provider and are calculated on the basis of the provider's own proprietary estimation methodology. In general, the counterparty emissions data can be:

- accurate, e.g. directly reported by the company in publicly available corporate reports (Non-Financial Statements, Sustainability Reports);
- estimated using the following approach:

Scope 1

The calculation procedure is based on official data from a public source (Eurostat) on emissions intensity, expressed in tonnes of CO_2 per € of value added, by NACE code and by EU country. This figure is further refined using, where available, more granular data on emissions by more detailed NACE/ATECO codes (source: Ispra/Register of the Union for the Emissions Trading Scheme). This factor is then benchmarked to revenues through a recalibration procedure that firstly requires calculation of the ratio between value added for the sector provided by Eurostat and the value added for the sector calculated by the external data provider, aggregating separate financial statements by sector and, lastly, applying the ratio between value added and revenues, again at sector level. The resulting figure is then further refined by comparison with a similar indicator calculated on the average data of the sample of businesses operating in the same sector starting from accurate data, when standardised and statistically significant samples are available.

Scope 2

Scope 2 emissions data are estimated using the following figures:

- Electricity consumption (in MWh) at 2-figure NACE code level (source: Terna);
- Conversion factor, adopted to convert electricity consumption into CO_2 emissions (in tonnes of CO_2 eq./GWh) (source: ENEL).

Scope 3

The Scope 3 emissions are estimated using a data provider method, adapted from the Eurostat[41] consumption-based account tool that estimates the emissions (total) of the entire chain of a given product, adjusted to take into account emissions associated with intermediate goods (unfinished). From the total emissions, the Scope 3 emissions are then calculated by deducting the Scope 1-2 emissions.

GHG intensity based on net revenues and reconciliation

GHG intensity in relation to net revenue (in euro thousands)	2024
Total GHG emissions (position-based) versus net revenues (tCO_2eq)	2,965
Total GHG emissions (market-based) versus net revenues (tCO_2eq)	2,961
Reconciliation	
Net revenue used to calculate GHG intensity	6,923,029
Net revenue (other)	-
Net revenue non-current assets held for sale and disposal groups (balance sheet)	50,042
Total net revenue (on balance sheet)	6,872,986

41 See the Consumption-based accounting tool; Eurostat [www.Home - Eurostat (europa.eu)]

GHG removals and GHG mitigation projects financed with carbon credits

In 2024, the Group offset emissions for the use of 2 mln Sm3 of natural gas, equal to more than 69% of total natural gas consumption, by purchasing VER (Verified Emission Reduction) Credits for joining the Vishnuprayag Hydro-electric Project (VHEP) by Jaiprakash Power Ventures Ltd. The VHEP project has involved the construction of a hydro-electric power plant to supply energy from renewable sources to the Indian power grid. The Indian grid operates with a mix of hydroelectric, nuclear and fossil fuel power plants. Construction of this system has allowed a reduction in anthropogenic greenhouse gas (GHG) emissions that would have been generated to supply energy to the grid using fossil fuels (over 70% of energy in India's northern electricity grid is obtained from fossil fuels). The verification standard adopted for the project is VCS (Verified Carbon Standard) by Verra, a global leader, that supports measurable climate action and sustainable development outcomes by driving large-scale investment in activities that reduce emissions, improve livelihoods and protect nature.

Carbon credits written off in the reference year	**2024**
Total (tCO_2eq)	4,064
Share from absorption projects (%)	-
Share from reduction projects (%)	100%
Recognised quality standard 1 (%)	-
Recognised quality standard 3 (%)	-
Share from projects within the EU (%)	-
Share of carbon credits that can be considered matching adjustments (%)	-
Carbon credits expected to be written off in the future	**2024**
Total (tCO_2eq)	-

The Scope 1 emission reduction target published in the 2022-2024 business plan includes support for the purchase of carbon credits to achieve it. Carbon credits are needed to offset the share of hard-to-abate emissions.

Resource use and circular economy

[ESRS E5]

This section provides, in relation to the management of 'resource use and circular economy', a description of the opportunities found to be material from the double materiality analysis. Next, the section outlines the policies and actions taken to manage the issue, to seize material opportunities, and the processes through which the Group monitors the effectiveness of its policies and actions.

Impacts, Risks and Opportunities

The process to map impacts, risks and opportunities with reference to this standard takes into account the specific aspects related to the Group's operational and commercial activities. In particular, this process includes the analysis of both internal and public documentation (e.g. the Environmental Policy, Decarbonisation Strategies) and the identification of initiatives taken to promote recycling and the use of sustainable materials (e.g. waste management, reduction of paper use, separate waste collection).

On the basis of the analyses performed, the following were material:

- **Opportunities** emerged attributable to the Downstream Value Chain, due to the possibility of expanding the offering through the development of products aligned with the needs of counterparties in the area of the reuse of resources connected with products and services (e.g. financing for recycling initiatives/contribution to circular economy systems (with particular reference to output resources)).

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
E5 Circular Economy	Deflussi di risorse connessi a prodotti e servizi			

Relevant scope Our operations
Impact positive/negative
Relevant scope Upstream Value Chain
Relevant scope Downstream Value Chain

The Policies, Actions and Targets defined by the Group are described in the following paragraphs for the material topic.

Policies, Actions and Targets related to resource use and circular economy

Outflows of resources related to products and services

Related to this section are the issues of resource outflows related to products and services with reference to the downstream value chain.

Policies

In line with its strategy, market trends and new European regulations in the area of sustainable finance, the Group is committed to working to support sustainable development through the incremental integration of sustainability principles into strategies and operational processes. In particular, it recognises the importance of sustainable resource managementin terms of reducing environmental impact and making optimal use of resources through circular economy processes. In this regard, consistent with its commitment to support its corporate customers' transition towards a circular economy and efficient use of resources, the Group identifies an opportunity in the pursuit of investment strategies towards long-term sustainable projects and products by offering dedicated credit solutions to companies operating in material recovery and reuse.

The Group's commitment is reflected in general policies governing the various ongoing and planned initiatives and collaborations to promote the ecological transition. In particular, mention is made of the Group's Sustainability and ESG Guideline, within which commitments with reference to the impact on the environment and ecosystems and to the circular economy.

In addition, a Credit Policy was approved by the Board of Directors in February 2025, concerning, among other things, investments in companies that support the transition to a circular economy and efficient resource management.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on Sustainability and ESG	The Policy defines the organisational model adopted by the Group to address the integration of sustainability principles along the three lines of environmental, social and governance (ESG) in the definition of the strategy, business model and corporate policies pursued in the conduct of its business. In particular, the document defines the principles, guidelines and relevant sustainability issues that are identified, implemented and monitored in order to respond to all stakeholders. The Policy outlines the Group's commitment which, In line with its strategy, the market trends in these issues and new European regulations in the area of "Sustainable Finance", the Group is committed to working to support sustainable development through the incremental integration of sustainability principles into strategies and operational processes. As part of its financing and investing activities, the Group pays particular attention to environmental, social and governance (ESG) factors, directing capital towards long-term sustainable activities, projects and products. In this context, the Group thus operates by paying attention to the impact on the environment and ecosystems, the responsible use of natural resources, the circular economy, pollution prevention and control, the restoration of biodiversity and ecosystems, respect for human rights, fairness and inclusion, fundamental rights on work and standards regarding child labour and forced labour, health and safety, and the adoption of good corporate governance practices.	The Policy is addressed to the Parent Company and all Group Companies.	The Policy is subject to approval by the Board of Directors, following the opinion of the relevant Board Committees and the Executive Committee. The implementation of the Policy must be notified to the following Structures and Functions of the Parent Company: - Structure to which the individual company reports; - Business Owner structure in charge of the process: Chief Financial Officer and Sustainability and ESG Staff; - Organisation Function.	The Policy, in the area of product development and distribution, is implemented in coherence with: - Insurance Distribution Directive (hereinafter also 'IDD'); - Directive (EU) No. 2016/97; - EU Delegated Directive 2021/1269 (hereinafter also MiFID 2 ESG).	It is available in the Sustainability section of the Group's corporate website.

Actions

The Group recognises the importance of the transition to a circular economy and sustainable resource management to achieve the EU's climate neutrality goal by 2050 and to halt biodiversity loss. The extensive use of resources puts pressure on the environment and nature during the extraction of raw materials and on the climate due to climate-changing emissions during the production of goods and products and the harvesting process. The adoption of circular economy approaches can help reduce climate-changing emissions in priority industry sectors such as agribusiness, consumer goods manufacturing, chemicals, transport, fashion and textiles, energy and utilities, and construction.

Consistent with its commitment to decarbonisation and the actions defined to support the transition of its corporate customers to a net-zero economy, the Group sees sustainable finance as an opportunity to promote and support the circular economy and further strengthen its contribution to climate change mitigation. The Group therefore recognises the importance of sustainable management of outbound resources and intends to seize the opportunities arising from the expansion of its range of financial products in response to the needs of its counterparties

In this regard, the Group offers dedicated credit solutions to companies that operate in material recovery and reuse, supporting activities such as recycling, waste management and reuse of raw and secondary materials by developing a credit assessment process that integrates ESG factors, including factors related to circular economy models, at every stage, from granting to credit review, with the aim of supporting the transition and monitoring exposure to ESG risks. In this context, the adoption of the ESG Questionnaire, discussed with the companies, allows the Group to collect qualitative and quantitative information on their commitment to circular economy models and to direct the granting of credit in a manner consistent with sustainability objectives, including those related to the circular economy and decarbonisation strategy.

In addition, the Group participates in ecological transition projects, which also promote the circular economy. Among the projects in which the Group participates are:

- the National Recovery and Resilience Plan (NRRP): the Bank actively participates in the National Recovery and Resilience Plan (NRRP), with a focus on the "Green Revolution and Ecological Transition", through which the Group supports projects that promote the circular economy, contributing to the country's ecological transition.
- SACE Green New Deal: Access to financial guarantees for companies that develop projects aligned with circular economy and ecological transition objectives, favouring sustainable investments. In 2024 the partnership agreement with SACE was renewed in relation to the SACE Green New Deal guarantee, with the aim of incentivising projects to reduce environmental impact and of launching an ecological transition through loans backed by SACE guarantees for around 80% of the total disbursed.
- The Bank is a signatory to the Convention between the Ministry for Business and Made in Italy, Invitalia and ABI to regulate the way in which companies access the facilities through an escrow account able to guarantee the payment of suppliers of subsidised goods. In particular, the Convention facilitates the granting and disbursement of facilities related to innovative investment programmes by SMEs, aimed, among others, at their transition towards the circular economy ('Sustainable Investments 4.0' facility).
- The Group is signatory to the Convention between the Ministry for Business and Made in Italy, CDP and ABI for granting subsidies to support research, development and innovation projects for the ecological and circular transition in support of the aims of the "Italian Green New Deal".

The above initiatives are part of the Group's normal operations and are therefore monitored and renewed annually on the basis of changes in the regulatory and market environment.

With a view to the future, the definition of further actions dedicated to fostering the ecological and circular transition of key customers and a careful monitoring of emerging national and international regulatory requirements and the expectations of the market and chief stakeholders is envisaged.

Objectives

To date, the Group has not defined specific quantitative targets for the management of resource outflows related to products and services with reference to the downstream value chain. The adoption of specific targets dedicated to fostering t he ecological and circular transition of the target customers will be evaluated in the future in order to ensure a continuous improvement of the commitment on this issue. However, the issue is appropriately addressed through the broader framework of decarbonisation targets set by the Group in line with NZBA membership.

Disclosure pursuant to Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation)

Introduction

The European Taxonomy is a classification system created by the *European Union* to determine whether an economic activity can be considered environmentally sustainable.

Introduced by Regulation (EU) 2020/852 (the so-called 'Taxonomy Regulation'), the taxonomy stipulates that activities which contribute to at least one of the following six environmental objectives and carried out in compliance with minimum safeguards can be defined as "environmentally sustainable";

- climate change mitigation;
- climate change adaptation;
- sustainable use and protection of water and marine resources;
- transition to a circular economy;
- pollution prevention and control;
- protection of ecosystems and biodiversity.

This Regulation has been supplemented over time by delegated acts that define, for each of the six environmental objectives, the economic activities and the criteria for technical screening to verify that they meet the requirements of the European Taxonomy, as well as the market reporting obligations with respect to the activities they carry out or, in the case of financial institutions, that they support through financing and investment.

In particular, Commission Delegated Regulation (EU) 2021/2139 and Commission Delegated Regulation (EU) 2023/2485 for the first two climate objectives, and Commission Delegated Regulation (EU) 2023/2486, for the remaining four environmental objectives, establish the types of economic activities that have the potential to contribute to these objectives (so-called 'taxonomy-eligible') and the technical screening criteria that, in the specific case, make it possible to confirm a substantial contribution of these activities to the environmental objectives (so-called 'taxonomy-aligned').

In addition, Commission Delegated Regulation (EU) 2021/2178 defines specific performance indicators to fulfil the reporting obligation of undertakings, which vary according to the type of undertaking and, in the context of financial enterprises, the type of business carried out, making a distinction between credit institutions, managers of financial assets, insurance and reinsurance undertakings and investment firms. With the inclusion of specific economic activities related to the fossil gas and nuclear sector under activities that can contribute to the energy transition, the legal framework has been expanded by a further piece of legislation, Commission Delegated Regulation (EU) 2022/1214, which integrates these specific activities into the European Taxonomy and establishes additional, related reporting obligations for all companies.

In light of this regulatory framework, accompanied by clarifications on its interpretation provided by the European Commission in FAQs on 21 December 2023 and November 2024, and on the implementation of the disclosure obligations gradually published by the European Commission, the Group prepared the required disclosures.

Section 3 - Social Information

Own workforce

[ESRS S1]

This section provides, in relation to the management of "climate change", a description of the impacts, risks and opportunities found to be material from the double materiality analysis. Next, the section outlines the policies and actions taken to manage the issue, to seize material opportunities, and the targets set to monitor the effectiveness of the actions. It also outlines the general processes for involving workers on material impacts that affect them, as well as the channels through which they can express their concerns. Finally, the section reports the metrics used to monitor the effectiveness of the measures taken.

Impacts, Risks and Opportunities

For the purposes of conducting the double materiality assessment with reference to this standard, all of the Group's own employees were considered, whether on permanent or temporary, full-time or part-time, contracts.

The process to map impacts, risks and opportunities with reference to this standard factors in the specific aspects related to the Group's operations. In particular, this process includes the analysis of both internal and public documentation of the Group (e.g. policies to regulate equal treatment and inclusion of employees) and the identification of initiatives taken to protect employees (e.g. the definition of an organisational function dedicated to D&I). The Group has safeguards in place to ensure the protection of its employees' rights. These safeguards, sometimes exceeding minimum regulatory standards, enable the Group to strengthen the confidence of its own workforce and to attract and retain new talent.

On the basis of the analyses performed, the following were material:

- **Positive impacts** related to the *Own Operations* perimeter related to the existence of measures and processes aimed at ensuring adequate working conditions, equal treatment and opportunities for employees and their privacy;
- **Opportunity**, with reference to the *Own Operations* perimeter, to improve the company's reputation, in view of the protection guaranteed to the Group's employees in terms of working hours, salary adjustment, social dialogue and training and skills development. The trust of the Group's employees and significant stakeholders is also strengthened in view of the freedom of association and collective bargaining guaranteed to the workforce, the existence of works councils, the existing work-life balance and the protection of health and safety rights, equal treatment and the prevention of violence and harassment in the workplace.

The following table summarises the sub-topics/sub-sub-topics considered material in terms of Impacts, Risks and Opportunities and the perimeter related to the Value Chain for standard S1:

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
S1 Own Workforce	Secure employment	Our operations (positive)		Our operations
	Working hours	Our operations (positive)		Our operations
	Adequate wages	Our operations (positive)		Our operations
	Social dialogue	Our operations (positive)		Our operations
	Freedom of association	Our operations (positive)		Our operations
	Work-life balance	Our operations (positive)		Our operations
	Health and safety	Our operations (positive)		Our operations
	Gender equality and equal pay	Our operations (positive)		Our operations
	Training and skills development	Our operations (positive)		Our operations
	Employment and inclusion of people with disabilities	Our operations (positive)		
	Measures against violence and harassment on workplace	Our operations (positive)		Our operations
	Diversity	Our operations (positive)		Our operations
	Privacy	Our operations (positive)		

Relevant scope Our operations | Impact positive/negative | Relevant scope Upstream Value Chain | Relevant scope Downstream Value Chain

For these issues, the following paragraphs describe the relevant Policies, Actions and Targets defined by the Group on Safeguarding Working Conditions (covering Safe Employment, Working Hours, Adequate Wages, Social Dialogue, Freedom of Association and Work-Life Balance), Health and Safety, Training and Skills Development, Diversity and Inclusion (covering Gender Equality and Equal Pay, Employment and Inclusion of People with Disabilities, Measures against Workplace Violence and Harassment and Diversity) and Privacy.

Policies, Actions and Targets regarding the Workforce

Protection of working conditions

Issues related to secure employment, employees' working hours, adequate wages, social dialogue, freedom of association and collective bargaining, and work-life balance belong to this paragraph.

Policies

The Group is committed to ensuring adequate working conditions in compliance with current legislation, addressing and managing issues such as safe employment, working hours, fair pay, social dialogue, freedom of association, collective bargaining and work-life balance. To this end, it carefully assesses the related risks and adopts the necessary prevention and protection measures to minimise them.

All the Group's employees are covered by collective bargaining, at national level with the application of the National Collective Bargaining Agreements for the banking sector and at company level with the signing of Level II Agreements.

In this context, the Bank has implemented an organisational model for Human Resources Management, based on the relevant Group Directive, which makes it possible to optimise internal skills and foster the professional development of employees, taking into account their aspirations and needs, also through a targeted remuneration policy.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Directive on Human Resource Management	It defines the organisational model adopted by the Group (principles, responsibilities and activities) for the human resources management process, with the aim of defining and implementing, in compliance with the laws in force and with national and company contracts, the human resources management policies defined by the company, optimising the performance of company processes, also in support of the business and enhancing the value of the professional skills present, offering development opportunities to all resources in compliance with their aspirations and needs where possible and in line with the principles of inclusion and with the commitments defined by the Company in the Gender Equality Policy.	The Directive is addressed to the Parent Company and the Group companies (Widiba, MPS Fiduciaria)	The approving structure is the Chief Executive Officer	-	Available to all employees on the corporate intranet
Remuneration policy	The Group's remuneration policies are geared towards creating sustainable value over time, ensuring the motivation and loyalty of all employees, and attracting external professionals, fully compliant with the risk-governance policies.	The document is addressed to the Parent Company and all Group companies.	The Corporate Compliance, Risk Management and Internal Audit functions provide their contribution by supporting corporate bodies in the design phase of remuneration policies and intervening in the corresponding implementation processes.	The remuneration policy is defined in compliance with the relevant legal and regulatory system and fulfils the disclosure obligations envisaged by Consob regulations and by the Supervisory Provisions of the Bank of Italy.	It is available in the Sustainability section of the Group's corporate website.

Actions

In response to the aforementioned policies in place, the Group has put in place and planned multiple actions to protect the working conditions of its workforce. In particular, the safeguards guaranteed by collective bargaining agreements and the Group's initiatives aimed at preventing psycho-social risks, ensuring work-life balance and in terms of supplementary pensions are mentioned.

All employees are covered by collective bargaining agreements. This ensures adequate labour protection in terms of stable employment, wage adequacy, social dialogue and freedom of association. In particular, the economic and regulatory treatment guaranteed by the CCNL is supplemented by company bargaining with improved provisions on particular areas (welfare, economic integration, training and professional development). In this regard, important agreements were signed on the activation of the company bonus, also in the form of welfare, on the increase of the company contribution to supplementary pension funds and the value of meal vouchers.

Management of psychological/social risks

With a view to mitigating and focussing on psychological/social risks, a psychological counselling service has been in place at the Bank since 2016, gradually extended to all Group companies. As of 3 June 2024, the new psychological listening and counselling service was also activated, a listening centre dedicated to welcoming moments of malaise or psychological discomfort, both in the work environment and in relations with colleagues, and in private life and the management of children, guaranteeing total anonymity.

As regards the updating of the work-related stress risk assessment, the setup of focus groups was agreed with the Workers' Safety Representatives to verify the effectiveness of measures identified in the 'Action Plan for work-related stress mitigation' through analysing the perception of a selected sample of workers. The focus groups were led by the company doctor coordinator of the Group Health Service, assisted by a scientific committee and the Head of the Prevention and Protection Service with the relevant department. Participants were chosen by random lots, respecting the proportionality of the company population in terms of organisational role, gender, age and territorial distribution.

In all of the areas investigated, good feedback was given on the mitigation actions implemented, with a general acknowledgement of the company's commitment to keeping the monitoring of work-related stress indicators under control, although areas for improvement remain. The Group plans to manage these insights appropriately, and a new assessment needs to be carried out to survey workers' perceptions of the content and contextual aspects of work related to work-related stress risk.

Families and leisure time

The Parent Company is committed to expanding flexibility tools with an evolutionary approach, favouring the work-life balance of personnel, through continuous dialogue, both in management and trade union relations. The time horizon of the activities described is mainly that set out in the current Business Plan (2024 - 2028). In this way, typical welfare institutions are complemented with specific initiatives also for the benefit of family members, accompanied by a dedicated internal communication plan:

- **Medical expense coverage** programme extended to family members; accident policy and leave for medical examinations;
- **MPSolidale**, an internal solidarity fund fuelled by donations of hours and days from colleagues or portions of remuneration from higher management levels, to allow colleagues time to deal with serious and verified personal and family needs, with priority given to childcare;
- **Support for parenthood** with an **orientation path for new parents** (Parents' Profession Project) and new initiatives for raising children, including customised study paths for special needs, as well as programmes reserved for employees and family members to encourage access to sports activities and to support psycho-physical wellbeing through an online platform;
- **Foreign language study programme** through an online platform dedicated to both colleagues and family members and agreement for enrolment in **university study programmes**; study leave for working students;
- **Digital corporate library offering** colleagues and family members the opportunity to borrow e-books;
- Platform of private offers for colleagues and their family members;
- Recreational, sports and cultural activities promoted by staff social organisations (CRAL).

There is also a plan for the recruitment of family members of employees who died while in company service (or while making use of the solidarity fund).

The Parent Company also supports the personnel intervention plans activated by the Welfare fund and Association (Cassa and the Associazione di Mutua Assistenza), entities with direct employee participation that have been in operation since 1950.

Supplementary pensions and financial facilities

Group companies allocate 2.5% of remuneration to the Corporate Pension Funds, while also extending membership options to dependent family members. In 2024, a trade-union agreement was signed, effective from January 2025, concerning the increase of the Parent Company's contribution to 3%. Insurance cover is also provided in the case of serious events such as premature death and permanent disability.

In addition, staff members are entitled to subsidised terms on loans, including through renegotiation initiatives, and on banking, financial and insurance transactions.

Objectives

Attention to the working conditions of the company's own workforce is embodied in the annual definition of qualitative-quantitative objectives by the Human Resources Management Function, in line with the company's strategic directions. In particular, these objectives concern:

- resource empowerment, to be strengthened by:
  - assigning resources to roles in line with their skills, competences and – as far as possible -expectations, with a view to leveraging people and ensuring equal development opportunities;
  - training resources appropriately;
- maintaining consistency between the professional appraisals of resources and the development pathways and incentive system;
- monitoring the corporate climate and employee satisfaction (listening to employees through interviews and visits to facilities, relations with peripheral company trade union representatives, etc.);
- allocating resources to units/roles that are in keeping with the Group's workforce sizing and adequacy models and with the Business Plan objectives;
- monitoring and overseeing the operational budgets assigned to personnel cost items (both expenses and other administrative expenses on staff, including time/labour management, modal allowances, missions, accommodation supplies, per diems for relocation);
- defining the performance indicators for management activities.

Health and safety in the workplace

Issues related to the protection of health and safety in the workplace are covered in this paragraph.

Policies

As regards the occupational health and safety of personnel, the Group is committed to complying with applicable regulations in force, adequately assessing all risks and planning and implementing prevention and protection measures necessary to minimise those risks.

In this regard, the Group has implemented an Occupational Health and Safety Management System (SGSSL), certified since 2008, which is governed by the internal document "Occupational Health and Safety Supervision" which, together with the Policy on Occupational Health and Safety, describes the responsibilities assigned, the operating procedures and the related records, as well as the rules for verification and control.

The detection of occupational health and safety risks is recorded and documented in the "Risk Assessment Document - RAD"[42], a document periodically updated in relation to activities undertaken. The latest update of the RAD of Bank and the other companies of the Group, which have outsourced the Company Prevention and Protection Service to the Parent Company, dates back to 30 June 2024. The SGSSL is regularly monitored and maintained with periodic control activities, including, at least once a year, both internal (carried out by suitably qualified personnel) and external (by a third-party certification body) audits. The contents of the documents are checked if the need arises or at least once a year and updated if necessary. The document and any amendments are brought to the attention of all staff, as well as third parties, through the Bank's internal and external channels (e.g. intranet portal, institutional website, notices, etc.).

42 The Risk Assessment Document illustrates the set of operations concerning the assessment of risks for the health and safety of workers pursuant to Article 17(1)(a) and Article 28 of Legislative Decree 81/08. The RADs were drawn up by the Employers of the individual Group companies (Parent Company, Banca Widiba, MPS Fiduciaria, MPS Tenimenti and MGFM), in collaboration with the Prevention and Protection Service Manager, the Coordinator of the Health Service Competent Doctors and the Radiation Protection Expert (where appointed), after consultation with the Workers' Safety Representatives.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Banca Monte dei Paschi di Siena S.p.A.'s Occupational Health and Safety Policy	The Policy defines objectives in this regard, including a commitment to: - prevent accidents and illness; - continuously improve health and safety management and performance; - communicate its guiding principles to its stakeholders; - comply with applicable legal requirements and other requirements that the company decides to enter into. The Policy also provides the framework for setting and reviewing health and safety objectives.	The Policy applies to the Parent Company and all Group Companies.	The Policy has been approved by the Parent Company's Board of Directors. The responsibility for guiding the implementation of the Safety Policy lies with Top Management and all of the Parent Company's Management.	The policy is implemented in compliance with national and EU legislation on health and safety in the workplace, as well as with the UNI ISO 45001 standard (which replaces the OHSAS 18001 standard as of March 2021), whose principles are of primary reference for the general objectives of company management.	A summary is available in the Sustainability section of the Group's corporate website and in the Suppliers Register. It is also available to all employees on the corporate intranet site.

Actions

During the period 13 December 2023-15 April 2024, external audits were conducted by RINA Services for the maintenance of the Occupational Health and Safety Management System in conformity to ISO 45001:2018. The Certification Body, for the year 2024, verified, overall, the adequate application of the system within the company, competence in the regulatory area being audited and the correct implementation of the system with regard to the personnel interviewed, confirming the renewal of the certification. The next audit to maintain the management system certification is scheduled for March 2025. As a result of the aforementioned audits, improvement programmes aimed at promoting workers' health have been defined, with the corresponding timing for implementation.

During 2024, several meetings were also held with the Workers' Safety Representatives (RLS) on various issues related to ordinary activities connected to mandatory fulfilments, such as, for example, consultation meetings pursuant to Article 50 of Legislative Decree 81/08 for territorial areas or for individual issues, the periodic meeting pursuant to Article 35 of Legislative Decree 81/08 and training activities pursuant to Article 37 of Legislative Decree 81/08.

Objectives

To date, the Group has no specific targets to manage the issue of safety at work. However, the monitoring of the issue is ensured by the aforementioned external audits and by the improvement programmes and continuous dialogue with the Workers' Safety Representatives, processes through which the Group ensures continuous monitoring of the issue of occupational health and safety, guaranteeing a proactive approach to risk management and the improvement of working conditions.

Training and skills development

This paragraph deals with the topics of training and skills development for Group employees.

Policies

In order to enhance skills and contribute to the professional development of internal resources, the Parent Company promotes organisational models that develop and stimulate growth, also through dedicated paths, in line with market needs and sustainable development. The Group pays particular attention to monitoring the training needs of personnel to avoid misalignment between skills possessed and those necessary to guarantee quality of service to Customers.

In this context, the Human Resources Development process, including Reskilling and Change Management Plans, is governed by the internal regulatory documents entiled "Professional Development Pathwas".

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Professional Development Pathways	The Group's strategic objectives and the provisions of the national collective labour agreement and company bargaining agreements provide for professional skills development pathways which combine experience-based steps, planned professional mobility across different positions and training and development plans to facilitate the acquisition of technical skills and enhance the soft skills required in the target role.	This policy is addressed to the Parent Company.	The approving structure is the first-level function 'Professional Development, D&I and Training'.	There are no direct references to third-party initiatives/standards in the policy.	Available to all employees on the corporate intranet
Reskilling and Change Management plans	The document regulates the reskilling and change management plans in detail, describing the activities carried out, from the definition of reskilling needs to the verification of the skills possessed, to the monitoring of activities and results following the training and development initiatives implemented.	The document is addressed to the Parent Company and all Group companies.	The approving structure is the first-level function 'Professional Development, D&I and Training'.	Not applicable.	Available to all employees on the corporate intranet

Actions

The Group's training model aims to respond proactively and dynamically to the new cognitive challenges posed by the markets and by continuous developments in the banking system, and business processes, as well as by and the impacts derived from it.

One of the cornerstones of the training model is the annual training planning process based on the work of various corporate functions involved in a methodology giving priority to training initiatives.

In particular, with a view to promoting a culture of risk, a process has been defined which, right from its planning stage, associates each training activity with one or more corporate processes and risks: in fact, this approach guarantees bespoke planning for the areas classified by the MPS Academy - the company's training facility - as high-risk (Credit, Anti-Money Laundering and Financial Crimes, Customer Protection and Transparency, Data Governance, Data Protection, Legislative Decree 231 and Cyber Security). The model is based on two annual activities: The Risk Assessment exercise that defines the risk exposure of each corporate role is the Skills Gap Analysis that determines the training needs of each employee.

Main projects implemented	
Training and development course envisaged by the Consob Intermediaries' Regulation	In 2024, around 10,000 individuals in direct customer contact were involved in training concerning MiFiD 2, for a total of 30 training hours per capita. In addition, Premium Managers were also trained synchronously, with interventions aimed at working on commercial tools for effective **customer needs analysis and their financial protection**.
Info-training course on Risk Culture	The subject of risk is monitored with internal communication plans in all its declinations (AML, Compliance, Credit, Cybersecurity, Sustainability and ESG, others). 'Culture of risk' is also the name of a now stable information-training plan, which associates operations with the main risks associated with them. The plan consists of a series of Intranet articles, each with a **Learning Card** (also on ESG topics involving 16,000 people). All articles are collected in a permanent intranet section. In April 2024, the annual 'Culture of Risk. A fundamental element for a healthy business' meeting chaired by the Chairman of the Board of Statutory Auditors. Participants: Chief Executive Officer, Board of Statutory Auditors, targets from the 3 business chains and General Management roles.
Multimedia training on Risk Culture	**Dedicated training for all staff**, in continuity with previous years, through a series of courses with periodic publication on topics covering different risk areas: from Wealth Risk Management to Operational Risk and Anti-Money Laundering.

Main projects implemented	
Compliance training	Two new courses were delivered during the year: "Code of Ethics" and "Administrative Liability of Entities - Legislative Decree 231/2001", which incorporates the regulatory changes in the model adopted by the Parent Company to which all Group staff have been enrolled. Two courses were then delivered on the topic of market abuse, one for network resources and the other for specialists. All of the Parent Company's resources are enrolled on the anti-corruption course.
Professional skills training courses	Final certification envisaged and provided to auditors and Specialists from the Information Security Function.
Risk-based training on anti-money laundering, credit, cybersecurity & Data Risk	Risk assessment to determine the main risks to which the various roles are exposed, and skills gap analysis to assess gaps in training (over 11,000 people for the Anti-Money Laundering area and 4,300 for the Credit area) with online training, virtual classroom training and operational coaching (online training for around 11,000 people on anti-money laundering and 4,300 on credit, webinar training for 1,200 people on anti-money laundering and 600 people on credit, operational coaching for 100 people on anti-money laundering and 70 people on credit). In 2024, there was also a return to the classroom for about 800 people in the area of credit. Post skill gap analysis cyber security & data risk training was provided, on the topics of cybersecurity, data governance, data protection and administrative responsibility of entities pursuant to Legislative Decree no. 231/01, which involved the resources of the central structures (over 3,900) with a course attendance rate of 60%.
Info-training plan and awareness raising on IT security	In accordance with the Plan and in continuity with training launched in previous years, **courses for all personnel** were provided on the main **threats: Fraudulent sites, phone hacking, classification of unstructured data**. The courses are accessible not only from the MPS Academy platform, but also from the Intranet in the cybersecurity section. The Plan envisaged specialist post-skills assessment training for personnel in the second-level corporate control functions on monitoring compliance risks (19 individuals), IT roles associated with obtaining or updating certifications, e.g., AIIA courses for Internal Auditors (18 participants), cyber courses for SWIFT operators for CSP compliance (SWIFT Customer Security Programme) and compliance with security requirements envisaged in international standards (300 individuals), courses provided by external certification bodies (e.g. ISACA) in some cases envisaging the issue of international attestations (24 individuals), online business continuity manager training (290 individuals). For initiatives involving key and strategic roles of the Parent Company, a board induction event was held for all Board Members and Statutory Auditors of the Parent Company and members of the Board of Statutory Auditors on Cybersecurity: "IT security".
Regulation & Risk Culture APP	An application running on smartphones was launched for the publication of training content on changing regulatory topics. Publications occur periodically once a month and consist of a video, using an avatar produced with generative artificial intelligence, and textual content. The contents are produced by Deloitte Risk Advisory.
Training courses to support network reorganisation: induction Roles POE value and new SB role	Following the evolution of the Small Business Service Model and in particular the establishment of the Small Business Districts, a Training Plan was prepared and launched to support the 'manoeuvre' in two directions: entry training to the POE value role (1,000 people involved for 10 hours each) and reinforcement training for managers and SB District managers (870 people involved in training for 11 hours each).
Managerial training for branch managers	Three different managerial training courses were launched, respectively dedicated to new managers, to learn the team management skills, to existing managers in their roles for at least 3 years, such as skills refresher training and leadership strengthening, and to managers involved in the dedicated professional development path.
Induction training for the main network roles	Training courses dedicated to learning the technical and operating skills indispensable to those taking on a new role.
Training course for new entrants CRO function	From May to October, the training course for newcomers to the Chief Risk Officer department took place (classroom training for 30 people approx.), which however involved all people in this department (webinar training for 30 people approx.) in 10 training sessions of 2.5 hours each. The training course was designed with the collaboration of the CRO function and the support of *Deloitte Risk Advisory*.
Training plan for new recruits	To support the entry of about 200 new employees into the parent company, a dedicated training plan was developed, which includes both technical and qualifying training (entry training for policy distributors) and capacity-building (focus on commercial skills).
Being advisor	Classroom training dedicated to standardising commercial action: programming and tools, risks and controls for Premium Managers.
Objective Value	Classroom training for Value Added employees, aimed at reinforcing the commercial process of offering consumer credit. Involving the first seven local retail head offices in 2024, the journey will continue in 2025 with the remaining seven.
Private Academy	Broken down into three progressive training steps and subsequent specialisation and certification initiatives, Private Academy is the programme that accompanies the Parent Company's Private Managers to the full acquisition of the skills indispensable for effective coverage of the role, and constantly updates them with a view to fully covering the evolving needs of customers.
"Transparency" training programme	The skill gap analysis 2024 envisaged the revision of the question basket, with a focus on some sensitive topics such as the issue of transaction disclaimers and pre-contractual fulfilment.
Training course on issues related to the agri-food market	A training course was started and will end in 2025, involving, in addition to the specialists in the Agrifood centres, SB managers and companies with customers in the sector (approx. 320 people). The programme includes the delivery of 14 webinars of 1.5 hours each and the support of an internal communication campaign consisting of a periodic newsletter introducing the webinar sessions, introductory videos and a dedicated web section on the Intranet. Educational activities are supported by self-enrolment features activated in the MPS Academy platform ('I choose') by users. The training course was designed in cooperation with the Chief Commercial Officer function and partner Santa Chiara Next, which selected the lecturers/speakers for each webinar, mediating with the most qualified institutes in the field (INIPA, ISMEA, QUALIVITA, etc.).
Post Network Audit Training	A training course on practices and operational risks was launched for staff belonging to branches audited for which significant gaps were found. The training consists of webinars by MPS Academy faculty members and online courses using adaptive technology. In 2024, about one hundred staff were involved.

Main projects implemented	
Accompaniment in the Parent Company's digitalisation processes	Training and communication initiatives were prepared to support the main applications and processes (Consumer Finance, Elise platform, Modular PEF for electronic lending, Mortgages Workflow, etc.).
Digital skills development	The 'Digital Agility' training project was launched in 2024, aimed at strengthening the digital skills of people in the central structures of the parent company, in line with the European Digicomp 2.0 framework. The project will involve more than 1000 people by April 2025, through synchronous training (via webinars). As part of the project, there is also a specific initiative for the IT Department, 'New Innovation and Technology Academy', aimed at providing contextual references and updates on the topics of architectural modernisation, AI, Low Code.

The 'MPS Academy' and ESG awareness programmes

The training activities are planned and organised in the MPS Academy, the company's permanent training school which since 2012 has accompanied the evolution of organisation models and supports individuals along their professional development paths, designing, planning, monitoring and financing training activities.

In this context, MPS Academy has promoted a number of initiatives on the subject to facilitate the dissemination of ESG principles, such as online courses, workshops and external seminars dedicated to sustainability topics, bespoke training activities connected to skill gap analyses in the areas of Credit and AML/CFT, as well as on diversity, equity and inclusion.

The "MPS Sviluppa" programme

The personnel development programme is designed to meet various corporate needs in terms of professional requirements and is geared towards:

- enhancing professional skills and capabilities;
- supporting people's motivation and engagement;
- empowering human capital for growth.

The programme is guided by the principles of equal opportunities and accessibility of training and development activities, consistent with the provisions of the Code of Ethics and the document "Rules on Inclusion".

The main instruments made available in the programme, whose execution is symmetrical to the time horizon of the 2024-2028 Business Plan projects, include: Development of soft skills: these initiatives are differentiated on the basis of the role held and the specific professional challenges related to it, through the use of tools such as digital coaching, which involves a course with a certified coach lasting several months, evaluations, which represent a moment of reflection and diagnosis on strengths as well as areas for improvement, and feedback questionnaires, which compare one's own self-assessment on behaviour with the observation of a group of people identified from among co-workers, peers and other observers;

Reskilling: targeted interventions were defined dedicated to the retraining of Central Structures' resources towards Network and Corporate Control Functions (FAC) roles. This structured and scalable process aims to actively manage reskilling, through enhancement of the skills and experience possessed by the people involved and the definition of personalised training courses that promote experiential learning;

Talent Academy: this is an annual programme aimed at identifying, retaining and managing people with talent, understood as human resources with high continuous performance, who show elements of development in a managerial key, useful to cover roles of responsibility and/or greater complexity in the medium term.

Objectives

The commitment to enhancing human capital is implemented through the annual definition of qualitative and quantitative objectives by the Human Resources Management Function, in line with the company's strategic indications. In particular, aspects such as adequate training coverage, consistency of performance and potential assessment with professional development paths and the incentive system are considered. The monitoring of the achievement of these objectives is ensured through specially prepared process KPIs.

Diversity and inclusion

Issues related to diversity and inclusion and, in particular, guaranteeing gender equality and equal pay for work of equal value, employment and inclusion of persons with disabilities, measures against violence and harassment in the workplace, and the protection of diversity are covered in this paragraph.

Policies

The Group's organisation model and structure envisage that all corporate structures are responsible for basing their conduct on ethics and risk culture principles, as well as promoting a corporate culture based on ethics, inclusion, accountability and legality, in compliance with the Code of Ethics. This Code, among its fundamental principles, demands respect for human rights in all activities and in relations with its stakeholders.

To this end, the importance of disseminating an inclusive corporate culture as a strategic driver of development and "zero tolerance" towards any kind of discrimination (racial and ethnic origin, colour, sex, sexual orientation, gender identity, disability, age, religion, political opinion, national extraction or social origin, or other forms of discrimination covered by Union regulation and national law) are reaffirmed in the internal document "Rules on Inclusion" as well as in the Gender Equality Policy.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Rules on inclusion	The document defines commitments in terms of valuing diversity, inclusion, equity and parity that the Group aims to pursue in all phases of the business life of each person, in the organisational and operational aspects and in internal and external communication. These are reflected in the Guidelines and Processes adopted by the Human Resources Department.	The Policy is addressed to the Parent Company and all Group Companies. The entire population of the Group is obliged to comply with this document.	The approving structure of the regulatory document is the CHCO Directorate.	The policy is implemented in accordance with the principles adopted by international organisations (e.g. the EU Charter of Fundamental Rights, the UN Declaration of Human Rights, the 2030 Agenda for Sustainable Development and the Principles for Responsible Banking), as well as the relevant European and national regulatory framework: - CRD V, EU Directive 2019/878 of 20 May 2019; - EBA Guidelines on sound remuneration policies (EBA/GL/2021/04); - Eu Directive No. 2023/970; - BankIT Circular 285; - Law No. 162 of 5 November 2021. The document also confirms the Group's membership of leading associations and campaigns (e.g. the Women in Banking Charter).	These are available in the Sustainability section of the Group's corporate website.
Gender Equality Policy	The Policy defines commitments to valuing diversity, inclusion, fairness and equality, promoting them at all stages of each person's corporate life, in organisational and operational aspects, and in internal and external communication. This document expresses principles designed to promote a climate that legitimises listening, respect, the expression of differences and the appreciation of everyone.	The document is addressed to all stakeholders.	The approving body of the document is the Board of Directors.	The document is produced in accordance with UNI/PdR 125:2022 Reference Practice.	It is available in the Sustainability section of the Group's corporate website.
Rules on preventing and combating gender-based harassment in the workplace	The document defines the general and unavoidable reference principles and non-tolerated conduct to ensure a working environment free from gender discrimination, violence and harassment to which each person must be committed.	The document is addressed to the Parent Company and all Group companies. The entire population of the Group is obliged to comply with this document.	The approving structure of the regulatory document is the CHCO directorate.	The document is produced in compliance with the provisions of provisions of Law No. 4 of 15 January 2021 ratifying and executing the International Labour Organization Convention No. 190 of 2019.	These are available in the Sustainability section of the Group's corporate website.

Group Guidelines on the management of whistleblowing systems	The Guidelines handles, through the whistleblowing system, actual or potential “non-compliance”, such as violations of the principles of equal opportunities, fairness and inclusion set out in the Code of Ethics, as well as other cases that may constitute violations of European Union law and relevant external and internal regulations.	The Guidelines apply to all personnel of the Parent Company and Group Companies: Banca Widiba and Monte Paschi Fiduciaria.	Its implementation must be notified to the following Departments and Functions of the Parent Company: - Directorate of Corporate Reporting; - Staff CAE and Government Audit Subsidiaries; - Organisation Partner; - Organisation Function.	The document is drafted in compliance with: - Directive 2013/36/EU (so-called CRD IV); - the implementation of these provisions into Italian law by Legislative Decree 72 of 12/5/2015, which introduced Article 52-bis of the Consolidated Law on Banking. - the 11th and 34th updates to Bank of Italy Circular 285; - Directive 2019/1937/EU.	These are available in the Sustainability section of the Group’s corporate website.

Actual or potential “non-compliance”, such as violations of the principles of equal opportunities, fairness and inclusion set out in the Code of Ethics and other cases that may constitute violations of European Union law and relevant external and internal regulations, are handled through the whistleblowing system, as provided for in the Group Directive on the Management of Internal Whistleblowing Systems.

As for the reporting of inappropriate behaviour in the workplace, the reporting person, in addition to using the whistleblowing system, can report to a special Protection Committee, as specified in the document Rules on preventing and combating gender-based harassment in the workplace, and in the document Gender Equality Management System.

The implementation and governance of the regulatory documents and related processes just mentioned describe the general approach for remedial measures with respect to any deviations/non-conformities that may occur. In keeping with this fundamental approach, all new recruits, from the beginning of their employment, receive information and continuous training on the duties they are required to perform, on the regulatory elements governed by the National Collective Bargaining Agreement and on specific disclosures (i.e., on privacy, anti-money laundering, Legislative Decree 231/2001, Code of Ethics, prevention and safety, Corporate Governance Code, etc.).

Actions

To ensure the monitoring of gender equality activities and areas, with particular reference to compliance management, the Gender Equality Management System was updated. Based on the outcome of the monitoring carried out, the management of recommendations was defined, ensuring the activation of any corrective actions. With a view to continuous improvement in the areas of gender equality and inclusion, the System envisages the preparation, management and updating of a Strategic Plan on gender equality**,** defining objectives and decisive action to close the gaps identified from analysis of the dedicated indicators. the Plan is shared and approved by a special Steering Committee, composed of Top Management. At the same time, nonconforming situations, such as violations of the principles of equal opportunities, equity and inclusion, are managed, and specific reporting is drafted.

With the aim of monitoring the implementation of the principles expressed in the Gender Equality Policy over time, the Group is committed to adopting specific KPIs that, in line with and consistent with the principles contained in the reference regulatory documents, enable the monitoring and measurement of the progress and results achieved, in support of the cultural change in terms of diversity and inclusion.

Below are the main actions related to the employment and inclusion of people with disabilities, prevention of violence and harassment in the workplace and promoting diversity.

These initiatives are implemented at Group level, affect all personnel and have a continuity character over the reference time horizon coinciding with the Strategic Plan in execution (2024-2028)

Initiatives dedicated to equal treatment and opportunities for all	
Plural Management Project	In-house training continued in 2024 to raise awareness of respect for diversity and inclusion, particularly in relation to gender and disability, and a focus on the Gender Equality Policy. A total of 2,633 managers have completed the course, including 210 in 2024.
Growth Together	*"Growth Together"* was implemented as a continuation of the "Women Leadership Program", a laboratory to support the managerial development of women in positions of responsibility, fostering self-awareness, knowing their own skills and setting firm objectives. Since its launch in 2020, the project has seen the participation of 609 women managers from all the business lines.
Top Management training	The active involvement of top management on diversity and inclusion issues was accompanied by a dedicated information and training activity, focusing on gender equality and the fight against and prevention of gender harassment in the workplace, by Fondazione Libellula.
"Safe at work" training	In 2024, a training meeting was held for specialists on how to intervene to prevent and manage possible incidents of harassment, organised by Fondazione Libellula.
Disability Lab meetings	In 2024, the meetings of the 'Disability LAB', a network of companies set up to foster discussion on concrete action plans, by Wise Growth, continued. In particular, the following topics were covered: "Management training in the disability field", "The detection of disability situations in the company", "Teams with disabilities: when and how to support them?".
"I'm Possible" training meetings	In 2024, training courses for resource persons were carried out to increase awareness and knowledge of the different experiences with inclusive teams, with a focus on disability issues.
Unconscious Bias	The Unconscious Bias course was made available to the entire corporate population with the aim of learning about the phenomenon of bias and reflecting on how it can influence perception and opinions in our relations. The online course was taken by 97% of the corporate population.
Gender equity	In 2024, the 'Gender Equity' course was made available to the entire corporate population, which was taken by 92% of the corporate population.
Awareness-raising on the prevention of gender harassment	On 25 November, the 'International Day for the elimination of Violence Against Women', the Bank joined ABI's initiative 'Words of Inclusion' to promote financial autonomy, a series of podcasts dedicated to the theme of economic violence. The training courses 'Financial Education: an empowerment tool' focused on the enhancement of financial education as a tool to prevent and combat the phenomenon of economic violence.
D&I page on the corporate intranet	The intranet section fully dedicated to Diversity & Inclusion is constantly updated, where opinions can be expressed and suggestions put forward, including reading recommendations, videos, newsletters and so on. Each month, the section is enriched with a new word from the inclusive glossary, which aims to clarify the meaning of certain terms that have entered into common usage but are not always used correctly.
D&I training for new recruits	The induction courses for new recruits include a special educational, taught in-house, dedicated to the topics of Diversity & Inclusion.
Inclusion Week	A week of virtual classrooms was held in March 2024, involving all Group personnel, on a voluntary basis, to reflect on two macro areas: workplace harassment contrast and prevention (by Fondazione Libellula) and disability (by internal teachers). At the end of the classrooms, a disability manifesto was published, in which suggestions and proposals were collected to promote initiatives that accommodate the needs of each colleague.
Open Jam	As part of the projects aimed at strengthening its commitment to valuing diversity and spreading an inclusive culture, the Group also joined the *'Open Jam 2024'* initiative, promoted by *The European House* - Ambrosetti, with the intention of enhancing the comparison between the different generations present in the company (GenZ, Millennials, GenX, Boomers).

Objectives

The focus on issues related to diversity and inclusion is reinforced with an enrichment of performance indicators in line with the "Rules on Inclusion" document and with constant monitoring of existing indicators. In particular, mention is made of the indicator concerning the percentage of positions of responsibility[43] held by women. This KPI - already identified as a **Smart target** for the period 2021-2023, in line with the commitments undertaken after joining the UNEP FI Principles for Responsible Banking and with the provisions of the UNI/PdR 125/2022 Reference Practice on Gender Equality Certification - **was set at 35% by 2023 and was comfortably passed, with the actual figure at the end of this period reaching 37% and increasing further to 37.6% at the end of 2024**. This indicator will continue to be one of the most monitored KPIs for achieving the objective set in the 2024-2028 Business Plan, i.e. more than 40% in 2028.

Targets are defined on the basis of KPI analysis, also with a view to pursuing the goal of continuous improvement in the areas of gender equality and inclusion, through the involvement of the functions that directly oversee the relevant issues. Monitoring of the defined indicators is managed by the relevant functions, which, in the event of deviations, identify corrective actions to align with the objectives of the Gender Equality Strategic Plan.

43 The following are considered as resources with positions of responsibility: In the General Management Division (of the Bank and other Group companies), heads of structures up to sector level (Chief Executive Officer, General Manager, Deputy General Manager, Head of Division, Head of Level I, II and III Structures, Area, Service, Staff, Technical Secretariat, Office and Sector), Regional Sales & Distribution Divisions (Business and Private Regional Managers, Retail Regional Managers, Private Managers and Retail District Managers), Regional Credit Divisions (Business and Retail RCD Managers, and in the Network the Branch Managers and Heads of Specialised Centres (e.g., Private Businesses, etc.).

Privacy

This paragraph relates to Privacy, i.e. the protection of the confidentiality of the personal data of the Group's people.

Policies

In order to prevent the violation of data privacy rights, data protection safeguards and channels for employees to raise concerns are ensured through the "Data Protection Policy".

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet
Data Protection Policy	The policy describes the privacy policy adopted by the Group according to the following methodological approach: - operational and privacy control, aimed at ensuring: (i) compliance with data protection principles from the project design or technology use stage; (ii) respect for the rights exercised by data subjects; (iii) the implementation of the Records of processing activities; (iv) the management of data breach events. - roles and responsibilities in the Bank; - privacy information flows; - planning and reporting on the activities and controls carried out; - training and empowerment of employees.	Currently, the policy refers to the Bank with plans to extend the drafting of this document to the other Group companies.	The Bank's Board of Directors is responsible for the overall supervision of the privacy compliance management system. It also approves the privacy management policies and process, providing strategic guidance on the matter and issuing the necessary instructions for its implementation.	For privacy compliance purposes, the Bank complies with the following standards: - EU Regulation 2016/679 (GDPR); - Legislative Decree 196/2003 (Privacy Code) as subsequently amended by Legislative Decree 101/2018; - Guidelines, measures and other pronouncements of the Italian Data Protection Authority and the EDPB, as well as other general regulations with an impact on privacy.	It is available in the Sustainability section of the Group's corporate website.

Actions

In order to ensure that employees are trained in data protection issues, the Group provides for employee training, i.e. initiatives to promote a data protection culture. In particular, such training courses are part of the Group's established practice and are provided for employees both at the time of their induction, as well as on the occasion of job changes or the introduction of significant new tools for the processing of personal data.

Training courses on this subject cover not only purely regulatory aspects (e.g. compliance with privacy regulations, data confidentiality, handling a data breach) but also those relating to data protection from a technological point of view, e.g. with regard to phishing or other scam techniques.

Persons authorised to process data are all employees who, in connection with their activities, come into contact with and process personal data to which they have access. Access to personal data, whether in computerised form or on paper, by persons authorised to process the data, must only take place if knowledge of the data is strictly necessary to perform the tasks assigned. In this respect, each appointee is assigned an access user to the Bank's Information System, the authorisation profile of which is closely related to the role he/she holds, the tasks entrusted to him/her and the operational entity to which he/she belongs.

Objectives

The group has not, to date, defined specific objectives for dealing with employee privacy issues. Nevertheless, the Group oversees the effective monitoring of policies and actions in relation to this issue. In particular, responsibility for Level II checks on the regulatory requirements of privacy obligations is assigned to the Compliance Function. These controls are part of the Group's normal operations and consist of:

- planning and carrying out remote and on-site audits during the year, also taking into account requests made by the Data Protection Officer (hereinafter also DPO);
- if aspects of non-compliance emerge in the conduct of employees in the performance of the duties entrusted to them in the field of privacy, reporting to the Internal Audit Function and the DPO Staff;
- carrying out Level II checks on the correct execution of the Data Protection Impact Assessment (hereinafter also DPIA);
- as part of the reporting to senior management prepared by the DPO, support to the DPO with regard to the results of privacy compliance checks carried out.

Processes for involving own workers and workers' representatives on impacts

The management of material impacts entails that the Group should have its own employee engagement processes in place to take their views into account.

At constitutional level, Italy protects the freedom of association (Article 18) and trade union membership (Article 39) and is a member of the International Labour Organization (ILO). In line with constitutional principles and regulations in force, the Group encourages freedom of association for employees, which it manifests in many ways.

Level II bargaining**,** which is entirely consistent with the applicable regulatory framework, confirms the strategic value of dialogue and the active involvement of trade union organisations, at the basis of a corporate climate of positive participation. To this end, the Group is committed to promoting information and consultation rights of the Trade Unions so that, each in their respective roles, the best solutions are constantly sought, in the common interest of laying the foundations for the long-term sustainable growth of the Group.

Ongoing discussion between the Parties, at central and peripheral level, has the shared objective of fostering extensive awareness and assessment of the repercussions on resources of reorganisations and seeking suitable convergences to limit the impacts and guarantee quality of working conditions in a context of innovation and change. In all cases of restructuring, business reorganisation or other activities affecting personnel in terms of work organisation and regional and professional mobility, the Group arranges specific disclosures, in compliance with provisions of the National Collective Labour Agreement, and/or discussions with trade unions to analyse the impact on staff. It is after the closure of negotiations, with different durations contractually predefined on the basis of the reorganisation (up to 50 days), that the agreed measure can be implemented.

The Group's industrial relations are supervised and managed by the First Level Company Function, through the planning and management of activities (initiation, development and definition of consultation procedures) and active listening to company trade union representatives to ensure compliance with laws and national and Level II bargaining.

In this context, Joint Committees, made up of company and union members, play a fundamental role in Level II bargaining, dealing with specific areas to jointly examine material issues and promote initiatives for enhancement and growth within company policies and processes.

The Committees - which met in 11 sessions in 2024 - are divided by scope and subject matter, including: "Commercial Policies", "Welfare", "Training", "Equal Opportunities" and "Environmental Sustainability".

Specifically, the 'Equal Opportunities' Committee has the task of agreeing female employment indicators at company level, as well as identifying appropriate empowerment policies. The Committee's activity was strengthened for the purpose of finding tangible solutions to enhancing the potential of people, each with their own diversities, identified as factors for the Group's cultural and social growth. Equally significant is the analysis conducted by the Corporate Observatory, a joint body set up to monitor interaction between personnel in the different operating entities with communications models that engage individuals at all levels. Its focus is on relationships to preserve the individual personality and maintain a high standard of "quality" of life in the company, and also on situations that may potentially harm the dignity of workers.

Listening to employees

For the Group, listening to people is an essential element of the relationship with employees and is carried out systematically by applying different internal tools and channels.

With a view to continuous updating and sharing the most important topics for the Group, the Chief Executive Officer continued to be involved. In particular, the CEO - over the course of 2024 - held 14 meetings in Italy (involving more than 4,000 colleagues) with the aim of sharing the guidelines of corporate strategy (2024-2028 Business Plan), fostering dialogue, listening and active participation.

These meetings were complemented by a further six in-person events at which the CEO met colleagues on development paths ("Talent Academy") and new recruits.

The CEO also held four conference call meetings with all colleagues to present the financial results for the period. On these occasions, a Q&A session was also scheduled, in which participants could put questions directly to the CEO. In-depth meetings on the topics posed by the HR Managers were then scheduled for these colleagues. Answers to frequently asked questions are made available on the Intranet.

The Commercial C-levels held 24 live meetings with colleagues from the respective Divisions to share and improve understanding of the j lines and the corporate objectives for the period. At each of these meetings, colleagues were able to submit questions or remarks, commented directly or after the event on the other communications channels.

Some sales functions hold specific listening sessions - sometimes with the assistance of business partners - to present market outlooks. 45 meetings in total were held in 2024.

In July 2024, the first edition of "A Day at the Branch" was held: more than 60 branches (for a total of about 2,500 people involved) throughout Italy hosted an equal number of managers from the central structures in order to carry out a direct and fruitful discussion focusing on practical aspects of the network's activities, so as to enhance together each concrete element and thus pursue the growth of the Bank and its people. The meetings were also attended by the Chief Executive Officer and the Deputy Chief Commercial Officer.

The main information and questions from the Network were taken up by the Departments and provided structured feedback to all staff through an article published on the intranet.

The effectiveness of involvement

Internal climate surveys and feedback collection are carried out by means of focus groups and employee satisfaction questionnaires after events, as well as interactive functions on the company intranet (comments, likes, shares). Another interaction method was also introduced ("Did you find this article useful?") to gather colleagues' views on the usefulness and layout clarity of the aspects discussed.

All employees, based on the methods described, can express their opinion on their working life in the Group, the applications released and the Bank's initiatives.

In parallel, the structured and systematic practice of one-to-one meetings and interviews with employees by Human Resource Managers, also at the direct request of the individual employee, has continued. In addition, for new employees, targeted listening procedures are in place within the first few months of employment by means of special questionnaires to collect their degree of satisfaction and perception on joining the company, as well as feedback interviews during the probationary period in which any needs or points of attention are acknowledged.

Processes to remediate impacts and channels for workers to raise concerns

The Group promotes, by means of territorial meetings, moments for exchanging views and the adoption of dialogue structures, the expression of any concerns and needs of its workers.

The Group provides employees with appropriate tools for reporting possible violations of the rules of conduct (the "Whistleblowing" system). In particular, through the Whistleblowing system, as governed by the Group's Code of Ethics, each employee is required to actively cooperate in the achievement of high ethical standards, both directly - by acting responsibly - and indirectly - by reporting any violations of laws, regulations and procedures that could have a negative impact on the Group. Through the dedicated IT platform or orally via a special telephone service, staff and qualified external personnel may report - confidentially - irregular or incorrect circumstances and conduct which they suspect or have become aware of in the course of their duties. These reports are received by the Fraud Audit department, which is also in charge of internal investigations. For more details on the complaint handling process as well as on the policies for the protection of employees using the complaint systems, please refer to Section 4 - Information on Governance (par. *"Policies, objectives and actions related to whistleblowing"*). A new multimedia course was implemented in 2024 in which all Group resources were enrolled, in addition to specific training measures for owners and new employees.

The protection of workers' human rights

The Group considers the enhancement of internal skills as a priority, fostering the professional development of its employees. To this end, it adopts organisational models aimed at growth, sharing objectives, knowledge and promoting the dissemination of an ESG culture at all levels of the organisation, including through compliance with the main international agreements and treaties on the subject. In this context, the Group is committed to complying with the United Nations' Universal Declaration of Human Rights, promoting the protection of human rights, including the principles on child labour and forced labour, and encouraging a conduct inspired by integrity and respect in line with the UN Global Compact and the UNEP Principles for Responsible Banking. These principles refer to the International Bill of Human Rights, as well as the International Labour Organisation (ILO) Declaration.

The Group therefore guarantees that people's lives and dignity are respected, and that work organisation choices safeguard the value of individuals, as well as health and safety in the workplace, the protection of working conditions, diversity and inclusion, training and skills development, and privacy.

Metrics

This section reports the metrics used by the Group to monitor the effectiveness of the measures taken by the company to manage its workforce. The following tables represent the actual (not estimated and not average) number of working employees at the end of the period, expressed in headcount (HC).

Characteristics and composition of the company's employees

Template for the submission of information on the number of employees by gender

Gender	Number of employees (in number of people) 2024
Men	7,760
Women	8,967
Other	-
Not communicated	-
Total Employees	**16,727**

Template for the presentation of the number of employees in countries where the enterprise has at least 50 employees representing at least 10 % of the total number of employees

Country	Number of employees (in number of people) 2024
Algeria	1
China	9
Egypt	2
France	128
India	1
Italy	16,582
Morocco	1
Russia	-
Tunisia	1
Turkey	2
Total	**16,727**

Template for submitting information on employees by type of contract, broken down by gender

Number of people	2024				
	Women	Men	Other(*)	Not communicated	Total
Number of employees	**8,967**	**7,760**	**-**	**-**	**16,727**
Number of permanent employees	8,962	7,749	-	-	**16,711**
Number of fixed term employees	5	11	-	-	**16**
Number of variable-hour employees	-	-	-	-	**-**
Number of full-time employees	7,332	7,650	-	-	**14,982**
Number of part-time employees	1,635	110	-	-	**1,745**

(*) Gender as specified by employees

Template for submitting information on employees by type of contract, broken down by region

Number of people	2024					
	North	Centre	South	Islands	Foreign	Total
Number of employees	**5,759**	**6,689**	**3,111**	**1,023**	**145**	**16,727**
Number of permanent employees	5,757	6,675	3,111	1,023	145	**16,711**
Number of fixed term employees	2	14	-	-	-	**16**
Number of variable-hour employees	-	-	-	-	-	**-**
Number of full-time employees	4,906	6,081	2,907	950	138	**14,982**
Number of part-time employees	853	608	204	73	7	**1,745**

The Group hires almost exclusively on permanent contracts; in residual cases, fixed term contracts are used for highly specialised positions where a longer observation period may be functional. All fixed term contracts expiring in 2024 were converted into permanent contracts. All contracts offered in recent years are for office hours from Monday to Friday.

Number and turnover rate of employees

As at 31 December 2024, the Group had a total of 16,727 working employees, down 10 units compared to 31 December 2023. The dynamics are mainly attributable to:

- 243 new hires, mainly young employees taken on mainly to strengthen the sales network;
- 256 terminations, of which 131 due to resignations.

The turnover rate, calculated as the ratio between the total number of terminations (256) and the total number of working human resources (16,727), is 1.53%. Terminations include employees leaving the workplace on a voluntary basis or due to dismissal, retirement or death in service.

Characteristics of non-employees in the company’s own workforce

The total number of workers who are not employees, but whose work is controlled by the organisation, came to 6 at the end of the period. In the HC, only workers placed at the disposal of companies whose main activity is “recruitment, selection and supply of personnel” (NACE N78 - agency workers) are considered.

Collective bargaining coverage and social dialogue

All employees in Italy are covered by collective bargaining agreements; therefore, the percentage is 100%.

Reporting template for collective bargaining coverage and social dialogue

2024			
Coverage rate	Collective bargaining coverage		Social Dialogue
	Employees - EEA (for countries with > 50 employees representing > 10% of total employees)	Employees - non-EEA (estimate for regions with > 50 employees representing > 10% of total employees)	Workplace Representation (EEA only) (for countries with > 50 employees representing > 10% of total employees)

	%	50.5%

** First and second level reporting to the administration and control bodies: for the Parent Company, Chief and First Levels; for Group Companies, the General Manager, if any.*

Adequate wages

In compliance with supervisory provisions, the remuneration structures for Group personnel may consist of a fixed and a variable component. Fixed remuneration, which is the main component of the economic value distributed to employees, is aligned to provisions of the NCBA for the sector and to company bargaining agreements in force from time to time.

Social protection

Employees with a subordinate employment relationship (Italy contract) with one of the companies of the Group are covered against the various cases of loss of employment income by the protections provided by Italian law. For the Parent Company and for Widiba Bank, the provisions of the National Collective Bargaining Agreement (CCNL) for the Credit Sector in Italy and of the MPS Supplementary Agreement also apply. For MPS Tenimenti and MPS Magazzini Generali Fiduciari, the regulations of the National Collective Bargaining Agreements adopted in those companies apply. More specifically, the following covers are provided for the Parent Company and Widiba:

- loss of income due to illness: salary and job preservation for increasing periods based on seniority, up to 36 months (Credit Sector CCNL), NASPI indemnity for 24 months following any dismissal (Italian Law), child/spouse recruitment in the case of premature death (MPS Supplementary Agreement);
- loss of income due to unemployment: NASPI indemnity for the 24 months following any dismissal (Italian Law);
- loss of income due to work injury and resulting disability: preservation of salary and job for increasing periods based on seniority, up to 36 months (Credit Sector CCNL), indemnified leave for disability (Italian law), benefits for approaching retirement (Italian law), NASPI (New Social Insurance Provision for Employment) indemnity for 24 months following dismissal (Italian law), insurance cover for permanent disability/death from accident (Italian law and MPS Supplementary Agreement), child/spouse recruitment in case of premature death (MPS Supplementary Agreement);
- loss of income due to parental leave: job preservation and indemnity for compulsory and optional leave (Italian Law), in addition to salary top-ups (Credit Sector CCNL);
- loss of income due to retirement: extraordinary income support allowance within 5 years of AGO (credit sector fund for post-employment benefits) pension entitlement, allowance according to AGO pension rules (Italian law), receipt of supplementary pension benefit (MPS Pension Funds / MPS Fund).

The following are the cases provided for by MPS Tenimenti and MPS Magazzini Generali Fiduciari:

- loss of income due to illness: preservation of salary and job for increasing periods according to seniority, indemnity for 12/24 months following possible dismissal (Italian law);
- loss of income due to unemployment: NASPI indemnity for the 12/24 months following any dismissal (Italian Law);
- loss of income due to work injury and resulting disability: preservation of salary and job for increasing periods based on seniority, indemnified leave for disability (Italian law), benefits for approaching retirement (Italian law), indemnity for 12/24 months following dismissal (Italian law), insurance cover for permanent disability/death from accident (Italian law);
- loss of income due to parental leave: job preservation and indemnity for compulsory and optional leave (Italian Law);
- loss of income due to retirement: allowance according to AGO pension rules (Italian law).

MPS Pension Funds

As part of the welfare system provided for by the Group, in relation to the loss of income due to retirement, the MPS Pension Fund and the MPS Welfare Fund have been introduced from 2020 as forms of supplementary pension system, with the possibility of membership also extended to the tax-dependent family members of Group employees. The allocation is based on ESG criteria and both funds have been signatories to the UNPRI Protocol (*Principles for Responsible Investment*).

Furthermore, in accordance with current regulations, both pension funds have approved and published documents on their websites containing information relating to disclosure of the commitment policy and policies incorporation of sustainability risks into the investment decision-making processes. The funds also define the monitoring methods and ESG reporting plan, for each segment envisaging quantitative analysis of the sustainability factors implemented by specific indicators for each aspect: environmental, social and governance.

In 2024, the funds completed the alignment with Law no. 220 of 9 December 2021 as amended following Law no. 122/2022, introducing the policy on measures to offset the financing of companies producing anti-personnel mines, cluster munitions and sub-munitions, in a capacity as qualified intermediaries. Furthermore, with reference to the MPS Pension Fund, in 2024 the strategic asset allocation adjustment activity continued, through planned investing in the private markets with investment instruments with strategies that explicitly integrate environmental and/or social considerations into investment management (Article 8 of the SFDR on sustainability-related disclosures in the financial services sector, that is part of the EU Action Plan for Sustainable Finance) and with products that target sustainable investments (Article 9 of the SFDR - on sustainability-related disclosures in the financial services sector, that is part of the EU Action Plan for Sustainable Finance).

Persons with disabilities

The share of own employees with disabilities is 6% (of which 52% men and 48% women).

In particular, these are workers hired in compliance with Law 68/1999 on the compulsory employment of disabled persons in Italy, for whom the assignment of tasks compatible with the worker's disability is envisaged.

The criteria that identify persons considered "disabled" under Law 68/1999 are set out in Article 1 of the Law. Each year, in compliance with the regulations in force, the Group checks, on the basis of the overall workforce, the number of disabled workers to be included and proceeds, normally in agreement with Employment Centres (Provincial Offices of the Ministry of Labour responsible for compulsory employment) to recruit disabled workers. There are also additional workers belonging to the "other Protected Categories" referred to in Law 68/1999, Article 18; these are workers for whom, although not disabled, a percentage of compulsory recruitment in companies is reserved (e.g. orphans of persons who died as a result of work, refugees).

Training and skills development metrics

Number and percentage of employees receiving a review

The tables reported below show the total number of employees who received a performance review broken down by gender and category.

Headcount and percentage figures are calculated on the basis of the total number of employees as at 31 December 2023 (reference year of the assessment). Each recipient of a review record is counted, according to the provisions of relevant internal rules, of the following Group companies: Parent Company, Widiba, MPS Fiduciaria, MPS Tenimenti and Magazzini Generali Fiduciari Mantova (MGFM).

Number of employees receiving performance reviews - breakdown by gender

	Reviewed		Not Reviewed		Total no.
Gender	**No.**	**%**	**No.**	**%**	
F	8,840	99.67%	29	0.33%	8,869
M	7,663	99.39%	47	0.61%	7,710
Total	**16,503**	**99.54%**	**76**	**0.46%**	

Number of employees receiving performance reviews - breakdown by category

	Reviewed		Not Reviewed		Total no.
Gender	**No.**	**%**	**No.**	**%**	
Executive managers	155	98.73%	2	1.27%	157
Middle Managers	6,013	99.87%	8	0.13%	6,021
Professional Areas (and other qualifications, including qualifications not included in the CCNL Credit Agreement)	10,335	99.37%	66	0.63%	10,401
Total	**16,503**	**99.54%**	**76**	**0.46%**	**16,579**

Average number of training hours

The tables below show the average number of training hours by gender and by employee category. The data were calculated by extracting the traces of training delivered from 1 January 2024 to 31 December 2024 and the list of all courses completed by each resource accessing the platform during the reference period. Subsequently, the training hours provided were allocated to each resource. Only the hours of the courses that each employee completed during the year are taken into account.

Average number of training hours by gender

Details requested	QL/QT	UoM	2024
Total average number of training hours per employee	QT	h	41.5
Average number of training hours per male employee	QT	h	41.1
Average number of training hours per female employee	QT	h	41.8

Average number of training hours by employee

Details requested	QL/QT	UoM	2024
Total average number of training hours per employee	QT	h	41.5
Average number of training hours provided to managers	QT	h	28.5
Average number of training hours provided to Middle managers	QT	h	42.1
Average number of training hours provided to office staff	QT	h	41.3

Note: For 2024, in addition to Banca MPS, Widiba and MPS Fiduciaria, this includes MPS Tenimenti and MGFM

The 3D Approach model also allowed for the following in 2024:

- a reduction in serious and very serious gaps in favour of slight and insignificant gaps;
- a reduction in the average number of hours per capita per year. Investment in "bespoke" training allows for an improvement in skills by targeting training time to real needs.

There was an increase in the number of resources with training hours in the 40-60 hour range.

Health and safety metrics

Workers covered by an occupational health and safety management system	2024
Number of employees covered by the health and safety management system (No.)	16,305
Percentage of employees covered by the health and safety management system (%)	97.48%

Note: the requested data on the total number of workers who are not employees, but whose work and/or place of work is controlled by the organisation is currently not available.
The calculation of the percentage was made by considering the ratio between the workers of the certified companies (BMPS and MGFM) and the total number of workers considered in the scope of the Annual Financial Statements.

Accidents in the workplace	2024
Total number of fatalities due to occupational accidents (No.).	**0**
Total number of serious accidents at work (excluding fatalities) (No.)	0
Total number of recordable accidents in the workplace (No.)	**53**
Hours worked (No.)	24,737,728
Rate of fatalities due to occupational accidents	0
Rate of serious accidents at work (excluding fatalities)	0
Rate of recordable accidents in the workplace	2.14
Accidents to/from workplace	92
Tasso di infortuni in itinere	3,72

Note: the requested data on the total number of workers who are not employees, but whose work and/or place of work is controlled by the organisation is currently not available.

Occupational illness	2024
Number of employees with occupational illness (No.)	**0**
Total number of recordable cases of occupational illness	0
of which fatalities caused by occupational illness	0
number of days lost due to work-related injuries, and fatalities work-related illnesses and fatalities resulting from illnesses	0

Note: the requested data on the total number of workers who are not employees, but whose work and/or place of work is controlled by the organisation is currently not available.

Work-life balance metrics

The Group is committed to welfare policies, which aim to create value for people and improve the corporate climate: every aspect of welfare in the Group is aimed at supporting colleagues and their families in financial, social and work/life balance terms, contributing to the increase in satisfaction, wellbeing, loyalty and productivity.

Welfare plays a central role in Level II bargaining, with talks on renewal continuing in 2024, as is a point of reference for all colleagues, thanks to ongoing dialogue with the Trade Unions. This model was also extended to personnel making recourse to the sector Solidarity Fund and for the entire period of such recourse.

Though within a framework of overall financial compatibility and sustainability, internal welfare has been supplemented over time with assets and services that meet the changing needs of employees, retired personnel and their families (currently over 50,000 individuals). The benefits are payable to all employees, for all contract types, regardless of working hours (part-time or full-time).

All company employees are entitled to family leave. When returning from parental leave, job preservation is fully guaranteed. Furthermore, note that parental leave may be taken for children up to the age of 12, in accordance with laws in force.

During 2024, a total of 1,452 employees (or 28% of eligible staff) took parental leave, of whom 325 were men (or 14% of eligible men) and 1,127 women (or 37% of eligible women). The return to work rate after maternity/paternity leave was around 94%, and those still in service 12 months after the parental leave was around 98%[44] (99% for women, 98% for men).

Remuneration metrics (pay gap and total remuneration)

The Group pays special attention to the issue of gender pay equality at all levels. The gender pay gap is defined as the difference between the average hourly wage levels paid to female and male workers for the same work. For 2024, the percentage delta between the average gross hourly wage of male employees and the average gross hourly wage of female employees corresponded to 11.35%.

This ratio was also broken down by type of classification: executives, middle managers and white-collar workers and amounted to 14.80%, 6.82% and -0.91% respectively.

This objective approach to the weighting of positions helps to ensure that the remuneration policy is gender neutral and makes it possible to pursue equal pay, as evidenced by the narrowing of the gender pay gap in the Group recorded in recent years.

In addition, the Group adopts specific measures and mitigating actions aimed at promoting gender balance and equal pay for equal work, equal experience and the other objective elements required by the EBA Guidelines (Equal Pay).

To determine the gross hourly remuneration, the value of the gross annual total remuneration (Gross ATR) was used[45], neutralising the distorting effect of more women in part-time work, and dividing the resulting value by the theoretical value of the hours worked in the year, equal to 1,554.

For 2024, the Total Remuneration rate calculated as the ratio of gross annual total Remuneration of the person with the highest salary to the median of the Gross ATR of the remaining employees (excluding the aforementioned person) was 8.97.

Incidents, complaints and severe human rights impacts

There is no evidence of lawsuits and/or extrajudicial proceedings concerning incidents of violations by workforce of their gender equality rights (compared to eight reports on “harassment in the workplace”). More generally, the absence of judicial and/or extrajudicial applications on the subject of serious human rights incidents is confirmed.

44 The percentage below 100% is due to voluntary resignations from service.

45 Theoretical gross Annual Total Remuneration (ATR) as at 31 December 2024 + the tax value of Fringe benefits for housing and cars granted to employees + the company share of payments to the supplementary pension fund + the company contribution of all existing insurance cover in favour of employees + the variable remuneration paid in 2024 - Incentive Schemes and Company Bonus - regarding performance in 2023. The theoretical gross ATR was calculated by including: the basic wage, equal to the sum of guaranteed, short-term, non-variable cash remuneration (seniority pay increases, personal salary scale reviews and provisions arising from National Collective Bargaining Agreements and from Supplementary Company Agreements, past and present) and all other recurring cash benefits such as allowances linked to the employee’s role/position/discomfort and covenants linked to permanence/stability/non-competition of the employment relationship, items that cannot be revoked at the company’s discretion, and therefore forming part of the basic wage paid to the employee.

Workers in the value chain

[ESRS S2]

This section provides, in relation to the management of "workers in the value chain", a description of the impacts found to be material from the double materiality analysis. Next, the section describes the policies and actions taken to manage the issue, to mitigate negative impacts, and the processes through which it monitors the effectiveness of its policies and actions. It also illustrates the channels through which workers in the value chain can express their concerns.

Impacts, Risks and Opportunities

The process of mapping impacts, risks and opportunities with reference to the standard in question includes the specificities related to the Group's operational and commercial activities, including the analysis of internal policies, public documentation and the identification of initiatives taken to protect employees in the value chain (e.g. selection of suppliers according to social sustainability criteria). Interaction with the Group's upstream and downstream value chain actors could indeed lead to impacts on their workforce, related, for instance, to working hours and work-life balance. On the basis of the analyses performed, the following were material:

- **Negative impacts** with reference to the Upstream Value Chain perimeter related to the potential inadequacy of safeguards to ensure adequate working conditions with reference to work stability, working hours, wage adequacy, social dialogue and work-life balance;
- **Positive impacts** pertaining to the Upstream Value Chain perimeter related to the existence of corporate practices and strategies aimed at safeguarding the health and safety and privacy of workers in the value chain and preventing incidents of child and forced labour.

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
S2 Workers in the value chain	Working conditions*			
	Other labor-related rights**			

Relevant scope Our operations | Impact positive/negative | Relevant scope Upstream Value Chain | Relevant scope Downstream Value Chain

** The topics pertaining to the following sub-sub-topics are included in the "Working Conditions" sub-topic: secure employment, working hours, adequate wages, social dialogue, freedom of association including the existence of works councils, work-life balance, health and safety.*
*** The sub-topic "Other labour-related rights", issues related to the following sub-sub-topics: child labour, forced labour, privacy.*

Policies, Actions and Targets on workers in the value chain

The process of mapping impacts, risks and opportunities in relation to workers in the upstream and downstream value chain resulted in the identification of material impacts in relation to the upstream value chain only. Therefore, with regard to the topics “working conditions” and “other work-related rights”, the following paragraphs describe policies, actions and targets defined by the Group associated with the workforce belonging to the upstream value chain.

Working conditions and other labour-related rights

Issues related to the upstream value chain, working conditions and other labour-related rights are covered in this section.

Policies

The Group’s Code of Ethics is the document that governs the guiding principles, values and rules of conduct that complement the legal and regulatory obligations for workers in the upstream value chain. The Group is committed to fostering the adoption of the same among its subsidiaries, associates, business partners, consultants and collaborators in order to guide behaviour based on ethical and professional standards.

This document reflects the Group’s commitment to structuring relations with its suppliers based on fairness and transparency. Transparency, cooperation, fairness and integrity are also promoted, avoiding situations of conflict of interest or unlawful behaviour.

Application of the Code is ensured through the internal control system, which is an essential element of the overall governance system of a company. More specifically, suppliers are sensitised to providing their services in line with standards of conduct consistent with those indicated in the Code of Ethics. In fact, on the basis of contracts and general purchasing conditions, suppliers are required to expressly accept, by means of a specific form, the declaration of commitment not to engage in behaviour that conflicts with the provisions of the Group’s Code of Ethics. Therefore, suppliers, in compliance with their contractual purchasing conditions, are directed to respect the rights of their workers and the responsible handling of any resulting social criteria. The Group also undertakes to respect the United Nations Universal Declaration of Human Rights, promoting the protection of human rights, including the principles on Child Labour and Forced Labour.

For more details on the Group’s Code of Ethics, please refer to the section “Policies, Actions and Targets on Business Conduct” in “Section 4 - Governance Information”.

The Group also respects, in its relations with upstream value chain actors, the dictates of the Organisation, Management and Control Model for the prevention of offences pursuant to Legislative Decree 231/01, which lays down strict rules of conduct to be observed in the selection of the supply chain. The Group is also committed to selecting its suppliers by considering occupational health and safety related aspects and promoting joint initiatives for management and the resolution of any risk situations with a view to mutual cooperation. It is also committed to adopting a procurement policy that protects the health and safety of workers, the environment and people in general. Working conditions are also safeguarded by Group MPS’s Occupational Health and Safety Policy and the Group’s Sustainability and ESG Policy.

The constant involvement of suppliers, in order to ensure the protection of their interests, takes place through the Stakeholder Management process overseen by the Purchasing Department. For more details on stakeholder engagement, please refer to “Section 1 - General Information” of this document on the “Stakeholder Engagement” process.

To date, no cases of non-compliance with the UN Guiding Principles, the ILO Declaration or the OECD Guidelines with regard to workers in the upstream value chain have been detected at Group level.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Directive on the management of regulatory obligations relating to Italian Legislative Decree 231/2001 on administrative liability	The Directive defines the 231 Model adopted by the Group, understood as a set of ethical and operational rules suitable for preventing the relevant offences pursuant to the aforementioned Legislative Decree 231/2001.	The Directive is addressed to the Parent Company and the other companies of the Group.	It has been approved by the Board of Directors.	The Document was drafted to update the Organisational Model for the prevention of risks pursuant to Legislative Decree 231/2001 ('Discipline of the administrative liability of legal persons, companies and associations, including those without legal personality').	It is available in the Sustainability section of the Group's corporate website.
Health and Safety Policy of Banca Monte dei Paschi di Siena S.p.A.	The Policy defines objectives in this regard, including a commitment to: - prevent accidents and illness; - continuously improve health and safety management and performance; - communicate its guiding principles to its stakeholders; - comply with applicable legal requirements and other requirements that the company decides to enter into; The Policy also provides the framework for setting and reviewing health and safety objectives.	The Policy applies to the Parent Company and all Group Companies.	The Policy has been approved by the Parent Company's Board of Directors. The responsibility for guiding the implementation of the Safety Policy lies with Top Management and all the Parent Company's Management.	The policy is implemented in compliance with national and EU legislation on health and safety in the workplace, as well as with the UNI ISO 45001 standard (which replaces the OHSAS 18001 standard as from March 2021), whose principles are of primary reference for the general objectives of company management.	A summary is available in the Sustainability section of the Group's corporate website and in the Suppliers Register. It is also available to all employees on the corporate intranet site.
Group Policy on Sustainability and ESG	The Policy defines the organisational model adopted by the Group to address the integration of sustainability principles along the three lines of environmental, social and governance (ESG) in the definition of the strategy, business model and corporate policies pursued in the conduct of its business. In particular, the document defines the principles, guidelines and relevant sustainability issues that are identified, implemented and monitored in order to respond to all stakeholders. The Policy, which concerns social sustainability matters, sets out the general criteria, guidelines and measures for monitoring the direct and indirect social impact of the Group's activities by identifying performance and risk indicators in the areas of social impact of greatest materiality to the Group, its employees and the value chain, as well as encouraging stakeholders engagement in order to understand their expectations and reflect these within the business strategy.	The Policy is addressed to the Parent Company and all Group Companies.	The Policy is subject to approval by the Board of Directors, following the opinion of the relevant Board Committees and the Executive Committee. The implementation of the Directive must be notified to the following units and Functions of the Parent Company: - units to which the individual company reports; - Business Owner units referring to the process: Chief Financial Officer and Sustainability and ESG Staff; - Organisation Function.	The Policy, in the area of product development and distribution, are implemented in coherence with: - Insurance Distribution Directive (hereinafter also 'IDD'); - Directive (EU) No. 2016/97; - EU Delegated Directive 2021/1269 (hereinafter also MiFID 2 ESG).	It is available in the Sustainability section of the Group's corporate website.

Actions

The following initiatives involve the majority of the Group's suppliers and external service providers, including professionals, companies and foreign businesses, and are part of the Group's normal practice regarding the management of supply relationships. It should also be noted that the material impacts identified in the double materiality analysis are potential, therefore, to date, the Group has not had to intervene to remedy any actual negative impacts.

The Group is committed to adopting standards of supplier selection and management in order to encourage compliance with social and human rights criteria throughout the supply chain. Suppliers are selected based on an assessment process that, in the pre-selection, award and supply contract finalisation stage and through specific questions, explicitly assesses compliance with regulations on labour law, National Collective Labour Agreement application, payment of contributions (DURC) as certified by the Single Document of Contribution Regularity (hereinafter also DURC) the possession of ESG certification of the counterparty. Furthermore during the registration phase, the acquisition of documents concerning the 231 model Compliance Statement (with references to anti-corruption legislation) and anti-mafia legislation is required, with specific questions on certification and the Code of Ethics. The provisions of the Code of Ethics that the counterparty may have must not conflict with the provisions of the Group Code of Ethics.

The 231 Model of the Group, which generally oversees relations with partners, does not allow relations with suppliers unless they declare and guarantee that they know and will comply with Legislative Decree 231/2001. For specific product categories, where protecting workers' physical wellbeing and moral character is of key importance, the commitment focuses strongly on examining the supplier's economic and financial conditions and the level of protection for workers. To achieve this, investigative tools are used to check that authorisations and permits have been issued, prevention and safety measures have been adopted and specialised training has been provided. The individual suppliers are informed of the Group anti-corruption policies and procedures, covering 100% of suppliers with which it has commercial relations.

At the same time, at Group level, checks are conducted on an annual basis to verify any updates in the documentation that the supplier counterparty has made available to the Group regarding its social sustainability. This process makes it possible to monitor whether suppliers have not met their obligations at the time of registration in the Group's Suppliers Register. In addition, if a new lawyer is appointed, she/he must sign contractual documentation. The Group has identified the Purchasing Department as the function dedicated, on a priority basis, to collecting the documentation and verifying the existence of supplier requisites, for the purpose of registration in the Group's Supplier Register.

Verification activities are carried out by the Control functions concerning the extent and compliance of the data protection programmes used by the Group's suppliers and business partners. Moreover, data protection is also ensured in contractual arrangements or cooperation agreements with third parties by envisaging specific clauses that identify the privacy roles accepted by each party.

Based on the analyses carried out by the functions involved, no serious human rights problems or incidents in the upstream value chain have been reported to date.

Objectives

The Group has not, to date, defined any specific targets to deal with the issue of value chain workers.

However, the effectiveness of the policies and actions adopted in this regard is ensured through the monitoring of specific indicators in order to ensure supply chain management aimed at respecting the principles of social and environmental sustainability. In this regard, a the verification, in the years following those of the first contractualisation, of the existence of the requisites for registration in the Group's Supplier Register, as well as the controls carried out by the Control and Internal Audit functions, guarantee the effectiveness of the policies and actions undertaken by the Group to protect the rights of workers in the upstream value chain and to pursue the development of relations with suppliers marked by respect for the human rights of their workers.

During 2024, 100% of the new suppliers (114 in total) were assessed according to environmental criteria, in accordance with international standards. The verification activity described is carried out continuously in relation to each new supplier.

The adoption of specific targets to deal with this issue will be evaluated in the future to ensure continuous improvement of the Group's commitment to workers in the value chain.

Process of involving workers in the value chain on impacts

Although the Group does not have a formalised process for involving suppliers' workers, either directly or through representatives, it does believe that the requirements assessed when signing contracts with suppliers make it indirectly possible to assess respect for the rights of the suppliers' workers.

In particular, in the supplier evaluation stage, a questionnaire is submitted, with answers where the supplier with certification is given a score. Suppliers with certification obtain scores that also carry more weight in the selection process for the award of the supply/service.

In the registration stage, all suppliers are also asked to self-certify the adoption (where applicable) of national/regional collective agreements.

Processes to remediate negative impacts and channels for workers in the value chain to raise concerns

In order to prevent and/or remedy the concerns of workers in the value chain, the Group provides channels of free access also to external parties, such as the Whistleblowing system. This system helps control and prevent the risks that the Group may face due to facts and actions that are contrary to external rules, company regulations, internal procedures and its Code of Ethics contributing to the implementation of sustainability policies, promoting integrity and fairness.

Moreover, access is through institutional channels, and therefore the system may also be accessed by any employees or staff not only of the Group, such as employees belonging to companies that provide goods or services or perform work for third parties and perform or have performed their work for the Group. For more details on the effectiveness of the Whistleblowing system, as well as on the safeguards and protection measures for whistleblowers, please refer to the section "Protection of Whistleblowers" within Section 4 - Governance Information of this document.

Affected communities

[*ESRS S3*]

This section provides, in relation to the management of "affected communities", a description of the impacts, risks and opportunities found to be material from the double materiality analysis. Next, the section outlines the policies and actions taken to manage the theme and seize material opportunities, and the processes through which it monitors the effectiveness of its policies and actions related to material impacts and opportunities related to the theme.

Impacts, Risks and Opportunities

The process to map impacts, risks and opportunities with reference to this standard includes the specific aspects related to the Group's operations. In fact, several initiatives aimed at protecting the communities of reference are underway and planned, which could generate positive impacts on them. These impacts relate, for example, to cultural, scientific, social and environmental initiatives, work orientation activities and collaborations with local institutions for the sustainable growth of productive fabrics. Interaction with communities could also entail opportunities for the Group related to the provision of financing to support companies belonging to the national production fabric.

The mapping process included the analysis of the Group's internal and public documentation and the identification of initiatives taken to protect communities (e.g. support to the agri-food sector) that could be materially impacted by the Group. On the basis of the analyses performed, the following were material:

- **Positive impacts** with reference to the Own Operations perimeter related to the support to communities through initiatives aimed at protecting and enhancing the territory in which they reside from an urban, cultural and youth employability point of view, and with reference to the Downstream Value Chain perimeter for the actions undertaken to support employability in some key sectors at a national level;
- **Opportunities** related to the Downstream Value Chain perimeter related to the expansion of the range of products and services aimed at supporting companies operating in key sectors for the national economy.

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
S3 Affected communities	Territorial Impact			

Relevant scope Our operations · Impact positive/negative · Relevant scope Upstream Value Chain · Relevant scope Downstream Value Chain

Policies, actions and targets defined by the Group in relation to territory-related impacts are described in the following paragraphs.

Policies, Actions and Targets related to the affected communities

Territory-related impacts

This paragraph relates to the issues concerning the **impacts linked to the territory**, with reference to the policies, processes and safeguards defined by the Group in order to guarantee support to the reference communities from an urban, cultural and youth employability point of view and in some specific sectors of the economy.

Policies

The Group pursues the social and environmental development of the community in which it operates by means of professional development and through professional orientation events, the promotion of events relating to financial education, support for weaker categories and the enhancement of the artistic heritage (banking and national). Effective oversight of the way existing and planned actions are planned and implemented is ensured by the relevant policies.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Directive on Communication and External Affairs	The Directive defines guidelines and responsibilities for the governance of external communication through the Strategic Communication Plan, which details the activities of media relations and social media communication, advertising and corporate image, events, sponsorship and heritage, developing themes and methods of intervention. In particular, the Plan deals with external communication initiatives aimed at enhancing the Group's image (e.g. to give adequate visibility to events with territorial resonance, inaugurations, initiatives in support of local communities and/or on the occasion of special circumstances) for which specific authorisation procedures are envisaged.	The Directive constitutes the guiding document for the Group to define the individual initiatives in the different areas.	The External Communication, Institutional Relations and Sustainability function, in line with the communication and budget strategies approved by the Board of Directors, drafts and submits the Communication Plan to the Steering Committee for subsequent approval by the Board of Directors.	The Directive has been updated to ensure greater conformity and compliance with the current legal and regulatory provisions of Legislative Decree 39 of 27/01/2010, which was followed by ABI Circular No. 15 of 25/06/2010 on the statutory audit of accounts. It is also fully aligned with Bank of Italy Circular 285/2013, having assigned the Board of Directors the supervision of the public information and communication process.	Available to all employees on the corporate intranet.
Historical archive management	The document regulates in detail the requirements inherent in the: - production of documents of historical interest; - the archiving of these documents in the repository; - the transfer to the historical archive, at the end of preservation in the repository.	The document is addressed to the Bank.	The Archives are subject to supervision by the Archival Superintendency for Tuscany, with whose cooperation the *Maximum Preservation Schedule of the documentation produced by Banca Monte dei Paschi di Siena* was prepared, approved by the Bank's Board of Directors and the competent Ministry. The Historical Heritage function governs the Historical Archive and the supply of documents of historical interest identified by the *Maximum Preservation Schedule*.	The document is structured in accordance with the Code of Cultural Heritage and Landscape (Legislative Decree 42/2004). The document also lays down rules to prevent an entity from being held liable under Legislative Decree 231/2001 for offences against cultural heritage introduced by Law 22/2022, such as money laundering or looting of cultural property.	Available to all employees on the corporate intranet.
Artistic Heritage Management	This document regulates in detail the fulfilments inherent to the **Management of the Bank's Artistic Heritage**, understood for the purposes of this document with limited and exclusive reference only to movable assets that, according to the definition of Article 10, paragraph 3, letter a) of Legislative Decree 42/2004, are of particularly important artistic, historical, archaeological or ethno-anthropological interest.	The document applies to the Bank.	In compliance with the regulations in force, the Historical and Artistic Heritage function is in charge of cataloguing, preserving, enhancing and protecting the Bank's artistic heritage.	The document is structured in accordance with the Italian Constitution and Legislative Decree no. 42 of 22 January 2004, "Code of Cultural and Landscape Heritage" (hereinafter referred to as Legislative Decree 42/2004).	Available to all employees on the corporate intranet.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Management of Sponsorships and Fundraising	The document regulates in detail the activities related to sponsoring and fundraising initiatives.	The document is intended for the Group, except for Widiba, which operates autonomously.	Sponsorship can be of a commercial or institutional nature: - commercial sponsorships require validation by the competent Business Function per market and are subject to a prior and final verification process to appreciate their actual commercial and visibility results; - Institutional sponsorships are visibility and prestige initiatives, directly overseen by top management.	The document is drafted in line with the main regulations and practices in force.	Available to all employees on the corporate intranet.
Group Policy on Sustainability and ESG	The Policy defines the organisational model adopted by the Group to address the integration of sustainability principles along the three lines of environmental, social and governance (ESG) in the definition of the strategy, business model and corporate policies pursued in the conduct of its business. In particular, the document defines the principles, guidelines and relevant sustainability issues that are identified, implemented and monitored in order to respond to all stakeholders. It describes the Group's commitment to empower territories both economically and socially through products, services and initiatives with a view to supporting the business fabric, developing the local community and benefiting individuals, families and small businesses by ensuring social inclusion and access. This is an area in which the Group has always been locally active by promoting initiatives for discussion and dialogue with customers and communities with a view to building and consolidating relationships of trust between the Bank and its customers. This local community development occurs by means of initiatives promoting career guidance, support for young people in their search for work, appreciating of artistic heritage and culture, and financial education.		Group Policy on Sustainability and ESG.	The Policy defines the organisational model adopted by the Group to address the integration of sustainability principles along the three lines of environmental, social and governance (ESG) in the definition of the strategy, business model and corporate policies pursued in the conduct of its business.	

Actions

This section reports the main actions taken by the Group to manage land-related impacts, mainly related to: vocational guidance of school and university students, support for the agri-food world characterising the area in which the Group operates, and the promotion of cultural initiatives aimed at spreading knowledge in the art world.

MPS Orienta

In 2024, in line with previous years, the Group also implemented the MPS Orienta programme, focusing on career guidance, the development of soft skills, financial education and, in general, relations with schools and universities.

The initiatives aim to promote employer branding, strengthen the link between education and the world of work, support the country's economic and social development, contribute to sustainable growth strategies and strengthen relations with customers and the area in which the Group operates.

The main initiatives of the MPS Orienta programme in 2024 include:

- Conventions and framework agreements with universities, masters and specialisation schools throughout the country: these arrangements allow young graduates or undergraduates to carry out curricular and non-curricular internships in specialist functions consistent with their studies;
- Traineeships with the Group: 40 traineeships in specialised facilities were activated in 2024, with an average duration of 6 months, some of which ended with employment;
- Career days: the Group participated in the 2 career days organised by the University of Siena with job orientation interviews and presentation of open internship positions;
- Arrangements for employees and their family members: An arrangement targeting Group employees and their family members has been signed with Unitelma (the online university of La Sapienza, Rome) for subsidised enrolment in online graduate and post-graduate courses. Since the signing of the agreement in 2020 and its renewal for the two-year period 2025-26, 43 enrolments in undergraduate courses and 184 enrolments in Level I and II post-graduate courses have been recorded.

The Group and support for the agri-food business

In order to support the agri-food component of the reality in which it operates, also in 2024 the Group set the objective of specialising its products and services to support the sustainability of the community and businesses, with made-to-measure financial services and constant strategic support, through a network of specialised centres in Italy's main agrifood districts.

In this context, the Group continued to promote MPS AgriDOP, a project designed to support companies in the ecological transition, through the development of dedicated services and products, with a special focus on companies operating in the "DOP Economy" sector[46]. The initiative is based on a long-term strategy to support production chains and protection consortia oriented towards the valorisation of PDO or PGI products and organic or environmental certification (e.g. ecological transition, launch of the European Green Deal programme aimed at achieving technological innovation and a circular, efficient and sustainable economy).

The network, designed to support and work alongside agricultural business owners (and likewise craftsmen, traders and tourism operators in the agrifood supply chain) in choosing financing, has expanded from 15 to 21 Agrifood Centres located throughout Italy in the strongest agricultural areas, with specialised advisors and a distinctive product mix (from financing to protection policies).

In addition to taking a series of specific actions to support target companies by activating and developing ad hoc initiatives and campaigns, the Centres play a proactive and advisory role in identifying and analysing the subsidy measures available in the area of competence, favouring the development of projects that have a positive impact on business development. Support from sector experts and solutions are also offered to guide companies towards a development process characterised by innovation, digitalisation and sustainability, which are central elements of the NRRP, are also offered.

The year 2024 also saw the Parent Company's participation in events and the collaborations with important partners, including sponsorship of the Guida Oli d'Italia 2024 promoted by Gambero Rosso, participation in the Vinitaly event in April and the "Stati Generali dell'olivicoltura nazionale ed internazionale" (States General of National and International Olive Growing) event, the latter organised by the Ministry of Agricultural, Food and Forestry Policies MASAF, and participation in Divinazione Expo (21-29 September), within which the G7 Agricoltura (Agriculture G7) took place.

46 Segment of the production and processing of agricultural products for food with geographical indications, which constitutes an important part of the national agri-food value.

In addition to collaboration and participation in dedicated events, the Group has undertaken initiatives to support the productive fabric in terms of access to credit and services. In this context, the product dedicated to olive-growing, called "Finanziamento Impiantolivo" with a direct Ismea guarantee was released in early July 2024 to finance farms that intend to build, restore or renovate olive-growing facilities and/or construct farm mills including bottling plants. In addition, important memoranda were signed:

- Memorandum of Understanding with Assocamerestero: the Joint Committee to set up the operational plan was established, and regular meetings and operational sessions were organised to give impetus to the agreement;
- Memorandum of Understanding with the Ministry of Agriculture on food sovereignty and forestry;
- Memorandum of Understanding with the Region of Sicily - Department of Agriculture;
- Credit mediation agreement with Simec;
- Collaboration agreement with Coldiretti / CIB (Italian Biogas Consortium).

The Group has also adhered to the agreements signed between the Ministry of Agriculture, Food Sovereignty and Forestry (MASAF) and Cassa Depositi e Prestiti (CDP), concerning the financing of projects to support investments in the agri-food business. In particular, the Ministry signed agreements governing relations with authorities for the implementation and management of subsidised finance. Through these agreements, special Tenders (IV and V) were launched for "Supply Chain Agreements", which through public and private financial support are expected to promote reorganisation processes in relations between operators in the Agri-food chain and Agri-energy chain. In 2024, loan extensions resolved in connection with the 4th Call for Proposals and new resolutions in connection with the 5th Call for Proposals totalled 198 for about EUR 124 mln in total granted, while there were 47 stipulations concerning the 4th Call for Proposals in the year for about EUR 31 mln. Geographically, 68% of beneficiaries are situated in the South and supported by 41% of granted resources, while 18% of beneficiaries are located in central Italy, receiving 20% of contributions. Finally, the 15% of beneficiaries in the North were financed with 39% of resources, in accordance with the table below:

GEOGRAPHIC AREAS	% DISTRIBUTION	
	No. BENEF.	AMOUNT
SOUTH	68%	41%
NORTH	15%	39%
CENTRE	18%	20%

In this context, the path towards strengthening the number of agreements with protection consortia and producer organisations continued. these make it possible to determine in better detail the specific financial aspects of the producing companies related to each individual specification. In 2024, 23 bank relationships were started with PDO and PGI consortia, facilitating the activation of approximately 1,900 relationships with members/consortium members.

Other initiatives to support communities

Tourism

To support businesses and development investments in tourism, the Group has signed up to the ABI, CDP and Ministry of Tourism Agreement to promote the Fondo Rotativo Imprese [Business Revolving Fund] with the aim of encouraging energy requalification, environmental sustainability and digital innovation in the tourism sector. The incentive is aimed at improving hospitality services and upgrading accommodation facilities in terms of digitisation and environmental sustainability (50% of funds are earmarked for energy upgrades). In 2024, 11 initiatives were financed and 4 more in the first 2 months of 2025 for a total investment of more than EUR 41 mln.

The Group and the support for green energy

To encourage investments in production facilities or processes that, through the use of renewable sources, allow for the reduction of energy consumption or the pursuit of energy autonomy, the Group has activated a new business line with a specific brand, MPS Energia Verde, with which it intends to support businesses and families in their transition process, making dedicated and flexible products and solutions available to customers, as well as specialist consultancy and a network with specialised partners. In particular, the Group intends to encourage the construction of energy production plants from renewable sources, with the support of specialists able to provide detailed advice on the functioning of the measures to support the energy supply chain, including through customer support aimed at accessing the incentives provided by the NRRP, especially with regard to:

- Transition 5.0, which supports the digital and energy transformation process of companies;
- CER, which stimulates the creation and development of Renewable Energy Communities;
- Agrivoltaic, which promotes hybrid agriculture-energy systems through non-repayable grants and incentive tariffs for electricity fed into the grid;
- Biomethane, which supports investments to build new biomethane production plants and for the total or partial reconversion of existing biogas plants powered by agricultural or agro-industrial biomass;
- Support for self-production, to encourage the self-production of energy from renewable sources in Italy;

The initiative involved the opening of 15 MPS Energia Verde centers located throughout Italy, where specialized resources operate who have access to a network of contacts with associations and experts in the sector, also coming from the academic world.

Art and culture for the Group

The strategies adopted are also aimed at promoting cultural initiatives as an element of the Group's identity. In 2024, the main lines of action in this area concerned the conservation and enhancement of the Group's historical and artistic heritage in order to meet two fundamental needs: conserve assets for future generations and promote cultural enjoyment and the dissemination of knowledge. Activities related to policies to enhance heritage are developed in a manner compatible with protection, without compromising conservation requirements. The Group's heritage, which has stratified over time, consists of the art collection, divided into various collection nuclei, and the Historical Archive[47].

As regards conservation and restoration, the Group ensures careful, constant oversight of the works in the collection, regularly monitoring their conservation conditions, as well as security aspects - to prevent possible risks of damage and maintain their integrity. In addition, maintenance and restoration work is carried out annually on items that require specific attention. This work is planned in agreement with local Superintendence Offices for the Fine Arts. During the year, work was carried out on 139 artefacts, including 110 paintings, 24 sculptures and 5 ceramic and bronze plates. The restorers were selected from the List of Professional Restorers of Cultural Heritage pursuant to Article 182, Italian Legislative Decree 42/2004, depending on the kind of asset being restored.

The Group, through its participation in the Cultural Relations working group of the Italian Banking Association (ABI), identifies the cultural strategies to be pursued, shared by all banking institutions. In this context, the Group ensures that book and archive materials can be consulted. In addition, in order to promote public enjoyment, free usage contracts have been signed with cultural bodies and institutions, which allow for a wider opening to the community through projects that enrich the local and national cultural offering. In 2024, more than 130 works of art were lent as part of 12 temporary exhibitions in Italy and abroad. As for consultations for study and research activities, in 2024 there were 20 accesses to the Historical Archive.

Free use of the works was also renewed at the Casa Buonarroti Foundation, Florence, and the Municipality of Casole d'Elsa. During the year, a free loan agreement was entered into with the Museum Complex of Palazzo Ducale di Mantua, concerning the Gonzaga collection of coins and medals (consisting of 2,184 items), for exhibition purposes in the Rustica rooms of Palazzo Ducale, to bring greater value to the local area.

Objectives

The Group has not currently defined specific measurable objectives to manage the issue that has been found to be material with reference to the affected communities, but it does monitor the policies and actions in relation to the impacts on the territory by assessing the performance of specific indicators linked to the proposed initiatives. For example, as part of MPS Orienta, the Group annually notes the number of internships activated and the number of participants in career day initiatives.

The adoption of specific targets to deal with this issue will be evaluated in the future to ensure continuous improvement of the Group's commitment to the affected communities.

47 The Bank's Historical Archive has been recognised by the Ministry of Cultural and Environmental Heritage (deed no. 685 of 7 April 1997) as a "Private Archive of notable historical interest" and is therefore subject to the constraints, obligations and administrative responsibilities of keeping it in order and proper preservation that derive from it.

Processes for engaging with affected communities about impacts

The Group's business model seeks to enhance the needs of customers and small and medium-sized enterprises rooted in the territory by listening to their needs in order to identify new opportunities and community needs. The Group recognises the importance of the point of view of the affected communities, promoting structured interaction with associations, bodies, institutions and players in the civil economy, operating in the area. In particular, through dialogue with the community and territories, the Group seeks to share its artistic heritage and knowledge.

The focus on communication with and involvement of the target communities is directly implemented through events and sponsorships as tools for dialogue and discussion with stakeholders. Through such initiatives, the institute aims to forge solid and transparent relationships, encouraging the participation and involvement of all local stakeholders.

This commitment translates into a regulated and formalised approach, seeking consistency and clarity in communication activities, governed by the Group Communication and External Relations Directive. In particular, the Group's external communication is overseen by the External Communication, Institutional Relations Department, through:

- the definition of policies, criteria, rules and the planning of communication initiative (opportunities, priorities, etc.);
- the direct implementation of communication initiatives or the monitoring and control of measures implemented directly by Group companies within the limits of granted powers;
- the planning and holding of conferences (congresses, seminars, openings) and exhibitions and fairs.

In addition, the "Media Relations, Events and Sponsoring" function coordinates and supervises any activities delegated to the relevant Group functions. In particular, the functions of the Group companies involved in the conception and/or planning of an engagement initiative are required to report the related data of the intervention itself to the above-mentioned function. This reporting must be carried out from the time when the initiative is proposed and, for events planned by external parties, from the time when they become aware of it, in order to allow for an accurate assessment of the initiative by the Functions in charge of this area.

The Group is also committed to supporting the most vulnerable and marginalised communities, through specific actions to listen and respond to their needs. Through support programmes, the Group stimulates youth employability and supports strategic sectors such as agribusiness and tourism.

The Group's commitment to community rights

The Group pursues the creation of value for all significant stakeholders through a sustainable development model aimed at the growth of its customers and the territory in which it operates.

The Group seeks the promotion, development of economic well-being and the quality of the social contexts in which it operates by supporting programmes to protect communities and territories. More specifically, we report:

- contributions to cultural, scientific, social and environmental initiatives;
- work orientation and financial education activities;
- products and services for the most vulnerable and needy groups and individuals in society;
- partnerships with local institutions for the sustainable growth of the production chain, and for the development
- of wellbeing and the health of the social context.

The reference policy is the Group's Code of Ethics, which set forth the commitment to comply with internal rules and procedures, external codes and agreements, including international ones, to which it adheres, contractual provisions and legal and regulatory obligations in force in every geographical context and sphere of activity in which it operates.

The principles of the Code apply to the Group's activities and concern all actions dedicated to local areas, the environment and the community. For further details on the Code of Ethics and alignment with international standards and initiatives, see the "Business conduct" chapter of "Section 4 - Information on Governance".

Consumers and end-users

[ESRS S4]

This section provides, in relation to the management of "consumers and end-users", a description of the impacts, risks and opportunities found to be material from the double materiality analysis. Below, the section outlines the policies and actions taken to manage the issue, to mitigate risks and negative impacts, to seize material opportunities, and the targets set to monitor the effectiveness of the actions. It also explains the general processes for engaging consumers and/or end-users and their representatives on identified impacts that affect them, as well as the mechanisms for remedying negative impacts and the channels through which they can voice their concerns.

Impacts, Risks and Opportunities

The process to map impacts, risks and opportunities with reference to this standard includes the specific aspects related to the Group's operational and commercial activities. As a financial institution, the Group offers a wide range of financial products and services that could impact consumers and end-users as customers. These impacts relate, for example, to the issues of data protection, accessibility of financial services and inclusion. Interaction with customers and end-users of our products and services may, on the other hand, also entail risks, such as risks related to the potential breach of information systems resulting in the loss of sensitive data and reputational impacts. Finally, this interaction can also generate opportunities for the Group, e.g. by increasing customer confidence in the safeguards defined to protect customers.

The mapping process included the analysis of the Group's internal policies, public documentation, the identification of the initiatives taken to protect customers and end-users (e.g. digitalised communications to customers and Digital Banking operations) with reference to all categories of customers and end-users that could be materially impacted by the Group. In particular, customers and end users include institutional, corporate and retail customers of the Group's products and services as well as business partners and suppliers.

On the basis of the analyses performed, the following were material:

- **Negative impacts** with reference to the Own Operations and Downstream Value Chain perimeter related to the potential inadequacy of safeguards to protect information concerning customers and end users;
- **Positive impacts** pertaining to the Own Operations perimeter related to the existence of business practices and strategies aimed at safeguarding customers' freedom of expression, access to products and services presented in a clear and transparent manner, personal safety and social inclusion. Examples include initiatives aimed at digitalising processes (e.g. user authentication methods to improve the customer experience, the adoption of technological solutions products aimed at social inclusion);
- **Operational and reputational risk** related to the Own Operations and Downstream Value Chain perimeter and linked to the potential violation of personal data protection of customers and end users;
- **Opportunities** related to the *Own Operations* perimeter attributable to the increase of Stakeholder confidence in the definition and implementation of safeguards to ensure freedom of expression (e.g. through the submission of complaints) and the protection of customers' personal data. With regard to the Downstream Value Chain, opportunities can be found in the expansion of the range of products and services aimed at ensuring the social inclusion of customers and the strengthening of privacy safeguards.

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
S4 Consumer and final users	Privacy			
	Freedom of expression			
	Access to information (of quality)			
	Healt and safety			
	Non-discrimination			
	Access to products and services			
	Responsible business practices			

Relevant scope Our operations
Impact positive/negative
Relevant scope Upstream Value Chain
Relevant scope Downstream Value Chain

For the issues found to be material, the following paragraphs describe the policies, actions and targets defined by the Group in relation to the protection of personal data (hereinafter referred to as **privacy**), the processes of listening to customers and filing complaints, the quality of information on products offered, personal safety, non-discrimination, the accessibility of products and services offered (also in terms of digitalisation) and the adoption of responsible business practices.

Policies, Actions and Targets for consumers and end users

Privacy

This section deals with privacy issues, with reference to the policies, processes and controls defined by the Group to ensure IT security and protect the personal data of customers and end users from unauthorised access and loss of data.

Policies

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on data protection compliance management Data Protection Policy	The policy describes the privacy policy adopted by the Group according to the following methodological approach: - operational and privacy control, aimed at ensuring: (i) compliance with the principles of personal data protection from the design or use phase of the technologies; (ii) respect for the rights exercised by the persons concerned (access, rectification, cancellation, etc.); (iii) implementation of the Records of processing activities; (iv) management of data breach events. - roles and responsibilities in the Bank; - privacy information flows; - planning and reporting on the activities and controls; - training and empowerment of employees in all relevant business lines.	Parent Company and Widiba Group and Fiduciaria companies.	The Policy has been approved by the Board of Directors, which is responsible for the overall supervision of the data protection compliance management system, policies and process and provides strategic guidance on the matter and issues the necessary instructions for its implementation across all business lines.	Drafted in accordance with: - EU Regulation 2016/679 (GDPR); - Legislative Decree196/2003 (Privacy Code) as subsequently amended by Legislative Decree 101/2018; - Guidelines, measures and other pronouncements of the Italian Data Protection Authority and the EDPB, as well as other general regulations with an impact on privacy.	The contents of the Policy are available in the "Data Protection Policy", which is available in the Sustainability section of the Group's website.
Group Policy on Logical Security Governance	It defines the Group's organisational model, principles and responsibilities for the 'Logical Security Governance' process, with the aim of protecting the company's information assets through the 'Information Security Management System' (ISMS), providing a medium/ long-term strategic direction.	All Group companies.	The Group's companies implement by resolution their own Top Management by adapting responsibilities, processes and internal rules, in line with their own characteristics and size The governance of the Group's logical security is centralised in the Information Security function of the Parent Company. Implementation is guided and set up by the Information Security and Information Technology functions.	It regulates how the ISMS is managed in accordance with internal and external reference standards (e.g. ISO/IEC 2700x (series)).	Available to all employees on the corporate intranet.

In the context of customer and end-user protection, privacy protection and IT security safeguards play a key role in ensuring that data and information, throughout their entire lifecycle, are adequately protected, in accordance with regulatory requirements on the protection of personal data and safeguarding of company assets.

The Group implements policies on this issue through the 'Data Protection Policy' and the 'Group Policy on Logical Security Governance', which define the guidelines and objectives to be pursued, through the 'Information Security Management System' (hereafter ISMS). to ensure that data and information, during their entire life cycle, are adequately protected, in accordance with regulatory requirements on the protection of personal data and the safeguarding of company assets.

The ISMS is based on the assessment of all risks associated with the subject and their management through the planning and implementation of the prevention and protection measures necessary to minimise these risks.

To guarantee the reliability of the information processed, as well as the effectiveness and efficiency of the processes involving the Group's stakeholders (customers, shareholders, suppliers, partners, etc.), all security aspects must be properly taken into account and integrated into all phases of the ICT service life cycle and apply to all forms of personal data, regardless of the data subject to whom they refer and/or the channel through which they are received, and apply to all Group companies. The above said Directive is reviewed annually and updated at least every three years, or in any case whenever a significant change is detected in reference legislation, security standards, internal processes, processes adopted by outsourcers, attack scenarios, Group technologies and organisational structure is detected.

Actions

The Parent Company, with the support and cooperation of all the corporate functions and Group companies, has established the Information Security Management System (ISMS), for areas under its responsibility: a set of organisational structures, processes, procedures and technological solutions adopted for the purpose of protecting the Group's own information assets and the information that Customers and end users exchange with the Group. Specifically, the ISMS:

- formalises process, operational and technological safety requirements, in accordance with regulations in force and industry best practice, defining strategic safety plans and how results are monitored;
- defines and implements the security architecture;
- guarantees the confidentiality, integrity, availability, verifiability and accountability of information;
- operationally manages security activities (incident management, fraud prevention activities, emergency communication management, change management, etc.);
- supports staff awareness and training in information security;
- makes it possible to monitor security levels and the effectiveness of the measures taken in order to facilitate audits and implement a process of continuous improvement.

All planned initiatives in the 2022-2024 time horizon were completed during 2024 and the most significant are described below:

- **Firewall configuration review**, aimed at strengthening the management of the Bank's firewalls, i.e. the security measures that protect IT systems and sensitive information from unauthorised access and cyber attacks, by carrying out a review of the rules currently in place, in line with international frameworks, eliminating non-compliant rules and creating new ones in line with the standards.
- ***Zero password***, with the aim of providing specific authentication solutions that do not require customers and users of the Bank to enter passwords and allowing them to be authenticated, for example by means of a push notification received on their device, or through a biometric identifier.

In order to strengthen its staff's awareness of information security, which is considered crucial to ensuring the effectiveness of the ISMS, the Group regularly sets up training programmes to educate employees on the policies pursued, security practices, associated risks and procedures to follow in the event of incidents. Training needs are identified according to the 3D approach model described in the Own Workforce section.

Objectives

The main objectives in the area of information security have been defined in the Information Security Strategic Plan 2024-2028. For 2025, the project areas already started in 2024 are expected to be completed, with particular reference to those resulting from the outcomes of the Cyber Resilience Stress Tests, and new initiatives to strengthen certain security processes and platforms will be launched.

The main planned initiatives are outlined below:

- Strengthening security safeguards, with the aim of increasing and evolving the Group's cybersecurity[48] posture to protect the data and information managed by the information system, through:
  - Implementing advanced data security and identity & access management solutions;
  - Strengthening perimeter defence safeguards;
  - Improving security incident detection and management systems;
  - Strengthening security controls and safeguards for corporate devices;
- Strengthening digital resilience, in order to define and adopt technological/organisational measures aimed at guaranteeing the Group's operational resilience against the continuously evolving threats to security and operations,, and lastly to strengthen the business continuity management framework, and the infrastructure elements supporting the availability of corporate applications and data;
- Transposing regulatory requirements with the aim of ensuring continuous adaptation to the Supervisory Authority's requirements in force from time to time and to the findings emerging from the works of the Supervisory Authorities and to standardise and strengthen "system" resilience;
- Increasing cybersecurity awareness in order to raise the level of customer awareness of cyber risks and key defence techniques, by providing training initiatives and periodic communication campaigns.

In defining such targets, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

IT security performance is assessed using a proprietary framework to evaluate the level of maturity of the Group's security safeguards. This framework is evaluated quarterly and includes a review of the status of the security posture, which takes into account any new implementations/design initiatives that occurred during the period under review.

Freedom of expression

Issues relating to the freedom of expression of customers, with particular reference to the processes of listening to customers and the submission of complaints by them, are dealt with in this paragraph.

Policies

As set out in the Code of Ethics, the Group is committed to responding to complaints aired by customers and their protection associations by using appropriate and timely communication systems. Complaints are handled in such a way as to ensure that they are dealt with promptly and thoroughly and are an important element in improving activities and procedures, overcoming conflicts and restoring customer confidence and satisfaction. In this respect, dissatisfied customers are guaranteed clear interaction, free of charge.

The Group is also committed to providing customers with clear and comprehensive information on how to file and handle complaints, and on access to out-of-court dispute resolution bodies. Furthermore, as set out in the Group Policy on handling complaints, ABF and ACF appeals and complaints, the proper management of complaints constitutes for the Group:

- an essential activity to establish a satisfactory customer relationship;
- a tool for identifying any critical issues and improving the quality of products/services provided;
- a useful safeguard in protecting the customer, both to encourage amicable resolution of disputes, and to define, in cases where this does not occur, the parties' positions, conducting an initial investigation before pursuing the dispute in other judicial settings.

48 The cybersecurity posture represents the set of measures, policies and technologies deployed by an organisation to mitigate cyber risks and protect digital assets.

In defining the contents of the policies, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on complaints management, ABF and ACF appeals and petitions	The policy has the following aims: ensure prompt, clear, complete and exhaustive answers to customers, reduce customer disputes and, in cases where this is not the case, define the position of the parties by carrying out an initial preliminary investigation phase with a view to the possible continuation of the dispute in other fora; obtain information on the company's operations and identify any critical issues and/or areas for improvement.	The Policy is addressed to the Bank and the following Group Companies: - Widiba; - MPS Fiduciaria.	The **Parent Company's Board of Directors** discusses, defines and approves policies on the handling of complaints and appeals to the ABF and ACF.	The policy is drafted in compliance with the main relevant external legislative and regulatory references (e.g. Consolidated Law on Banking, Bank of Italy provisions, relevant Consob resolutions).	The contents are available at the Complaints and Appeals link on the Sustainability section of the Group's website.

Actions

The operational procedures for handling complaints adopted by the Group outline the responsibilities assigned to the various corporate structures and define at least the following activities:

- receipt of the complaint;
- the census and taking charge of it;
- the preliminary investigation (during which the necessary information and documents are acquired to determine whether the complaint is well-founded or not, resorting where necessary to the contribution of the competent structures in each instance), which ends with the preparation of a settlement proposal aimed at taking a legitimate and correct decision on the outcome of the dispute;
- the resolution determining the outcome of the complaint (rejected, upheld or partially upheld); this decision is taken on the basis of the evidence and knowledge gathered in the course of the investigation;
- communication of the outcome to the customer;
- accounting.

In carrying out this activity, the following aspects in particular are taken into account, in relation to the peculiarities of individual complaints:

- situation that gave rise to the dispute and circumstances that emerged in the reconstruction of the events, assessing any critical aspects of the marketing process and customer information, the correct application of company regulations and contractual provisions, and the possible presence of internal fraud;
- contractual formalisation of the products/services that are the subject of the complaint, noting any documentary deficiencies;
- commercial assessment of the relationship with the customer also for credit aspects;
- content of opinions expressed by other corporate functions that may have been consulted;
- well-established guidelines taken by arbitrators (ABF and ACF) or by the jurisprudence of merit and legitimacy;
- risks of losing and compliance with external standards;
- congruity of any economic claims made by customers with respect to the grievances complained of and/or the losses/ damages actually suffered.

Objectives

In the area of "freedom of expression", the Group has not planned to identify measurable quantitative targets. However, it has defined policies and actions to ensure the quality of the services provided to customers and to monitor the constant improvement of the customer experience, consistent with current external regulations. This translates into constant monitoring, both quantitative and qualitative, of the activity carried out by the Complaints and Mediation Department in terms of compliance with processing times and in terms of effectiveness; in particular, the focus is on the number of upheld/partially upheld/rejected grievances and the number of favourable/partially favourable/unfavourable arbitration decisions.

Health and safety

This section deals with issues related to the protection of the health and safety of customers and end users, i.e. the set of policies, measures and procedures adopted by the Group to ensure that the use of the products and services offered is in compliance with the protection of their health and safety and with reference to the activities carried out by the Group and within its Offices and Branches by preventing injuries and illnesses.

Policies

The protection of customers and end users is a primary objective for the Group, in order to guarantee the safety of its customers and contribute to a lasting relationship of trust.

The success of health and safety oversight depends on constant commitment and compliance by all personnel. Therefore, activities concerning information and training on occupational health and safety issues are considered essential within the Group in order to spread an adequate awareness of the importance of these issues among the workforce and to increase the "safety culture" in a broader sense.

In this context, the occupational health and safety policy (the "Safety Policy"), constitutes the point of reference within the Group for risk assessment, definition and review of health and safety objectives. As a result, the Group is committed to informing everyone in company environments (employees, suppliers, customers) about the the organization in charge of safety and emergency management, as well as the risks and the relevant prevention and protection standards adopted.

In defining the contents of that policy, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Health and Safety Policy of Banca Monte dei Paschi di Siena S.p.A	The Policy defines objectives in this regard, including a commitment to: - prevent accidents and illness; - continuously improve health and safety management and performance; - communicate its guiding principles to its stakeholders; - comply with applicable legal requirements and other requirements that the company decides to enter into. - The Policy also provides the framework for setting and reviewing health and safety objectives.	The Policy applies to the Parent Company and all Group Companies.	The Policy has been approved by the Parent Company's Board of Directors. The responsibility for guiding the implementation of the Safety Policy lies with Top Management and all of the Parent Company's Management.	The policy is implemented in compliance with national and EU legislation on health and safety in the workplace, as well as with the UNI ISO 45001 standard (which replaces the OHSAS 18001 standard as from March 2021), whose principles are of primary reference for the general objectives of company management.	A summary is available in the Sustainability section of the Group's corporate website and in the Suppliers Register. It is also available to all employees on the corporate intranet site.

Actions

In order to build solid technical and organisational safeguards in the banking sector, as regards corporate safety management, the Parent Company has taken every step necessary to develop an "Occupational Health and Safety Management System" and to gradually incorporate it into the other management systems implemented, as well as extending it to the other Group companies. Initiatives have also been promoted for dissemination of the culture of occupational health and safety, and the interaction between corporate structures, in order to achieve cooperation and business efficiency in terms of safety, while ensuring the traceability of related responsibilities.

For more details on actions in the area of corporate health and safety, please refer to the chapter Own Workforce in "Section 3 - Social Information" of this Report.

Objectives

In the area of consumer and end-user health and safety protection, the Group has so far not set any measurable targets. However, the effectiveness of the policies and actions adopted is duly guaranteed by the external audits and improvement programmes and continuous dialogue with the Workers' Safety Representatives, processes through which the Group ensures continuous monitoring of the "Occupational Health and Safety Management System".

Non-discrimination

This paragraph relates to the issues of **non-discrimination** of customers and end consumers in accessing the products and services offered by the Group.

Policies

The Rules on Inclusion define the Group's commitment to inclusion, fairness and equality, respect and listening, values that inspire the Group and are confirmed in the Code of Ethics. In day-to-day communication with customers, staff maintain an open and aware approach, taking into account the specific aspects of each person and, when faced with counterparties who present physical problems of any kind, or who, for example, come from foreign countries, they will act naturally and with respect, adopting an approach aimed at listening and being helpful, without being intrusive or imposing.

In defining the contents of that policy, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Rules on inclusion	The document defines commitments in terms of valuing diversity, inclusion, equity and parity that the Company aims to pursue in all phases of the business life of each person.	The Policy is addressed to the Parent Company and all Group Companies.	The transposition of the document must be notified to the Unit to which the individual company reports, the Professional Development, D&I and Internal Communication functions.	The policy is implemented in accordance with the principles adopted by international organisations (e.g. the EU Charter of Fundamental Rights, the UN Declaration of Human Rights, the 2030 Agenda for Sustainable Development and the Principles for Responsible Banking).	These are available in the Sustainability section of the Group's corporate website.

Actions

Communication, a fundamental means of sharing corporate information, is developed with a language that helps to counteract the formation of stereotypes and prejudices and to eliminate discrimination towards customers and the general public. Effective peer-to-peer communication ensures that people are represented, listened to and treated equally, respecting differences and promoting inclusion, in compliance with the indications contained in Directive EU/54/2006 on the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation and the UN Convention on the Rights of Persons with Disabilities.

- The corporate guidelines to be observed in the communication concern:
- the use of language appropriate to the target audience identified and, where possible, inclusive and accessible;
- the use of images that consider gender, social, ethnic and cultural differences;
- the adoption of communication channels that convey clear and accessible communications oriented towards inclusion and combating all types of discrimination and prejudice;
- the organisation of events (e.g. congresses, seminars, openings) managed in such a way as to provide for a fair distribution of speakers (between men and women) and participants, the accessibility of the chosen venue.

Objectives

In the area of "freedom of expression", the Group has not planned to identify measurable quantitative targets. However, the effectiveness of policies and actions taken in this regard is adequately monitored through the collection of feedback and consumer involvement adequately described in the section "Consumer and end-user involvement processes".

Access to products and services in terms of digitalisation of supply

This section covers the issues of access to products and services with regard to customers and end users in terms of offering digitalised products and services are covered in this section.

Policies

The Group, operating in a context of continuous evolution and transformation, continues its initiative to digitalise customer interactions by expanding the range of products, services and access channels offered and improving access to banking services and products for less digitalised stakeholder categories, ensuring a smoother and more satisfying experience for all customers, regardless of their degree of familiarity with digital technologies, with the ultimate aim of optimising the customer experience.

Through the Group Directive on ICT Governance and Strategy Definition, the Group defined an IT strategy aimed at operational excellence, i.e., constant improvement of the stability, performance, quality and level of satisfaction of the services provided to the Group's Customers and employees.

This strategy aims to develop a bank-customer relationship model centred on the ability to reach the bank at any time and from any device through the use of enabling technologies to provide a distinctive service and anticipate customers' needs.

In defining the contents of the above mentioned policies, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on Governance and definition of the IT strategy	It defines the organisational model adopted by the Group, the principles and responsibilities for the "Logical Security Governance" Process with the objective of protecting the company's information assets, providing a medium/long-term general and strategic direction that enables the achievement of the objectives set in its Digital Operational Resilience Strategy.	The Policy is addressed to the Bank and all Group Companies.	The transposition of the Directive must be notified to the corporate reporting unit of the individual company, the IT (Information Technology) function and the Organisation Area.	The Policy is implemented in accordance with the provisions of Bank of Italy Circular 285/2013, which describes the governance and operation of information systems supporting the Bank.	Available to all employees on the corporate intranet.

Actions

Against the backdrop of the defined IT strategy, the Group has planned and put in place multiple actions aimed at innovating alternative distribution channels (including by targeting disadvantaged demographics) in the services described below.

ATM and Electronic money Services

A migration plan for the ATM pool, which will end in 2025, has been initiated, which includes upgrading the operating system of the machines, aimed at increasing their security and reducing their vulnerability, combating malicious attacks and making the software and hardware released by suppliers more compatible, in order to improve the digital customer experience in terms of protection when using the service.

In the E-money sector, the Group extended the audio guide function of the Parent Company ATMs to cover debit and credit cards on the international circuit. This innovation allows blind or visually impaired customers to access main functions, such as querying balances, current account movements and withdrawals. In addition, the use of Google Pay and ApplePay digital payment wallets was extended to the cards of the Parent Company's and Widiba Bank's customers.

Internet banking services

The Parent Company offers internet banking services for its retail and corporate customers. During 2024, the process of optimising the multi-channel platform, improving the counterparty experience and enhancing protection tools, continued. At the same time, the range of online services offered was expanded and the interaction between the branch and online channels improved to enable the extension of full paperless processes and a consequent saving of time for customers and managers by enriching the perimeter of deeds and contracts prepared in the branch and signable through internet banking, and to pursue the objective of minimising the use of paper in line with the Group's commitment to combating climate change and protecting the environment.

2024 saw the continued commitment of the Parent Company to the issues of accessibility and user-friendliness of all channels available to customers and employees. In this regard, Banca MPS uses assistive technologies, consistent with the technology available on the market, to make screen-reader readable sites and apps and integrated engine in smartphones (e.g. voiceovers) and performs periodic checks to identify any technical and user experience issues.

The Parent Company continues to make use of specialised providers and industry associations to ensure complete accessibility and usability of internet banking information and transaction operations from desktop, mobile and apps.

In 2024, Banca MPS, leveraging its well-established open banking platform planned to extend the available services by providing payment cancellation (customers will be able to request the cancellation of a payment through the third party used to dispatch it) and bulk payments (through each third parties will be able to offer a service to send a list of payments in a single transaction). At the same time, solutions are being explored to reduce and/or eliminate difficulties in interactions with third parties when the customer authorises payments.

Objectives

In the area of "Access to products and services in terms of digitalisation of the offering", the Group did not envisage the identification of measurable quantitative targets. However, the effectiveness of the policies and actions adopted, described above, is adequately monitored through the monitoring activities carried out by the Body with Strategic Supervision Function (OFSS) which, in accordance with the "Group Directive on IT Governance and Strategy Definition", assesses the adequacy, functionality and reliability of the entire information system and individual services provided.

In detail, the Body is informed at least annually about the adequacy of the services provided.

Responsible business practices of the Group, access to and quality information on products offered in terms of social inclusion

This paragraph is related to the Group's **responsible business practices**, the offering of products to promote social inclusion and the availability of **quality information** on these products.

Policies

Meeting customer needs is a fundamental condition for the Group in conducting its business activities and an inescapable requirement in maintaining and improving a relationship of trust with customers. For this reason, the Parent Company is strongly focused on maintaining transparent, continuous and non-discriminatory communications.

The Group Policy on Commercial Policies ensures effective management and oversight of processes for interactions between the Group and its customers. Taking into account the requirements of external regulations on investment and banking services and the related rules of conduct towards customers, it defines methodologies, models and business rules with reference to key processes such as:

- the definition and management of service models, i.e. the definition and management of elements supporting the enhancement of the customer relationship;
- the definition of processes and rules to protect customers in the provision of banking products and services, in compliance with applicable regulatory requirements;
- the definition of commercial marketing plans, which outline the commercial market strategy, planning annual and periodic objectives and defining the levers in terms of initiatives, pricing, products, promotions and communications to support their achievement.
- the oversight of customer relationship management;

The Group implements product design, development and marketing policies that take into account the needs of its customers as well as legal provisions on issues of transparency and fairness in customer relations, in order to prevent unfair commercial practices. This is also reiterated in the Code of Ethics, which states that the Group has put in place appropriate operating procedures that allow it to propose the most suitable products or services based on customers' actual needs and requirements. Customers, before subscribing to a product or service, are provided with clear and comprehensive information on the conditions and services offered, to encourage informed choices.

Particular focus is given to the needs of the more vulnerable customers and society in general, with the promotion of access to banking services, informed use of credit, and the prevention of over-indebtedness. Furthermore, the Group fosters social welfare through the creation of sustainable products and services tailored to the needs of its customers by supporting a development model aimed at including categories of people with basic financial needs.

In this context, as stated in the "Sustainability and ESG Guideline", the Group operates with a focus on respect for human rights, fairness and inclusion, fundamental rights on work and standards regarding child labour and forced labour, health and safety, and the adoption of good corporate governance practices. In order to contribute to the protection of the wellbeing of the health and development of the entire community and in line with the values and principles expressed in the Code of Ethics, exclusion and enhanced due diligence policies for certain high social impact sectors have been defined within the Sustainability and ESG Directive. Specifically:

Production and marketing of armament materials:

- Exclusion policies aimed at avoiding involvement in the financing and brokering of transactions related to arms production and trade, as referred to in Law no.185/90. With reference to the production, transit and/or marketing of armament materials, the Group may support operations that have been authorised by the relevant authorities and that comply with applicable and current legislation;
- Exclusion policy for counterparties and transactions involving controversial weapons and/or weapons banned by international treaties, e.g. nuclear, biological and chemical weapons, cluster bombs, weapons containing depleted uranium, anti-personnel landmines; the Group does not support transactions destined for countries subject to sanctions and embargoes, countries in armed conflict and/or whose governments have been responsible for serious violations of international human rights conventions, nor does it have any dealings with entities operating in these market sectors.

Tobacco Industry and Cultivation:

A due diligence assessment of transactions aimed at financing counterparties and activities/projects related to tobacco cultivation and the tobacco industry based on the following criteria:

- involvement or otherwise in corrupt or ethically controversial events that expose the company to particular media attention and criticism;
- state-owned company or state-owned concessionary service provider;
- company with revenues mainly from activities related to the cultivation and production of tobacco;
- company with revenues mainly from activities related to the cultivation and production of tobacco for pharmaceutical purposes.

Development and dissemination of gambling:

A due diligence assessment of the risks, including reputational risks, associated with the nature and purpose of the transaction and the profile of the counterparty. Specifically, with reference to the nature and purpose of each transaction, the following transactions are subject to extended due diligence:

- the provision of online gambling platforms;
- the purchase, construction, development and expansion of gambling halls;
- the purchase and production of machinery that promotes gambling;
- the marketing and sales promotion activities related to gambling.

In defining the contents of the policies, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

In addition, all Group policies and directives are validated in advance by the Compliance function in order to certify that their contents comply with risk control and external regulations. Policies and directives classified as strategically significant (e.g. product policy, commercial policy, financial product governance and control directive) are subject to review at least every three years and are subject to approval by the Board of Directors.

Policies on strategic guidelines for assuming, managing, monitoring and mitigating the risks to which the Group is exposed are reviewed at least once a year and require the prior opinion of the Risk and Sustainability Committee.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on Commercial Policies	The Policy defines the methodologies, models and corporate rules adopted by the Group on Commercial Policies on the set of elements characterising the relationship between the Group and its Customers.	The Policy is addressed to the Parent Company and the Group companies involved in the Commercial Policies (Widiba,, MPS Fiduciaria, MPS Belgio, Montepaschi Banque).	This policy, classified as strategically significant, has been approved by the Board of Directors, which is responsible for the overall commercial policy guidelines.	The Commercial Policies comply with the requirements of external regulations on investment and banking services and the related rules of conduct towards customers (e.g. EU GDPR Regulation 2016/679; MIFID II 2014/65, etc...).	Available to all employees on the corporate intranet.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Products Policy	The Policy defines general models and principles adopted by the Group in the conception, acquisition and control of new products or services; development of new activities; entry into new operational or market segments.	The Policy is addressed to the Parent Company and all Group Companies.	The policy, which is classified as being of strategic importance, has been approved by the Board of Directors, which is responsible for the overall guidelines for issuing, structuring, reviewing and distributing financial products and aligning products with regulatory developments and the interpretations issued by the Supervisory Authorities. The Board of Directors is also involved in approving innovative, strategically significant/risk-relevant products and in the risk assessments deemed necessary by the Control functions subject to the opinion of the Risk Management Committee and the Risk and Sustainability Committee. In addition, proposals that have received a negative opinion from the Risk Control Function, or from the Risk Management Committee, may nevertheless be submitted for approval, and in this case must be approved by the Board of Directors following their discussion by the Risks and Sustainability Committee. Products must comply with the Group's sustainability requirements in terms of risk profiles, business effectiveness, tools and functionalities, processes, impact on the information system, compliance with internal and external regulations. Before being marketed, each product must therefore be reviewed by all necessary functions, including the Control functions, and then approved by a role formally authorised to do so.	The Policy has been drawn up in compliance with current regulations concerning the transparency of banking and financial services and transactions, Supervisory Provisions on the transparency of banking and financial services and transaction and the European Banking Authority's Guidelines on governance and control arrangements for banking products. With regard to insurance investment products, the Policy is in line with EU Directive 2016/97 (IDD Directive) and EU Regulation 2017/2358.	A document overview is available in the Sustainability section of the Group's corporate website.
Rules on investment services: mapping and identification for ESG purposes of financial products	The document defines the rules for ascertaining the veracity of the ESG qualification, i.e. sustainability, associated with the financial products being placed, in order to manage and contain 'greenwashing' for the perimeter products being analysed.	The Policy is addressed to the Parent Company and Widiba.	The Product Function handles periodic reporting to the Investment and Product Steering Committee - Investment Session.	The Policy is implemented in compliance with Regulation (EU) 2019/2088 as supplemented by Regulation 1288/2022).	Available to all employees on the corporate intranet.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on Governance and Control of Customer Banking Products	The Policy defines the organisational model adopted for the release of products to be offered to customers. The process describes the activities to be carried out across the various stages: 1. Conception/acquisition, which includes identifying the **Potential Target Market**, to limit the risk that banking products will not meet the characteristics, needs and objectives of the customers for whom they are intended; 2. Preliminary risk assessment in which the Control functions and the Legal function assess product compliance and its risks for the Bank, as well as identifying possible mitigation actions to be taken into account during its implementation; 3. Product Implementation, validation and approval; 4. Product monitoring, which covers all activities to the product's various aspects across its life cycle; 5. Product delisting, setting out the procedures for purging products from the Catalogue. In the case of innovative or strategically important/risk-relevant product design, the preliminary risk assessment phase entails a specific risk assessment to assess its impact on the RAF; this also requires the approval of the Risk Management Committee.	The document is addressed to Banca MPS and the following Group companies: Widiba and Monte Paschi Banque.	The policy, which is classified as being of strategic importance, has been approved by the Board of Directors, which is responsible for the overall guidelines for issuing, structuring, reviewing and distributing financial products and aligning products with regulatory developments and the interpretations issued by the Supervisory Authorities. The Board of Directors of the Parent Company and of each Group Company approves or disapproves proposals to develop new products or changes to existing products intended for its customers, which must be brought to its attention based on the criteria defined in the Group Product Policy (e.g. strategically significant and/or risk-relevant products and/or products for which a risk assessment is deemed necessary and submitted to the Risk Management Committee for its opinion). The Investment and Product Steering Committee annually approves the plan for product development and evolution. Any unforeseen new products require approval for marketing.	For retail banking products, the Directive takes into account the European Banking Authority's Guidelines on Governance and Control Arrangements for Retail Banking Products and Internal Governance.	Available to all employees on the corporate intranet.
Group Policy on Governance and Control of Customer Financial Products	The Policy defines the specific Governance and Control over Financial Products and describes the guidelines adopted with reference to the distribution of complex financial products to customers classified as 'retail'.	The Policy is addressed to the Bank and Widiba. This applies to all financial products/services intended for customers issued/established after 3 January 2018 and to all financial products/services issued/established before 3 January 2018 that are still distributable after that date[49].	The Policy, which is classified as strategically significant, has been approved by the Board of Directors of the Parent Company, which is responsible for the overall governance of issuing and/or structuring and/or distributing financial products. The Investment and Product Steering Committee annually approves the plan for product development and evolution. Any unforeseen new products require approval for marketing.	The Policy is implemented in coherence with the Product Governance, provided for in Directive 2014/65/EU (MiFID II), which is supplemented by Delegated Directive (EU) 2017/593.	Available to all employees on the corporate intranet.

49 The following are outside the scope of this Policy: (i) Capital Markets products/services and (ii) products intended exclusively for "Eligible Counterparties" for MiFID purposes and "Financial Counterparties" for EMIR purposes

Policies	Description of main contents	Reference Scope (e.g. Own Operations/Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on the Distribution of Protection Insurance Products and Supplementary Pension Schemes	The Guideline defines the organisational model adopted by the Group for the process of 'Distribution of protection insurance products and supplementary pension schemes', setting out the governance and control of these products.	The Policy is addressed to the Parent Company and Banca Widiba. The Directive applies to non-life and life protection insurance policies other than insurance investment products and to newly issued supplementary pension schemes distributed by the Bank, or existing ones if they are substantially modified[50].	This Policy, which is classified as strategically important in that it concerns distribution mechanisms, has been approved by the Board of Directors of the Parent Company.	The Policy is drafted in line with Directive (EU) 2016/97 ("IDD Directive"), European Commission Delegated Regulation No. 2358 of 21 September 2017 ("EU POG Regulation") as amended by EU Delegated Regulation 2021/1257, IVASS Regulation No. 45.	Available to all employees on the corporate intranet.
Group Policy on Sustainability and ESG	The Policy defines the organisational model adopted by the Group to address the integration of sustainability principles along the three lines of environmental, social and governance (ESG) in the definition of the strategy, business model and corporate policies pursued in the conduct of its business. Specifically, the document defines the principles, guidelines and relevant sustainability issues that are identified, implemented and monitored in order to respond to all stakeholders. In particular, with regard to the impact on society, the Guideline describes how the Group pursues the cross-cutting objective of: generating a positive impact on the community by guaranteeing opportunities for digital development and sustainable growth to all Customers, areas and communities and identifying solutions and measures to support the cash flow of businesses economically affected by calamitous and extraordinary events (e.g. natural catastrophes); encouraging the emergence of new entrepreneurial activities in regions with lower growth; providing support for female entrepreneurship and particular customer segments; and preventing and combating usury.	The Policy is addressed to the Parent Company and all Group Companies.	The Policy is subject to approval by the Board of Directors, following the opinion of the relevant Board Committees and the Executive Committee. The implementation of the Directive must be notified to the following Structures and Functions of the Parent Company: - Unit to which the individual company reports; - Business Owner structure referring to the process: Chief Financial Officer and Sustainability and ESG Staff; - Organisation Function.	The Policy, in the area of product development and distribution, is implemented in coherence with: - Insurance Distribution Directive (hereinafter also 'IDD'); - Directive (EU) No. 2016/97; - EU Delegated Directive 2021/1269 (hereinafter also MiFID 2 ESG).	It is available in the Sustainability section of the Group's corporate website.

50 The Policy does not apply to insurance products that consist of insurance of large risks.

Actions

As part of the wider process of designing its products and services, the Group ensures that product characteristics are determined taking into account the findings of customer intelligence analyses. These analyses are aimed at detecting the characteristics and needs of customers through, inter alia, the assessment of the behavioural profile of the various customer segments, the MiFID profile and the analysis of customer portfolios for investment products, the potential demand from customers, and the exploitation for cognitive purposes of the multiple moments of interaction between bank and customer and the acquisition of direct and indirect feedback. The product design process also guarantees:

- the evaluation of the risk profile of investment products with regard to checks on adequacy/appropriateness;
- the definition of economic conditions in compliance with current regulations (e.g. on usury) and, where applicable, internal pricing policies;
- the definition of the characteristics of the customers for whom the product is intended;
- compliance with the principles and rules defined in the Group directive on governance and control of banking products for customers with regard to the definition of the target market;
- compliance with sustainability requirements defined in terms of risk profiles, business effectiveness, tools and functionalities, processes, impact on the information system, compliance with internal and external regulations.

Products aimed at the social inclusion of consumers and end users

In this context, the Group is committed at all times to supporting the social needs of the most vulnerable categories, offering its customers multiple products aimed at facilitating access to social inclusion for users and end consumers, as described below.

<u>MPS Mio Futuro Account and Free Savings Service</u>

As from 16 December 2024, the new bundled current account for “under-18” customers has been available, a **financial inclusion** and **savings education** tool that gives minors the opportunity, under parental supervision, to start saving.

<u>Mortgages with the First Home Fund guarantee</u>

During 2024, the Parent Company continued to commit to offering mortgages guaranteed by the First Home Fund managed by Consap. These are medium- and long-term mortgage loans intended for the purchase and renovation of properties used as main homes granted up to 100% the value of the property and are in particular for customers eligible under the regulations (First Home Fund) or in favour of:

- young couples, at least one of whom is not over age 35;
- single parent families with minor children;
- tenants in accommodation owned by independent low-income housing associations;
- young people under age 35 with non-standard employment contracts.

<u>SACE Garanzia Futuro</u>

During 2024, the Parent Company joined up to the “Garanzia Futuro” instrument promoted by SACE, through which new financing was provided to support the growth process of companies in Italy and on global markets, investments in infrastructure, support for supply chains and local communities and female entrepreneurship.

<u>*Sustainability Linked Loans*</u>

In the course of 2024, the Sustainability Linked Loans were made commercially available to all customers. “ESG Covenant” allow the linking of customer objectives on sustainability issues, including social, environmental and governance KPIs, to improved pricing conditions. These covenants are associated with certain medium- and long-term financing products with gradual amortisation intended for corporations. During the year 2024, the Group disbursed 27 Sustainability Linked Loans with social covenants totalling EUR 188.5 mln.

<u>Funding to combat usury</u>

To prevent and combat usury, the Group has established specific financing, particularly in this area, with pilot agreements in place with “Fondazione Toscana per la prevenzione dell’usura Onlus” and Adiconsum. A total of around EUR 1.7 mln was disbursed in 2024.

Resto al Sud

The Group has released products dedicated to businesses with registered office in the southern regions of Italy. In particular, *MPS Resto al Sud* is a targeted incentive to facilitate new business activities in regions of Southern Italy, areas hit by earthquakes in Central Italy and the smaller islands, and the marine, lagoon and lake areas of Central and Northern Italy. This funding is disbursed in accordance with the provisions of the Minister for Territorial Cohesion and the Mezzogiorno, which promotes it, and the managing entity Invitalia. This incentive covers up to 100% of costs, with a maximum loan amount of EUR 50,000 per applicant. EUR 5.8 mln was disbursed in 2024.

Natural disasters

The Group has established a series of CDP-funded subsidised loans to support those affected by natural disasters. At the end of 2024 two subsidised loans, set up ad hoc by the Group, are still active in favour of those affected by the seismic events that occurred in Emilia-Romagna in 2012 and in Central Italy in 2016. The loans are dedicated to those severely affected by the events, especially as regards property, production plants and public and private services. In addition, in 2024, in connection with the natural disasters occurring in September (Emilia-Romagna), the Parent Company set up a series of loans with favourable conditions for companies resident and/or based in the affected areas that suffered damage.

Finally, initiatives were implemented to suspend loan instalments for the areas affected by the state of emergency based on regional provisions and also at the initiative of the Bank.

Adoption of Protocols, Products and Credit Pools

The Parent Company is a party to the Agreement governing the relationship between Sviluppo Campania and the Lending Bank for the operation of the financial instrument "FONDO ROTATIVO PMI" (FRI Campania). This is an initiative, implemented with Community funds (ERDF), aimed at enabling SMEs in the Campania Region to access the credit market on favourable terms, with a view to strengthening the competitive capacity of companies, supporting the adoption of emerging technologies, innovation processes and corporate reorganisation and restructuring processes.

The Parent Company supports the implementation of aid measures in favour of Tuscan SMEs provided by the Region of Tuscany, which include the reduction of interest on loans granted by banks to Tuscan companies, as part of a European Investment Bank ("EIB") provision.

The Parent Company has adhered to the "Smart Specialisation" measure under the Sustainable Growth Fund to support industrial research and experimental development projects of strategic importance for the production system, consistent with the thematic areas of the national smart specialisation strategy[51], aimed at identifying technological and application trajectories that evolve from it, with a focus on less developed regions (Basilicata, Calabria, Campania, Molise, Puglia, Sardinia and Sicily).

The Group also planned the following initiatives in 2024 to support households and businesses in coping with rising interest rates:

- renegotiation of floating rate mortgages, according to the methods provided for by Law 197/22 with particular reference to customers with ISEE [equivalent economic situation indicator] not exceeding EUR 40,000;
- mortgage suspension: possibility of requesting the suspension of the payment of mortgage instalments in application of the provisions of the Gasparrini law. That allows for the suspension of an entire instalment under the Fund if at least one of the joint mortgage holders falls into one of the following situations:
  - unemployment following the termination of his/her working relationship under Article 409 nr.3 of the Code of Civil Procedure;
  - unemployment following the termination of his/her employment;
  - suspension from work for at least 30 consecutive working days
  - reduction of his/her working hours by at least 20% of total working hours for a period of at least 30 consecutive working days;
  - death or certified severe disability or civil invalidity to a degree of at least 80%;
- activation of the product for the advance payment of TFS-TFR intended to support civil servants waiting for the settlement of the Treatment by INPS.

51 The *Smart Specialization Strategy* (NSSS) identifies long-term investment priorities shared with the regions and key stakeholders, ensuring complementarity between centrally planned actions and those at territorial level, so as to reduce the risk of duplication or overlap and strengthen their impact. The objective is to create new value chains that, starting from research and development, lead to the generation of innovative products and services and the development of key enabling technologies for the implementation of the next generations of products to increase wealth, improve its distribution and bet on the possibility of new jobs that can last.

Initiatives to support financial education

With the aim of guaranteeing its customers access to products and services in a transparent and informed manner, the Group is continuing its initiatives to support the financial education of customers and end consumers.

"Flash Mercati" webinar

The traditional weekly webinar "Flash Mercati" dedicated to the Private and Retail networks continued, with around 45 meetings/webinars in total throughout the year. In addition to these meetings, the Group facilitated dedicated appointments, organised digitally or in person at the request of the network, to address specific market or product issues.

For the Companies network, 45-minute webinars were held monthly under the title "Markets and operating inputs on specialised services (Liquidity Management and Coverage)".

Digital B2B

This is a series of interactive webinars delivered by specialists on specific topics, such as financial market trends, and aimed at Wealth Management specialists and all Private and Family Office Network resources.

Info-training meetings throughout the country

The following initiatives were held during the year: (i) "Le Giornate del Private Banking" ("Private Banking Days"), carried out through three different editions each of which involved around 140 employees from the Private and Family Office network; and (ii) 19 sessions of around 60 minutes each, involving the entire Private and Family Office network, to review in-depth the most important issues relating to the economic and financial context.

Objectives

During 2024, the Group identified financial inclusion as a strategic priority, highlighting the importance of customer relations and links with local communities. This priority is reinforced by a widespread grassroots presence and the historical mission of supporting the community and customers in accessing financial services, through continual listening and engagement, while promoting financial education. In defining targets, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

For the three-year period 2024-2027, the Group has set a target of increasing the financial inclusion of young retail customers by improving their planning and economic resilience. The 18-35 age group is the specific target out of total retail customers. This cluster was identified on the basis of internal and external analyses concerning the socio-economic characteristics of Generation Z and the Italian context, characterised by job insecurity and a low propensity to save.

The Group aims to increase the penetration of savings products, especially savings and pension plans, among retail customers aged 18-35 by 1.2% from 6.2% to 7.4% by 2027. This objective will be pursued through:

- commercial actions aimed at directly engaging the identified cluster;
- facilitated financial solutions with dedicated pricing to encourage access to savings and pension plans;
- financial education initiatives, aimed at raising young customers' awareness of the importance of financial planning and long-term savings.

Progress towards the target will be monitored periodically through internal data, which segment retail customers by age group and total deposits, and will be published annually. Key metrics will include the penetration rate of savings products in the target cluster and the effectiveness of sales and training initiatives.

Other monitoring indicators for social issues

In addition, with reference to the investment activities carried out by the Group, within the 2024-2028 Business Plan, targets for disbursements with ESG purposes (which therefore also incorporate social factors in the disbursement criteria) have been strengthened by planning to reach 30 percent by 2028 of ESG volumes disbursed compared to the total volumes disbursed during the year and 25 percent of green and social bond issues compared to the total issues made during the year and for the period 2024-2028.

Consumer and end-user involvement processes

The management of material impacts entails that the Group should have its own employee engagement processes in place to take their views into account. In this regard, one of the commitments made by the Group within the Code of Ethics is to create and develop relationships with customers aimed at increasing their satisfaction. The aim is to place the customer at the centre of the Group's commercial strategies in order to respond to their needs and preferences, through transparent behaviour, innovation and valuing customers' needs and characteristics.

To spread the culture of relationships, the Group monitors the achievement of targets related to customer satisfaction and loyalty. In particular, the Group collects suggestions and proposals from customers and other significant stakeholders concerning the services and products offered. The Group adopts an approach based on active listening and customer involvement. The main objective is to guarantee a personalised, innovative and accessible banking experience through an omni-channel model that ensures customer interaction through digital tools and qualified assistance. The monitoring of feedback makes it possible to respond to the different needs of customers, facilitating an update of the products and services offered.

In detail, customer involvement takes place through a Contact Centre divided into two main areas:

- the Network Hub, which provides commercial and specialised assistance, through the MIA Chatbot, a virtual assistant that handles 44% of requests autonomously, and the presence of consultants, who via chat (70%) and telephone calls (30%), handle the remaining 56% of requests;
- the Customer Hub, on the other hand, offers information and transaction assistance, as well as outbound business consulting. Through a multi-channel presence, the Group allows customers to contact it via telephone, e-mail, webform, certified e-mail and the "call me back" service. An average annual flow of about 420,000 calls and 70,000 enquiries handled through other channels is recorded through these contact structures.

Technological innovation and digitalisation play a significant role in the evaluation of the services offered by the Group. In the area of Digital Banking, services are mainly provided through the bank's official app, available on the Apple and Google Play stores. Customers can review the app and give a rating from 1 to 5 stars, contributing to the continuous improvement of the service. The Bank Customer Service (Level II) monitors and responds to reviews using standard templates defined by the Business Function and validated by the Communication Function. If a standard template is not adequate, a specific response is requested. Monitoring the evaluations allows the Group to take the necessary actions to improve the app and digital services, optimising the user experience.

Within the Group, Banca Widiba is distinguished by certain specificities in its customer experience model. Customer involvement is achieved through a rating system whereby products and services are given a score from 1 to 5, accompanied by comments and suggestions. All feedback is analysed in order to improve the offering and the quality of the service. The figures for 2024 show an average of 16,000 comments per month, 97.2% of which were positive.

Processes to remediate negative impacts and channels for consumers and end-users to raise concerns

As part of the processes to manage material negative impacts on customers and end users, the Group has processes in place to remedy and manage concerns expressed by customers.

Within the Group, the management of customer disputes is based on a structured and uniform process, while taking into account the specific aspects of the different businesses comprising it, including Banca Widiba.

At present, customer disputes may take the form of **complaints** made to the Supervisory Authorities, requests for **mediation** pursuant to Legislative Decree 28/2010 as amended, and **requests** for assisted **negotiation** (pursuant to Legislative Decree 132/2014 as amended). In addition, following unsuccessful or partially unsuccessful complaints for which no response is provided within the prescribed time limits, customers may refer to the Financial Banking Arbitrator (ABF), which handles disputes concerning banking and financial products and services, and the Financial Disputes Arbitrator (ACF), concerning the obligations of diligence, fairness, information and transparency in the provision of investment services and collective asset management.

With regard to the channels made available to consumers, in addition to the grievance handling process, the Bank has structured and formalised management processes concerning:

- applications (submitted by customers or non-customers) including the requests or reports, mainly of a logistical, relational and commercial nature, received exclusively in written form;
- complaints, which include:
  - objections made verbally relating to services rendered by the bank or arising from contractual relations with the bank (including objections made by customers and potential customers concerning the management of the pre-contractual stage);
  - all objections, in verbal form, concerning relational problems with Bank employees;
  - objections, concerning products or services offered, made via web channels or social networks;
  - requests for clarification, remarks and/or objections about products or services offered or alleged inefficiencies, received from journalists/media outlets.

Complaints management

The Group seeks maximum transparency and accessibility of grievance channels, actively informing consumers of their existence through its institutional website, contractual documentation and direct communication at branches and specialist centres.

Complaints may be **submitted** by customers in the following ways:

- delivery by hand to a Branch or Specialised Centre;
- ordinary or recorded delivery mail;
- online form available on the Bank's institutional website;
- e-mail and via the certified e-mail address of the Complaints Function.

Operational monitoring of the entire grievance management process, customers' appeals to the ABF or ACF and mediation and assisted negotiations is managed and ensured by the **Complaints and Mediation Department**.

The **various steps in the grievance management procedure** are:

- the receipt of the complaint and its transmission to the Complaints and Mediation Department;
- registration of the complaint, completed with the aid of the Complaints Management application (GRB);
- investigation, which is carried out with support from the Branch/Centre of reference for the customer or supported by the functions responsible for the matter in question;
- decision-making, in compliance with independence aspects envisaged in internal regulations from time to time;
- accounting treatment and settlement of the complaint, if the outcome envisages outlay in favour of the customer.

Receiving complaint

3. Shares cases monthly in Dedicated Meeting with a view to Qualitative analysis
4. Shares cases periodically with other Bank Offices as per Regulations

The Case Study can generate:
1. Process Efficiency
2. Evidence for Quality Committee

In compliance with the provisions of regulations, with particular regard to Article 17 of the joint Bank of Italy/Consob Regulation, the Bank of Italy's Supervisory Provisions on the transparency of banking and financial transactions and services, and ISVAP Regulation no. 24/2008, the Bank has established the following **maximum timeframes**[52] to provide a response to grievances submitted by customers:

- 60 calendar days from the date of receipt of grievances concerning banking and financial products and services and investment services;
- 45 calendar days from the date of receipt of grievances concerning insurance brokerage services;
- 30 calendar days for grievances concerning violations of the Code of Conduct for information systems managed by private consumer credit firms (CIS);
- 15 business days from the date of receipt for grievances concerning payment services.

The Group ensures the confidentiality of reports and protection from retaliation for individuals who use the complaint mechanisms, in line with the principles of transparency and fairness governing customer relations. The activity carried out by the Complaints and Mediations department is characterised by the utmost objectivity and third party protection of stakeholders' rights, regardless of their geographical area. In addition, the Group promotes the accessibility and clarity of information on how to submit grievances, so that all customers can exercise their rights fully aware of and confident in the compliant handling process.

If the management of grievances brings to light elements for attention or risk or areas for improvement for the Bank, the Complaints Function reports these aspects to the relevant Corporate Functions for the matter in question, informing the Compliance Function and Risk Function.

52 Exceptions are objections related to the possible violation of the rules pertaining to the "Code of Conduct for Privately Operated Information Systems on Consumer Credit, Reliability and Punctuality of Payments," for which the maximum response time is 30 working days (extendable for an additional two months in exceptional and justified cases) as provided for in Article 12 paragraph 3 of the European Regulation 2016/679 (GDPR).

No involvement of stakeholders (i.e. customers submitting complaints or appeals is envisaged) in the planning, review, operations and improvement of the procedure described above. In addition, there is a tracking of the effectiveness of procedures from a stakeholder perspective that allows for the assessment of customer satisfaction, such as the submission of an ABF/ACF complaint or a reiteration of the complaint in itself constitutes a symptom of customer dissatisfaction with the responses provided by the Bank, and similarly, the acceptance of the complaint predictably gratifies the customer.

On the other hand, a quantitative and qualitative monitoring of the activity carried out by the Complaints and Mediation department is provided for in terms of compliance with processing times and in terms of effectiveness; in particular, the focus is on the number of upheld/partially upheld/rejected complaints and the number of favourable/partially favourable/unfavourable arbitration decisions.

Within this framework, and in accordance with the provisions of Section XI of the Bank of Italy's Supervisory Provisions of 20 June 2012, as amended, on the subject of the "Transparency of banking and financial transactions and services - Fairness of relations between intermediaries and customers", the Group prepares and publishes on its websites an annual report on its complaint handling activities.

In fact, the Complaints Mediation Department is separate and independent from functions in charge of the marketing of products and services, so as to prevent potential conflict-of-interest situations and ensure maximum protection of the customer's interest.

Within the Group, Banca Widiba adopts an approach to grievance handling that, while aligning with the general principles of the Group, has some specific aspects. In this regard, any customer who feels that he/she has not received a level of service in line with his/her expectations and contractual commitments may contact Customer Care through the Mediacenter tools and according to the procedures described on the Banca Widiba's website to suggest possible corrective measures, or contact his/her follow-up advisor.

If it is not possible, for any reason whatsoever, to overcome the differences that have arisen, the customer may address a complaint in writing to Banca Widiba's Complaints Department by the following methods: ordinary mail, with stamped envelope addressed to Ufficio Reclami (Complaints Office) at Banca Widiba, via Messina 38, Torre D, 20154 - Milan; e-mail, to the e-mail address: reclami@widipec.it; direct delivery to their follow up financial advisor.

In the interest of the customer, the grievance must contain at least the following contents: identification data (name, surname, date and place of birth, address) of the customer; relationship identification number (current account or securities deposit); telephone number where the customer can be contacted if necessary; a clear description of the product/service provided by the Bank and the reasons why the customer is dissatisfied; any documentation supporting the disputed facts.

To standardise the management of existing complaints in Banca Widiba with respect to procedures already in place at the Group, and to intervene promptly in the resolution of cases so that a complaint does not turn into a formal grievance, a formal process was created called the "Complaints Register", which is intended to achieve the expected objective:

- the census of all complaints made by customers and financial advisers by mapping the cases using the ABI Classification of Complaints;
- complaints monitoring.

It is considered that a complaint has occurred if:

- the objection is made verbally concerning services rendered by the Bank or arising from the contractual relationship with the Bank;
- it is a written objection made on web channels (such as Chat and social networks);
- the objection is made in the form of a request for clarification, in verbal or written form, by journalists and newspapers.

Protecting the human rights of consumers and end users

In line with the significance identified in the Double Materiality Analysis of issues related to consumers and end users, the Group is committed to developing relationships of trust and mutual and lasting satisfaction with customers, marked by values of transparency and fairness. The Group has therefore put policies and processes in place to promote the protection of human rights and to follow a conduct inspired by integrity and respect, committing to:

- complying with internal rules and procedures, the external codes and agreements, both national and international, to which it adheres, contractual provisions and legal and regulatory obligations in force in each geographical context and sphere of activity where it operates;

- assessing the seriousness and reliability of organisations it has a direct or indirect relationship with, paying attention to their possible involvement in activities that are illegal, harmful to human rights, or detrimental to human health and safety;
- operating in line with the principles of the UN Global Compact and the UNEP Principles for Responsible Banking which it endorses;
- complying with the minimum sustainability criteria identified by the Group as mandatory, consistent with the relevant international, European and national (conventions that apply to all counterparties and projects, in order not to provide funding to counterparties and projects for which, during the assessment, evidence will emerge of adverse impacts and of legal proceedings relating to violations of human rights (including health and safety standards), violations of fundamental labour rights and child and forced labour standards, financial and non-financial reporting fraud, money laundering, corruption or financing of terrorism, and which involve controversial and/or internationally banned weapons (e.g. nuclear, biological and chemical weapons, cluster bombs, weapons containing depleted uranium, anti-personnel landmines). The Group does not support transactions destined for countries subject to sanctions and embargoes, countries in armed conflict and/or whose governments have been responsible for serious violations of international human rights conventions, nor does it have relations with entities operating in these market sectors.

Section 4 - Governance Information

Business conduct

[ESRS G1]

This section provides a description, in relation to the management of 'business conduct' of the impacts, risks and opportunities found to be relevant from the materiality assessment conducted, the policies adopted to prevent, mitigate and correct any non-compliant conduct and the actions to mitigate actual and potential impacts, address risks and seize relevant opportunities, the targets set to monitor the effectiveness of the actions and the metrics used to monitor the effectiveness of the measures adopted.

Role of administrative, management and control bodies in the conduct of businesses

The Group adopts a Code of Ethics that forms the basis of its activities. It is approved by the Board of Directors in the same way as the Bank's Compliance Programme (231 Model) and it sets out the guiding principles, the values and rules of conduct (in addition to legal and regulatory obligations), which the directors, auditors, managers and employees of the Group companies undertake to respect and disseminate in the performance of their duties, in relation to their respective responsibilities.

The Group also undertakes to promote the dissemination of the principles of the Code of Ethics to associated companies, subsidiaries, investees, business partners, consultants and external staff and associates. Compliance with the code is evaluated in current and future relations. The Code of Ethics is therefore a governance tool and an integral part of the 231 Compliance Programme, binding on all those involved. Its implementation is monitored and verified under the internal control system.

In addition, the presence in the Board of Directors and the Board of Statutory Auditors, in the year 2024, of members with specific theoretical knowledge and practical experience on the subject of business conduct, with a focus on administrative liability pursuant to Legislative Decree No. 231/2001, acquired and matured through:

- role as member of Supervisory Bodies pursuant to Legislative Decree 231, including in listed companies and banks;
- experience as director and/or statutory auditor of listed companies and banks;
- Lecturer in Master's Course on administrative liability of entities;
- membership of associations/organisations/independent bodies with an ethical purpose and membership of study groups on administrative liability of entities;
- consulting on economic crime;
- Legal knowledge deriving from studies in law, the practice of law and/or academia, and the publication of scholarly articles.

Impacts, Risks and Opportunities

The process of mapping impacts, risks and opportunities with reference to the standard in question is based on the analysis of the specific aspects associated with the Group's operational and commercial activities, its strategic and governance documentation, both internal and public, and the identification of the initiatives selected and adopted to protect customers and end consumers (e.g. ongoing training on anti-corruption issues, whistleblowing and the 231 Management Model). In fact, the Group has put in place strong safeguards to define and ensure compliance with the principles relating to corporate culture, to protect whistleblowers and to prevent active and passive corruption. The changing environment could also entail risks for the financial institution, such as risks related to the potential breach of the Group's IT security. Finally, this interaction can also generate opportunities for the Group, e.g. by increasing stakeholder confidence in the safeguards defined to protect whistleblowers.

After conducting the double materiality assessment, the following aspects were found to be **material** with reference to Own Operations:

- **Positive impacts: related to** the adoption of corporate practices and policies aimed at disseminating a mindful and adequate **corporate culture** within the Group, ensuring the **protection of whistleblowers** and **preventing corruption** through training;

- **Negative impact:** connected to the lack of adequate safeguards to ensure the **security of the Group IT and network systems** for the benefit of customers through the implementation of cybersecurity policies and safeguards;
- **Risks:** related to **Reputational Risk** arising from possible inadequate cybersecurity safeguards aimed at ensuring the security of IT and network systems for the benefit of the Group customers and stakeholders, and from breaches of customer privacy/information by employees;
- **Opportunities:** increased stakeholder confidence related to whistleblower protection.

Topic	Sub-Topic/ Sub-Sub-Topic	Outcomes of impact materiality	Outcomes of financial materiality	
		Impacts	Risks	Opportunites
G1 Conduct of Enterprises	Corporate culture*	✓ ✗		
	Whistleblower protection	✓		
	Active and passive corruption**	✓		

Relevant scope Our operations | Impact positive/negative | Relevant scope Upstream Value Chain | Relevant scope Downstream Value Chain

**The topic "Active and passive corruption" also includes aspects related to the topic of Cybersecurity*
***The topic "Corruption and Bribery" also includes aspects related to Anti-Money Laundering and Countering the Financing of Terrorism*

For these issues, the following paragraphs describe the relevant Policies, Actions and Targets defined by the Group on **corporate culture** in terms of **protection of** whistleblowers and **prevention of corruption phenomena, and** cybersecurity in terms of **security of computer and network systems.**

Policies, Actions and Targets on business conduct

Corporate culture

This paragraph covers the issues related to corporate culture.

Policies

Material Group policies on corporate culture include the Group's Code of Ethics and the Group Policy on Governance Security Logic.

Code of Ethics

The Group's Code of Ethics contains the principles, values and rules of conduct that the Group is committed to following in all its activities, in its internal relations, in its relations with the market and significant stakeholders, and with the environment.

The Code is an essential part of Model 231 (the Organisation, Management and Control Model for the prevention of offences pursuant to Legislative Decree 231/01) as it supplements the model in terms of expressing and communicating values, principles and rules of conduct.

Any non-compliance and conduct considered not in line with the provisions of the Code can also be detected by each corporate function, as part of control activities pertinent to their own spheres of responsibility. Relevant reports are to be sent at the same time to the Compliance and Internal Audit Functions through the formal reporting procedure. They must be treated confidentially and analysed to assess their relevance, taking corrective and/or improvement action if necessary. To this end, the compliance function examines the reports for the aspects within its competence, also nforming the internal audit function, which, through auditing activities, assesses and ascertains possible conduct that suggests a breach of the Code, and presents the results to the relevant corporate bodies and to the 231 Supervisory Board (hereinafter also referred to as 231 SB).

In defining the contents of the policies, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Code of Ethics	The objectives of the Code are: - define 'good conduct' standards for company policies and procedures; - inform employees of the behaviour required of them; - contribute to the implementation of the Group's sustainability policies; - help make the Group's objectives compatible with the interests of civil society.	The Code of Ethics is applicable to all customers of the Group. The policies adopted by the Group on conduct are addressed to the entire corporate population without exclusions and without distinctions related to the geographical area of reference and the value chain.	The Code and any amendments thereto are subject to the approval of the Bank's Board of Directors. The application and implementation of the Code by Group companies is ensured through the internal control system.	The Group is committed to the following: - internal rules and procedures; - external codes and agreements, including international ones, to which it adheres; - contractual provisions and legal and regulatory obligations in force in each geographical context and sphere of activity in which it operates.	It is available in the Sustainability section of the Group's corporate website.

Cybersecurity

IT security is one of the fundamental pillars of the Group's culture, which is committed to ensuring the resilience, robustness and responsiveness of its digital system.

In this regard, the **Group** adopts the **Group Directive on Logical Security Governance,** with the aim of minimising the risks associated with **cybersecurity** breaches and ensuring adequate protection of data and information throughout their life cycle. To this end, the Directive defines the **"Information Security Management System"** (ISMS) aimed at ensuring its safeguarding and protection in all company activities.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on Logical Security Governance	The Policy defines the organisational model adopted by the Group, the principles and responsibilities for the "Logical Security Governance" Process with the objective of protecting the company's information assets through the "Information Security Management System" (ISMS), adopted at Group level, providing a general and strategic medium/long-term direction.	The Policy is addressed to the Parent Company and all Group Companies.	The Group Companies implement the Directive by resolution of their Top Management by adapting responsibilities, processes and internal rules, in line with their own characteristics and size. The Group's governance logical security is centralised in the Parent Company's Information Security function. Implementation is guided and set up by the Information Security and Information Technology functions.	The Policy regulates how the ISMS is managed in accordance with internal and external applicable standards (e.g. ISO/IEC 2700x (series)).	An overview is available in the Sustainability section of the Group's corporate website.

Actions

In order to guarantee and ensure that all employees are aware of and understand the values and principles underpinning the Group's activities, a structured training model is in place which sets out that all employees complete their assigned courses.

The courses are updated on the instructions of the compliance function every time there is a regulatory or procedural innovation. As a result, course enrolment campaigns are planned, with monthly monitoring and a reminder plan for all persons who do not complete the assigned training. Each online course includes a final test, which must be passed to complete the course.

The Group uses a multidimensional training model aimed at a more effective and broad dissemination of risk culture. The interaction of the training model with Model 231/01 made it possible to identify the topics material to the latter, assigning each of them a level of relevance.

As far as information security is concerned, the Bank, with the support and cooperation of all corporate structures and Group companies, has established the Information Security Management System (ISMS), a set of organisational structures, processes, procedures and technological solutions adopted for the purpose of protecting the Group's own information assets and the information that customers exchange with the Group. For more information on the actions taken by the Group in the area of cybersecurity, please refer to the actions mentioned under "Privacy" in the chapter Consumers and End Users.

The following tables also show the percentages of training coverage on 231 relevant and anti-corruption issues for the year 2024 for Group middle managers, executives, and employees, CEOs and C-Levels.

Objectives

The internal control system, which is a fundamental element of the overall and ordinary governance system of the Group, ensures compliance with the Code of Ethics. In particular, each corporate function carries out controls aimed at managing, monitoring and governing the set of risks relating to the operational areas and responsibilities falling within its competence, including the risk of non-compliance with the Code.

In addition, there are the Control Functions, which by legislative, regulatory, statutory or self-regulatory provision have control tasks, and the Internal Audit Function, which, through audit and control activities, verifies the regular course of operations and the development of risks, as well as assessing the completeness, adequacy, functionality and reliability of the organisational structure and other components of the internal control system.

With regard to information security, to ensure adequate management thereof, roles and responsibilities relating to information security have been defined within the Group so as to separate tasks and areas of responsibility with potential overlaps.

Furthermore, within the ISMS, security frameworks and indicators are defined for the guidance, control and monitoring of protection and safeguard measures of the Group's general principles, and contacts are maintained with the relevant authorities and industry associations to ensure constant alignment and info-sharing.

Protection of whistleblowers

The issue related to the protection of whistleblowers are dealt with in this paragraph.

Policies

With regard to reports of violations received through the Whistleblowing channel, the Group has set up an internal system, defining a procedure for the management of reports that employees and qualified external parties may make in relation to events of fraud, as well as irregularities in the conduct of business or violations of the rules governing banking activity and of European Union law. The relevant process is governed by the Group Directive on the Management of Internal Violation Reporting Systems.

Every employee is expected to actively cooperate in achieving high ethics standards, both directly - by performing their duties correctly - and indirectly - by reporting any violations of laws, regulations and procedures that could have a negative impact on the Group, its customers, employees and the community in general.

In defining the contents of the Directive, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/or standards	Availability (institutional site, corporate intranet)
Group Policy on the management of whistleblowing systems	The Policy handles, through the whistleblowing system, actual or potential "non-compliance", such as violations of the principles of equal opportunities, fairness and inclusion set out in the Code of Ethics, and other cases that may constitute violations of European Union law and relevant external and internal regulations.	The Policy applies to all personnel of the Parent Company and Group Companies: - Banca Widiba e Monte - Paschi Fiduciaria.	Its implementation must be notified to the following unit and Functions of the Parent Company: - Directorate of Corporate Reporting; - Staff CAE and Government Audit Subsidiaries; - Organisation Partner; - Organisation Function. The Group's Board of Directors is the body with strategic supervisory functions and approves the internal reporting system for violations, while the Bank's Board of Statutory Auditors has the supervisory function over the entire reporting system.	The document is drafted in compliance with: - Directive 2013/36/EU; - the implementation of these provisions into Italian law (Legislative Decree 72 of 12/5/2015); - the 11th and 34th updates to Bank of Italy Circular 285 - Directive 2019/1937/ EU.	It is available in the Sustainability section of the Group's corporate website.

Actions

Through the dedicated IT platform, which can also be accessed via the internet by "qualified external persons", or orally via a dedicated telephone service, staff and qualified external persons can report negligent, unlawful, irregular or improper circumstances and conduct relating to their work - which they suspect or have become aware of in the course of their duties.

The following categories of parties may report information[53]:

- personnel, i.e. employees and those who otherwise work on the basis of relationships that determine their inclusion in the company organisation;
- qualified external parties, such as:
  - suppliers, self-employed workers, freelancers and consultants working for the Bank;
  - terminated staff, where the information reported was acquired in the course of the employment relationship;
  - persons for whom the employment relationship has not yet started, where the information reported has been acquired during the selection process;
  - shareholders and persons with administrative, management and control functions.

The Fraud Audit unit, set up within the Internal Audit function, receives reports and has the task of carrying out preliminary checks, investigations and internal assessments, in order to define the legitimacy and reliability of what has been reported, obtain evidence and reconstruct the facts. This unit informs the whistleblower, within 7 days from the date of receipt, that his/her report has been correctly received and taken into account. It also provides feedback to the whistleblower, within three months of receipt of the report, on the follow-up action taken.

At the end of each investigation concerning the reports received, a Special Investigation Report is prepared, summarising the results of the activities carried out, or, if the investigations reveal responsibilities of employees, a Special Investigation Report is prepared and published as required by the Standards in force.

The Group protects whistleblowers who have submitted a report in good faith against retaliatory, discriminatory or in any event unfair conduct as a result of the report, which will not, therefore, have a prejudicial effect on continuation of the employment relationship. The Group ensures confidentiality of the report and of the personal data of the whistleblower and any reported person. Penalties are provided for anyone who violates the measures to protect the confidentiality of the whistleblower, commits retaliatory or discriminatory acts against the whistleblower, or takes action to obstruct the report or attempt to obstruct it.

Objectives

The supervisory role over the entire system is guaranteed by the Board of Statutory Auditors of the Parent Company. The Head of Internal Reporting Systems, identified within the Internal Audit function, also ensures the proper conduct of the process and provides an annual report to the Board of Auditors, the Board of Directors, the Risk and Sustainability Committee and the Director in charge of the internal control and risk management system.

The process thus structured ensures adequate protection of whistleblowers, although no quantitative targets have been defined in this respect.

Active and passive corruption

This paragraph covers active and passive corruption issues, including the fight against money laundering and terrorist financing, are covered in this paragraph.

Policies

The Group promotes the principles of transparency, accountability and integrity in its relations with public administrations and external staff by adopting internal anti-corruption procedures and courses of action for all personnel.

To reinforce this commitment, the Group has issued a rule document containing guidelines for the prevention of corruptive events, which constitutes the framework for the prevention of corruption risks. The document complements and reinforces the anti-corruption policy already adopted by the Group over time through the new Code of Ethics, Model 231 and the provision of specific procedures for managing the exercise of signatory powers, the expenditure cycle and relations with suppliers.

53 Whistleblowing reports include, but are not limited to, administrative irregularities and accounting and tax compliance, potential or actual violations of the provisions laid down to prevent money laundering and the financing of terrorism, market abuse (insider trading, manipulation) and other irregularities in investment services and activities, and violations of data privacy regulations.

The Group also pays the utmost attention to compliance with national and international regulations aimed at combating money laundering and terrorist financing[54]. For this reason, it has adopted a "Policy on Combating Money Laundering and Terrorist Financing", reflecting its commitment to fight the aforementioned criminal phenomena on an international basis, devoting particular attention to the tools to use in this fight, in the knowledge that the pursuit of profitability and efficiency must be combined with the continuous and effective monitoring of the integrity of corporate structures.

In defining the contents of the cited documents, the Group gives due consideration to the interests of key stakeholders, as detailed in the Stakeholder Engagement process section of this document.

Policies	Description of main contents	Reference Scope (e.g. Own Operations/ Value Chain Upstream or Downstream, geographical scope)	Validation of Top Management	Reference to recognised third-party initiatives and/ or standards	Availability (institutional site, corporate intranet)
Group Anti-Corruption Policy	The Document describes the principles and rules of conduct to which Group personnel must adhere in order to prevent potential 'Acts of Corruption'.	The document is addressed to all Group personnel, as well as to all those acting in the name and/or on behalf of individual Group companies, including external consultants.	The Board of Directors approves this document, which sets out the guidelines and principles to be followed by the Group with regard to anti-corruption. The control activities aimed at mitigating the risks of corruption and/ or ascertaining any non-compliant conduct in this regard, are delegated to the Corporate Control Functions, defined within the Internal Control System.	The Group is committed to combating all forms of corruption, in line with the principles of the United Nations Global Compact Programme and the UNEP Principles for Responsible Banking, and in consistent implementation of its Code of Ethics. To this end, it undertakes to comply with the relevant national and international regulations, including the Italian Criminal Code and Civil Code, specific laws and decrees on anti-corruption, as well as conventions and recommendations of international bodies such as the OECD, UN, G20, Transparency International and the Wolfsberg Group.	It is available in the Sustainability section of the Group's corporate website.
Group Policy on Combating Money Laundering and Terrorist Financing	The document identifies the Group's global policy on combating money laundering and terrorist financing.	The Policy is addressed to the Parent Company and all Group Companies.	The Board of Directors examines and approves the Anti-Money Laundering Policy and the annual report drawn up by the Anti-Money Laundering Function, including the self-assessment exercise on the risk of money laundering and terrorist financing and the plan of activities.	The document is prepared in accordance with the rules and principles dictated by national and EU regulatory provisions, in accordance with the relevant international standards.	It is available in the Sustainability section of the Group's corporate website.

Actions

The Group operates in line with its values and with a sense of responsibility towards society by applying "zero tolerance" towards any corrupt practice (direct or indirect, public or private, external or within the organisation, instigated, attempted, committed), to ensure that its staff and all persons working for it comply with anti-corruption regulations, adopting all measures necessary to prevent and effectively counter the risk. In this regard, the Group is committed to carrying out a self-assessment of risks, to be submitted periodically to the corporate functions in order to assess their likelihood of occurrence and the effectiveness of the relevant regulatory and control measures.

The Group periodically identifies, at intervals of no less than two years, the main areas considered to be at risk of corruption related to significantly sensitive activities[55] and, for these, it supplements the existing processes with precise indications aimed at preventing any episodes. In addition to regulatory sanctions, any violation of anti-corruption provisions may lead to disciplinary action against the employee responsible, up to the most serious sanction of termination of employment.

54 These concepts refer to the risk arising from the breach of legal, regulatory and self-governance provisions necessary for preventing use of the financial system for purposes of money laundering, terrorist financing or the financing of programmes for the development of weapons of mass destruction, as well as the risk of involvement in money laundering, terrorist financing or the financing of programmes for the development of weapons of mass destruction.

55 These include: appointments of suppliers; joint ventures, acquisitions and disposals of company shareholdings; gifts and entertainment; events and sponsorships; job offers; disbursement of credit; management of the liability cycle (expenditure); consultancy; transactions in which the Bank is a public service provider (subsidised finance); political contributions, donations, membership fees, non-profit; management of public services.

For each business process, the corruption risks to which the Group is potentially exposed are assessed[56]. The results of the last assessment exercise carried out in 2024 showed that, despite the existence of potential risks on all Group structures, there was no need to take further action than the safeguards currently in place. With specific reference to relations with the Public Administration, which are particularly sensitive to the risk of corruption, the Group expressly prohibits the granting of political contributions or any disbursement in cash or in kind to support a particular political cause.

In relation to the safeguards put in place with regard to active and passive corruption, the Group is committed to complying with an anti-corruption programme that provides for:

- a risk self assessment activity to be submitted periodically to the corporate functions with reference to the risks/safeguards inherent in their respective processes;
- training and awareness-raising plans for employees.

The Training function updates the contents of the anti-corruption course on the instructions of the Compliance function (responsible for the validation of the contents) whenever there are regulatory or procedural changes or gaps in the audit.

In addition, the training plan for the Internal Audit function includes specific training activities for Fraud Audit staff, including a training pill and a more structured course, including through the use of international certification paths (e.g. Certified Fraud Examiner).

For the Boards of Directors of the subsidiaries, specific board induction sessions on administrative liability of entities and the structure of the Group's 231 Models. In the area of combating money laundering and terrorist financing, the Group's controls consist of the activities listed below:

- identifying applicable regulations, assessing the impact on processes and procedures, updating the internal regulatory framework;
- implementing suitable IT procedures for consistent risk management, due diligence, data and information storage, continuous monitoring of customers and transactions, detection of potentially suspicious transactions and reporting to the Financial Information unit;
- assessing the adequacy of the risk management process and the suitability of the internal control system and procedures;
- providing anti-money laundering and anti-terrorism training to all employees.

Objectives

As part of its activities to prevent corruptive phenomena, the Compliance Function:

- identifies, with the responsible structures, the corporate processes where the risk of corruption lies, assessing the adequacy of the safeguards adopted;
- coordinates activities aimed at the correct application of the rules for the prevention of corruption in the Group (e.g. through the preparation of a training plan);
- provides advice and assistance on anti-corruption issues;
- supports the Human Resources Department in developing an info-training programme on the prevention of corruption offences to be provided to Group employees.

On 6 February 2024, the Bank's Board of Directors resolved on the programme of activities and controls (2024 Compliance Plan), which the Compliance function undertook to complete during the 2024 financial year. Specifically, for 2024, out of the 692 audits that the function had planned to carry out, 797 took place. Among the activities performed, 758 conformity opinions and 649 validation opinions on internal regulations were also issued.

The Internal Audit function is the structure in charge of carrying out third level controls and, therefore, exercises the responsibilities defined within the company regulations on the Internal Control System.

On the basis of the aforementioned controls, the Group ensures the prevention of the phenomena of active and passive corruption, including the fight against money laundering and terrorist financing, although it has not defined quantitative targets in this respect.

The Anti-Money Laundering function of the Parent Company is in charge of monitoring the risks in this area. At Group level, responsibility is assigned to the department of the Chief Risk Officer, who reports directly to the Board of Directors and exercises these duties centrally also for the Group's Italian subsidiaries. Additionally, in line with the model adopted for

56 These risk cases include, but are not limited to, corruption in judicial proceedings, corruption for an act contrary to official duties perpetrated by a person in charge of a public service, corruption for an official act, concussion, incitement to corruption.

the Group's Internal Control System, the Corporate Bodies are specifically involved in mitigating the aforementioned risks, through clearly defined tasks and responsibilities.

Metrics

The metrics used to monitor the effectiveness of the measures taken to manage business conduct, in relation to anti-corruption training and active and passive bribery cases, are reported in this section.

Training on the fight against corruption and bribery

As part of the periodic activities carried out by the Group in order to identify the main areas considered to be "at risk of corruption", within which the mapping of functions at risk carried out by the Compliance function takes place, potentially all corporate structures are exposed to "corruption risk".

In this context, it is specified that 100% of the Parent Company's staff, being potentially exposed to the risk of corruption, are involved in the anti-corruption course enrolment campaign. The following table shows the total number (in no. of workers) of persons in functions at risk who benefited from the training courses, taking into account absences due to illness and abstention. In addition, the table includes information on the nature, scope and topics covered by training programmes against active and passive corruption and the extent to which training is provided to members of the administrative, management and supervisory bodies.

Table on training on the fight against corruption and bribery

	2024			
	Functions at risk	Executive managers	The administrative, management and supervisory bodies	Other own workers
Extent of training (no. of workers)				
Total	16,439	155	7	-
Total training recipients	16,321	155	7	-
Mode of delivery and duration (hours)				
Classroom training (total hours)	19.0	-	5.0	-
Computer-based training (total hours)	12,227.0	116.3	2.0	-
Voluntary computer-based training (total hours)	-	-	-	-
Total training hours	**12,246.0**	**116.3**	**7.0**	-
Frequency (within the year)				
How often is training required?	1	1	-	-
Topics covered (Y/N)				
Definition of corruption	Y	Y		
Policy	Y	Y		
Suspicion/detection procedures	Y	Y		

Confirmed incidents of corruption or bribery

In 2024, no cases of legal and regulatory non-compliance within the Group were found, without penalty of any kind or with a non-monetary penalty, and there were no confirmed instances of corruption involving workforce.

Section 5 - Annexes

Key performance indicators (kpi) of credit institutions

Introduction

The tables below show the disclosure requirements under Article 8 of the Disclosures Delegated Act supplementing the EU Taxonomy Regulation (2020/852)[57].

These obligations require financial firms to report KPIs for eligibility and alignment with the Taxonomy commencing the calendar year 2023. This disclosure aims to provide transparency about sustainability and facilitate the transition to a low-carbon economy. In particular, Article 8 of the Regulation requires companies within the scope of the Non-Financial Reporting Directive (NFRD) 2014/95/EU to publish information on how and to what extent their economic activities qualify as "environmentally sustainable" according to the Taxonomy Regulation. The result is presented as the Green Asset Ratio (GAR), i.e. exposure to taxonomy-aligned assets (numerator) divided by total assets (denominator).

At 31 December 2024, the turnover-based GAR and the capex-based GAR were 1.06% (0.50% at 31 December 2023) and 1.15% (0.53% at 31 December 2023), respectively, while total GAR assets were EUR 94,586 mln (EUR 94,254 mln at 31 December 2023).

To calculate GAR at the present date, we would need to have the actual data disclosed by counterparties in order to measure the banks' taxonomy-related KPIs. What this means is that companies that are not required to publish non-financial disclosures (NFRD) are excluded from the calculation, and this lack of data is reflected in the GAR for the bank.

Methodology

The main methodological choices adopted by the Group on the basis of current regulations are outlined below. In particular, the Group has adopted the key performance indicators (KPIs) set out in Annex V of Commission Delegated Regulation (EU) 2021/2178.

The Green Asset Ratio (GAR) is the ratio of (i) exposures to taxonomy-aligned assets to (ii) the value of total covered assets[58]:

The following methodological decisions were made to determine the share of taxonomy-eligible and taxonomy-aligned exposures:

- **Financial undertakings and undertakings not obliged to publish non-financial information (Legislative Decree 254/2016 and/or Regulation (EU) 2013/34/EU- NFRD):** exposures where the *use of proceeds is not known* - as determined with the support of an external provider - were weighted by the turnover and CapEx KPIs, in relation to taxonomy eligible and aligned activities for the six environmental objectives, published by these counterparties in their respective non-financial statements. On the other hand, taking into account the technical screening criteria set out in Delegated Regulation 2021/2139 EU, there are no taxonomy eligible and aligned exposures where the use of proceeds is known. In light of the interpretative clarifications provided by the European Commission in the FAQs on 21 December 2023 and in November 2024, the identified NFRD counterparties also included - in contrast with the situation at 31 December 2023 - counterparties whose parent companies are subject to non-financial reporting requirements;
- **guaranteed household loans:** Based on Delegated Regulation 2021/2139, only loans secured by residential real estate were considered for eligibility. On the other hand, loans for "building renovations" under the same regulation and for the purchase of "motor vehicles" were out of scope due to the lack of specific information on identifying "green loans". To determine alignment KPIs, the technical screening criteria set forth in the aforementioned Delegated Regulation were applied to distinguish between real estate constructed before and after 31 December 2020. For 2024, with regards to buildings constructed before 2020 that do not meet the requirement of a class-A energy performance certificate, the Group applied the criterion – in light of the abovementioned clarifications provided by the European Commission – of whether the building was included in the top 15% of the national or regional building stock in terms of primary energy requirements. This was because it was able to make use of studies published by private entities, unlike in the previous financial year;

57 For a full discussion of the relevant regulatory framework, please refer to the section entitled "Disclosure pursuant to Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation)" in Section 2 "Environmental Information" of this Sustainability Report.

58 In keeping with EU Delegated Regulation 2021/2178, "total GAR" means the gross carrying amount of the Group's total assets less trading book exposures and exposures to central governments, central banks and supranational issuers.

- **Flows:** In line with Regulation (EU) 2021/2178, the Group considers the amount of new exposures based on the gross book value as the flow; only positive flows are considered without deducting the amounts of loan repayments or sales of debt/equity instruments that occurred in the same period;
- assets under management: the ratio of the portfolio of equity and debt securities held as Assets Under Management and issued by financial and non-financial companies subject to mandatory NFRD to total equity and debt securities held in as Assets Under Management was considered.

Finally, as required by the Regulation, templates referring to 31 December 2023 have been published. However, it should be noted that comparisons are not homogeneous as a result of the above-mentioned changes to the scope of the 2024 disclosure.

Gas & Nuclear templates

In line with Commission Delegated Regulation (EU) 2022/1214 of 9 March 2022 amending Delegated Regulation (EU) 2021/2139, the Group publishes templates for the alignment, eligibility and non-eligibility of gas and nuclear activities.

The compilation of the templates under the Regulation only concerns non-financial companies that have reported the key performance indicators (KPIs) relating to the alignment, eligibility and non-eligibility of their economic activities under the Regulation in their 2023 reporting.

1 Credit institutions must report in this template information on exposures in the banking book with the sectors covered by the taxonomy (NACE sectors 4 levels of detail), using the relevant NACE codes on the basis of the counterparty's principal activity.

2 The allocation of the NACE sector of the counterparty must be based solely on the nature of the immediate counterparty. The classification of exposures incurred jointly by more than one borrower must be based on the characteristics of the borrower that is most relevant or decisive for the institution to grant the exposure. The distribution by NACE codes of jointly incurred exposures shall be determined by the characteristics of the most relevant or decisive borrower. Institutions must report information by NACE codes with the level of disaggregation required in the template.

Additional information on nuclear energy and fossil gas activities

Template 1 - Nuclear and Fossil Gas Activities

	Nuclear energy related activities	Loans & Advances – Finanziamenti	Off-balanceh sheet – Guarantees	Off-balance sheet – Asset under Management
1	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	NO	NO	NO
2	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	NO	NO	NO
3	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	NO	NO	NO
	Fossil gas related activities			
4	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels	YES	YES	YES
5	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels	YES	YES	YES
6	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using f ossil gaseous fuels.	YES	YES	YES
