General information

For financial year 2024, KfW Group's sustainability reporting is based on a sustainability statement within the meaning of the European Sustainability Reporting Standards ("ESRS"; Commission Delegated Regulation [EU] 2023/2772 of 31 July 2023, as amended) for the first time. The report was prepared in accordance with the ESRS, with exception of ESRS 1.110, as the report was not integrated in KfW Group's combined management report, and thus a partial application of the ESRS took place. The transition to the ESRS as a reporting standard was made in light of the increasing significance of the ESRS as an EU-wide reporting standard in the form of an EU Commission Delegated Regulation, which is applicable with immediate effect. The ESRS reporting standard thus replaces KfW Group's previous comprehensive reporting in line with the international framework of the Global Reporting Initiative ("GRI") and the Task Force on Climate-related Financial Disclosures ("TCFD"). Sustainability matters that are classified as non-material within the ESRS, but were included in the previous reporting in accordance with GRI, HGB and TCFD will be published separately during 2025.

In line with the consolidated non-financial statement in the combined management report, this report also contains the combined non-financial report of KfW as the parent company and of KfW Group in accordance with Sections 315b and 289b of the German Commercial Code (*Handelsgesetzbuch* – "HGB") and Section 315c in conjunction with Sections 289c to 289e HGB, as the Corporate Sustainability Reporting Directive ("CSRD"; [EU] 2022/2464) has not yet been transposed into German law. The combined non-financial report of KfW as the parent company and of KfW Group will be referred to in the following as "sustainability report". Reporting pursuant to Article 8 of the EU Taxonomy Regulation for financial year 2024 is also integrated in this sustainability report.

Due to the first-time application of the ESRS, quantitative disclosures are provided without comparative information for previous periods in accordance with ESRS 1.136.

Basis for preparation of the sustainability report for KfW Group

In this consolidated sustainability report, the information on sustainability matters of KfW Group is presented in accordance with the scope of consolidation of the consolidated financial statements. Please refer to "Disclosures on shareholdings" in the consolidated financial statements for a presentation of the group of consolidated companies. The sustainability report covers all companies in the consolidated financial statements that have been consolidated pursuant to commercial and supervisory law. Where disclosures in this sustainability report refer to KfW, they relate exclusively to KfW as the parent company. This also applies to the consolidated subsidiaries (e.g. KfW IPEX-Bank, DEG and KfW Capital). Where reference is made to KfW Group, this relates to all subsidiaries included in the consolidated financial statements. The group of consolidated companies to be used is reviewed on an annual basis. Based on Section 289b (2) HGB, this report releases KfW IPEX-Bank from the obligation to include a non-financial statement in its management report in accordance with Section 340a (1a) HGB and Section 267 (3) sentence 1, (4) and (5) HGB. This means that the individual reporting obligation for KfW IPEX-Bank will no longer apply in financial year 2024.

The relevant sections of this sustainability report indicate where the reporting includes information based on other legal provisions or generally accepted standards – for example, the International Finance Corporation ("IFC") Performance Standards, the core labour standards of the International Labour Organization ("ILO"), and the guidelines of the Organisation for Economic Cooperation and Development ("OECD"). The option to omit specific information regarding intellectual property, know-how or the results of innovations was not used. Nor was use made of the option to exempt from disclosure of impending developments or matters in the course of negotiation. With regard to the value chain, this sustainability report covers the material impacts, risks and opportunities along KfW Group's entire upstream and downstream value chain. The value chain is described in the following section "KfW Group's value chain". Where discretionary decisions, estimates and assumptions are made within or outside of the value chain, this is indicated at the relevant points. Quality assurance for this report is carried out in line with the procedure set out in the "Internal controls and risk management relating to sustainability reporting" section of this chapter. No external parties performed quality assurance. Deloitte GmbH Wirtschaftsprüfungsgesellschaft performed an independent limited assurance engagement.

Reporting is based on the following time horizons:

- Short-term: corresponds to the period of 1 January to 31 December of the financial year to which this report refers)
- Medium-term (pursuant to ESRS 1 77b): from the end of the short-term time horizon, up to five years
- Long-term (pursuant to ESRS 1 77c): consideration of impacts over a period of more than five years
- Long-term (pursuant to ESRS 2 BP-2 9a): analysis of risks and opportunities over a period of ten or more years

Differentiation of long-term time horizons for impacts, risks and opportunities is based on existing processes (e.g. group business sector planning or risk inventory).

Some information in this sustainability report is incorporated by reference, as listed below. In accordance with ESRS 1.119 et seq., references are made exclusively to the combined management report or the consolidated financial statements. Reference is made to the relevant section of the document by means of such reference to the combined management report or the consolidated financial statements without repeat mention of the section.

Strategy, business model and value chain

KfW as the parent company is a promotional bank of the Federal Republic of Germany. The Federal Government owns 80% of KfW's share capital and the German federal states own the remaining 20%. KfW's business model and business activities as a state-owned promotional bank are primarily governed by the KfW Law. The areas of activity comprise promotional business and the related transactions in accordance with Article 2 (1) and (3) of the KfW Law as well as the mandated transactions in accordance with Article 2 (4) of the KfW Law. Mandated transactions constitute business that the Federal Government mandates to KfW on a case-by-case basis for reasons of state interest and that is generally structured as lending and equity investment business. Mandated transactions may deviate from the requirements of KfW's exclusion list (see "Exclusion lists at KfW Group" section in the "Environmental information" chapter), the sector guidelines (see "Paris-aligned sector guidelines" section in the "Environmental information" chapter) or the sustainability guidelines (see "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter) in individual cases. This also applies to targets set in connection with sustainability matters relating to KfW Group. The promotional business, the related transactions and the significance of Federal Government mandated transactions are described in more detail in the "KfW business model" section in the "Basic information on KfW Group" chapter. For a description of the business model, please also refer to the "KfW business model" section in the "Basic information on KfW Group" chapter. Through its business sectors, KfW Group offers the following products and/or services to various groups of customers in the direct financing, on-lending and investment business (see table below). For further information on the main product/service and customer groups, please refer to the "General economic environment" section of the economic report, the "New business projections" section of the forecast and opportunity report, and the "KfW Group's value chain" section of this chapter. KfW Group generated total sales revenue of EUR 21.9 billion in financial year 2024.

Overview of business sectors and their products/services and customer groups deemed significant within the meaning of ESRS 2¹⁾

Business sector	Products/services and customer group
Mittelstandsbank & Private Kunden (SME Bank & Private Clients)	– SME Bank: promotion²⁾ of companies in the areas of energy efficiency, renewable energy, environment and sustainability, innovation and digitalisation, general corporate financing and entrepreneurship – Private Clients: primarily promotion of education (e.g. student loans) and promotion²⁾ for private clients in the area of residential properties (e.g. energy-efficient new construction/refurbishment, acquisition or construction of own homes)
Individualfinanzierung & Öffentliche Kunden (Customised Finance & Public Clients)	Financing in the Climate and environment and Digitalisation and innovation areas of the KfWplus transformation agenda: – Basic and broad-based promotion for municipalities and municipal and social enterprises²⁾ – Customised debt financing solutions with risk assumption for enterprises and project companies – Global financing for banks, leasing companies and funding for promotional institutions of the federal states
KfW Capital	– Stakes in venture capital and venture debt funds to generate innovation, value creation and employment – Investments in the co-investment fund coparion and in the four generations of the High-Tech Gründerfonds for start-ups – Coordination of the Future Fund ("investment fund for forward-looking technologies")
Export and project finance	– KfW IPEX-Bank is a specialist bank for international project and export financing – Support for sustainability and digitalisation, financing for exports, infrastructure investments, securing raw materials and climate and environmental action projects – Financing for projects and investments in the interests of Germany and Europe
KfW Development Bank	– Financing of programmes and projects that mainly involve public-sector players in developing countries and emerging economies on behalf of the German Federal Government – Promotional priority areas include social infrastructure, economic infrastructure, financial system development and multisectoral issues such as environmental protection and resource conservation, migration and displacement and support for reform processes.
DEG	– Promotion of sustainable development/expansion of the private sector in developing countries and emerging economies – Structuring and financing of investments and equity investments/funds by and in private companies in developing markets as well as advising companies on their sustainable transformation – Investments in and by companies in the agriculture, services, industry and infrastructure/ green energy sectors, as well as in financial institutions and private equity funds

¹⁾ The activities in the business sectors Financial markets and Head office are not recorded under the definition of the datapoint ESRS 2 SBM-1 40 a) (i.-ii.) in conjunction with AR 13 and therefore not included in this list.

²⁾ The promotional programmes include standardised, on-lent financing (see explanation in the section on "KfW Group's value chain").

KfW Group's value chain

KfW Group's value chain is made up of value chain actors which are part of its own operations or the upstream and downstream value chain. The following figure illustrates this value chain.

KfW Group's value chain

KfW Group's value chain begins with **upstream entities** such as suppliers/service providers, investors (funding) and shareholders. Funding on the money and capital markets has a material impact on the group's business activities. KfW's creditworthiness, which is assessed by rating agencies, is key to its funding conditions. In addition to the institutional liability (*Anstaltslast*), it is necessary to mention the comprehensive liability of the German Federal Government under Article 1a of the KfW Law, which extends to loans taken out and bonds issued by KfW, forward transactions structured as fixed transactions, the rights conferred by options and other loans to KfW, and loans to third parties insofar as they are expressly guaranteed by KfW. As a result, KfW is ranked by rating agencies as having top-notch credit quality (triple-A rating). KfW Group receives additional funding from the German federal budget, for example to channel grants to customers as part of promotional programmes.

KfW Group's workforce in the central units and business sectors, along with the members of the Executive Board and the Board of Supervisory Directors, are among the **actors in KfW Group's own operations**. The central departments take on overarching tasks within KfW Group, such as Human Resources, Credit Risk Management, Risk Controlling, Compliance, Finance, and Group Development and Economics. Some of these functions are organised independently in the subsidiaries. KfW Group's value creation is realised through its own operations, which are a link between the upstream and downstream value chain. All necessary internal processes and activities to provide financing solutions and products are performed in own operations. The business sectors operationalise the business model and the business activities. For a description of the current and expected results of business activities, please refer to the "Development of KfW Group" section of the economic report and the "New business projections" section of the forecast and opportunity report.

KfW Group's banking business (downstream value chain) comprises the products offered in the individual business sectors in the direct financing, on-lending and investment business. The direct financing business includes national and international direct financing by KfW, KfW IPEX-Bank and DEG for corporates including finance companies, public organisations (e.g. municipalities, states and ministries) and private individuals. In the on-lending business, KfW supports lending by financing partners to end customers by providing loans at favourable interest rates. The intermediary financing partners (financial institutions) enable customers (companies, private individuals and public institutions) to apply for KfW promotional loans and use the funds granted for this purpose. In this arrangement, KfW has no direct contractual or other business relationship with the end customers of the on-lending business. The on-lending principle is firmly anchored in the KfW Law and is a central component of KfW's business model. It represents an important sales channel. The on-lending principle can involve one or two financing partners, which are assigned to the first level in the downstream value chain depicted. The investment business consists of investments in venture capital and venture debt funds in the business sector KfW Capital, as well as investments in private equity, venture capital and venture debt funds or equity investments related to the business activities of DEG and KfW Development Bank. KfW manages and secures its financial liquidity by investing in debt securities in a liquidity portfolio managed by the business sector Financial markets, among other things.

The **end of the downstream value chain** is defined by the information, influence and control options resulting from the sustainability guidelines of KfW Group's business sectors or by the business model in accordance with the KfW Law. The sustainability guidelines dictate how the respective business sectors in the direct financing and on-lending business are to deal with environmental and social aspects and how the Environmental and Social Appraisal ("E&S Appraisal") is to be implemented in practice. The E&S Appraisal considers and assesses a project to be financed for potential risks and impacts on people and the environment. In the direct financing business, the value chain normally ends at the first level with the direct business partner.

In the on-lending business, the E&S Appraisal is normally the responsibility of the intermediary financing partners in accordance with recognised international practice (in the case of financing for projects outside the EU or OECD high income countries, KfW Group may also be responsible for the E&S Appraisal). KfW Group carries out spot checks of the procedures for implementation of E&S Appraisals used at the intermediary financing partners. Moreover, financing partners must observe the general terms and conditions of the respective promotional programme and ensure compliance with all environmental and social requirements and standards applicable in the country of investment.

Notwithstanding the foregoing, KfW Development Bank and DEG, as part of the E&S Appraisal, review the environmental and social management system of intermediary financing partners or ensure the introduction or implementation of an environmental and social management system when financing projects with intermediary financing partners or when issuing credit lines.

In the case of the on-lending business, the value chain ends at the second level with the customer of the on-lending business, despite the involvement of financing partners, thus highlighting the significant importance of the on-lending principle and the direct link to KfW's business model.

In the investment business, KfW Capital invests in venture capital and venture debt funds. As part of due diligence, KfW Capital analyses the handling of environmental, social and governance ("ESG") risks and opportunities, sustainability governance and responsibilities for sustainability matters. The KfW Capital Sustainability Policy provides for a review at the level of the respective venture capital or venture debt fund. The assessment of the impact of investments on the environment and society as part of group-wide impact management is also recorded at this stage.

DEG's investments in banks, companies, project financing, private equity funds and venture capital funds are governed by the DEG Guideline for environmental and social sustainability. DEG ensures the introduction/ implementation of an environmental and social management system as part of its E&S Appraisal and pursuant to contractual regulations and therefore implicitly ensures compliance with international standards such as the IFC Performance Standards and the ILO Core Labour Standards. DEG's E&S Appraisal provides for a risk categorisation of the customers. The same applies to KfW Development Bank's fund business, where the corresponding Sustainability Guideline of KfW Development Bank applies. For further information on the sustainability guidelines and E&S Appraisal of the business sectors, refer to the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter.

Interests and views of stakeholders

As explained in the table below, KfW Group is in continuous dialogue with key stakeholders across its entire value chain. The term stakeholder in this regard refers to various groups that are either affected by or can affect KfW Group's activities. KfW Group's most important stakeholders along the value chain are:

- Analysts, representatives of rating agencies and initiatives
- Business contacts from the investment business
- Competitors
- (Potential) employees
- End customers (or their representatives, e.g. associations) from the direct financing business and borrowers (or their representatives, e.g. associations) from the promotional programmes of the on-lending business
- Executive Board and Board of Supervisory Directors of KfW
- Financing contacts (or their representatives, e.g. associations) from the direct financing business
- The general public
- Intermediary financing partners as business contacts in the on-lending business
- Investors (funding)
- Parties directly affected by KfW Group investments and financing
- Population groups whose living conditions are to be improved
- Public sector clients and strategic cooperation partners in politics and business
- Regulators
- Representatives from the media, the research community, supra-national interest groups and non-governmental organisations
- Shareholders
- Suppliers
- Workers in the downstream value chain

KfW Group involves external stakeholders via various dialogue formats. The following table shows some of the key dialogue formats:

Selected dialogue formats with external stakeholders 2024

Format	Participants	Implementation	Frequency	Purpose and consideration of results
Advisory Board of KfW Capital	Experts from the venture capital ecosystem (fund managers, investors, representatives of associations, professors, ministries, Deutsche Börse and KfW)	KfW Capital	Once a year	Dialogue on certain priority topics and current developments
Bilateral talks	National/international promotional or commercial banks (peer group)	KfW/KfW Development Bank/DEG	As necessary	Important innovations and milestones in the sustainability strategy and dialogue on sustainability matters
	Investors, national/international commercial banks	KfW/financial markets	As necessary	Dialogue on sustainability-related topics
Bonn breakfast (<i>Bonner Frühstücksrunde</i>)	Leaders from development cooperation	DEG in cooperation with Engagement Global	Four times a year	Networking event and sharing of substantive impetus for guests; reputation management for DEG
Development forum (<i>Entwicklungsforum</i>)	External speakers (e.g. experts from scientific community or peer group banks) and KfW Development Bank employees	KfW Development Bank	Once a month	Dialogue on sustainability-related topics, their development and implications for KfW Development Bank
Promotional dialogue (<i>Förderdialog</i>)	Selected financing partners/ bank associations, the German Federal Ministry for Economic Affairs and Climate Action and KfW	KfW	Once a year	Strategic dialogue format on overarching topics
Meetings at DEG head office	Representatives from the Bundestag, ministries, and the science, business and finance communities	DEG	Several times a year (as needed)	Dialogue with managers and other employees on development policy matters
Information and participatory event	Project stakeholders; interested members of the public	Executing agency	Dependent on actions; normally always part of the E&S Appraisal	Providing information about KfW Development Bank's actions in a culturally appropriate context, obtaining feedback for use in decision-making processes
Information and feedback session with financing partners and bank associations	Selected domestic financing partners and bank associations	KfW	As necessary	Sounding out new promotional approaches; discussion and feedback on promotional products
KfW new customer monitoring	Borrowers from the promotional programmes of the domestic business	KfW	Once a month	Feedback on satisfaction of individuals and companies with the products, processes and services
NGO dialogue	NGOs as representatives of various stakeholder groups	DEG	Once a year	Dialogue format to bring a wide range of interests to DEG's attention
NGO dialogue at the UN Climate Change Conference	Climate, environment and human rights NGOs and representatives from various stakeholder groups	KfW	Once a year	Dialogue format on sustainability-related topics
Political breakfast in Berlin	Representatives from the Bundestag, ministries and the formal economy in the fields of development policy and foreign trade	DEG in cooperation with the German Chamber of Industry and Commerce	Once a year	Networking event and sharing of substantive impetus for guests; reputation management for DEG
Project visits as part of project audits and progress checks	Workers in the downstream value chain and affected communities (e.g. the general public)	KfW Group	As necessary	As part of project monitoring, to gain direct impressions of project implementation
Corporate Advisory Board	Sector representatives and experts from scientific community and ministries	KfW IPEX-Bank	Twice a year	Dialogue on certain priority topics and current developments
Company visits	Representatives from parliament, ministries and the general public	KfW Development Bank and DEG	Several times a year (depending on delegation trips made by representatives)	Presentation of the developmental impact of DEG investments based on specific companies

Dialogue with stakeholders is of particular importance to KfW Group. The dialogue formats may be enhanced if necessary, depending on the results of the engagement, and may be involved in strategic planning or operating processes.

KfW Group also has various overarching and business sector-specific grievance mechanisms by means of which stakeholders affected by the banking business can voice their complaints about potential risks to human rights and the environment. Moreover, KfW Group's workforce has various options for responding to fields of action, disadvantages and complaints. KfW Group also has an established German Supply Chain Act (*Lieferkettensorgfaltspflichtengesetz* – "LkSG") complaints procedure for banking operations. For a detailed description of the respective grievance mechanisms, please refer to the "Complaints management" section in the "Social information" chapter and the "Strategies relating to aspects of business conduct policies" section in the "Governance information" chapter. Representation and inclusion of the interests of employees working in Germany takes place in various forms: through engagement with workers' representatives, surveys of employees in Germany or intranet postings. For more detailed information on the engagement of KfW's own workforce, please refer to the "Procedures for engaging with the own workforce and workers' representatives" section, which can be found in the "Social information" chapter. The Executive Board and Board of Supervisory Directors are informed via various channels about stakeholder viewpoints and interests with respect to KfW Group's sustainability-related impacts. For example, the Group Development department assesses negative/critical media reports and NGO reports on KfW Group on an ad hoc basis. Risk Controlling has the option of submitting the assessment to the Executive Board as part of quarterly reputational risk monitoring.

Engagement with KfW Group stakeholders also includes participation and involvement of the Board of Supervisory Directors. KfW Group's shareholders are represented on the Board of Supervisory Directors and exercise both a control and a shareholder function. The Executive Board regularly discusses important issues relating to corporate management and strategy with the Chair and Deputy Chair of the Board of Supervisory Directors. If necessary, the Chair of the Board of Supervisory Directors convenes an extraordinary meeting and informs the Board of Directors about important matters. In the reporting year, the Executive Board informed the Board of Directors about strategies, planning, business development, profitability, the risk situation, risk management, compliance, remuneration strategy, IT strategy, the financial position, sustainable corporate governance and its implementation, and results. Information was also provided on the group companies, transactions of particular importance to the profitability or liquidity of the company and changes in the economic environment significant to the company.

In accordance with Article 7a (1) sentence 1 of the KfW Law, there is also an SME Advisory Council. In accordance with Article 7a (2) of the KfW Law, it specifies the state mandate of the Mittelstandsbank (*SME Bank*), deliberates and takes decisions on proposals for the promotion of small and medium-sized enterprises, taking into consideration the overall business planning of KfW. The Executive Board informs the Council at least once a year about programmes that are underway or planned for the medium term, and submits alternative proposals on request. In accordance with Article 7a (1) sentence 2 of the KfW Law, the SME Advisory Council consists of nine representatives or appointed members from the German Federal Government and two representatives appointed by the Bundesrat. It is chaired by the Federal Minister for Economic Affairs and Climate Action; the Federal Minister of Finance serves as deputy chair.

Integrating sustainability matters into the business strategy

KfW Group believes it has a responsibility to accelerate the sustainable transformation of society and the economy and to boost Germany as an industrial and technological hub. To achieve this goal, KfW Group is striving to become the leading digital transformation and promotional bank. In this context, the strategic **KfWplus transformation agenda** is designed to pave the way towards meeting the challenges of this decade. In addition to digitalisation, innovation and climate change mitigation, the agenda also includes actions to combat biodiversity loss. KfWplus constitutes the strategic framework for KfW Group and is operationalised in the strategic objectives 2029. The **strategic objectives 2029** reflect how KfW Group wants to position itself over a five-year horizon. For further information on the KfW Group business strategy, KfWplus and the strategic objectives 2029, refer to the "Strategic objectives 2029" section in the "Basic information on KfW Group" chapter.

KfW Group's strategic ambitions are aligned with the German Federal Government's mandate and its Climate Action Programme 2030, and the German Sustainable Finance Strategy. The Federal Government's Climate Action Programme 2030, aimed at implementing the Climate Action Plan 2050 (Federal Government climate action programme), provides for KfW Group's development into a transformative promotional bank that will support the transformation of the country's economic sectors and financial market. The promotional mandate issued to it by the Federal Government is implemented by KfW in the business sectors and via special tasks commissioned by the Federal Government.

The group-wide **sustainability mission statement** is closely linked to the business strategy as an overarching frame of reference for KfW Group's actions. The mission statement is directly based on the UN's Sustainable Development Goals ("SDGs"), the Paris Agreement of 2015 and the German Sustainability Development Strategy. The sustainability guidelines of the business sectors, subsidiaries and central units set out the requirements of the sustainability mission statement in greater detail with regard to environmental and social issues. KfW Group pursues a **sustainable finance concept** that aims to anchor sustainability rigorously, multidimensionally and measurably in all promotional and financing activities. With its group-wide "tranSForm" sustainability project, KfW Group has further developed and refined its sustainable finance policy (see the "Expansion of group-wide impact management" section in the "Environmental information" chapter). The primary objective, "sustainable promotion", is firmly established in the group-wide strategic objectives 2029 and includes key management approaches from "tranSForm". Other important strategic moves are being gradually integrated into the sustainable finance policy. For instance, it has included KfW Group's commitment to biodiversity since mid-2023. A "BioDiv Roadmap" is being prepared to ensure that the group addresses biodiversity in a holistic and targeted manner, with the necessary groundwork already completed in 2024. Building on this, KfW Group plans, among other measures, to have developed a qualitative biodiversity strategy by 2026 in order to reinforce positive impacts on biodiversity, reduce adverse impacts and minimise the associated business risks.

The KfWplus transformation agenda provides a framework for the **banking business** through its core elements "Climate & environment", "Digitalisation & innovation" and "Managing impact & mobilising private capital". In line with the agenda, KfW Group is careful to avoid potential adverse impacts and risks to society and the environment (including the climate) in its promotional and financing activities, and where possible attempts to reduce or offset such impacts through suitable actions. Based on the strategic objectives 2029 and its sustainability mission statement, KfW Group primarily uses its exclusion list (see the "Exclusion lists at KfW Group" section in the "Environmental information" chapter), its E&S Appraisals in accordance with international standards (see the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter) and its Paris-aligned sector guidelines to bring its promotional and financing activities closely in line with the 1.5°C target (see the "1.5°C alignment of KfW's financing activities" section in the "Environmental information" chapter). SDG mapping is used to ensure the operationalisation of the "SDG mapping" target defined in the strategic objectives 2029. Additionally, an impact management system has been developed based on the SDGs as part of "tranSForm" (see the "Environmental information" chapter). Impact management is also to be used in future to help operationalise this target. Furthermore, there is a definition of environmentally sustainable lending at KfW Group level which addresses the regulatory requirements set out in the 7th amendment to the German Minimum Requirements for Risk Management ("MaRisk") in conjunction with the European Banking Authority's Guidelines on Loan Origination and Monitoring. The definition includes promotional and financing activities of which the new commitment volume counts towards the environment quota set out in the strategic objectives 2029, meaning that they contribute to the "Climate and environment" promotional area in line with KfWplus. Furthermore, the strategic objectives 2029 define an SME share of financing that exceeds 40% of new commitments as a target to bolster the German SME segment. An overview of the contributions made by KfW Group's business sectors to the environment quota and SME share of financing can be found in the "Environment quota" section in the "Environmental information" chapter and the "Customers – Corporates" section in the "Social information chapter". Please refer to the "New business projections" section in the "Forecast and opportunity report" chapter for further information on the assessment of relevant products and/or services, customer groups and markets.

The impact of ESG risks on risks relevant to KfW Group are assessed as part of **ESG risk management**. ESG risks as a risk driver, not risk type, do not present new risks for the group to take into account in risk management. In assessing ESG as part of risk management, the focus is on the financial effects ESG risks may have. Changes in the environment (“E”) such as climate change, social transformation (“S”) and governance standards (“G”) and their impact on the assessment of creditworthiness of KfW Group’s business partners are therefore taken into account. The main focus is on the business strategy and the impacts of a range of climate scenarios on KfW Group’s business activities and risk-bearing capacity.

The importance of sustainability at KfW Group is also reflected in the structure of its **sustainability governance**. KfW Group established the new Sustainability Strategy division and the corresponding new management role of Chief Sustainability Officer (“CSO”) in 2024. The new division comprises two teams: Sustainability Policy and Sustainable Finance Management. Along with the Corporate Strategy division, the new Sustainability Strategy division is incorporated in the Group Development and Economics department to ensure ongoing close integration with the individual strategy areas. The group-wide work and dialogue on sustainability matters is also based on a broad network of decentralised sustainability officers from the individual KfW Group organisational entities (see “Corporate governance” chapter). To strategically ensure continuous development of the group-wide commitment to sustainability, the strategic objectives 2029 also aim for an average ranking among the three best development and promotional banks within a “Best of the Best” peer group. This comprises the ten best-rated development and promotional banks in the respective peer groups of three major ESG rating agencies (ISS, MSCI and Sustainalytics).

All **Human Resources** issues are derived from KfW Group’s mandate and business strategy, including the KfWplus agenda. Specifically, with the help of the core element “top-performing KfW”, the aim of KfWplus is to enable employee potential to be fostered via talent pools and further development via skills training, promotion and monitoring, in order to enhance employer attractiveness. Employer attractiveness and, above all, diversity are also firmly anchored in KfW Group’s sustainability mission statement and strategic objectives 2029. The objective of the “Employer positioning” project includes improving work-life balance and improving equal opportunities for KfW Group employees. What is more, employees are to be equipped to face the challenges of the digital transformation. Please refer to the “Working conditions” section in the “Social information” chapter.

Business model and strategy in the context of material impacts, risks and opportunities

In its double materiality assessment, KfW Group has identified various potential and actual impacts, both positive and negative, as well as risks and opportunities. In each case, an analysis was performed to determine whether the impacts, risks and opportunities were material for the banking business and/or banking operations.

The term “**banking business**” refers to all services provided by KfW Group to its customers as part of its business activities.

Banking operations, by contrast, encompass all of KfW Group’s activities, structures and processes aimed at facilitating the banking business at its sites.

The material impacts, risks and opportunities identified are mainly concentrated in the downstream value chain in the banking business. KfW Group is managed from Germany. Allocation of net interest and commission income by region can be viewed in “Segment reporting by region” in the consolidated financial statements. In the banking business, the topics of climate change, energy, pollution and biodiversity as well as value chain workers, affected communities, and consumers and end-users were identified as material. In addition, material ESG risks specific to KfW Group were determined for the banking business. The time horizons set for the report were taken into account in performing the materiality assessment. A deviating assessment within the different time horizons arose for only one material negative impact in sub-topic E1 Energy. The result for the other material impacts was identical across all time horizons. The materiality assessment process is explained in the “Processes to identify material impacts, risks and opportunities” section of this chapter.

Material impacts, risks and opportunities can influence KfW Group's strategy, decision-making and value chain but have only a limited impact on its business model. The KfW Law defines the function, structure and organisation of KfW, as described in the "Strategy, business model and value chain" section of this chapter. The strict requirements of the KfW Law set the framework for the entire business model, including its risk-bearing capacity. As a result, the material impacts, risks and opportunities identified do not have a significant impact on the business model from KfW Group's point of view. Regardless of this, the impacts, risks and opportunities are taken into account in the Internal Management System.

The strategy and the influence of material impacts, risks and opportunities on it are addressed by a number of overarching aspects within KfW Group, which are presented below:

The Internal Management System ensures that KfW Group's risks and opportunities are sufficiently addressed in group business sector planning as the central strategy and planning process on an annual basis. The basis for the strategy process is the KfWplus transformation agenda and the strategic objectives 2029. As part of this process, the strategic objectives 2029 will be reviewed annually for relevance, completeness and level of aspiration and adjusted where necessary depending on changed parameters or newly determined promotional priority areas. Material risks and opportunities may result in changes in parameters or newly determined promotional priority areas. For further information on the Internal Management System, refer to the "Internal Management System" section in the "Basic information on KfW Group" chapter.

The sustainability guidelines of the business sectors, subsidiaries and central units are intended to boost the strategy's resilience to adverse impacts caused by the banking business. They are derived from the sustainability mission statement. The sustainability guidelines govern the treatment of environmental and social matters in (co-)financed projects of KfW Group and operationalise them via an E&S Appraisal. The aim of the E&S Appraisal is to identify, avoid, mitigate or, if unavoidable, offset possible adverse impacts and risks of a project for people and the environment. Please refer to the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter for an in-depth description of the sustainability guidelines including the E&S Appraisal.

The resilience of the strategy and the business model is also analysed and measured annually based on scenario calculations or stress tests. ESG risks are included in the scenario configuration and various time horizons are considered. Operational resilience is ensured via ESG risk management tools. For further information in this context, refer to the "Disclosures on ESG risks" section of this chapter.

Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy

The main impacts, risks and opportunities for KfW Group are presented below. For simplification reasons, the material impacts, risks and opportunities were aggregated in the categories "Climate and environmental issues in the banking business", "Working conditions in banking operations", "Persons or groups affected by the banking business" and "KfW Group-specific issues". The aggregation shows the interaction between the material impacts, risks and opportunities and KfW Group's business strategy and possible specifics of the topic clusters.

Climate and environmental issues in the banking business

KfW Group's banking business is associated with various material impacts, risks and opportunities in the 'climate and environment' area. The overarching term encapsulates the ESRS sub-topics of adaptation to and mitigation of climate change, energy, pollution and biodiversity. The following tables indicate the material impacts, risks and opportunities in this area:

E1: Climate change

Climate change adaptation

Dimension: banking business Type: positive impact, risk and opportunity

Climate impacts and physical climate risks may result in a liquidity/payment default risk for borrowers. Financing that boosts borrower resilience can counteract this. The increasing impact of climate change may lead to a greater need for financing for adaptation actions. At the same time, the German Federal Government's political prioritisation of health, quality employment and climate/environmental issues opens up new opportunities to launch programmes that can meet these needs.

Climate change mitigation (emissions)

Dimension: banking business Type: positive and negative impact, risk and opportunity

Transition climate risks, such as the inability of borrowers to adapt their business model to the transition to a climate-neutral economy, can increase the liquidity and payment default risk for borrowers. Directing capital flows to and financing of sustainable investments towards 1.5°C alignment by excluding or reducing investments in climate-damaging industries and CO₂-intensive sectors, and financing climate action and other projects that reduce greenhouse gas emissions help to reduce the emissions financed – this can minimise transition risks for borrowers. Moreover, 1.5°C alignment may also be interrupted if, for example, supply security has to be guaranteed in the case of mandated transactions. The increasing impact of climate change may lead to a greater need for financing mitigation actions in order to manage the impacts of climate change. At the same time, political prioritisation of health, quality employment and climate/environmental issues opens up new opportunities to launch programmes that can meet these needs. KfW Group can establish itself as an effective trailblazer by providing financing for sustainable projects and businesses, thereby contributing to the transformation towards climate neutrality.

Energy

Dimension: banking business Type: positive and negative impact, and opportunity

Promotion of renewable energy and energy efficiency, and financing energy-saving measures are important steps towards sustainable transformation of the energy sector. This may result in a growing need for financing for renewable energy, energy efficiency and also the infrastructure to operationalise the energy system. At the same time, political prioritisation of health, quality employment and climate/environmental issues opens up new opportunities to launch programmes that can meet these needs. In individual cases, KfW Group finances projects, on behalf of the Federal Government (e.g. mandated transactions), with a connection to fossil fuels if there is a public interest.

E2: Pollution

Pollution

Dimension: banking business Type: positive and negative impact

Reducing pollution helps to protect and conserve the environment in the long term. Financing environmental protection projects contributes to protecting the environment. However, financing environmentally harmful or emission-intensive industries, even if they are regulated by strict environmental laws and standards, may imply an unavoidable environmental impact.

E4: Biodiversity and ecosystems

Biodiversity and ecosystems

Dimension: banking business Type: negative impact, and opportunity

Financing can help to protect biodiversity and reduce potential credit default risks resulting from physical and transition risks for borrowers. But financing can also have a negative impact on biodiversity.

The KfWplus transformation agenda, the strategic objectives 2029 and the sustainability mission statement address the material impacts, risks and opportunities associated with financing in the areas of climate and environment. General risk management also considers associated risk drivers that influence risk types such as credit risk or market price risks. This means that these drivers are included in the management and organisation of risks and in risk processes. In the context of material impacts, risks and opportunities associated with climate and the environment, KfW Group's business strategy takes into account three sustainability goals: the SDG contribution of KfW financing activities (SDG mapping), the 1.5°C alignment of KfW's financing activities and the environment quota of financing (see the "Overarching environmental targets and actions" section in the "Environmental information" chapter). The sustainability guidelines of the business sectors that determine the respective E&S Appraisal, along with KfW Group's exclusion lists and the group-wide Paris-aligned sector guidelines, represent the central frameworks for managing negative impacts and risks in the area of climate and environment.

Material impacts, risks and opportunities in the context of climate and environment are continuously monitored, included in group business sector planning as necessary and addressed in the business strategy. They are closely linked to the business strategy and influence the decision-making process arising from the business strategy, even if only indirectly in some cases. Examples include setting up internal projects such as the "BioDiv Roadmap" project, revising and expanding the Paris-aligned sector guidelines (e.g. to include the new sector guideline for oil and gas published in December 2023) and adapting or relaunching promotional programmes (e.g. expanding the KfW Environmental Protection Programme).

Risk Controlling regularly reviews KfW Group's business strategy in terms of its resilience to climate and environmental risks so that it can determine actions at an early stage if necessary. Climate scenario analyses and stress tests are performed for this purpose. These are simulations and stress test calculations that assess the impact on KfW Group's risk and earnings position, relying on various scientific assumptions regarding global climate development and global climate policy. They are based on the climate scenarios of the International Energy Agency ("IEA") and of the Network of Central Banks and Supervisors for Greening the Financial System ("NGFS"). They also analyse whether the loan and equity investment portfolio is exposed to increased climate risks in the medium to long term. KfW Group's risk strategy stipulates performance of scenario analyses to assess the resilience of the business strategy, particularly with regard to climate risks. The results of the scenario analyses are also included in the assessment of risk-bearing capacity with regard to the risk appetite defined in the risk strategy. The risk appetite is reviewed and reassessed annually in group business sector planning. The main risk management approaches are included in the risk strategy and serve as the basis for operational risk management. Please refer to the "Processes to identify material impacts, risks and opportunities" section of this chapter for an overview of the scenario analyses performed.

The promotional priority areas including climate and environment are based on the political framework and are derived, for example, from the current version of the coalition agreement or other Federal Government programmes (such as the Climate Action Plan or the Action Plan on Nature-based Solutions for Climate and Biodiversity). These requirements strongly affect the strategy in the context of climate and environment by supporting the promotional priority areas with financing and promotional products or, as necessary, adjusting them. For further information on this, refer to the "Integrating sustainability matters into the business strategy" section of this chapter, and the overview of actions in the context of climate and environment in the "Overarching environmental targets and actions" section in the "Environmental information" chapter.

A group-wide biodiversity strategy is to be developed in order to address the growing importance of biodiversity as an action area in KfW Group's banking business. The "BioDiv Roadmap" project was launched in 2023 to serve this purpose. The second phase of the roadmap involved developing the basics for a group-wide biodiversity strategy by December 2024. The next phase comprises developing the specific strategy and creating the structures for its implementation. The aim of the banking business biodiversity strategy is to boost positive impacts on biodiversity in all relevant business sectors, reduce adverse impacts and dependencies and minimise the associated risks in the banking business. Financing has the potential to adversely impact biodiversity, for instance, if the projects financed contribute to land degradation, desertification and soil sealing or affect threatened species. The sustainability guidelines of the business sectors address how to deal with adverse impacts in this context. For further information, please refer to the "Specific disclosures on biodiversity in policies" section in the "Environmental information" chapter.

Working conditions in banking operations

Working conditions in banking operations affect KfW Group's workforce, which includes KfW Group employees and non-employees. In addition to general working conditions, this section addresses equal treatment/non-discrimination and corporate culture. A list of the material positive impacts can be found in the tables below. No material opportunities, negative impacts or risks for KfW Group were identified in the materiality assessment.

S1: Own workforce

Working conditions

Dimension: banking operations Type: positive impact

Appropriate working conditions have a positive impact on loyalty and motivation/performance of KfW Group employees and recruitment of potential employees (e.g. less staff turnover, fewer days of absence, more new hires); non-discriminatory and transparent remuneration and flexibility in working hours and location are particularly important to KfW Group employees, and attention to mental health as well as a healthy and ergonomic working environment has a beneficial effect on general health.

Equal treatment/non-discrimination

Dimension: banking operations Type: positive impact

Creating an inclusive working environment through equality and non-discrimination and promoting structurally disadvantaged groups in management positions has a positive impact on their career development and satisfaction.

G1: Business conduct policies

Business conduct and corporate culture

Dimension: banking operations Type: positive impact

A favourable corporate culture can offer employees a working environment in which they feel comfortable and motivated, which can contribute to employee satisfaction.

KfW Group employees include all individuals who have an employment relationship with a group company in accordance with national law or practice. Employees are all persons with an active employment contract with a group company who participate in the group's value creation. This includes individuals in partial retirement (both working and non-working periods), those in training (vocational and graduate trainees, interns, temporary student employees and sandwich-degree students), seconded and posted employees, non-active employees (e.g. due to parental leave) and local specialists as well as national staff at the foreign locations. Not included are those in German tax-advantaged "mini-jobs", early retirees, and members of the Executive Board and senior management if their position is their main activity. Reporting on employees covers all KfW Group employees in Germany and abroad. If only a certain sub-group of employees is meant, this is indicated accordingly. Employees can be divided into three types:

- Employees with permanent employment contracts (all KfW Group employees with an open-ended employment contract)
- Employees with fixed-term employment contracts (all KfW Group employees whose contracts expire on a certain date)
- Non-guaranteed hours employees (workers without a guaranteed minimum or fixed number of working hours; such employee must be available to work as required, the employer is under no contractual obligation to guarantee the employee a minimum or fixed number of working hours per day, week or month)

In accordance with the ESRS, non-employees for KfW Group means all contractors in and outside Germany who have concluded a contract to provide labour to a company belonging to the group (self-employed), and workers providing labour supplied by undertakings primarily engaged in the placement and supply of labour (temporary employees). If only a certain sub-group of non-employees is meant, this is indicated accordingly.

KfW Group's workforce does not engage in any activities where there is a significant risk of incidents in the context of forced labour or child labour. The KfW Group human rights policy ("Declaration on respect for human rights and the human rights strategy of KfW and its subsidiaries") prohibits child and forced labour. As KfW Group is not currently pursuing any climate-related transition plans, the workforce remains unaffected by any positive or negative impact resulting from transition plans.

As the materiality assessment found no material opportunities, risks or negative impacts for KfW Group's workforce, the focus of reporting is on positive impacts. The KfWplus transformation agenda, the strategic objectives 2029 and the sustainability mission statement address the positive impacts and actively drive them forward. The business strategy takes into account important internal impact drivers relating to KfW Group's own workforce, such as available internal resources, HR marketing activities and the promotion of inclusion, equality and diversity. The strategic objectives 2029 also place a special focus on KfW Group's own workforce. They anchor the secondary objective "employee potential/customer centricity" in the business strategy in order to leverage positive impact resulting from the working conditions in banking operations. An important part of this is the "Employer positioning" project to enhance employer attractiveness, raise brand awareness and strengthen profiling and diversity, thereby putting the main positive effects into practice. The project is primarily aimed at employees in Germany. Further information on the project is provided in the "Social matters in banking operations" and "Diversity and inclusion" sections in the "Social information" chapter.

The majority of KfW Group's workforce is employed in Germany, meaning that they in particular benefit from the significant positive impacts. The creation of an inclusive working environment and the promotion of structurally disadvantaged groups have a particular impact on these groups of employees. KfW Group's workforce benefits from the positive impact of a non-discriminatory, inclusive working environment and a favourable corporate culture. The benefits of further improved working conditions for non-employees are limited compared to those for employees. For example, non-employees do not benefit from healthcare programmes, nor do they have any co-determination rights at KfW Group.

(Groups of) persons affected by the banking business

KfW Group's banking business has different material impacts, opportunities and risks on and for different persons or groups. "Persons or groups" refers here to value chain workers, affected communities, consumers and end-users.

KfW Group finances a large number of different schemes and projects in various regions around the world. This results in different types of **value chain workers**. The main types are:

- employees in undertakings (including financial undertakings) and public institutions that are direct financing customers
- workers employed by financial undertakings as part of the on-lending business
- employees in undertakings that are customers in the on-lending business
- employees at private equity, venture capital and venture debt funds
- employees at business partners on the money and capital markets (e.g. issuers of debt securities and trading partners)

The above list includes workers in the downstream value chain only, i.e. in connection to the banking business, as workers in the upstream value chain were not determined to be material in the materiality assessment. To improve readability, the term "value chain workers" is used below exclusively to describe the workforce within the banking business.

The value chain workers are affected by various positive and negative impacts, as shown in the following table:

S2: Workers in the value chain

Workers in the value chain

Dimension: banking business Type: positive and negative impact

Financing can have different impacts on value chain workers. On the one hand, jobs can be created or secured through financing. On the other hand, challenges may arise that infringe on human rights and compromise the physical integrity of workers despite the exercise of strict due diligence in the value chain.

KfW Group's financing can create or secure jobs in the value chain, thereby operationalising KfW Group's primary objective or purpose "Transformation of the economy and society with the aim of improving economic, environmental and social living conditions around the world", which is enshrined in the strategic objectives 2029. For KfW Group, this means promoting sustainable development and thus providing transformational impetus to improve living conditions worldwide. The creation of new jobs also contributes to the primary objective in different ways. Firstly, it boosts the economy through higher incomes and greater purchasing power, increasing prosperity and quality of life. Secondly, new jobs can help to facilitate access to education, healthcare and other important services, and promote social integration.

Sustainability guidelines that govern the treatment of environmental and social risks of financed projects apply to the respective business sectors' financing. Financing projects are also analysed for potential negative impacts or risks for employees, among other things. If the internal risk classification shows that an E&S Appraisal is required, international standards are applied during the assessment (see the description of the E&S Appraisal in the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter). Depending on the result of the assessment, conditions may be imposed on the project to be financed. Violations of human rights and/or the physical integrity of value chain workers cannot be completely ruled out, despite compliance with strict due diligence obligations. According to KfW Group's current risk assessment, there is an increased risk of human rights violations, for example through incidents of child labour and forced labour in KfW Group's financing activities, particularly in emerging economies and developing countries. KfW's financing does not give rise to a widespread, systemic risk of human rights violations, due to the comprehensive regulations on E&S Appraisal (see the description of the E&S Appraisal in the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter). However, if human rights are breached after a supported project has commenced, KfW initiates countermeasures without delay. These countermeasures must be determined, implemented and monitored on a case-by-case basis in accordance with the sustainability guidelines.

Material impacts on **affected communities** arise from KfW Group's banking business and therefore occur in connection with its financing activities. The materiality assessment did not reveal any material impact, risks or opportunities resulting from banking operations. Accordingly, KfW Group defines affected communities as all communities that are or could be positively or negatively impacted by accessing funding. This definition also takes into account indigenous peoples as a specific affected community. In summary, communities may be affected by the following impacts of KfW Group (see the following table:

S3: Affected communities

Affected communities

Dimension: banking business Type: positive and negative impact

Financing can have different impacts on affected communities. Financing can affect the living conditions and circumstances as well as local rights of communities both positively and negatively.

KfW Group's financing may have a positive impact on the living conditions and circumstances of the affected communities. The primary objective firmly anchored in the strategic objectives 2029 is also addressed here. A positive impact on living conditions and circumstances can be achieved, for example, by funding education and healthcare projects, which can improve the quality of life of communities, promote economic development and create new jobs. It is also possible that financing in the area of renewable energy can help to protect the climate and the environment and reduce or completely avoid dependency on fossil fuels. In this case, affected communities can benefit from positive climate and environmental impacts, such as improved air quality or avoiding resettlement in order for fossil fuel resources to be extracted. These positive impacts benefit all groups of communities affected by KfW Group.

Financing can have a variety of adverse impacts on the affected communities and their living conditions and circumstances. Living conditions and circumstances can be influenced by aspects including traffic risks for local residents, environmental impacts (air, water, noise, waste), resettlement due to land use by the financing customers and harm to natural resources that are relevant to the livelihood of communities. Material negative impacts of financing are not systemic, as potential impacts on affected communities are assessed in accordance with the E&S Appraisal of the business sectors in advance of corresponding (project) financing (see the description of the E&S Appraisal in the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter). The aim of the guidelines is to avoid negative impacts to the extent possible or, if complete avoidance is not possible, to minimise them or offset them. If the assessment shows that a financing project does not meet environmental and social

requirements and standards, or that unacceptable environmental and social impacts or risks are to be expected that cannot be adequately reduced through suitable mitigation actions, KfW Group will not participate in the financing. Please refer to the “Value chain workers and affected communities” section in the “Social information” chapter for more information.

Material risks and opportunities relating to affected communities in the value chain were not identified in the materiality assessment.

In the sustainability report, KfW Group defines consumers as individuals who purchase, consume or use goods and services for personal use either for themselves or for third parties. End-users are persons who ultimately use a particular product or service or who are intended to use it. KfW serves **consumers and end-users** in two ways: directly (e.g. via student loans) and indirectly via the on-lending business (e.g. via promotional programmes such as the Home Ownership programme). Information on consumers and end-users relates to KfW, as only KfW, but not the subsidiaries, finances private clients. It must be borne in mind regarding the definition of consumers and end-users for KfW that due to the bank’s role as a promotional bank, the generally applicable definition of “consumer” in the context of consumer loans (Section 491 of the German Civil Code [*Bürgerliches Gesetzbuch*]) does not apply. In the context of the sustainability report, however, the term “consumers and end-users” is still used for the purpose of standardisation. The following table shows the positive impacts and opportunities in relation to consumers and end-users:

S4: Consumers and end-users

Consumers and end-users

Dimension: banking business Type: positive impact

Consumers and end-users benefit from the fact that KfW Group facilitates access to financing and promotional products for the general public and promotes housing security by financing owner-occupied housing, and improves access to education through education financing. Non-discriminatory access to promotional products enables everyone to benefit equally from the advantages.

KfW’s business activities have a particularly positive impact on consumers and end-users by guaranteeing them non-discriminatory access to financing and promotional products. Cooperation with financing and sales partners in the on-lending business is a key factor. KfW also believes that individual promotional products have a favourable effect. For example, the promotion of owner-occupied housing is intended to underpin housing security. KfW also offers various types of financing in the context of school, academic and vocational training, which improves access to education primarily for financially weaker consumers and end-users. All manners of consumers and end-users benefit from improved access to KfW’s financing and promotional products. However, only the relevant target group(s) can benefit from the specific financing and promotional products.

The positive impact is directly linked to the principle of subsidiarity enshrined in the strategic objectives 2029. Subsidiarity means that KfW Group focuses on eliminating market weaknesses without obstructing or driving out private-sector enterprises. One such market weakness is the tight housing and real estate market. KfW Group addresses this by improving access to financing and promotional products, such as in its operationalisation of the promotional principle.

Material impacts and opportunities concerning value chain workers, affected communities, consumers and end-users **have an effect** on KfW Group’s **strategy** and the primary objective firmly anchored in the strategic objectives 2029. They may arise from the strategy or influence it:

On the one hand, KfW Group’s strategy generates positive impacts, which can be seen, for instance, in the promotional priority area climate change and the environment, and in impact management and customer centricity. All three groups of people mentioned above stand to benefit from these effects. In

the “Sustainability strategy” section, the business strategy refers to the interests of value chain workers and those of affected communities, and refers to the group-wide exclusion list, the E&S Appraisal and the Declaration on respect for human rights and the human rights strategy of KfW and its subsidiaries. In its financing activities, KfW Group takes care to avoid potential adverse impacts on people and the environment (including the climate) and associated risks, or to minimise or offset them through suitable actions where necessary. More detailed information is provided in the “Social matters at KfW Group” section in the “Social information” chapter.

On the other hand, environmental, social and governance matters can have an impact on KfW Group’s strategy. The impacts described in this chapter have the potential to promote (positive impacts) or hinder (negative impacts) the primary objective of KfW Group as defined in the strategic objectives 2029. The material opportunities for consumers and end-users can affect the strategy and influence target figures depending on the form of the opportunities to be realised. In the context of the group-wide strategy process, possible changes to the strategic objectives 2029 are reviewed annually, as described at the beginning of this chapter. In addition, value chain workers, affected communities, and consumers and end-users are involved through stakeholder engagement formats to enable them to gain an understanding of issues concerning them. This may also have implications for the strategy. In this context, please refer to the “Interests and views of stakeholders” section of this chapter.

KfW Group-specific issues

Two material positive impacts and one material risk specific to KfW Group were identified in the materiality assessment (see table below). The ESRS topics were expanded to include material sustainability matters in the form of KfW Group-specific sustainability matters that were not covered or not covered with sufficient granularity by an ESRS. Please refer to the “Processes to identify material impacts, risks and opportunities” section of this chapter for further information on identifying material impacts, risks and opportunities.

KfW Group-specific issues

Corporate and public clients

Dimension: banking business

Type: positive impact

Due to their size, small and medium-sized enterprises (SMEs) are at a structural disadvantage compared to other, larger companies when it comes to raising capital. KfW Group’s financing offering can mitigate such structural disadvantages by improving SME access to financing and promotional products.

Promotion of sustainable transformation

Dimension: banking business

Type: positive impact

KfW Group endeavours to promote and fund the sustainable transformation of enterprises and public institutions.

Bank-specific ESG risks

Dimension: banking business/banking operations Type: risk

Bank-specific ESG risks can result from credit and equity investment risk due to inadequate governance at counterparties as well as societal changes and greater customer expectations regarding ESG transparency. They can also occur in connection with operational risks, such as information security risk. Information security risks could occur if KfW Group does not keep up with the latest digital technologies for protection against cyber threats. Furthermore, bank-specific ESG risks are associated with compliance risks such as potential violation of laws on trade embargoes, bribery, corruption and market manipulation.

KfW Group promotes **SMEs and the sustainable transformation of enterprises and public institutions**. In order to improve access to financing and promotional products for SMEs, KfW Group offers financing and promotional products specifically for this customer group. This offering is intended to reduce the structural disadvantages in raising capital that SMEs face and have a positive impact on them. The favourable impact on SMEs dovetails with the principle of subsidiarity set out in the strategic objectives 2029. The business strategy also provides for upfront fees as an incentive to sales partners to process microloans and for product-related marketing and sales activities (e.g. for product campaigns or to reinforce the sales position). Furthermore, the strategic objectives 2029 provide for an SME share of more than 40% in financing German SMEs in domestic promotion, which directly contributes to the promotion of SMEs. Financing for the sustainable transformation of enterprises and public institutions is in line with and promotes the purpose enshrined in the strategic objectives 2029. Specifically, financing for the sustainable transformation is tied in with the strategic business objectives through the environment quota (see the “Environment quota” section in the “Environmental information” chapter), the 1.5°C target (see the “1.5°C alignment of KfW’s financing activities” section in the “Environmental information” chapter) and the implementation of the sector guidelines (see the “Paris-aligned sector guidelines” section in the “Environmental information” chapter).

KfW Group created a sub-project within the “transForm” project to further develop the **management of ESG risks** until the end of 2024. The key aspects of the project were creating a central tool to record the ESG risks of KfW Group’s counterparties – the ESG risk profile – utilising the risk profile information in other risk instruments, and taking account of ESG risks in risk and overall bank management processes. This also includes performing a comprehensive ESG risk driver analysis as part of the risk inventory, which supports the materiality assessment carried out in line with the ESRS. For further information, refer to the “Disclosures on ESG risks” section of this chapter.

Materiality assessment

In order to determine the scope of the sustainability report, KfW Group performed a materiality assessment in accordance with the principle of double materiality as set out in ESRS 1. The aim of the assessment is to determine the material impacts, risks and opportunities in relation to the topic-specific sustainability matters specified in the ESRS and, where applicable, other company-specific sustainability matters. The sustainability matters determined to be material on the basis of this analysis constitute the total requirements to be reported, which are to be included in the sustainability report in addition to the ESRS 2 mandatory disclosures. In an iterative process, KfW Group first identified the impacts, risks and opportunities potentially relevant to it and then assessed their materiality. Materiality is assessed in a multi-stage decision-making process: firstly, in a workshop-based process by informed internal contacts who are familiar with sustainability matters from their respective organisational entity and who are normally decentralised sustainability officers. The assessment was then checked for consistency by the party with overall responsibility for the materiality assessment and, where necessary, assessment proposals were developed for impacts, risks and opportunities on which the informed internal contacts were unable to reach assessment consensus. The CSO approved the results and the decision on assessment proposals. The Executive Board then received the results for information purposes.

KfW Group performed the materiality assessment for the first time for the 2024 reporting period. The completeness of the impacts, risks and opportunities, and the circumstances that influence their assessment will be reviewed in future as part of an annual materiality re-evaluation. On this basis, adjustments will be made to the materiality assessment as indicated. The next review will be performed on 30 June 2025 for the 2025 reporting period.

Processes to identify material impacts, risks and opportunities

In accordance with ESRS 1, a sustainability matter is considered material if it is assessed as material either from an inside-out perspective (taking account of KfW Group’s impact on people and the environment) or from an outside-in perspective (taking account of the risks and opportunities arising from sustainability matters) (principle of double materiality). The basis for identifying the impacts, risks and opportunities was formed by 22 sub-topics of environment, social and governance topics, which were derived from the topics listed in the ESRS and supplemented by sustainability matters specific to KfW Group.

To determine and assess the impacts, risks and opportunities for KfW Group, KfW, all subsidiaries and the value chain with upstream and downstream activities were taken into account. If impacts, risks or opportunities do not relate to KfW Group in general, but to specific activities, geographical regions, business relationships or subsidiaries, these were identified and documented. The contents of the report are presented on the basis of group-level materiality. KfW Group analyses and assesses the “banking business” and “banking operations” dimensions separately in the materiality assessment, in order to adequately consider and assess impacts, risks and opportunities arising from its own activities (including upstream activities) as well as those from business relationships. For a definition of those terms please refer to the “Business model and strategy in the context of material impacts, risks and opportunities” section in this chapter.

The impacts were assessed on the basis of the categories “scale”, “scope”, “irremediable character” (in the case of negative impacts) and “probability of occurrence” (in the case of potential impacts). This yielded a materiality score between 0 (low) and 15 (very high) for each impact. Impacts with a materiality score of 8 or higher are considered material. Financial materiality exists when risks or opportunities have or are expected to have a material impact on KfW Group’s cash flow, development, performance, financial position, cost of capital or access to finance over the short, medium or long term. The materiality of risks and opportunities (financial materiality) was assessed based on the magnitude of the financial effects and the estimated probability of occurrence. Each risk and opportunity was assigned a materiality score on a scale of 0 (no effect/unlikely) to 5 (very significant financial effect/highly likely), with a score of at least 3 deemed material. The risks and opportunities were assessed in the context of the impact assessments in topic-related workshops, in order for any existing interdependencies between the impacts and risks or opportunities to be taken into account. The relevant thresholds for materiality were determined based on the EFRAG recommendations in accordance with (Draft) ESG 1 “European Sustainability Reporting Guidelines 1 Double materiality conceptual guidelines for standard-setting”.

KfW Group drew on various internal and external sources and expert assessments from internal and external contacts to identify and assess impacts, risks and opportunities. The following documents in their current versions, among others, were used for the initial collection: GRI Sustainability Report and Financial Report of KfW Group, exclusion lists (see the “Exclusion lists at KfW Group” section in the “Environmental information” chapter), the Paris-aligned sector guidelines (see the “Paris-aligned sector guidelines” section in the “Environmental information” chapter) and the results of SDG mapping (see the “SDG mapping of KfW’s financing activities” section in the “Environmental information” chapter). Additional data sources were used to quantitatively corroborate the expert assessments, including the ESG risk inventory, the statistics on reputational risk events, the new product process and the group-wide strategy process. To ensure the consistency of the results with KfW Group’s strategic objectives and publications, the KfW Law, the strategic objectives 2029, the sustainability mission statement and the “Sustainability strategy” section of the business strategy as well as relevant KfW Group media publications were reviewed.

KfW Group also included the perspectives of external stakeholders to analyse the positive and negative impact on people and the environment. Across the group-wide value chain and in line with the definition of stakeholders pursuant to the ESRS, the focus was on twelve stakeholder groups: civil society, lobbyists, regulators, investors, public sector clients, data providers/IT service providers, the Federal and state governments, the Executive Board and Board of Supervisory Directors, employees, business and corporate clients including banks, financing partners and customers (including the promotional business). Their views were incorporated in particular via findings from engagement formats with affected stakeholders already undertaken by KfW Group. This comprised the complaints reports for the business sectors SME Bank & Private Clients, Customised Finance & Public Clients and KfW Development Bank, as well as the separate complaints report for KfW Development Bank. For the first report based on the ESRS a one-time survey of stakeholder views was also carried out in a total of 15 interviews in 2023.

Linking the materiality assessment and the general risk management process

The materiality of ESG risk drivers is assessed at KfW Group by means of the risk inventory, which comprehensively defines and categorises the ESG risk drivers. Possible effects on KfW Group's risk types are estimated on the basis of interdependencies. The aim is to identify material ESG risk drivers and take these into account in the materiality assessment of the risk inventory. The assessment also considers the probability of occurrence criteria and the anticipated financial effects (amount of loss) in order to determine the contribution of an ESG risk driver to the materiality of a risk type (e.g. credit risk or operational risk). All ESG risk drivers that contribute to a risk type classified as material overall for the group are also classed as material in this report. As a result, they were included in the materiality assessment according to the ESRS. Not every material ESG risk driver is clearly topically attributable to an ESRS standard. These risk drivers are therefore listed under the KfW Group-specific topic "Banking sector-specific ESG risks". The management and supervisory bodies of KfW Group monitor and manage the ESG risk drivers assessed as material in the materiality assessment as part of KfW Group's general risk monitoring and management. For additional information on monitoring and management processes, please refer to the "Organisation of risk management and monitoring" section in the "Risk report" chapter.

Information provided to the Executive Board and Board of Supervisory Directors on material impacts, risks and opportunities

The process described in this section to determine the material impacts, risks and opportunities ensures that the materiality assessment is closely linked to the existing processes in terms of risks (e.g. the ESG risk inventory), opportunities (e.g. the group-wide strategy process or new product process) and impacts (e.g. SDG mapping). The Executive Board and Board of Supervisory Directors are involved in the existing processes by various means through which they address the material risks, opportunities and impacts of KfW Group. For instance, the Executive Board receives a risk report once a month on the bank's overall risk situation (including risk drivers relating to sustainability matters), and the Board of Supervisory Directors is also regularly informed about the risk situation (at least once per quarter). Furthermore, the Executive Board addresses sustainability matters concerning KfW Group on an ad hoc basis in Executive Board discussions triggered by internal projects (e.g. BioDiv-Roadmap, Employer positioning and "tranSForm").

Processes to identify material climate-related impacts, risks and opportunities

To identify material climate-related impacts, risks and opportunities, KfW Group applied the "Processes to identify material impacts, risks and opportunities" in a similar manner. In addition, KfW Group has determined the actual greenhouse gas emissions for 2024 for both its own operations and the financed portfolio. For further information, please refer to the "Greenhouse gas emissions" section in the "Environmental information" chapter. As part of the materiality assessment, the participating experts assessed the potential and future impact of KfW Group's business activities on climate change. This assessment was performed in accordance with the process described in this chapter.

Physical and transition climate risks (outside-in perspective) are determined at several management levels. This is done partially in the risk inventory (see the "Disclosures on ESG risks" section of this chapter). In the case of business partners, physical climate risks are assessed using an application developed in-house. The result of the ESG risk profile reflects the potential financial effects of ESG risks that may arise within a reasonably long period of time, taking into account the foreseeable future. Similarly to the rating methodology, the forecast takes into account a company's susceptibility to adverse ESG developments and unanticipated ESG events. The assessment includes both aspects relating to the past with considerable significance for the future development of the company and current/forward-looking factors. The result of the assessment of ESG risks (very low to very high) reflects the risk materiality (potential financial effect of the risk) as well as the expected time horizon until the risk occurs. Longer periods of time before ESG risks materialise may give the company more time to adapt to them. Shorter periods may increase the risk. Given the individual character of each business partner and sector, a generally applicable definition of limits for time periods is not envisaged, as otherwise there is a risk of omitting relevant information. Stress testing also addresses the level of identification and management of (portfolio) risks.

Physical climate risks and their potential impact on business activities and risk-bearing capacity are also analysed in stress tests. A stress test on drought risk in combination with social unrest in selected countries was carried out in 2023 (see 2023 Sustainability Report). KfW Group prepared a combined flood and heavy rain stress test for the first time in 2024. The scenario involves using hazard maps with a specified probability of occurrence (e.g. flood of the century) to simulate a location-based assessment of the costs incurred in the scenario by a business partner in terms of its fixed assets and other effects of the event (e.g. destruction of infrastructure). On this basis, a change in the probability of default and the loss given default for the next three years is calculated with the aim of quantifying stressed credit risk indicators such as the expected loss. Given that the 2024 stress test on physical climate risks relating to flooding as an ESG risk driver will be performed during the first quarter of 2025 for the first time, there were no results available at the time of preparing this report. The results will be reported starting in financial year 2025 with retroactive effect.

Transition climate risks and their impact on KfW Group's business activities and risk-bearing capacity were also simulated over a long-term period from 2024 to 2050. This involved analysing the scenarios "Net Zero 2050", "Disorderly Transition", "Fragmented World" and "Nationally Determined Contributions" of the NGFS, which provide for the introduction of cross-sector carbon pricing in various forms. In addition to carbon prices, the stress test also takes into account rising energy prices and changing customer behaviour towards a sustainable economy and its products. The orderly "Net Zero 2050" scenario assumes that transition of the economy will commence immediately, while the "Disorderly Transition" scenario assumes it will start in 2030. The NGFS "Nationally Determined Contributions" ("NDCs") scenario describes a world in which countries implement their contributions to reducing greenhouse gas emissions in accordance with the Paris Agreement, which are currently pledged at national level. In this scenario, the average temperature rise is estimated to be over 2°C by 2050 and over 3°C by 2100. In the NGFS "Fragmented World" scenario, there are no globally coordinated measures for setting carbon pricing paths. This results in an inconsistent and fragmented policy with regard to pricing CO₂ emissions. The scenario assumes average global warming of 2.3°C by 2100. In the scenarios, the companies analysed can pass on some of the carbon costs to customers based on sector-dependent parameters. The stress test simulates the long-term development of credit risks in the corporate portfolio. The expected annual loss of the portfolio was used as a risk measure to indicate the development in risk provisioning. In addition, scenario-based emission paths are taken into account, which depend on the carbon price applied in each case, and a balance sheet projection that takes into account existing KfW Group strategy programmes, in particular for reducing greenhouse gas emissions. The assessment period up to 2050 means that transition portfolio risks, which primarily have a long-term impact and whose negative impact is particularly material for the greenhouse gas-intensive sectors, can be studied.

The "Net Zero 2050" and "Delayed Transition" scenarios both show the largest spikes in expected losses per year until 2050. The price increases for CO₂ emissions and energy are very high in both scenarios in order to achieve the 1.5°C target of the Paris Agreement, primarily affecting emission-intensive sectors. At the same time, these two scenarios also see the largest reduction in forecast emissions of the borrowers in the observed portfolio. There is major uncertainty regarding the potential impacts of transition climate risks on the assets and business activities of KfW Group, with a particular view to the long-term time horizon relevant to this risk. The uncertainty is addressed in the stress test presented by analysing four different climate scenarios and subjecting the assumptions made to a critical evaluation, which is also included in the communication of results. The results of the stress test on transition climate risks are also included in the process to determine the business strategy. In future, climate stress tests for transition risks will continue to focus on long-term assessment periods in order to create a strategic roadmap for overall bank management.

In assessing its scenarios on structural risks, KfW Group also analysed on a quarterly basis in 2024 a scenario with a rapid rise in carbon prices and a time horizon from 2024 to 2027. The scenario is based on the following assumptions: Led by the western industrialised nations, the world begins an ambitious climate action programme from 2024 with the aim of achieving global carbon neutrality by 2050, while adhering to the Paris climate plan of maximum global warming of 1.5°C. Based on the NGFS "Net Zero 2050"

scenario, carbon prices in industrialised countries would increase linearly from EUR 120/t of CO₂ in 2024 to EUR 170/t of CO₂ in 2027, while the carbon price increase in developing countries and emerging economies would be lower. Greenhouse gas-intensive industries in particular would be negatively affected by the high carbon prices. A sharp rise in carbon prices would also lead to a decline in economic performance in the countries/regions affected.

Climate-related opportunities and risks are taken into account via the group-wide strategy process. For further information please refer to the “KfW business model” section in the “Basic information on KfW Group” chapter and the “General economic environment and development trends” section in the “Forecast and opportunity report” chapter. The financial report does not yet use any climate-related critical assumptions.

Processes to identify materiality relating to pollution, water and marine resources, biodiversity, and resource use and circular economy

In order to identify material impacts, risks and opportunities in the areas of pollution, water and marine resources, resource use and circular economy, and biodiversity as well as dependencies related to biodiversity and ecosystems, KfW Group applied the process described in the section “Processes to identify material impacts, risks and opportunities”, including the assessment criteria. In a similar manner, the company’s own locations (banking operations) and the upstream and downstream value chain, including the banking business, were analysed separately. The process also analysed transition risks, physical risks and opportunities related to biodiversity and ecosystems. Systemic risks and ecosystem services were not analysed separately in this context.

The result of the analysis determined negative impacts on biodiversity caused by KfW Group’s financing to be material. These may potentially also have a negative impact on affected communities (such as the pollution-related impacts identified as material). KfW Group provides complaints channels and mechanisms to ensure that any concerns of affected communities are adequately heard. There were no other specific consultations for the materiality assessment. Instead, the concerns of the communities were taken into account by analysing the complaint reports of the domestic business sectors and KfW Development Bank. Furthermore, the participants in the materiality assessment workshops included the perspective of affected communities in their assessment. No sites were identified where pollution is of material significance for the activities and the upstream and downstream value chain. Based on the WWF Biodiversity Risk Filter, a review was conducted to determine whether KfW Group sites are located in or near biodiversity-sensitive areas and ecosystems in need of conservation. KfW Group has such sites. However, no negative impacts were identified in this context, as the majority of these are small sites with few employees in the centre of the respective city, or the cities already have mitigating conservation plans in place.

KfW Group’s business activities that have a material impact on pollution are listed below. No material opportunities or risks were identified in this context.

The following business activities may contribute to the reduction of pollution by financing environmental protection projects:

- National and international financing under promotional programmes such as the KfW Environmental Protection Programme, Environmental Innovation Programme and KfW Syndicated Loan Sustainable Transformation
- Promotion of development projects in developing countries and emerging economies on behalf of the Federal Government with promotional products such as grants, development loans and promotional investments
- National and international direct financing and credit lines with banks
- Investment via venture capital, venture debt and private equity funds

The following business activities may involve financing projects or companies in particularly environmentally harmful industries or with high pollutant emissions:

- National and international financing via promotional programmes
- National and international direct financing including export and project financing
- Mandated transactions
- Financing private equity funds and financing of credit lines with banks

When conducting business activities in connection with financing projects or companies in the most environmentally harmful industries or industries with high pollutant emissions, a number of things should be noted. Firstly, it is not possible to name specific promotional programmes, as for one thing, there is generally no sector exclusion, meaning that companies in the segment of the most environmentally harmful industries or industries with high pollutant emissions are also entitled to avail themselves of the promotional programmes on offer. The financing itself, however, does not necessarily have a negative impact. For another thing, certain promotional programmes do not have a specific intended use (e.g. general corporate financing programmes such as the KfW Promotional Loan for large mid-sized companies), so not all negative effects can necessarily be ruled out. Secondly, direct financing can also be granted to borrowers that operate in the most environmentally harmful industries or industries with high pollutant emissions, without the financing itself having a negative impact. Thirdly, the restrictions of the Paris-aligned sector guidelines and the exclusion list, as well as consideration of the relevant sustainability guidelines for all business activities mentioned must be observed.

Processes to identify business conduct-related materiality

To identify the material business conduct-related impacts, risks and opportunities, KfW Group applied the method described in the “Processes to identify material impacts, risks and opportunities” section of this chapter in similar manner. The Compliance department was closely involved in the process to ensure that specific aspects were taken into account.

Materiality of climate change in banking operations

KfW Group does not consider the issue of ‘climate change’ to be material for its banking operations, as its capacity to influence – and consequently its impact on – climate change mitigation is limited. No financial materiality was identified in terms of banking operations either. The greenhouse gas (“GHG”) footprint, which was calculated in full for the first time for 2024, confirms the assumption made in the materiality assessment that emissions from banking operations account for a very small proportion of KfW Group’s total GHG footprint. For these reasons, it can be assumed that the issue of ‘climate change’ will continue to be considered material only for KfW Group’s banking business in the future as well. This means that only the financed GHG emissions (Scope 3 category 15) of KfW Group are to be reported. However, operational GHG emissions (Scope 1, Scope 2 and other significant Scope 3 categories) would then not be part of this report and KfW Group’s GHG footprint would be incomplete. To avoid this, the information on operational GHG emissions was voluntarily included in the sustainability report. For further information, refer to the “Greenhouse gas emissions” section in the “Environmental information” chapter.

Determining information identified as material

To identify the material impacts, risks and opportunities and therefore material sustainability information, KfW Group applied the processes including the thresholds described in the “Processes to identify material impacts, risks and opportunities” section of this chapter. The assessment was carried out jointly with the subsidiaries at the level of the individual sustainability matter. For reporting purposes, KfW Group aggregates the information from the subsidiaries at group level and reports it on a consolidated basis.

List of disclosure requirements covered

The following table provides an overview of the material disclosure requirements in the sustainability report:

List of disclosure requirements covered in the sustainability report based on the results of the materiality assessment

Disclosure requirement	Sub-topic	Dimension	Section of sustainability report
ESRS 2 BP-1	General basis for preparation of the sustainability statements	Banking operations and banking business	– Basis for preparation of the sustainability report for KfW Group
ESRS 2 BP-2	Disclosures in relation to specific circumstances	Banking operations and banking business	– Basis for preparation of the sustainability report for KfW Group
ESRS 2 GOV-1	The role of the administrative, supervisory and management bodies	Banking operations	– Executive Board and Board of Supervisory Directors of KfW – Structure and organisation of sustainability governance
ESRS 2 GOV-2	Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies	Banking operations	– Processes to identify material impacts, risks and opportunities – Structure and organisation of sustainability governance
ESRS 2 GOV-3	Integration of sustainability-related performance in incentive schemes	Banking operations and banking business	– Executive Board and Board of Supervisory Directors of KfW
ESRS 2 GOV-4	Statement on due diligence	Banking operations and banking business	– Statement on due diligence in sustainability matters
ESRS 2 GOV-5	Risk management and internal controls over sustainability reporting	Banking operations and banking business	– Internal controls and risk management relating to sustainability reporting
ESRS 2 SBM-1	Strategy, business model and value chain	Banking operations and banking business	– Strategy, business model and value chain – KfW Group's value chain – Integrating sustainability matters into the business strategy – Environment quota – Diversity and inclusion – Customers – Corporates
ESRS 2 SBM-2	Interests and views of stakeholders	Banking operations and banking business	– Interests and views of stakeholders
ESRS 2 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	Banking operations and banking business	– Business model and strategy in the context of material impacts, risks and opportunities – Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy – Processes to identify material impacts, risks and opportunities
ESRS 2 IRO-1	Description of the processes to identify and assess material impacts, risks and opportunities	Banking operations and banking business	– Materiality assessment – Processes to identify material impacts, risks and opportunities
ESRS 2 IRO-2	Disclosure Requirements in ESRS covered by the undertaking's sustainability statements	Banking operations and banking business	– Processes to identify material impacts, risks and opportunities – Determining information identified as material
ESRS E1 GOV-3	Integration of sustainability-related performance in incentive schemes	Banking operations and banking business	– Executive Board and Board of Supervisory Directors of KfW
ESRS E1 IRO-1	Description of the processes to identify and assess material impacts, risks and opportunities	Banking operations and banking business	– Processes to identify material impacts, risks and opportunities
ESRS E1 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	Banking business	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy – Processes to identify material impacts, risks and opportunities
ESRS E1 E1-1	Transition plan for climate change mitigation	Banking business	– Paris-aligned sector guidelines – DEG Impact/Climate Commitments
ESRS E1 E1-2	Policies related to climate change mitigation and adaptation	Banking business	– Disclosures on ESG risks – Environmental and Social Appraisal Guidelines – Exclusion lists at KfW Group – Paris-aligned sector guidelines
ESRS E1 E1-3	Actions and resources in relation to climate change policies	Banking business	– Disclosures on ESG risks – Expansion of group-wide impact management – Environment quota – Environmental and Social Appraisal Guidelines – Actions to achieve 1.5°C alignment for new financing – DEG Impact/Climate Commitments

List of disclosure requirements covered in the sustainability report based on the results of the materiality assessment

Disclosure requirement	Sub-topic	Dimension	Section of sustainability report
ESRS E1 E1-4	Targets related to climate change mitigation and adaptation	Banking business	– Disclosures on ESG risks – Overarching environmental targets and actions – SDG mapping of KfW's financing activities – Environment quota – Additional information on KfW Group's environmental targets – 1.5°C alignment of KfW's financing activities – DEG Impact/Climate Commitments
ESRS E1 E1-6	Gross Scopes 1, 2, 3 and Total GHG emissions	Banking operations and banking business	– Greenhouse gas emissions
ESRS E1 E1-9	Anticipated financial effects from material physical and transition risks and potential climate-related opportunities	Banking business	n/a
ESRS E2 IRO-1	Description of the processes to identify and assess material pollution-related impacts, risks and opportunities	Banking operations and banking business	– Processes to identify material impacts, risks and opportunities
ESRS E2 E2-1	Policies related to pollution	Banking business	– Environmental and Social Appraisal Guidelines
ESRS E2 E2-2	Actions and resources related to pollution	Banking business	– Expansion of group-wide impact management – Environment quota – Environmental and Social Appraisal Guidelines
ESRS E2 E2-3	Targets related to pollution	Banking business	– Overarching environmental targets and actions – SDG mapping of KfW's financing activities – Environment quota – Additional information on KfW Group's environmental targets
ESRS E3 IRO-1	Description of the processes to identify and assess material water and marine resources-related impacts, risks and opportunities	Banking operations and banking business	– Processes to identify material impacts, risks and opportunities
ESRS E4 IRO-1	Description of the processes to identify and assess material biodiversity and ecosystem-related impacts, risks and opportunities	Banking operations and banking business	– Processes to identify material impacts, risks and opportunities
ESRS E4 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	Banking business	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS E4 E4-1	Transition plan and consideration of biodiversity and ecosystems in strategy and business model	Banking business	– Resilience of KfW Group's strategy and business model regarding biodiversity risks
ESRS E4 E4-2	Policies related to biodiversity and ecosystems	Banking business	– Disclosures on ESG risks – Environmental and Social Appraisal Guidelines
ESRS E4 E4-3	Actions and resources related to biodiversity and ecosystems	Banking business	– Disclosures on ESG risks – Expansion of group-wide impact management – Environment quota – Environmental and Social Appraisal Guidelines – Biodiversity actions
ESRS E4 E4-4	Targets related to biodiversity and ecosystems	Banking business	– Disclosures on ESG risks – Overarching environmental targets and actions – SDG mapping of KfW's financing activities – Additional information on KfW Group's environmental targets
ESRS E4 E4-6	Anticipated financial effects from biodiversity and ecosystem-related impacts, risks and opportunities	Banking business	n/a
ESRS E5 IRO-1	Description of the processes to identify and assess material resource use and circular economy-related impacts, risks and opportunities	Banking operations and banking business	– Processes to identify material impacts, risks and opportunities
ESRS S1 SBM-2	Interests and views of stakeholders	Banking operations	– Interests and views of stakeholders
ESRS S1 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	Banking operations	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy

List of disclosure requirements covered in the sustainability report based on the results of the materiality assessment

Disclosure requirement	Sub-topic	Dimension	Section of sustainability report
ESRS S1 S1-1	Policies related to own workforce	Banking operations	– Social matters at KfW Group – Diversity and inclusion – Remuneration – Working conditions – Procedures for engaging with the own workforce and workers' representatives
ESRS S1 S1-2	Procedures for engaging with the own workforce and workers' representatives about impacts	Banking operations	– Social matters in banking operations – Working conditions – Procedures for engaging with the own workforce and workers' representatives – Complaints management – Complaints channels for employees
ESRS S1 S1-3	Processes to remediate negative impacts and channels for own workers to raise concerns	Banking operations	– Complaints management – Ombudsperson – KfW's LkSG complaints procedure – Complaints channels for employees
ESRS S1 S1-4	Taking action on material impacts on own workforce, and approaches to mitigating material risks and pursuing material opportunities related to own workforce, and effectiveness of those actions	Banking operations	– Social matters in banking operations – Social matters at KfW Group – Diversity and inclusion – Remuneration – Working conditions
ESRS S1 S1-5	Targets related to managing material negative impacts, advancing positive impacts, and managing material risks and opportunities	Banking operations	– Diversity and inclusion – Remuneration – Working conditions
ESRS S1 S1-6	Characteristics of the company's employees	Banking operations	– Diversity and inclusion
ESRS S1 S1-8	Collective bargaining coverage and social dialogue	Banking operations	– Remuneration
ESRS S1 S1-9	Diversity metrics	Banking operations	– Diversity and inclusion
ESRS S1 S1-10	Adequate wages	Banking operations	– Remuneration
ESRS S1 S1-16	Compensation metrics (pay gap and total compensation)	Banking operations	– Remuneration
ESRS S1 S1-17	Incidents, complaints and severe human rights impacts	Banking operations	– Complaints channels for employees
ESRS S2 SBM-2	Interests and views of stakeholders	Banking business	– Interests and views of stakeholders
ESRS S2 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	Banking business	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS S2 S2-1	Policies related to value chain workers	Banking business	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S2 S2-2	Processes for engaging with value chain workers about impacts	Banking business	– Value chain workers and affected communities
ESRS S2 S2-3	Processes to remediate negative impacts and channels for value chain workers to raise concerns	Banking business	– KfW Group's grievance mechanisms – Ombudsperson – Group-wide complaints management in the banking business
ESRS S2 S2-4	Taking action on material impacts on value chain workers, and approaches to managing material risks and pursuing material opportunities related to value chain workers, and effectiveness of those actions	Banking business	– Social matters at KfW Group – Value chain workers and affected communities – Complaints management
ESRS S2 S2-5	Targets related to managing material negative impacts, advancing positive impacts, and managing material risks and opportunities	Banking business	– Overarching environmental targets and actions – SDG mapping of KfW's financing activities – Value chain workers and affected communities
ESRS S3 SBM-2	Interests and views of stakeholders	Banking business	– Interests and views of stakeholders
ESRS S3 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	Banking business	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy

List of disclosure requirements covered in the sustainability report based on the results of the materiality assessment

Disclosure requirement	Sub-topic	Dimension	Section of sustainability report
ESRS S3 S3-1	Policies related to affected communities	Banking business	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S3 S3-2	Processes for engaging with affected communities about impacts	Banking business	– Value chain workers and affected communities
ESRS S3 S3-3	Processes to remediate negative impacts and channels for affected communities to raise concerns	Banking business	– Value chain workers and affected communities – KfW Group's grievance mechanisms – Ombudsperson – Group-wide complaints management in the banking business

Overview of EU legislation taken into account in the sustainability report

This report includes datapoints deriving from other EU legislation where they are required to be reported under ESRS 2 or have been identified as material. These include datapoints from the Sustainable Financial Disclosure Regulation (“SFDR”), Pillar 3, the Benchmark Regulation and the European Climate Law. The following indicates whether and where these datapoints are stated in the report.

List of datapoints that derive from other EU legislation as listed in Appendix B of ESRS 2

Disclosure requirement	Datapoint	Materiality	Section of sustainability report
ESRS 2 GOV-1	Board's gender diversity paragraph 21 (d)	No reservation	– Executive Board and Board of Supervisory Directors of KfW
ESRS 2 GOV-1	Percentage of board members who are independent paragraph 21 (e)	No reservation	– Executive Board and Board of Supervisory Directors of KfW
ESRS 2 GOV-4	Statement on due diligence paragraph 30	No reservation	– Statement on due diligence in sustainability matters
ESRS 2 SBM-1	Involvement in activities related to fossil fuel activities paragraph 40 (d) i.	Not relevant	n/a
ESRS 2 SBM-1	Involvement in activities related to chemical production paragraph 40 (d) ii.	Not relevant	n/a
ESRS 2 SBM-1	Involvement in activities related to controversial weapons paragraph 40 (d) iii.	Not relevant	n/a
ESRS 2 SBM-1	Involvement in activities related to cultivation and production of tobacco paragraph 40 (d) iv.	Not relevant	n/a
ESRS E1-1	Transition plan to reach climate neutrality by 2050 paragraph 14	Material	– DEG Impact/Climate Commitments
ESRS E1-1	Undertakings excluded from Paris-aligned Benchmarks paragraph 16 (g)	Material	– DEG Impact/Climate Commitments
ESRS E1-4	GHG emission reduction targets paragraph 34	Material	– DEG Impact/Climate Commitments
ESRS E1-5	Energy consumption from fossil sources disaggregated by sources (only high climate impact sectors) paragraph 38	Not material	n/a
ESRS E1-5	Energy consumption and mix paragraph 37	Not material	n/a
ESRS E1-5	Energy intensity associated with activities in high climate impact sectors paragraphs 40 to 43	Not material	n/a
ESRS E1-6	Gross Scope 1, 2, 3 and Total GHG emissions paragraph 44	Material	– Greenhouse gas emissions
ESRS E1-6	Gross GHG emissions intensity paragraphs 53 to 55	Material	– Greenhouse gas emissions
ESRS E1-7	GHG removals and carbon credits paragraph 56	Not relevant	n/a
ESRS E1-9	Exposure of the benchmark portfolio to climate-related physical risks paragraph 66	n/a ¹⁾	n/a ¹⁾
ESRS E1-9	Disaggregation of monetary amounts by acute and chronic physical risk paragraph 66 (a)	n/a ¹⁾	n/a ¹⁾
ESRS E1-9	Location of significant assets at material physical risk paragraph 66 (c)	n/a ¹⁾	n/a ¹⁾
ESRS E1-9	Breakdown of the carrying value of its real estate assets by energy-efficiency classes paragraph 67 (c)	n/a ¹⁾	n/a ¹⁾

List of datapoints that derive from other EU legislation as listed in Appendix B of ESRS 2

Disclosure requirement	Datapoint	Materiality	Section of sustainability report
ESRS E1-9	Degree of exposure of the portfolio to climate-related opportunities paragraph 69	n/a ¹⁾	n/a ¹⁾
ESRS E2-4	Amount of each pollutant listed in Annex II of the E-PRTR Regulation (European Pollutant Release and Transfer Register) emitted to air, water and soil paragraph 28	Not material	n/a
ESRS E3-1	Water and marine resources paragraph 9	Not material	n/a
ESRS E3-1	Dedicated policy paragraph 13	Not material	n/a
ESRS E3-1	Sustainable oceans and seas paragraph 14	Not material	n/a
ESRS E3-4	Total water recycled and reused paragraph 28 (c)	Not material	n/a
ESRS E3-4	Total water consumption in m ³ per net revenue on own operations paragraph 29	Not material	n/a
ESRS E4 SBM-3	paragraph 16 (a) i.	Not relevant	n/a
ESRS E4-SBM-3	paragraph 16 (b)	Material	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS E4 SBM-3	paragraph 16 (c)	Material	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS E4-2	Sustainable land / agriculture practices or policies paragraph 24 (b)	Material	– Specific disclosures on biodiversity in policies
ESRS E4-2	Sustainable oceans / seas practices or policies paragraph 24 (c)	Material	– Specific disclosures on biodiversity in policies
ESRS E4-2	Policies to address deforestation paragraph 24 (d)	Material	– Specific disclosures on biodiversity in policies
ESRS E5-5	Non-recycled waste paragraph 37 (d)	Not material	n/a
ESRS E5-5	Hazardous waste and radioactive waste paragraph 39	Not material	n/a
ESRS S1 SBM-3	Risk of incidents of forced labour paragraph 14 (f)	Material	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS S1 SBM-3	Risk of incidents of child labour paragraph 14 (g)	Material	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS S1-1	Human rights policy commitments paragraph 20	Material	– Social matters at KfW Group
ESRS S1-1	Due diligence policies on issues addressed by the fundamental International Labor Organisation Conventions 1 to 8 paragraph 21	Material	– Social matters at KfW Group
ESRS S1-1	Processes and measures for preventing trafficking in human beings paragraph 22	Material	– Social matters at KfW Group
ESRS S1-1	Workplace accident prevention policy or management system paragraph 23	Material	– Working conditions
ESRS S1-3	Grievance/complaints handling mechanisms paragraph 32 (c)	Material	– KfW's LkSG complaints procedure – Complaints channels for employees
ESRS S1-16	Unadjusted gender pay gap paragraph 97 (a)	Material	– Remuneration
ESRS S1-16	Excessive CEO pay ratio paragraph 97 (b)	Material	– Remuneration

List of datapoints that derive from other EU legislation as listed in Appendix B of ESRS 2

Disclosure requirement	Datapoint	Materiality	Section of sustainability report
ESRS S2 SBM-3	Significant risk of child labour or forced labour in the value chain paragraph 11 (b)	Material	– Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy
ESRS S2-1	Human rights policy commitments paragraph 17	Material	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S2-1	Policies related to value chain workers paragraph 18	Material	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S2-1	Non-respect of UNGPs on Business and Human Rights principles and OECD guidelines paragraph 19	Material	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S2-1	Due diligence policies on issues addressed by the fundamental International Labor Organisation Conventions 1 to 8 paragraph 19	Material	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S2-4	Human rights issues and incidents connected to its upstream and downstream value chain paragraph 36	Material	– Value chain workers and affected communities
ESRS S3-1	Human rights policy commitments paragraph 16	Material	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S3-1	Non-respect of UNGPs on Business and Human Rights and OECD guidelines paragraph 17	Material	– Social matters at KfW Group – Value chain workers and affected communities
ESRS S3-4	Human rights issues and incidents paragraph 36	Material	– Value chain workers and affected communities
ESRS S4-1	Policies related to consumers and end-users paragraph 16	Material	– Social matters at KfW Group – Customers – Consumers and end-users
ESRS S4-1	Non-respect of UNGPs on Business and Human Rights and OECD guidelines paragraph 17	Material	– Social matters at KfW Group – Customers – Consumers and end-users
ESRS S4-4	Human rights issues and incidents paragraph 35	Material	– Customers – Consumers and end-users
ESRS G1-1	United Nations Convention against Corruption paragraph 10 (b)	Material	– Strategies relating to aspects of business conduct policies
ESRS G1-1	Protection of whistle-blowers paragraph 10 (d)	Material	– Strategies relating to aspects of business conduct policies
ESRS G1-4 ²⁾	Fines for violation of anti-corruption and anti-bribery laws paragraph 24 (a)	Not material	n/a
ESRS G1-4 ²⁾	Standards of anti-corruption and anti-bribery paragraph 24 (b)	Not material	n/a

¹⁾ No information provided as the datapoint is not included due to the transition period in the 2024 reporting year

²⁾ Matter pursuant to Sections 315c in conjunction with 289c HGB; addressed in the "KfW Group-specific issues" section of this chapter

Governance

The following information relates to the administrative, management and supervisory bodies of KfW as parent company of KfW Group. These are the Executive Board of KfW, the Board of Supervisory Directors and its committees (Presidial and Nomination Committee, Remuneration Committee, Risk and Credit Committee, and Audit Committee). KfW does not have a general shareholders' meeting. Some of the typical tasks performed by a general shareholders' meeting are assigned to the Board of Supervisory Directors in addition to its control and supervisory functions. The Executive Board does not include any representatives of trade unions or any of the group's own employee representatives. The Board of Supervisory Directors includes four representatives of trade unions and no members of the group's own employee representation bodies.

Executive Board and Board of Supervisory Directors of KfW

KfW's Executive Board is chaired by Stefan Wintels, currently comprises six members, and is responsible for managing business in accordance with the KfW Law, the KfW Bylaws and the procedural rules. In accordance with Article 1 (1) sentence 1 of the KfW Bylaws, the Executive Board members must be personally reliable and professionally qualified to assume their functions. Professional qualifications are understood within the meaning of Section 25c of the German Banking Act (*Kreditwesengesetz* – "KWG") and the Federal

Financial Supervisory Authority (*Bundesanstalt für Finanzdienstleistungsaufsicht – “BaFin”*) guidance notice on the fitness and propriety of management board members and members of administrative or supervisory bodies pursuant to the KWG, the German Payment Services Supervision Act (*Zahlungsdiensteaufsichtsgesetz – “ZAG”*) and the German Investment Code (*Kapitalanlagegesetzbuch – “KAGB”*), in which BaFin explains the professional and personal requirements for persons who are appointed as members of management under the respective supervisory laws. Under Section 25c (1) sentence 2 KWG, a prerequisite of the professional qualifications is adequate theoretical and practical knowledge of the business concerned, as well as managerial experience. Pursuant to Section 25c (1) sentence 3 KWG, the professional qualifications necessary for managing an institution can generally be assumed if three years’ managerial experience at an institution of comparable size and type of business can be demonstrated. Requirements in terms of the necessary experience for a position to be filled on the Executive Board are defined in the respective job descriptions with candidate profiles for positions on the Executive Board of KfW, which are drawn up by the Presidial and Nomination Committee of the Board of Supervisory Directors (see below) in accordance with Article 11 (1) no. 4 of the KfW Bylaws. On this basis, the Presidial and Nomination Committee identifies suitable candidates to fill a position on the Executive Board and proposes appointments to the Board of Supervisory Directors. None of the Executive Board members received variable components in their remuneration in 2024. There are thus no separate incentives provided with regard to sustainability (including climate-related considerations), as the financing and promotion of sustainable development form part of the Federal Government’s mandate, making them an integral component of KfW’s business model and strategy.

The supreme controlling body is the Board of Supervisory Directors, which also appoints and dismisses members of the Executive Board. It is responsible for advising and constant monitoring of the conduct of KfW’s business activities and the management of its assets. In accordance with the KfW Law, the Board of Supervisory Directors has 37 members, none of whom assume a management role within KfW. Article 7 of the KfW Law influences the composition of the Board of Supervisory Directors and ensures that the sections of society that are relevant to KfW are represented on the Board of Supervisory Directors. Based on the composition prescribed in the KfW Law and the functions defined therein, the Board of Supervisory Directors as a whole must have the knowledge, skills and experience of the body as a whole required to perform its responsibilities. The members of the Board of Supervisory Directors must have the necessary expertise to perform their office and must be reliable, sufficiently independent and able to commit sufficient time to the performance of their office (Article 7 (1) of the KfW Bylaws). The Federal Minister of Finance and the Federal Minister for Economic Affairs and Climate Action assume the position of Chair in alternating years pursuant to Article 7 (1) no. 1 of the KfW Law. In addition to seven federal ministers (Article 7 (1) nos. 1 and 2 of the KfW Law; automatic members by virtue of their office), 30 (81.1%) independent members of the Board of Supervisory Directors are appointed by the Federal Parliament (*Bundestag*), the Federal Council (*Bundesrat*) and the German Federal Government (Article 7 (1) nos. 3 to 7 of the KfW Law; appointed members). With the exception of the federal ministers, the members of the Board of Supervisory Directors are appointed for three years and roughly one third of the members are replaced every year (Article 7 (2) sentences 1 and 2 of the KfW Law).

Pursuant to Article 10 (3) sentence 1 of the KfW Bylaws, for the purpose of performing the responsibilities assigned to it, the Board of Supervisory Directors establishes committees from among its members pursuant to Articles 11 to 14 of the KfW Bylaws (Presidial and Nomination Committee, Remuneration Committee, Risk and Credit Committee, and Audit Committee). Pursuant to Article 10 (3) sentence 2 of the KfW Bylaws, the committee members must demonstrate the knowledge, skills and experience necessary to perform the respective responsibilities. Further provisions regarding the internal rules, composition and duties of the Board of Supervisory Directors and its committees are set out in Articles 10 to 14 of the KfW Bylaws, and other documents. The Presidial and Nomination Committee also regularly (at least once a year) assesses the knowledge, skills and experience of the individual members of the Executive Board and Board of Supervisory Directors and of each body in its entirety, pursuant to Article 11 (1) no. 6 of the KfW Bylaws. The process of assessing and evaluating these qualifications is based on KfW’s suitability guideline adopted by the Presidial and Nomination Committee, which set out specific criteria regarding suitability and expertise for the Executive Board and Board of Supervisory Directors. None of the members of the Board of Supervisory Directors received variable components in their remuneration in 2024; there are therefore no separate incentives with regard to sustainability (including climate-related considerations) for either the Executive Board or the Board of Supervisory Directors.

The following table provides information on various aspects of diversity of the Executive Board and the Board of Supervisory Directors:

Diversity within the governing bodies of KfW in 2024

	Executive Board	Board of Supervisory Directors
	%	%
Percentage of female members	50.0	27.0
Percentage of male members	50.0	73.0
Percentage of members of other genders	0.0	0.0
No gender information provided	0.0	0.0
Average ratio of female to male members	100.0	37.0
Aged <30	0.0	0.0
Aged 30 ≤ 50	16.7	24.3
Aged >50	83.3	75.7

KfW offers its Executive Board members regular training to ensure that they have suitable skills and knowledge. This is also done on the basis of an existing concept for informing the Executive Board about relevant legal (regulatory) requirements and obligations. To expand their knowledge with regard to their role or regulatory matters, KfW additionally offers the 37 members of the Board of Supervisory Directors regular training courses by external experts. It also provides a budget for their participation in external training events. The trainings offered to the members of the Executive Board and Board of Supervisory Directors include “Current developments in sustainability”, and “ESG risk management and controlling” with internal and external experts. A course was held for each of the Boards in the third and fourth quarters of 2024 concerning CSRD and ESRS requirements for sustainability governance, management of impacts, risks and opportunities, and sustainability reporting.

Structure and organisation of sustainability governance

The EU and the Federal Republic of Germany have committed to promoting sustainable development and implementing the 2030 Agenda with its Sustainable Development Goals (“SDGs”) and to fulfilling the Paris Climate Agreement. KfW Group supports these sustainability targets. KfW Group’s Chief Executive Officer bears overall responsibility for KfW Group’s sustainability strategy and communication. The sustainability report is part of sustainability communication and the management report, and is therefore the responsibility of the Chief Financial Officer. Along with the Executive Board members responsible for the individual business sectors and the management boards of the subsidiaries, the CFO manages operational implementation of sustainability-related issues with regard to sustainable financing transactions.

It was necessary to further develop sustainability governance at KfW Group due to the increased importance of sustainability for banking business and the growing expectations of the stakeholders. The central role of the Group Development department was reinforced at mid-year through measures including establishing a CSO function, to improve coordination, transparency and prioritisation of group-wide sustainability activities. The CSO defines the sustainability strategy, which is an integral part of KfW Group’s business strategy, and acts as a central point of contact for the Executive Board and Board of Supervisory Directors, e.g. with regard to monitoring sustainability matters. The CSO heads the division of the same name, which is part of the Group Development department in the CEO’s area of responsibility and comprises the Sustainability Policy and Sustainable Finance Management teams. The latter team’s responsibilities included managing the “tranSForm” project, such as the central management of the “SDG mapping” and “Paris alignment of KfW’s financing activities” topics (see the “SDG mapping of KfW’s financing activities” and “1.5°C alignment of KfW’s financing activities” sections in the “Environmental information” chapter). The central discussion and decision-making body at senior management level for sustainable finance at KfW Group is the steering

committee from the “tranSForm” project. Following the end of the project as of 31 December 2024, the role will be taken over by the Sustainable Finance Committee (“SFC”). The SFC meets every two months, is chaired by the CSO and continues to support the Executive Board. The involvement of and information provided to the represented business areas (such as business sectors, Risk Controlling and Finance) will also be ensured via the SFC going forward, which will additionally support the implementation of uniform sustainable finance management throughout KfW Group. The aforementioned two teams work together to coordinate the work of the internal Network Sustainable Finance. The network serves to ensure the exchange of information, and coordinates and advances sustainable finance topics at the working level in all three areas of sustainability (environmental, economic and social). The name and rules of procedure of the network will be revised due to the creation of the SFC.

The proven decentralised operational integration and responsibility in the relevant business sectors, subsidiaries and central units continues alongside the central role of the Group Development department. Their sustainability officers play a key role in efficient interface management. Sustainability officers have been appointed in 15 departments and three subsidiaries of KfW Group (KfW IPEX-Bank, DEG, KfW Capital), where their duties include providing advice, impetus and further development, but also acting as a link, coordinator and communicator for their department and delivering input for sustainability reports and ESG ratings. Group Development works with them to develop proposals for decisions by the Executive Board on the strategic orientation of sustainability. The relevant business sectors, subsidiaries and central units can initiate additional targets and actions in a decentralised manner in the sustainability action areas banking business and banking operations. They can also suggest ideas on focus areas to supplement the orders issued by the Executive Board. KfW Group summarises the action areas and topics relating to sustainability matters on an annual basis in a sustainability programme with information on the progress and challenges associated with each topic.

The parties responsible for preparing the sustainability report provide the Executive Board with an annual overview of the material impacts, risks and opportunities for their information. The Executive Board is further involved as needed in adjustments to targets and actions in connection with impacts, risks and opportunities. The Board of Supervisory Directors regularly addresses the annual report, consolidated financial statements and annual financial reporting, which now also includes the sustainability report, at its spring meeting. Moreover, the Executive Board reports on sustainability issues on an ad hoc basis in the Board of Supervisory Directors meetings. Compliance with and performance of due diligence requirements with regard to sustainability matters at KfW Group are primarily ensured via the sustainability guidelines of the business sectors, subsidiaries and central units, of which the KfW human rights policy (“Declaration on respect for human rights and the human rights strategy of KfW and its subsidiaries”) is an integral part. An overview of the core elements of due diligence with regard to sustainability is provided in the “Statement on due diligence in sustainability matters” section of this chapter. As part of the LkSG risk assessment, the Compliance department informs the Executive Board annually about the group’s risk situation and makes detailed reports. More information on KfW Group’s human rights policy is provided in the “Social matters at KfW Group” section in the “Social information” chapter.

For further information on strategic management, refer to the “Internal Management System” section in the “Basic information on KfW Group” chapter. Decisions are made in both the Executive Board and the Board of Supervisory Directors and its committees based on draft resolutions and oral discussions. Where needed, alternatives and (potentially interdependent positive or negative) impacts on quantitative control variables are assessed. The quantitative control variables that may potentially be discussed include promotion (e.g. environment quota), finance (e.g. costs and income), risk (e.g. risk-weighted assets [“RWA”] budget) and funding (e.g. funding needs).

Statement on due diligence in sustainability matters

The following table indicates where in the sustainability report information can be found on the due diligence process at KfW Group, including the way in which the main aspects and steps of the due diligence process are applied:

Allocation of the core elements of the due diligence to the chapters of the sustainability report

Core elements of due diligence	Section of sustainability report
Embedding due diligence in governance, strategy and business model	– Business model and strategy in the context of material impacts, risks and opportunities – Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy – Linking the materiality assessment and the general risk management process – Processes to identify material impacts, risks and opportunities – Executive Board and Board of Supervisory Directors of KfW Group – Structure and organisation of sustainability governance
Engaging with affected stakeholders in all key steps of the due diligence	– Interests and views of stakeholders – Materiality assessment – Processes to identify material impacts, risks and opportunities – Structure and organisation of sustainability governance – Disclosures on ESG risks – Additional information on KfW Group's environmental targets – Overarching guidelines – Environmental and Social Appraisal Guidelines – Exclusion lists at KfW Group – Paris-aligned sector guidelines – Social matters at KfW Group – Diversity and inclusion – Remuneration – Working conditions – Value chain workers and affected communities – Customers – Consumers and end-users
Identifying and assessing adverse impacts	– Business model and strategy in the context of material impacts, risks and opportunities – Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy – materiality assessment – Processes to identify material impacts, risks and opportunities
Taking actions to address those adverse impacts	– Strategy, business model and value chain – Disclosures on ESG risks – Expansion of group-wide impact management – Environment quota – Environmental and Social Appraisal Guidelines – Actions to achieve the 1.5°C alignment for new financing – Paris-aligned sector guidelines – DEG Impact/Climate Commitments – Biodiversity actions – Resilience of KfW Group's strategy and business model regarding biodiversity risks – Social matters in banking operations – Diversity and inclusion – Remuneration – Working conditions – Value chain workers and affected communities
Tracking the effectiveness of these efforts and communicating	– Basis for preparation of the sustainability report for KfW Group – Disclosures on ESG risks – Overarching environmental targets and actions – SDG mapping of KfW's financing activities – Environment quota – Additional information on KfW Group's environmental targets – Greenhouse gas emissions – 1.5°C alignment of KfW's financing activities – DEG Impact/Climate Commitments – Diversity and inclusion – Remuneration – Working conditions – Value chain workers and affected communities – Customers – Consumers and end-users – Customers – Corporates

Internal controls and risk management relating to sustainability reporting

Risk management in sustainability reporting is based on the established process-integrated internal control system (“ICS”) of KfW Group. The reporting process for the sustainability report is embedded in the existing process landscape for financial reporting and the existing sustainability reporting. The established quality assurance and approval mechanisms can be used as a basis, with specifics relating to sustainability reporting based on the ESRS added and supplemented. As provided in the group-wide ICS methodology, a risk assessment is carried out during the process expansion, comprising risk identification, risk description and risk assessment. The risks are identified at the critical points in the relevant processes at which they may occur. The process-inherent risks are assessed using a uniform evaluation scheme in a risk matrix based on types of damage (e.g. financial, normative or reputational) and their probability of occurrence, and hedged in line with the matrix. The assessment is based on expert evaluations and available data (such as operational risk scenarios). This is documented in a risk control inventory. Risks arise at KfW in the context of sustainability reporting relating to the input of various quantitative data, in the categories of accuracy, completeness and data processing, as well as concerning (unpunctual) actual delivery. These risks are hedged by means of multi-stage decentralised quality assurance and approval processes (e.g. using multiple assessor verification). The established hedging mechanisms from financial reporting can be used as a basis for hedging the identified risks. Where other units outside of financial reporting are process owners, requirements for dealing with risks are developed, set down in writing and published as part of the “Restructuring sustainability reporting at KfW Group” project with the respective process owners. The results of the risk assessments and controls are transferred to the group-wide ICS rules and then shared with the Executive Board and Board of Supervisory Directors via the annual reporting implemented there. For further information on the group-wide ICS methodology and its application please refer to the “Additional internal control procedures” section of the risk report.

Disclosures on ESG risks

As is the case for all ESG risks, the ESG risks identified as material in the materiality assessment conducted in accordance with ESRS are not classed as an independent category of risk. Their contribution to the materiality of a risk type as a risk driver is assessed in the risk inventory. With respect to climate risks, KfW Group’s material ESG risk drivers are primarily found in the area of credit risk. Material risk drivers concerning governance of counterparties are particularly relevant to credit and equity investment risk, whereas risk drivers concerning governance breaches by KfW Group and threats to the group’s information security primarily relate to operational risk. Risk drivers concerning demographic change and the quality of customer relationships are particularly relevant to equity investment risk. For more detailed information on risk strategy and risk management, please refer to the “Organisation of risk management and monitoring” section of the risk report.

KfW Group has established a separate sub-project for ESG risks within the group-wide “tranSForm” project in order to **reinforce ESG risk management**. This sub-project realises the group’s ESG risk management efforts but without pursuing a measurable, results-based objective within the meaning of the ESRS. The aim of the sub-project is to continue to develop ESG risk management at group level until the end of 2024, to improve the identification, assessment and management of ESG risks, and to meet the relevant regulatory requirements relating to ESG risks that apply to KfW Group. The central instrument for ESG risk management at KfW Group is the ESG risk profile – an application that records the ESG risks of the group’s business partners. The risk profiles for banks, corporates, funds and securitisations are already in use, and the risk profile for countries was introduced in the first half of 2024. ESG risks were included in the risk management cycle and its instruments in line with the project plan until the end of 2024. The specific steps to further develop ESG risk management and thus also to achieve the target are explained in more detail in the next section.

The **packages of measures** under the “ESG risk management” tranSForm sub-project are broken down into meta-measures, and were defined based on existing regulatory requirements of national and European supervisory authorities in the context of ESG risk management. The meta-measures include the following topics and risk instruments: establishing an ESG risk profile database, integrating ESG risks into credit ratings, ensuring that ESG risks are adequately addressed in the risk strategy, business strategy, and risk appetite, valuation of collateral and in risk-bearing capacity. Other topics comprise further developing ESG risk stress testing capabilities, defining and reporting key performance indicators (“KPIs”) and key risk indicators, establishing standard reporting for ESG and creating the option for ad hoc ESG reports, integrating the ESG risk view into the credit process, expanding the ESG risk inventory and specifying operational risks and reputational risks with regard to ESG risk aspects, assessing and realising need for action relating to market price risk in the context of ESG risks, and creating external transparency on the group’s basic approach to ESG risk management. The meta-measures implemented apply throughout the group; there may be additional subsidiary-specific actions. The planned detailed work packages for each meta-measure were completed by the end of reporting year 2024.

The design and introduction of KPIs on transition, physical and other climate and environmental risks along with the definition of the corresponding risk appetite were reviewed and revised in the reporting year and completed by the end of financial year 2024. Actions already taken to deal with climate risks at KfW Group portfolio level were also constantly enhanced and expanded. This included assessment of transition climate risks in the portfolio using KfW’s own “ESG risk profile” application for business partners and specific ESG stress tests. For a detailed description of the further actions to manage the risks identified as material as part of risk management and monitoring at KfW Group, please refer to the “Organisation of risk management and monitoring” section of the risk report.

KfW Group introduced a new internal policy in the reporting year: “ESG risk management”. The policy is a comprehensive guide to dealing with ESG risks throughout KfW Group. The policy sets out the fundamental methods, tools and management processes used in connection with ESG risks. These include, in addition to the 7th MaRisk amendment, the ECB Guide on climate-related and environmental risks. The Risk Controlling department will assume responsibility for the policy with effect from 1 January 2025 following completion of the tranSForm project.

Environmental information

As KfW Group's primary objective, sustainable promotion is at the heart of the strategic objectives 2029, in which KfW Group defines its targeted medium to long-term positioning. In line with the strategic transformation agenda KfWplus, these include the vision of positioning KfW as THE digital transformation and promotional bank. In this respect, climate and environmental aspects are of particular importance as part of the promotional principle of "sustainability" and the concept of "promoting transformation and boosting resilience". The strategic importance of these issues is also evident in the results of the materiality assessment performed by KfW Group for this report. The topics identified as material in the banking business are "climate change mitigation", "climate change adaptation", "energy", "pollution" and "biodiversity". These topics are therefore the focus of the "Environmental information" chapter. The chapter starts by presenting targets, actions and policies of KfW Group that relate to the material environmental aspects across all topic areas in an overarching section. These include targets and actions that relate to the SDG contribution of KfW's financing activities and the group-wide environment quota of financing, the sustainability policies of the business sectors, and the exclusion lists used with regard to environmental aspects. Further information on any topic-specific targets, actions and policies is provided in separate sections of the chapter, on climate and energy (including information on KfW Group's greenhouse gas emissions), pollution, biodiversity and material climate and biodiversity risks. Disclosures in accordance with Article 8 of the EU Taxonomy are also provided in this chapter.

Overarching environmental targets and actions

Three targets are embedded in the strategic objectives 2029 with respect to the topics "climate change mitigation", "climate change adaptation", "energy", "pollution" and "biodiversity" identified as material within the banking business:

- SDG mapping of KfW's financing activities
- 1.5°C alignment of KfW's financing activities
- Environment quota of financing of more than 38%

KfW Group considers the targets to be in line with the orientation of the promotional policy and the focus on sustainable transformation in Germany and around the world. These targets and the corresponding actions are described in further detail below (for the "1.5°C alignment of KfW's financing activities" target, see the corresponding section of this chapter).

SDG mapping of KfW's financing activities

The United Nations adopted the 2030 Agenda for Sustainable Development in 2015, covering the three dimensions environmental, social and economic. At the heart of the 2030 Agenda are 17 universal goals for sustainable development, the Sustainable Development Goals, or SDGs. KfW Group contributes to the achievement of all SDGs through its promotion and financing of governments, municipalities, companies and private individuals worldwide, and covered all SDGs with financing activities in 2024. The financing contribution to each SDG is displayed in the table below. To make the contributions to the global SDGs transparent, KfW Group aims to map 100% of annual new business to at least one Sustainable Development Goal. The group discloses the volume of financing allocated to each SDG (absolute volume in millions of EUR). A comprehensive review of the allocation is carried out for each financing. This is described in the following section. For a small number of financings, it was not possible to make a clear allocation to the SDGs in 2024. They are therefore not included in the SDG mapping. The group allocated 98.2% of new commitments to an SDG in financial year 2024.

KfW Group financing contributions to the SDGs¹⁾

	New commitments 2024
	EUR in millions
SDG 1: No poverty	4,351
SDG 2: Zero hunger	569
SDG 3: Good health and well-being	3,464
SDG 4: Quality education	4,706
SDG 5: Gender equality	1,160
SDG 6: Clean water and sanitation	2,773
SDG 7: Affordable and clean energy	52,308
SDG 8: Decent work and economic growth	33,896 ²⁾
SDG 9: Industry, innovation and infrastructure	47,011
SDG 10: Reduced inequalities	4,258
SDG 11: Sustainable cities and communities	54,342
SDG 12: Responsible consumption and production	2,733
SDG 13: Climate action	51,756
SDG 14: Life below water	564
SDG 15: Life on land	1,425
SDG 16: Peace, justice and strong institutions	1,149
SDG 17: Partnerships for the goals	2,979

¹⁾ KfW financing generally contributes to several SDGs at the same time.

²⁾ Adjusted for non-recurring effects from mandated transactions to stabilise and secure the energy supply in Germany in the amount of EUR 8.5 billion in financial year 2024 carried out on behalf of the German Federal Government

KfW Group set the SDG contribution target voluntarily given that no harmonised, standardised indicators have yet been established for (promotional) banks to report their (financing) contributions to the SDGs. Accordingly, it also developed its own SDG mapping approach. The mapping process for “SDG eligible” financing takes account of the SDG requirements (with a focus on the preamble to the 2030 Agenda), and also considers whether activities are in line with the sustainability strategy of German Federal Government, the SDG Compass developed by the GRI, the UN Global Compact and the World Business Council for Sustainable Development, and whether the intended positive impact on the respective SDG is plausible in line with KfW Group’s understanding of impact.

In order to present the SDG contribution of financing transparently, KfW Group examined the standard data recorded for new financing for such information that enables an indication on the intended positive impact on sustainable development in line with KfW’s understanding of impact. Any negative effects on other SDGs are not offset. In terms of results, this includes the contribution of financing activities to the environment quota (for all business sectors), qualitative and quantitative impact indicators (DEG) and development markers (KfW Development Bank). For the results of customers and partners in the business sectors SME Bank & Private Clients and Customised Finance & Public Clients, KfW product categories are also used. Standardised purposes (KfW Development Bank), promotional product-specific classifications (SME Bank & Private Clients and Customised Finance & Public Clients) and sector classifications (DEG and KfW IPEX-Bank) are used at level of the financed activity as additional data fields to identify the intended positive impacts to achieve the SDGs. Compliance with international standards such as the IFC Performance Standards and performance of an E&S Appraisal (see the “Environmental and Social Appraisal Guidelines” section of this chapter) on the financing ensure that any conflicting targets and negative effects on achieving the SDGs are prevented or minimised. Compliance with KfW Group’s exclusion list is also a fundamental requirement (see the “Exclusion lists at KfW Group” section of this chapter). Financing is eligible as an SDG contribution only when all the requirements are met.

In the areas of **“climate change mitigation”, “climate change adaptation”, and “energy”** (including the use of renewable energy and energy efficiency) contributions of financing activities to SDG 7 and SDG 13 enable measurement of the intended positive impact of KfW Group and also demonstrate how KfW Group exploits the opportunities identified as material in these areas. The aim of SDG 7 is to ensure access to affordable, reliable, sustainable and modern energy worldwide. KfW Group considers financing to contribute to SDG 7 if the technologies involved either serve to further expand renewable energy sources or are classified as transitional technology to achieve the energy sector transformation (transitional technologies pursuant to the sector guidelines; see the “Paris-aligned sector guidelines” section of this chapter). Investments in increasing energy efficiency are also part of KfW Group’s commitment to achieving SDG 7. The objective of SDG 13 is to take urgent action to combat climate change and its impacts. KfW Group contributes to this goal by providing resources for climate change mitigation and adaptation both in Germany and internationally, and by supporting its project partners as needed in designing and executing their investments. In the area of climate change mitigation, it focuses on actions relating to renewable energy, energy efficiency, forest conservation/reforestation and environmentally friendly mobility. KfW Group’s contribution to SDG 13 also includes financing for climate change adaptation actions, such as investments in climate-resilient supply of drinking water and flood risk management.

In the area of **“pollution”**, the SDG contribution measures the intended positive contributions of KfW Group financing activities to minimising and preventing air pollutants, water pollution and soil pollution via KfW’s SDG mapping. This follows the SDG eligibility methodology described in this chapter and is not based on specific loads. Financing activities that contribute to minimising pollution are primarily allocated to the following SDGs: SDG 3 addresses problem areas that have an adverse effect on health and well-being, including pollution of air, water and soil. KfW Group financing that is mapped to this SDG includes infrastructure actions to secure minimum hygiene standards (such as sewage treatment facilities). Financing activities that contribute to minimising pollution are also mapped to SDG 6 and SDG 12. In addition to ensuring availability and sustainable management of water and sanitation for all, SDG 6 also concerns the challenge of ending contamination of water resources by untreated wastewater. In light of this, KfW Group includes both financing for wastewater disposal and promotional measures for modern waste management systems that prevent contamination of water resources. The aim of SDG 12 is to ensure sustainable consumption and production patterns. KfW Group financing activities deemed to make a contribution to this goal include promoting environmentally friendly production processes and wastewater treatment (see the “Environmental and Social Appraisal Guidelines” section of this chapter). To ensure compliance with the aforementioned standards, potentially negative impacts of financing activities on pollution are also examined, primarily by applying IFC Performance Standard 3 “Resource Efficiency and Pollution (2012)”.

In the area of **“biodiversity”**, the contributions of financing mapped to SDG 14 and SDG 15 show how KfW Group exploits the opportunity identified as material to expand financing for companies that contribute to biodiversity conservation through their activities. KfW Group’s intended positive contribution to biodiversity and ecosystems is also demonstrated through the mapping of financing to these SDGs. Therefore, the target is currently not based on any further (inter)national strategies or legal requirements in connection with biodiversity and ecosystems or ecological thresholds in line with its purpose. The main contributions to SDG 14 are environmental programmes for wastewater purification and treatment and promotional measures for maritime protected areas and sustainable fishing. The contribution to SDG 15 in Germany primarily comprises environmental programmes for soil and groundwater conservation, and in terms of KfW Group’s international activity, protected area management, sustainable forestry and combatting desertification. KfW Group’s financing activities in the area of biodiversity and ecosystems vary widely and can be allocated to different steps of the mitigation hierarchy (i.e. avoidance, minimisation, restoration and rehabilitation, and compensation or offsets) depending on the financing target and activity. Clear allocation of the “SDG mapping” target to a step of the mitigation hierarchy is therefore impossible. Aside from measurement of the intended positive contributions, potential conflicting targets and negative effects on achieving the SDGs with regard to biodiversity shall be minimised. This is achieved by examining potential negative impacts of financing using IFC Performance Standard 6 “Biodiversity Conservation and Sustainable Management of Living Natural Resources (2012)” (or Environmental and Social Standard [“ESS”] 6 of the World Bank at KfW Development Bank) as part of the E&S Appraisal (see the “Environmental and Social Appraisal Guidelines” section of this chapter). KfW Group also uses IFC Performance Standard 7 “Indigenous Peoples” (or ESS7 at KfW Development Bank) in the E&S Appraisal to ensure that the informed and willing consent of local and indigenous peoples is considered in financing activities, and that they are consulted as necessary.

KfW Group's **understanding of impact** is derived from the basic idea of demonstrating the process from financing up to the intended change or impact. SDG mapping is a first step in making KfW Group's financial contribution to achieving SDGs clear. The scope of the impacts on sustainability cannot currently be quantified through SDG mapping. For this reason, a group-wide impact management system has been established (see the following "Expansion of group-wide impact management" chapter).

Expansion of group-wide impact management

KfW Group's strategic efforts in the area of "sustainable financing" were grouped in six sub-projects under the "tranSForm" project until the end of financial year 2024. The aim of the project was to strengthen KfW's contribution to the SDGs and the Paris climate targets. It underscores KfW's aspiration to support the achievement of a greenhouse gas-neutral future in line with the Federal Government's mandate and its Climate Action Programme 2030 and the German Sustainable Finance Strategy. The main elements of "tranSForm" are governance, expansion of the impact management system, ensuring the 1.5°C alignment of KfW's financing activities, developing a GHG accounting system, even stricter inclusion of ESG risk factors in KfW Group's risk management (see the "Disclosures on ESG risks" section in the "General information" chapter), implementing financial sustainability reporting and data and IT support. A group-wide harmonised understanding of impact was established as part of the "tranSForm" sub-project "impact management" along with measurement of the sustainability-related impact of projects financed or co-financed by KfW have on sustainability. Group Development will be responsible for further developing group-wide impact management after completion of the "tranSForm" project, from 2025. Impact indicators that will continue to be developed were defined as part of impact management, based on the SDGs. The focus was on reinforcing the data basis for impact management in 2024. Corresponding procedural and technical developments were aimed at both general data availability and improving data quality. These further developments were devised and gradually realised in 2024. KfW Group had already developed methodologies for measuring GHG savings by 2023 for renewable energy and energy efficiency projects, and for the transport and mobility sector. The focus of this further development is on automated use of the existing methods going forward and centralised technical calculation of savings, unless the business sectors calculate their savings in a decentralised manner and not in line with the group-wide methodology. Technical implementation was phased in in 2024 and is initially focused on application cases relating to renewable energy. KfW Group will report on methodological advances and the measurement of specific impact indicators on an ongoing basis in the future.

Impact measurement is the focal point of impact management. There is therefore no plan to use biodiversity offsets, mitigation actions or local and indigenous knowledge. These aspects will be included, if necessary, in the E&S Appraisal (see the "Environmental and Social Appraisal Guidelines" section of this chapter).

Environment quota

The promotional priority area "climate change and environment" is included as an element in the strategic KfWplus transformation agenda. This key promotional area is to be further expanded with regard to the **environment quota target**. The target quota is defined in the strategic objectives 2029 and, for the reporting year, totals at least 38% of the annual new commitment volume. It represents the ratio of the eligible new commitment volume to KfW Group's total new commitment volume. KfW Group set itself the environment quota target voluntarily without the active involvement of stakeholders in order to ensure a continuously high promotional business volume in the "environment and climate change mitigation" priority area.

KfW Group has defined different eligibility criteria for financings to be included in the environment quota depending on the type of financing, which were developed based on the standard market level of ambition and the typical financing conditions of climate-related and environmental public promotional programmes. No other scientific findings were included in determining the criteria. The environment quota comprises the impacts and opportunities identified as material in the areas of "climate change mitigation", "climate change adaptation", "energy" and "pollution". Promotional programmes, facilities, initiatives or credit lines with an explicit focus on the climate (including climate change adaptation) or environmental protection and resource conservation (including sewage treatment and air pollution control) are directly included in the environment quota. For individual promotional programmes, this may only apply to specific loan purposes. Project-related financing or corporate financing for renewable energy, e-mobility, carbon sinks, carbon capture and storage as well as for producing climate change-mitigation and climate-adaptation technologies are included directly. Specific reduction targets apply for including other project-related financing or corporate financing relating to climate change mitigation and other avoidance of pollution, particularly waste avoidance, wastewater treatment, air pollution control and noise control. In these cases, a proven reduction in resource

consumption and environmental pollution of at least 15% is required. Including financing in the area of energy efficiency requires the demonstrable achievement of specific emission reductions (measured in CO₂ equivalents – “CO₂eq”) by at least 15% compared with the national industry average of existing assets in the case of new investments or 20% in the case of replacement investments. Beyond this, no loads are specified. The respective business sectors are responsible for compliance with the group-wide rules and for providing quality-checked data for consolidation. They can also define further, business-sector-specific criteria for the inclusion of financing in the environment quota. There have been no changes in the method used to calculate the environment quota since the previous year.

The environment quota of 44% at group level in 2024 was above the target of the strategic objectives (>38%) and slightly below the prior-year quota of 45%¹⁾. Various developments were evident in the quota. For instance, promotional business opportunities were limited due to state-aid legislation with a high EU reference rate, which resulted in reduced commitments in the business sector SME Bank & Private Clients in promotional segments without state aid (such as commercial climate and environment financing). This was also apparent in the business sector Customised Finance & Public Clients from the low number of commitments to municipal enterprises and for the Sustainable Transformation syndicated loan. This situation had a negative effect overall on the volume of new business and the environment quota of financing at group level. The other business sectors made a positive contribution to the environment quota, primarily due to the higher pro-rata number of commitments relating to the environment by KfW Development Bank and business sector Export and project finance, KfW Capital's Green Transition Facility, and the increased focus of DEG's new business on climate and environment financing. The following table presents the new commitment volume and environment quota of the group and the individual business sectors.

KfW Group's new commitment volume and environment quota by business sector in 2024

Business sector	New commitments, total	Of which climate change and environment	Environment quota ¹⁾
	EUR in billions	EUR in billions	%
SME Bank & Private Clients	35.8	20.7	58
Customised Finance & Public Clients	41.6	1.8	21 ²⁾
KfW Capital	1.6	0.1	4
Export and project finance ³⁾	23.9	6.6	28
KfW Development Bank	7.8	4.7	60
DEG	2.5	1.2	48
Total^{2), 4)}	112.8	34.7	44

¹⁾ Percentage of total commitments for the business sector or business area

²⁾ Adjustment for non-recurring effect from emergency aid and price cap for gas and heat on behalf of the Federal Government, special funding measures (including margining and gas storage facilities) and the hydrogen core network amortisation account

³⁾ The environment quota in the core business of the business sector is 26%. Excluding the consolidation effect from domestic promotional export and project on-lending business, the environment quota is 28%.

⁴⁾ Adjustment of KfW Group's total volume for commitments in export and project finance made from KfW domestic programme loans by EUR 0.4 billion

The following table shows the **key actions** in terms of promotional programmes and financing priorities for 2024 **that contribute to achieving the environment quota**. As a lever for the decarbonisation of the banking business, programmes and financing with a focus on climate and energy additionally contribute to the achievement of the group-wide target of “1.5°C alignment of new financing” (see the “1.5°C alignment of KfW's financing activities” section of this chapter) and compliance with the Paris-aligned sector guidelines (see the “Paris-aligned sector guidelines” section of this chapter).

¹⁾ Unaudited previous year figure

The business sectors' key contributions to the environment quota in 2024

Climate & energy

Business sector	Financing/promotional priority	Target group	Sustainability matter ¹⁾	Commitment volume EUR in billions
SME Bank & Private Clients	Federal Funding for Efficient Buildings Provision of loans with interest subsidies and repayment bonus for the energy-efficient refurbishment of residential and non-residential buildings and the purchase of a newly refurbished efficiency building, grants for the purchase and installation of new, climate-friendly heating systems Time horizon: ongoing	Including private, commercial and public-sector investors, private individuals, home owners' associations, companies, municipal enterprises, self-employed, non-profit organisations, contractors	Climate and energy	10.0
	Climate-friendly Construction Residential Buildings, Non-residential Buildings, Residential Property for Families Construction or first purchase with high energy-efficiency standards (Efficiency House 40 or Efficiency House 55 in the low-price segment) and demonstrably low GHG emissions ("Sustainable Building Plus Quality Label", "Sustainable Building PREMIUM Quality Label") Time horizon: ongoing	Private individuals, homeowners' associations, companies, municipal enterprises, self-employed, non-profit organisations	Climate and energy	7.7
	Climate action campaign for corporates Financing of investments within the EU to reduce, avoid and eliminate GHG, based on EU taxonomy technical criteria Time horizon: ongoing	Including companies, municipal enterprises, self-employed	Climate and energy	1.6
	KfW Environmental Protection Programme Promotion of nature-based climate change mitigation and biodiversity actions in companies with a focus on the maintenance, re-naturalisation and restoration of semi-natural ecosystems and measures to unseal and re-naturalise soil and for natural, decentralised rainfall management on private companies' commercially used land Time horizon: ongoing	Companies and the self-employed	Climate, pollution and biodiversity	0.8
KfW Development Bank	Financing projects in energy generation, distribution and efficiency, including renewable energy and energy efficiency, and projects for the design of sustainable urban transport and the development of rural roads in developing countries and emerging economies on behalf of the Federal Government Time horizon: ongoing	Developing countries and emerging economies	Climate and energy	2.5
	Financing of projects on behalf of the Federal Government in the area of environmental protection in general, including biodiversity, and water, wastewater and waste disposal in developing countries and emerging economies Time horizon: ongoing	Developing countries and emerging economies	Pollution and biodiversity	1.2

The business sectors' key contributions to the environment quota in 2024

Climate & energy

Business sector	Financing/promotional priority	Target group	Sustainability matter ¹⁾	Commitment volume EUR in billions
Customised Finance & Public Clients	IKK – KfW Investment Loans for Municipalities Promotion of investments by municipalities in municipal infrastructure Time horizon: ongoing	Municipal authorities, their legally dependent self-operated companies (<i>Eigenbetriebe</i>), regional municipal associations (<i>Gemeindeverbände</i>) and special-purpose municipal associations (<i>kommunale Zweckverbände</i>)	Climate and energy	0.5
	Sustainable Mobility Investment Loan Promotion of investments in sustainable and climate-friendly mobility based on the EU taxonomy criteria Time horizon: ongoing	Including companies, municipal enterprises, self-employed	Climate and energy	0.3
	Federal Funding for Efficient Buildings – Municipalities Promotion of refurbishment and purchase of a newly refurbished efficiency building Time horizon: ongoing	Municipal authorities, their legally dependent self-operated companies, regional municipal associations and special-purpose municipal associations	Climate and energy	0.3
	Climate-friendly Construction Municipalities – Residential and Non-residential Buildings Promotion of new construction and first purchase of climate-friendly residential buildings, homes and non-residential buildings in Germany Time horizon: ongoing	Municipal authorities, their legally dependent self-operated companies, regional municipal associations and special-purpose municipal associations	Climate and energy	0.2
	“Nature-based solutions for climate and biodiversity in municipalities” promotional programme Promotion in the areas of semi-natural green space management, tree-planting and the creation of natural oases such as local climate-ready parks and small bodies of water, nature-experience areas and urban forests and forest gardens Time horizon: 2024	Municipal authorities, regional and special-purpose municipal associations	Climate and biodiversity	0.2
Export and project finance	Export and project finance in the Energy and Mobility sector departments, for example financing for wind farms and rail transport Time horizon: ongoing	Corporate customers with a regional focus on countries in the EU, North America and selected emerging economies	Climate and energy	5.0
DEG	Financing climate and environmental protection projects with a focus on renewable energy projects in Africa, Asia and Latin America to promote the generation and use of green electricity in developing countries Time horizon: ongoing	Corporate customers with investments in developing countries and emerging economies	Climate and energy	0.4
KfW Capital	“Green Transition Facility” investment programme Investments in venture capital funds and venture debt funds with a focus on “climate tech” and related climate-relevant topics (definition based on the EU Taxonomy Regulation 2020/852) Time horizon: 2024	Start-ups and innovative technology companies with a focus on environmental change	Climate and energy	0.1

¹⁾ The sustainability matter defines the topics addressed by the action. The consideration of biodiversity offsets or inclusion of local and indigenous knowledge depends on the project and, where necessary, takes place within the framework of the E&S Appraisal, for example through the use of the IFC Performance Standards (see the “Environmental and Social Appraisal Guidelines” section of this chapter).

In addition to the topics already listed, KfW Group has identified the **sustainable transformation** of corporate customers and public institutions as an overarching material topic in the area of climate and environment. KfW Group's contributions relating to sustainable transformation are also pursued with the objectives set in connection with the SDG contribution of KfW's financing activities, the environment quota, the 1.5°C target (see the "1.5°C alignment of KfW's financing activities" section of this chapter) and through the implementation of sector guidelines (see the "Paris-aligned sector guidelines" section of this chapter). As actions, the business sectors' promotional and financing priorities listed in the table above also contribute to the promotion of sustainable transformation. In the **Customised Finance & Public Clients** and **SME Bank & Private Clients** business sectors, this includes financing for renewable energy, energy efficiency, sustainable mobility and environmental protection. The commitment volumes for the key contributions of the Customised Finance & Public Clients and SME Bank & Private Clients business sectors in these areas are presented in the table above. **KfW Capital's** "Green Transition Facility" investment programme promotes start-ups and innovative technology companies that contribute to environmental change through investments in venture capital funds. With regard to sustainable transformation, **KfW IPEX-Bank** particularly finances projects intended to facilitate doing business digitally and sustainably. In light of the target for the "1.5°C alignment of KfW's financing activities", KfW IPEX-Bank's focus is on investments in renewable energy and in the mobility transition. **KfW Development Bank** supports sustainable transformation in partner countries, including by providing financing for projects in the fields of renewable energy, environmental protection, sustainable agriculture, education and health. It works closely together with governments, local organisations and companies to develop programmes and projects that have long-term positive impacts on the economic, social and environmental development of partner countries and harmonise these impacts. The commitment volumes for KfW Development Bank's key contributions in these areas are presented in the table above. As part of its business activities, **DEG** has committed to working together with its customers to achieve a customised approach for a sustainable transformation and climate-resilient business in line with the SDGs. For further information on transformation support for DEG customers, please refer to the "DEG Impact/Climate Commitments" section of this chapter.

Additional information on KfW Group's environmental targets

The strategic objectives, including the environmental targets enshrined in them (SDG contribution of KfW's financing activities, 1.5°C alignment of KfW's financing activities, environment quota), are defined annually with the Board of Supervisory Directors. In this context, the targets are also presented to the stakeholders represented in the Board of Supervisory Directors. As part of the strategic objectives 2029, they apply from financial year 2024 for the following five years. Adjustments to the targets may come about as part of the annual review of the strategic objectives. The monitoring of the targets is part of KfW Group's internal control system. As part of this monitoring, if there are any shortfalls, the causes are analysed and the assumptions on which the strategy is based are reviewed regarding external and internal factors. For more detailed information on the strategic objectives 2029 and information on monitoring the targets, please refer to the "Strategic objectives 2029" section in the "Basic information on KfW Group" chapter.

Overarching policies

KfW Group's overarching policies regarding the topics of climate, energy, pollution and biodiversity are presented in the following chapter. The focus is particularly on the aspects that address the material environmental topics emphasised in the "Environmental information" chapter. This comprises the guidelines on E&S Appraisals and exclusion lists. Further – topic-specific – policies on climate, energy and biodiversity and ESG risks are set out in the "Specific disclosures: Climate and energy" and "Specific disclosures: Biodiversity" sections of this chapter and the "Disclosures on ESG risks" section in the "General information" chapter. Sustainability policies and guidance are included in KfW Group's procedural rules and are subject to an annual review including consultation with the responsible units. The fixed responsibilities for each policy and guidance are defined in the Organisation Manual.

Environmental and Social Appraisal Guidelines

KfW Group's sustainability mission statement includes inter alia the consideration of internationally recognised environmental and social standards within the framework of the E&S Appraisal (see the "Integrating sustainability matters into the business strategy" section in the "General information" chapter). The business sectors' sustainability guidelines follow this mission statement and specify their requirements relating to the E&S Appraisal more precisely in their respective business sector. This applies to the sustainability guidelines of KfW Development Bank and KfW IPEX-Bank and to DEG's environmental and social guidelines and the

joint sustainability guideline for domestic promotional business of the SME Bank & Private Clients and Customised Finance & Public Clients business sectors. KfW Capital's sustainability policy also governs a process for assessing investments, but does not enshrine a separate E&S Appraisal. Due to the investment focus on exclusively European and German funds and the associated geographical focus of the portfolio companies, risks such as those faced in developing countries and emerging economies play a minor role in KfW Capital's ESG risk assessment.

The sustainability policies are available on the KfW Group websites and are the responsibility of the respective head of department or management board as the highest level. KfW Group's material focal areas of climate change mitigation, pollution, biodiversity and ecosystems are addressed through the standards and requirements applied within the framework of the E&S Appraisal. KfW Development Bank's sustainability guideline additionally takes into account the topic of climate change adaptation. Differences are due to the business sectors' differing promotional and financing priorities. Positive impacts and opportunities are not covered by the guidelines, with the exception of KfW Development Bank's Sustainability Guideline.

The E&S Appraisal is based on the following standards and additional requirements:

Environmental and social appraisal standards and requirements

General scope	Scope
Declaration by KfW Group on respect for human rights in its business operations	
IFC Performance Standards (or ESS at KfW Development Bank) ¹⁾	SME Bank & Private Clients, Customised Finance & Public Clients,
Environmental, Health, and Safety Guidelines ¹⁾	KfW IPEX-Bank, KfW Development Bank, DEG
ILO Core Labour Standards ¹⁾	
Environmental and social standards in the project country in question	
Business sector-specific scope	Scope
National environmental and social standards for investments in EU countries	SME Bank & Private Clients, Customised Finance & Public Clients
Requirements of the Federal Ministry for Economic Cooperation and Development, including its Human Rights Strategy	
UN Basic Principles and Guidelines on Development-based Evictions and Displacements	KfW Development Bank
Environmental and Social Standards of the European Development Finance Institutions	
Federal Ministry for Economic Cooperation and Development's Human Rights Strategy (for orientation)	DEG
Equator Principles	KfW IPEX-Bank

¹⁾ For SME Bank & Private Clients and Customised Finance & Public Clients business with location of investment outside the EU and OECD high income countries

The Performance Standards on Environmental and Social Sustainability (IFC, 2012) applied by all business sectors and the World Bank's Environmental and Social Standards (ESS, 2017) applied at KfW Development Bank, address the negative impacts and risks identified as material in the following areas: prevention of pollution including pollutants (IFC Performance Standard 3: Resource Efficiency and Pollution Prevention and ESS3), biodiversity (IFC Performance Standard 6: Biodiversity Conservation and Sustainable Management of Living Natural Resources and ESS6), labour and working conditions in the value chain (IFC Performance Standard 2: Labor and Working Conditions and ESS2), community health, safety and security (IFC Performance Standard 4: Community Health, Safety and Security and ESS4), land acquisition and involuntary resettlement (IFC Performance Standard 5: Land Acquisition and Involuntary Resettlement and ESS5), indigenous peoples (IFC Performance Standard 7: Indigenous Peoples and ESS7) and cultural heritage (IFC Performance Standard 8: Cultural Heritage).

In the business sectors, the E&S Appraisal processes are adapted to the respective business model in accordance with their sustainability policies. Against this background this section contains a general description for the group as a whole, and relevant differences in the application and/or monitoring of compliance with the requirements in the business sectors are highlighted. The E&S Appraisal pursues the aim of identifying, avoiding, minimising or, if unavoidable, offsetting possible negative impacts and risks of a project for people and the environment. It consists of two key steps: (1) screening and categorisation and (2) in-depth assessment. In the screening and categorisation step, the project is screened for potential environmental and social risks or impacts (screening) and then categorised with regard to the risks involved (categorisation). As part of this process, projects are divided into the risk categories presented in the following table:

Environmental and social appraisal risk categories

Category	Description
A: High risk	Projects that imply potential significant adverse risks and/or impacts for people (social) or the environment that are diverse or irreversible
B+: Significant risk in specific areas	Projects that have potential limited significant environmental or social impacts and/or risks
B: Moderate risk	Projects that have potential adverse impacts or risks that are generally foreseeable, temporary, reversible and limited to the site of the project. These can generally be avoided or reduced with state-of-the-art mitigation measures or standard solutions.
C: Low risk	Projects expected to have no or minimal environmental or social risks

In addition, KfW Development Bank and DEG determine the risk categories for financial intermediaries and banks on the basis of the risk potential of the partner's entire financing portfolio. The categories (FI A, FI B, FI C) and actions are tailored to financing of financial institutions. For private equity funds, DEG also applies categorisation into FI A, FI B+, FI B and FI C. The categorisation is based on the fund's respective target portfolio.

In category A, B+ and B projects, the screening and categorisation is followed by an in-depth assessment. A project's risk categorisation determines the scope, focuses and depth of the assessment. In order to prevent adverse pollution or biodiversity impacts in connection with KfW Group's financing activities or to remedy these if they do occur, actions to avoid or reduce adverse impacts and risks and, where necessary, offsets are identified as a result of the in-depth assessment and imposed on the executing agency and/or borrower with binding effect. KfW Group requests regular reporting on the implementation and requires corrections if measures are insufficiently implemented or action targets are not achieved. Adverse impacts relating to climate change mitigation and to energy are to be prevented or minimised through the application of Paris-aligned sector guidelines (see the "Paris-aligned sector guidelines" section of this chapter) and exclusion lists (see the "Exclusion lists at KfW Group" section of this chapter). In addition, the exclusion lists address the prevention of negative impacts in the area of climate change adaptation.

The assessment is based on Environmental and Social Impact Assessments, any requisite sectoral studies (for example, on resettlement requirements or biodiversity conservation), and documentation of compliance with the relevant national legislation. All projects must meet the environmental and social requirements and standards applicable in the relevant investment country. In the SME Bank & Private Clients and Customised Finance & Public Clients business sectors, national standards are used as the assessment benchmark for investments in EU countries and in OECD high income countries in the event an assessment is necessary. If the investment location is outside this group of countries, in addition to the national standards, international standards are also used as a benchmark. If the E&S Appraisal shows that the environmental and social standards to be applied and the additional requirements are not being met in some areas, avoidance measures, reduction measures or offsets are defined. The scope and nature of the monitoring of the implementation measures are contractually agreed with the partners or financed enterprises. Depending on the risk category, (internal) experts in environmental and social compatibility are also involved. At DEG, such experts are involved in every project irrespective of the risk category. Projects that are likely to have an unacceptable environmental or social impact that cannot be prevented or mitigated by suitable actions are not eligible for funding.

Sustainability guideline for the domestic promotional business

The currently applicable version of the sustainability guideline for domestic promotional business applies to all new commitments for financing in the SME Bank & Private Clients and Customised Finance & Public Clients business sectors, irrespective of the form of financing. The financing partners were involved in developing the sustainability guideline and the E&S Appraisal process for the on-lending business set out therein. The aim of the guideline is to define a uniform and binding framework for taking account of environmental and social standards in (co-)financed projects and to promote transparency in the E&S Appraisal decision-making processes. In the domestic promotion E&S Appraisal, a distinction is drawn between direct financing by KfW and indirect financing by financing partners. The latter primarily concerns the on-lending business. In both cases (direct business and on-lending business), the screening and categorisation of possible environmental and social impacts and risks is carried out at the level of the uses of funds defined for the individual promotional products or programmes. The product- or programme-induced uses of proceeds are already assessed individually in the product development process (for new development or change/extension of a promotional product), independently of the individual project. Whether KfW subjects the project to a simplified further appraisal, an in-depth further assessment or no further assessment depends on the type of financing (direct business or on-lending business), on the investment country (inside or outside EU countries and OECD high income countries) and on the result of the environmental and risk categorisation.

Actions are usually defined if material shortcomings, i.e. a breach of environmental and social standards by the project, are identified during the in-depth assessment. These then have to be implemented by the borrower or financed enterprise. Environmental and social due diligence by an independent expert may be necessary. In the case of a simplified appraisal, requirements are set in the credit process: before commitment, KfW can request additional information on the project and the status of authorisations, which serves to determine environmental and social compatibility. Depending on the categorisation, environmental and social compatibility aspects are spot-checked at a later point.

The business sectors SME Bank & Private Clients and Customised Finance & Public Clients are responsible for implementing the sustainability guideline and compliance with the graded appraisal procedure. Irrespective of their domicile, the financing partners in the on-lending business are required to use appropriate procedures to take account of potential environmental and social impacts and risks of the projects to be (co-)financed by KfW (including taking account of size, sector and investment country) in line with standard banking practice. This assumption is based on a market analysis and knowledge gained from in-depth discussions with KfW's financing partners. The financing partners are informed of the expectations via tried-and-tested communication channels (in particular financing partner circulars). The procedures can be integrated into existing processes or also explicitly established in the form of an environmental and social management system (ideally in accordance with IFC). KfW conducts annual spot checks of the basic assumption on existing processes for carrying out E&S Appraisals in a later process.

Guideline of KfW IPEX-Bank for environmentally and socially sound financing

The Guideline of KfW IPEX-Bank for environmentally and socially sound financing applies to all KfW IPEX-Bank financing. The guideline fleshes out KfW IPEX-Bank's sustainability mission statement with regard to the assessment of the environmental and social compatibility of its products and advisory and financing services. Its aim is to define a uniform and binding framework for the consideration and incorporation of international environmental and social standards in KfW IPEX-Bank's financing activities. The sustainability guideline is largely based on the Equator Principles, in whose further development stakeholders such as non-governmental organisations are also involved.

All financing is subject to the requirements of KfW IPEX-Bank's Sustainability Guideline. The contracts for KfW IPEX-Bank's financing products for projects for which an environmental and social action plan or mitigation actions are necessary provide for reporting on compliance with safeguards and with the environmental and social action/management plan. The customer engages an independent expert in consultation with KfW IPEX-Bank to carry out the monitoring for category A and category B+ projects (see the "Environmental and Social Appraisal Guidelines" section of this chapter). The expert monitors compliance with the agreed action plans or actions or audits the customer's self-monitoring. In the event of exceptional adverse impacts on the environment or social issues, KfW IPEX-Bank will support the remediation as far as it is able. During the term of category A and category B+ projects, the customer will set up a procedure through which complaints

by employees and affected members of the public are received and handled in an appropriate way. Complaints and processing results will be documented and part of the contractually agreed internal reporting within the project between the customer and KfW IPEX-Bank.

Sustainability Guideline of KfW Development Bank

The Sustainability Guideline of KfW Development Bank applies to all KfW Development Bank's projects, irrespective of the form of financing. It describes the principles and process for dealing with environmental, social and climate aspects in the context of the preparation and implementation of projects financed by KfW Development Bank. It aims to define a uniform and binding framework for taking account of environmental, social and climate standards in planning, assessment, implementation and monitoring of projects and to create transparency, predictability and accountability in the decision-making processes of the E&S Appraisal and climate mainstreaming.

In addition to requirements on the E&S Appraisal, the guideline stipulates that all financing by KfW Development Bank is subject to climate mainstreaming, the aim of which is to systematically take account of climate change in all projects from the start. Potential associated with climate change is to be unlocked and climate-related risks for the future viability of the projects are to be reduced as far as possible. To this end, each project is analysed for possible aspects relevant to the topics of climate change mitigation and adaptation in order to identify climate-related matters and take account of them in feasibility studies. If climate-related potential or risks are identified, actions to address the potential and risks are agreed for the project with the executing agency. When climate mainstreaming, KfW Development Bank includes KfW Group's sustainability mission statement and applies the specific development-policy concepts and guidelines of the Federal Ministry for Economic Cooperation and Development.

The Sustainability Guideline of KfW Development Bank also includes sustainability matters for awarding contracts for consulting, construction and supplies for the implementation of KfW Development Bank projects. This concerns not only the sustainable design of project elements but also requirements on environmental and resident protection and social compatibility. In accordance with the Sustainability Guideline of KfW Development Bank, the executing agency is required to introduce project-related complaints management in accordance with World Bank's ESS10 and report on it to KfW.

In the case of KfW Development Bank projects, the preparation of the documents relevant for the in-depth E&S Appraisal is supported in the project preparation stage and usually financed by funds from the Study and Expert Fund of the contracting authority, the Federal Ministry for Economic Cooperation and Development. If the executing agency has already prepared documents on environmental and social compatibility itself, these are checked by means of environmental and social due diligence and, where required, an environmental and social action plan is prepared in order to close identified gaps compared to World Bank standards, as already mentioned in this section. Within the framework of donor harmonisation (Paris Declaration), KfW Development Bank can also use comparable standards of other development banks. In the case of KfW Development Bank projects, in addition to reporting by the executing agency or an advisor with appropriate expertise, KfW Development Bank's experts also carry out their own controls of the implementation of the agreed actions in on-site progress controls. KfW Development Bank receives regular reports on the implementation and requires corrections if actions are insufficiently implemented or targets are not achieved.

In order to ensure effective monitoring of any adverse environmental, social and climate impacts and risks, reporting and notification requirements are agreed with the executing agency and/or the recipient of the funds and tracked. In order to monitor the environmental, social and climate impacts and risks of a project, a particular focus is set on controlling the implementation of the agreed mitigation measures and monitoring procedures. If deemed necessary due to the complexity of the circumstances, KfW Development Bank reserves the right to additionally require – in consultation with the executing agency – independent third-party monitoring. If resettlements or actions to restore livelihoods are necessary, these are audited with a separate final audit.

DEG Guideline for environmental and social sustainability

The DEG Guideline for environmental and social sustainability defines the basis for the environmental and social sustainability of DEG's business activities and describes the principles of DEG's activities, which include safeguarding livelihoods and quality of life in developing countries and emerging economies and aim to advance self-supporting economic systems. Among other things, it stipulates that the environmental and social interests of people affected by the impacts of co-financed projects must always be taken into account when assessing projects. In addition, the guideline enshrines the support of DEG's partner countries in the realisation and further development of environmental protection and international social standards. The guideline applies to the whole of DEG.

In DEG, exposures are categorised in the main assessment. Based on this categorisation of the potential environmental and social risks, the assessment is carried out in accordance with the criteria and processes defined for the relevant category. The harmonised standards of the European Development Finance Institutions ("EDFI"), the content of which is based on the IFC Performance Standards, specify the sequence of the assessment process. The focus and depth of the assessment are determined according to the individual specifics of each project. An environmental and social management plan and/or action plan – as a material result of the assessment in the case of medium and higher risks – defines appropriate and effective actions specific to the project that the financed enterprise is to take to protect people and the environment in order to avoid undesirable impacts, reduce these to an acceptable level or remediate them. This is done taking account of the perspectives of communities affected. Implementation of the actions is closely monitored. In addition, there is mandatory annual reporting by customers and corresponding documentation in DEG.

The DEG processes for the environmental and social due diligence and for the regular environmental and social monitoring are reviewed annually. The first audit of compliance with the guideline is carried out through an internal control system in which the competent head of division analyses individual investments by means of random sampling and monitoring. The control action is also audited externally each year using random sampling.

Exclusion lists at KfW Group

KfW Group's exclusion list for new commitments must be applied on an ongoing basis across all newly committed financing. The exclusion list was developed with the involvement of the business sectors and in consultation with representatives of several departments of the Federal Government. The guideline is published on KfW's website. The heads of the business sectors and the management boards of the subsidiaries are responsible for implementation in KfW Group. Compliance with the exclusion list is monitored on a decentralised basis at the level of the business sector-specific credit processes.

By means of the list, KfW Group excludes financing for activities that could lead to unacceptable adverse impacts or risks in relation to certain aspects in the climate, environment and social areas or that are not acceptable for KfW Group for other overriding reasons. With regard to the material topics of climate change mitigation, energy and pollution, these exclusions contribute to reducing or preventing adverse impacts and risks in connection with KfW Group's financing: the production of or trade in radioactive material and unbound asbestos, nuclear power plants (apart from actions that reduce environmental hazards of existing assets) and uranium mines and the prospecting, exploration and production of coal, crude oil (upstream) and natural gas (upstream) and further associated business activities and projects. To minimise adverse biodiversity impacts and associated risks, KfW Group additionally excludes financing for projects that have impacts on the extent and condition of ecosystems and threaten to result in the destruction or significant impairment of areas particularly worth protecting – without appropriate offsetting in accordance with international standards.

Furthermore, the exclusion of financing for production of or trade in products or activities that fall under national or international regulations on cessation or prohibitions or are subject to an international ban is intended to prevent or minimise impacts on the state of species. This includes, for example, exclusions of financing for the production of or trade in ozone-depleting substances pursuant to the Montreal Protocol and protected animals, animal products, plants and plant products pursuant to the Washington Convention on International Trade in Endangered Species. In addition, the exclusion list contains additional requirements that link KfW Group's direct financial involvement to qualitative conditions for selected sectors. This concerns large-scale operations in the agricultural or forestry production of palm oil or lumber and large reservoir and hydropower projects. The former must comply with recognised international certification systems

(RSPO or FSC) or equivalent regulations to ensure sustainable cultivation conditions or must be in a process developing them in that direction. The exclusion list also addresses direct impact drivers on biodiversity loss by means of exclusions in the areas of climate change and pollution. Further direct impact drivers on biodiversity loss and social consequences of biodiversity-related impacts and impacts and dependencies on ecosystem services are taken into account through the E&S Appraisal (see the “Environmental and Social Appraisal Guidelines” and “Specific disclosures on biodiversity in policies” sections of this chapter).

KfW Capital uses the **Exclusion List of KfW Capital** to apply restrictions to its operations in economic sectors that are not considered to be compatible with KfW Capital’s ethical, social and environmental standards. The exclusion list supplements the Group’s exclusions with additional criteria. The Exclusion List of KfW Capital is intended to reduce adverse impacts in connection with climate change; energy; the pollution of air, water and soil; and pollutants. Compliance with the exclusion list by financing partners is audited in a due diligence process and contractually agreed.

The selection of the content of the guideline is carried out by KfW Capital’s sustainability management team based on the Exclusion List of the KfW Group and other sector standards, including the IFC Exclusion List issued by the International Finance Corporation and the European Investment Fund Exclusion List and other venture-capital-specific exclusions. The exclusion list is published on KfW Capital’s website. KfW Capital’s sustainability management, investment management and management board are responsible for implementation.

The following activities that are related to KfW Group’s material climate and environmental impacts, risks and opportunities are excluded by KfW Capital beyond the Group’s exclusion list:

in the area of climate change and energy, these include investments in any upstream or midstream activities (transportation and storage) in the oil and gas sector and the construction of new oil power plants. In the area of pollution, the exclusions include investments in the production of or trade in considerable quantities of hazardous chemicals and their commercial use. The Exclusion List of KfW Capital also extends KfW Group’s exclusions with regard to biodiversity in order to further minimise adverse impacts on biodiversity and the associated risks. Through the exclusions mentioned, the Exclusion List of KfW Capital applies to the areas of climate change and pollution as direct impact drivers on biodiversity loss. In relation to the extent and condition of ecosystems and species, the exclusions additionally comprise exclusion of investments in commercial logging work in semi-natural tropical rainforests and all products for which animal testing is required (for non-medical purposes; special rules apply to life sciences funds), and in the operation of fur farms or the trade in/production of fur products and any activities in connection with shark fins or commercial whaling. The exclusion list does not specifically address social consequences of impacts related to biodiversity and ecosystems.

In accordance with the EDFI environmental and social standards “Principles for Responsible Finance”, the **DEG Exclusion List** or Harmonised EDFI Exclusion List lists projects that DEG generally does not finance. The implementation of the exclusion list is monitored using DEG’s internal control system and compliance with the list is mandatory at DEG in connection with the E&S Appraisal. The exclusion list is published on DEG’s website. The “Sustainability and Corporate Governance” division’s management is responsible for implementation. Adjustments to the policy are decided by the management board. Exclusions concerning the material topics of (avoidance of) pollution and biodiversity correspond to the exclusions of the Group’s Exclusion List and the material impacts and risks it addresses.

Specific disclosures: Climate and energy

KfW Group sees an important role for itself in the transformation of the economy and society with the aim of improving economic, environmental and social living conditions. KfW Group wants to live up to its responsibility in the climate-friendly transformation with the aim of achieving the 1.5°C alignment of its new business. The Paris-aligned sector guidelines for emission-intensive sectors serve as an implementation tool for this target and are presented in this chapter as well as the measures adopted to achieve 1.5°C alignment for new business. In addition, DEG's targets and activities in connection with climate and energy are briefly outlined. Before this, an introductory overview of KfW Group's GHG emissions in 2024 is provided.

Greenhouse gas emissions

KfW Group's GHG emissions are presented below:

GHG emissions¹⁾

	2024
	t CO ₂ eq
Scope 1 GHG emissions	
Gross Scope 1 GHG emissions	3,917
Percentage of Scope 1 GHG emissions from regulated emission trading schemes (%)	0
Scope 2 GHG emissions	
Gross location-based Scope 2 GHG emissions	11,627
Gross market-based Scope 2 GHG emissions	1,996
Significant Scope 3 GHG emissions	
Total gross indirect (Scope 3) GHG emissions	144,586,508
Cat. 1: Purchased goods and services	54,833
Cat. 2: Capital goods	7,831
Cat. 6: Business travel	5,860
Cat. 7: Employee commuting	7,833
Cat. 15: Investments	144,510,150
Total GHG emissions	
Total GHG emissions (location-based)	144,602,052
Total GHG emissions (market-based)	144,592,421

¹⁾ The GHG emissions were calculated in accordance with the requirements of the ESRS, the GHG Protocol and PCAF for the first time for financial year 2024. At the current time, KfW Group has not set a target for the reduction of Scope 1, Scope 2 or Scope 3 emissions (excluding category 15). In light of this, the presentation in the table deviates from ESRS E1-6, AR 48 and does not include any prior-year figures, comparative figures or information in connection with targets (including milestones and base year).

The GHG emissions were calculated in accordance with the requirements of the ESRS, the GHG Protocol (Corporate Standard, Version 2024) and the Partnership for Carbon Accounting Financials (PCAF Global GHG Accounting & Reporting Standard Part A – Financed Emissions) for the first time for financial year 2024. KfW Group's total emissions (market-based) amounted to 144,592,421 t CO₂eq in financial year 2024. The total emissions comprise Scope 1 and 2 emissions and emissions from significant Scope 3 categories. Further details on GHG emissions are set out in the above table and explained methodically in the following sections: "Total GHG emissions in banking operations" for the operational emissions and "Total GHG emissions in the banking business" for the financed emissions. KfW Group's emissions are presented on a gross basis, i.e. the calculation does not include any removals or any purchased, sold or transferred carbon credits or GHG allowances. Biogenic emissions of CO₂ from the combustion or bio-degradation of biomass are not included in the emissions presented in the table above. In financial year 2024, they amounted to 112 t CO₂ in Scope 1 from the burning of wood pellets. With regard to Scope 2 and 3 emissions, it was neither known nor possible to infer whether biomass was used as an energy source in the reporting year.

The following section considers total emissions from greenhouse gases in relation to net revenue in order to calculate GHG intensity. Net revenue of EUR 21,906 million pursuant to section 2 no. 5 of Directive 2013/34/EU in connection with section 43 (2) c) of the Directive was used to calculate GHG intensity. Net revenue at KfW Group is included in interest income, commission income and other operating income (as part of net other operating income or loss) of the consolidated income statement (see sections “Consolidated statement of comprehensive income”, “net interest income”, “net commission income” and “other operating income or loss” in the consolidated financial statements).

GHG intensity per net revenue

	2024
	t CO ₂ eq/EUR million
Total GHG emissions (location-based) per net revenue	6,601
Total GHG emissions (market-based) per net revenue	6,601

Total GHG emissions in the banking operations

In 2024, the total GHG emissions (market-based) in KfW Group’s banking operations amounted to 82,271 t CO₂eq. The GHG emissions reported comprise the emissions of the companies consolidated in the sustainability report and Scope 1 and 2 emissions of the leased properties under the financial control of KfW Group. KfW Group takes account of the emission sources explained below in its GHG accounting.

For KfW Group, **Scope 1** (direct GHG emissions) includes emissions from stationary combustion (gas and oil heating systems, emergency power generators, combined heat and power units), mobile combustion (owned and leased vehicles) and fugitive emissions (leakage of refrigerants from refrigerators and air conditioning systems). The data is based on invoice data and meter readings, where available, and extrapolations for rented buildings and offices abroad.

In **Scope 2** (indirect GHG emissions through the use of energy), KfW Group takes account of emissions from the purchase of electricity, heat and cooling. The data is based on invoice data and meter readings, where available, and extrapolations for rented buildings and offices abroad. In Germany, only green electricity is purchased, via a bundled contract for electricity from renewable sources. The share of contractual instruments in KfW Group’s total electricity consumption amounts to 86.5%. These are exclusively bundled contractual instruments. Contractual instruments are not used for other emission sources.

Scope 3 covers all further significant indirect emissions that do not fall under Scope 1 or Scope 2, including the activities along KfW Group’s entire value chain. In 2024, KfW Group screened Scope 3 categories 1–14 using estimates in accordance with the requirements of the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standards (Version 2011). In the screening, categories 1 (purchased goods and services), 2 (capital goods), 6 (business travel) and 7 (employee commuting) were identified as significant on the basis of the magnitude of their estimated GHG emissions. Emissions in categories 1 and 2 are estimated using invoice data and extrapolated. The data for the category “business travel” is based on information on travel booking, reports on train travel and invoice data for rental-car and taxi journeys. The commuting category is fully estimated on the basis of data by the Federal Statistical Office of Germany for commuting in Germany.

Financed emissions (Scope 3 category 15) were already identified as material in the materiality assessment. Emissions of this category are reported in the “GHG emissions in the banking business” section of this chapter. All other Scope 3 categories were identified as insignificant for KfW Group on the basis of the conducted screening. Categories 3 (fuel-and energy-related emissions), 4 (upstream transportation and distribution), 5 (waste), 8 (upstream leased assets) and 13 (downstream leased assets) were identified as generally relevant categories, but were not classified as significant for KfW Group due to the small amount of emissions associated with these categories. No emissions occur in categories 9 (downstream transportation),

10 (processing of sold products), 11 (use of sold products) or 12 (end-of-life treatment of sold products), as KfW Group does not offer physical products or physical intermediate products. KfW Group does not act as a franchisor and accordingly, there are also no emissions in category 14 (franchises).

Specific KfW Group consumption data (known as activity data) is used for the **calculation of emissions** where available. This data is multiplied by emission factors provided by the ecoinvent database (where available) or by public databases of the European Environment Agency (“EEA”), the U. S. Environmental Protection Agency (“USEPA”), the Department for Environment, Food & Rural Affairs (“DEFRA”), the German Environment Agency (“UBA”) or the Intergovernmental Panel on Climate Change (“IPCC”), or comes from information from the respective contractual partner. The GHG emission calculation using market-based methods reflects the specific emission factors of the energy providers used by KfW Group. The location-based method, on the other hand, reflects the average emission factors of energy production at specific locations. Where market-based emission factors were not available, location-based emission factors were used for the calculation in line with the requirements of the GHG Protocol. A distinction is made in the emission calculation between primary and secondary data. Primary data is collected directly, whereas secondary data is derived from analysing and modelling primary data. KfW Group calculates 7.4% of Scope 3 emissions (excluding category 15) using primary data from suppliers or other partners in the value chain.

The GHG inventory includes values based on **discretionary judgements, estimates and assumptions** that are determined in accordance with the requirements of ESRS E1-6 and the GHG Protocol. The emissions of KfW Group’s foreign locations were consolidated into the calculation of greenhouse gas emissions for the first time in 2024. In order to ensure reasonable effort and take account of regional differences in emissions, the Scope 1 and 2 emissions are extrapolated to 100% using data collected from a third of the locations. The foreign locations’ Scope 3 emissions are estimated in accordance with the requirements of ESRS E1-6 and the GHG Protocol. Due to the estimations applied, the amount of emissions stated is only an approximation of the actual emissions. Where discretionary judgements and estimates were required, the assumptions made are presented in the explanation of the relevant emission category.

Total GHG emissions in the banking business

Since 2023, KfW Group has developed a group-wide GHG accounting system in order to create transparency regarding the GHG footprint of its promotional and financing activities – referred to as “financed emissions”. GHG emissions within Scope 3, category 15 (“financed emissions”) in accordance with the GHG Protocol are calculated following PCAF recommendations (PCAF Standard, Part A). The PCAF framework provides standardised formulas for calculating the GHG emissions of various asset classes in the portfolios of financial institutions. PCAF distinguishes between a total of seven asset classes: listed equity and corporate bonds, business loans and unlisted equity, project finance, commercial real estate, mortgages, motor vehicle loans, and sovereign debt.

The relevant population of transactions for calculating KfW Group’s financed emissions is based on these aforementioned asset classes and fully covers all transactions defined in accordance with the PCAF Standard. The financed share of counterparties’ reported or estimated GHG emissions for corresponding KfW Group transactions is calculated using the PCAF methodology for the respective relevant asset class. The allocation of the GHG emissions is based on the level of KfW Group’s financing share of corresponding transactions and covers Scope 1 to 3 of these business-related GHG emissions. The KfW Group portfolio’s total GHG emissions are defined as the sum of the financed emissions of all relevant on-balance sheet transactions. In total, 80.1% of KfW Group’s total assets is taken into account in the group-wide GHG accounting as of the 31 December 2024 reporting date in accordance with the PCAF asset classes used.

The financed emissions are calculated for all KfW Group’s business sectors and broken down in the table below in accordance with the EU classification of business sectors NACE²⁾ (Rev. 2). The breakdown in terms of the NACE sectors’ climate relevance is based on the structure of the templates under CRR part 8 (ESG disclosure). In addition to the disclosure of KfW Group’s absolute financed GHG emissions (including a breakdown by Scope 1 to 3), the economic GHG intensity per NACE sector is also presented. The economic GHG intensity in the table below is derived from the amount of GHG emissions (t CO₂eq) in relation to the associated gross carrying amount (IFRS; EUR in thousands) per NACE sector or in total.

²⁾ Nomenclature statistique des activités économiques dans la Communauté européenne (“NACE”) as the EU classification system on the systematic and sectoral breakdown of economic activities in the European Community

KfW Group's financed emissions amounted to 144,510,150 t CO₂eq in financial year 2024. The calculation includes the financed GHG emissions of the statistical population described above.

The direct Scope 1 emissions represent a share of 52.84%, the Scope 2 emissions a share of 4.54% and the Scope 3 emissions a share of 42.62%. A comparably high share of financed GHG emissions is attributable, in particular, to investments in the sectors "D – Electricity, gas, steam and air conditioning supply" and "H – Transportation and storage". A share of 57.5% of KfW's total footprint is attributable to these sectors. With a share of 12.4% of the total footprint, sector "C – Manufacturing" is the third largest sector covered in the portfolio. The other highly climate policy relevant NACE sectors account for 15.2%. Less climate policy-relevant sectors accounted for 2.7% of total emissions, while 12.2% were attributable to other NACE sectors (J, M to U). With a total financing volume of EUR 436.8 billion, this results in a total intensity of 0.331 t CO₂eq/EUR thousand.

KfW Group's financed GHG emissions (Scope 3, category 15) by NACE sector (Level 1) as of 31 December 2024

	Scope 1-3	Scope 1	Scope 2	Scope 3	Economic intensity
NACE sector	t CO ₂ eq	t CO ₂ eq	t CO ₂ eq	t CO ₂ eq	t CO ₂ eq/ EUR in thousands
High climate impact NACE sectors					
A – Agriculture, forestry and fishing	762,653	121,003	21,479	620,172	0.878
B – Mining and quarrying	3,008,600	1,827,232	174,962	1,006,407	1.392
C – Manufacturing	17,936,880	4,187,451	1,009,778	12,739,652	0.677
D – Electricity, gas, steam and air conditioning supply	46,424,747	36,402,603	2,033,031	7,989,112	0.880
E – Water supply; sewerage; waste management (...)	8,446,795	5,718,167	338,705	2,389,923	0.867
F – Construction	3,129,134	115,287	154,242	2,859,605	0.415
G – Wholesale and retail trade; repair of motor vehicles and motorcycles	1,420,620	175,567	96,556	1,148,497	0.101
H – Transportation and storage	36,633,179	17,926,174	735,733	17,971,272	0.811
I – Accommodation and food service activities	136,448	8,175	13,706	114,567	0.041
L – Real estate activities	5,027,579	1,184,425	493,752	3,349,402	0.038
Other (low) climate impact NACE sectors					
K – Financial and insurance activities	3,894,571	1,151,097	397,237	2,346,237	0.231
Other sectors (J, M–U)	17,688,943	7,540,734	1,088,414	9,059,796	0.141
Total	144,510,150	76,357,914	6,557,595	61,594,640	0.331

For the calculation of financed emissions, KfW Group has decided to generally aim for the highest possible data quality of relevant GHG information – expressed in the data quality score ("DQS") – to ensure reliable calculation of financed GHG emissions pursuant to PCAF. Where KfW Group's business partners provide reported GHG emissions, these are used in the calculation of the GHG footprint (DQS 1 and 2). For the remaining financing activities, the primary approach is to use approximations with the aid of corresponding PCAF calculation models. The models are based on physical activity data (DQS 3) and GHG intensities of the business partner's respective sector (DQS 4 and 5).

Publicly accessible GHG databases such as EXIOBASE and the Joint Impact Model are used for the approximation of financed GHG emissions on the basis of industry sector averages (DQS 4 and 5). Modelling using physical activity data (DQS 3) is primarily used for project and property financing and is based on, for example, datapoints from the Poseidon Principles (ship financing), the AWG Carbon Calculator (aircraft financing) and the IPCC³⁾ (power plant financing).

The average DQS across KfW Group's total relevant financing portfolio is 4.55. Looking at the individual Scope categories of financing activities, the highest GHG data quality with a corresponding average DQS of 4.48 is achieved with regard to Scope 1 GHG emissions. Scope 2 GHG emissions have an average DQS of 4.59, while the majority of Scope 3 GHG emissions were collected on the basis of industry averages and have a corresponding DQS of 4.61. The proportion of financed GHG emissions that were calculated on the basis of primary data from business partners is associated with the corresponding DQS levels 1 and 2 across all business sectors and asset classes and amounts to 14.1%. Scope 1 GHG emissions have the greatest coverage of primary data.

The focus of the further stages of expansion of KfW Group's GHG accounting is on the ongoing refinement of the PCAF methodology and increasing the data quality of relevant GHG information through published customer data.

1.5°C alignment of KfW's financing activities

The aim of the 1.5°C alignment of KfW's financing activities is set out in KfW Group's strategic objectives 2029 as one of three sustainability targets and therefore applies throughout the group. The target is divided into two components: "1.5°C alignment of new financing" and "GHG neutrality of the portfolio". By establishing the GHG accounting system for measuring KfW Group's financed emissions, through which a GHG footprint was calculated for the first time for the reporting date of 31 December 2024, KfW Group set 2024 as the base year for measuring progress towards the target. The first time it will be possible to measure progress will therefore be by the reporting date of 31 December 2025. The target was set as part of KfW Group's "tranSForm" project with the involvement of the business sectors Customised Finance & Public Clients, SME Bank & Private Clients, KfW Development Bank, KfW IPEX-Bank, KfW Capital and DEG. The Paris-aligned sector guidelines that apply throughout the group serve as a key steering instrument to ensure the 1.5°C alignment of new financing.

The implementation of the second component of the target, GHG neutrality of the portfolio, is to be achieved by the middle of the current century. The target allows KfW Group to operationalise the contribution to achieving the 2030 Agenda set out in the sustainability mission statement and monitor the alignment of its financing with the Paris Climate Agreement in this regard. Please see the "Additional information on KfW Group's environmental targets" section of this chapter for information on how the progress towards the target is monitored. KfW Group is currently reviewing a possible revision of the target regarding ESRS requirements for a measurable, outcome-oriented and time-bound GHG emission reduction target.

Paris-aligned sector guidelines

KfW Group's Paris-aligned sector guidelines (sector guidelines) define sector-specific minimum requirements for the climate-alignment of financed technologies for greenhouse gas-intensive economic sectors. They are publicly available on KfW's website and entered into force on 11 June 2021 (last updated on 22 May 2024). The sector guidelines' objective is to support the global transformation process towards GHG neutrality. By means of the sector guidelines, KfW Group commits to the 1.5°C climate target and assumes responsibility for a sustainable transformation of business and society in Germany and globally. The sector guidelines were developed with the involvement of the business sectors Customised Finance & Public Clients, SME Bank & Private Clients, KfW Development Bank, KfW IPEX-Bank, KfW Capital and DEG. KfW Group also engaged in dialogue with representatives of several departments of the Federal Government before publication. Beyond the sector guidelines, KfW Group plans to develop a transition plan for climate change mitigation.

³⁾ Intergovernmental Panel on Climate Change ("IPCC") as an intergovernmental expert council on climate change for the collection and evaluation of scientific information on climate change

The sector guidelines focus on greenhouse gas-intensive sectors in which the use of carbon neutral technologies is particularly challenging (“hard to abate”). When selecting the sectors, it was ensured that the sectors constitute significant financing volumes in the group. The sector guidelines are in line with the Paris Climate Agreement because their defined minimum requirements ensure compliance with the decarbonisation pathways mapped out in Paris-aligned climate scenarios. As a result, the sector guidelines illustrate the mix of transformation and transition technologies that can shape the structural change process in line with the Paris Agreement. Transformative technologies that directly contribute to the targeted GHG neutrality are increasingly being promoted. In addition to investments in research and development, this includes, in particular, greenhouse gas-neutral technologies and business models that are already marketable and require suitable financing for further market penetration. This includes, for example, renewable energies and green hydrogen. Transitional technologies that cause GHG emissions but will initially still play an important role with regard to a climate-friendly and successful transition will also continue to be financed. Limiting the associated financing volume in line with the Paris-aligned decarbonisation pathways, avoiding long-term carbon lock-in effects and continuously focusing on the best available technologies is key for Paris alignment. The requirements for technologies differ in the sectors and are more closely defined in the respective sector guidelines. However, greenhouse gas-intensive technologies that are neither compatible with the GHG neutrality targeted in the long term nor required for the transition phase are excluded. To ensure Paris alignment, the sector guidelines also take account of the fact that the climate impact of financed plants, power stations, buildings and other assets does not end with the full repayment of the associated loan, but rather these assets are generally used beyond the term of the loan. KfW Group has therefore selected the sector guidelines’ minimum requirements in such a way that the investments covered by them will be in line with the Paris-aligned decarbonisation pathways until the end of their expected technical lifetimes.

The sector guidelines are thus a central tool by KfW Group for addressing its material impacts, risks and opportunities in relation to climate change mitigation and in the area of energy. They reduce KfW Group’s negative impact by limiting the financing of investments in greenhouse gas-intensive sectors and technologies with minimum requirements for climate alignment. Capital flows and financing are channelled towards sustainable investments by the use of the sector guidelines and KfW Group’s financed emissions are reduced. In addition, the financing of renewable energy and energy efficiency measures promotes the sustainable transformation of the energy sector. This will strengthen KfW Group’s positive impact on climate change mitigation and in the area of energy and will make use of the associated opportunities. KfW Group’s sector guidelines also mitigate transition risks and reputational risks from financing borrowers criticised for high emissions. The topic of climate change adaptation and KfW Group’s associated material impacts, risks and opportunities are not covered by the sector guidelines. This topic is addressed in KfW Development Bank’s Sustainability Guideline as part of the climate mainstreaming established in this business sector (see the “Environmental and Social Appraisal Guidelines” section of this chapter).

The sector guidelines, which had been implemented in 2021, were revised in 2022 in view of the 1.5°C target. Science-based minimum requirements were derived from the IEA’s “Net Zero by 2050” scenario for the electricity generation, iron and steel production, automotive, aviation and building sectors. A steering system was developed for the shipping sector that, in addition to the previous technology-centred approach based on the IEA’s Sustainable Development Scenario, steers the shipping portfolio towards 1.5°C alignment using real emissions data for the financed assets. Information from the Poseidon Principles framework was used for this. Since December 2023, the steering system has been supplemented by sector guidelines for the oil and gas sector, which were also derived from the “Net Zero by 2050” scenario.

Generally, the sector guidelines apply to new financing by KfW Group in the aforementioned sectors with immediate⁴⁾ effect from the date they enter into force. They do not apply to financing projects or promotional programmes that were already in an advanced stage of preparation or had been fully prepared at the

⁴⁾ In certain business sectors, transition deadlines apply for internal and external communication and, if applicable, process adjustments.

date of publication of the respective sector guidelines. There are also promotional programmes for which none of the sector guidelines are applicable as management-relevant projects are not addressed. For new or extended programmes, KfW uses the sector guidelines to check the Paris alignment of respective programmes. The Federal Republic of Germany can also commission KfW Group to provide financing in the form of programmes or individual mandates, even if these are not compatible with the sector guidelines. Responsibility for implementation of and compliance with the sector guidelines is held at the highest level by the heads of the business sectors and the management boards of the subsidiaries. As the central regulator, the Sustainability Strategy division is involved in monitoring the appropriate implementation of the sector guidelines and has tracked their proper implementation in the business sectors' processes.

For the SME Bank & Private Clients and Customised Finance & Public Clients business sectors' promotional programmes, the alignment of the product- or programme-specific conditions with the sector guidelines is reviewed in a product development process for new or enhanced products and, if necessary, these conditions are adjusted (for example in the programme factsheets). For new products and structural changes to existing products, the product is checked for alignment with the sector guidelines before the new product process is started. Compliance with sector guidelines is integrated into the product factsheets and contract terms as an eligibility criterion. By signing the contract, the borrower confirms compliance. The contractual relationship between KfW Group and on-lending financial companies stipulates that the banks must monitor the use of the funds for the specified purpose by means of suitable customary banking measures. The audit of the appropriate use of the funds must be documented by the financing partner. In the case of loan commitments requiring approval in the business sector Customised Finance & Public Clients, in line with the approach at KfW Development Bank, KfW IPEX-Bank and DEG, it is documented in the loan application whether the financing falls under any sector guidelines and whether these are complied with. Otherwise, no contract can be concluded and the programme cannot be implemented. At KfW Development Bank, KfW IPEX-Bank and DEG, compliance with sector guidelines is integrated into the respective requirements for the loan process. For each financing approach, it is checked and documented in the loan application whether the financing falls under any sector guidelines and whether these are complied with. Otherwise, no contract can be concluded. venture capital funds financed by KfW Capital invest equity in companies and do not finance technologically definable objects. KfW Capital's business is therefore currently not affected by the sector guidelines. When taking up new activities and in a portfolio review, KfW Capital ensures that the sector guidelines are applied if new commitments fall within their scope.

Actions to achieve 1.5°C alignment for new financing

As part of the "Paris alignment" sub-project of the "tranSForm" project, a methodology for accounting GHG emissions was established to regularly capture the group-wide GHG footprint of the financing portfolio. This is intended to systematically demonstrate over the course of time to what extent the Paris-aligned sector guidelines lead to long-term decarbonisation of the financing portfolio. To this end, a group-wide vision was developed for implementation of a GHG accounting system that takes into account the heterogeneity of the financing portfolio. The GHG accounting system will enable the systematic recording and quantification of GHG emissions connected to KfW Group's financing activities. This is intended to create transparency by giving stakeholders, including the public, an insight into the financing activities' GHG footprint.

Further actions to achieve the 1.5°C alignment for new financing include promotional programmes and financing by KfW Group that contribute to the environment quota (see "Environment quota" section of this chapter). KfW Group's ability to undertake promotional and financing activities in the area of climate and energy is fundamentally dependent on sufficient availability of funds through refinancing. KfW's refinancing situation described in the "KfW Group's value chain" section in the "General information" chapter supports KfW Group's operating activities in setting promotional incentives.

DEG Impact/Climate Commitments

With the adoption of the three Impact/Climate Commitments, DEG's work since 2022 has focused (1) in an even more targeted manner on further increasing the positive development impacts of its customers' projects on society and the environment, (2) reducing greenhouse gas emissions in line with the Paris Climate Agreement's 1.5°C target in the fight against climate change using a science-based pathway and (3) actively supporting its customers in their transformation to strengthen their resilience and achieve even greater development impacts. With the second commitment, DEG particularly contributes to climate change mitigation and to strengthening its customers' climate resilience. It focuses on the joint development of climate-related transformation pathways with DEG clients to reduce GHG emissions. A reorganisation of DEG's portfolio is intended to successively reduce its emissions through more climate-conscious new business (avoidance) and transformation offers for existing clients (reduction). The remaining emissions attributable to DEG are then to be permanently removed from the atmosphere from 2040 through investments in sink projects in order – beyond KfW's group-wide target of 1.5°C alignment – to achieve a neutral position for the portfolio as early as 2040. A corresponding investment strategy on neutral positioning is currently being developed. DEG is currently also developing interim targets for the reduction pathway for 2030 and 2035. The climate strategy is embedded in DEG's business strategy as a strategic framework and has been adopted by DEG's management board.

DEG is aiming to reduce greenhouse gas intensity by two thirds compared with the base year 2021 with its transformation pathway to reduce the greenhouse gas intensity (measured in t CO₂eq per EUR million of financing cash value) of its ordinary business activities as a development finance institution, i.e. all exposures financed from its own funds at portfolio level, by an average of 4.2% each year from 2025 compared with the base year 2021. The strategy, including the target, thus relates to DEG's financed emissions (in accordance with PCAF, Part A). It does not take account of emissions arising as a result of the on-lending of external funds to DEG's customers. Further information on the calculation and measurement of financed emissions is provided in the "Greenhouse gas emissions" section of this chapter. The pathway to neutral positioning was chosen in accordance with the Paris Agreement, although DEG is not excluded from the EU Paris-aligned Benchmarks. Target achievement is based on the requirements of the Science Based Target initiative ("SBTi"). These require a substantial reduction of attributable emissions and/or the emission intensity and permanent removal of the remaining emissions. Target achievement is governed by the group-wide Paris-aligned sector guidelines (see "Paris-aligned sector guidelines" section of this chapter). If the sectors relevant to DEG's business are not yet covered by the sector guidelines, the reduction pathway of 4.2%, which is based on the "absolute contraction approach" for mixed and heterogeneous product portfolios in accordance with SBTi (2020), and, as of 2025, the department-specific emission intensity targets and associated carbon budget apply. Both instruments are used in the early assessment of financing as well as the final financing decisions. For the base year 2021, the emissions financed by DEG were recorded in full for the first time using customer data and GHG modelling. The baseline value of the DEG portfolio's emission intensity for base year 2021 is 413 t CO₂eq per EUR million. The GHG intensity value relates to the Scope 1 and Scope 2 emissions from the direct financing business that are attributable to DEG and to the attributable Scope 3 category 15 emissions in the indirect financing business with financial institutions. In a test phase until the end of 2024, the necessary systems for GHG accounting and progress measurement were created and increased reduction targets up to the target of 4.2% were introduced gradually. Measurement of performance and progress to achieve these targets will be published in this report from 2025 onwards in accordance with the requirements of the ESRS.

The most important actions in 2024 that are intended to contribute to achieving DEG's climate goals are summarised in the following table. The actions set out in the DEG Impact/Climate Commitments are based on the following hierarchy: 1) avoidance of greenhouse gas emissions, 2) reduction of greenhouse gas emissions and climate change adaptation through the implementation of transformation pathways with customers and 3) neutralisation of unavoidable, remaining greenhouse gas emissions from 2040. They focus on decarbonising DEG's investment business as a decarbonisation lever and will collectively contribute to an expected reduction of GHG intensity in the portfolio by 4.2% annually from 2025.

List of the most important actions for achieving DEG's climate goals

Action (classification in the hierarchy of actions)	Target group	Implementation period	Time horizon
Climate-friendly customer selection (avoidance) The customer's climate data is already collected prior to the financing commitment in order to determine the customer's climate impact and its alignment with the Paris targets. DEG is guided by the Multilateral Development Banks' Principles for Assessment of Paris Alignment and the KfW sector guidelines. From 2025, the plan is to also manage the direct business through carbon budgets.	All DEG's financing commitments	2022	Ongoing measure
Management of DEG new business (reduction) Definition and piloting of department-specific carbon budgets for flexible portfolio allocation and to enable financing of customers with higher emission intensity in order to be able to support them in the transformation and thus reduce their greenhouse gas intensity.	DEG's financing business in the Corporates and Infrastructure customer cluster	Definition in 2024, piloting from 2025	2025
Transformation support for DEG customers (reduction and adaptation) Support of DEG customers in their transformation towards Paris-aligned reduction pathways, especially also for high emitters, and for climate change adaptation through an extended advisory service in the form of the Climate Advisory and Reduction Initiative ("CARI") programme. To measure this effect, the Development Effectiveness Rating ("DERa") was expanded to include the aspect of CO ₂ eq reduction and transformation at the customer supported by DEG; objective: DERa score for the portfolio of 32 points as of 31 December 2024 (see section "Workforce in the value chain and affected communities" in the "Social information" chapter).	All customer groups of DEG's financing and advisory business	2024	Ongoing measure
Neutralisation of DEG's remaining GHG emissions (neutralisation) Establishment of a diversified portfolio with afforestation and reforestation projects; objective: neutralise remaining GHG emissions financed by DEG through direct investments in sink projects.	All customer groups of DEG's financing business	Ongoing since 2022	2040

DEG made the following progress in realising the Climate Commitments in 2024: in addition to increasing HR capacity for climate management and advisory services, the recording and documentation of DEG portfolio customers' greenhouse gas emissions were digitized and the basis for integration into standard processes was created. In terms of avoiding and reducing the emissions it finances, DEG took a large number of climate-relevant Business Support actions (training on carbon accounting for funds, modelling of GHG inventory at banks, etc.) and piloted specific climate advisory projects with individual customers from Nicaragua and Nigeria. Particular support went to the CARI programme of the subsidiary DEG Impulse, in the amount of EUR 1.5 million for a range of climate advisory projects. DEG also invested in a further carbon sink fund in 2024 and obtained EU guarantees for carbon sinks which will be used for additional investments in carbon sinks that will contribute to DEG's carbon-neutral status from 2040.

Specific disclosures: Pollution

In the materiality assessment, with regard to pollution as a consequence of its promotional and financing activities, KfW Group identified as material both positive (reduction of pollution through the financing of environmental projects) and negative impacts (financing of projects/companies in particularly polluting industries or industries with high pollutant emissions). The measurement of the positive impacts and the prevention or minimisation of negative impacts are part of the cross-topic targets described in this chapter (SDG contribution and environment quota) and policies (sustainability guidelines of the business sectors and exclusion lists), which are listed in the "Overarching environmental targets and actions" section in the "Environmental information" chapter. Existing actions for these targets related to (reducing) pollution are also set out in the general information. For information on pollution in accordance with ESRS E2-1, E2-2 and E2-3, please therefore refer to the specified section of the chapter.

Specific disclosures: Biodiversity

The topic of biodiversity was a particular focus of KfW Group's strategic orientation in 2024 in the second phase of the "BioDiv Roadmap" (see the "Biodiversity actions" section of this chapter). Targets with regard to KfW Group's promotional and financing activities in the field of biodiversity have so far been set within the framework of the KfW's financing activities' contribution to SDG 14 and SDG 15 (see the "SDG mapping of KfW's financing activities" section of this chapter). There is no specific biodiversity target beyond this in light of the fact that the biodiversity strategy is still under development (see the "Biodiversity actions" section of this chapter). Some actions concerning biodiversity also include promotional and financing activities that contribute to the environment quota. Please therefore see the "Environment quota" section of this chapter for information on these actions. Moreover, KfW Development Bank places a special focus of this financing on the protection and sustainable use of biodiversity. In light of this, KfW Development Bank's biodiversity actions are presented separately below.

Biodiversity actions

KfW Group is developing a **biodiversity roadmap** until 2026. From its perspective, the ongoing loss of biodiversity in addition to climate change is one of the most urgent challenges of our time. Biodiversity thus represents an increasingly relevant topic for KfW Group as a transformative bank. The "BioDiv-Roadmap", an internal project, was launched in 2023 to address the topic of biodiversity in a structured and targeted way in the group. The second phase of the roadmap ended at the end of 2024. During this phase, analyses were carried out to create the foundations for the next phase, in which a biodiversity strategy is to be developed and then implemented. The most important activities in this phase included a qualitative description of KfW Group's status quo; performance of initial, in some cases still to be validated, portfolio, materiality, regulation and peer analyses; and the identification of possible partnerships. The action areas for the future biodiversity strategy were set on the basis of these analyses. For the third phase, which begins in 2025 and is expected to expire by the end of 2026, the plan includes developing a qualitative biodiversity strategy, expanding projects with positive impacts, reducing negative impacts in the new business and managing biodiversity-related risks that impact the group in line with regulatory requirements. Furthermore, the foundations are to be laid and further developed for the selective collection of biodiversity data from the co-financed projects. The biodiversity roadmap is an overarching action for developing KfW Group's future biodiversity strategy. Where biodiversity offsets, mitigation actions or the inclusion of local and indigenous knowledge are intended to be part of the strategy that is to be developed, they are listed here. These aspects are currently included, where necessary, in the E&S Appraisal (see the "Environmental and Social Appraisal Guidelines" section of this chapter).

KfW Development Bank places a special focus on the topic of biodiversity. The business sector's key biodiversity actions are presented in the following table:

KfW Development Bank's key biodiversity actions in 2024¹⁾

Action/project	Target group	Promotional business volume EUR in billions
Projects with biodiversity as the main or secondary objective and contracts with partner countries with an OECD Development Assistance Committee's biodiversity and tropical forest label for the protection of biodiversity (time horizon: 3–5 years)	Developing countries and emerging economies, governments and state institutions/authorities in partner countries	0.5

¹⁾ The consideration of biodiversity offsets or inclusion of local and indigenous knowledge is project-dependent and, where necessary, takes place within the framework of the E&S Appraisal, for example through the use of IFC Performance Standards or the World Bank's Environmental and Social Standards (see the "Environmental and Social Appraisal Guidelines" section of this chapter).

Specific disclosures on biodiversity in policies

The IFC Performance Standards (or, in KfW Development Bank, the World Bank's Environmental and Social Standards), which are applied in the E&S Appraisal in certain circumstances and are enshrined in the E&S Appraisal guidelines (see the "Environmental and Social Appraisal Guidelines" section of this chapter) take account of direct influences on the loss of biodiversity and further biodiversity aspects as set out below. IFC Performance Standard 6 (or ESS6) requires that the following aspects are taken into account in connection with the identification of risks and impacts concerning biodiversity and ecosystem services: relevant threats to biodiversity and the ecosystems and ecosystem services, with a focus on the loss of habitats, the destruction and fragmentation of habitat, invasive alien species, exploitation, hydrological changes, nutrient pollution and pollution. These impacts are to be avoided where possible or, where this is not possible, minimised. IFC Performance Standard 6 (or ESS6 and, with regard to ecosystem services, ESS1) takes account of further impacts on the state of species and excludes the implementation of projects that would lead to a (net) reduction in the population of endangered or particularly endangered species and sets out requirements for preventing the introduction of invasive alien species. In addition, the standards set out requirements for preventing or mitigating impacts on the extent and condition of ecosystems, including land degradation, and further requirements regarding preventing or mitigating negative impacts on ecosystem services. The social consequences of financing activities in connection with biodiversity are also included through the use of the IFC Performance Standards in the E&S Appraisal. For example, by using standard 7 "Indigenous Peoples" (or ESS7), KfW Group ensures that the informed and willing consent of local and indigenous peoples is considered in the context of financing activities, and that they are consulted as necessary. KfW Group does not use any additional group-specific policies regarding land use/agriculture, oceans/seas or deforestation beyond the policies specified in this report. There are no requirements in the E&S Appraisal guidelines on climate change as a further direct influence on the loss of biodiversity, with the exception of requirements on climate mainstreaming and on the application of ESS6 in KfW Development Bank's Sustainability Guideline. KfW Group's impacts in the area of climate change as a further influence on biodiversity are steered via the Paris-aligned sector guidelines and exclusion lists (see the "Paris-aligned sector guidelines" and "Exclusion lists at KfW Group" sections of this chapter).

Disclosures on climate and biodiversity risks

For general information on KfW Group's ESG risk management, including the existing targets, actions and policies in this regard, please refer to the "Disclosures on ESG risks" section in the "General information" chapter.

Resilience of KfW Group's strategy and business model regarding biodiversity risks

KfW Group examined whether and to what extent ESG risk drivers impact KfW Group's overall risk profile in the short term in the risk inventory of financial year 2024 (see "Risk management approach of KfW (overview)" in the "Risk report" chapter). With regard to biodiversity and ecosystems, the following drivers were defined and analysed in terms of their influence on the risk types: ocean acidification, resource scarcity as a result of loss of biodiversity, dependence on ecosystem services, land and sea use, pollution (of water bodies and soil), animal welfare, exploitation of species, rising resource costs. KfW Group will be affected by biodiversity risks in credit and equity investment risks in particular if reduced biodiversity increases its business partners' probability of default. To analyse whether this materially impacts one or more types of risk, KfW Group first calculated the business partner's risk with regard to dependencies or influences on biodiversity on the basis of the business partner's sector. For business partners who are classified as at risk, the business partner's ESG risk profile is in the second step – taking account of risk mitigation measures – used to calculate whether there is a high risk with regard to the biodiversity categories under consideration in each case. Stakeholders were not included separately in the analysis. As a result, no biodiversity risk drivers were classified as material for financial year 2024 in any risk type.

Disclosures in accordance with Article 8 of the EU Taxonomy

Legal requirements in the context of the EU Taxonomy Regulation

Substantial financial resources are required for the transformation to a sustainable economy. Since 2018, a comprehensive reform process has been under way at European level with the primary aim of redirecting capital flows towards environmentally sustainable activities. The “EU Action Plan on Financing Sustainable Growth” published in March 2018 and the subsequent “Strategy for financing the transition to a sustainable economy” in July 2021 define numerous fields of action for the development of the regulatory framework in Europe in the area of sustainable finance, which addresses the financial sector in particular. The development of the EU taxonomy for sustainable economic activities was at the core of the package of reforms. It defines a classification system which, with the help of technical criteria, enables economic activities to be classified as environmentally sustainable (“taxonomy-aligned”). The EU taxonomy is thus intended to create a standardised understanding of environmental sustainability and, thanks to this mechanism, to foster increased transparency regarding the associated capital flows. The reporting obligations relating to the EU taxonomy addressed in this section are based, in particular, on the Taxonomy Regulation (EU) 2020/852 (hereinafter referred to as the “EU Taxonomy Regulation”) in conjunction with Delegated Regulation (EU) 2021/2178 supplementing Article 8 of the EU Taxonomy Regulation (“Disclosures Delegated Act”; DDA).

In accordance with Article 9 of the EU Taxonomy Regulation, the EU taxonomy covers economic activities with a potentially positive impact on the following six environmental objectives: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems.

The technical screening criteria for assessing the environmental sustainability of economic activities are specified in several subsequent EU delegated acts. The EU Commission has also published several Draft Commission Notices to address inconsistencies and room for interpretation within the regulations.⁵⁾

The reporting obligations pursuant to Article 8 of the EU Taxonomy Regulation apply to certain financial and non-financial corporations however differ in nature and scope depending on the type of undertaking. These obligations will enter into force in stages. For financial year 2024, financial corporations report taxonomy eligibility for all six environmental objectives, but only report taxonomy alignment for the environmental objectives of climate change mitigation and climate change adaptation. Starting in financial year 2025, the full reporting obligations are to be complied with all six environmental objectives for the first time. Credit institutions report on the taxonomy eligibility and alignment of their financing, including the main KPI for credit institutions, the green asset ratio (“GAR”), in accordance with DDA Annex VI “Template for the KPIs of credit institutions” and Annex XII “Standard templates for the disclosure referred to in Article 8(6) and (7) (nuclear and fossil gas-related activities)”. Credit institutions use the information provided by the financed counterparty as a basis for their analysis. In addition to the quantitative disclosures, the qualitative disclosures listed in Annex XI of the DDA must be published. Banking operations processes are not taken into account for credit institutions in taxonomy reporting.

The mandatory scope of application of the EU taxonomy is defined by the European corporate sustainability reporting requirements. As of the reporting date, these were set out in the Non-Financial Reporting Directive (“NFRD”), which was transposed into national law in Germany with the CSR Directive Implementation Act (*CSR-Richtlinie-Umsetzungsgesetz* – “CSR-RUG”). The NFRD is to be replaced by Directive (EU) 2022/2464, the Corporate Sustainability Reporting Directive (“CSRD”), which was published in December 2022. The CSRD had not yet been transposed into national law as of the 31 December 2024 reporting date; the provisions of the CSR-RUG therefore continue to apply in Germany.

⁵⁾ The Delegated Regulations include (EU) 2021/2139, which establishes the technical screening criteria for the two environmental objectives of climate change mitigation and climate change adaptation. Delegated Regulation (EU) 2023/2485 adds further economic activities to these two environmental objectives. Complementary Climate Delegated Act (EU) 2022/1214 also contains conditions subject to which certain power generation activities that use nuclear energy and natural gas are also classified as environmentally sustainable transitional activities. The content of this Regulation amends Regulations (EU) 2021/2139 and (EU) 2021/2178. Delegated Regulation (EU) 2023/2486 supplements the catalogue of requirements for screening economic activities that are conducive to the other four environmental objectives. Some of these have been published as notices in the Official Journal of the European Commission: 2022/C 385/01, C/2023/267, C/2023/305 and C/2024/6691.

Application of the EU taxonomy within KfW Group

Sustainability in its actions is a particular priority and an overarching business objective for KfW Group. It promotes climate and environmental protection across the globe and has made sustainability a key component of its mission statement, its policies, and its business and risk strategy. As part of the group-wide “tranSForm” sustainable finance project, KfW Group is addressing, among other objectives, the internal implementation of the reporting obligations resulting from the EU Taxonomy Regulation.

A potential future reporting obligation notwithstanding, KfW Group is voluntarily publishing group-wide taxonomy KPIs in accordance with Article 8 of the EU Taxonomy Regulation for the first time for financial year 2024. Independently of KfW Group, KfW IPEX-Bank falls within the direct scope of application of Article 8 of the EU Taxonomy Regulation at single entity level. It has already disclosed the EU taxonomy information mandatory for reporting since financial year 2021 and is using the option of consolidated reporting at the level of the parent entity of a group this year for the first time.

KfW Group supports the idea of a standardised classification system for environmentally sustainable economic activities. It shares the fundamental view that increasing transparency about the sustainability impact that financing has can have a positive steering effect. The fundamental requirement is that the resulting KPIs are meaningful and comparable. Applied to KfW Group’s business activities, implementation of the regulatory requirements set out in the EU Taxonomy Regulation means that significant parts of KfW Group’s financed portfolio are excluded from mandatory taxonomy screening. By way of example, financing provided to sovereign states and supranational institutions, corporate financing provided to small or medium-sized companies that are not themselves subject to mandatory NFRD/CSRD reporting, and financing provided to counterparties based outside the EU are not included in the taxonomy KPIs. At the same time, this sort of financing is a key feature of the business activities of a public promotional bank with international operations. What is more, the scope of the EU taxonomy has so far only included economic activities that are especially relevant with regard to environmental and, in particular, climate-related aspects. Other sectors of the economy that are equally deserving are not included in this sort of sustainability analysis as they are not taxonomy-eligible. Finally, the high ambition level and the associated requirement to furnish evidence that the criteria for taxonomy alignment have been met, coupled with the fact that data is often not yet available, result in very low taxonomy alignment rates. As a result, KfW Group has not, to date, used the taxonomy screening results to manage its business sectors or as a component of individual financing decisions. As far as the group’s products are concerned, the promotional criteria for individual promotional programmes and fund investments within KfW Group have thus far been geared to selected criteria from the EU taxonomy, in particular the substantial contribution to an environmental objective.⁶⁾ Beyond this, the EU taxonomy has not been a relevant consideration when designing the products offered by KfW Group to date.

Basis for taxonomy reporting within KfW Group

For taxonomy reporting, assets are recognised in gross carrying amounts on the basis of KfW Group’s consolidated financial statements prepared in accordance with the International Financial Reporting Standards (“IFRS”). In addition, existing definitions and distinctions from regulatory financial reporting (“FinRep”) are applied.⁷⁾ This relates in particular to the allocation to counterparty type, which is based on the direct business partner in line with FinRep, and the allocation of assets to the required product groups. Taxonomy reporting is based on the regulatory consolidated group. For KfW Group, the subsidiaries included match the consolidated group under commercial law that is decisive for the preparation of the consolidated financial statements.

The GAR represents the share of taxonomy-aligned exposures in certain components of assets, known as covered assets.

⁶⁾ This includes the “Climate action campaign for corporates” (programme 293), “Sustainable mobility for municipalities and companies” (programmes 267–269) and the “Green Transition Facility” venture capital fund.

⁷⁾ According to question 20 of the Frequently Asked Questions (FAQs) published by the EU on 20 December 2021

Covered assets are calculated as total assets before risk provisioning less exposures to central governments, central banks and supranational issuers and the trading portfolio. Exposures to central governments, central banks and supranational issuers include transactions with central and state governments, supranational organisations and balances with central banks. KfW Group does not hold any financial assets for trading purposes. Derivatives that are used for hedging purposes in economic terms but do not fulfil the stringent hedge accounting requirements are reported in the trading book.

Certain exposures of covered assets are not eligible for the taxonomy assessment. These include exposures to counterparties not subject to the NFRD/CSRD, as well as derivatives, short-term interbank loans, cash and cash equivalent assets, and other assets. Derivatives in the taxonomy templates comprise derivatives designated for hedge accounting. Other assets include non-current assets held for sale, property, plant and equipment, intangible assets, income tax assets, value adjustments from macro fair value hedge accounting and assets recognised as other assets. This item also includes subsidiaries reported in FinRep under investments in subsidiaries, joint ventures and associates.

Exposures to NFRD/CSRD counterparties in the counterparty sector comprising credit institutions and other financial corporations (financial undertakings) as well as non-financial corporations are always eligible for the taxonomy assessment. Exposures to households are included in the taxonomy assessment if such loans are collateralised by residential immovable properties, building renovation loans or motor vehicle loans. Exposures to local governments and regional governments are also to be included in the taxonomy assessment as a matter of principle.

The verification of the NFRD/CSRD disclosure obligation of business partners is operationalised in accordance with Articles 19a and 29a of Directive 2013/34/EU. For the purposes of determining the NFRD/CSRD disclosure obligation, the direct (legal) principal business partner with which the business relationship is maintained is considered in each case. Business partners in the counterparty sector comprising credit institutions, other financial and non-financial corporations that have their registered office in the EU, employ more than 500 people on average and are classified as large undertakings in terms of their net turnover and/or balance sheet total in accordance with Directive 2013/34/EU are identified. These business partners are classified as being subject to the NFRD/CSRD if they are categorised as public interest undertakings. Business partners in these counterparty sectors are also classified as being subject to the NFRD/CSRD if they have published a mandatory disclosure of taxonomy KPIs for financial year 2023. The published taxonomy KPIs are used to determine the taxonomy-eligible and taxonomy-aligned share, per environmental objective, of transactions with no known use of proceeds.

Transactions with business partners in the counterparty sector comprising credit institutions, other financial and non-financial corporations that do not meet the criteria listed for the NFRD/CSRD disclosure obligation are treated as transactions with non-NFRD/CSRD counterparties and not included in the taxonomy assessment.

For financial year 2024, the only transactions included in the taxonomy assessment for KfW are transactions executed with a business partner from one of the counterparty sectors comprising credit institutions, other financial or non-financial corporations that is subject to the NFRD/CSRD. Accordingly, for products such as investment assets (fund assets), receivables from special purpose vehicles or securitisations, the NFRD/CSRD disclosure obligation is checked first based on the direct business partner involved (legal business partner). Exposures associated with environmentally sustainable bonds are included in the taxonomy assessment without the NFRD/CSRD disclosure obligation having to be checked.

As a government-owned promotional bank, one of the ways in which KfW fulfils its primary, statutory objective, namely the promotional business, is in the form of what is known as on-lending business. The on-lending business means that KfW grants promotional loans to end borrowers via financing partners (credit institutions or other financial corporations). The on-lending business is always to be included in the taxonomy assessment. Due to the lack of data available, the on-lending business is included in KfW Group's taxonomy reporting in financial year 2024 as taxonomy-non-eligible/taxonomy-non-aligned.

Transactions with local authorities and regional governments are to be included in the taxonomy assessment subject to specific conditions. As no reporting obligations apply for financial year 2024, meaning that there is a lack of data available for these business partners, as was confirmed by spot checks carried out by KfW, no taxonomy assessment is carried out for transactions with local authorities and regional governments. For financial year 2024, all transactions executed with local authorities and regional governments are shown in the reporting tables as taxonomy-non-eligible/taxonomy-non-aligned under local governments financing.

If there is a directly attributable economic activity, i.e. a known use of proceeds, for exposures in the counterparty sector comprising non-financial corporations, a taxonomy assessment is carried out (see Implementation of the taxonomy assessment process within KfW Group). Exposures classified as taxonomy-eligible or taxonomy-aligned with a directly attributable economic activity are included in both the turnover KPI and the CapEx KPI⁸⁾ for KfW Group. If there are several attributable economic activities for an exposure, this exposure is classified as taxonomy-non-eligible or taxonomy-non-aligned. To simplify matters, transactions that do not add significantly to the informational value of KfW Group's taxonomy reporting are not included in the taxonomy assessment.

Exposures to business partners subject to the NFRD/CSRD in the counterparty sector comprising non-financial corporations without a known use of proceeds (general corporate financing) and exposures to financial undertakings (with the exception of the on-lending business) are considered based on the turnover and CapEx KPIs for each environmental objective as reported in the taxonomy KPIs published by the business partner for financial year 2023.

As KfW Group is publishing taxonomy reporting for the very first time in financial year 2024, no comparative figures for the previous year are provided.

Implementation of the taxonomy assessment process within KfW Group

The taxonomy criteria are checked on a case-by-case basis for every transaction based on the taxonomy reporting principles explained in the previous chapter.

The first step involves determining, for each individual transaction, whether the transaction is eligible for the taxonomy assessment. Eligible transactions are then grouped into exposures for which a definite use of proceeds can be determined and those for which no clear use of proceeds can be defined. The regulatory requirements provide for a different methodological approach to the two groups of transactions.

For exposures with a clear known purpose, the taxonomy eligibility review involves analysing whether the assets financed are related to an economic activity that meets the criteria set out in the Taxonomy Regulation. If so, the financing is assessed as taxonomy-eligible. These types of exposures are then checked for taxonomy alignment. All of the three following requirements have to be met for financing to qualify as taxonomy-aligned: (1) a significant positive contribution to one of the six environmental objectives, (2) avoidance of significant harm to the environmental objectives and (3) compliance with minimum social safeguards by the direct business partner. While an exposure with a known use of proceeds can therefore only be analysed entirely regarding its taxonomy eligibility and alignment, financing for which there is no definite use of proceeds is weighted using the taxonomy KPIs published by the business partner concerned and is then reported as taxonomy-eligible and taxonomy-aligned on a pro rata basis. General across-the-board assessments yielding a result of zero for the transactions analysed are excluded.

The taxonomy assessment is performed based on regulations that are standardised across the group. This also includes KfW IPEX-Bank, which was already included in the mandatory scope of application of the taxonomy before other business sectors of KfW Group. At KfW IPEX-Bank, the taxonomy assessment has already been incorporated into the credit process within the banking business. For existing business, the validity of the information that has been collected as a mandatory requirement since financial year 2021 is checked annually and, if necessary, the taxonomy assessment updated on the basis of the information

⁸⁾ In accordance with the Taxonomy Regulation (EU), non-financial undertakings report their KPIs based on turnover and capital expenditure ("CapEx").

provided or published by the business partner. All other affected business sectors of KfW Group are conducting an initial review of the existing business that is eligible for the taxonomy assessment for financial year 2024 based on the information provided or published by their business partners. The implementation project includes the intensive involvement of all business sectors using appropriate dialogue formats, as well as extensive training sessions and information events that are aimed, among other things, at supporting both the initial review and process implementation.

For financial year 2024, the transactions executed by the business sectors that have been assessed, quality-assured and approved on the basis of FinRep data will be aggregated centrally within Finance and reported on a consolidated basis in the reporting tables to be used in accordance with the EU Taxonomy Regulation. As part of the process of integration into the sustainability report, the disclosures in accordance with Article 8 of the EU Taxonomy Regulation are included in the approval processes for the sustainability report. The financial year 2025 will see the final integration into the standard operating processes, as well as the ongoing expansion of automated reporting. This process will also involve establishing and expanding suitable data exchange processes with relevant customers of KfW Group.

Disclosures by KfW Group on the EU taxonomy as of 31 December 2024

As of the reporting date of 31 December 2024, KfW Group is reporting for the first time on the proportion of its taxonomy-eligible and taxonomy-aligned economic activities for the environmental objectives of climate change mitigation and climate change adaptation. For the other environmental objectives, reporting is only mandatory on the taxonomy-eligible economic activities, to be disclosed in detail in the taxonomy templates (see separate chapter). The two tables below provide a summarised overview of KfW Group's key indicators as of 31 December 2024.

Key indicators as of 31 December 2024

	31 Dec. 2024
Covered assets (in EUR million)	460,085
Exposures not included in calculation of the numerator (as % of covered assets)	44.0
<i>of which: share of counterparties not subject to the NFRD/CSRD (as % of covered assets)</i>	44.0

Overview of taxonomy eligibility and alignment as of 31 December 2024

	Total		Taxonomy-eligible		Taxonomy-aligned (GAR)	
	Turnover	CapEx	Turnover	CapEx	Turnover	CapEx
Covered assets	%	%	%	%	%	%
Eligible for taxonomy assessment	56.0	56.0	2.3	2.3	0.2	0.2

The business activities of KfW Group's individual business sectors are represented differently in the taxonomy reporting at group level due to features specific to that business. An overview of the business sectors and their products is provided in the "Strategy, business model and value chain" section in the "General information" chapter.

In the two business sectors SME Bank & Private Clients and Customised Finance & Public Clients, a significant portion of financing as part of promotional programmes is provided to end borrowers via financing partners in the context of the on-lending business, which contributes a share of 51% to KfW Group's covered assets. The taxonomy eligibility/alignment of this on-lending business cannot be assessed in financial year 2024 as there is not sufficient data available. A possible future approach to enable a taxonomy assessment of the on-lending business and the development of an appropriate process solution is being coordinated with the German banking industry. Municipal financing to local authorities is another area that cannot be included in the taxonomy assessment due to the lack of data available in financial year 2024. As a result, most of the taxonomy reporting for the business sectors SME Bank & Private Clients and Customised Finance & Public Clients currently relates to the assessment of refinancing of financial undertakings outside the on-lending business and the assessment of individual promotional loans for non-financial undertakings.

The business sector Financial markets is responsible, in particular, for refinancing activities, liquidity management and operational market price risk management for KfW Group. The reporting for financial year 2024 essentially includes a taxonomy assessment of the bonds held in the liquidity portfolio for liquidity management purposes and the money market transactions that were executed.

The business sector Export and project finance is managed by KfW IPEX-Bank and comprises the bank's own market business and the fiduciary business conducted by KfW IPEX-Bank in its own name and for the account of KfW. Due to its international focus, extensive components of the portfolio fall outside the scope of mandatory reporting defined by the EU taxonomy, as KfW IPEX-Bank has a significant proportion of business with counterparties that are not subject to the NFRD/CSRD due to the nature of its financing mandate. In conventional export financing, for example, a loan is concluded with a foreign buyer outside the EU in order to finance a German or European delivery. As a result, the exposure is excluded from the taxonomy assessment. Another significant share of KfW IPEX-Bank's business is attributable to special financing transactions with single-purpose entities as direct counterparties. These are generally not subject to the NFRD/CSRD themselves due to size criteria – even if they are based in the EU. As a result, in the reporting year, these transactions are also not eligible for the taxonomy assessment – even if their financing purpose is directly related to a taxonomy-eligible economic activity within the EU.

The business sectors KfW Development Bank and DEG use their funds outside the EU. Following a detailed review in accordance with the requirements set out in the EU Taxonomy Regulation, this means that the corresponding financing arrangements are not eligible for the taxonomy assessment because the counterparties are not subject to the NFRD/CSRD.

KfW Capital invests in German and European venture capital and venture debt funds. Since the funds as direct legal counterparties are not subject to the NFRD/CSRD, KfW Capital's fund investments are not eligible for the taxonomy assessment in the financial year under review.

KfW Group has exposures to households in the form of education financing and employee loans, that are not to be classified as real estate or vehicle financing according to the EU taxonomy. Besides that, there is no significant retail business in any business sector.

Due to the regulatory requirements and the special nature of KfW Group's business activities, a significant proportion of KfW Group's overall portfolio (44%) is not in scope of the taxonomy assessment. A significant proportion of the remaining business that is in scope of the taxonomy assessment cannot be assessed for taxonomy eligibility due to a lack of data available. Based on the overall conditions, only 2.3% (turnover KPI and CapEx KPI) of the business is taxonomy-eligible. These 2.3% mainly comprise economic activities for environmental objective 1 "climate change mitigation" and environmental objective 2 "climate change adaptation" (turnover KPI and CapEx KPI). As of 31 December 2024, KfW Group reported a GAR of 0.2% (turnover KPI and CapEx KPI) on the basis of its covered assets.

The Complementary Climate Delegated Act (EU) 2022/1214 added six nuclear and fossil gas-related activities to the list of economic activities in the catalogue of requirements. The sector guidelines and the exclusion list restrict the granting of such financing within KfW Group to a considerable degree. The taxonomy-eligible and taxonomy-aligned exposures nevertheless include exposures where the use of proceeds is connected with nuclear and gas activities defined in the Complementary Climate Delegated Act. As far as financial year 2024 is concerned, however, these only include financing for which there is no known use of proceeds. This business is included based on the general KPIs published by the counterparty, including the nuclear and gas activities reported there.

KfW Group has been using the environment quota to measure climate-related and environmental financing since 2012 (see the “Environment quota” section in the “Environmental information” chapter). In 2024, 44% of KfW’s financing made a positive contribution to the environment quota. This means that the achievement of the environment quota target differs considerably from the GAR as the main performance indicator used in the EU taxonomy. As of now, the GAR is not part of the KPIs relevant for steering or managing the KfW Group. This discrepancy is due to significant differences in the data collection and calculation methodology, the result being that the two indicators cannot be compared.⁹⁾

Additional information on the tables in the appendix

Templates for credit institution KPIs

The taxonomy templates for the taxonomy KPIs of credit institutions of Annex VI DDA to be reported pursuant to Article 4 DDA are published in the “Taxonomy tables pursuant to Annex VI/XII (EU) 2021/2178 (DDA)” chapter.

The figures in the taxonomy templates are rounded to millions of euros; fractions are reported to one decimal place. Templates 1 to 5 are published separately for the turnover and CapEx KPIs.

The breakdown of the sectors in taxonomy template 2 is based on the main activity of the direct legal business partner.

Templates for nuclear and fossil gas-related activities

The templates for nuclear and fossil gas-related activities of Annex XII DDA to be reported pursuant to Article 8 (8) DDA are published in the “Taxonomy tables pursuant to Annex VI/XII (EU) 2021/2178 (DDA)” chapter.

The figures in the templates for nuclear and fossil gas-related activities are rounded to EUR millions; fractions are reported to one decimal place. The information on the economic activities in nuclear energy and fossil gas are provided only for business partners subject to NFRD/CSRD requirements.

For the calculation of the proportions in templates 2 to 5, the covered assets correspond to the exposures in the denominator of the GAR (applies to templates 2, 4 and 5), and the taxonomy-aligned exposures correspond to the exposures in the numerator of the GAR (applies to template 3).

⁹⁾ While the environment quota is calculated based on the annual new commitment volume, it is the group’s existing business that is taken as a basis for calculating the GAR. All new commitments in KfW Group’s own business can contribute to the environment quota. In the case of GAR, large parts of the lending business are excluded from the numerator as explained above. Furthermore, both the ambition level and the documentation and verification requirements that apply when calculating the GAR are so ambitious that only a handful of transactions meet the requirements for inclusion.

Social information

The fulfilment of KfW's "sustainable promotion" purpose is operationalised in the strategic objectives 2029, as described in the "Strategic objectives 2029" section in the "Basic information on KfW Group" chapter of the financial report, including in the context of secondary objectives. One of these secondary objectives relates to "employee potential and customer centricity". It stresses the importance of KfW Group's workforce for a top-performing group and focuses on customers as a success factor for sustainable business. This is underpinned by corresponding objectives related to employer attractiveness, customer satisfaction, brand awareness, brand profiling and diversity and is a component of the group's strategy. Strategic importance is also reflected in the impacts and opportunities that have been identified as material for this report, the influence of which is explained in detail in this chapter.

This chapter is divided into four sections. The first section, "Social matters at KfW Group", sets out the basis for KfW Group's social responsibility. The emphasis is on the foundation and, as a result, the supporting guidelines that make up the group's social construct and influence its social activities. The human rights policy described in the section forms the basis that ensures respect for human rights throughout the group and is closely linked to the company's Code of Conduct. This Code defines the rules of conduct and ethical standards that KfW Group and its employees must adhere to, and also sets standards for external partners. The second section addresses social matters in banking operations. The topics of diversity, remuneration, working conditions and worker participation are described in relation to the group's own workforce. This encompasses key aspects for KfW Group such as employee satisfaction, non-discriminatory pay, work-life balance, gender equality and inclusion. All further developments related to these aspects are bundled in the group-wide "Employer positioning" strategic project. All measures in this project are therefore described in detail in the following chapter. KfW Group not only ensures compliance with statutory requirements, but also makes sure that employees are treated fairly, that their rights are safeguarded and that the group is perceived as an attractive employer. Social matters in the banking business, which are addressed in the third section, describe the impacts and opportunities that KfW Group's business has on and for value chain workers, affected communities and customers. This section also provides information on a KfW Group-specific impact on corporate customers. The fourth section explains complaints management and the channels that can be used to raise concerns. The group ensures that complaints raised by its own workforce, as well as those raised by customers, by those affected by financings and by other stakeholders are taken seriously and dealt with appropriately. Aside from ensuring compliance with statutory requirements, this also serves to create an open and transparent corporate culture.

Social matters at KfW Group

KfW Group commits to the following agreements and declarations in its human rights policy ("Policy statement of KfW and its subsidiaries on human rights and on its human rights strategy") and the Code of Conduct:

- the United Nations Universal Declaration of Human Rights ("UN", 1948);
- the European Convention on Human Rights (1950);
- the International Covenant on Civil and Political Rights ("Civil Covenant") and the International Covenant on Economic, Social and Cultural Rights ("Social Covenant", 1966);
- the Convention on the Rights of Persons with Disabilities (UN Convention on the Rights of Persons with Disabilities, 2006);
- the UN Guiding Principles on Business and Human Rights (2023) and
- the other core human rights instruments drawn up within the UN;
- the Core Labour Standards of the International Labour Organization ("ILO").

The group also takes into account the Organisation for Economic Co-operation and Development ("OECD") Guidelines for Multinational Enterprises, the IFC Performance Standards and the World Bank's Equator Principles. The human rights principles and policies of the European Development Finance Institutions and the dimensions of the "Diversity Charter" are also observed.

The aim of KfW Group's **human rights policy** is to ensure that civil, political, economic, social and cultural human rights are respected, realised and promoted. In this context, the human rights policy incorporates existing rules, policies and processes and maps out the group's human rights strategy. It applies throughout the group and is designed to emphasise the central importance of human rights to partners, customers, suppliers, other stakeholders and the general public. The declaration meets the requirements of Section 6 (2) LkSG for the policy statement to be issued on the human rights strategy with regard to the group's employees and suppliers. The policy is published on KfW's website. The business sectors are responsible for ensuring compliance with the human rights policy within their business processes. Overall responsibility lies with the Executive Board. The group maintains regular and open dialogue with stakeholders, potentially affected parties and experts regarding aspects related to human rights, with the aim of refining processes in place to promote human rights. Stakeholder dialogue is described in the "Interests and views of stakeholders" section in the "General information" chapter.

With regard to the **LkSG**, associated risk management processes have been implemented to identify and assess potentially highly relevant human rights and environmental risks. A risk analysis of the bank's own operations is carried out every year, and on an ad hoc basis, to identify these risks. The risk analysis is updated whenever the company expects the risk situation in the supply chain to change or expand significantly, due, for instance, to the introduction of new products, projects or a new business sector, or because knowledge has come to light through the established complaints procedure. Based on the identified and prioritised risks, the relevant departments and subsidiaries are required to introduce or review appropriate preventive and remedial actions and make any necessary adjustments. Specifically, a number of risks such as child labour, forced labour including human trafficking and the violation of land rights can be classified as less relevant for the group's banking operations, as most of its employees work in Germany.

KfW Group sees itself as an employer that is committed to the **implementation of human and labour rights**, including the prohibition of child labour, forced labour and human trafficking, and that guarantees freedom of association, the right to collective bargaining, non-discriminatory pay, the ban on discrimination in respect of employment and occupation (regardless of gender, origin, ethnicity, religion, political beliefs, disability, age or sexual identity) and the right of individuals to recreation, health and safety. Risk-based control measures have been implemented at KfW to monitor requirements related to human rights. Action is taken immediately if violations of human and labour rights become known.

Incorporating the consideration of human rights and environmental protection into its business activities is a top priority for the group. Consideration of human rights and the human rights policy is ensured via the group-wide exclusion list and the applicable sustainability guidelines (see the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter).

KfW Group makes the financial and human resources available to take the actions necessary to manage material impacts on social matters. The allocated resources allow the necessary steps to be taken.

KfW Group's **Code of Conduct** is a group-wide set of rules that applies to the Executive Board, management boards, top management, and all employees in Germany and abroad, and also serves as a guide for external service providers and partner institutions. It is available to the public on KfW's website. The Code of Conduct sets out principles and recommendations for a value-based approach to risk culture, diversity, inclusion and a non-discriminatory working environment, leadership culture, skills development and data protection. Through implementation of the Code of Conduct, the group is committed to the principles laid down by the OECD and the Financial Action Task Force for dealing with non-cooperative, non-transparent or deficient countries and territories. The Code of Conduct is subject to an annual review process coordinated by the Compliance department. If necessary, ad hoc adjustments can also be made during the year. The departments of KfW and its subsidiaries are involved in preparing and updating the document. Each and every individual is responsible for complying with the principles set out in the Code of Conduct.

Social matters in banking operations

Social matters in banking operations relate to the group's own workforce, which comprises both KfW Group employees and non-employees, and include issues related to equal treatment/non-discrimination and corporate culture alongside general working conditions. Definitions of the group's workforce and the material impacts for these groups are described in detail in the "Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy" section in the "General information" chapter.

The materiality assessment revealed material positive impacts for KfW Group's workforce. In order to demonstrate the positive impacts arising from working conditions in banking operations, the secondary objective "Employee potential/customer centricity" has been firmly established in the strategic objectives 2029. Key components include the "Employer positioning" project to boost employer attractiveness, customer satisfaction, brand awareness and brand profiling, and diversity.

The **"Employer positioning" project** creates a strategic framework for many KfW Group measures related to topics such as diversity, leadership culture, development, remuneration and working conditions in order to enhance the group's strategic vision in terms of employer attractiveness. The project was launched in 2023 with the aim of retaining, recruiting and developing employees and will run until 2030. The measures identified as part of this project will be implemented on an ongoing basis and the scope of application extends to all KfW Group employees in Germany. The strategic positioning was developed along the following seven dimensions of employer attractiveness, which, according to studies on employer positioning factors and a survey of managers and employees, talents and committees, influence employee retention and recruitment: company with purpose (includes business models as well as socially and environmentally responsible, sustainable business with a focus on diversity and inclusion in accordance with ESG principles), leadership, collaboration, flexibility (particularly with regard to working hours and workplace, see the "Working conditions" section of this chapter), conditions (especially remuneration, see "Remuneration" section of this chapter), further development and infrastructure (e.g. personnel-related processes).

Actions were then developed, and resources allocated as part of the group business sector planning process in order to implement the strategic positioning. Employees and workers' representative bodies in Germany are closely involved in the project, in particular through an employee survey conducted in 2023 as well as workshops with managers, employees and committees. Employees are informed about developments within the project via a quarterly newsletter and every six months via information events for the company's own workforce. Key actions are described in the following chapters.

Diversity and inclusion

Policies related to diversity and inclusion within the group's own workforce

KfW Group strives to provide equal and fair opportunities and communication channels to all individuals irrespective of any linguistic, cultural or other differences. The topic of diversity and inclusion is covered throughout KfW Group by the human rights policy and the Code of Conduct, both of which are explained in more detail in the "Social matters at KfW Group" section of this chapter. KfW, KfW IPEX-Bank and KfW Capital have also signed the Diversity Charter. The aim of the "Employer positioning" project is to achieve an above-average market positioning for the "Company with purpose" dimension, including the areas of diversity and inclusion. Corresponding ambition levels and actions have been defined, for example, in the Equal Opportunities Plans and the Inclusion Agreement. The topic is also reflected in the group's remuneration strategies, which are described in the "Remuneration" section of this chapter.

Showing employees that they are appreciated is a key focus of the group's sustainability mission statement, and qualified and motivated employees are emphasised as a key success factor. A brief description of the sustainability mission statement is provided in the "Integrating sustainability matters into the business strategy" section in the "General information" chapter.

As KfW and its subsidiaries have different legal forms, they operate on different legal bases where equal opportunities are concerned. This is reflected in a company-specific range of policies, actions and targets. Nevertheless, KfW Group's commitment to gender equality – also with regard to remuneration – is part of the strategic objectives 2029 and is enshrined in the KfW and DEG Equal Opportunities Plans in accordance with Part 3, Sections 11 to 14 of the German Federal Equality Act (*Bundesgleichstellungsgesetz – BGleG*).

KfW prepared the sixth **Equal Opportunities Plan**; it came into effect on 1 January 2024 and applies to all KfW employees in Germany for a period of four years. After two years, the implementation status will be evaluated and, if necessary, adjustments made to validate target achievement level. The objectives set out in the Equal Opportunities Plan are explained in this section.

Responsibility for implementing KfW's Equal Opportunities Plan lies with managers, supported by the Human Resources ("HR") department. Employees are encouraged to participate in the implementation process and to exploit the opportunities offered by the Equal Opportunities Plan. The Equal Opportunities Plan and the results of the evaluation process are published on the intranet. Targets, sub-targets and key actions are also published on KfW's website.

DEG has adopted its own **Equal Opportunities Plan** that runs from 1 January 2023 to 31 December 2027 and applies to all employees working in Germany. This plan pursues the following objectives in the areas of gender empowerment, work-life blend, gender pay and gender balance:

- Promoting potential candidates through personnel development with a view to equal rights for women and men
- Creating a framework by ensuring balance
- Non-discriminatory pay by identifying and eliminating structural disadvantages
- Achievement of targets through gender parity in management and senior specialist positions

The Equal Opportunities Plan was drawn up by DEG's HR department and coordinated with the Management Board and the Works Council. Reports are presented to the Management Board and the Supervisory Board annually and (interim) results published internally. The Management Board has overall responsibility for implementing the plan.

Actions related to diversity and inclusion within the group's own workforce

In order to implement the policies and achieve the targets outlined in the following section, various actions are being taken to address the topics of diversity and inclusion. KfW Group is implementing the actions described below to create an inclusive working environment that ensures equal opportunities and non-discrimination and to promote structurally disadvantaged groups in management positions. Key actions taken by KfW and DEG are set out in their individual Equal Opportunities Plans. As KfW IPEX-Bank and KfW Capital do not have any legal basis for an equal opportunities plan, a company-specific catalogue of actions has not been drawn up. The group has an overarching corporate wording policy for gender-appropriate language in communication and documents (internal and external, e.g. target group-specific job advertisements), which was adopted with due account for comprehensibility, accessibility and readability.

As part of the employer attractiveness dimension "Company with purpose", the newly developed Equal Opportunities Plan was defined at **KfW** with regard to making the objectives part of the corporate culture and ensuring equal opportunities, **with the following actions**, which are to be implemented by 31 December 2027.

Career advancement for women is to be promoted by (further) developing existing communication formats in this area with the involvement of relevant stakeholders. These include panel discussions with experts, webinars, articles and brochures. In order to reduce implicit bias (unintentional stereotyping of, or prejudice against, people of a particular social group), a voluntary basic seminar was set up for all employees. The plan is to incorporate the topic into the full range of further seminars and trainings.

Equal promotion and development opportunities for women are also to be ensured by encouraging managers to highlight explicit opportunities and offerings to female employees, such as training and coaching to assess their skills or to help them develop in specialist roles. One focus is on promoting career advancement for women with severe disabilities, with greater attention being paid to their participation in talent programmes, for instance. Established actions include ensuring a remuneration policy that meets the relevant requirements and is structurally appropriate, as explained in further detail in the "Remuneration" section of this chapter, analysing the career progression of women and men who have taken advantage of programmes to foster the reconciliation of work and family life, setting target salaries for internal transfers and promotions, and actions in the context of a "second-life career" for parents who have been taking advantage of work-life balance offers for a prolonged period.

In order to increase the proportion of women at levels in the hierarchy not covered by a collective bargaining agreement, targeted exchange programmes and support for women are to be implemented. When filling vacancies, women with the appropriate qualifications are to be given preference for non-tariff roles in order to strive for parity and strengthen the basis for management levels. For the purpose of increasing the proportion of women in STEM roles ("STEM": science, technology, engineering and mathematics) women are to be approached through role models, exchange programmes, networking opportunities, communication measures and transparency regarding new roles. In order to promote part-time leadership, the necessary conditions, such as the establishment of job shares, are to be promoted. The overall conditions for part-time work and leadership are being reviewed and to identify any necessary improvements. Other actions include continuing the talent pools for employees involving at least equal participation, promoting the development of, and supporting, high-potential female employees through mentoring, shadowing and group coaching, addressing potential female candidates for vacancies in senior positions, ensuring gender balance as part of the application process wherever possible, having at least one female manager involved in relevant processes, and defining divisional reference values for senior specialist positions following the reorganisation of non-tariff roles as a whole.

An inclusion agreement was concluded for KfW in 2015 between KfW, the general representative for disabled employees and the General Staff Council to promote the topic of inclusion and non-discrimination more consciously. The Agreement defines seven target areas based on the UN Convention on the Rights of Persons with Disabilities. The aim is to give applicants with severe disabilities who have appropriate qualifications greater access to suitable jobs. Participation in a talent programme organised by the Vienna-based company myAbility Social Enterprise GmbH offers young students with disabilities access to KfW through introductory days. Every year, around five to eight talents come to KfW for taster days. Of these, one person was subsequently hired in 2024. One key action for KfW employees with severe disabilities is, for example, the accessible design of the working environment. Severely disabled employees are entitled to various benefits to compensate for the disadvantages they face, including six days of additional leave, exemption from overtime and a disabled-friendly parking space. KfW supports employees to obtain aids to make their working environment as accessible and suited to their disabilities as possible. In terms of accessible communication, sign language courses are on offer, and sign language interpreters are engaged at events. Visually impaired employees can be provided with an accessible "Fast Viewer version".

To reduce prejudices against employees with severe disabilities, voluntary awareness workshops and inclusion days are held for all employees. Around 30 to 40 employees take part in the training sessions every year. Around 1,000 employees take part in the health and inclusion days at all locations combined. An explicit support offer is provided to managers and teams for successful inclusion. This includes external consulting for managers of KfW and KfW IPEX-Bank in case of uncertainty about the impact of a staffing decision. The actions for inclusion are ongoing and do not have a specific end date.

KfW IPEX-Bank has set targets for the proportion of women in leadership positions in line with the German Act for the Equal Participation of Women and Men in Leadership Positions in the Private and Public Sector (*Führungspositionengesetz*). These targets are listed in the table "KfW Group's targets regarding employee diversity and inclusion". KfW IPEX-Bank has already initiated actions to achieve these targets, with further actions planned. For instance, an individual programme has been launched for employees working in Germany who express an interest in a leadership role. The "Leadership Prospects" programme was introduced in 2022 and extended after originally being intended to last 12 to 18 months. The programme includes a needs analysis, workshops, group coaching, networking, dialogue formats, mentoring and shadowing. The aim is to get more employees, especially women, interested in leadership so that they sign up for and complete the potential assessment programme. The programme for the internal actions is aimed at women within KfW IPEX-Bank who are interested in management or already in a management position; the external actions are targeted at external female applicants. The associated programme actions are being implemented on an ongoing basis. If programmes such as mentoring and shadowing or certification expire, the aim is to continue them based on the same parameters. The network "Female Leaders of IPEX" has also been established for women in management positions and women who have passed the potential assessment programme with the aim to boost participation of women at KfW IPEX-Bank in KfW programmes overall. Recruiting days are being organised to attract female graduate trainees and high-potential female employees are being specifically approached by the responsible manager when management positions become vacant.

The actions defined by **DEG** in its Equal Opportunities Plan are to be implemented by 31 December 2027. Regarding gender empowerment, DEG is committed to addressing women and motivating them to participate in career development programmes. High-potential employees are provided with targeted support, such as mentoring, shadowing and specific training programmes. To reduce potential barriers to taking steps towards leadership, DEG conducts surveys on the attractiveness of leadership roles. The goal is to specifically encourage and enable women to take on responsibility within the framework of board mandates – a position on the supervisory board of a company in which DEG holds a stake or which it finances – or the management interdisciplinary projects.

DEG is committed to creating management positions as job shares. The goal is to create a “job share marketplace” where (potential) managers can register and apply for job sharing vacancies. In addition, care should be taken during the promotion round to ensure that there is no significant difference in the number of women and men promoted. The aim is to promote women in proportion to their share in the respective functional level.

Targets related to diversity and inclusion within the group's own workforce

One of KfW Group's general objectives is to actively support groups of individuals who tend to be more affected by discrimination, so that the resulting topics and scheduled targets for diversity and inclusion are an integral part of the sustainability agenda. Achieving the targets set out in the Equal Opportunities Plans is a key interim objective in meeting the requirements of the BGleIG from the perspective of KfW Group.

The KfW target for the proportion of severely disabled employees, as shown in the table below, is 6%, which is above the statutory 5% quota. The HR division and the Executive Board were involved in setting the target. The Executive Board receives information on the status of implementation every six months. Once the target had been set, all departments and representatives for disabled employees were given information on their status quo, need for development and the support measures provided by the HR department.

Specific metrics are reported to the Executive Board and Directors every six months in order to measure and evaluate the progress made in terms of inclusion and diversity. To measure the progress made in diversity management at KfW, a “**diversity**” KPI was developed and implemented in the strategic objectives 2029. Information underlying the “diversity” KPI is collected annually by the company Barbara Lutz Index Management GmbH (Fki Diversity for Success), based in Unterföhring, which was commissioned by the Federal Ministry for Family Affairs to provide the requisite academic support. The result is compared with a benchmark of all indexed companies and backed up with an ambition level and actions that also contribute to the equality and inclusion strategy. The methodology behind the survey of the index values includes a combination of qualitative and quantitative parameters. Social and diversity development are part of sustainable development. The indicator is measured for KfW in Germany. The target is 85 out of a total of 100 points by 2029, with 100 points being the maximum achievable score. The current value (for 2023) is 80 points. The KPI will be collected each year from 2023 to 2029. Employees were involved in setting the target as part of the engagement procedures described in the “Procedures for engaging with the own workforce and workers' representatives” section of this chapter.

KfW has defined four overarching targets relating to diversity, equality and inclusion in its Equal Opportunities Plan. These include making equal opportunities part of corporate culture at KfW, identifying and eliminating structural disadvantages, improving the reconciliation of family life, care-giving and work, and increasing the proportion of women in management and senior specialist positions. The stated increase in the proportion of women is underpinned by a quantitative target and shown in the table below. The targets for the proportion of women are to be achieved at the levels of heads of department, heads of division and team heads. Demographic trends were taken into account when setting the target and were discussed in the Executive Board dialogue.

Further impact indicators for this target include the number of job shares and the proportion of part-time management positions. The tandems are management tandems at team management level. Two managers share team leadership and can utilise up to 1.4 full-time equivalents for this purpose. Target achievement is tracked by measuring the impact of individual actions. The impact of the actions in terms of anchoring gender equality in corporate culture at KfW is measured based on the number of participants in panel discussions, webinars and seminars, the associated number of clicks, data trends from HR department reports, and the answers to equality-related questions in the employee survey. Identifying and eliminating structural disadvantages is measured using the same sources, as well as by looking at salary trends for new hires and transfers over time among other means. In particular, the inclusion rate and the proportion of women with severe disabilities or equal status also play a role. In particular, the inclusion rate and the proportion of women with disabilities or equal status also play a role here.

KfW IPEX-Bank's strategy provides for a gender-neutral personnel policy and sets targets for equal participation in leadership positions and on the Board of Supervisory Directors. The quota relates to all KfW IPEX-Bank managers worldwide, including subsidiaries, and all branches and foreign branch offices. The quotas are based on the ratio of women to all managers at the relevant level and use the number of women and men at the level concerned as key metrics. The HR department is responsible for measurement and monitoring, with quarterly reporting for Management Board control. The regular measurements always take place at the end of a quarter and are compared with the target value for 30 June 2027; there are no milestones or interim targets. The target ratio was determined taking into account the current or planned number of management positions and the gender distribution, projection regarding age-related departures, and assumptions regarding (re)appointments. The Management Board and the Board of Supervisory Directors of KfW IPEX-Bank were involved in the determination process. Current trends and changes in the company's performance have no impact on the target-setting process. The quotas and the current level of target achievement are taken into account when (re)filling management positions.

Support for structurally disadvantaged groups is also addressed at an early stage, with a target quota to be achieved for female graduate trainees at KfW IPEX-Bank in Germany set back in 2024, as shown in the table below. The focus is on recruiting female graduate trainees, provided they are equally suitable candidates. The distribution of female and male graduate trainees is considered in every recruitment decision. The quota of 60% applies to the respective current year. No stakeholders were involved in the target-setting process. The quota was set taking into account the current equal distribution of women and men, and the fact that significantly fewer women are interested in leadership. To increase the number of interested female employees, the target was set in favour of female graduate trainees. In the 2024 financial year, the target figure was not met due to the application situation. Only 30% of the applications received were from female applicants.

At **DEG**, the targets described in the table below, "Proportion of women in the potential pool" and "Proportion of women in development programmes", were designed to increase the proportion of female participants in the Professional Development Programme ("PDP") and mentoring schemes, for example. The stages in the potential pool relate to the potential assessment programme used to select managers. The first selection stage consists of an aptitude assessment interview, the second selection stage includes an aptitude test in which an individual's leadership potential is assessed. The target for the first selection stage was not reached in 2024. The figures are volatile, as this is a small target group in which there is a lot of movement. For example, employees who complete an assessment centre after the first stage are no longer counted. The proportion of women in the first selection stage corresponds to the proportion of women at the 'Senior Manager' function level, from which the potential pool is largely recruited. The quota has risen by 26.7% since the adoption of the equality plan.

The goal of achieving gender balance is intended to help eliminate structural disadvantages and further boost the proportion of women at management level and in senior specialist positions. DEG defines the targets for achieving equal participation among women and men. Each of the targets is based on legislation, DEG's ambitions and internal modelling of feasible results within the term of the plan.

KfW Group's targets regarding employee diversity and inclusion

Action area (scope of application)	Target	Function	Actual value (31 Dec. 2024)	Target value	Target year
			%	%	
Inclusive working environment that ensures equal opportunities and non-discrimination (KfW)	Proportion of employees with severe disabilities		6.0	6.0	Annually
Inclusive working environment that ensures equal opportunities and non-discrimination (KfW)	Increasing the proportion of women in management and senior specialist positions	Heads of department Heads of division Team heads	30.8 40.6 39.4	30.0 40.0 42.5	2027
Promotion of structurally disadvantaged groups in management positions (DEG)	Proportion of women at selection stages 1 and 2 of the potential pool	Selection stage 1 Selection stage 2	38.0 67.0	50.0 50.0	Ongoing minimum value until 2027
Promotion of structurally disadvantaged groups in management positions (DEG)	Proportion of women participating in development programmes (PDP, mentoring, etc.)		60.0	60.0	Ongoing minimum value until 2027
Inclusive working environment that ensures equal opportunities and non-discrimination (DEG)	Increasing the proportion of women in management and senior specialist positions	Heads of department Heads of division Management level 3 ¹⁾ Management level 2 ²⁾	45.0 36.0 36.0 42.0	40.0 40.0 50.0 50.0	2027
Promotion of structurally disadvantaged groups in management positions (KfW IPEX-Bank)	Equal participation in management positions Board of Supervisory Directors	Management Board Heads of division Team heads	50.0 33.3 34.9	50.0 40.0 40.5	30 June 2027
Inclusive working environment that ensures equal opportunities and non-discrimination (KfW IPEX-Bank)	Proportion of female graduate trainees		48.3	60.0	Annually

¹⁾ Management level 3 – Specialist coordination and country office direction

²⁾ Management level 2 – Senior management

Metrics related to diversity and inclusion within the group's own workforce

As of 31 December 2024, KfW Group had a total of 8,838 employees. As this relates to the number of employees on the reporting date, the figure differs from the average figure shown in the financial report under "Average number of employees during the financial year" in the consolidated financial statements. The breakdown of the number of employees by various characteristics (e.g. gender) is shown in the following tables. All metrics are measured as of the reporting date and always relate to the head count.

Employee turnover at KfW Group was 5.3% in 2024. A total of 454 employees left KfW Group in 2024. Employee turnover refers to all employees who left the company during the reporting period either voluntarily or due to dismissal, retirement or death. The turnover figure does not include the expiry of temporary contracts, employees who left because they moved to different positions within the group, or secondments. The departure measure relevant to the employee turnover rate is counted on the first day after the official termination of the contract of employment.

The following employee metrics are stated on a head count basis as of 31 December 2024. Specific methods and assumptions were not used in collecting the data; the system counts and totals the figures.

Number of employees by gender

	31 Dec. 2024
Female	4,261
Male	4,577
Other	0
Not reported	0
Total	8,838

Number of employees by region and country¹⁾

	31 Dec. 2024
Germany ²⁾	8,387
Rest of the world	451
Total	8,838

¹⁾ Breakdown by country for countries with more than 50 employees, accounting for at least 10% of KfW Group's total workforce

²⁾ This also includes employees assigned to foreign posts.

Number of employees by type of contract and gender as of 31 December 2024

	Female	Male	Other	Not reported	Total
Permanent employees	3,777	4,050	0	0	7,827
Temporary employees	484	527	0	0	1,011
Non-guaranteed hours employees ¹⁾	0	0	0	0	0
Total	4,261	4,577	0	0	8,838

¹⁾ Workers with no guaranteed minimum or fixed number of working hours. While the employee must be available to work as required, the employer is under no contractual obligation to guarantee the employee a minimum or fixed number of working hours per day, week or month.

Gender distribution at top management level at KfW Group¹⁾

	31 Dec. 2024	
	Head count	%
Female	11	29.7
Male	26	70.3
Other	0	0.0
Total	37	100.0

¹⁾ Top management level is defined as the level below the Executive Board; within KfW Group, this is the head of department level. The subsidiaries are included in this framework with their management level.

Number of employees by age group

	31 Dec. 2024
< 30 years of age	1,133
30 ≤ 50 years of age	4,664
> 50 years of age	3,041
Total	8,838

Remuneration

Policies related to remuneration within the Group's own workforce

The **group-wide remuneration strategy policy** in accordance with Section 27 of the Remuneration Regulation for Institutions (*Institutsvergütungsverordnung – “InstitutsVergV”*) sets out the overall parameters for remuneration within KfW Group. KfW Group is expressly committed in its procedural rules to transparent and non-discriminatory remuneration principles and evaluation processes. The procedural rules stipulate that the remuneration systems should not differentiate on the basis of gender, nationality, ethnic origin or religion. They describe the key aspects of performance management and (variable) remuneration, as well as the parties involved and responsibilities within the remuneration process. These rules apply to all group employees with a German employment contract. The remuneration paid to employees working abroad whose employment contracts are subject to local law in that country, and to whom KfW's staff agreements do not apply, is not included in KfW's remuneration system. KfW ensures, however, that the remuneration paid to these individuals meets the requirements set out in the Remuneration Regulation for Institutions by summarising the remuneration rules for national staff at foreign sites in employment guidelines.

The objectives of the remuneration strategy are:

- To align remuneration instruments and processes with the group's business and risk strategy
- To support employee retention and recruitment and thereby ensure that personnel requirements are met
- To ensure transparency regarding changes of position within each company and between the companies in the group
- To define a standardised framework for the design and implementation of processes for performance management and remuneration structure
- To ensure appropriate remuneration systems, in particular to avoid any incentives to take disproportionately high risks
- To ensure clear and transparent remuneration systems
- To implement and monitor the relevant regulatory requirements

As the parent institution, KfW ensures compliance with the regulatory requirements for remuneration at the subsidiaries and works towards the implementation of, and compliance with, the group-wide remuneration strategy. To this end, it reviews compliance with the requirements set out in Section 27 InstitutsVergV at least once a year, i.e. compliance with the group-wide remuneration strategy. The following aspects are reviewed for compliance: strategic relevance of the remuneration systems, misguided incentives and negative performance contributions, guaranteed variable remuneration, severance payments and retention awards, bonus cap, total amount of variable remuneration and hedging transactions. KfW must also be involved by the group subsidiaries in any processes introducing new or revising existing remuneration system concepts. This ensures that new concepts comply with the regulatory requirements and are consistent with the group-wide remuneration strategy. Deviating regulations must be reviewed by KfW's HR department before being approved by the Executive Board with the involvement of the responsible supervisory body. In accordance with the Remuneration Regulation for Institutions, the Board of Supervisory Directors monitors the appropriateness of the employee remuneration systems, which also involves setting the total amount of variable remuneration.

The subordinate remuneration strategies of KfW IPEX-Bank, DEG and the Bylaws and business strategy of KfW Capital describe the parties involved and responsibilities within the remuneration process. The companies review their systems and the underlying remuneration metrics once a year to ensure that they are appropriate and compatible with the business and risk strategies. The Board of Supervisory Directors/supervisory boards of the subsidiaries receive the documented results. Where shortcomings are identified, KfW promptly draws up an action plan. The Executive Board of KfW is responsible for the remuneration process and, as a result, for ensuring an appropriate remuneration system structure, as well as for providing annual information to the Board of Supervisory Directors.

KfW Group employees in Germany covered by collective bargaining agreements are subject to the regulations of the collective bargaining agreement for public banks. Activities that fall under collective bargaining agreements are assigned in accordance with collective bargaining pay-scale groups and remuneration is paid accordingly. Among other things, the collective bargaining agreement includes regulations on working hours, pay, annual leave and termination of employment. Employees not covered by collective agreements are subject to similar working and employment conditions as employees who are covered by a collective agreement; the applicable collective bargaining agreement also serves as a frame of reference for contracts of the former group of employees. The main working conditions are regulated in particular in staff or works agreements negotiated and concluded between the employer and the Staff Council or Works Council. KfW Capital is not bound by collective bargaining agreements.

The Remuneration Committee of the Board of Supervisory Directors of KfW and DEG, the Board of Supervisory Directors of KfW IPEX-Bank and the Supervisory Board of KfW Capital are responsible for supporting the Board of Supervisory Directors/supervisory body in monitoring an appropriate structure of the remuneration systems for employees. This also includes the annual review to determine whether the defined principles for setting remuneration metrics are appropriate, the total amount of variable remuneration has been calculated properly, the performance contributions and performance and retention periods are appropriate, and the remuneration systems meet the requirements set out in the Remuneration Regulation for Institutions or, for KfW Capital, the Investment Firm Remuneration Regulation (*Wertpapierinstituts-Vergütungsverordnung*) and the German Investment Firm Act (*Wertpapierinstitutsgesetz*). The remuneration metrics must be consistent with the remuneration strategy and support the achievement of the strategic objectives, which at KfW Group include non-discriminatory remuneration in line with standard market conditions.

The committee also monitors the remuneration systems for the heads of the Risk Controlling and Compliance functions and the risk takers, as well as the process for identifying risk takers. In addition, the committee monitors the appropriate structure of the remuneration system for managing directors and prepares for the supervisory board consultation on their remuneration. In accordance with Section 10 of the German Transparency in Wage Structures Act (*Entgelttransparenzgesetz*), employees have been able to assert their individual right to information to verify gender-neutral pay since 2018. This means that they can seek information on the criteria and procedures used to determine pay and receive written information on the statistical median of the average gross monthly remuneration extrapolated to full-time equivalents, as well as up to two individual salary components of a peer group. All companies in the group have implemented this statutory requirement; KfW Capital is not affected, as it has fewer than 200 employees, meaning that implementation of the right to information is reviewed on a case-by-case basis.

Actions related to remuneration within the Group's own workforce

Various actions relating to remuneration and other benefits for KfW Group's own workforce are in place to ensure implementation of the policies and their processual anchoring. These are explained in the chapter below. The group aims to continuously ensure the satisfaction of its employees by providing appropriate remuneration and social benefits in line with market standards. To make sure that the remuneration systems are gender-neutral, salaries are set based on a grading structure in which equivalent functions are assigned to salary bands.

In addition, a gender-sensitive remuneration policy is ensured by identifying and eliminating structural disadvantages. For this purpose, possible "structural cases" will be identified at KfW and DEG in advance of the salary review, in particular structurally disadvantaged women and part-time employees, which will result in effective and sustainable salary adjustments by the department. To identify these "structural cases", all directors received an evaluation, at the start of the 2023/2024 salary review, showing which female employees stand out in particular as regards their remuneration with a view to equal pay, meaning that they are considered "structural cases". The gender pay gap of the peer group was used to identify the women who stood out statistically in terms of their deviation from the peer group in the context of the salary review. The heads of department were asked to pay attention both to differences in performance and to reducing gender-specific imbalances when allocating the budget. Special attention was to be paid to the women identified, as they make a particularly marked statistical contribution to the gender pay gap. During the salary review, the gender pay gaps of the departments and levels were monitored on a regular basis in order to present transparent information on the impact of the planned salary adjustments on department

gender pay gaps. For those employees not covered by a collective bargaining agreement, the results of the salary review had a consistently positive effect on the gender pay gap for annual target salaries at the relevant non-pay scale levels.

In order to implement equal pay for women and men, DEG is enhancing the tools used to analyse the remuneration structure based on parameters such as gender, age, length of service and function level. An external benchmarking process is designed to make the competitiveness of the remuneration structure more transparent. If a salary equalisation measure is not implemented for employees with a comparable performance evaluation, separate grounds must be furnished by the department concerned, along with a plan for future effective and sustainable development. Performance aspects, incentives and structural equal treatment of employees are given equal weighting in salary adjustments.

Moreover, an external, independent pay equity analysis was conducted for KfW, KfW IPEX-Bank and DEG in Germany for the first time in 2024 by the Frankfurt-based company Lurse AG. All three companies received a positive outcome from the analysis and met all requirements for the Lurse pay equity certificate which is valid for two years. The next step is a review of the results of the pay equity analysis at individual institution level in 2025, with further targeted actions derived as necessary. KfW, KfW IPEX-Bank and DEG were also designated “Universal Fair Pay Analysts” based on the “Universal Fair Pay Check” conducted by the Berlin-based company FPI Fair Pay Innovation Lab gemeinnützige GmbH. The FPI certificate is valid for one year. The pay equity analysis is to be repeated at KfW and KfW IPEX-Bank in 2025 with the aim of being recertified by FPI and being able to track any developments.

The “conditions” dimension in the core element “top-performing KfW” of the KfWplus agenda was reviewed as part of the “Employer positioning” project in 2023. KfW Group employees with a German employment contract are entitled to employer-financed pension benefits for the duration of their employment as well as to receiving disability benefits and benefits for surviving dependants. The scope, exact details and amount of the company pension are based on the pension regulations set by KfW and its subsidiaries. The group also offers its employees with a German employment contract the following additional benefits: voluntary deferred compensation for pension benefits, mobility benefits, such as reimbursement of commuting costs, reimbursement for the “Deutschlandticket” monthly travel pass, free parking spaces and private accident insurance. KfW and DEG also offer their employees with permanent German employment contracts several additional benefits, such as access to low-interest building loans, occupational incapacity insurance, capital accumulation benefits (*vermögenswirksame Leistungen*) and, as of 2024, bicycle leasing, which was also introduced at KfW Capital.

Targets related to remuneration within the group's own workforce

The policies and actions described above contribute to the promotion of non-discriminatory and transparent pay for KfW Group employees. While no specific, measurable and results-based targets have been defined, qualitative objectives are in place.

The general objectives of the group-wide remuneration strategy are described at the beginning of this section. As part of KfW's Equal Opportunities Plan, the goal of “identifying and eliminating structural disadvantages” also contributes to ensuring a gender-sensitive remuneration policy. The effectiveness of the policies and actions is measured by the salary trend for new hires and transfers over time.

DEG's targets include increasing the transparency of the data basis for the remuneration structure, ensuring a gender-sensitive remuneration policy, and avoiding structural discrimination in new hires and the salary trend. As both plans apply from 1 January 2024, progress will be measured from 2024.

Metrics related to remuneration within the group's own workforce

The relevant remuneration metrics and associated methodology are described in this section. The proportion KfW Group employees covered by collective bargaining agreements in the European Economic Area (“EEA”) is 25.7%. A total of 98.8% of the group's employees in the EEA have workers' representatives. The table below shows the collective bargaining coverage and proportion of employees with workers' representatives in Germany.

Collective bargaining coverage and social dialogue

Coverage rate	Collective bargaining coverage	Social dialogue
	Employees – EEA (for countries with > 50 employees accounting for > 10% of the total number)	Workplace representation (EEA only) (for countries with > 50 employees accounting for > 10% of the total number)
0–19%		
20–39%	Germany	
40–59%		
60–79%		
80–100%		Germany

The appropriateness of remuneration at all group sites was analysed in financial year 2024 to ensure that all employees receive an adequate wage. The focus was on the statutory minimum wage in the countries within the EEA. In countries outside the EEA, the adequate wage was determined based on a range of criteria. The review showed that all KfW Group employees received an adequate wage in financial year 2024.

The gender pay gap according to the ESRS calculation was 14.0% in financial year 2024 and is defined as the difference between the average gross hourly pay of female and male employees. Gross hourly pay is calculated by dividing total annual remuneration by the target working hours, or by the hours worked in cases involving temporary student employees. The total annual remuneration includes the following items, provided they were paid in the reporting period: wage and salary payments, remuneration for work performed (remuneration for hours worked including overtime, shift allowances), remuneration for working hours lost/absence, as well as one-time payments such as bonuses, holiday bonuses, other fixed one-time payments, company performance bonuses, individual performance bonuses, other variable one-time payments and non-monetary (in kind) benefits. The pay components are calculated based on the accrual principle. The gender pay gap is unadjusted, i.e. factors such as qualifications, employment history and employment scope and activity are not taken into account.

The ratio of the total annual remuneration paid to the highest-paid individual at KfW Group to the annual median total remuneration paid to all employees is 10.6. The total remuneration included in this calculation includes the same pay components as those included in the gender pay gap. Please note for the purposes of this metric, that 28.1% of employees work part-time, meaning that they receive lower total annual remuneration. Furthermore, in line with the definition of employees, the remuneration metrics also include the salaries paid to interns, temporary student employees and vocational trainees. These two effects reduce the median income overall.

All the metrics explained relate to the reporting date based on the accrual principle as of 31 December 2024.

Working conditions

Policies related to working conditions within the group's own workforce

For KfW Group, for example, the structure of working hours and the promotion of work-life balance are key aspects when it comes to fulfilling employees' individual needs and supporting their performance. The policies related to working conditions at KfW Group are described in detail below.

The policies related to working conditions at KfW Group are derived from the group's mandate and business strategy. They include promoting employability and creating a sustainable working environment as an attractive employer in order to recruit and retain the best employees, objectives pursued in the "Employer positioning" project described in the "Diversity and inclusion" section of this chapter. Working conditions at KfW Group are set out in procedural rules that are agreed between the employer and the Staff Council or Works Council, and apply to employees in Germany with a German employment contract. Overall, KfW and each of the companies follow the policies described in the "Social matters at KfW Group" section of this chapter and other statutory requirements and provisions, including the German Act on the Implementation of Measures of Occupational Safety and Health to Encourage Improvements in the Safety and Health Protection of Workers at Work (*Arbeitsschutzgesetz*), the German Ordinance on Workplaces (*Arbeitsstättenverordnung*),

Book VII of the German Social Code (*Sozialgesetzbuch VII*) and the German Maternity Protection Act (*Mutterschutzgesetz*). The labour and health protection law of the respective country applies to employees with a foreign employment contract. German labour and social security law also applies when employees are assigned to posts abroad and are not subject to foreign social security obligations.

Key aspects of working conditions from KfW Group's perspective include flexible working hours and locations, as well as striking a balance between work, family life, care-giving and personal life. For KfW, the relevant work-life balance policy can be found in the sixth Equal Opportunities Plan, which is explained in more detail in the "Diversity and inclusion" section of this chapter. The issue of flexible working hours and locations is also covered, for KfW, in the staff agreements on mobile working, workations and working hours; for KfW IPEX-Bank and DEG, the regulations can be found in the corresponding works agreements.

KfW Group operates preventative occupational health and safety management services to promote employee health. The focus of these services is to provide an appropriate working environment, including ergonomic workstations, to prevent risks and accidents at work, and thereby also prevent and minimise sick days. The issue of health is addressed in the German Works Constitution Act (*Betriebsverfassungsgesetz – BetrVG*). Actions to minimize hazards are based on the activity-oriented risk assessment to be carried out on a decentralised basis by managers. The implementation process, along with guidelines on occupational health, is set out in policies and work instructions based on the statutory health and safety regulations, such as the German Occupational Safety and Health Act and accident prevention regulations. The risk assessments focus in particular on groups of persons not only active in an office context. Personal risk assessments are conducted for particularly vulnerable individuals.

Actions related to working conditions within the group's own workforce

Various actions are in place within KfW Group to ensure implementation of the policies and their establishment in corresponding processes. As part of the "Employer positioning" project, the group is focusing on **flexible working models** to facilitate employees' **work-life balance**. The three main components are a range of individual part-time models, flexible working hours using a flexitime model and mobile working. Work-life balance is covered by a staff agreement, and works agreements for the subsidiaries.

Mobile working is an option on a 60:40 basis for employees in Germany working for KfW, KfW IPEX-Bank and DEG (60% of working hours worked outside of the office and 40% in the office), and without a fixed ratio at KfW Capital. In addition to the statutory and collectively agreed regulations, KfW and KfW IPEX-Bank offer additional leave of absence schemes in order to promote a better work-life balance. These are set out in a staff agreement at KfW and in a works agreement at KfW IPEX-Bank and DEG and include overall conditions for time-off for childcare purposes, care-giving for close relatives and for other personal reasons (e.g. sabbaticals). Another action to meet the target of a top-performing KfW as part of KfWplus, "Flexibility to boost employee satisfaction and recruitment" was implemented for the first time in 2024. Since July 2024, staff members, graduate trainees and sandwich-degree students working at KfW, KfW IPEX-Bank and KfW Capital who have been employed in Germany for at least six months and have EU citizenship can apply for up to 20 working days (pro rata for part-time employees, where applicable) per calendar year for mobile working abroad. DEG is also planning to implement the actions relating to mobile working abroad and sabbaticals based on KfW's regulations.

There are also actions relating to **family and care-giving**. Parent-child offices are a concept that has been introduced at every location. In addition, KfW and KfW IPEX-Bank maintain an in-house daycare centre with 45 childcare places at the Frankfurt office, and other support services are provided by external service providers such as pme-Familienservice. Moreover, in cooperation with a parents' association, ten childcare places at the Erasmus kindergarten and 66 crèche places at two other facilities are also reserved. For childcare at other facilities, employees can access extensive databases with lists of available places in day nurseries, after-school care facilities and schools. Employees across Germany can also access 24-hour emergency care from a family service all year round in the case of last-minute childcare requirements as well as virtual childcare options. KfW also organises childcare services provided by a family service where needed at conferences hosted by KfW. Assistance in finding babysitters and au pairs and a very comprehensive school holiday programme are also available. DEG offers its employees a childcare allowance in Cologne, as well as access to emergency childcare options via a family service provider and support in organising regular childcare options. To make it easier to plan a return to work after parental leave, DEG also provides

a total of 15 childcare places. DEG additionally offers an extensive school holiday programme and an academy providing trainings on topics for parents. KfW Group has its own fathers' network and has been a member of the nationwide fathers' network Conpadres since 2019. KfW, KfW IPEX-Bank and DEG offer a programme for people with care-giving responsibilities, including, in particular, dedicated care guides, on-site consultation sessions, a 24/7 hotline and information events.

KfW's aim is to facilitate the balance between work, family, care-giving and personal life for women and men alike. In a quest to improve childcare and care-giving for relatives, a location-specific survey on employees' demand was conducted in Germany in 2024 as part of the "Employer positioning" project. Based on the results of the survey, KfW is looking into suitable actions and developing new services taking into account the infrastructure conditions. The work-life balance agreement will be updated in the coming years and expanded to include new work-life balance components.

Employees at other stages of life are also supported with offers and fringe benefits. Older employees of **KfW** and **KfW IPEX-Bank** in Germany have the option of continuing to work beyond the statutory retirement age if the employee and employer agree. There is also a "reverse mentoring" scheme for managers, where experienced managers are supported by "digital natives" from the Digital8 network acting as their mentors. In addition, the long-standing "management job sharing" HR development tool is to be enhanced by a focus on "management job sharing combining different age groups", alongside "better balance". A corresponding action is currently being planned.

As part of its Equal Opportunities Plan, DEG is planning several actions to improve working conditions and thereby also to increase employer attractiveness and employee satisfaction. The current offerings to facilitate a work-life balance, particularly in the context of childcare, care-giving for relatives and other aspects of work-life balance, are reviewed at regular intervals as part of the "audit workandfamily" recertification process. The needs of employees returning from parental leave are also reviewed and the reintegration process is adapted if necessary. In order to promote flexible working hours and the use of parental leave by fathers, DEG is analysing possible obstacles and developing targeted actions to overcome them. The overall aim is to continuously adapt and enhance the work-life balance offers and overall conditions to meet the needs identified.

The effectiveness of all actions is measured as part of the employee survey. For further information, please refer to the "Procedures for engaging with KfW's own workforce and workers' representatives" section of this chapter.

For **local KfW Group staff working in KfW Group's offices abroad**, the working conditions and social benefits that apply at least match, if not exceed, the relevant national legal requirements and are based on the benefit level of comparable international companies locally. The regulations for national employees can be found in separate employment guidelines issued by KfW Development Bank, KfW IPEX-Bank and DEG. The aim is also to apply the requirements and agreements applicable to employees in Germany, such as regarding flexible working hours/locations, inclusion and diversity, in the same way to the foreign offices depending on the local context and needs. When assigning employees to foreign posts, the group provides additional benefits which take account of economic and safety requirements. These additional benefits address both the local situation and the differences between the home and host countries.

Targets related to working conditions within the group's own workforce

As part of its corporate objectives on working conditions, the group has focused on the possibility of mobile working and on fostering a results-based work culture. KfW Group does not set any overarching quantitative targets for these aspects. Overall, effectiveness is measured in the context of regular employee surveys, as explained in the "Procedures for engaging with KfW's own workforce and workers' representatives" section of this chapter, as well as by monitoring employee turnover and incoming job applications, among other things.

While KfW has not defined any quantitative targets as part of its Equal Opportunities Plan, the impact of the actions described is measured and tracked. The overarching qualitative objective is to "improve the balance between work, family life, care-giving and personal life for women and men alike". Improvements in the options for childcare and the care-giving for relatives are measured, for instance, based on criteria such as the number of childcare places, the use of school holiday and emergency childcare places, and care-giving services.

In addition, the overall **effectiveness of the actions taken as part of the “Employer positioning” project** is measured based on an “Employer attractiveness” KPI as part of the strategic objectives 2029. The KPI is based on both internal and external employer attractiveness, with the data is collected jointly with an external market research institute. Going forward, internal employer attractiveness will be measured on the basis of the engagement index as part of the regular employee survey, in line with the market standard. The index is measured based on six different items (e.g. the extent to which employees would recommend their employer to others) which are then used to calculate an average. Limitations of the employee survey include the fact that it is not possible to obtain more in-depth information on the motives behind the responses as part of the survey. However, this is compensated for by an extensive qualitative follow-up process. The engagement index is an established index on the market that has also been validated with an external market research company. The index can be compared against other organisations in the benchmark. External employer attractiveness is a weighted index of various factors that are combined with the company’s representative peer group. The index is measured on the basis of three factors (e.g. visibility, intention to apply) in the relevant target groups, which are then used to calculate a weighted average. An external market research institute compiles the index every two years and carries out benchmarking against the peer group.

DEG has defined two targets in relation to the defined work-life blend action area, as shown in the table below. In future, additional capacity corresponding to at least 0.2 full-time equivalents is to be created when filling management job share positions. In addition, DEG aims to create a “job share marketplace” allowing (potential) managers interested in working part-time or in a job share model can register and apply for job sharing vacancies. DEG has found that there are many opportunities on offer to allow employees to strike a balance between work, family, care-giving and personal life. In the area of work-life balance, these are safeguarded by regular re-audits (audit workandfamily) to maintain certification by the Hertie Foundation, which DEG has held for ten years now. The offers are currently taken up largely by women. For DEG, encouraging increased use of part-time and temporary part-time models and parental leave by male employees is a goal worth working towards to achieve an improved gender balance. There is also a particular need to promote greater flexibility in working hours in the management ranks. As well as taking targeted steps to facilitate further part-time and job sharing solutions in management, all parties involved are to strive to make part-time management roles a possibility.

DEG’s targets in relation to working conditions

Action area (scope of application)	Target ¹⁾	Actual value 2024	Target value	Target year
Promotion of structurally disadvantaged groups in management positions (DEG)	Part-time management (including job share partner)	8	8	2027
Promotion of structurally disadvantaged groups in management positions (DEG)	Management job shares	4	3	2027

¹⁾ Targets have currently been defined at DEG only. Table content is therefore limited to DEG. However, the offer is available throughout KfW Group.

Procedures for engaging with the own workforce and workers’ representatives

Due to the various laws on employee participation (German Federal Personnel Representation Act [*Bundespersonalvertretungsgesetz – “BpersVG”*] and the German Works Constitution Act) it is not possible to create a works council for KfW Group as a whole. As a result, there is no group-wide, standardised procedure for KfW Group to engage with its own workforce and workers’ representatives. However, each company has put its own procedures in place, which are described below. An agreement with employees on representation by a European works council, a works council of a Societas Europaea (“SE”) or a works council of a Societas Cooperativa Europaea (“SCE”) is not required by law.

The social interests of employees at KfW Group are represented by the trade unions and the company's social partners. Employees have the right to freedom of association, which includes the right to form associations to protect and advance working and economic conditions. KfW is subject to the German Federal Personnel Representation Act. Employee interests are represented by a General Staff Council, which is responsible for issues across all sites and generally meets once a month, and by the three Local Staff Councils in Frankfurt, Bonn and Berlin, which generally meet once a week. Among other things, the Staff Council is responsible for ensuring that regulations benefitting the group's own workforce are complied with and implemented. It must address suggestions and complaints raised by employees and negotiate with KfW's management where there is a legitimate interest in doing so; it is also involved in organisational, social and HR-related matters and can negotiate and conclude staff agreements with KfW. KfW IPEX-Bank and DEG are subject to the German Works Constitution Act and have their own works councils and supervisory boards with elected workers' representatives who can be approached at any time. Among other things, the works councils are involved in the negotiation of works agreements at an early stage. If necessary, initial ideas are also discussed with employees. The workers' representatives, along with the equal opportunities officers, the (general) representatives for youth and vocational trainees and the (general) representatives for severely disabled employees are institutions that monitor compliance with laws and (company) regulations and serve as direct points of contact for employees in the event of individual questions or conflicts of interest.

KfW Capital does not have a works council or any established procedures for engaging the workforce or workers' representatives. This is also based on the German Works Constitution Act, which does not stipulate any obligation to create a works council if a company has only a small number of employees. There are, however, (informal) dialogue formats to include and address workforce concerns and demands. This informal engagement is a feature throughout the group.

The staff councils hold monthly meetings with the Chief Human Resources Officer and the Head of HR, particularly on all matters that have a significant impact on employees. There are monthly dialogue sessions between HR staff and all staff from the equal opportunities office, as well as monthly dialogue with the employees from the representative office for disabled employees. A fortnightly meeting is also held between the deputies of the equal opportunities office and the Head of HR. Every six weeks and when specific issues arise, the general representatives for severely disabled employees, the general representatives for youth and vocational trainees and the General Staff Council Executive Board meet with the Head of HR and an administrator responsible for the general representatives for severely disabled employees. Operational responsibility for engaging employees and ensuring that the results are incorporated into the company policy lies with the responsible heads of department and the Executive Board, depending on the topic.

The responsible bodies and affected employees are involved as extensively as possible at an early stage, especially during change processes – such as internal restructuring, major new projects and decisions on corporate strategy. This inclusion process can include face-to-face information from line managers, in-house information events and intranet notifications. The interests of KfW's female employees are also represented by the equal opportunities officers and their three deputies elected in accordance with the requirements of the German Federal Equality Act. Furthermore, the interests of employees with severe disabilities are represented by the relevant KfW, KfW IPEX-Bank or DEG representatives for employees with severe disabilities. These representatives have the right to attend all meetings of the Staff Council concerned, the occupational health and safety committees and workplace inspections in an advisory capacity.

Potential obstacles relating to the inclusion of specific individuals in the workforce (e.g. language and cultural differences) are addressed and efforts made to prevent them. A team charter is drawn up in each team at KfW and KfW IPEX-Bank in accordance with the staff or works agreement in order to emphasise any special features of collaboration. If complaints or comments are made, KfW Group's grievance channels can be used; these are described in more detail in the "Complaints management" section of this chapter. There are currently no staff councils at the individual foreign sites; the employees are involved directly at these offices.

In order to engage employees and to review the effectiveness of the engagement processes and actions, a **group-wide employee survey** of all employees working in Germany has been conducted every two years since 2014 by an external consultancy. The catalogue of questions contains a mandatory section to evaluate satisfaction with overall conditions in the workplace and cooperation. The questions are checked for suitability before each survey. The equal opportunities officer, the Staff Council/works councils and the representatives for severely disabled employees are involved as stakeholders. The Staff Council/works councils are always involved in the preparation, implementation and evaluation as part of the employee participation process. The survey results allow comparisons to be made over time. Employees can use open comments to communicate requests and suggestions for improvements to working conditions.

The Executive Board and the management, consisting of heads of department, heads of division and team heads at KfW, use the survey results as the main basis for extensive follow-up work. This work is performed at all hierarchical levels using various dialogue formats: company-wide team and divisional workshops and management forums are used to analyse the results of the survey, define action areas for the relevant level and target group and adopt actions at departmental and company level as part of the employer positioning project. The management receives the results of their relevant organisational entity, along with instructions to discuss these results with their employees so that suitable improvement measures can be taken if necessary. The employee survey is analysed in detail at team or division level only if a defined minimum number of participants have completed the survey. Employees are given transparent information on the follow-up processes and decisions made based on the survey results on the intranet and by e-mail. The effectiveness and success of the actions taken can be evaluated with the help of the next survey.

The most recent group-wide survey was conducted in 2023. The survey sought information on the understanding of, and identification with, the KfWplus agenda, the company's attractiveness as an employer and key cultural issues at KfW Group. The format contained 112 questions. The feedback was processed in the "Employer positioning" project in 2023 in particular and forms the basis for the actions described. An equally intensive analysis of the survey results is conducted at DEG by the Management Board, executive staff and HR – on a self-directed basis in parallel with the activities at group level.

In addition to the official group-wide format, there are other individual survey formats that are not conducted on a regular basis but address individual topics more specifically. As part of the "Employer positioning" project, a voluntary, anonymised survey on current and/or future needs related to company childcare and care-giving support was conducted in April and May 2024. These surveys were initiated jointly by KfW and KfW IPEX-Bank, with the aim of tailoring work-life balance programmes to meet demand. The data was analysed via the external service provider Impuls and the results were incorporated into the development and adaptation of actions as part of the project.

Various stakeholder groups are integrated in the group's remuneration policies in different ways:

- At KfW, shareholders are involved as stipulated in the KfW Bylaws through the Board of Supervisory Directors and the Remuneration Committee.
- Employees in Germany can exert influence on staff or works agreements on remuneration matters through the workers' representatives – i.e. the staff and works councils – in accordance with the German Federal Personnel Representation Act or Works Constitution Act.
- The Board of Supervisory Directors of KfW IPEX-Bank and Supervisor Board of DEG are each composed of one-third workers' representatives and two-thirds shareholder representatives in accordance with the German One-Third Participation Act (*Drittelbeteiligungsgesetz*). A workers' representative is also a member of the Remuneration Committee of the Board of Supervisory Directors/Supervisor Board and can be contacted by employees.
- Transparency, i.e. access to information, is also ensured at DEG through the publication of the remuneration report as part of the notes to the annual financial statements and through the individual right to information in accordance with the German Transparency of Remuneration Act.

Social matters in the banking business

The fact that the business sectors specialise in various financing and promotional products translates into different impacts, risks and opportunities in KfW Group's banking business with regard to social issues. A detailed description of the business models and activities of each company is provided in the "Strategy, business model and value chain" section in the "General information" chapter. The following section of the report describes policies, actions and targets that KfW Group uses to address material impacts along the value chain in the context of social information. The relevant stakeholders are value chain workers, affected communities, consumers and end-users, as well as corporate customers.

Value chain workers and affected communities

Policies related to value chain workers and affected communities

Downstream value chain workers of KfW Group include employees of financed companies in direct business, employees of financing partners in the on-lending business and employees of funds and business partners in liquidity management (e.g. issuers of debt securities and trading partners). Details on the value chain are explained in more detail in the "KfW Group's value chain" section in the "General information" chapter. Only the downstream value chain is taken into consideration, as the focus is on the banking business due to its materiality. The main impacts, risks and opportunities relate in particular to employees at financed companies, both in direct financing and as customers in the on-lending business. Any influence over employees at on-lending banks, business partners and funds is very limited. Information on the impacts associated with these workers is not available in sufficient quantity or quality either. Regarding these companies in its value chain, the group relies on compliance with general statutory provisions or compliance with the regulations that apply to them in accordance with their business models. In developing countries and emerging economies, the higher risk and possibility of insufficient government controls on implementation of the E&S Appraisal and regular monitoring means that care is taken to ensure that these companies have an effective environmental and social management system themselves. The Code of Conduct, which was explained in the "Social matters at KfW Group" section of this chapter, also serves as a guide for externals and partner institutions.

This section also contains information on **affected communities**. These are communities that are (potentially) affected by the use of funds within the KfW Group product and service portfolio. Indigenous peoples are recognised as a particularly vulnerable group in society. For more detailed information, please refer to the "Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy" section in the "General information" chapter.

To fulfil KfW Group's business purpose and at the same time minimise potential adverse impacts on people and the environment, KfW Group conducts an E&S Appraisal on all planned domestic promotional business, project and export financing, as well as projects in emerging and developing countries. The E&S Appraisal procedures are laid down in the relevant sustainability guidelines of the business sectors (see the "Environmental and Social Appraisal Guidelines" section of the "Environmental information" chapter). Specific social topics covered by the individual sustainability guidelines are explained in further detail for each business sector below.

The **sustainability guideline for the domestic promotional business** takes into account respect for and protection of human rights in this area of influence as part of the human rights policy and formulates the goal of ruling out any involvement in human rights violations. With regard to value chain workers, the guideline stipulates the application of the standards referred to in the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter as the benchmark for the E&S Appraisal.

KfW Development Bank also assesses environmental and social sustainability based on the standards and requirements listed in the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter. With regard to value chain workers, the requirements of World Bank Environmental and Social Standard 2 on Labor and Working Conditions, the World Bank Group's Environmental, Health and Safety Guidelines and the ILO Core Labour Standards are taken into account in the context of financing. If implementation or monitoring consultants are involved in a development bank project (such as a standard infrastructure project), their duties on site also include monitoring compliance with the ILO Core Labour Standards, with the actions defined in management plans for occupational safety, working conditions and resident protection, as well as with the corresponding KfW environmental, social and work safety-related requirements for contract awards. They are also responsible for remedying any shortcomings where necessary.

With regard to affected communities, one of the aspects that is explored is the extent to which financed projects could pose risks to human health or safety, and whether they could lead to large-scale resettlement or significant loss of livelihoods. If the affected communities are indigenous peoples, KfW Development Bank implements the approval process in accordance with World Bank Environmental and Social Standard 7 and the Human Rights Strategy of the German Federal Ministry for Economic Cooperation and Development. This includes, among other things, the recognised principle of free, prior, and informed consent (“FPIC”). Specific actions are developed and implemented as part of collaborative participatory approaches, before being recorded and followed up on using an Indigenous Peoples Plan. Compliance with local environmental regulations and general efforts to minimise environmental risks also help protect affected communities. KfW Development Bank pursues a “do no harm” approach in all its projects. This means that KfW Development Bank actions must not reinforce existing disadvantages, but rather should contribute to reducing disadvantages wherever possible. Business sector KfW Development Bank is also examining the extent to which the provisions set out in the LkSG could be applied voluntarily to the financing business.

KfW IPEX-Bank’s Sustainability Guideline calls for application of the standards and requirements set out in the “Environmental and Social Appraisal Guidelines” section in the “Environmental information” chapter. They describe how human rights are addressed in financing projects, including value chain workers and affected communities. Impacts on affected communities, disadvantaged and vulnerable groups, safeguarding and ensuring respect for human rights through appropriate action to avoid adverse impacts on human rights and to address adverse impacts by taking appropriate actions, social matters in the workplace (including ILO Core Labour Standards) and occupational health and safety are assessed to determine the extent to which they may be relevant. Issues such as human trafficking, forced labour and child labour are covered in KfW’s human rights policy and its subsidiaries by the Modern Slavery Act and the Equator Principles. If adverse impacts on indigenous peoples are identified, the project must consistently be reviewed to ensure it complies with IFC Performance Standard 7 „Indigenous Peoples“ (including FPIC).

DEG’s detailed procedure for environmental and social assessment and project monitoring is set out in the “Environmental and Social Appraisal Guidelines” section in the “Environmental information” chapter. With regard to value chain workers and affected communities, DEG assesses, also in accordance with the relevant IFC Performance Standards, the extent to which DEG financing could pose risks to human health or safety (IFC Performance Standard 4), whether it could lead to large-scale resettlement or significant loss of habitat and cultural heritage (IFC Performance Standard 5 and 8) and the extent to which indigenous peoples are likely to be affected (IFC Performance Standard 7). Compliance with local environmental regulations (including IFC Performance Standard 3 and 6) and general efforts to minimise environmental risks also help protect affected communities. DEG acts in accordance with the exclusion lists that apply to it, the contents of which are explained in the “Exclusion lists at KfW Group” section in the “Environmental information” chapter. Regarding human rights issues, the list expressly prohibits child and forced labour, also by taking into account the ILO Core Labour Standards.

As part of the due diligence process, **KfW Capital** enquires as to whether the venture capital funds have a monitoring, reporting, exclusion and grievance mechanism in place to ensure compliance with human rights in line with international standards (e.g. the UN Universal Declaration of Human Rights). It examines which actions are implemented by the venture capital funds to ensure the well-being of their own workforce, such as preventive health programmes. The funds are also asked to what extent they ensure the well-being of employees working in their portfolio companies through pre-investment checks and subsequent monitoring. KfW Capital’s exclusion list also rules out any investments that affect areas owned or claimed by indigenous peoples without the fully documented consent of these peoples. Contracts with venture capital and venture debt funds also include obligations to respect human rights and comply with the ILO standards.

In line with KfW’s mandate as promotional bank and the group’s role as financier in developing countries, a balance must often be struck between conflicting positive and negative effects. For instance, promoting environmental objectives in the context of existing political and social circumstances is not always possible without regard to social issues such as human rights. Financing and investment decisions are made in line with the established E&S Appraisal described in detail in the “Overarching guidelines” section in the “Environmental information” chapter. According to current information, three cases were identified in 2024 (Indonesia, Tanzania and China [Xinjiang]) in which such conflicts between the objective and the needs of the local population had or may have arisen. The case in Indonesia was reported via the established complaints procedure described in the “Complaints management” section of this chapter. In all of these cases, action

was taken to investigate the matter and derive remediation options. Due to the cases currently being reviewed, it cannot be definitively confirmed whether there were cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work or the OECD Guidelines for Multinational Enterprises involving affected communities in KfW Group's value chain in the financial year.

No severe human rights issues or incidents connected to its value chain in the context of value chain workers were identified at KfW Group. Nor were any cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work or the OECD Guidelines for Multinational Enterprises involving value chain workers reported within its value chain.

Processes for engaging with value chain workers and affected communities about impacts

KfW Group endeavours to involve all of its relevant stakeholders in order to avoid adverse impacts and strengthen positive impacts. Engaging with stakeholders at an early stage can help to ensure that any problems, conflicts and overall adverse impacts are recognised at an early stage, resolved and, where appropriate, mitigated from the outset. All stakeholders are involved primarily via the existing grievance mechanism. For detailed information, please refer to the "Complaints management" section of this chapter. Stakeholders are also involved via various dialogue formats at KfW Group as set out in the "Interests and views of stakeholders" section in the "General information" chapter. The relevant formats for value chain workers and affected communities include bilateral talks, the *Bonner Frühstücksrunde* (Bonn breakfast), *Förderdialog* (promotional dialogue), information and participatory events, NGO dialogue including the UN Climate Change Conference, project visits as part of project audits and progress checks, and company visits.

Familiarity with the target groups and parties affected is a prerequisite for designing successful **KfW Development Bank** projects. This involves both identifying the relevant actors and recognising the potential and risks associated with the project's sustainable effectiveness (participation, acceptance, conflicts, etc.), as well as assessing the positive and potentially adverse impacts that the project might have on these groups and making any necessary conceptual adjustments. The scope of the necessary target group and stakeholder analysis depends on the type of project. The decisive factor is whether the project has direct intended impacts on the target group or indirect impacts. The gender analysis reveals gender inequalities, power structures and discriminatory gender norms and can be supplemented to include the content of additional analyses that are also mandatory, such as a target group and stakeholder analysis. Potential for promoting equal opportunities and, where possible, gender-transformative approaches, as well as risks in the context of the project can be identified, adopting an intersectional perspective. Final responsibility for the project documentation and thus also for the gender analysis lies with the portfolio manager, meaning that any gender analysis conducted by external consultants is also approved by the portfolio manager.

DEG reviews compliance with environmental and social standards and the implementation of agreed action plans at existing customers on an annual basis. This includes, in particular, the review of an environmental and social management system and, as a result, the consideration and protection of affected communities by the customer. DEG is assessed externally every year within the framework of the Operating Principles of Impact Management. The assessment examines whether DEG is measuring the impact of its investments on businesses and affected communities adequately.

Actions related to value chain workers and affected communities

KfW Group fulfils its due diligence obligations with regard to value chain workers and affected communities in accordance with the complaints management process. The process is explained in detail in the "Complaints management" section of this chapter.

KfW Group creates and secures jobs in companies and organisations as part of its business activities described in the "KfW Group's value chain" section in the "General information" chapter. This is achieved by providing financial resources to support the economy on a social, economic and environmental level. The financing and promotion provided is designed to support individual projects, companies and public institutions and to create and secure the associated skilled jobs in the interests of sustainable economic development.

One of the ways in which KfW Group improves the living conditions of affected communities is by **financing various environmental projects**, such as with respect to environmental and resource conservation, including biodiversity. A detailed description of the promotional programmes as key actions can be found in the “Environment quota” section in the “Environmental information” chapter.

Exclusion lists to avoid adverse impacts on affected communities define areas in which KfW Group does not offer financing for new projects or purposes, such as the use of pesticides, or investments that threaten to destroy or significantly impair areas that are particularly worthy of protection. A detailed description of the exclusion lists can be found in the “Exclusion lists at KfW Group” section in the “Environmental information” chapter.

To ensure the socially responsible financing, also for value chain workers and affected communities, **KfW Group** applies business area-specific **E&S Appraisal** procedures. This involves analysing whether projects could result in large-scale resettlement or significant loss of habitat or cultural heritage, and whether indigenous peoples could be affected. If human rights violations come to light after a financed or promoted project has started, remedial actions are taken immediately. The E&S Appraisals are explained in greater detail in the “Overarching guidelines” section in the “Environmental information” chapter. Please refer to the “Environmental and Social Appraisal Guidelines” section in the “Environmental information” chapter with respect to determining the appropriateness of actions and assessing the effectiveness of mitigation measures in the event of negative impacts.

Special requirements and risks must be taken into account when **financing projects abroad**, particularly in developing and emerging economies. In particular with regard to the protection of affected communities, the group takes additional precautions in its international business to live up to its special responsibility.

The sustainability guidelines of KfW Development Bank, KfW IPEX-Bank and DEG allow for the possibility of an in-depth analysis of human rights issues (Human Rights Impact Assessment) and actions to safeguard compliance with human rights. This option is exercised, in particular, if a project is to be realised in an area in which a critical human rights situation has already arisen or is expected, or if the project is expected to result in conflicts that could have a significant impact on human rights. Exposures with potential adverse impacts on indigenous peoples require their FPIC. In such cases, finding economically viable solutions for appropriate mitigation actions is imperative. For KfW Development Bank and DEG, appropriate mitigation actions are defined by the fact that they are based on the mitigation hierarchy. This means anticipating mitigation actions and avoiding risks and impacts. If avoidance is not an option, the aim is to minimise the extent of the impact or reduce it to an acceptable level. As a result, mitigation actions are aimed at diminishing and minimising the impacts. If significant residual impacts remain despite these endeavours, these are countered with suitable offsets, provided this is technically and financially feasible. If this is not feasible, a review is performed to determine whether the project is worthy of support.

If indigenous peoples are affected by KfW, KfW IPEX-Bank or DEG financing or projects, the conformity of the project must generally be reviewed according to the group’s applicable guidelines. If an environmental and social action plan or mitigation actions are defined as part of the E&S Appraisal, the contracts for financing products provide for reporting (monitoring) on compliance with protective actions or the environmental and social action/management plan.

If KfW Group’s involvement in affected communities results in a significant loss of livelihoods due to land use, or if people affected by the project have to be resettled involuntarily, a separate Livelihood Restoration Plan, Resettlement (Action) Plan or, where applicable, a Resettlement Policy Framework must be prepared in accordance with World Bank ESS5. This should be available at the time of the project review. If people need to be resettled, a separate final audit is carried out to assess the success of the resettlement process and the extent to which livelihoods have been restored. Resettlement is considered successful if the affected individuals identified in the resettlement plan have received their entitlements (e.g. compensation, new homes, support measures) and their livelihoods have been at least restored or ideally improved.

The implementation agreements and contracts that KfW Development Bank and DEG conclude with their partners as a binding requirement include the standard obligation for the partners to report any particular incidents, such as serious accidents and other significant incidents, during project implementation in a timely manner and to provide information on remedial action (incident reporting clause). As soon as KfW Development Bank and DEG are notified of specific incidents, these are recorded and tracked. KfW Development Bank employees are informed about the incident disclosure requirements at mandatory E&S Appraisal training sessions. Project partners are given the same information during the contractual negotiations. KfW Development Bank and DEG ensure that all reported incidents are properly documented and processed, and that appropriate action can be taken to remedy the situation and stop it from recurring.

KfW Development Bank has built up a **network of environmental and social experts**. This network consists of the Competence Centre for Environmental and Social Sustainability, along with environmental and social experts based directly in the operating divisions. The Competence Centre conducts mandatory introductory and refresher training for specific target groups of operational staff on at least a quarterly basis. Optional specialised in-depth training is offered for employees who come into contact with value chain workers and affected communities. The Competence Centre also advises KfW IPEX-Bank's operating units on compliance with its sustainability guideline. Mandatory training providing an introduction to the E&S Appraisal in Financial Cooperation is offered four times a year for new hires, and it is recommended that all employees repeat this training approximately every four years. The aim of this training is to educate participants on, and raise their awareness of, the entire E&S Appraisal process so that they can identify potential adverse environmental and social impacts and involve experts at the relevant points, ensuring that suitable tools to counter these impacts can be developed for the projects concerned. The effectiveness of the approach and the actions taken are reviewed at regular intervals, at least every year when the annual budget is set for the training programme, and adjustments made as necessary.

The Voluntary Ambition Level in Supply Chains (*Freiwilliges Ambitionsniveau in Lieferketten* – “FALKE”) project was initiated at KfW Development Bank in 2023. The aim of FALKE is to further develop the human rights due diligence approach for KfW Development Bank financing in a targeted manner, even though this is not formally required by the Supply Chain Act. To this end, an analysis was performed of the relevant processes and tools at KfW Development Bank, such as the Environmental and Social Appraisal, along with a peer benchmarking. A package of actions was created based on the analysis, which is to be implemented by 2026 and involves further systematisation of recording human rights risks. Addressing human rights risks in the extended supply chain of projects for essential goods and materials, among others, is to be piloted. Implementation of the planned package of actions will further reduce human rights risks in KfW Development Bank financing activities and this also enables targeted preparations for potential regulatory requirements to be made. Realisation of the FALKE initiative does not require significant operating resources or capital expenditure.

DEG also has its own environmental and social guideline, which is explained in the “Overarching guidelines” section in the “Environmental information” chapter. The E&S Appraisal for every exposure ensures compliance with the social and sustainability standards applied. Action plans for the risks identified in the E&S Appraisal are contractually agreed with the customer to minimise the potential adverse impacts, such as by improving working conditions. Customers are responsible for implementing the agreed actions and reporting annually to DEG on the progress made. In cases involving more complex projects with greater potential for adverse impacts, external monitoring is commissioned or an on-site assessment is carried out by DEG employees. If the customer wishes to make improvements that extend beyond compliance, such as improvements to working conditions, they can obtain additional financing, support and advice from DEG. The agreement or subsequent processing of the action plans by the customer has a positive effect, particularly with regard to the consideration and protection of affected communities in the context of financing. This allows DEG to make an indirect positive contribution in those countries where financing is provided. This impact is measured and managed using DERA, which measures customers' developmental impact. DEG's financing has a positive impact in customer regions in the five DERA target dimensions. DERA is explained in detail in the “Value chain workers and affected communities” section of this chapter below. Through its membership of the 2X Challenge, DEG also supports career development and non-discriminatory treatment of women working for its customers. DEG has established a decentralised model comprising experts from the Sustainability division and market multipliers to broaden internal knowledge and firmly embed specialist expertise within the organisation. DEG has also developed in-person and online training for employees on standards, performing assessments and impact measurement.

As part of the E&S Appraisals performed at **KfW Development Bank and DEG**, individual actions are introduced for financing partners that do not implement or comply with their own environmental and social requirements, as described in the “Overarching guidelines” section in the “Environmental information” chapter. If financing partners do not implement or comply with the actions imposed, KfW Development Bank and DEG can demand that corrective steps be taken. This may include stopping invoice payment approvals until the relevant requirements have been met. In extreme cases, KfW Development Bank can decide to terminate its contracts with these partners.

KfW Capital’s Sustainability Policy requires venture capital funds to take ESG criteria into account in their own due diligence. Extensive checks are performed in this regard and the obligation is set out in the relevant contracts. In addition, KfW Capital enquires as to whether monitoring, reporting and complaints procedures are in place to ensure compliance with international governance standards (e.g. the UN Universal Declaration of Human Rights, ILO standards and the EU General Product Safety Directive) and implementation of these procedures is contractually agreed. If the due diligence process reveals that the venture capital fund does not consider ESG standards in its investments, there are minimum criteria that must be met before an investment can be made. This includes the venture capital fund drawing up an ESG policy, the content of which is coordinated with KfW Capital, specifying which ESG criteria are to be taken into account going forward (potentially tailored to suit the sector and phase of the venture capital fund’s investment focus). Due diligence also involves checking whether the venture capital fund has established a whistleblowing mechanism and whether internal compliance procedures are currently in progress or have been completed. The actions serve to protect the employees of the venture capital funds.

Targets related to value chain workers and affected communities

KfW Group’s sustainability mission statement requires that risks and negative impacts on social (and environmental) matters be considered as a qualitative target for all financing and promotional projects. An overview of the sustainability mission statement is provided in the “Integrating sustainability matters into the business strategy” section in the “General information” chapter. The group-wide “SDG mapping” target also takes into account SDGs relating to value chain workers and affected communities. The overall target is explained in greater detail in the “SDG mapping of KfW’s financing activities” section in the “Environmental information” chapter, which lists all SDG contributions.

At individual business sector level, additional quantitative indicators are used in some cases to track policies and actions related to significant positive impacts on affected communities and value chain workers. These are not, however, underpinned by results-based, measurable targets. The additional, quantitative indicators for impact measurement referred to above are described in the sections below. KfW Capital does not have any specific targets for tracking the effectiveness of the policies and actions.

KfW Group’s contribution to creating and securing **jobs in the value chain** through its financing is covered by allocating financing to SDG 8 (Decent work and economic growth) as a sub-item. The mapping of the financing to the SDG is made in accordance with the SDG eligibility methodology described in the “SDG mapping of KfW’s financing activities” section in the “Environmental information” chapter. As SDG 8 aims to promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all, it addresses a core area of KfW’s promotional activities. Within Germany, KfW’s programmes aimed at support for SMEs, start-up capital, digitalisation and innovation are particularly relevant in this regard. Outside of Germany, development programmes to strengthen the private and financial sector, as well as large-scale export financing, are mapped to SDG 8.

As part of the impact management project described in the “SDG mapping of KfW’s financing activities” section in the “Environmental information” chapter, indicators are being developed with respect to workers both within the value chain and beyond (including indirect sector effects). Job-related impacts are measured to determine whether financing contributes directly or indirectly to maintaining or increasing the number of jobs as part of impact management. This indicator was developed as part of the impact category “Creating and securing decent work” and, as all other impact management indicators, is intended to make KfW’s financing and promotional activities more transparent. For further information on impact management, refer to the “Expansion of group-wide impact management” section in the “Environmental information” chapter.

KfW Group can provide information on expected positive contributions related to the consideration and improvement of living conditions, as well as the **protection of affected communities** and the preservation of local rights, by mapping financing commitments to SDGs 9 (Industry, innovation and infrastructure) and 11 (Sustainable cities and communities). Further information on the SDG eligibility methodology can be found in the “SDG mapping of KfW’s financing activities” section in the “Environmental information” chapter.

Financing commitments that are mapped to SDG 9 provide information on intended positive impacts in terms of improving living conditions. The group has a broad range of KfW programmes that are aligned with this target, ranging from energy-efficient refurbishment and charging infrastructure for electric cars to the telecommunications sector and financing of innovative start-ups and growth companies. In terms of KfW’s activities abroad, financing for the transport and raw materials sectors, among others, also makes key contributions to SDG 9 by promoting industrial processes within the partner countries and securing the basis for industrial production in Germany and Europe. International development financing focuses on expanding sustainable transport infrastructure, in particular on expanding local public transport to improve living conditions for communities.

KfW Group’s contribution to SDG 11 includes financing municipal and social enterprises (e.g. kindergartens, water supply, land development), promoting home ownership and environmentally friendly actions for energy-efficient urban rehabilitation, improving energy efficiency in industry and commerce, as well as in the private sector, primarily in Germany. With their commitment to areas including socially inclusive slum rehabilitation, social housing construction, sustainable transport systems and disaster prevention, the group’s international activities also make key contributions to SDG 11, facilitating an intended positive contribution to the living conditions and protection of affected communities.

The group endeavours to avoid any negative impacts on the living conditions of affected communities, such as resettlement, that could arise from its co-financed projects. While KfW Group does not collect any overall metrics in this regard, some of its business sectors monitor their impact and the actions implemented with regard to affected communities using the indicators described below.

KfW Development Bank aims to avoid or minimise adverse impacts of co-financed projects as far as possible and monitors the impact it has in this regard. There are plans to evaluate and track significant positive impacts in the future. Proposed KfW Development Bank projects are assessed in terms of their developmental benefits and feasibility, generally on the basis of a feasibility study and an environmental and social sustainability study. Once the project has been completed, KfW Development Bank carries out a final review. The effectiveness of a representative random sample of around 50% of the projects completed is also evaluated ex post by an independent unit. This is intended to promote institutional learning and ensure the continuous improvement of future projects.

KfW Development Bank provides further transparency by disclosing information on effectiveness in the transparency portal. The developmental impact is assessed on the basis of six key criteria agreed by the international donor community in the OECD Development Assistance Committee. This overall assessment reveals at a glance whether a project has been successful or unsuccessful, and how the success is ranked. In the biennial report for the 2021/2022 period, 84% of all of the projects evaluated were classified as successful. The evaluation reports are published in KfW’s transparency portal. The key results and findings are also presented in digital format in the “Interactive Database Evaluation and Learning” application, allowing them to be used efficiently and effectively.

DEG’s Impact/Climate Commitments are a pledge to increase the contribution its customers make to the economic, social and environmental goals covered by the SDGs, thereby continuously improving the positive impact of its investments at local level. It evaluates its financing activities and the associated developmental impact in relation to factors such as value chain workers and the affected communities using DERa, which was first introduced in 2017. DERa was updated in 2024, validated by Risk Research and relaunched as DERa 2.0. Stakeholders, i.e. value chain workers, were not involved in this update.

DERa assesses the negative and positive contribution that each customer makes to sustainable development, highlights the changes that have occurred since DEG's investment and illustrates DEG's role in the transformation process. DEG can report on its effectiveness and manage the overall developmental quality of its portfolio based on the DERa evaluation. The DERa comprises two pillars. One maps the impact contribution made by DEG's customers, while the other captures the customer's transformation processes supported by DEG. Five impact categories are used for the purposes of the first pillar to evaluate the development contributions made by each customer: decent jobs, local income, market and sector development, environmental stewardship, and community effects. Each category consists of various impact areas and features indicators that capture a customer's contribution to this category. These indicators are primarily quantitative data or qualitative expert assessments, as well as indicators from international databases, such as the World Bank. Impacts are evaluated in net terms, i.e. impact areas, impact categories and the overall score for this pillar can be negative. This is because the assessment includes both indicators that capture either positive or negative impacts, and indicators that can be both positive and negative. The second pillar considers four approaches that DEG uses to support its customers in their transformation: structuring, closing E&S compliance gaps, promotional measures and impact climate commitment beyond compliance. For these mechanisms, DERa 2.0 documents transformation milestones/targets that DEG agrees with its customers and monitors the progress of implementation. The DERa is applied over the entire project term of each investment. A new DERa must be created for each project before it is approved. It consists of a baseline showing the current values prior to the DEG investment and an ex-ante estimate of the expected effects of the investment over a time horizon of five years. Following approval, the DERa is updated annually by recording the latest values. This enables information to be provided on the customers' developmental impact since DEG's investment. The impacts made by DEG's customers are published every year in DEG's annual Development Report.

In its business strategy, DEG has set itself the target of achieving an annual average DERa portfolio value of 32 points. This target score creates an incentive to enter into socially sustainable financing arrangements. All customers who have a positive cash value at the end of the year and are not classified as defaulted exposures are included in the calculation. DEG achieved an average DERa 2.0 score of approximately 35 with its customers in 2024.

Customers – Consumers and end-users

Policies related to consumers and end-users

In the sense of the value chain described in the "KfW Group's value chain" section in the "General information" chapter, private individuals are customers who either receive financing directly from KfW, such as student loan recipients, or who take out real estate loans, for instance, through the on-lending business. This chapter relates exclusively to KfW's business model, as only KfW – unlike its subsidiaries – provides financing to end-users. As a result, this issue is not relevant across the group. Detailed information on consumers and end-users is provided in the "Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy" section in the "General information" chapter, where the material impacts are also described in further detail.

The promotional priority is to provide non-discriminatory access to financing products for consumers and end-users. Promotional activities include promoting energy efficiency in construction and refurbishment of residential buildings, promoting the purchase and construction of owner-occupied homes, and providing education financing (e.g. student loans and loans for continuing professional development). Article 2 of the KfW Law, the KfW Bylaws and the mandate letters/agreements of the respective ministries form the basis for the legal promotional options open to consumers and end-users.

KfW's "Sustainability guideline for the domestic promotional business" also addresses financing projects for consumers and end-users via the SME Bank & Private Clients business sector, which includes the management of potential adverse impacts or risks related to environmental and social matters. A detailed explanation of the guidelines can be found in the "Overarching guidelines" section in the "Environmental information" chapter. The human rights policy described in the "Social matters at KfW Group" section of this chapter also applies in this regard.

No cases of non-respect of the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work or the OECD Guidelines for Multinational Enterprises involving consumers and end-users were reported at KfW in its upstream or downstream value chain in financial year 2024. Nor were any severe human rights issues and incidents connected to its consumers or end-users identified.

Processes for engaging with consumers and end-users about impacts

Consumers and end-users are involved in particular through measurement of their satisfaction levels. Various direct tools have been put in place to obtain feedback on improving services and to involve customers in the group's activities. Customer satisfaction with the domestic promotional business is assessed in KfW's new customer monitoring. A total of 1,000 sub-borrowers are surveyed every month to yield a representative overview of opinions. Along with the external evaluations of the promotional programmes, their feedback provides valuable information on how KfW products, processes and services can be more closely aligned with market requirements.

KfW also calculates the net promoter score ("NPS"), which measures customer feedback on all housing-related promotional programmes and indicates how likely customers are to recommend KfW to others. NPS uses a scale of 0 to 10 and is calculated by subtracting the percentage of detractors (dissatisfied customers) from the percentage of promoters (loyal and enthusiastic customers). A high NPS indicates that customers see KfW in a positive light and are more likely to recommend KfW to others.

Consumers and end-users are also involved via information and feedback sessions with financing partners and bank associations as described in the "Interests and views of stakeholders" section in the "General information" chapter.

Actions related to consumers and end-users

Consumers and end-users are addressed via promotional programmes, most of which are on-lent loans through banks. The product requirements are defined either by the commissioning ministries in close consultation with KfW (federal programmes) or by KfW working closely with the commissioning ministries (KfW's own programmes/ERP programmes). Within the target groups addressed, the products are open equally to all eligible applicants in line with the product terms and conditions.

One of the ways in which KfW makes a positive contribution for consumers and end-users is by offering various financing solutions to meet the needs of people in school-based and higher education, and people undergoing further professional development. The education financing programmes improve access to education, particularly for financially disadvantaged consumers and end-users, allowing KfW to help to promote equal opportunities. KfW also promotes the purchase and construction of owner-occupied residential property, thereby supporting housing security. Please refer to the "Environmental and Social Appraisal Guidelines" section in the "Environmental information" chapter with respect to determining the appropriateness of actions and assessing the effectiveness of mitigation measures in the event of negative impacts on consumers and end-users.

KfW grants education financing directly to the end customer in the form of a loan. KfW currently offers three promotional products related to education. The **KfW Student Loan** is used to finance a student's living expenses during an undergraduate/graduate degree or doctorate. This is KfW's own programme, meaning that it is offered without the use of state funds and at KfW's own risk. The KfW Student Loan is offered across the board to almost all students at state or state-recognised higher education institutions in Germany, with no major restrictions apart from age-related restrictions. The **Education Loan** is a promotional product for vocational trainees and students in the last two years of their training or studies. It is granted by KfW on behalf of the Federal Ministry of Education and Research ("BMBF") in cooperation with the Federal Office of Administration (*Bundesverwaltungsamt*). It provides support in the final stage of vocational and higher education to enable the recipients to concentrate on obtaining their qualifications. The product details are governed by the relevant promotional requirements of the Federal Office of Administration. The funding programme under the **Upgrading Training Assistance Act** ("*Aufstiegs-BAföG*"), which is implemented on behalf of the BMBF, is used for further professional development. The promotional terms are set out in the *Aufstiegs-BAföG*. The funding provided under the *Aufstiegs-BAföG* consists of a grant and an optional loan component, which are designed to cover not only living expenses but also the costs of resources and examinations, among other things. KfW handles the optional loan component of the *Aufstiegs-BAföG* programme only. The application and approval process is the responsibility of the further professional development offices in the federal states. The promotional business volume for the three education financing products totalled EUR 172 million in 2024.

Article 2 (1c) of the KfW Law states that KfW's mandate includes implementing promotional measures on behalf of the state, in particular concerning housing. To finance owner-occupied housing, KfW grants loans to private individuals, both with and without energy efficiency conditions, thereby promoting housing security. For more information on housing-related promotional products for private individuals with energy efficiency conditions, please refer to the "Environment quota" section in the "Environmental information" chapter. For the purchase of owner-occupied property, KfW offers private individuals the **Home Ownership programme**, which can be used to finance the purchase or construction of owner-occupied property, including ancillary building costs. The promotional loan is granted via the bank on-lending system; KfW does not make use of any state funds with regard to the financing conditions. KfW also offers private individuals the **promotion of cooperative housing** with a loan that can be used to purchase shares in housing cooperatives for a member-occupied housing cooperative flat in Germany. In 2024, the promotional business volume for products to promote housing security totalled EUR 2,354 million.

KfW's key actions for consumers and end-users in 2024

Promotional product	Target group	Promotional business volume EUR in millions
Home Ownership programme: loan to purchase or build a home	Private individuals who buy or build a residential property for their own use	5,266
KfW Student Loan: financing of undergraduate/graduate degrees and doctorates; KfW's own programme	Students aged 18 and over studying at a state or state-recognised higher education institution based in Germany	244
Funding under the Upgrading Training Assistance Act: loan and grant for further professional development; programme mandated by the Federal Government	Individuals who have completed a recognised vocational training programme	125
Promotion of cooperative housing: loan to purchase shares in housing cooperatives to be used for member-occupied housing	Private individuals who wish to acquire shares in housing cooperatives for member-occupied housing	25
Educational Loan: financial support in the final years of education/training; programme mandated by the Federal Government	Full-time vocational trainee or student aged 18 to 35	13

KfW is committed to providing non-discriminatory access to promotional products. With this goal in mind, another action is to ensure that KfW's website is accessible. In recent years, the main focus has been on the accessibility of portable document formats ("PDFs") and forms on KfW's portals. KfW bases this on the requirements of the German Ordinance on Accessible Information Technology (*Barrierefreie-Informationstechnik-Verordnung – "BITV"*). The legally required accessibility statement is updated on a regular basis, at least once a year.

Various activities are used to review and monitor accessibility measures:

- Comprehensive BITV audit of the kfw.de website from July 2024
- Plans for continual testing until at least 2025
- BITV monitoring via a special project management tool (BITV-Jira) for task visualisation and documentation using the Confluence software
- Proactive internal and external audits during the year

Targets related to consumers and end-users

In its domestic promotional business, KfW uses KfW new customer monitoring to identify and implement optimisation potential related to customers, and in doing so monitor the effectiveness of actions taken with respect to private customers. Approximately 1,000 borrowers and grant recipients are surveyed every month to gain a representative overview of opinions. The aim is to systematically monitor and measure customer satisfaction over time and to analyse current developments in detail so that KfW can implement control measures at an early stage, and measure the impact of any measures taken, in cases where the target of

75% is not met. The 2024 Sustainability Programme set the target of developing approaches to improve customer satisfaction. Customer satisfaction in Germany has been surveyed and analysed to this end since 1 January 2017. KfW's ambition level is between 75% and 80% (top 2 values), depending on the analysis. The overall satisfaction indicator is used to measure customer satisfaction. The survey is based on the question "How satisfied are you with KfW's services overall?" on a 5-point scale and presentation of the top 2 values (proportion of customers answering "Completely satisfied" or "Very satisfied"). The "customer satisfaction" KPI is calculated as a simple average of the weighted average scores for commercial and private customers. Once the survey responses have been collected, the market research institute commissioned by KfW carries out statistical analyses of the anonymised data. Employees from Group Development and Economics as well as Domestic Marketing and Digital Channels were involved in setting the target. They used results from the preceding years and the national "Kundenmonitor Deutschland" survey and determined an ambitious target corridor. KfW new customer monitoring provides important insights for KfW's strategic objectives 2029 and is incorporated into the user-centric (further) development of products, processes and services. The group calculates this indicator on a monthly basis using representative samples in the main domestic programmes for commercial and private customers (residential construction and student loans/education). The latest KfW new customer monitoring value as of 31 December 2024 is 66.1%. Based on the customer feedback from KfW new customer monitoring the main reasons for falling short of the target were the volatile environment for KfW's promotional products in terms of interest rates, availability of funds and financing conditions. These primarily reflect the marked change in external circumstances beyond KfW's control (such as federal budget developments, higher market interest rates, increased sustainability requirements). KfW is in constant specialist dialogue with its clients in order to optimise the financing conditions to be more customer friendly.

KfW Group's sustainability mission statement refers to supporting achievement of the 2030 Agenda with the SDGs. Education financing products contribute to the fulfilment of SDG 4 "Quality education" by promoting equal access to education. The housing-related products generally contribute to SDGs 7, 11 and 13. The products for financing home ownership that are not linked to energy-efficiency conditions contribute to the fulfilment of SDG 11 "Make cities and human settlements inclusive, safe, resilient and sustainable" by helping to secure housing. More detailed information can be found in the "SDG mapping of KfW's financing activities" section in the "Environmental information" chapter.

Customers – Corporates

Corporate customers have been identified as an additional company-specific material topic due to the particular nature of KfW Group's business model. They are taken into account due to the positive material impacts in terms of improving access to the products offered. Due to their size, SMEs are at a structural disadvantage compared to other companies when it comes to raising capital. This can be explained by asymmetrical distribution of information between companies and investors, which is exacerbated by a lack of credit history. As a result, it is difficult, or very expensive, for investors to assess companies' creditworthiness and the success potential of the projects to be financed. Demand also tends to be for smaller financing volumes. Overall, this can translate into a smaller or more expensive supply of capital, which equates to more difficult access to financing. With its specific credit lines for SMEs, DEG supports access for these companies via bank financing. SMEs in developing and emerging economies face particular obstacles in accessing long-term financing.

In order to improve access to financing products for SMEs, KfW Group also offers financing options for this customer group, as already explained in the "Assessment of the material impacts, risks and opportunities and their interaction with KfW Group's strategy" section in the "General information" chapter. Due to the business model provided for in the KfW Law (on-lending principle), KfW Group relies on SMEs gaining access to its promotional products via their regular banks. To ensure this, the group provides its financing partners with product information and marketing material and offers a contractually agreed monetary incentive for each financing agreement that is concluded. KfW Group endeavours to ensure that SMEs have access to information and resources, in particular by having advisors in its Infocenter answer questions on the individual promotional products and help companies find the right product to suit their individual needs. The advisors are trained to provide detailed advice on the product requirements and conditions, and to support companies during the application process. KfW promotional loans are characterised by more favourable interest rates than standard market rates, as well as long terms and fixed interest rate periods and, where applicable, the use of repayment bonuses. To facilitate access to lending, KfW also enables the on-lending banks to assume part of the SME's default risk as a risk partner in selected programmes (e.g. start-up financing).

In order to track the improvement in access to financing products for SMEs, the two key metrics described below provide a good overall impression of the impact achieved. One aim of KfW Group's strategic objectives 2029 is to provide financing for the German SME sector with the commitment volume for domestic promotional business products classified as "relevant to the SME sector" accounting for over 40% of total commitment volume in Germany. The SME share of financing at group level was 35% in 2024, which was below the target of the strategic objectives. Promotional opportunities were limited in view of the high EU reference rate due state-aid legislation, which resulted in lower new business volume in corporate environmental financing for the business sector SME Bank & Private Clients (Renewable Energy – Standard and Climate action campaign for SMEs) and in the SME-relevant products of the business sector Customised Finance & Public Clients (primarily Investment Loans for Municipal and Social Enterprises, and the global loan for lease finance). In addition, higher new business volume in private housing financing (Climate-friendly Construction and Federal Funding for Efficient Buildings) resulted in a smaller share of SME promotion in the total promotional volume and thus to a smaller SME share of financing. The table below provides an overview of the contributions made by KfW Group's business sectors to the SME share of financing.

Commitments made by the business sectors in relation to the strategic area of German SMEs¹⁾

Promotional area	2024	
	EUR in billions	%
SME Bank & Private Clients	13.4	37
Customised Finance & Public Clients	1.0	2
KfW Capital	1.6	100
Total commitments	16.0	35²⁾

¹⁾ The table shows the commitment volume of the business sectors classified as "relevant to the SME sector".

The figure has not been adjusted for commitments "relevant to the SME sector" which were made outside Germany.

²⁾ Adjustment for non-recurring effect from emergency aid and price cap for gas and heat on behalf of the Federal Government, special funding measures (including margining and gas storage facilities) and the hydrogen core network amortisation account

Furthermore, the improvement in customer satisfaction is measured via the KfW new customer monitoring programme. The group calculates this indicator monthly in its main domestic programmes using representative samples. The calculation of the indicator is explained in greater detail in the "Customers – Consumers and end-users" section of this chapter.

Any complaints about promotional products and financing are received by the Infocenter, the specialist divisions responsible for processing them and the complaints management team. The group-wide complaints management team is responsible for performing a structured evaluation of critical feedback and complaints. The process is explained in detail in the "Group-wide complaints management in banking business" section of this chapter.

Complaints management

KfW Group has established grievance mechanisms and channels that are available to all stakeholders to ensure that the policies, actions and targets of KfW Group described above are implemented and monitored effectively, and that human rights, particularly with regard to the Code of Conduct and the human rights policy, are respected. Each subsidiary of KfW Group also has its own grievance mechanism. In order to follow up on potential fields of action raised and ensure that the channels are effective, KfW Group focuses on an appropriate risk culture that emphasises a responsible, competent approach to risk and a healthy culture of error. The aspects of the risk culture set out in the Code of Conduct provide guidance in this regard (see the "Social matters at KfW Group" section in the "Social information" chapter). The risk culture is monitored centrally using the risk culture index tool, which is calculated every two years as part of the employee survey. After each employee survey, an action group identifies focus areas in which actions are defined to continuously improve the risk culture.

KfW Group's grievance mechanisms

The group has established procedures to respond to complaints and reports of potential human rights-related and environmental risks, and to react appropriately to any of its own breaches of duty. KfW Group's grievance mechanisms are based on the Policy statement of KfW and its subsidiaries' on human rights and on its human rights strategy, which is explained in further detail in the "Social matters at KfW Group" section of this chapter. Complainants can lodge complaints or raise human rights and environmental issues with KfW Group using the channels described below. All standard communication channels can be used: verbal, written, e-mail and the established online complaint forms; issues can also be raised in person with the ombudsperson. Complaints relating to the banking business can be addressed directly to the business sector concerned. Employees and third parties can also opt to report potential criminal offences (including failure to comply with the law) anonymously to KfW's compliance whistleblowing system.

Ombudsperson

The group has appointed a lawyer from an external law firm to act as its ombudsperson. The ombudsperson serves as an external point of contact for the KfW Group workforce and third parties who wish to report potential compliance violations and suspected criminal offences. At the core of the ombudsperson system lies the principle that whistleblowers can contact the ombudsperson confidentially if they have reason to suspect criminal offences or potential violations of the law. This encompasses all types of corruption, bribery, fraud, money laundering and similar irregularities, as well as breaches of the German Banking Act and the LkSG. This whistleblowing system allows KfW Group to investigate any such irregularities systematically.

The ombudsperson independently and autonomously investigates the reports received to determine how relevant they are to the company. If the conclusion is that KfW and/or a KfW Group company could be affected, the ombudsperson passes on the matter to the Compliance department of the group company concerned without disclosing the whistleblower's identity. The Compliance department then follows a due and proper procedure to evaluate the case before coordinating and implementing the necessary action. If the evidence points to criminal conduct, the company takes further (e.g. legal) steps on a case-by-case basis. Each group company has its own compliance organisation. Compliance violations are generally handled by the various compliance units within the group. If individual cases cannot be assigned to a specific group company, KfW Compliance acts as the overarching compliance function.

When complaints and reports of violations are processed, the complaint offices and KfW Group's independent Compliance function ensure compliance with the principles of impartiality, objectivity and confidentiality. Information on protection for whistleblowers is explained in greater detail in the "Strategies relating to aspects of business conduct policies" section in the "Governance information" chapter. Information on the whistleblowing system is available in various languages and can be found on the group website along with contact details. Consumers and end-users are informed of the availability of the whistleblowing system by the Infocenter, or are referred to it when submitting a complaint. There is no standard means of ascertaining whether value chain workers, consumers and end-users are aware of and trust these structures or processes as a way to raise their concerns or needs and have them addressed.

KfW's LkSG complaints procedure

The statutory minimum requirements set out in the LkSG currently relate to procurement and KfW's banking operations. The KfW Executive Board has commissioned the Compliance department to implement a central evidence unit to monitor the obligations arising from the LkSG. The Compliance department has established a governance structure related to the LkSG with corresponding responsibilities and set these out in a group-wide policy. It monitors risks related to the Act, compliance with appropriate due diligence obligations and takes on general tasks such as documentation, reporting and training of the employees concerned. The KfW Executive Board has overall responsibility for compliance with the LkSG within KfW Group. The group's grievance mechanisms were reviewed as part of the implementation of the LkSG and adapted to meet the requirements set out therein. In particular, all environmental and human rights-related grievances received are reported to the central evidence unit and thereby included in the group-wide risk assessment. The whistleblowing system meets the requirements set out in the LkSG and protects all whistleblowers from retaliation. Handling of complaints is governed by the group-wide "LkSG complaints procedure". Once a complaint or report has been received, it is assessed to determine whether it relates to potential human rights violations or environmental issues. Receipt of the report is documented within the company. The whistleblower or complainant should receive confirmation of receipt within a maximum of seven calendar

days. Complaints and reports are passed on to the competent unit for further processing. This unit is responsible for processing and clarifying the facts of the case. If possible and necessary, the matter is discussed with the whistleblower or the complainant in order to better understand the facts and the action to be taken. The whistleblower or the complainant is informed of the result in writing. Feedback should be provided within three months. If it takes more than three months to investigate the matter, the whistleblower or complainant is informed accordingly. For those activities covered by the LkSG, this means that a review of the effectiveness of the actions implemented to comply with the due diligence obligations is carried out at least annually or on an ad hoc basis. In this respect, the central evidence unit acts not only as a regulator, but also as an advisor to the specialist departments, and is also responsible for monitoring risk management, including the development of safeguards and control measures. The effectiveness of the complaints procedure is reviewed at least once a year and on an ad hoc basis. In 2024, the review did not reveal any findings.

KfW's central evidence unit, which is part of the Compliance department, is informed when complaints are processed. In cases involving complaints related to human rights and environmental risks or breaches of duty, it develops remedial actions and adapts existing preventive measures (if necessary). The central evidence unit is to be informed about the outcome of the processing of complaints and reports related to the LkSG, and of any actions introduced or adapted.

The German Minimum Requirements for Risk Management ("MaRisk") that apply to the compliance function provide protection against being penalised or disadvantaged as a result of lodging a complaint. The compliance function shall ensure the implementation of effective procedures for complying with the legal rules and regulations that are material to the group, and of corresponding controls. The appropriateness and effectiveness of the complaints procedure is monitored annually and on an ad hoc basis. If a report or complaint related to the LkSG is not received by the Compliance department, but by another department within the group, it is forwarded to the responsible Compliance department.

The LkSG complaints procedure was communicated to employees for the first time during LkSG information campaigns on the intranet. The communication of the procedure was intended to ensure that all employees are aware of the options for reporting human rights-related and environmental risks and violations, and that the procedure can be used effectively. In addition, KfW Group organises a group-wide training session on the LkSG every two years, with relevant departments being provided with information on the main content and regulatory purpose of the Act. The training aims to raise sufficient awareness of human rights-related and environmental risks. Training and awareness-raising actions help to draw employees' attention to these issues so that any violations that are impending or have already occurred can be recognised and reported at an early stage. The training is mandatory for employees and their attendance is documented. The training is intended to enable employees to identify potential risks and violations at an early stage and act accordingly.

Complaints channels for employees

In addition to the overarching channels already described, group employees can approach their managers with concerns and complaints at any time. Employees in Germany also have the option of contacting their company's workers' representatives and their HR partners. Various channels have been set up at KfW and its subsidiaries to reflect the different statutory requirements. Complaints are passed on to the relevant division if they have been raised elsewhere.

Employees of KfW in Germany who feel discriminated against on grounds related to the German General Act on Equal Treatment (*Allgemeines Gleichbehandlungsgesetz* – "AGG"), i.e. due to their race, ethnic origin, gender, religion or beliefs, disability, age or sexual identity), can contact the AGG Complaints Office. The right of complaint pursuant to Section 13 AGG grants the employees of a company a comprehensive right to lodge a complaint with respect to discrimination. The employer is responsible for the specific structure of the complaints procedure and the complaints office to be established. The AGG Complaints Office is legitimised by the AGG by ensuring appropriate accountability for fair conduct and strengthening employee trust. The information is published on KfW's intranet and there is mandatory training on the AGG every three years for all employees of KfW, KfW IPEX-Bank and DEG in Germany. There are no defined procedures for case processing, as all cases differ. Any findings resulting from the individual complaints are forwarded to the parties responsible. The complainant decides whether the information is to be passed on and is involved in any decisions on action to be taken. DEG, KfW IPEX-Bank and KfW Capital also have their own AGG complaints offices. A total of two cases of discrimination were reported at KfW Group in reporting

year 2024. Both cases were closed in the reporting year without any monetary obligations for the group. Submitted cases are generally documented and analysed by HR and handled in collaboration with the individuals or departments responsible. In cases of conflict, external contact points are available through social counsellors and an external psychosocial hotline. The Staff Council, Works Council, equal opportunities officers and representatives for disabled employees are available as contact persons, who are listed on the intranet with a telephone number and e-mail address and they also offer open consultation sessions. The employer's representative for matters relating to staff with severe disabilities is the main point of contact person for inclusion at KfW.

Employees in Germany also have the right to submit any suggestions or complaints to the workers' representatives responsible for them at KfW, KfW IPEX-Bank and DEG. At KfW, the equal opportunities officer is the point of contact for any complaints regarding discrimination based on gender, especially discrimination against women. The workers' representatives advise those affected and represent their interests towards KfW and its subsidiaries. They provide regular information on these matters on the intranet, in circulars and at staff and works meetings.

The legal basis for the activities of KfW's Staff Council in Germany is the German Federal Personnel Representation Act (*Bundespersonalvertretungsgesetz* - "BPersVG"). The Staff Council is responsible for proposing actions that allow employees to ensure compliance with the relevant laws, to receive and pass on suggestions and complaints, and to ensure that these issues are addressed by KfW. All workers' representative bodies have their own intranet page providing the names of the relevant contacts and the times of their consultation sessions. The Executive Board and the Head of HR meet with the staff representatives on a monthly basis. In accordance with Section 80 BetrVG, the situation at KfW IPEX-Bank and DEG is comparable. The tasks of the Works Council are set out in the BetrVG and include monitoring compliance with the law, receiving and forwarding suggestions from employees and ensuring that they are addressed by KfW IPEX-Bank and DEG, and promoting gender equality. In order to fulfil these tasks, the Works Council must receive full and timely information from the employer. To this end, weekly meetings are held with HR and regular monthly meetings with the management. Depending on the participation rights of the Staff Council/Works Council, various processes are in place to ensure and operationalise compliance with these rights. KfW, KfW IPEX-Bank and DEG focus on dialogue with complainants in order to reach amicable solutions.

Group-wide complaints management in the banking business

Grievance mechanisms are in place throughout the group; they are tailored to the individual business sectors and types of complaints. The group uses incoming complaints regarding products and services as a vital customer feedback tool to optimise processes and services. This approach is based on the BaFin minimum requirements for complaints management. KfW Group's goal is also to avoid human rights breaches as far as possible using established processes and preventive measures. The aim is to give anyone who feels negatively affected by KfW Group's projects the opportunity to lodge a complaint. The complaints procedure in place at KfW and its subsidiaries is set up in accordance with the UN Guiding Principles on Business and Human Rights.

KfW's grievance mechanism is described on its website. Complaints can be lodged by telephone, post or by sending an e-mail to a complaints mailbox. Each complaint is processed and answered with the involvement of the relevant departments of KfW. The principles for complaints handling include informing complainants of the opportunities available for arbitration and out-of-court dispute resolution. For affected communities, the project-related grievance mechanism provided by the respective local partners is to be used. KfW Group sees improving accessibility also for vulnerable groups as part of its tasks. Complaints are evaluated quarterly and reported in the form of key findings to the Executive Board. If the analysis reveals recurring fields of action, these should be addressed in a targeted manner. To this end, the causes of complaints are identified, and possible solutions are developed together with all departments involved in order to make the group's service and performance even more customer-friendly. Customer enquiries are answered by the specialist division or the complaints management team. As regards value chain workers, it is not standard procedure with respect to financing to refer employees of financed companies or on-lending banks to grievance mechanisms of the financing bank.

The Compliance department at KfW is an independent organisational unit. Complaints are always assessed for relevance to compliance issues and are processed by the relevant divisions. If a complaint involves an indication of a criminal offence, Compliance is responsible for processing and handling the complaint.

KfW Development Bank's grievance mechanism is designed to give anyone who feels directly negatively affected by the impact of a project supported by KfW Development Bank, either now or in the future, the opportunity to raise complaints. These can be submitted by e-mail or using an online form, as well as via KfW Development Bank's central complaint office. Complaints can also be submitted to one of KfW Development Bank's foreign branch offices or to the responsible project manager directly. All complaints are processed regardless of the channel used to submit them. Contact details, admissibility criteria and further information on the mechanism, as well as the complaint reports, are published on the website. A complaint does not have to be lodged in any particular form, but the complainant must be actually or potentially affected or an authorised representative of such person.

In accordance with the applicable environmental and social standards (in particular World Bank Environmental and Social Standard 10), all KfW Development Bank projects must set up a local grievance mechanism as a point of contact for affected communities, for example. This also applies to financial intermediaries. As a result, KfW Development Bank requires the project developers to inform and consult affected communities about the project as part of the E&S Appraisal, using information that is easy to understand, and to address suggestions and concerns related to the project design and implementation where possible. In accordance with World Bank Environmental and Social Standard 2, it is mandatory for the projects to also have their own grievance mechanism for workers. Complainants can also contact the KfW Development Bank complaint office to report any actual or potential violations of environmental and social standards, including human rights violations. Incoming complaints are assessed to ensure they are valid before being registered. Following a preliminary review, which involves collecting information on the background to the complaint, an attempt is made to work towards remedial action in tandem with the complainant and other stakeholders. If agreed action cannot be taken immediately or a remedial solution is unsuccessful, the complainant will be provided with information on alternative means of addressing their concerns. KfW Development Bank's grievance mechanism evaluates valid complaints and determines whether there are systematic fields of action, with the aim of analysing internal processes and procedures and making any necessary adjustments to avoid similar complaints in future. The planned Guidelines & Procedures of KfW Development Bank's complaints management include a clause on retaliation. The idea is for KfW Development Bank to undertake to implement actions to prevent and counteract possible retaliation against complainants and other individuals involved in a complaint. Developing grievance mechanisms, for both employees of projects and the third parties affected by the projects, is an integral component of the environmental and social standards applicable to KfW Development Bank in its financing activities. As such, they are also part of the regular reporting obligation and the object of periodic reviews by KfW or the experts it appoints. The specific subject and scope of the review depend on the case at hand, but generally also include a survey of the relevant target groups on their experience in dealing with the mechanisms in question. If room for improvement is determined, there are various potential measures available to improve the accessibility of the mechanisms, including targeted training for stakeholders and awareness-raising campaigns.

At **KfW IPEX-Bank**, complaints can be submitted using an e-mail address and a form on the website in addition to the group-wide complaints channels. This compliance channel for regulatory matters is responsible for complaints relating to investment advice, lending and other services provided by KfW IPEX-Bank, and serves as the complaints management mechanism in accordance with the requirements imposed by BaFin and the German Securities Trading Act (Wertpapierhandelsgesetz). Confirmation receipt of the complaint is sent along with an indication of the expected processing time, which generally does not exceed two weeks. The central complaint office then coordinates clarification of the matter, involving all the necessary areas of the organisation. Information on the complainant can be submitted in anonymised form. The sustainability officer and the press inquiries channel within Group Communications are responsible for complaints and concerns relating to sustainability, environmental and social issues.

KfW IPEX-Bank's Sustainability Guideline requires each borrower to set up a procedure through which complaints by employees and affected members of the public are received and handled in an appropriate way. Cases and processing results are documented and included in reports. For example, training may be provided on a case-specific basis.

DEG's grievance mechanism can be used by any person who believes they have been adversely affected by a project co-financed by DEG. Complaints to DEG must be submitted in writing. This can be done online using a complaint form, by e-mail or by post. The DEG complaint office is independent of the company's operational activities and of the areas responsible for the activities relating to the complaint. It can be accessed via the DEG website. The process is described in German and English with information provided on the relevant procedures and schedules. The complaints procedure involves an independent body, the Independent Expert Panel ("IEP"), which is supported by a complaint office at DEG. Any complaints received are passed on to the IEP. This external body consisting of three independent international experts is designed to ensure appropriate accountability for fair conduct and to strengthen stakeholder trust. If the complaint does not fulfil the relevant criteria, the complainant is notified and informed of the reasons for the rejection. The panel recommends alternative procedures for complaints that are rejected.

In valid cases, the IEP decides whether to initiate arbitration or a compliance review. DEG's complaint office is staffed by DEG employees who record incoming complaints, confirm receipt, coordinate appropriate implementation of the grievance mechanism, and support the panel in practical matters. DEG established this mechanism in 2014 with a Dutch development finance institution. DEG informs the parties concerned if efforts to reach a satisfactory solution are hampered by the principle of confidentiality.

The IEP may use an additional investigation method depending on the nature of the complaint. Stakeholders must be provided with appropriate access to sources of information, advice and expertise, and the panel is responsible for monitoring any agreed action. The IEP ensures conformity with DEG's guidelines, in particular the DEG Guideline for environmental and social sustainability, the group's sustainability mission statement, the group's human rights policy and the exclusion list. The DEG grievance mechanism has its own policy that explains the protection offered against retaliation. In this context, the requirements of the EU Whistleblowing Directive are relevant to compliance. No training or reviews are provided beyond provision of the grievance mechanism in connection with DEG business.

KfW Capital's central complaints management team coordinates the clarification of concerns. Complaints can be submitted by post or online via a central e-mail inbox. Information on the complainant can be submitted in anonymised form. Complaints that are potentially relevant to the LkSG are processed in the same way as other incoming complaints and are passed on to KfW Capital's Compliance function. Complaints and reports relating to KfW Capital that are received via the group companies' complaints channels are passed on by KfW's Compliance division to KfW Capital's Compliance function for further processing. As part of its due diligence, KfW Capital also verifies whether the venture capital funds have established a whistleblowing mechanism that can be used by employees of the venture capital funds, and whether internal compliance procedures are currently underway or have been completed in the past. This also serves to protect the employees of the venture capital funds. The whistleblowing unit can also, however, be set up to be used by externals, for instance by employees of the portfolio companies.

Governance information

Compliance strategies at KfW Group

Promoting and further developing the corporate culture

KfW Group's Code of Conduct is at the centre of promotional activities and an expression of corporate culture. It sets out the specifics of the group's values, such as strengthening collaboration, expanding risk culture, promoting diversity, leading effectively and developing skills. For a detailed description of the Code of Conduct, please refer to the "Social matters at KfW Group" section in the "Social information" chapter. Accordingly, KfW Group expects its employees to act ethically and with integrity. In addition, it expects its employees to "take responsibility" in order to maintain this corporate culture.

The foundation of KfW Group's corporate culture is compliance with all relevant statutory, regulatory and internal requirements. This includes requirements on combating corruption and fraud, preventing money laundering and financing of terrorism, compliance with financial sanctions and embargoes, and on securities and tax compliance, data protection and risk management. Compliance with statutory and regulatory requirements is also an element of the group-wide Code of Conduct and the values to which all employees are committed. The guidelines on anti-corruption and anti-bribery are in line with the United Nations Convention, the statutory requirements and German legal and regulatory requirements. The procedures for protecting whistleblowers comply with Directive (EU) 2019/1937 and the German Whistleblower Protection Act (*Hinweisgeberschutzgesetz* – "HinSchG"). Safeguards for the prevention of criminal acts are created and documented in accordance with Section 25h KWG. The implementation of all integrity and compliance guidelines is described by group-wide compliance guidelines, which are supplemented and further elaborated by additional, company-specific policies and work instructions. The prevention of corruption and other criminal acts is also an ongoing objective in KfW Group's sustainability programme as part of the corporate culture. In addition, KfW Group is committed to fighting corruption as a corporate member of Transparency International and, represented by DEG, is a supporting company of the Extractive Industries Transparency Initiative. It cooperates with partners including the Federal Ministry for Economic Cooperation and Development (*Bundesministerium für wirtschaftliche Zusammenarbeit und Entwicklung* – "BMZ") in implementing the corruption prevention and integrity strategy in German development policy. KfW Group applies the quality criteria required by the BMZ of all implementing entities for the implementation of this strategy in its international financing activities. The applicable rules of conduct are based on the German Federal Government's anti-corruption requirements and also on the existing rules of large German commercial and promotional banks.

As part of the "Cultural journey" project launched in January 2024, KfW Group is working on promoting and developing its corporate culture. The aim of the project is for the corporate culture to support the implementation of KfW Group's strategic agenda to an even greater degree. The refinement of KfW Group's cultural identity this calls for is realised with the involvement of employees and on the basis of the strengths and weaknesses of the current corporate culture. The targets include transforming the bank to meet the dynamic challenges of our time and continuing to position KfW Group as an attractive employer. For further information on KfW Group's efforts to increase its attractiveness as an employer, please refer to the "Employer positioning" project in the "Social matters in banking operations" section in the "Social information" chapter. The project is coordinated by the Human Resources and Corporate Development departments and, in the design stage, included workshops for employees at various levels, where action areas for a new cultural direction were developed. Workshops with Executive Board members, managing directors and heads of department were then used to define a target culture and plan actions. This year's KfW management conference kicked off the implementation stage, in which all departments are working on their contribution to the target culture.

Strategies relating to aspects of business conduct policies

The **prevention of criminal acts and compliance with the Code of Conduct** are the collective responsibility of KfW Group. The KfW Executive Board bears overall responsibility for compliance within KfW Group. In addition, the managing directors of the respective subsidiaries and their compliance organisations are responsible for compliance with and implementation of binding regulations. The Executive Board has delegated various areas of responsibility to the Compliance department, including the responsibility for group compliance. This includes defining preventive measures and conducting investigations in the event of loss. Preventive measures include introducing additional controls and expanding existing controls on business initiation and/or the realisation of projects (e.g. prior to disbursements).

The Compliance department operates independently of other departments and aligns the existing compliance management system with changing laws and market trends. In accordance with the Minimum Requirements for Risk Management ("MaRisk"), Compliance is the central area responsible for recognising legally relevant developments at an early stage, preparing decisions in the responsible bodies and applying a monitoring process to ensure that all legal requirements are met. KfW's Compliance department concentrates on matters such as the prevention of criminal acts, money laundering and the financing of terrorism, compliance with financial sanctions and embargoes, securities compliance, tax compliance, data protection and compliance with MaRisk. The fraud officer coordinates the actions to prevent criminal acts and, like the money laundering officer, the securities compliance officer and the data protection officer, is assigned to the Compliance department. There are guidelines applicable throughout the group on prevention of criminal offences and handling gifts and invitations. The Legal Affairs department advises the Compliance department on legal matters, such as on searches and seizures.

KfW Group's Code of Conduct is directed at all employees, managers, members of the KfW Executive Board and the managing directors of the subsidiaries. In addition, the KfW Executive Board and the management boards of the subsidiaries have their own codes of conduct, in which their obligations to the respective boards of supervisory directors/supervisory boards are mentioned separately.

KfW Group has introduced various measures for **reporting and following up on suspected incidents**. All KfW Group employees and external persons have the opportunity to report information on possible unlawful behaviour (in particular criminal acts) in connection with KfW Group's business activities to the fraud officer or the trusted third party (ombudsperson). For a detailed description of the role and tasks of the ombudsperson, information on the whistleblowing system and, in addition, information on internal and external complaints management, see the "Complaints management" section in the "Social information" chapter.

The fraud officer inventories and processes all suspected incidents. Losses are recorded in a loss database belonging to the Risk Controlling department. It coordinates business decisions (e.g. involvement of internal and external persons and/or organisations), prepares a risk analysis and monitors compliance with rules and coordination of investigations. The fraud officer is authorised to issue instructions for the performance of the officer's institution-specific responsibilities and, in exceptional cases, can convene a fraud task force that consists of the relevant divisions and organisational units and jointly decides on further action. Suspected incidents in which employees are involved with a loss potential of EUR 1 million or with the potential for material reputational damage are deemed exceptional cases. The fraud officer informs the Executive Board about the processing of the suspected incidents. Internal Auditing then audits compliance with the correct procedure.

A review of adherence to the implementation of compliance requirements is carried out in the annual audit of the consolidated financial statements. The auditor sends the audit report to BaFin as the competent supervisory authority. Violations of or deviations from the rules may be subject to fines and sanctions. The units responsible for compliance and the compliance divisions themselves are also included in Internal Auditing's audits.

KfW Group has established a whistleblowing system to **protect whistleblowers**. The whistleblowing system enables individuals to provide confidential information on suspicious circumstances that point to criminal acts. Contractual arrangements ensure that a whistleblower's name and identity will remain protected. As a lawyer, the ombudsperson is subject to a duty of confidentiality, and the whistleblower's identity is only disclosed to the compliance organisation of the group company affected on request and with the express consent of the whistleblower. The reporting channels for whistleblowers in the event of compliance violations are part of KfW Group's internal and external whistleblowing system. Information on whistleblower protection is available for employees via the intranet and is also provided by means of digital and in-person training.

The **investigation of business conduct incidents** is also regulated within KfW Group. Pursuant to Section 25h KWG, banks must create and document adequate safeguards to prevent criminal acts. In this context, a risk analysis of internal and external fraud risks is prepared every year, and appropriate preventive measures derived. Corruption risks exist, for instance, in the approval of loans or subsidies, in procurement and in the award of contracts. Two cases associated with corruption were confirmed in 2024. Neither of the cases involved KfW employees. Specifically, there were allegations of corruption against external bidders, who therefore were not admitted to the award process in line with KfW's internal guidelines. The Executive Board has adopted group-wide rules of conduct and a Code of Conduct to prevent corruption for all KfW Group employees. These contain binding rules for the acceptance and giving of gifts and other benefits. The option these provide to have the acceptance of gifts and other benefits authorised is intended to protect employees from criminal charges. The focus is on transparency and dealing openly with any conflicts (of interest). An existing work instruction sets out how to deal with gifts and invitations and includes fixed value limits for accepting or giving them.

For the results of Internal Auditing's annual audit, see the "Additional internal control procedures" section of the risk report.

In order to avoid violations of KfW Group's compliance regulations, **awareness-raising and training measures** are carried out to avoid internal and external criminal acts. The heads of division are required to address the topic of preventing corruption once a year in divisional meetings. Obligatory online training on criminal acts, money laundering/terrorism financing and data protection plus additional, target group-oriented in-person training is held every year to ensure responsible conduct by our employees when dealing with business partners. This target group-oriented in-person training organised by the Compliance department is aimed at employees who are deemed to be particularly at risk pursuant to the "risk analysis of criminal acts". This includes in particular employees involved in award and/or approval processes, and employees in KfW's foreign branch offices due to their particular vulnerability with regard to corruption and bribery.

In addition, the group plans to communicate changes in corporate culture arising in connection with the "Cultural journey" project to employees through workshops and information events.

Taxonomy tables pursuant to Annex VI/XII (EU) 2021/2178 (DDA)

Summary of KPIs to be disclosed by credit institutions under Article 8 Taxonomy Regulation

0. Summary of KPIs to be disclosed by credit institutions under Article 8 Taxonomy Regulation

		Total environmentally sustainable assets (turnover)	Total environmentally sustainable assets (CapEx)	KPI****	KPI*****	% coverage (over total assets)***	% of assets excluded from the numerator of the GAR (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the denominator of the GAR (Article 7 (1) and Section 1.2.4 of Annex V)

Templates for nuclear and fossil gas-related activities

Templates based on stock figures

1. Nuclear and fossil gas related activities

Row	Nuclear energy related activities	
1.	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	Yes
2.	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	Yes
3.	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	Yes
Fossil gas related activities		
4.	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	Yes
5.	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	Yes
6.	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	Yes

2. Taxonomy-aligned economic activities (denominator) – Turnover

Row	Economic activities	Amount and proportion (the information is to be presented in monetary amounts and as percentages)					
		CCM + CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)

4.	Amount and proportion of economic activity referred to in row 4 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.29 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI	0	0.0%
5.	Amount and proportion of economic activity referred to in row 5 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.30 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI	0	0.0%
6.	Amount and proportion of economic activity referred to in row 6 of Template 1 that is taxonomy-non-eligible in accordance with Section 4.31 of Annexes I and II to Delegated Regulation 2021/2139 in the denominator of the applicable KPI	0	0.0%
7.	Amount and proportion of other taxonomy-non-eligible economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	449,465	97.7%
8.	Total amount and proportion of taxonomy-non-eligible economic activities in the denominator of the applicable KPI	449,466	97.7%

Templates based on stock figures – financial guarantees (off-balance sheet)**1. Nuclear and fossil gas related activities**

Row	Nuclear energy related activities	
1.	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	No
2.	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	No
3.	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	No
Fossil gas related activities		
4.	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	No
5.	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	No
6.	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	No
