E2

E3

E4

Nature

NEGATIVE IMPACT

- ▷ Negative environmental impacts from financed activities (Biodiversity, Pollution, Water)

La Banque Postale Group wishes to use its financing and investment capacity to **support transformative initiatives** in economic sectors with a **strong impact on nature** or highly dependent on ecosystems.

Following its first biodiversity footprint publication in 2024 based on the TNFD framework, La Banque Postale Group aims to gradually **align its commitments to Nature** (Biodiversity, Pollution, Water) **with its climate ambitions**.

Policies

- ▷ **Biodiversity policy** for the Caisse des Dépôts Group
- ▷ **Water policy** for the Caisse des Dépôts Group
- ▷ **Responsible Financing and Investment Charter** of La Banque Postale: sector-specific exclusions (pesticides) and managing environmental controversies
- ▷ **La Banque Postale's principles of intervention in sectors at risk of deforestation and ecosystem conversion:** criteria for excluding at-risk players
- ▷ **Green Works Charter** of CNP Assurances which applies to real estate portfolio management companies
- ▷ **LBP AM's Biodiversity Policy:** engagement and advocacy actions, exclusion lists

Actions

- ▷ **Measuring the impacts and dependencies of the financed activities on biodiversity,** including impacts related to pollution and water stress levels
- ▷ **Climate and Biodiversity Impact Fund:** financing of national and international projects to protect and restore biodiversity and water resources
- ▷ **Shareholder engagement (CNP Assurances, LBP AM)** and sphere of influence with the invested companies
- ▷ **Sustainable management of CNP Assurances' woodland assets**
- ▷ **Sustainable water and sanitation management component of green loans**

Key metrics

BIODIVERSITY FOOTPRINT MEASUREMENT

(30 December 2023, LBPSA scope, Corporate financing portfolios, Public sector and social economy, Home and commercial real estate loans)

STATIC LAND IMPACTS

4,180 MSA.km²

DYNAMIC LAND IMPACTS

55 MSA.km²

E5

Circular economy

La Banque Postale Group is attentive to reducing at source and optimising the use and end-of-life of resources, across all of its operational activities

As part of its Corporate and Investment banking portfolios, La Banque Postale Group does not have a waste management policy, but participates in La Poste Groupe's work to **define a resource footprint and the associated waste reduction pathways.**

NEGATIVE IMPACT

- ▷ Negative impacts of our own operations and service activities on waste
- ▷ Negative environmental impacts from financed activities (Waste)

Policies

- ▷ **La Banque Postale's Resources and Circular Economy policy** (reduction of resources consumed, use of recycled resources, ecodesign approach)
- ▷ **CNP Assurances: "Green Works" Charter** for real estate under discretionary management

Actions

- ▷ **OWN OPERATIONS**
 - Reduction of waste volumes and resources consumed (WEEE, plastic, paper, cardboard)
 - End-of-life optimisation for raw and secondary materials, waste processing hierarchy
- ▷ **FINANCED ACTIVITIES:**
 - LBP AM and CNP Assurances: "pollution and waste" criteria for the analysis and selection of assets

Key metrics

TOTAL VOLUME OF WASTE GENERATED

1,435 tonnes

WASTE ELECTRICAL AND ELECTRONIC EQUIPMENT (WEEE)

575 tonnes

NON-RECYCLED WASTE

253 tonnes
17.6%

S2

Workers in the value chain

La Banque Postale Group implements various **policies and strategies to minimise the negative impacts and improve the positive impacts on workers in the value chain**, particularly as regards human rights and working conditions.

They cover **three groups of people covering the Group's entire value chain**:

- ▷ Workers of service providers, suppliers or distributors
- ▷ La Poste workers working for and on behalf of La Banque Postale
- ▷ Employees of financed entities

NEGATIVE IMPACT

- ▷ Negative impact of our financed activities on human rights

POSITIVE IMPACT

- ▷ Favourable corporate culture and working conditions, including upstream and downstream value chain

RISK

- ▷ Risk associated with a failure to assess La Banque Postale's partners in a context of transition

Policies

- ▷ **WORKERS OF SERVICE PROVIDERS, SUPPLIERS OR DISTRIBUTORS:**
 - **Responsible and Ethical Purchasing Charter**
 - **Responsible Purchasing policy** for La Poste Groupe, which applies to the entire La Banque Postale Group
 - **Supplier assessment procedure**
- ▷ **WORKERS OF THE FINANCED ENTITIES:**
 - **Human Rights policy** for La Poste Groupe, which applies to the entire La Banque Postale Group
 - **Responsible Financing and Investment Charter**
 - **Human Rights policy** for LBP AM

Actions

- ▷ **ALL WORKERS**
 - Access to the whistleblowing system and protection of whistle-blowers
 - Controversy monitoring and exercising the duty of care
- ▷ **WORKERS OF SERVICE PROVIDERS, SUPPLIERS OR DISTRIBUTORS:**
 - Audit of suppliers on the ESG component
 - Supplier listening questionnaire with a stronger ESG component
- ▷ **WORKERS OF THE FINANCED ENTITIES:**
 - LBP AM's sphere of influence with financed companies

Key metrics

S3

Affected communities

La Banque Postale is actively committed to the **regions** in order to **support their development** and **support essential services**, through the regional network and the financing of local authorities, charities and the local economic sector

La Banque Postale Group is committed, within the limits of its abilities, to **ensuring that human rights are respected** in all financed activities.

NEGATIVE IMPACT

- ▷ Negative impact of our financed activities on human rights

POSITIVE IMPACT

- ▷ Regional network
- ▷ Sustainable/positive impact financing

Policies

- ▷ **POLICIES ON RESPECT FOR HUMAN RIGHTS:**
 - **Human Rights policy** for La Poste Groupe, which applies to the entire La Banque Postale Group
 - **Responsible Financing and Investment Charter**
 - **Human Rights policy** for LBP AM

These policies are aligned with the United Nations Guiding Principles, the ILO Conventions and the OECD Guidelines

Actions

- ▷ **RESPECT FOR HUMAN RIGHTS IN FINANCED ACTIVITIES:**
 - Controversy monitoring
 - LBP AM's sphere of influence with financed companies
- ▷ **COMMITMENT TO THE REGIONS:**
 - Financing offers for local authorities (infrastructure, mobility, energy transition, etc.)
 - Financing of the local public sector (hospitals, social housing, etc.)
 - Financing of charities
 - Regional coverage via the La Poste network
 - Societal sponsorship (L'Envol, MicroDon, support for charities)

S4

Customers and end-users

La Banque Postale Group is actively involved with its customers:

- ▷ Offering them a good quality of service and suitable advice
- ▷ Providing highly accessible bancassurance services
- ▷ Protecting them (cybersecurity, personal data protection)
- ▷ Offering them ways to take action through its ESG offers

La Banque Postale Group focuses its support on people experiencing banking and insurance difficulties

NEGATIVE IMPACT

- ▷ Negative impacts on customers in the event of a cybersecurity breach
- ▷ Negative impact of our financed activities on human rights

POSITIVE IMPACT

- ▷ Access to bancassurance services (including vulnerable groups) and regional network

RISK

- ▷ Risk related to a failure to protect our customers

Policies

- ▷ **La Banque Postale Group code of conduct:** customer interests, compliance with the principles of ethics, transparency and responsibility
- ▷ **CNP Assurances code of conduct:** protecting customer interests, identifying and processing professional complaints and confidentiality
- ▷ **LBP CF's internal policy for managing vulnerable customers:** identifying and supporting vulnerable customers
- ▷ **Information Systems Security policy** for La Banque Postale
- ▷ **Data protection policy:** confidentiality, fairness and access to information for customers

Actions

- ▷ **ACCESS TO BANCASSURANCE SERVICES:**
 - Accessible banking mission
 - Banking and insurance products accessible "by design"
 - Actions to identify and protect vulnerable customers (*L'Appui*, etc.)
 - Regional network facilitating access to services
- ▷ **DIALOGUE WITH CUSTOMERS:**
 - Customer advice, "Customer Voice" study, etc.
 - Complaints process
 - NPS of customers experiencing financial difficulties
- ▷ **CYBERSECURITY & PERSONAL DATA PROTECTION:**
 - Cybersecurity strategic plan (2021-2027)
 - Team training and awareness
- ▷ **ESG OFFERS:**
 - ESG assessment of offers: ESG checklist
 - Impact offers: green loans, impact bank cards, etc.

Business conduct

La Banque Postale Group deploys **innovative ESG governance** and a **responsible corporate culture** (mission-led company status).

La Banque Postale Group is committed to conducting its activities in an **ethical and responsible** manner, and is committed to its suppliers, particularly SMEs.

POSITIVE IMPACT

- ▷ Business ethics and general interest

RISK

- ▷ Risk of insufficient consideration of ESG matters in La Banque Postale Group's internal governance
- ▷ Risk associated with a failure to assess La Banque Postale's partners in a context of transition

Policies

- ▷ **BUSINESS CONDUCT:**
 - **Group code of conduct:** rules of good conduct, aligned with the Group's values
- ▷ **SUPPLIER RELATIONS:**
 - **Supplier Relations and Responsible Purchasing Charter:** guarantee of a responsible financial relationship with its suppliers
 - **Responsible Purchasing policy:** La Banque Postale commitment regarding late payments

Actions

- ▷ **BUSINESS CONDUCT:**
 - **Whistleblowing system**
 - **Whistle-blower protection system**
 - **Raising employee awareness** of business conduct and ethics
- ▷ **CORRUPTION:**
 - Procedures to prevent and detect corruption
 - **Mandatory anti-corruption training** for all employees
- ▷ **SUPPLIER RELATIONS:**
 - Integration of **ESG criteria** into the selection and monitoring of suppliers
- ▷ **LOBBYING:**
 - **Lobbying activities** to promote ethics and impact finance

Sustainability Report

Note to the reader

In this sustainability report, the data points to which La Banque Postale Group has responded are identified at the end of each paragraph using the corresponding EFRAG code. Example: [E1.1.01].

STRUCTURE OF THE SUSTAINABILITY REPORT

2.1 General information on the preparation of sustainability reports [ESRS 2]

In 2025, La Banque Postale is publishing its first sustainability report for 2024, in accordance with the requirements of the Corporate Sustainability Reporting Directive ("CSRD"), transposed into Article L. 233-28-4 of the French Commercial Code, and the European Sustainability Reporting Standards (ESRS) issued by the European Financial Reporting Advisory Group (EFRAG).

This first year marks a profound transformation of the information on the Group's sustainability matters, which until now has been presented in the "Non-Financial Statement (NFS)" chapter of the Universal Registration Document (URD). Compared to the previously published NFS, the sustainability report proposes a new specific structure linked to the ESRS as well as additional information relating to key topics on which La Banque Postale Group has continued to work this year, such as: the climate transition plan and measuring the

biodiversity footprint of financing and investment portfolios.

This sustainability report forms part of a broader set of La Banque Postale Group's institutional reports:

- The **integrated report** offers a simple summary presentation of the Group's strategy and transformation, highlighting the achievements and highlights of the year, including ESG issues;
- The **mission report** offers an accessible presentation of the Group's mission, commitments and targets, as well as a summary analysis of the opinion of the members of the Mission Committee on the Group's progress;
- The **Climate and Nature report** provides detailed explanations of the impacts of the Group's activities on the climate and biodiversity, as well as the efforts made to align La Banque Postale's decarbonisation strategies with biodiversity conservation targets;

- The **transition plan** is a forward-looking document that presents all the actions deployed to achieve the 2040 commitments, mainly regarding decarbonisation, but also nature;
- The **PRB** (Principles for Responsible Banking) **report** enables La Banque Postale, as a signatory, to report on its progress on targets in the main areas of impact identified, in accordance with the framework developed by the United Nations Environment Programme Finance Initiative (UNEP FI). This report is available in Section 8.1 Principles for Responsible Banking of the Universal Registration Document (URD).

These reports are available on the La Banque Postale website.

In addition, all the climate and nature commitments of CNP Assurances, LBP AM and Louvre Banque Privée are documented in their respective publications, and in particular their responsible investment reports (Article 29 of the Energy-Climate law (LEC)).

These various regulatory or voluntary publications enable La Banque Postale and its subsidiaries to report on the progress of their sustainability commitments to all audiences.

La Banque Postale Group's sustainability report presented in Chapter 2 forms an integral part of La Banque Postale Group's management report. It has been certified by the Statutory Auditors authorised to verify the sustainability information in accordance with the requirements of the CSRD. Their report is presented in Section 2.6 "Sustainability and Taxonomy Information Certification Report" of this chapter.

La Banque Postale Group has endeavoured to meet the requirements of the standards set by the ESRS in force on the date on which the sustainability report was drawn up, on the basis of the information available. The Group is also committed to a continuous improvement process in order to improve the quality of the information published in future financial years.

The information presented in the sustainability report was prepared in the context of the first-time application of the CSRD Directive⁽¹⁾.

This context is characterised by uncertainties in interpretation of the legislation. It has required the use of judgements to define and apply the criteria that make it possible to obtain relevant information for the institution, as well as uncertainties about the applicability of certain data points and the relevance of reporting on sustainability-related impacts, risks and opportunities for La Banque Postale Group.

It should also be noted that there are no established practices and frameworks for the double materiality analysis, including the definition of materiality thresholds, and for deepening of the analysis of impacts, risks and opportunities throughout the value chain.

This La Banque Postale Group sustainability report presents the main judgements and thresholds applied in the assessment of materiality during this first year in paragraph 2.1.4.1 "Methodology for identifying and assessing IROs", as well as the data sources used in paragraph 2.1.4.3 "Data sources used in the analysis and updating process".

This process will be reviewed annually as part of a continuous improvement process.

A better understanding of the requirements will be possible when implementation guidance, best practices or additional questions and answers become available.

As this is the first year of reporting, comparative data is not published for the new indicators.

The disclosure requirements covered by the sustainability report are presented in Section 2.5.1.1 "Coverage of disclosure requirements".

The scope covered by this sustainability report is specified in paragraph 2.1.1.1 "Reporting scope". In the specific case of information concerning the Company's employees, details are provided in paragraph 2.3.1.1.1 "Scope taken into account". When the entire reporting scope could not be taken into account, this is specified in the relevant paragraph.

The main information concerning the methodological choices made, the methodological approximations used and details of the metrics used is listed in paragraph 2.1.1.2 "Calculation methods and details of published indicators".

Additional information is also specifically available:

- concerning decarbonisation targets, in the Methodological Details paragraph of chapter 2.2.1.4.1 "Presentation of decarbonisation targets";
- concerning the Group's greenhouse gas emissions, in paragraph 2.2.1.7.3 "Methodological information";
- concerning information on the Group's employees, in paragraph 2.3.1.7 "Indicators relating to the Group's workforce";
- concerning payment terms, in paragraph 2.4.1.4.3 "Payment practices with respect to suppliers";
- and in each relevant paragraph for other information.

In particular, methodological details are provided on the calculation of investment emissions (Scope 3 Category 15), mentioning the components included by each entity (asset categories taken into account, scopes of counterparties considered, methodology for calculating the financed portion, etc.). Work on alignment with the methodological approach will be carried out for the coming financial years in order to determine the components that could form part of a common methodological basis, given the different activities of La Banque Postale Group.

In addition, the Group may have used estimates based on past experience and various other factors deemed reasonable. When the information at 31 December 2024 could not be collected, certain data has been estimated or extrapolated. When the information available at an interim date (30 June 2024 for La Banque Postale's financed emissions, 31 December 2023 for LBP AM's financed emissions) was deemed to be more reliable than estimates and representative of the situation for the whole of 2024, this data was used. These methodological approaches are indicated in the aforementioned paragraphs. All data mentioned in this sustainability report must be interpreted in the light of this information.

(1) Pursuant to the provisions of the French Commercial Code and the information standards on sustainability adopted pursuant to Articles 29 ter or 29 quater of Directive 2013/34/EU and Article 8 of Regulation (EU) 2020/852.

As part of a continuous improvement process, these approximations and estimates may be refined in future years if more relevant information is available.

An internal control system has been launched to guarantee the reliability of the information published in the sustainability report. Changes may be applied to this system to make it more robust.

In this context, the Group has made its best efforts to draft the sustainability report in line with expectations, while acknowledging that, on the basis of future market practices and recommendations, it will be able to better understand these new regulations and standards and review certain reporting and communications practices for its sustainability report in the coming years.

2.1.1 Basis for preparation of the sustainability report

2.1.1.1 Scope declaration

The sustainability report is prepared on a consolidated basis (La Banque Postale Group) in line with the scope of consolidation of the financial statements presented in Sections 5.1 "Consolidated financial statements" and 5.2 "Notes to the consolidated financial statements" of the Universal Registration Document, excluding CNP Europe Life⁽¹⁾. Added to this scope is CNP Santander Insurance Services Ireland Limited, which manages the workforce in Ireland and contributes to social information.

In this document, the following names will be used:

- **La Banque Postale Group, or the Group** refers to La Banque Postale and all of its subsidiaries in the banking and insurance scope;
- **La Banque Postale** refers to the following **banking activities**: La Banque Postale SA and all its banking subsidiaries;
- **CNP Assurances** refers to the **insurance scope**: CNP Assurances Holding⁽²⁾ and all its subsidiaries, including CNP Assurances SA. [BP_1.01]

For La Banque Postale Group, all financially consolidated subsidiaries are fully disclosed, including:

- consolidated qualitative information;
- quantitative indicators, including greenhouse gas emissions.

The following scopes have been excluded from this publication:

- CNP Cyprus Insurance Holding (CIH) and the three entities it holds. As at 31 December 2024, this group was in the process of being sold and is non-material;
- Non-material entity CNP Europe Life, which has run-off insurance contracts and does not employ employees;
- partial exclusion for CNP Assurances Protection Sociale (a public limited company 65% held by CNP Assurances Holding and 35% by La Mutuelle Générale since 31 December 2024), for which the only consolidated information for this year is the social stock information (S1)⁽³⁾.

To complete this consolidated view, a significant amount of qualitative information is disclosed on certain entities. These entities are: CNP Assurances; La Banque Postale Leasing & Factoring; LBP AM and its subsidiary La Financière de l'Échiquier; La Banque Postale Consumer Finance; Louvre Banque Privée and its subsidiary.

The list of companies included in the scope of financial consolidation is presented in Note 3.1 *Scope of consolidation and rules* in Section 5.2 "Notes to the consolidated financial statements" of the Universal Registration Document.

La Banque Postale's non-consolidated entities are not included in the reporting, except in the event of a significant impact. When these impacts have been deemed significant by La Banque Postale Group's internal experts, narrative components will be disclosed (for example, for *MicroDon* or *L'Envol*).

The carbon footprint includes the entire consolidated scope, subsidiaries over which the Group has operational control, as well as entities in which the Group holds interests and which form part of the value chain. [BP_1.02]

La Banque Postale is published in the consolidated sustainability report of La Poste Group and Caisse des Dépôts (CDC).

In addition, CNP Assurances is included in La Banque Postale's sustainability report, and CNP Assurances SA also publishes its own report.

For the 2024 financial year, two subsidiaries, Louvre Banque Privée and La Banque Postale Consumer Finance, would be eligible for the publication of a sustainability report (eligibility criteria met, including that of an average workforce of more than 500 employees), and are exempted because they are included in La Banque Postale Group's sustainability report, and their securities are not admitted for trading on a regulated market. [BP_1.03]

(1) Non-material entity, which has run-off insurance contracts and does not employ employees.

(2) Legal entity that brings together CNP Assurances SA and the Group's four insurance subsidiaries (Property & Casualty, Health, Personal Risk and Consulting). Since 31 December 2024, it also includes the new subsidiary CNP Assurances Protection Sociale, created by the merger of the staff of La Mutuelle Générale and those of CNP Assurances.

(3) Details of the indicators published concerning these employees are shown in paragraph 2.3.1.7 "Indicators relating to the Group's workforce".

The sustainability report covers La Banque Postale Group's entire value chain (upstream and downstream):

- **own operations and service activities:**
 - own operations: relations with suppliers, buildings, IT, consumption of resources (energy), employment of people;
 - service activities: customer and consumer transactions (account management and banking transactions, electronic payment transactions, etc.), insurance;
- **financed activities:**
 - credit: financing of retail customers and business customers;
 - investment in portfolios. [BP_1.04]

La Banque Postale Group has not made use of the option that allows it to omit specific information relating to intellectual property, know-how or the results of innovations. [BP_1.05]

La Banque Postale Group has not made use of an exemption from publishing information on imminent developments or matters under negotiation. [BP_1.06]

2.1.1.2 Calculation methods and details of published indicators

All social and governance information is calculated from direct sources, across the entire value chain.

For environmental data, La Banque Postale Group uses indirect sources of estimation to assess its carbon footprint and associated targets for financed emissions, and to assess its biodiversity footprint. The greenhouse gas (GHG) emission factors from ADEME's Footprint® database, including physical ratios and monetary ratios, are used in particular to estimate the carbon footprint. [BP_2.03]

Details of the methodologies and uncertainty factors related to financed emissions are presented in the paragraph *Focus on Scope 3 emissions*. [BP_2.04]

It is not possible to calculate a single level of uncertainty for all data estimated using indirect sources. The breakdown of uncertainty levels for the calculation of the carbon footprint is explained in paragraph 2.2.1.7.1 "Greenhouse gas emissions by scope". [BP_2.05]

To reduce the uncertainty related to the calculation of GHG emissions in the operational scope, La Banque Postale Group will favour the reporting of activity data on an actual basis and the use of physical ratios rather than monetary ones, depending on the availability of the information.

In addition, for the calculation of financed emissions, disclosing the emissions of companies financed or in the portfolio will improve the accuracy of the measurements.

Lastly, the measurement of biodiversity-related impacts and dependencies could be enhanced by incorporating physical metrics. [BP_2.06]

Metric subject to high level of uncertainty [BP_2.07]	Assumptions, approximations and judgements [BP_2.09]	Sources of measurement uncertainty [BP_2.08]
Greenhouse gas emissions Scope 3, categories 1 and 2	▷ Use of monetary factors applied to the amounts of purchases of goods and services, and to the amounts of capitalised equipment	▷ Uncertainty over monetary factors ▷ Uncertainty regarding the allocation of accounts to purchasing families
Greenhouse gas emissions Scope 3, category 15	▷ Use of data provider models or PCAF sectoral emissions factors when data by counterparty is not available <i>via</i> data providers or in annual reports	▷ Uncertainty linked to the emission factors or models used
Biodiversity footprint of the portfolios	▷ Use of outstandings by sector and by country for calculation with Global Biodiversity Score (GBS) ▷ Use of financial data to calculate the footprint of financing portfolios for businesses, the public sector and the social economy	▷ Uncertainty related to the calculation model and GBS input data
Resources allocated to the various action plans	▷ Expert allocation of resources to actions implemented	▷ Uncertainty related to this allocation

2.1.1.3 Changes compared to previous reports

The presentation and content of this report differ from previous years. They are based on the requirements of the European CSRD (Corporate Sustainability Reporting Directive) and ESRS (European Sustainability Reporting Standards). A **double materiality analysis** was also carried out, focusing on the Group's impact on the environment and society, and on the financial risks and opportunities related to each sustainability topic. From this, the Group was able to define the reporting scope. [BP_2_10]

For the first year, La Banque Postale Group has applied the ESRS standards, and is approaching this reporting period with a continuous improvement approach. For certain entity-specific metrics, already published in 2023, the historical values are indicated in the report. When methodological changes require a revision of the historical values for 2023, this is specified when the metric in question is presented. [BP_2_11] [BP_2_13] [BP_2_15]

2.1.1.4 Information incorporated by reference

No information has been incorporated by reference in the Group's sustainability report. [BP_2_20]

2.1.2 Committed governance on sustainability issues

La Banque Postale is a French private limited company (*société anonyme*) with an Executive Board and a Supervisory Board. This dual governance structure is considered as insuring the best balance of powers for the benefit of all stakeholders. In order to best incorporate Environmental, Social and Governance (ESG) matters into its strategy and operations, La Banque Postale has chosen to integrate sustainability into its Group governance bodies. Thus, the Management Board, a collegial body, manages the Group under the supervision of the Supervisory Board. It relies on the Executive Committee to implement the operational and strategic guidelines it establishes particularly in terms of ESG. These guidelines are then rolled out by the Sustainability Department, and by the business lines and subsidiaries.

The Supervisory Board oversees the actions and strategies established and implemented by the Executive Board, with the help of its specialised committees. In conjunction with the Strategy and CSR Committee and the Risk Committee, the Financial Statements Committee monitors the preparation of the sustainability report and presents it to the Supervisory Board.

The Mission Committee, an external advisory body set up in 2021, presents its work to the Supervisory Board each year in order to enrich its discussions and deepen the Group's sustainability strategy.

2.1.2.1 Role of governance in managing ESG impacts, risks and opportunities

Sustainability matters, including impact, risk and opportunity management, are fully integrated into La Banque Postale's governance. They are supported operationally by various departments and functions within the Group, as shown in the infographic below. The managers responsible for these scopes oversee the related impacts, risks and opportunities. [GOV_1_08]

Several bodies therefore contribute to La Banque Postale's ESG governance:

- the Supervisory Board oversees strategic decisions related to impacts, risks and opportunities (IROs), supported by specialised committees, including the Strategy and CSR Committee, which assesses sustainability targets;
- the Executive Board establishes operational guidelines and ensures collective agreement on ESG matters;
- the role of the Executive Committee is to steer the operational implementation of the Group's ESG strategy. [GOV_1_10]

MANAGEMENT AND SUPERVISORY BODIES, AND THEIR ROLE IN MONITORING IMPACTS, RISKS AND OPPORTUNITIES [GOV_1_08] [GOV_1_09] [GOV_1_10] [GOV_1_11]

* Managing Director of Retail Banking and Executive Vice-President of the Consumer and Digital Services business unit of La Poste Groupe/Managing Director of Corporate and Local Development Banking/Managing Director of CNP Assurances/Chairwoman of the Executive Board of LBP AM and Chairwoman of La Financière de l'Échiquier.

The first double materiality analysis carried out in 2024 revealed material challenges for the Group, most of which are already integrated into its governance.

Thus, **environmental impacts** are managed by the **Sustainability Department**, which is responsible for steering the operational implementation of the ESG component of the strategic plan. The Chief Sustainability Officer, present to the Executive Committee, can report on the actions carried out. In addition, the Strategy and CSR Committee reviews the Group's ESG strategy and targets as well as the actions carried out.

Matters concerning employees are fully integrated into the Group's governance. The **Human Resources Department** reports to the management and supervisory bodies. The same applies to **value chain workers**, whose matters are overseen by the **Purchasing Department**. The Human Resources Director therefore sits on the Executive Committee and the Managing Director of Finance and Strategy sits on the Executive Board. There is no specialised committee on these topics, but they are regularly discussed by the Supervisory Board.

Business conduct issues are managed operationally by the **Compliance Department**, represented at the **Executive Board** level by the Chief Risk and Compliance Officer and the General Secretariat of the Financial Conglomerate.

The **Group Risk Department** is responsible for defining the risk management framework and its monitoring, including ESG risks. It reports to the Executive Committee through its Director, and to the Executive Board through the Chief Risk and Compliance Officer and the General Secretariat of the financial conglomerate. The Supervisory Board Risk Committee conducts a regular review of ESG risks.

Conversely, ESG matters related to affected communities and customers are very operational, and do not fall under a single manager within the Group, although they are taken into account by the Group's various business lines. [GOV_1.11] [GOV_1.12]

These responsibilities regarding the management of impacts, risks and opportunities are specified in the Group's strategic, financial and non-financial planning policy. This policy also explains the responsibilities of the Sustainability Department, the Human Resources Department, the Group Risk Department and the Group Compliance Department.

In addition, the role of the Mission Committee, which represents the Group's commitments, is defined in the Company's Articles of Association, as is La Banque Postale Group's company purpose. [GOV_1.09]

Each specialised committee of the **Supervisory Board** takes on the sustainability matters specific to its field of expertise. For example, the Financial Statements Committee examines the sustainability report, while the Remuneration Committee incorporates CSR criteria into the executive remuneration policy. Additional information is available in Section 3.1.2.1.5 "Sustainability implications for the Executive Board, the Supervisory Board and its specialised committees" of the Universal Registration Document.

In 2024, several joint sessions were held bringing together the members of the Financial Statements Committee, the Risk Committee and the Strategy and CSR Committee, in order to ensure consistency in the way in which ESG topics are dealt with, in particular those relating to CSRD reporting and biodiversity.

The **internal control system** covers all La Banque Postale Group's risks, including ESG risks. Internal controls fall under three levels of control, ranging from operational, support, and regulatory functions to permanent control, carried out by the Risk Department and the Compliance Department, and then the Internal Audit Department. [GOV_1.13]

In 2024, a special organisation was set up to identify and validate impacts, risks and opportunities (IROs). The roles and responsibilities are structured as follows:

- The identification and assessment of IROs are carried out jointly by the Sustainability Department (SD) and the Finance and Strategy Department in conjunction with the Group Risk Department, and is based on the Group's **risk mapping**;
- The validation of IROs and materiality thresholds is carried out by the Executive Committee and the Executive Board. They are also presented to the Supervisory Board's Strategy and CSR Committee and to the Mission Committee. From 2025, the IROs and their rating will be reviewed annually.

IRO IDENTIFICATION, LISTING AND VALIDATION PROCESS IN 2024 [GOV_1.10]

Certain impacts and all the risks identified are the subject of targets, the determination and monitoring of which are supervised by the Supervisory Board as part of the annual risk appetite approval.

The Executive Board oversees the definition of the **mission-led company targets**, the monitoring of the associated metrics and the actions implemented, which correspond to certain impacts on ESRS E1, S3 and S4 in particular. These targets are presented to the Supervisory Board, based on the work of its Strategy and CSR Committee.

The operational monitoring of the mission-led company targets, which includes the priority ESG issues for La Banque Postale Group, is carried out by a Steering Committee with those responsible for metrics that meets every quarter and whose reports are prepared and sent to the Internal Audit Department. This forms part of the audit trail for the mission report.

Risk monitoring, carried out by the Group Risk Department, is also carried out by the Executive Board, under the control of the Supervisory Board. All risks are monitored and managed based primarily on monitoring indicators and warning thresholds.

In addition, there is a **network of ambassadors** comprising 244 employees who disseminate and promote the ESG targets in all business units.

- The circle of advisory ambassadors, who are members appointed by a member of the Executive Committee to support and manage the transformation of our bancassurance model. There are 110 of them;
- The circle of volunteer ambassadors, a role open to all employees who wish to improve their ESG skills and knowledge and promote the relevant frameworks to their colleagues. There are 134 of them. [GOV_1_14]

Role of the management and supervisory bodies in the conduct of business

For relationships with suppliers, the Executive Board approved the **responsible purchasing policy** in 2023, ensuring that it incorporates ESG criteria in line with La Banque Postale's commitments. It also ensures that this policy is deployed consistently. For its part, the Executive Board oversees the operational implementation of this policy, by managing relationships with suppliers and ensuring compliance with social, environmental and contractual criteria.

In terms of **lobbying**, the Executive Board implements strategic guidelines, supervises operational lobbying activities and provides regular reporting. Alignment with the Group's strategic targets, ethical values and regulations is also guaranteed, under the supervision of the Supervisory Board.

With regard to ethics and anti-**corruption** issues, the Executive Board plays a central role in overseeing anti-corruption and ethical governance policies. It manages the anti-corruption system provided by the Ethics team and also ensures the effectiveness of internal control mechanisms, training and processes to prevent and detect corruption-related risks.

The Executive Committee plays a cross-functional and strategic role in these three areas (relationships with suppliers, lobbying, ethics and anti-corruption). It does not

directly supervise the activities, but acts as a coordinating body between the various departments. Its main role is to validate the strategic priorities and ensure their consistency with La Banque Postale Group's overall vision. [GI_GOV_1_01]

2.1.2.2 Skills and expertise of the Supervisory Board on sustainability issues

The skills and expertise of the Supervisory Board are regularly assessed and updated (additional information is available in Section 3.1.2.1.2 E "Information and training for the Supervisory Board members" of the Universal Registration Document).

They are established as part of a mapping of 16 skills criteria, two of which concern ESG matters. This mapping is the combined result of Supervisory Board members' responses to self-assessment questionnaires and other regulatory documents (Fit & Proper forms).

In addition to this self-assessment process, an external firm periodically (and specifically in 2024) performs a review of the skills of the Supervisory Board members, including individual interviews in order to assess their contributions to the work of the Supervisory Board and the specialised committees to which they belong. [GOV_1_15]

At 31 December 2024, 14 of the 15 members had expertise in compliance and **Anti-Money Laundering and Countering the Financing of Terrorism** (AML-CFT), thus meeting the Group's requirements in terms of governance and regulation. 11 of the 15 members have specific expertise in **ESG and the just transition**, illustrating the Supervisory Board's commitment to environmental, social and governance matters.

SKILLS OF THE SUPERVISORY BOARD MEMBERS [GOV_1_16]

Following the programme of strategic seminars held for the Supervisory Board, the Appointments and Governance Committee reviews, discusses and defines the content of the training programme for Supervisory Board members for the next financial year. This programme is open to members of the Executive Board and implemented with the support of operational teams and external experts, and aims to ensure a good representation of the skills and expertise required within the Supervisory Board while ensuring that the topics provided are appropriate to the needs expressed by its members.

Since 2022, this training programme has included an **annual training dedicated to ESG**.

In 2023, training focused on CSRD issues. In 2024, the training was devoted to issues related to biodiversity and the climate transition plan. The following topics were presented:

- The Climate and Nature report and the work carried out to determine the impacts and dependencies of the Group's activities on ecosystems;
- Initiatives to manage the associated risks, report the Group's actions and integrate biodiversity-related risks and opportunities into the strategy;
- The climate transition plan to build a solid decarbonisation strategy;
- Ongoing work in this area, from setting targets to operational implementation.

In 2022 and 2023, members of the Supervisory Board and the Executive Board also received training in ethics and the code of conduct, in order to consolidate their understanding of ethics and business conduct issues. [GOV_1.16]

The ESG skills represented on the Supervisory Board and the Executive Board are gradually being enhanced thanks to the training provided. Corporate culture and La Banque Postale Group's proactive positioning as a mission-led company are also powerful tools for focusing the skills of the governance bodies on the Group's impacts, risks and opportunities. [GOV_1.17]

2.1.2.3 Management and supervisory bodies

COMPOSITION OF THE MANAGEMENT AND SUPERVISORY BODIES

The Supervisory Board has 15 members. Five of these members are employee representatives⁽¹⁾. Their participation on the Supervisory Board reinforces the quality of discussions and sheds light on the Company's operational and social realities. Each specialised committee of the Supervisory Board includes at least one member representing employees. Additional information is available in Sections 3.1.2.1.E "Knowledge, skills and experience of Supervisory Board members" and 3.1.2.2.1 "Membership of the Executive Board" of the Universal Registration Document.

(1) Under the conditions provided for in French law No. 83-675 of 26 July 1983 on the democratisation of the public sector, and in order No. 2014-948 of 20 August 2014 (in reference to Article 10-1 of French law No. 90-568 of 2 July 1990 on the organisation of the public service mission of La Poste and on France Télécom).

Since 25 January 2024, the Executive Board has been composed of three members appointed by the Supervisory Board. [GOV_1.03]

It is important to La Banque Postale Group that the **composition of the management and supervisory bodies is diverse**. The Supervisory Board also ensures that it has a balanced representation of women and men.

COMPOSITION OF THE MANAGEMENT AND SUPERVISORY BODIES AND BREAKDOWN BY GENDER [GOV_1.05]

Executive Board and Supervisory Board members (excluding employee representatives).

GENDER DIVERSITY RATIO ON THE SUPERVISORY BOARD

Members representing employees are not included in the gender balance rate in accordance with the regulations in force.

La Banque Postale's Supervisory Board ensures that at least one-third of its members are independent, in accordance with the recommendation of the Afep-Medef Code applicable to listed companies.

In addition, the Supervisory Board, at the proposal of the Appointments and Governance Committee, appoints one of its independent members as lead member. Its main role is to help prevent conflicts of interest and ensure that they are properly managed within the Supervisory Board.

INDEPENDENT SUPERVISORY BOARD MEMBERS

Members representing employees are not included in the calculation of the independence rate.

Almost all of the Supervisory Board members have in-depth knowledge of the banking and financial sector, the activities carried out and the products offered by the Bank, namely:

- their executive offices or operational roles (financial services, strategic management) currently held within La Poste or Caisse des Dépôts, which give them a holistic view of the Group's activities, as well as a detailed understanding of the challenges it faces;
- among the independent members, their considerable experience acquired during their careers as senior executives, consultants or auditors with banking, financial and insurance institutions, which gives them a certain perspective and critical eye in relation to the Group's practices;
- among the members representing employees, their role as employees (an average of nearly 20 years) covering both the business lines and the internal control functions, which gives them a good understanding of the institution's activities. [GOV_1.04]

2.1.2.4 CSR and sustainability issues taken into account by governance bodies

During quarterly Steering Committee meetings, the Sustainability Department ensures the implementation of due diligence for the identification of the Group's IROs as well as the results and effectiveness of policies, actions, metrics and targets in relation thereto. Information on the low-carbon pathway for Scopes 1 and 2 is updated every year, while the Scope 3 low-carbon pathway is updated every six months for La Banque Postale SA.

The governance bodies are also regularly informed on these subjects:

- the Supervisory Board, informed of the Group's climate strategy at least twice a year;
- the Management Board, which reviews and adapts the climate and nature strategies on the basis of the work carried out by the Group's experts, at least twice a year;

- the Mission Committee, which addresses the subject of climate change at each of its meetings (at least three per year);
- the Executive Committee, whose climate and nature topics are on the agenda at least once a month;
- the Group Risk Steering Committee, which meets once a month.

Additional information is available in Section 3.1.2.1.5 "Sustainability implications for the Executive Board, the Supervisory Board and its specialised committees" of the Universal Registration Document.

More specifically, at CNP Assurances, the Executive Committee, the CSR Committee, the Audit and Risk Committee and the Board of Directors are informed of significant impacts, risks and opportunities, in particular the implementation of due diligence, the transition plan, as well as the results and effectiveness of the policies, actions, measures and targets adopted to address them. In 2024, CNP Assurances' CSR Committee met five times. [GOV_2.01]

This information is fed into the transition plan with regard to the IROs. At the operational level, **almost all (88%) of the material impacts, risks and opportunities** identified as part of the double materiality analysis had **already been taken into account** in the update of the "La Banque Postale 2030" strategic plan. [GOV_2.02]

The list of significant IROs processed by the governance bodies is presented in the IRO description tables (for more information, please refer to Section 2.1.3.2 "Description of material impacts, risks and opportunities (IROs)"). [GOV_2.03]

2.1.2.5 Alignment of remuneration with La Banque Postale's sustainability targets

Lastly, to frame its remuneration policy, La Banque Postale has adopted principles and rules determining the remuneration of corporate officers, based on the work of its Remuneration Committee. They were prepared in accordance with the main recommendations of the Afep-Medef Code, and with the provisions of the Order of 3 November 2014 on the internal control of companies in the banking, payment services and investment services sector, which are subject to supervision by the French Prudential Supervision and Resolution Authority (ACPR).

Additional information is available in Section 3.2 "Remuneration of executives" of the Universal Registration Document. [GOV_3.06]

Remuneration of the Supervisory Board

The remuneration of the members of La Banque Postale Group's Supervisory Board, including its Chairman, the lead member and the Chairmen of the Committees, is based on a fixed amount and therefore does not depend on the achievement of climate targets. The amounts reflect the responsibilities assumed as well as members' actual attendance of Supervisory Board and Committee meetings. [GOV_3.01] [E1_GOV_3.01] [E1_GOV_3.02]

Remuneration of Executive Board members

ANNUAL VARIABLE REMUNERATION OF MEMBERS OF THE EXECUTIVE BOARD

The remuneration of Executive Board members is determined by the Supervisory Board based on the recommendation of the Remuneration Committee. [GOV_3_06]

For the 2024 financial year, **15%** of the annual variable remuneration of the members of La Banque Postale Group's Executive Board is **based on ESG performance criteria**, divided between:

- criteria related to La Banque Postale's accessible banking mission (5%);
- criteria related to its positioning as a "responsible finance leader":
 - a climate target: validation of the low-carbon pathway and alignment with the Paris Agreement, according to the SBTi and NZBA methodologies (5%) – see mission-led company target no. 3.4;
 - other ESG targets: progress of the action coordination programme in improving sustainability actions and social responsibility within the Group (5%). [GOV_3_01] [E1_GOV_3_01] [E1_GOV_3_02]

For each indicator, the assessment of the achievement rate is based on the assessment by the Supervisory Board of the performance of the members of the Executive Board in light of the major strategic focuses and budget targets defined each year. The achievement rate for each criterion may vary between 0% and 120%.

The overall performance is equal to the weighted average of the achievement rates of each performance criterion, capped at 100%. For the financial criteria, a trigger threshold is applied below which the achievement rate will be considered zero. Reaching the trigger threshold results in an achievement rate of 80%. The calculation of performance between the different limits is linear. [GOV_3_02] [GOV_3_04]

The sustainability targets set to assess the achievement of the Executive Board's ESG targets are as follows:

Climate targets and alignment with the Paris Agreement

La Banque Postale is committed to reducing its greenhouse gas emissions by following a low-carbon pathway in line with the Paris Agreement. This pathway is based on recognised methodologies, such as the Science-Based Targets initiative (SBTi) and the Net Zero Banking Alliance (NZBA). SBTi targets are detailed in paragraph 2.2.1.4.1 "Presentation of decarbonisation targets".

Progress of the sustainability programme

La Banque Postale's sustainability programme aims to coordinate and strengthen actions to boost the Group's social and environmental commitments. It is based on the following milestones for 2024:

- The definition of a clear governance framework to structure and manage non-financial data (ESG);
- The framing of climate pathway management systems, in line with the SBTi and NZBA methodologies, for coverage and trading floor activities;
- The deployment of ESG analysis processes *via* the Impact Weighting Factor (IWF) tool in several key areas:
 - Industrialisation of processes for asset and project financing (APF) and commercial real estate;
 - Framework for processes in the public sector, the social economy and large companies.
- The publication of the sustainability report and the Climate and Nature report, in order to report on the actions and progress made in terms of the Group's social and environmental responsibility. [GOV_3_03] [E1_GOV_3_03]

Variable remuneration of employees

The individual variable remuneration of employees includes a significant portion linked to the achievement of ESG targets, which relate to the Group's long-term impact and

performance, excluding financial results. This portion is monitored by mission-led company indicator 1.2 (see Section 2.1.6.1 "The impact-awareness culture at the heart of the mission-led company").

VARIABLE REMUNERATION OF EMPLOYEES

The Group's ambition is to increase the weighting of these non-financial criteria and bring this rate up to 40% for the entire banking and insurance scope by 2030. These non-financial criteria cover "customer", "sustainability" and "employee"-related matters, and are aligned with the Group's strategy.

With regard to collective variable remuneration, 50% of the discretionary profit-sharing plan depends on the achievement of non-financial indicators. [GOV_3_01] [EI_GOV_3_01] [EI_GOV_3_02]

2.1.2.6 Due diligence procedures

La Banque Postale Group is implementing a structured process of due diligence to ensure that ESG issues are integrated into its activities. This process is based on several pillars:

Governance and strategic integration

Due diligence is integrated into La Banque Postale Group's governance and strategy through a dedicated committee procedure. Half-yearly and quarterly committees oversee duty of care activities, covering both the subsidiaries and the operating scope. For purchasing, they are supplemented by a dedicated policy and by sector-specific exclusion policies that cover the entire Group. La Banque Postale incorporates issues related to its employees into its due diligence process, including the prevention of psychosocial risks, equal opportunities and occupational health.

The launch process for any new offer includes a mandatory ESG analysis prior to its launch on the market.

In addition, the Impact Weighting Factor, gradually rolled out to the Bank's technical reserves, measures the environmental, social and regional impact of Corporate and Investment Banking transactions (for more information on the ESG checklist, see focus point: *The ESG checklist: responsible products "by design"*; for more information on the IWF, see focus point: *The Impact Weighting Factor*).

CNP Assurances' due diligence procedure is carried out by sustainability officers who are experts in the support functions. It is supplemented by inputs from dialogue with stakeholders and is then presented to the CSR

Committee, which reports to the Board of Directors of CNP Assurances. These due diligence procedures specifically cover relationships with its suppliers, mergers and acquisitions, but also investment decisions.

Finally, at LBP AM and La Financière de l'Échiquier, due diligence is based on three levers: the integration of ESG matters via the **GREaT methodology** (see focus point: *The GREaT methodology*), exclusion policies and shareholder engagement.

Louvre Banque Privée also adopts sectoral exclusion policies and selection rules applicable to the products presented in its ESG Charter.

Stakeholder engagement

La Banque Postale actively collaborates with its stakeholders, including its suppliers and partners, through responsible purchasing policies and clear commitments on respect for human rights and international standards and compliance with its purchasing manual. Within the credit activities, questionnaires on climate risk and the ESG profile of issuers are rolled out.

This collaboration extends to the shareholder engagement policies conducted by LBP AM.

Identification and assessment of negative impacts

For the own operations scope, negative impacts can be identified and assessed using tools such as the Responsible Purchasing Charter, risk mapping, the due diligence plan and policy as well as supplier assessments.

For credit and investment activities, this process is based on the Impact Weighting Factor (see focus point: *The Impact Weighting Factor (IWF)*), exclusion policies and the Responsible Financing and Investment Charter (see focus point: *La Banque Postale's Financing and Investment Charter*).

At CNP Assurances, shareholder engagement policies, exclusion policies and the selection of direct investments on the basis of ESG criteria prevent a certain number of negative environmental impacts (climate, biodiversity, etc.), ethics (corruption, financing of terrorism and money laundering, etc.) or social (human rights violations, discrimination, etc.)

There are four types of exclusion policies deployed by LBP AM in its investments: regulatory, standards-based (gross violation of the OECD Guidelines and United Nations Guiding Principles on Business and Human Rights), sector-specific (particularly for the gambling, tobacco, thermal coal, oil and gas sectors, sectors which cause deforestation or which have the most negative impact on biodiversity) and specific in the event of serious shortcomings on one of the four pillars of the GREaT analysis grid (see focus point: *The GREaT methodology*).

Corrective actions and follow-up

Measures such as exclusion policies and shareholder engagement programmes are implemented to reduce the identified negative impacts.

In addition, for its own activities, the Group deploys its due diligence processes as well as its Responsible Purchasing Charter and a four-pillar compliance programme for its suppliers. CNP Assurances and LBP AM also have a responsible purchasing policy.

Monitoring and communication

La Banque Postale and its subsidiaries regularly publish reports on their due diligence efforts and results (institutional websites of La Banque Postale and La Poste, socially responsible investment policies on the LBP AM website, Louvre Banque Privée's statement of negative impacts as part of SFRD reporting framework). [GOV_4_01]

DUE DILIGENCE PROCEDURES

CROSS-FUNCTIONAL LEVERS

The implementation of due diligence is based on various tools deployed by the Group and its subsidiaries. These provide a cross-functional approach to the entire process, and are continuously enhanced and updated as part of a continuous improvement approach.

	POLICIES, TOOLS AND ACTIONS	STAGES CONCERNED	ENTITY CONCERNED	MATTERS ADDRESSED
GOVERNANCE AND CROSS-FUNCTIONAL POLICIES	Duty of care	①②③④⑤	All	Preventing risks across the entire value chain
	Monitoring committees (including CSR Committee and CSR Department)	①⑤	All	Several committees dedicated to monitoring CSR, due diligence and duty of care, with reviews by the governance bodies of the Group and its entities
INDICES AND ANALYSIS GRIDS FOR PRODUCTS AND SERVICES	ESG checklist (Credit)	①	La Banque Postale	Assessment of products and services according to their environmental and societal impact
	Impact Weighting Factor	①③④	La Banque Postale	Impact measurement metric focused on societal, environmental and regional impacts
	GREaT rating	①	LBP AM	Assessment of the governance, resource management, energy transition and regional development of 11,000 companies
	Specific questionnaires (climate, etc.)	②	La Banque Postale	Assessment of the management of sustainability issues
RISK MAPPING AND ASSESSMENT	Risk Mapping	②③	La Banque Postale, CNP Assurances	Human rights risk assessment and environmental impact assessment
	Retail customer risk assessment	③	LBP Lending activities	Customer risk assessment
COMMITMENT AND INVESTMENT DECISIONS	Charters (ESG, responsible investment, etc.)	①	LBP AM, Louvre Banque Privée	Principles of action shared with the Group's stakeholders
	Sustainability due diligence for mergers and acquisitions		CNP Assurances	Checking that acquisitions are aligned with social and environmental objectives
	Exclusion policies	①③④	LBP AM, Louvre Banque Privée, CNP Assurances	Exclusion of investments in sensitive sectors (fossil fuels, etc.)
	Selection of investments based on ESG criteria	③④	LBP AM, Louvre Banque Privée, CNP Assurances	Assessment of investments with sustainability and compliance criteria
	Shareholder engagement and dialogue	①②④	LBP AM, CNP Assurances	Working with companies to improve their practices
PURCHASING	Responsible purchasing policies, charters and manuals	①②④	All	Promotion of sustainability principles in purchasing and management of negative impacts in the upstream value chain on social, human rights and environmental aspects
	Supplier assessment (Provigis, Ellipro, IndueD, EcoVadis, etc.)	②③	La Banque Postale, CNP Assurances	Checking suppliers' commitments on human rights, international standards and sustainability
	Supplier Relations and Responsible Purchasing label	⑤	La Banque Postale SA, CNP Assurances	Sharing and certifying the responsible purchasing approach
CUSTOMER ENGAGEMENT	Reviewing the suitability of products to meet customer expectations	②	Louvre Banque Privée	Assessing products and services against customer expectations
	Customer satisfaction survey	②	Louvre Banque Privée	
COMMUNICATION AND TRAINING	Reports, ESG publications, SFDR report	③⑤	All	Transparency with stakeholders on ESG commitments and results
	Duty of care E-learning	⑤	La Banque Postale	Strengthening skills in due diligence issues

2.1.2.7 Risk management and internal control

2.1.2.7.1 Risk management and internal control system

La Banque Postale Group has set up a global governance and risk management system, for which additional information is available in Section 6.3 "Risk management framework" of the Universal Registration Document. This system is based on a set of committees, which report on appropriate risk management to the management of La Banque Postale Group, via its management bodies. The system integrates the risk component into all of the Company's decision-making processes, involving the Company's players at different levels. ESG risks are gradually being integrated into the committee procedure defined by La Banque Postale's Risk Department. Therefore, a section dedicated to ESG risks is included in the Bank's risk appetite.

Risk monitoring is carried out based on the three lines of defence model for banking institutions. ESG risks are also gradually included at these three levels in order to ensure that they are controlled. Additional information on internal control is available in Sections 4.6. "Internal control" and 6.3.2 "Internal control" of the Universal Registration Document. **[GOV_5_01]**

The identification of ESG risks is an important pillar of La Banque Postale Group's risk management framework. This process is based on an overall analysis of the external environment, business portfolio, internal operations and the Group's strategic priorities, also incorporating the opinions of civil society and specialised NGOs.

The ESG risks are identified and assessed in La Banque Postale Group's risk map in order to provide an overall view and ensure that all these risks are comprehensively managed at the level of the financial conglomerate. The ESG risk map is updated annually to assess its criticality using a common rule applied to all risk categories across the Group. Criticality is determined by combining impact and frequency measurements. It is assessed on a scale of 1 to 4 (minor, moderate, major and critical). The ESG risk is qualified as "major". ESG risk measurement and assessment is based on existing measurement systems (operational risks, compliance etc.), but also on dedicated systems for quantified risks. Additional information is available in Section 6.8.3 "Risk identification and assessment" of the Universal Registration Document. **[GOV_5_02]**

2.1.2.7.2 Risks identified and risk mitigation strategy

The risks identified in the risk map have been included in La Banque Postale Group's double materiality analysis. The material risks resulting from this analysis are detailed in Section 2.1.3.2 "Description of material impacts, risks and opportunities (IROs)".

The main ESG risks used in the CSRD materiality analysis are as follows:

- Environmental risks:
 - Physical and transition climate-related risks;
 - Nature-related physical and transition risks (considered as non-material);
- Social and societal risks:
 - Risk related to the Group's employment, health and safety practices;
 - Risk related to a customer protection failure;
 - Risk of assessment failures in relation to La Banque Postale Group's customers and stakeholders;
- Governance risks:
 - Risk of failures in the internal governance of La Banque Postale Group.

Additional information concerning the details of the ESG risks identified and applied in La Banque Postale Group's risk mapping is available in Section 6.8.3.2 "ESG risk map" of the Universal Registration Document.

The actions implemented to mitigate them are described in this chapter, in the various paragraphs presenting the action plans, and specifically in 2.2.1.5 "Decarbonisation levers and action plans" and 2.3.1.5 "Employee action plans and resources". **[GOV_5_03]**

The results of the mapping exercise feed into the risk monitoring system and its management framework. Remedial plans are defined to control identified potential impacts. These may take the form of sector-specific policies, reviews and adjustments of La Banque Postale's internal processes, or stronger control and monitoring arrangements. **[GOV_5_04]**

The Supervisory Board and Executive Board place considerable emphasis on ESG factors when it comes to defining La Banque Postale's strategy, operating targets and risk management framework. The Executive Board and the Supervisory Board receive regular briefings on ESG risk exposures and take these issues into account in their decisions. Finally, monthly reports are sent to the Executive Committee and the Group Risk Management Committee (GRMC). **[GOV_5_05]**

2.1.3 A strategy for the just transition

2.1.3.1 Group business model and value chain

2.1.3.1.1 Business model

The Group's business model is based on sustainable profitability which supports the just transition. The Group's main growth drivers are bancassurance in France, notably through retail banking, CNP Assurances and La Banque Postale Consumer Finance, international bancassurance via CNP Assurances, corporate and investment banking, serving the public sector, the social economy, companies and financial institutions, and finally, wealth management and asset management with Louvre Banque Privée, LBP AM, Tocqueville Finance and La Financière de l'Échiquier.

The Group's strategy is structured around several areas, including offering solutions adapted to each individual for a unique experience, offering products that have a positive impact on society and the planet, developing a learning company, developing digital solutions for an omnichannel customer experience, standing out by providing the best in bancassurance services for all and diversifying for a more resilient business model. [SBM_1.25]

The Group draws on a number of resources, including its sustainability DNA (mission-led company, accessible banking mission, La Poste Group's strength and its influence in the public financial sector of Caisse des Dépôts), its regional presence in France and abroad, its employees, a solid partner network, and its robustness thanks to a solid financial profile and a low risk profile. [SBM_1.26]

Based on these components, it creates value in the following areas: enabling customers to participate in the just transition, providing banking and insurance inclusion, training and engaging employees, financing the regions, taking action for the planet, collaborating with charities and NGOs and strengthening shareholder confidence.

Additional information on the Group's business model can be found in Section 1.1 "General presentation of the Group" of the Universal Registration Document. [SBM_1.27]

2.1.3.1.2 Products and services

La Banque Postale Group continues to strengthen its positioning as a committed bancassurance player, offering a comprehensive range of products and services tailored to the needs of its retail customers and to business customers.

Its historical offering includes traditional banking solutions, as well as diversified insurance products, such as life insurance, personal insurance and property and liability insurance. La Banque Postale is also the custodian of the accessible banking mission entrusted by the State, which guarantees universal and non-discriminatory access to essential banking services for vulnerable groups (see 2.3.4.5.2 "Actions implemented to generate positive impacts").

As part of its transformation into a mission-led company, the Group has taken a strategic step by integrating social, environmental and regional targets into its development. This transformation has resulted in:

- the development of inclusive banking and insurance products to meet social and environmental challenges;
- the introduction of solutions promoting a just transition and a sustainable economy, such as green financing, responsible savings products and offers adapted to the projects of individuals and companies.

In 2024, La Banque Postale sold the business assets of KissKissBankBank (KKBB) and Lendopolis, two crowdfunding platforms acquired in 2017. During their integration into the Group, these companies benefited from the strategic support and resources of La Banque Postale to consolidate their position and accelerate their development.

- KissKissBankBank has strengthened its role in cultural and social crowdfunding, supporting thousands of projects led by entrepreneurs, associations and artists. This dynamic enabled KKBB to become a key player in the sector, before its takeover in Ulule, where it continues its mission with an even wider community.
- Lendopolis, which specialises in crowdfunding for companies, has benefited from a structured strategy by La Banque Postale to develop its offering in favour of energy transition projects. Lendosphere's 100% acquisition of Lendopolis created a European leader in crowdfunding dedicated to the energy transition, while guaranteeing its business continuity.

This strategic repositioning allows the Group to refocus on its core banking businesses, while promoting sustainability and positive impacts through solid partnerships with these entities. [SBM_1.01]

Prohibited products

None of the products or services offered by La Banque Postale Group are prohibited in certain markets. However, the Group is extremely vigilant with regard to a certain number of sectors with high sustainability risks.

For example, La Banque Postale excludes the financing of fossil fuels and infrastructure aimed at increasing air traffic (with the specific exception of financing aimed at improving the safety of staff and passengers, bringing infrastructure up to standard or improving its energy efficiency).

A Responsible Financing and Investment Charter derived from its operational risk management policy provides guidance to La Banque Postale Group on financing and lending to business and corporate loan customers. This Charter specifies that companies operating in sensitive sectors are excluded in terms of financing or investment.

Moreover, companies involved in serious or repeated controversies concerning environmental, social or governance issues, may also be excluded from financing and investment. For more details, see focus point *La Banque Postale's Financing and Investment Charter*.

La Banque Postale Group also strives to prevent financial, legal and reputational risks caused by investing in jurisdictions known for a lack of regulation, transparency or cooperation regarding tax fraud, money laundering and terrorism financing. As such, it is prohibited from setting up operations in the countries mentioned in the European list of non-cooperative countries and territories for tax purposes. Offers in these countries must be approved by the Tax Department before they are marketed (additional information is available in Section 4 “Business activity and results” of the Universal Registration Document).

In addition, the Group has compiled a list of countries excluded from sovereign wealth funds due to corruption, tax policy issues or the failure to respect basic rights. It has also clarified its principles of intervention in the defence sector, which came into force on 1 July 2024. The Group

reaffirms the exclusion from its financing and investment activity of all weapons and equipment prohibited by international conventions or by European Union regulations, as well as the players involved in these sectors.

In addition, the urgent need to protect ecosystems and communities from deforestation and the conversion of ecosystems has led La Banque Postale to define a commitment strategy to support its customers in the fight against deforestation, which came into force on 1 January 2024. To ensure alignment with Caisse des Dépôts' biodiversity policy, this engagement strategy is complemented by the exclusion of operators and traders in the coffee, cocoa, rubber, palm oil, soya, cattle and timber sectors from financing and investment unless the company has implemented a recognised policy to prevent deforestation. [SBM_1.05]

La Banque Postale's Financing and Investment Charter

La Banque Postale's Responsible Financing and Investment Charter embodies the Bank's commitment to sustainable and community-minded finance. This document establishes the fundamental principles that guide the bank's lending and investment decisions, systematically integrating environmental, social and governance (ESG) issues. It complements the topical commitments, principles of intervention and sectoral risk management policies. It is based on two main pillars: exclusions and management of ESG controversies.

Exclusions

La Banque Postale has identified activities that are incompatible with the targets of sustainable development, health and well-being for all. In addition, it does not wish to contribute capital to countries where fundamental rights and international standards are not respected. The Charter specifies that companies operating in sensitive sectors (tobacco, controversial, banned or unconventional weapons, pornography, gambling, pesticides, fur, animal testing) are excluded from financing and investment. With regard to sovereigns, countries considered as tax havens or with an insufficient score in indices related to fundamental rights (in particular political rights and civil liberties, workers' rights, freedom of the press) and corruption are excluded.

Controversy management

Companies involved in serious or repeated controversies concerning environmental, social or governance issues, may also be excluded from financing and investment.

The UN Guiding Principles, the International Labour Organization Conventions on fundamental principles and rights at work and the OECD Guidelines for Multinational Enterprises serve as guiding frameworks.

La Banque Postale undertakes to verify, before investing in or financing a company, that the company is not involved in an ESG controversy, based on an exclusion list validated by the Controversies and Exclusion Committee. This Committee meets quarterly to update the exclusion list and make it available to stakeholders.

Information relating to exclusion criteria and cases of controversy is obtained from public information sources, data suppliers and counterparties.

In the event of serious or repeated controversies over ESG issues, a procedure is put in place to assess the companies concerned. The Controversies and Exclusion Committee examines these cases and may decide to place the company under supervision, to initiate a dialogue, or, in the most serious cases, to exclude it from the Corporate and Investment Banking portfolio if the engagement does not yield satisfactory results.

Implementation

The implementation of the Charter is subject to a dedicated and documented internal procedure, specifying the roles and responsibilities of each stakeholder. The Sustainability Department ensures that it is distributed to all employees concerned by its application and that it is properly understood. The Charter is available on the La Banque Postale website.

Scope of application

The provisions of the Charter apply in particular to the activities of La Banque Postale Group's Corporate and Local Development Banking division. To date, they do not apply to the activities of the bancassurance divisions in France and abroad, or to those of the Wealth and Asset Management division.

2.1.3.1.3 Main types of customers

True to its role as a bank dedicated to serving the community, La Banque Postale targets a diverse range of customers with an offer adapted to the specific needs of each segment, while integrating social, environmental and economic matters into its strategy.

Public sector and social economy

La Banque Postale is a key player with local authorities and public hospitals. Its strategic partnership with SFIL/CAFFIL (Société de Financement Local/Caisse Française de Financement Local) enables it to finance structuring projects, such as the construction and renovation of public infrastructure or the acquisition of state-of-the-art medical equipment. In addition, through its subsidiary Hippocad, it supports local authorities in social action initiatives, thus meeting the needs of the most vulnerable.

Corporates

La Banque Postale supports companies of all sizes, from SMEs and intermediate-sized enterprises to large, listed companies (SBF 120, CAC 40), by offering them tailor-made banking and financial engineering solutions. This offer aims to support productive investments, technological, ecological and social innovation, as well as the energy transition. Particular attention is paid to sectors exposed to climate risks (transport, non-carbon energies) and to industries that are strategic for national independence.

Financial institutions

La Banque Postale offers specialised solutions to financial institutions, such as banks, insurance companies, mutual insurance companies, asset managers and funds. These solutions include investment activities, structured financing (fixed income or bank), securities borrowing and lending, as well as hedging and cash management instruments. This positioning consolidates its role as a major player in the financial ecosystem, while promoting responsible and sustainable practices.

Retail customers

La Banque Postale serves 10.1 million active retail customers by offering them a comprehensive range of financial products and services. It focuses on banking accessibility and financial inclusion, with 17,000 retail outlets throughout the country, including 7,000 post offices, guaranteeing proximity to its customers. In 2024, La Banque Postale welcomed 647,000 new retail customers and recorded a 26% increase in sales of complementary equipment products, demonstrating its ability to meet the evolving needs of its customers.

Policyholders

With the integration of CNP Assurances, La Banque Postale has established itself as a major integrated bancassurance group. This transaction strengthens its ability to offer a complete range of property and personal insurance, covering areas such as life insurance, retirement, personal risk and protection. With more than 30 million personal risk and protection policyholders and 14 million savings and retirement policyholders on two continents (Europe and Latin America), CNP Assurances consolidates La Banque Postale's commitment to offering solutions adapted to the needs of its customers, while promoting responsible and sustainable practices. [SBM_1.02]

2.1.3.1.4 Breakdown of own workers and income

Total income is defined as the total income from interest and similar income, income from securities, commissions received, profits from financial transactions and other operating income.

It therefore includes the following consolidated income statement items from the financial statements in section 5.1 Consolidated financial statements of the URD:

- ▷ Interest income;
- ▷ Fee and commission income;
- ▷ Net gain or loss on financial instruments at fair value through profit or loss, through equity or from the derecognition of financial assets at amortised cost;
- ▷ Income and expenses from reinsurance contracts held;
- ▷ Finance income or expenses from reinsurance contracts held;
- ▷ Income from other activities (excluding provision reversals).

The concept of income used for La Banque Postale Group's sustainability report corresponds to the definition of "net turnover" in Article. L. 511-35-1 of the Monetary and Financial Code, i.e. the total income from interest and similar income, income from securities, commissions received, profits from financial transactions and other operating income.

La Banque Postale Group is not considered to be a company active in the fossil fuel sector, given its financing, investment and insurance business, in accordance with the list defined by the regulations. It applies fossil fuel exclusion policies, as detailed in Section 2.2.1.3. "Climate change mitigation and adaptation policies". Additional information on portfolio exposures to sectors that contribute significantly to climate change is available in Section 6.8.7 "Indicators of potential climate change transition risk" of the Universal Registration Document. [SBM_1_09]

FOSSIL FUEL REVENUES	Revenue (in € thousands)
Fossil fuel sector revenues	0 [SBM_1_10]

The Group's exclusion principles are set out in its Responsible Financing and Investment Charter. For more information, please refer to the focus point: *La Banque Postale's Financing and Investment Charter*.

2.1.3.1.5 Sustainability strategy and targets

As a mission-led company, La Banque Postale is committed to meeting social, environmental and regional challenges.

La Banque Postale Group's company purpose

"Because it was created with the purpose of serving the public, La Banque Postale believes that there can be no long-lasting value creation without redistribution, no economic growth without local prosperity, and no sustainable development without respect for planet boundaries.

By offering quality and accessible services, our purpose is to enable everyone to fulfil their potential and to contribute, through their investment, savings, insurance and consumption choices, to building a society that is more attentive to the planet and all who live on it. As a committed banker and insurer, it is our desire to work towards this just transition alongside our customers and employees."

By offering financial products and services to as many people as possible, the Group fulfils its public service mission while supporting its customers in the just transition.

As part of its transformation into a mission-led company, the Group has set itself ambitious targets in terms of the sustainability of its products and technical reserves, which it is monitoring closely. By 2025, for example, it aims to ensure that 80% of new offers are identified as sustainable based on the ESG checklist (see focus point: *The ESG*

checklist: responsible products "by design") and to be assessing 87% of the Bank's technical reserves based on the Impact Weighting Factor (see focus point: *The Impact Weighting Factor (IWF)*).

Since 2021, CNP Assurances has also included its company purpose in its Articles of Association. It has also set out its commitments to its various stakeholders, as well as specific monitoring indicators to ensure their implementation.

CNP Assurances' company purpose

"As a responsible insurer and investor, driven by the community values of our Group, we work with our partners to create an inclusive and sustainable society, providing solutions to as many people as possible to protect and support them on their chosen paths."

CNP Assurances stands out for its vision as an insurer and sustainable investor, its open and multi-partner model, as well as its financial strength and impact on the economy. Its model enables it to reach several hundred partners and tens of millions of customers on two continents: Europe and Latin America. As a member of the major state-owned financial unit Caisse des Dépôts, CNP Assurances is a leading financial player in green investments and major infrastructure in its regions. [SBM_1_21]

In 2024, ESG integration was placed at the heart of the Group's product innovation dynamic.

The inclusion of ESG criteria in the **design of offers** for Retail Banking for individuals and professionals and in Corporate and Local Development Banking is based on shared tools such as the ESG checklist and the issuance framework for green, social and sustainable bonds, which defines the rules applicable to thematic issues.

The ESG checklist assesses offers and products in terms of their contribution to the customer experience and satisfaction as well as to the just transition. Within the

range, certain product and service offerings are particularly relevant to the just transition, in particular:

- Financing offers that promote social home ownership (PAS loans), energy renovation (impact real estate loan, zero-interest eco-loan, *Avance Rénovation* loan) or that support responsible consumption projects (personal loans for green vehicles or green works);
- Community finance offers such as the Solidarity Interest Service (SIS), available for regulated passbook savings accounts as well as the LBP AM SRI Human Rights and LBP AM SRI *Actions Solidaire* funds;
- The range of committed financial savings built on obtaining the State SRI label for eligible products and on strict ESG selection criteria for others;
- Savings solutions dedicated to financing the transition, such as the Tocqueville Environnement SRI fund or green bond issues;
- Free non-banking services that support all customers in calculating and managing the carbon footprint of their banking expenses (Carbo) or, which help young customers negotiate adulthood (Youth Pass).

Since December 2024, La Banque Postale customers have been able to sign up to a new impact card offer, in partnership with WWF France. This offer aims to:

- contribute to the energy renovation of the French housing stock, especially the least energy-efficient housing. To this end, deposits in the associated accounts are allocated to the financing or refinancing of real estate loans granted by La Banque Postale to those buying a home, where these also include a home improvements budget for energy and heat efficiency;
- promote actions to preserve and restore biodiversity: the additional contribution of the impact card, compared to a traditional card, is paid in full to WWF France to support its programmes;
- support holders to adopt more responsible consumption practices throughout using the Carbo carbon footprint calculator and dedicated advice.

Risk management and insurance solutions also respond to changes in society and the challenges of increased life expectancy, preparing for retirement, and changing social protection schemes. CNP Assurances has therefore introduced:

- The right to be forgotten for women who suffer from breast cancer;
- Microinsurance products in Latin America;
- A range of insurance products covering needs in terms of protection against life risks (life insurance, funeral costs, long-term care);
- Products and services adapted to the specific needs of the elderly and people with chronic diseases.

In **financial savings**, in addition to funds offering existing sustainable investment solutions, the Group has expanded its offer by listing the Tocqueville Biodiversity SRI UCI in July 2024. This fund, classified under Article 9 of the SFDR Regulation, is offered to Retail Banking customers and supports investment in companies that, through their goods and services, directly and indirectly reduce the impact of human activities on biodiversity. More information on SFDR technical reserves is available in paragraph 2.1.6.4 "Monitoring indicators for impact finance commitments".

Also, in the structured debt securities segment, La Banque Postale Group continues to innovate towards greater ESG integration. In September 2024, it launched a green issue – La Banque Postale Green PAB 100 Autocall November 2032 – which can finance or refinance projects related to the environmental transition identified based on its Green, Social and Sustainability Bond Framework. This also provides an opportunity to use a new underlying index (Euronext® Euro zone 60 PAB) in line with the recommendations of the Paris Climate Agreement. [SBM_1.22]

La Banque Postale Group places sustainability matters at the heart of its strategy, as evidenced by:

- the Group's transition plan and the sectoral policies put in place to direct financing and investments (coal, oil, gas, aeronautics, deforestation and ecosystem conversion);
- the publication of the Climate and Nature report (aligned with the TCFD and TNFD recommendations), which for the first time links climate and biodiversity matters in a single publication;
- the ESG checklist, which helps to better qualify offers (see focus point: *The ESG checklist: responsible products "by design"*);
- Use of the Impact Weighting Factor, an internally developed sustainability and impact indicator (see focus point: *The Impact Weighting Factor (IWF)*), as well as GREaT, LBP AM's SRI analysis method (see focus point: *The GREaT methodology*). [SBM_1.23]

2.1.3.1.6 Value chain

La Banque Postale Group's value chain is presented in the following infographic.

La Banque Postale Group values collaboration with its teams, partners and ecosystems to strengthen its impact and develop innovative and sustainable solutions. It also strives to share its knowledge and best practices with its partners to maximise the impact of its actions. Internally, it encourages cooperation between its different teams and departments to ensure a consistent and effective implementation of its sustainability strategy. [SBM_1.28]

2.1.3.1.7 Consideration of stakeholders

Details of how stakeholders are taken into account are presented in the following infographic "Main stakeholder challenges".

La Banque Postale Group seeks to work collaboratively with its stakeholders in as many decisions as possible. [SBM_2.01]

The Group's main stakeholders are presented in the infographic showing the value chain. [SBM_2.02]

Several bodies ensure that the interests of the Group's stakeholders are understood and taken into account.

Composed of 18 members, including 12 independent experts from the economic, financial, academic and civil society worlds, the **Mission Committee** monitors and develops La Banque Postale's sustainability strategy. It meets at least three times a year, and ensures that the actions implemented effectively contribute to meeting the Group's targets. It assesses the action plan on the basis of 14 indicators and publishes a mission report each year, which is presented to the Supervisory Board.

The **Customer Board**, a partner of the Executive Committee, aims to improve the offer, the quality of service and the customer experience. To this end, it collects customer opinions on the Group's projects or strategic decisions three times a year. Its 16 members embody the diversity of La Banque Postale's customers.

The **Initiative against Banking Exclusion Think-tank** was created in 2013 at the initiative of La Banque Postale. Composed of 25 members, it brings together committed players from the social and non-profit world to:

- Collectively supporting the commitment to financial inclusion;
- Share work related to poverty;
- Promote synergies between players and the creation of solutions.

Finally, La Banque Postale Group regularly consults **NGOs** and civil society as part of its commitments and actions.

For example, the Impact Weighting Factor was built with WWF France. Similarly, each sector-specific policy is drawn up on the basis of dialogue with an NGO or a professional federation in the sector concerned. [SBM_2_03] [SBM_2_04] [SBM_2_06]

Discussions with stakeholders help the Group to understand the key challenges to which the Group must respond, and make it possible to work together on innovative solutions on social issues: community causes, professional integration, access to housing, banking inclusion, budgeting education, education and equal opportunities. [SBM_2_05]

The governance bodies are regularly informed of the views expressed by stakeholders. [SBM_2_12]

INCORPORATING STAKEHOLDER ISSUES INTO THE STRATEGY

La Banque Postale's ten-year strategic plan (2021-2030) is the result of an approach that takes on board the concerns of stakeholders (customers, community and co-workers). It also incorporates the expectations of investors and rating agencies. It was developed before the CSRD, but it is based on the Group's **sustainable values** and is already aligned with the majority of the issues identified in the materiality analysis.

Our strategy focuses on our main stakeholders: **customers, community and co-workers**. For La Banque Postale, the term "sustainability" encompasses environmental and societal issues, particularly those of the regional public sector, and the Group's ability to provide responsible products and services (banking services, insurance, credit and investment). In this respect, it is aligned with the main ESRS.

The strategy's sustainability pillars include **serving our company purpose as a mission-led company**, defined by our commitment to a society which works towards the interests of our planet and its inhabitants, a just transition, and the transformation of the bancassurance model. This strategy aims to mitigate our impacts and promote adaptation (economic resilience and diversification) in a context of environmental and societal transition. It also systematically includes ESG matters to ensure sustainability and positive impact.

The Group's strategy reinforces its differentiating position as a **universal banking and insurance provider**, in line with our accessible banking mission and regional network.

Furthermore, La Banque Postale Group recognises the **impact of its financed activities** and acts accordingly through both shareholder dialogue with companies, and the financing of the public sector and the social and solidarity economy. [SBM_2_08] [SBM_2_09]

S2

G1

With regard to CSRD topics not covered in the current strategy, the issues of **governance** and **business conduct** are intrinsic to the business model of a particularly regulated bancassurance company, and are the subject of daily attention.

The implementation of the 2030 strategic plan takes stakeholder issues into account. There are currently no scheduled structural changes to the strategic plan. However, when it is updated, the interests of stakeholders identified through the double materiality analysis will be integrated into a conglomerate vision, which includes CNP Assurances. [SBM_2_10]

The affected stakeholders will therefore not be impacted in the short term by a change in the strategy. [SBM_2_11]

2.1.3.2 Description of material impacts, risks and opportunities (IRO)

SUMMARY RESULTS OF THE DOUBLE MATERIALITY ANALYSIS

	IMPACT		RISK/OPPORTUNITY	
	Own operations and service activities	Financed activities	Own operations and service activities	Financed activities
 E1 Climate change	●	●	●	●
 E2 Pollution	○	●	○	○
 E3 Water and marine resources	○	●	○	○
 E4 Biodiversity and ecosystems	○	●	○	○
 E5 Circular economy	●	●	○	○

 S2 Workers in the value chain	●	●	●	●
 S3 Affected communities	●	●	○	○
 S4 Customers and end-users	●	●	●	/
 G1 Business conduct	●	●	●	●

The positive and negative impacts, risks and material opportunities for La Banque Postale Group are set out in the diagram below presenting the list of IROs.

It is important to underline that the initiatives put in place by the Group to mitigate certain material negative impacts or generate positive impacts may cause undesirable side effects on other aspects of sustainability. For example, the climate targets related to home loan portfolios may in specific cases conflict with the Group's ambition to make banking services, and in particular home loans, accessible to all categories of the population. This climate ambition may also be difficult to reconcile with the financing role of social landlords, depending on the pace of energy renovation of their real estate portfolio. Additional information is available in Section 2.2.1.4.1 "Presentation of decarbonisation targets".

These dependencies between the various ESG issues may therefore have an influence on the effectiveness of certain actions carried out by the Group. They are taken into account in its strategy "in support of the just transition" in order to have a holistic vision of environmental, social and governance issues. However, as part of the double materiality analysis, no material impact from these dependencies was identified. [SBM_3.01] [SBM_3.02] [SBM_3.04]

With regard to the consideration of time horizons, material environmental impacts are considered as current, while social and governance impacts can be current or potential. The potential impacts were assessed in the short term for own operations and service activities, and in the medium term for financed activities, taking into account the time lag of these impacts in the value chain. The time horizons of each IRO are presented in the diagram below. [SBM_3.06]

2.1.3.3 Interactions between material IROs and La Banque Postale Group's business model

In a context of environmental and social transition, **La Banque Postale Group is adapting its business model to have a positive impact and ensure its resilience.** This approach is part of its strong focus on sustainability, expressed by La Banque Postale's mission and the company purpose of CNP Assurances. Although the impacts and risks identified do not call into question the Group's bancassurance activity, they do lead to changes in the conduct of its service activities, its investments and its commercial offers. Therefore, La Banque Postale Group's strategy is adapting at all levels, in line with its status as a mission-led company.

The effects of material impacts and risks, particularly current ones, are already included in this strategy. The Group will continue to enhance it to take into account the potential impacts, risks and opportunities identified in the future. In the short term, no change to the strategy is planned but an ongoing dialogue with stakeholders will ensure that it continues to be relevant.

La Banque Postale's business model has also evolved to take account of these challenges.

The service offering has been expanded to take into account environmental impacts, risks and opportunities. This required adapting the decision-making processes and supporting the business lines in redefining the role of the bancassurer. For example, in a context in which the scale and frequency of climate events is creating new challenges for insurers, CNP Assurances has implemented a global protection approach that includes climate risks *via* reinsurance coverage against the risk of excess mortality. This coverage thus protects against pandemics or heat waves. In addition, for its own operations, changes in decision-making processes and the initiatives in progress in the Group's HR, purchasing and compliance functions reflect the consideration of the effects of climate change on social and governance aspects. Lastly, the Group has integrated the effects related to financed activities as part of an impact investor, financier and creditor approach. A third "impact" focus area therefore complements the risk-return ratio in the analysis of strategic decisions, and can also be a way of identifying opportunities. [SBM_3_03]

The Group's main negative environmental impacts are related to the activities it finances, in particular GHG emissions, pollution, water consumption, the use of marine resources, impacts on biodiversity and waste production by sectors supported through loans and investments. There are also negative impacts on customers in the event of a cybersecurity breach or inadequate insurance. They are linked to the Group's business model, and therefore affect all economic sectors.

The positive impacts, on the other hand, do not only stem from the business model but also from the Group's strategy. As a mission-led company, La Banque Postale has adopted an impact-awareness culture and pursues ambitious social and environmental targets. Thus, the

positive impacts related, for example, to green loans for climate change adaptation, favourable working conditions for employees and workers in the value chain, the financing of local authorities and accessible banking result from the Group's desire to pursue societal targets. Similarly, as a responsible insurer covering more than 30 million policyholders, CNP Assurances has material impacts on people, and strives to promote the positive effects of these impacts. [SBM_3_05]

These impacts may be related to La Banque Postale Group's activities as well as its business relationships:

- The environmental, employee and governance impacts are linked to the Group's activities (own operations, service activities and financed activities);
- The social impacts related to workers in the value chain, affected communities and customers are mainly related to its business relationships (links with the parent company La Poste *via* La Poste workers working for and on behalf of La Banque Postale, links with suppliers, link with local and regional authorities, links with customers). [SBM_3_07]

Estimation of the financial effects of material risks

The current financial effects of material risks are considered through provisions for environmental, social or governance risks. All provisions detailed below are included in the consolidated balance sheet of the financial statements in Section 5.1 "Consolidated financial statements" of the Universal Registration Document.

In 2024, La Banque Postale included **provisions for climate risks**. These provisions were defined in addition to the sectoral provisions already in place by addressing two main portfolios:

- the transition risk on the Corporate portfolio, in particular by assessing the impact of an increase in carbon prices on the solvency of counterparties;
- the physical risk of flooding on the home loan portfolio and the impact that this may have on expected recoveries in the event of litigation.

These assessments cover the material risks of the ESRS E1 within the scope of the financed activities. They will be refined and supplemented at each closing of financial statements and as the system matures. These provisions are presented in Note 4.6 "Impairment and provisions for credit risk" in Section 5.2 "Notes to the consolidated financial statements" of the Universal Registration Document.

Provisions for social factors, covering HR disputes, are described in Note 7.7 "Provisions" in Section 5.2 "Notes to the consolidated financial statements" of the Universal Registration Document. The ESRS S1 material risk "HR risk relating to any failure of the Group's employment and employee health, safety, diversity and inclusion practices" is therefore recorded in the financial statements.

At 31 December 2024, La Banque Postale Group's financial statements did not include provisions for governance risks.

In addition, no assessment of the financial impact of the material opportunities was carried out. [SBM_3_08]

DESCRIPTION OF MATERIAL IMPACTS ARISING FROM THE DOUBLE MATERIALITY ANALYSIS [SBM_3_01]

ESRS	Own operations and service activities		
E1	⊖	Greenhouse gas emissions and energy consumption related to the internal operation and supply chain of offices	⌚
	⊖	Inability to deal with damage related to climatic hazards, resulting in reduced coverage of claims for policyholders*	⌚
E5	⊖	Waste production in the context of own operations (particularly electrical and electronic equipment)	⌚
S1	⊖	Working conditions affecting the physical or mental health of employees (e.g. stress, burnout, musculoskeletal disorders)	⌚
	⊖	Incidents of discrimination, inequality or harassment in the workplace, with negative consequences for employees	⌚
	⊖	Deterioration in pay levels, the number of jobs or the type of contract leading to a decrease in the purchasing power of employees	⌚
	⊖	Failure to respect other work-related rights (covered by European regulations)	⌚
	⊕	Actions to promote inclusion, protection, equal opportunities, skills development and professional development of employees	⌚
	⊕	Favourable working conditions for La Banque Postale Group employees (working hours, social dialogue, fair remuneration system, social protection, collective agreements, etc.)	⌚
S2	⊖	Negative impact in the event of poor working conditions (unequal pay, safety, etc.), forced labour and/or child labour within companies in the value chain of own operations and service activities	⌚
	⊕	Contribution to the improvement of working conditions, the protection and the inclusion of workers in the value chain of own operations and service activities	⌚
S3	⊕	Societal sponsorship, regional network and financing of local authorities*	⌚
S4	⊖	Negative impact in the event of a data breach or cybersecurity incident	⌚
	⊕	Customer service, banking accessibility, accessibility of insurance services, protection and financial security of customers*	⌚
G1	⊖	Incidents of fraud, corruption or anti-competitive practices	⌚
	⊖	Late payments from suppliers, with a negative impact on their financial stability (especially SMEs, vulnerable suppliers and those dependent on the Company)	⌚
	⊕	Corporate impact culture	⌚
	⊕	Corporate culture, business ethics, AML-CFT policies and commitment to the general interest	⌚

RISKS AND OPPORTUNITIES ARISING FROM THE DOUBLE MATERIALITY ANALYSIS [SBM_3_02]

ESRS	Own operations and service activities		
E1	⚠	Physical climate and environmental risk: financial effects of climate change and environmental degradation on the Group's own operations	⌚
	⚠	Physical climate and environmental risk on Insurance business	⌚
	⚠	Climate and environmental transition risk on the Group's own operations	⌚
	⚠	Climate and environmental transition risk for Insurance business	⌚
S1	⚠	HR risk relating to the failure of the Group's employment and employee health and safety, diversity and inclusion practices	⌚
	↗	Development of the skills of the Company's employees promoting innovation and the creation of new products and services	⌚
S2	⚠	Risk of financial loss related to a failure in the assessment of La Banque Postale's partners (service provider, supplier or distributor) in a context of transition to a more equitable and inclusive society	⌚
	⚠	Termination or temporary decrease in the activity of a major service provider, supplier or distributor resulting in financial losses	⌚
S4	⚠	Risk of financial loss due to failure to apply the Group's customer protection practices or weaknesses in these practices	⌚
	⚠	Risk of financial loss related to a failure to assess La Banque Postale's partners (customers) in the context of a transition to a more equitable and inclusive society	⌚
	⚠	Abusive commercial or marketing practices leading to risks of non-compliance and reputational damage	⌚
	⚠	Risk related to customer service failures	⌚
G1	⚠	Risk of dysfunction in the internal governance of La Banque Postale Group due to insufficient or erroneous consideration of ESG issues and risks in strategic decision-making	⌚
	⚠	Risk of non-application of regulations and ethics rules by partners, leading to risks of criminal sanctions and reputational damage	⌚
	↗	Corporate culture, commitment and strong values, to strengthen the Group's brand image and attract new talent	⌚

DESCRIPTION OF MATERIAL IMPACTS ARISING FROM THE DOUBLE MATERIALITY ANALYSIS [SBM_3_01]

ESRS	Financed activities	
E1	Investments in business segments with high greenhouse gas emissions*	⌚
	Greenhouse gas emissions financed through the granting of credits (air transport, land transport, wholesale and retail trade, building construction, etc.)*	⌚
	Contribution to climate change adaptation and mitigation through loans (green loans, loans dedicated to energy renovation, support for the transition of companies, etc.)*	⌚
	Investments in companies contributing to climate change adaptation*	⌚
E2	Air, soil and water pollution financed through investments and funding from polluting sectors*	⌚
E3	Investment/funding of organisations in sectors with high water consumption and/or exerting significant pressure on marine resources*	⌚
E4	Investment/funding of industries exerting significant pressure on biodiversity (soil degradation, pollution, pressure on ecosystems, greenhouse gas emissions, etc.)*	⌚
E5	Negative impact related to waste generated by industries in the investment and credit portfolio*	⌚
S2	Negative impact in the event of poor working conditions, forced labour and/or child labour within companies in the credit/investment portfolio*	⌚
	Contribution to the improvement of working conditions, diversity and inclusion within companies in the investment portfolio through minimum conditions requirements, training, encouragement to sign charters, etc.*	⌚
S3	Investments in sectors with critical risk levels: operations and materials from conflict zones, violations of privacy and freedom of expression, environmental pollution, impacts on health and human rights, etc.*	⌚
	Societal sponsorship, regional network and financing of local authorities*	⌚
S4	Negative impact in the event of financing of activities undermining the safety and/or health of consumers*	⌚
G1	Incidents of corruption/conflicts of interest in the assets of the investment portfolio leading to economic instability, inefficient public services and threatening the stability of institutions	⌚

RISKS AND OPPORTUNITIES ARISING FROM THE DOUBLE MATERIALITY ANALYSIS [SBM_3_02]

ESRS	Financed activities	
E1	Exposure of portfolios to physical risks*	⌚
	Exposure of portfolios to climate transition risks*	⌚
	Changes in energy prices leading to decreases in asset values	⌚
	Funding for organisations contributing to climate change adaptation*	⌚
	Funding for organisations contributing to climate change mitigation*	⌚
	Funding for companies in the renewable energy sector*	⌚
S2	Risk of financial loss related to failure in the evaluation of the Group's partners (financed activities) in a context of transition to a more equitable and inclusive society, in particular failure in the working conditions of portfolio companies	⌚
G1	Risk of failures in the application of regulations, in ethical rules or in the management practices of the entities financed by the investment portfolio, leading to risks of criminal sanctions, controversies or reputational damage	⌚

Negative impact Positive impact

HORIZON [SBM_3_06]

Current Short-term (< 1 year) Medium-term (1 to 5 years) Long-term (> 5 years)

*Impact finance IROs.

The way in which the material impacts listed above influence the population and the environment is specified in the description of each impact. [SBM_3_04].

2.1.3.4 Strategy and business model resilience

The resilience of La Banque Postale Group's strategy and business model is driven by:

- its long-term vision of supporting retail customers, the accessibility of insurance solutions that protect and facilitate all life pathways, and the development of public and private economic players in France. This vision is based on its connection to a major state-owned group through its shareholder, Caisse des Dépôts, its status as a mission-led company and the company purpose of CNP Assurances, which underlines its desire to ensure that its social and environmental credentials guide its development and performance;
- its roots in France. La Banque Postale is now the twelfth-largest bank in the euro zone⁽¹⁾, with nearly 10 million active retail customers. Thanks to the postal network, it is present throughout France;
- its international development through its insurance business and its subsidiary CNP Assurances;
- the diversity of its activities (insurance, banking, asset management), which combined with its geographical diversification, strengthens its ability to face socio-economic cycles and geopolitical crises with more resources.

For more information on the Group's business model, see paragraph 2.1.3.1 "Group business model and value chain". [SBM_3_10]

This resilience is strengthened by the Group's understanding of its impacts, risks and opportunities. Established for the first time in 2024, the list of IROs will be updated annually from 2025. [SBM_3_11]

Specific issues were identified as part of the double materiality analysis, in addition to the issues covered by the ESRS disclosure requirements. These issues were identified during double materiality work, based on sectoral benchmarks and consultations with internal or external experts. They are as follows:

- **Impact-awareness culture:** this issue, specific to the Group, is linked to La Banque Postale's mission. It is related to ESRS G1;
- **Financing of local and regional authorities:** this issue represents La Banque Postale's specific positioning in the financing of regional players, and is linked to ESRS S3;
- **Cybersecurity:** this issue, common to all players in the bancassurance sector, focuses on customer protection (ESRS S4).

These issues were linked to the most relevant thematic ESRS. The IROs associated with these specific issues are included in the list of material impacts, risks and opportunities resulting from the double materiality analysis as presented in the previous tables. With the exception of IROs associated with the specific issues listed above, all IROs are covered by ESRS disclosure requirements. [SBM_3_12]

2.1.4 Management of the Group's impacts, risks and opportunities

2.1.4.1 Methodology for identifying and assessing IROs

The procedure for identifying and analysing IROs was carried out in two parts:

- **A materiality impact analysis**, based in particular on the ENCORE database (Exploring Natural Capital Opportunities, Risks and Exposure);
- **A financial materiality analysis**, based on the Group's ESG risk map.

These analyses were carried out on the scopes of Own Operations, Banking Services, Insurance, Credit and Investment, so as to cover all of the Group's business areas.

The methodological approach has been aligned with CNP Assurances.

The process of identifying and assessing the IROs is presented in the infographic "Process of identifying, rating and validating IROs in 2024" in Section 2.1.2.1 "Role of governance in managing ESG impacts, risks and opportunities". [IRO_1_01]

2.1.4.1.1 Impact materiality

The impact materiality analysis was carried out on the Group scope, taking into account, in all geographic areas, Own Operations (including Banking Services), as well as the Insurance and Credit businesses and Investment. For the latter two scopes, the exposures of the portfolios to sectors that contribute significantly to climate change were integrated into the analysis, in order to assess the impacts related to financing and investment activities. Additional information on the loan portfolios is available in Section 6.8 "Environmental, social and governance (ESG) risks" of the Universal Registration Document. [IRO_1_03]

As the scope of bancassurance activities is very broad, due to the Credit and Investment businesses, all the topics listed in the CSRD were analysed.

The process also included the link with the Company's duty of care. A mapping of the risks arising from due diligence was also examined to ensure overall consistency. [IRO_1_04]

In order to incorporate the views of affected stakeholders, workshops with external stakeholders and internal experts were held to confirm the methodologies, enhance the analysis and validate the results obtained. WWF France, EcoAct, I4CE, BL Évolution, OREE, INEC, La Banque Postale Group's Human Resources Department, Caisse des Dépôts and LBP AM took part in these workshops.

(1) In terms of assets, end-2023.

The following internal stakeholders were consulted on all environmental topics: the Sustainability Department, the Group Risk Department (GRD), CNP Assurances, LBP AM, Louvre Banque Privée and La Poste Group. Apart from the consultation of external experts, direct consultations with the communities potentially affected by the financed activities were not carried out.

Furthermore, in the insurance scope, the double materiality assessment is carried out by the CNP Assurances Group operational and business line management teams, who have a good perception of the interests and points of view of stakeholders.

The structured stakeholder dialogue process is also presented in Section 2.1.3.1. "Group business model and value chain". [IRO_1.05]

La Banque Postale Group (including CNP Assurances) used two methodologies for the impact materiality analysis, for all activities (Own Operations, Banking Services, Insurance, Credit and Investment).

Materiality of financed activities for environmental matters

The identification and assessment of environmental impacts (ESRS E1 to E5) on the Credit and Investment portfolios were carried out using the ENCORE database, with an analysis specific to each portfolio.

For each line in the portfolio, each impact was rated using the ENCORE database. A sector is thus considered material for a specific impact if the corresponding ENCORE rating is "High" or "Very High". The sum of technical reserves in the sectors considered as material was calculated for each impact.

An impact is considered material for La Banque Postale Group if the total technical reserves meeting this definition are greater than the defined thresholds (see Section 2.1.4.1.3 "Materiality thresholds used").

For each of the identified impacts, this analysis was able to determine:

- their scale, defined as the average ENCORE rating of the portfolio;
- their scope, assessed according to the total technical reserves in the material sectors.

The approach used to analyse the materiality of environmental impacts is therefore based on the sectors of activity financed, rather than by geographic areas, due to the scale of the financing activities and the difficulty of identifying all the sites in question.

The ENCORE database does not cover all environmental sub-topics of the CSRD. This is why the materiality of the following sub-topics was not assessed during this financial year:

- "Pollution of living organisms and food resources" (E2);
- "Substances of concern" (E2);
- "Substances of very high concern" (E2);
- "Microplastics" (E2);
- "Impacts on the state of species" (E4);
- "Dependencies on ecosystem services" (E4);

Their assessment will be updated in future years, depending on the availability of external data.

Materiality of other matters

In addition, in the absence of tools to quantify the scale of social and governance impacts, the identification and assessment of these were carried out based on the Group's internal management data and interviews with the Group's various stakeholders. The result of this analysis made it possible to rate all the impacts (see the infographic "Impact materiality assessment criteria" below). [IRO_1.02]

The quantitative assessment of the impact materiality was carried out, at Group level, based on the following criteria:

- Scale: indicates to what extent the impact is negative, or on the contrary beneficial, for the population or the environment;
- Scope: indicates how widespread the negative or positive impact is;
- Whether the impact is irreversible (only for negative impacts);
- Probability of occurrence (only for potential impacts);
- Long-term impact: weighting of the duration of the impact.

IMPACT MATERIALITY ASSESSMENT CRITERIA [IRO_1.06]

Magnitude	Extent	Irremediable character Negative impacts only	Probability of occurrence Potential impacts only	Long-term impact
0: Minor 1: Moderate 2: Major 3: Severe	0: Not widespread 1: Local 2: Regional 3: Global	0: Easily remediable 1: Not easily remediable 2: Difficult to remedy 3: Irremediable	0: Very unlikely 1: Possible 2: Probable 3: Very likely	x 0.8: Less important x 1: Similar x 1.1: More important
Material impact: average (Magnitude + Extent + Irremediable character + Probability of occurrence) x Long-term impact > Materiality threshold				

In accordance with ESRS 1 (3.4, paragraph 45), potential negative impacts relating to human rights are subject to an exception: the criterion of severity prevails over that of probability. [IRO_1.06]

2.1.4.1.2 Financial materiality

The identification and assessment of La Banque Postale Group's risks was based on the Group's ESG risk map (see infographic *Financial materiality assessment criteria below*). The identification and assessment of all opportunities were carried out by the internal experts of the Risk team and the relevant business lines.

CNP Assurances has used its own methodology based on the mapping of risks, the mapping of the due diligence impacts, as well as expert assessments. In order to assess the risks, we consulted the business line departments, the CNP Assurances Group subsidiaries, the sustainability representatives of the shareholder La Banque Postale, and the sustainability officers within the CNP Assurances Group subsidiaries. The Sustainability Department and the Accounting Department ensured the overall consistency of the assessment and proposed a materiality threshold, which was reviewed by the members of the Executive Committee and the Board of Directors. This analysis was presented to the Audit and Risk Committee and to CNP Assurances Group's CSR Committee. The assessment will be reviewed each year by the dedicated teams. [IRO_1_07]

The environmental impacts of the financed activities, i.e. negative impacts related to global warming, pollution, water and marine resource management, biodiversity and

waste, give rise to opportunities for financing activities to limit, reduce or remedy these impacts (green loans, financing of circular economy projects, decontamination solutions, etc.).

The negative impacts related to the climate also give rise to physical and transition risks that stand out as material in the financial analysis.

Other than climate risk, environmental risks are not material. This is due to the fact that there is currently no methodology to assess them. Indeed, the assessment of risks is based on economic variables, yet the outcomes generated by environmental impacts other than climate are not currently included in these variables, in the absence of regulations or changes in consumer behaviour. [IRO_1_08]

The quantitative assessment of financial materiality was carried out, at Group level, based on the ESG risk map, where the various risks are rated according to four levels (Minor, Moderate, Major and Critical). For all activities (Own Operations, Banking Services, Insurance, Credit and Investment), the following criteria are considered:

- The potential financial effect;
- The probability of occurrence;
- The time horizon based on which the duration of the risk is weighted.

ASSESSMENT OF FINANCIAL MATERIALITY [IRO_1_09]

Potential financial effect	Probability of occurrence	Time horizon
0: Minor	0: Very unlikely	x 0.8: Short-term
1: Moderate	1: Possible	x 1: Medium-term
2: Major	2: Probable	x 1.1: Long-term
3: Severe	3: Very likely	

Material risk/opportunity	
$\left(\frac{\text{Potential financial effect} + \text{Probability of occurrence}}{2} \right) \times \text{Time horizon} > \text{Materiality threshold}$	

The topics that have not yet been included in the Group's ESG risk map have been considered and assessed on an expert basis, pending methodologies for a more detailed assessment. All opportunities were also assessed by experts. [IRO_1_09]

2.1.4.1.3 Materiality thresholds used

In the Credit and Investment scopes, materiality thresholds have been defined in order to determine the material impacts: the impacts with material technical reserves higher than these thresholds were considered as material during the impact analysis, carried out using the ENCORE database (see Section 2.1.4.1.1 "Impact materiality").

By way of illustration, this threshold was set at €1 billion for the portfolios in the banking scope, which represents 1.3% of La Banque Postale's outstanding loans.

In order to ensure consistency between the results obtained with the thresholds applied to the portfolios and the rating of the IROs, a materiality threshold was also defined on the rating scale. This threshold applies to all IROs across all scopes. [IRO_2_13]

2.1.4.1.4 Internal control process

Currently, there is no internal control procedure concerning impacts. The control elements for this scope will be gradually integrated following the first impact analysis exercise carried out as part of the CSRD.

In addition to the double materiality analysis, the Group relies on a risk management framework which is managed and overseen by a series of committees. These committees provide independent management in accordance with legal and regulatory provisions. The independence of this governance and management is ensured by separating roles between the Executive Board, in charge of the operational achievement of the Group's targets and day-to-day management, and the Supervisory Board, in charge of overseeing the actions of the Executive Board.

The risk management framework is based on the three levels of control forming the general internal control framework. For more information, please refer to paragraph 2.1.2.7.1 "Risk management and internal control system". [IRO_1_11]

2.1.4.2 Risk and opportunity management

La Banque Postale Group treats **Environmental, Social and Governance** (ESG) risks as a risk area in its own right, but also as a risk factor for other risk areas (credit, operational, market, etc.). Dedicated risk management frameworks provide appropriate responses to the knock-on effects of ESG risks on existing risk factors. [IRO_1.10]

The Group Risk Department's dedicated ESG Risk unit leads studies and analyses to assess whether the level of exposure to ESG risks is acceptable, and complies with the commitments made by La Banque Postale Group. It then reports on this work to the Group's Executive Board and Supervisory Board. It coordinates and harmonises work on the risk management framework with the subsidiaries and within the Group.

In order to encourage their inclusion in all of the Group's risk control and management frameworks and ensure that they are managed efficiently, they are covered by the existing organisations and bodies, rather than by dedicated bodies. The principles applicable to La Banque Postale Group's Risk Appetite Framework are therefore also applicable to the management of ESG risks. ESG risks are controlled in the same way as other risks. For more information, please refer to Section 2.12.7.1 "Risk management and internal control system"; additional information is also available in Section 6.8.2 "ESG risk governance" of the Universal Registration Document. [IRO_1.11] [IRO_1.12]

At this stage, the management of opportunities is not integrated into the Group's overall management framework. [IRO_1.13]

2.1.4.3 Data sources used in the analysis and updating process

The data sources used in the analysis are:

- The ENCORE tool, for the identification and assessment of negative environmental impacts on the Credit and Investment scopes;
- Internal management data, to assess the positive impacts on all scopes as well as the impacts on the scope of own operations;
- The Group's ESG risk map, for risk identification and assessment.

The scopes of Own Operations, Banking Services, Insurance, Credit and Investment are covered in the analysis. [IRO_1.14]

The IRO analysis and assessment exercise – carried out for the first time this year – will be updated in the next financial year, to include the update of the ENCORE database, published in July 2024 as well as the update to the Group ESG risk map. [IRO_1.15]

2.1.4.4 Climate-related IRO assessment

2.1.4.4.1 Impact materiality

The impacts on climate change related to the Group's greenhouse gas (GHG) emissions were assessed across La Banque Postale's various business scopes (Own Operations, Banking Services, Insurance, Credit and Investment). On the Credit and Investment scopes, these impacts were assessed based on the ENCORE database which gives the scale of the impacts of the various sectors in the portfolio in terms of GHG emissions, following the methodology presented in Section 2.1.4.1.1 "Impact materiality". For the scope of its own operations, the impacts related to GHG emissions were assessed based on carbon data for the 2023 financial year. [EL_IRO_1.01]

2.1.4.4.2 Financial materiality – physical and transition risks

To assess the **physical risks** related to climate change, La Banque Postale has carried out risk mapping work. It has defined these risks, measured their impact and their probability of occurrence on the basis of indicators specific to its portfolios and its operational scope, in particular using the quantification of reference physical risk scenarios over short-, medium- and long-term horizons.

La Banque Postale analyses the exposures subject to a physical risk for its Commercial and Real Estate Loans portfolio. The following categories of physical risks are considered:

- Extreme events (flooding, wildfires, storms, clay shrinkage and swelling);
- Chronic physical risks (increase in temperature, increase in precipitation, drought, heat waves).

Additional information on this analysis is available in the Pillar III reporting in Section 6.8.8 "Indicators of potential climate change physical risk" of the Universal Registration Document.

In 2023, CNP Assurances also updated the assessment of the physical risks for its real estate portfolio, taking into account the specific characteristics of the buildings to prepare adaptation plans in 2024. As for the risks to its own operations, it was considered that its buildings and employees, mainly located in Europe and Latin America, are not severely exposed to climatic hazards likely to disrupt business. [EL_IRO_1.02] [EL_IRO_1.03] [EL_IRO_1.04] [EL_IRO_1.05] [EL_IRO_1.06]

The risk mapping work also covers **transition risks**. These risks are assessed using reference transition risk scenarios (NGFS). These analyses cover portfolio exposure to the most carbon-intensive sectors and emissions financed by the Group.

Additional information on this analysis is available in the Pillar III reporting in Section 6.8.7 "Indicators of potential climate change transition risk" of the Universal Registration Document. [EL_IRO_1.09] [EL_IRO_1.10] [EL_IRO_1.11] [EL_IRO_1.12]

Certain assets and activities have been identified as potentially incompatible with the Group's transition plan. They include a list of exposures to fossil fuels and companies excluded from the Paris-Aligned Benchmark. Additional information is available in Section 6.8.7.1 "Credit quality of exposures by sector, emissions and residual maturity" of the Universal Registration Document. [\[E1_IRO.1.14\]](#)

The opportunities related to the transition were assessed on an expert basis without resorting to scenario analysis. [\[E1_IRO.1.15\]](#)

The scenarios presented in this chapter are compatible with the climate assumptions in the financial statements. Indeed, provisions for transition risks have been defined on the basis of the NGFS short-term disorderly transition scenarios. With regard to provisions for physical risks, the flood scenario is used as a reference. [\[E1_IRO.1.16\]](#)

2.1.4.5 Assessment of IROs related to biodiversity and ecosystems

2.1.4.5.1 Impact materiality

The **impacts** on biodiversity and ecosystems were examined, within the scope of La Banque Postale Group's own operations, based on internal management data and on the Group's ESG risk map. The assessment of this data highlighted ESRS E4 – Biodiversity and Ecosystems as non-material for this scope.

The biodiversity matters for La Banque Postale Group are therefore concentrated in the activities of the downstream value chain, namely credit and investment activities. In these scopes, the impact analysis was carried out on the basis of technical reserves exposed to sectors with significant impacts on biodiversity and ecosystems, following the methodology presented in Section 2.1.4.1.1 "Impact materiality". This assessment highlighted ESRS E4 as material in terms of impacts on the credit and investment scopes.

A more in-depth analysis of the impacts on biodiversity was carried out as part of La Banque Postale Group's 2023 Climate and Nature report (in accordance with the recommendations of the TCFD and TNFD) published in October 2024. This study provides visibility as to the location of the impacts on biodiversity and ecosystems of the activities in the portfolios analysed. The results of the impact analysis carried out as part of the double materiality analysis are generally consistent with the results of the nature report according to the TNFD recommendations. The full study is available in La Banque Postale's 2023 Climate and Nature report. [\[E4_IRO.1.01\]](#)

2.1.4.5.2 Financial materiality

The identification and assessment of risks related to biodiversity and ecosystems was carried out based on the methodology detailed in Section 2.1.4.1.2 "Financial materiality".

Although ESRS E4 is not currently material from a financial point of view, a more in-depth analysis of the risks and dependencies related to biodiversity was carried out as part of the 2023 Climate and Nature report (following the recommendations of the TCFD and TNFD), published in October 2024.

The Global Biodiversity Score (GBS)-based work carried out assessed the dependency of La Banque Postale's portfolios on the 21 ecosystem services provided by nature with regard to four of the five pressures defined by the IPBES (change in land use, overexploitation of natural resources, pollution and climate change).

Two ecosystem service dependency scores are available:

- An average dependency score, which represents the average of dependencies across all ecosystem services and sectors in the portfolio;
- A critical dependency score, which represents the portion of the portfolio that is critically dependent - i.e. highly or very highly - on at least one ecosystem service.

Indeed, if the dependence is strong or very strong, this ecosystem service is considered as non-substitutable.

Four portfolios were analysed, covering 39% of La Banque Postale's on-balance sheet and off-balance sheet exposures: commercial and residential real estate, corporate finance and public sector and social economy financing.

In addition, sectoral qualitative grids have been developed to define, identify and qualify the impacts and dependencies related to the nature of the priority sectors for La Banque Postale. This exercise was conducted in five sectors identified as priorities (Real estate, Food and beverage manufacturing, Transport and warehousing, Energy production and distribution and Health and the pharmaceutical sector).

The results of these analyses are available in the 2023 Climate and Nature report.

For its part, CNP Assurances used the BIA-GBS™ methodology, which assigns each business sector a biodiversity dependency score. Once these scores have been aggregated for companies and then for the CNP Assurances portfolio, this work made it possible to measure the direct dependency (Scope 1) and the upstream value chain dependency (Scope 3) on ecosystem services of the activity of the companies to which CNP Assurances is exposed. The measurement covers 98% of CNP Assurances' directly held equity and bond portfolio. The result shows that the average dependency of CNP Assurances' investment portfolio is low both in terms of its own activities and the upstream value chain of the financed companies. Nevertheless, this average dependency score must be supplemented by the critical dependency score. This reveals a significant percentage of companies that are highly or very heavily dependent on at least one ecosystem service. In other words, this means that the business model and the sustainability of a company may present a risk without corrective action (example: water scarcity for the leather sector), and therefore represent a risk for the financial value of CNP Assurances' investment. [\[E4_IRO.1.02\]](#) [\[E4_IRO.1.03\]](#)

Wishing to anticipate the impacts and dependencies that the erosion of biodiversity could have on the sustainability of its business model, La Banque Postale carried out an initial assessment of its nature-related physical and transition risks. Systemic⁽¹⁾ risk has not yet been included. [\[E4_IRO.1.04\]](#)

(1) Risks resulting from the collapse of the entire system, rather than the failure of parts of the system.

Involvement of stakeholders and affected communities

As part of the double materiality analysis, La Banque Postale Group consulted internal and external stakeholders on the various subjects.

In addition to the internal stakeholders presented in Section 2.1.4.1.1 "Impact materiality", the following stakeholders were consulted on the topic of Biodiversity: WWF France, CDC Biodiversité and BL Évolution. [E4_IRO_1_05]

Not being a manufacturing company, La Banque Postale Group does not source raw materials and does not have a production site that could have a negative impact on biodiversity and ecosystems. [E4_IRO_1_06]

Thus, the Group's own operations do not affect communities in terms of biodiversity. [E4_IRO_1_07]

In the operational scope, the Group also has no impact on the ecosystem services that are of interest to the affected communities. ESRS E4 - Biodiversity and ecosystems is in fact not material for this scope. [E4_IRO_1_08]

Sites located in or near sensitive areas

La Banque Postale Group does not have any sites located in or near biodiversity-sensitive areas. [E4_IRO_1_14] [E4_IRO_1_15]

Given the nature of the Group's activities, it was not considered necessary to implement mitigation measures on its own operations, such as the measures referred to in: Directive 2009/147/EC of the European Parliament and the Council on the conservation of wild birds; Council Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora; an environmental impact assessment (EIA) as defined in Article 1 (2) (g) of Directive 2011/92/EU of the European Parliament and of the Council (76) on the assessment of the effects of certain public and private projects on the environment; and, for activities in third countries, national provisions or equivalent international standards, such as the International Finance Corporation (IFC) Performance Standard 6: Biodiversity conservation and sustainable management of living natural resources. [E4_IRO_1_16]

2.1.4.6 Assessment of pollution-related IROs

La Banque Postale Group's own operations and service activities are not the source of significant pollution, and are not located in areas at risk of pollution. The impacts, risks and opportunities identified for these activities were examined based on internal management data, and on the Group's ESG risk map. This assessment showed ESRS E2 – Pollution as non-material for these scopes.

The challenges in terms of pollution are concentrated in the activities of the downstream value chain, namely credit and investment activities. For these scopes, the impact analysis was carried out on the basis of technical reserves exposed to sectors causing significant pollution, following the methodology presented in Section 2.1.4.1.1 "Impact materiality". The risk assessment was carried out based on the methodology presented in Section 2.1.4.1.2 "Financial materiality".

For the credit and investment scopes, ESRS E2 is material for the impact analysis and non-material for the financial materiality analysis. [E2_IRO_1_01]

The analysis highlighted the following sectors as very material in terms of pollution (considering the average impact score of air, water and soil pollution):

- Manufacture of metal products;
- Manufacture of wearing apparel;
- Paper industry;
- Building construction and civil engineering;
- Pharmaceutical industry;
- Manufacture of motor vehicles, trailers and semi-trailers;
- Aviation and defence;
- Electric power generation, transmission and distribution;
- Programming, consulting and other IT activities. [E2_IRO_1_03]

In addition to the internal stakeholders presented in Section 2.1.4.1.1 "Impact materiality", the following organisations were consulted as part of the double materiality analysis on the topic of pollution: WWF France, CDC Biodiversité and BL Évolution. [E2_IRO_1_02]

2.1.4.7 Assessment of water and marine resources-related IROs

As a commercial bank, La Banque Postale Group's own operations and service activities do not require significant use of water or marine resources. The impacts, risks and opportunities identified on these activities were examined based on internal management data, as well as on the Group's ESG risk mapping. This assessment showed that ESRS E3 – Water and marine resources is non-material for these scopes.

Matters related to the use of water and marine resources are concentrated in downstream value chain activities (credit and investment activities). For these scopes, the impact analysis was carried out on the basis of technical reserves exposed to sectors with a high consumption of water and/or marine resources, based on the methodology presented in Section 2.1.4.1.1 "Impact materiality".

The risk assessment was carried out based on the methodology presented in Section 2.1.4.1.2 "Financial materiality" of this document.

For the credit and investment scopes, ESRS E3 is material for the impact analysis and non-material for the financial materiality analysis.

The following sectors were identified among the financed sectors as having very significant impacts in terms of water consumption:

- Paper industry;
- Manufacture of mineral products and metal products;
- Renewable energy production;
- Building construction and civil engineering;
- Mining and quarrying;
- Manufacture of leather and related products;
- Electric power generation, transmission and distribution.

The following sectors have been identified among the financed sectors with the most significant impacts in terms of marine resource use:

- Building construction and civil engineering;
- Mining and quarrying;
- Agriculture, forestry and fishing;
- Renewable energy production. [E3_IRO_1.01]

During the topical workshops held as part of the double materiality analysis, La Banque Postale Group consulted internal and external stakeholders on the various topics. In addition to the internal stakeholders presented in Section 2.1.4.1.1 “Impact materiality”, the following stakeholders were consulted on water-related issues: WWF France, CDC Biodiversité and BL Évolution. [E3_IRO_1.02]

2.1.4.8 Assessment of IROs related to resource use and the circular economy

The impacts, risks and opportunities identified in relation to resource use and circular economy were examined, within the scope of La Banque Postale Group's own operations, based on internal management data and the Group's ESG risk map. For the operational scope, this assessment highlighted ESRS E5 – Resource use and circular economy as material for the impact analysis and as non-material for the financial materiality analysis.

Resource use and circular economy matters are also present in the activities of the downstream value chain, namely credit and investment activities. For these scopes, the impact analysis, which highlighted ESRS E5 as material, was carried out on the basis of technical reserves exposed to sectors with significant waste production, following the methodology presented in Section 2.1.4.1.1 “Impact materiality”.

The sectors that stand out for their very significant impact in terms of waste production are:

- Real estate activities;
- Renewable energy production;
- Automotive industry, Pharmaceutical industry, Mining industries;
- Aviation and defence;
- Manufacture of leather and related products;
- Electric power generation, transmission and distribution.

For credit and investment activities, the assessment of risks and opportunities was carried out based on the methodology presented in Section 2.1.4.1.2 “Financial materiality” of this document. This topic is not financially material for these scopes. [E5_IRO_1.01]

In addition to the internal stakeholders presented in Section 2.1.4.1.1 “Impact materiality”, an external stakeholder, OREE, was consulted on the topic of the circular economy. [E5_IRO_1.02]

2.1.5 Disclosure requirements covered by the sustainability report

The data points required by other legislative acts of the European Union are presented in the table presented in paragraph 2.5.1.2 “Data points required by other European Union legislation”. [IRO_2.01]

The sustainability sub-topics subject to disclosure are presented in the table below.

The disclosure requirements covered by the sustainability report are presented in a table in Section 2.5.1.1 “Coverage of disclosure requirement”. The following non-disclosure choices were made at La Banque Postale Group level:

- Voluntary data points;
- Data points subject to delayed disclosure;

- Data points related to non-material topics;
- Disclosure condition not met;
- Existence of an alternative: choice to publish only one of these alternatives.

It should be noted that the minimum disclosure requirements (MDR) have been rolled out and covered for each ESRS. [IRO_2.02]

2.1.6 Additional information specific to the entity

2.1.6.1 The impact-awareness culture at the heart of the mission-led company

La Banque Postale is committed to serving its purpose as a mission-led company. This commitment is supported by a specific governance structure, embodied by the Mission Committee.

This company purpose, enshrined in the Company's Articles of Association, focuses specifically on the impact-awareness culture, which commits all employees to actions which serve and protect the environment, and is implemented operationally in all activities within the banking scope.

Within La Banque Postale Group, all employees, including the members of the Executive Board, are committed to a culture of ESG responsibility. A significant proportion of ESG targets is integrated into remuneration packages (additional information is available in paragraph 2.1.2.5 "Alignment of remuneration with La Banque Postale's sustainability targets"). This approach reflects the Group's ambition to embed the impact-awareness culture at the heart of its operations, by involving each employee in achieving its environmental, social and governance (ESG) targets. This approach reflects a collective commitment to making the sustainable transition a driver of performance and action for all.

PRESENTATION OF IMPACT CULTURE

In particular, La Banque Postale Group condemns all breaches of integrity, fraud and anti-competitive practices. It upholds financial transparency, ensures compliance with economic sanctions programmes and protects personal

data. It acts in compliance with the highest standards to enable it to carry out its business activities safely and securely, to protect health and the environment and to uphold international human rights.

IMPACT CULTURE METRICS

		2023	2024	2025 target
LA BANQUE POSTALE'S MISSION-LED COMPANY METRICS	 % of employees having attended at least two CSR/sustainable finance training courses	69.7%	80%	90%
	 Non-financial targets taken into account in employee remuneration	20%	28.8%	20%
	 Innovation and carbon footprint awareness among customers (number of customers)	14,555	25,529	61,624
	 % of employees who have participated in a sustainability initiative	9.3%	15.3%	20%
CNP ASSURANCES' COMPANY PURPOSE METRICS	 Aggregate number of work-study contracts or internships offered to young people from deprived neighbourhoods or who have dropped out of school	106	243	200
	 Annual spending on sponsorship projects and actions with an impact on society (in € millions)	3.51	5.97	3.50
	 Percentage of employees mobilised to participate in actions with a societal impact during their working hours	16%	17%	20%
OTHER METRICS	 Bank card carbon footprint - annual emissions (tCO₂e)	408	455	N/A
	 Portion of socially responsible investment in employee savings	100%	100%	N/A
	 Number of hours of employee working time devoted to community outreach	1,596	4,072	N/A
	 Number of employees involved with L'Envol	241	270	N/A
	 Number of young people benefiting from L'Envol	508	516	N/A

The various indicators related to the company purpose of La Banque Postale Group and CNP Assurances show the Group's commitment to the impact-awareness culture.

In particular, it should be noted that the targets which cover the inclusion of non-financial targets in the remuneration of the Group's employees, the cumulative number of work-study students or interns from priority neighbourhoods or those who have dropped out of school, and the annual expenditure devoted to sponsorship projects and actions with a societal impact were exceeded in 2024.

Employee engagement on the subject is also on the rise, with improved monitoring of ESG/sustainable finance training and their increased involvement in engagement actions. In addition, the number of hours of voluntary work performed by employees more than doubled between 2023 and 2024. This reflects the increased commitment of the Group's employees to ESG issues and a strengthening of the impact-awareness culture within the Company.

In addition, the number of work-study students or interns from priority neighbourhoods has increased significantly, as has the annual expenditure devoted to sponsorship projects and actions with a societal impact.

Customer awareness of the carbon footprint of their purchases is also evolving.

It should also be noted that:

- Bank cards are a payment method which 94% of French people use on a daily basis⁽¹⁾. Their carbon footprint, although not very significant in terms of the Group's total GHG emissions, is significant for La Banque Postale because it reflects banking activities. 18% more new bank cards were issued in 2024 compared to 2023. In addition, methodological changes mean that their carbon footprint can now be assessed more accurately, based on life cycle analysis data. The 2023 benchmark was reassessed from 563 tCO₂e to 408 tCO₂e;
- The share of socially responsible investment in employee savings is 100%, given that La Banque Postale only offers LBP AM products to its employees. LBP AM's eligible range is 100% SRI to date;
- The number of employees involved in *L'Envol* and young people benefiting from the *L'Envol* scheme has increased very slightly, which shows that this initiative remains important over the long term for La Banque Postale.

2.1.6.2 La Banque Postale Group's impact finance approach

Finance for tomorrow defines impact finance as an investment or financing strategy that aims to accelerate the just and sustainable transformation of the real economy, by providing evidence of its beneficial effects. It is based on the pillars of intentionality, additionality and impact measurement. The latter is at the heart of the Group's governance, through the Sustainability Department (DEC) created in 2021, which has made it possible to adapt and steer the implementation of the roadmap of the 2030 strategic plan. Amongst other things, the DEC's role is to ensure that this strategy is consistent and credible across the entire Group to consolidate La Banque Postale's leadership in impact finance. The DEC plays an innovative role in the construction of the offer and ensures overall consistency by building internal principles to avoid any reputational risk of greenwashing.

Impact finance is a cross-functional subject, covered by various policies and concrete actions that are detailed in the thematic ESRS. At the strategic level, this topic is specifically present in the targets set by La Banque Postale as a mission-led company (Transform our bancassurance model through an impact-awareness culture, Develop and promote the products and services needed to meet environmental, social and regional challenges and Advance best practices and regulatory standards in the bancassurance sector through La Banque Postale's exemplary actions).

Within the scope of the financed activities, the topic of impact finance is present in the positive impacts of the financing of environmental solutions and local authorities as well as actions to create favourable working conditions in the downstream value chain. For La Banque Postale Group, impact finance also involves exemplary management of financing and investments, which is primarily reflected in the assessment and mitigation of negative impacts of the financed activities on the environment and people. In insurance business and banking services, it is rolled out through actions to promote access to bancassurance services and the regional network (the accessible banking mission is presented in 2.3.4.5.2 "Actions implemented to generate positive impacts").

Impact finance is also managed through the monitoring of various indicators published in the CSRD.

Lastly, La Banque Postale Group has made practical commitments to impact finance in the various scopes.

For example, LBP AM, La Banque Postale's main asset management subsidiary, is involved in several financial sector initiatives to support academic research and enhance the environmental transparency of issuers, SRI development and state-of-the-art collaborative shareholder engagement actions. These initiatives include LBP AM's participation in a number of working groups on impact finance, biodiversity and climate within the Institute for Sustainable Finance, of which it is also a Board member.

In addition, La Banque Postale has created the Impact Weighting Factor to improve the way in which it selects its financing projects (see focus point below).

LBP AM has also developed an investment analysis methodology integrating sustainable development issues, which is used across the Group (see focus: *The GREaT methodology*).

(1) French people aged 18 or over, IFOP survey for Monnaie de Paris, 2024

PRESENTATION
OF IMPACT FINANCE**The Impact Weighting Factor (IWF)****A tool to guide financing and investment strategies**

The Impact Weighting Factor is an impact scoring tool used to grant loans to retail customers and for Corporate and Investment Banking. It was developed by La Banque Postale in partnership with WWF France.

The aim of **the IWF** is to assess and manage La Banque Postale's impact on the environmental, societal and regional areas (CO₂ emissions, biodiversity impact, support for vulnerable customers, etc.) via its Corporate and Investment Banking activities, in addition to risk measurement and financial performance. It also aims to raise awareness and support the Group's teams and all its retail and business customers with their environmental, regional and inclusive transformation.

THE IMPACT WEIGHTING FACTOR (IWF)

The IWF is an impact metric based on the 3 pillars

Environment	Territory	Inclusion
This pillar incorporates the elements of the European Green Deal , and as a result, the Environment pillar is aligned with European regulations on sustainability (e.g. Taxonomy and SFDR) at least in terms of the addressed themes.	This pillar is specific to La Banque Postale because of its presence in the Territory with a focus on its economic and social characteristics (a 'functional' approach). The scope of the territory is limited to that of France and the EU.	This pillar addresses social issues concerning the various stakeholders that make up society: employees, suppliers, citizens.
AREAS		
▷ Climate ▷ Biodiversity ▷ Water ▷ Pollution	▷ Contribution to regional economic development ▷ Sustainable territorial development	▷ Respect for human rights ▷ Diversity and inclusion ▷ Universal accessibility of products/services

IMPACT SCALE

Impact Weighting Factor ⑤	Very positive impact
Impact Weighting Factor ④	Positive impact
Impact Weighting Factor ③	Neutral impact
Impact Weighting Factor ②	Negative impact
Impact Weighting Factor ①	Very negative impact

Depending on the operations, the score may be on the **counterparty** (generally on unallocated financing transactions or when entering into a relationship: e.g. corporate, SME/ISE, Public sector) or on **the purpose of the financing** (e.g. home loans for "individual" customers, or the financing of commercial real estate, assets or infrastructure for "Corporate" customers). In order to calculate this score, the Group relies on quantitative data **collected** directly from customers or **purchased** from external suppliers, **public sources** or **representatives** of each sector.

This score calculation is an integral part of **non-financial analysis** of a counterparty or of the purpose of the financing, carried out by the sales teams and verified by the Credit Risk Department. It is **integrated into existing business processes** (e.g.: entering into a relationship, analysis of the counterparty and annual review, portfolio management, etc.).

The IWF has an **operational impact** on the pricing of loans to retail customers (subsidised borrowing rate for positive impact financing or for the financing of efficiency renovation). For the Corporate scope, for real estate, asset and project financing, the delegated scheme is impacted by this score (in the event of an unfavourable score, the decision will be made at a higher level).

The target is to gradually equip **all business lines** with the Impact Weighting Factor to help them in their credit or investment decision.

The IWF has been created in collaboration with the business lines to take into account the specific nature of each activity. At this point, **the IWF has been developed for the five priority business lines**: Home loans, Commercial real estate financing, Asset and project financing, Large corporate loans and Trading room.

The next planned deployments will focus on local authorities, social housing operators and public health, as well as SMEs/intermediate-sized enterprises and consumer loans.

The deployment of the IWF meets the ambitions of the transition plan and is managed based on a **mission-led company** metric (Share of La Banque Postale's activities covered by the IWF).

This index thus helps to encourage investment and financing in sectors with a positive environmental and social impact, and to reduce exposure to activities or counterparties generating negative impacts (fossil fuels, polluting customers, etc.).

The IWF system is included in the variable remuneration of members of the Executive Board, as detailed in Section 2.12.5 "Alignment of remuneration with La Banque Postale's sustainability targets".

The GREaT methodology

Integrating ESG issues into LBP AM's asset management business

LBP AM, La Banque Postale Group's asset management company, places responsibility at the heart of its strategy. LBP AM's Socially Responsible Investment (SRI)* approach is therefore integrated into all of its management processes. It is based on three areas:

1. Incorporate sustainable development issues into the selection of investments;
2. Encourage companies to improve their practices;
3. Exclude companies involved in major controversies or operating in sensitive sectors (controversial and prohibited weapons, tobacco, gambling, thermal coal and certain oil and gas companies).

GREaT investment analysis methodology

The aim of the proprietary GREaT methodology is to integrate sustainable development issues into the analysis of LBP AM's investments. It aims to assess companies in terms of **respect for human rights, product quality** and **managing societal impacts**. To achieve this goal, LBP AM bases its analysis on four pillars:

- **G** – responsible Governance;
- **R** – sustainable management of natural and human Resources;
- **E** – Energy transition;
- **(and) T** – Territorial development.

The GREaT approach includes specific criteria related to consumers, such as:

- protection of personal data;
- quality and safety of products and services;
- managing relationships with consumers (privacy, data protection);
- preventing and addressing negative impacts on the rights of customers and end users, access to essential services (health, communication);
- respect for human rights.

This methodology applies to all asset classes and makes it possible to assign SRI ratings to the sustainable development practices of nearly 12,000 companies. These SRI ratings are incorporated into the asset selection process mainly through quantitative methods and thresholds established and audited within the framework of the SRI certification.

The **GREaT Committee** manages the cross-functional deployment of LBP AM's engagement and exclusion policies. It decides on whether to exclude companies in application of LBP AM's policies.

2.1.6.3 Material IROs related to impact finance

The theme of impact finance is one of the pillars of La Banque Postale Group's strategy, and is therefore present across all scopes of the double materiality analysis. Impact finance covers not only the financing of environmental solutions, but also that of the social

economy as well as supporting customers, particularly those in vulnerable situations.

More specifically, impact finance is covered by the following IROs as part of the double materiality analysis:

IMPACT FINANCE IROS

Details of these IROs are shown in Section 2.1.3.2 "Description of material impacts, risks and opportunities (IROs)".

2.1.6.4 Monitoring indicators for impact finance commitments

La Banque Postale Group is committed to a broad approach to impact finance. Its commitments are represented in the indicators presented in the table below and in paragraphs 2.2.1 "Combating and adapting to climate

change [E1]", 2.3.3 "Committing to the regions and communities affected by our activities [S3]" and 2.3.4 "Acting in the interests of our consumers and end-users [S4]" in this sustainability report.

OUTSTANDING ASSETS MANAGED WITH ESG FILTERS OR LABELS

		2022	2023	2024
LBP AM & LOUVRE BANQUE PRIVÉE SCOPE	Total outstandings (in € millions)	70,531	76,810	80,245
	Assets classified under Article 6 SFDR (in € millions)	8,000	7,150	7,020
	Assets classified under Article 8 SFDR (in € millions)	36,497	55,827	57,341
	Assets classified under Article 9 SFDR (in € millions)	1,000	2,075	2,375
	Assets not subject to SFDR (in € millions)	25,034	11,758	13,509

	Total responsible finance assets (including unit-linked) (in € millions)	353,144	389,315	389,642
	of which finance assets meeting the specifications of the SRI or Greenfin label (in € millions)	90,656	97,515	87,527
	of which finance assets managed according to other ESG filters (in € millions)	262,488	291,800	302,115

Assets managed with ESR filters or certifications are defined as follows:

SFDR technical reserves (Sustainable Finance Disclosure Regulation) are classified according to the three categories defined by Regulation (EU) 2019/2088 of the European Parliament and of the Council: Article 6⁽¹⁾, Article 8⁽²⁾ and Article 9⁽³⁾ funds.

Definition of “Responsible technical reserves of financial assets” for LBP AM:

The selected technical reserves take into account environmental, social or governance (ESG) criteria in the financial analysis and in the building of portfolios. These are:

- Either **SRI technical reserves**, with the systematic and traceable integration of ESG criteria considerations, with a high degree of selectivity (or significant improvement in an average ESG score vs. the portfolio's analysis universe). These may be:
 - portfolios of funds or discretionary management portfolios that have obtained the SRI or Greenfin label,
 - portfolios of funds or discretionary management portfolios whose SRI approach is considered equivalent to the SRI certification specifications (V2);
- Or **responsible technical reserves** which are not classified as SRI: these are funds (such as SFDR 8) that comply with a list of exclusions and filters established on the basis of ESG criteria with a lesser degree of selectivity. For example, these are funds with an average SRI rating better than that of the universe (but not higher than 20%, unlike a “V2” SRI fund).

Responsible technical reserves not classified as SRI, and portfolios whose approach is considered to be very close to the certification (Greenfin, SRI V2) without being certified, comprise the technical reserves of financial assets with other ESG filters.

Technical reserves marketed but not managed by LBP AM are not disclosed in this sustainability report.

Definition of “Responsible technical reserves of financial assets” for Louvre Banque Privée:

The benchmark technical reserves used are limited to the technical reserves under discretionary management; freely managed technical reserves are structurally excluded, as customers are free to choose and freely manage their investments (ESG/non-ESG) at any time.

The ESG methodology consists of applying the following exclusion criteria cumulatively:

- Exclusion from the investment universe of companies operating in whole or in part in certain controversial sectors or types of business sectors;
- Then, standards-based exclusion based on ratings assigned by the “Sustainalytics” social and environmental rating agency;
- Finally, the critical analysis of Louvre Banque Privée's management and analysis team is used to refine this list.

With regard to listed securities funds:

- Internal and external funds are either SRI-certified or rated at least three Morningstar Globes (on a scale of 1 to 5);

(1) Article 6: Products without sustainability targets.

(2) Article 8: Products that promote environmental and/or social characteristics.

(3) Article 9: Products whose target is to have a positive impact on the environment and society.

- In very exceptional circumstances, funds that cannot technically be certified or rated by Morningstar in terms of globes (for example: Global Macro funds; Long Short Equities, Long Short bonds, etc.) are eligible from an ESG point of view provided that the fund's ESG process is detailed and validated by the UCI Referencing Committee. Such funds may not exceed 5% of the technical reserves of a management profile. Such funds must be categorised as SFDR 8.

Finally, Louvre Banque Privée does not directly hold any bonds, real estate or forestry assets. In general, Louvre Banque Privée does not manage unlisted assets. It should also be noted that the "Green Industry Law" profiles may include a percentage of unlisted assets, but these are selected and managed under the responsibility of LBP AM.

Definition of "Technical reserves with other ESG filters" for CNP Assurances:

CNP Assurances and its subsidiaries (including foreign subsidiaries) have their own protocols for defining "Other ESG filters". These definitions may vary from one subsidiary to another. The parent company performs a consistency review to ensure that the definition is consistent within the Group.

The definitions are supplemented by CNP Assurances' exclusion policies, shareholder engagement policy and NZAOA commitments.

The following types of assets may be selected:

- Directly held listed equities;
- Directly held bonds;
- Real Estate assets;
- Woodland;
- Private equity and infrastructure funds;
- Listed equity funds.

2.2 Environmental information

2.2.1 Combating and adapting to climate change [E1]

2.2.1.1 Material IROs and links with strategy and business model

The materiality analysis approach for the Climate topic, as well as the identification of the corresponding impacts, risks and opportunities (IROs), are detailed in Section 2.1.4.4 "Climate-related IRO assessment".

2.2.1.1.1 Type of climate risk

La Banque Postale Group's various climate-related physical and transition risks are presented in Section 2.1.3.2 "Description of material impacts, risks and opportunities (IROs)". [E1_SBM_3_01]

2.2.1.1.2 Resilience analysis

An internal stress test framework has been developed by La Banque Postale to measure the impacts of climate risk on its business model and study its resilience based on the scenarios of the Network for Greening the Financial System (NGFS) used in the exercises of the French Prudential Supervision and Resolution Authority (ACPR) and the European Central Bank (ECB). By projecting over a horizon of one to three years with constant assets, the analysis covers the Retail and Non-Retail loan portfolios. La Banque Postale aims to roll out this exercise over a period of more than 10 years in 2024.

Ad hoc sensitivity scenarios were also developed to assess the materiality of the climate risk in terms of market risk, liquidity risk and operational risk.

The data, combined with the ESG risk management work, provided a basis for incorporating climate issues in the Bank's Internal Capital Adequacy Assessment Process (ICAAP) and led to an increase in the coverage of climate risks by capital. They are also used in the context of risk management: in the mapping of climate risks and the work to produce the materiality matrix.

In relation to physical risks, these tests are based on the "flood" scenario for real estate exposures and the "drought" scenario for companies. Physical operational risks were also studied with the 100-year Seine flood scenario; with assumptions that deliberately target a strong shock over a limited time horizon (1 year) and are used to calibrate the Bank's insurance coverage needs (flood of the Seine). [E1_IRO_1_07] [E1_IRO_1_08] [E1_IRO_1_13] [E1_IRO_1_15]

Additional information is available in Section 6.8.4.5 "Incorporation of short, medium and long-term effects of environmental and social factors and associated risks into the Bank's risk management framework" of the Universal Registration Document.

La Banque Postale therefore assesses its exposure to carbon-intensive sectors and its ability to cope with climate shocks. Based on the results of these exercises, La Banque Postale's overall performance is in line with the average for euro zone banks. Its portfolio's exposure to the most carbon-intensive sectors is limited, and its concentration on the most carbon-intensive firms is low.

In 2024, CNP Assurances SA was also asked by the ACPR to participate in the climate stress test on the scope of its activities in France on the basis of its data at the end of 2022. The test quantified CNP Assurances' exposure to the climate scenarios proposed by the ACPR, and in particular its sensitivity to a high-interest rate environment in the various scenarios. It also highlighted CNP Assurances' resilience to climate risk: the measures implemented in recent years (reduction of the investment portfolio carbon footprint, reduction of exposure to the thermal coal sector, increase in green investments) enable CNP Assurances to fare better in the event of an unfavourable transition scenario for companies that emit the most greenhouse gases. [E1_SBM_3_02] [E1_SBM_3_03] [E1_SBM_3_04] [E1_SBM_3_05] [E1_SBM_3_06]

La Banque Postale Group is building a climate strategy using scenario analyses. This science-based approach has two components. The first concerns the quantification of stressed impacts and internal capital adequacy. The second relates to establishing low-carbon pathways and the alignment of its portfolios with the targets of the Paris Agreement. These analyses enable the Group to consider all the impacts related to climate change beyond its direct control and to establish the positioning of the organisation according to its decarbonization strategy. La Banque Postale Group therefore incorporates climate-related risks into its strategy and business model based on its many commitments. These are detailed below in paragraphs 2.2.1.3 “Climate change mitigation and adaptation policies” and 2.2.1.5 “Decarbonisation levers and action plans”. [E1_SBM_3.07]

2.2.1.2 Transition plan for a low-carbon pathway compatible with the Paris Agreement

2.2.1.2.1 Presentation of the transition plan

In 2021, through its Chairman of the Executive Board, La Banque Postale made an ambitious commitment to achieve net zero emissions by 2040, i.e. ten years ahead of the targets set by the Paris Agreement, conditional upon consistent measures from governments and companies. La Banque Postale is putting its pledges into action both in its offerings, by publishing low-carbon pathways, and in its sector-specific policies. All internal actions are aligned to this transition, as regards both the organisation's operational scope and the operations of its various business lines.

In 2025, La Banque Postale Group reached a new milestone with the publication⁽¹⁾ of its transition plan covering its main entities (La Banque Postale, CNP Assurances, LBP AM and Louvre Banque Privée). With a forward-looking purpose, this transition plan details the actions to be implemented over the next 5 years to meet the decarbonization targets set by the Group. It makes it possible to anchor long-term targets in the overall strategy by aligning the climate targets with the financial planning horizon. The implementation of this plan thus requires transformative thinking on how to develop the business model, which involves all employees on all subjects: governance, monitoring of the plan's execution, financing dedicated to actions, etc. For La Banque Postale Group, the implementation of this plan will align with the commitments already made with the operational and commercial challenges of the Group's business lines and subsidiaries, and will send a clear strategic message. [E1_L_01]

La Banque Postale has relied on two distinct but complementary methodological frameworks to define its low-carbon pathways:

1. the Science Based Targets initiative (SBTi): the worldwide standard for CO₂ emissions reduction pathways and validation of company pathways;
2. the Net Zero Banking Alliance (NZBA): a United Nations-convened group of banks that establishes CO₂ emission baselines and pathways. La Banque Postale has been a member of the NZBA's Steering Group since 2021. La Banque Postale's two subsidiaries, CNP Assurances and LBP AM, are members of the Net Zero Asset Owner Alliance and the Net Zero Asset Managers Initiative respectively, both of which are aiming to help their members achieve net zero emissions by 2050.

The commitment to the SBTi dates from 2017. La Banque Postale contributed to the development of the first methodology specific to the financial sector, and took part in the methodological road tests in June 2019. This step was important for La Banque Postale in several ways, including the development and strengthening of internal skills, the Bank's business lines taking on board the challenges related to the setting of low-carbon pathways (own operations and portfolios), and initial estimates of the Bank's performance in terms of alignment with the Paris Agreement. The methodology was published in October 2020. One year later, La Banque Postale became one of the first three banks in the world to have its low-carbon pathways validated by the SBTi, both in its operational scope and in its Corporate and Investment Banking activities. In 2023, La Banque Postale continued to implement its low-carbon pathways with the development of a steering tool for residential and commercial property, and the ongoing development of a tool for corporate counterparties (Corporate and Investment Banking). For the operational scope, La Banque Postale's pathway was reviewed and included in an overall target presented by La Poste Group. The latter was validated by the SBTi in March 2024.

In addition, La Banque Postale has implemented stringent sectoral risk management policies in the coal, oil and gas sectors that guarantee it is aligned with 1.5°C in these sectors. Here again, its approach is based on scientifically validated scenarios such as the “IPCC Special Report on Global Warming of 1.5°C (SR15)”, the IEA Net Zero by 2050 or the Carbon Risk Real Estate Monitor (CRREM) 1.5°C.

Thus, La Banque Postale's pathways are based on the scientifically credible scenarios presented above. Through these analyses, La Banque Postale can consider all the impacts related to climate change which are beyond its control, and ensure that its strategy is resilient to climate change.

La Banque Postale's subsidiaries have also implemented strategies to align with the Paris Agreement, taking into account the specificities of their activities.

(1) The full transition plan is published separately and is available on La Banque Postale's institutional website from spring 2025.

CNP Assurances has also set targets for reducing direct and indirect greenhouse gas emissions, aligned with the Paris Agreement. At the end of 2024, approximately 28% of CNP Assurances' investment portfolio was covered by a target aligned with the Paris Agreement. CNP Assurances' targets are based on the recommendations of the Net Zero Asset Owner Alliance. As data is not always available for all asset classes, the exercise was carried out with a view to continuous improvement. Participation in the work of the Net Zero Asset Owner Alliance makes it possible to refine these results from year to year.

In 2022, **LBP AM** committed to achieving a "Net Zero" alignment for 80% of assets under management by 2030, and 100% by 2040.

Louvre Banque Privée follows an asset management strategy expressed as an "implied rise in temperature". Each company in the portfolio is assessed according to its low-carbon pathway, based on SBTi and CDP (Carbon Disclosure Project) data. Companies receive a score based on their compatibility with global warming scenarios ranging from an alignment at 1.5°C to scenarios above 3°C. The implied temperature of a portfolio is the weighted average of the temperatures of the companies held. Thus, if this average is 1.5°C, it means that the companies in the portfolio have transition plans aligned with the target of 1.5°C. **[E1.1.02]**

La Banque Postale, as well as its subsidiaries, are not excluded from the benchmarks of the Paris Agreement. For information, these financial benchmarks, like the EU PAB, bring together companies and securities whose pathway is compatible with limiting global warming to 1.5°C above pre-industrial levels by 2050. **[E1.1.12]**

2.2.1.2.2 Incorporating the transition plan into the Group's overall strategy and financial forecasts

La Banque Postale Group has included its decarbonization targets in its overall targets. In order to achieve them, each business line, including the subsidiaries, has drawn up a specific roadmap aligning its decarbonisation projects and initiatives with the Group's ambitions. They have been particularly mindful of aligning commercial targets with climate targets. This direct involvement of the business lines was key to raising awareness and empowering each department in achieving La Banque Postale's decarbonization ambitions.

Decarbonization initiatives are managed in the short and medium term within the divisions, with overall monitoring by the Executive Committee. On the financial side, the transition plan projects are gradually incorporated into strategic and budget reviews, allowing for rigorous monitoring of execution, costs and the value of positive outcomes. They also strengthen the integrated planning process (financial, non-financial and strategic). **[E1.1.13]**

Construction of the transition plan, led by the Sustainability Department, involved all of La Banque Postale Group's business lines in the construction of their own roadmap. This plan was validated at each stage by the Executive Committee. The members of the Supervisory Board were informed of the progress of work on this transition plan, while the Mission Committee contributed to its advance preparation and approved the final content.

For CNP Assurances, the transition plan is approved and monitored by the Board of Directors. LBP AM's transition plan will be approved in 2025 by the Sustainable Finance Committee and by LBP AM's Supervisory Board. Louvre Banque Privée's plan was adopted by its Executive Board in 2024, and will be published jointly with that of La Banque Postale in 2025. **[E1.1.14]**

2.2.1.2.3 Monitoring the implementation of the transition plan

The transition plan will be carried out weight of real estate loans to retail customers in its total management mechanisms that will make it possible to assess the progress of projects and make adjustments if necessary. La Banque Postale will present its progress each year in its sustainability report. A review of the plan every 3 to 5 years is already scheduled in order to take into account any regulatory and strategic changes within the Group. **[E1.1.15]**

2.2.1.3 Climate change mitigation and adaptation policies

Through its climate policies, La Banque Postale Group aims to address the following sustainability issues:

- mitigation of environmental impacts through policies to reduce greenhouse gas (GHG) emissions across all activities. The mitigation component relates in particular to Corporate and Investment Banking, and is achieved through actions such as establishing sector-specific policies (coal, oil and gas, aeronautical) or by establishing decarbonisation targets and pathways for certain carbon-intensive sectors (real estate, automotive transport, air transport and cement);
- climate change adaptation: in 2024, the Caisse des Dépôts Group adopted an adaptation policy that targets both operational activities and investments and financing. Work will be initiated in 2025 to eventually equip La Banque Postale Group with a climate change adaptation policy aligned with that of the Caisse des Dépôts Group;
- energy efficiency, which is addressed in the operational scope through commitments related to building management. **[E1.2.01]**

SUMMARY OF LA BANQUE POSTALE SA'S CLIMATE CHANGE MITIGATION POLICIES

These issues are addressed within the **operational scope** through actions and commitments to improve energy efficiency, use renewable energy and reduce emissions related to transport or purchases. These commitments are detailed in Section 2.2.1.5 "Decarbonisation levers and action plans".

As a subsidiary of Caisse des Dépôts and La Poste, La Banque Postale applies the **Group's Climate policy** in the **financing and investment scope**. This policy aims for a strict framework for high-emission activities, decarbonisation of activities and portfolios based on a pathway which gradually aligns with a 1.5°C ambition, and financing to be deployed in favour of the environmental transformation.

In addition, La Banque Postale has established sector-specific policies, intervention principles and a Responsible Financing and Investment Charter.

Sector-specific policies

These policies form part of La Banque Postale's "net zero emissions" by 2040 ambition. Their provisions apply to all financing and investments in the banking scope relating to the coal, oil, gas and aeronautics sectors. They concern in particular the activities of the Corporate Banking and

Local Development division. The activities of the bancassurance divisions in France and abroad, as well as those of the Wealth and Asset Management division, are excluded from these policies to date. The policies specific to these scopes are presented below.

The business lines are responsible for implementing these policies, with the support of the Sustainability Department.

These policies are available on the La Banque Postale website.

Risk Management Policy – Coal sector

This policy establishes the principles to be applied in order to fulfil its commitment to completely exit the coal sector by 2030.

In order to support the energy transition, La Banque Postale continues to finance companies in these sectors which publicly commit to exit the coal sector before 2030, and with a scientifically based transition plan aligned with the Paris Agreement. Companies active in the coal sector may also be financed if the purpose of the financing is to develop renewable energy. Moreover, these companies' renewable energy subsidiaries are not excluded from La Banque Postale's financing and investment universe.

Risk Management Policy – Oil and Gas sectors

This policy establishes the principles to be applied to achieve a total exit commitment from these sectors by 2030 in order to support its climate commitments.

Under this policy, La Banque Postale undertakes to exclude oil and gas companies from its financial services by 2030, including those listed in the Global Oil and Gas Exit List (GOGEL) and their subsidiaries, and to gradually divest from these companies. Nevertheless, it will maintain its commercial relationships with the companies listed in GOGEL and their subsidiaries if they have a public and credible exit strategy for the oil and gas sectors before 2040. Financing required for health or safety reasons, or to comply with regulatory standards, is excluded from this policy.

In addition, La Banque Postale rules out any collaboration with companies which are opposed to the energy transition, particularly those that slow down or block efforts to exit the fossil fuels sector.

The Bank's principles of intervention in the aeronautics sector

In line with its climate commitments, the principles establish the rules to be applied in order to participate in and encourage the decarbonisation of the aeronautics sector. They are aligned with the Paris Agreement.

Based on its principles, La Banque Postale undertakes to finance only the newest aircraft and aeronautics companies which, from 2025, have strategies aligned with the pathway of 1.5°C of global warming. Moreover, to support the energy transition, La Banque Postale is able to finance projects which promote the use of sustainable fuel (SAF) and electric aircraft. In addition, La Banque Postale has stated that it will not finance new airports, except in France if explicitly provided for by the French Climate and Resilience law. However, it will support projects aimed at modernizing existing infrastructures, provided that they contribute to the energy transition, the preservation of biodiversity, or the improvement of the environmental performance of airport platforms.

Responsible Financing and Investment Charter

La Banque Postale is well aware of the need to incorporate decarbonisation matters into its Corporate and Investment Banking activities, and also works with other sectors. In order to achieve this, La Banque Postale's Responsible Financing and Investment Charter derived from its risk management policy provides guidance on its financing operations and lending to business customers.

The Charter imposes exclusions for companies operating in fossil fuels sectors or that have violated environmental legislation. In the event of serious or repeated controversies over environmental issues, a procedure is in place to assess the companies concerned. For more information, please refer to the focus point: *La Banque Postale's Financing and Investment Charter*.

Other initiatives

For several years now, La Banque Postale has chosen to actively collaborate in market discussions and to participate in various benchmark initiatives such as the Principles for Responsible Banking (PRB), a global initiative coordinated by the United Nations Environment Programme Finance Initiative (UNEP FI). By signing these principles in 2019, La Banque Postale committed to aligning its strategy with international and national reference frameworks, in particular the Sustainable Development Goals and the Paris Climate Agreement. The PRB report can be found in Section 8.1 "Principles for Responsible Banking" of the Universal Registration Document.

Policies and commitments of La Banque Postale Group subsidiaries

In addition, La Banque Postale's subsidiaries have established climate change mitigation policies for their activities.

CNP Assurances focuses its climate policies and actions around recent regulations, such as Article 29 of the Energy-Climate law (LEC) and the SFDR regulation, and also relies on the Global Compact and the Principles for Responsible Investment (PRI). In 2019, CNP Assurances joined the Net Zero Asset Owner Alliance, committing to achieving carbon neutrality in its investment portfolio by 2050. This international alliance, bringing together more than 80 institutional investors, aims to limit global warming to 1.5°C. CNP Assurances relies on three main levers:

- regularly measuring the alignment of the investment portfolio with the Paris Agreement and publishing the progress made;
- conducting shareholder dialogue with companies to ensure that they are also moving towards carbon neutrality;
- demanding public policies in favour of a transition to a low-carbon economy.

All of CNP Assurances' commitments are presented in its due diligence policy concerning the negative impacts of investment decisions on sustainability factors. Revised in 2024, it presents the three pillars of CNP Assurances' investment strategy: policy of exclusion, commitment and selection of investments based on ESG criteria.

In 2020, CNP Assurances adopted a plan to phase out thermal coal, setting zero exposure by 2030 in the EU and the OECD, and by 2040 elsewhere. This exclusion policy was extended in 2021 and 2022 to include restrictions on investments in fossil oil and gas, thus reinforcing its responsible investment strategy.

The due diligence policy is subject to operational oversight and implementation by the Investment Department. Management committees with the asset management companies ensure this regular monitoring.

In addition, to reduce the consequences of climate risks on its insurance business, CNP Assurances has implemented a global protection approach to incorporate climate risks through reinsurance coverage against the risk of excess mortality. All causes of excess mortality are covered: this coverage provides protection against both pandemics and heat waves.

LBP AM has adopted an exclusion policy in order to limit its exposure to issuers whose activities, policies or practices are not compatible with its vision of a responsible economy. The policy includes regulatory, standards-based and sector-specific exclusions for thermal coal (updated in April 2021) and the oil and gas sectors (validated in June 2022). This exclusion policy was updated in May 2023. It is validated and updated by the LBP AM Sustainable Finance Committee. The ESG Committee is regularly informed of the work carried out under this policy, and the GREaT Committee oversees its implementation. The exclusion policy applies to all open-ended funds managed by LBP AM and is available on its website.

As part of the integration of La Financière de l'Échiquier into LBP AM, the oil and gas policies are in the process of being combined. The other policies (voting, engagement and coal) have been harmonised.

In addition, LBP AM's commitment policy aims to improve the climate performance of its portfolios. Through dialogue, LBP AM seeks to better understand the policies and practices of the companies to improve the analyses carried out by its teams. Through the ESG commitment, LBP AM encourages the integration of sustainable development matters, including climate-related matters, into companies' strategies, and setting out robust policies to help prevent ESG risks. The policy applies to the two asset management companies of LBP AM (LBP AM and La Financière de l'Échiquier⁽¹⁾). Engagement campaigns are monitored during weekly ESG management committee meetings and, where applicable, GREaT committee meetings. This policy is approved by the Sustainable Finance Committee. In particular, the Governance Committee approves the development and updates of the voting policy at Shareholders' Meetings.

Louvre Banque Privée, as part of its discretionary management, incorporates sustainability risks in accordance with the SFDR regulations and Article 29 of the Energy-Climate Act. The targets of its ESG policy are established in its ESG charter. The policy is under the operational responsibility of the Director of Discretionary Management and the Chief Sustainability Officer, who reports to the Chairman of the Executive Board. The Executive Board approves the sustainability roadmap on an annual basis.

In its management, the Bank takes into account the interests of its customers. It aims to reconcile ESG integration with the maintenance of sectoral and geographical diversification and the control of sustainability risks. The main documents, such as the ESG Charter, the Article 29 report, the sustainability documents related to each mandate (SFDR) and the annual statement of negative impacts, are freely accessible on its website. [E1_MDR_P_01_06]

2.2.1.4 Climate change mitigation and adaptation targets

2.2.1.4.1 Presentation of decarbonization targets

To monitor and achieve its reduction targets, and in particular the achievement of its "zero net emissions" ambition by 2040, La Banque Postale has developed science-based trajectories.

Operational scope

For its operational scope, La Banque Postale is committed to:

- sourcing 100% of its electricity from renewable sources by 2030.
- reducing its Scope 1 & 2 GHG emissions by 43.6% over the 2021-2030 period. This commitment covers GHG emissions from the Bank's vehicle fleet and buildings, excluding the Banking Advice Line and CNP Assurances. The buildings of the La Poste Network are not included in this pathway, but within the scope of the La Poste Group Consumer and Digital Services business unit (BGNP). This pathway, aligned with a 1.5°C scenario, was charted using the Absolute Contraction Approach (ACA). The pathway aims to reduce its operational footprint by 2,219 tCO₂e for Scope 1 and by 736 tCO₂e for Scope 2 by 2030;
- reducing its emissions by 25% on Scope 3 (partial: categories 1 partial, 3, 6 and 7), i.e. an expected reduction of 7,757 tCO₂e.

La Banque Postale's commitment is part of a scientific approach. All reduction targets for the operational scope (i.e. outside Scope 3 Category 15) correspond to the targets of the SBTi pathway validated in March 2024 for the La Poste SA scope, which includes La Banque Postale. The targets correspond to the implementation of this pathway for the La Banque Postale SA scope. [E1_4_01] [E1_MDR_T_01_13] [E1_4_22]

REDUCING GREENHOUSE GAS EMISSIONS - Operational scope - 2021-2030

Absolute value (tCO₂e)

(1) The La Financière de l'Échiquier scope includes funds historically managed by Tocqueville Finance SA and those historically managed by La Financière de l'Échiquier.

Corporate and Investment Banking portfolios

In the banking sector, carbon-reduction targets can be set based either on asset class (portfolio) or on the sector of the activities being financed. Different frameworks and indicators apply depending on which of these two

approaches is used. For reasons of timing and coverage, La Banque Postale has chosen to combine these two approaches by relying on two market initiatives, the Science Based Targets initiative (SBTi) and the Net Zero Banking Alliance (NZBA).

SCOPE 3 CATEGORY 15 TRANSITION TARGETS [E1_4_02]

For its Corporate and Investment Banking activities, La Banque Postale SA undertakes to:

- continue to finance only those **energy projects that are based on renewable energy**;
- reduce indirect greenhouse gas emissions in Scope 3 – Category 15, relating to its portfolio of **home loans for retail customers**, by 73.7% per sq.m. over the 2022-2035 period to achieve a 53% reduction per sq.m. by 2030.

This pathway was created using the Global GHG Accounting and Reporting Standard for the Financial Industry (PCAF) methodology and the "CRREM 1.5" scenario. Although the establishment of a target for this asset class is considered optional by the SBTi, the Bank wished to propose one, given the significant weight of real estate loans to retail customers in its total financing technical reserves. This target was submitted to the SBTi for validation in 2024. It replaces the previous target, validated in 2021 for this asset class. This new target reflects both a change in the baseline data due to a better quality of data on the financed assets, and the Bank's ambition to align it with a 1.5°C scenario;

- reduce indirect Scope 3 – Category 15 GHG emissions from its **commercial property portfolio** by 65% per sq.m over the 2022-2030 period;

- align the temperature of its **large corporate equity and bond portfolio** from +3.14°C in 2019 to 2.2°C in 2025 (Scopes 1 and 2).

This pathway was built based on the temperature rating methodology developed by the SBTi, using the revenue owned emissions temperature score (ROTS) aggregation option. The scenarios used are those developed in the IPCC Special Report on Global Warming of 1.5°C (SR15).

- align the temperature of its **medium/long-term large corporate loan portfolio** from 3.14°C in 2019 to 2.3°C in 2025 (Scopes 1 and 2).

This pathway was built based on the temperature rating methodology developed by SBTi, using the revenue owned emissions temperature score (ROTS) aggregation option. The scenarios used are those developed in the IPCC Special Report on Global Warming of 1.5°C (SR15).

At the end of 2024, La Banque Postale SA filed revised pathways for its real estate portfolios (retail customers, commercial real estate) with the SBTi. These pathways, which are presented in this sustainability report, are currently being validated by the SBTi. In addition, a methodological review of the various decarbonisation targets will be carried out in 2025, with the temperature pathways on the large corporate equity and bond portfolios and those on the large corporate medium/long-term loan portfolios maturing at the end of 2025.

La Banque Postale SA has filed these pathways with SBTi as a financial institution, in addition to its contribution to the pathways filed by La Poste SA. As compliance with the targets for reducing the carbon footprint of financing and investment portfolios is essential for a financial institution, this subject is specifically monitored in the context of the mission-led Company commitments.

It should be noted that the decarbonisation ambitions of real estate portfolios may prove incompatible with the accessibility targets of the Group's banking services, in particular with regard to home loans.

Granting loans to low-income households raises the question of the financial resources required to buy energy-efficient homes. The Group's societal commitment may thus have a negative effect on the low-carbon pathway of the home loan portfolio. The same applies to financing for social housing and social landlords, for which the pace of energy renovation of their stock is sometimes too slow, even though this financial support represents an important component of the Group's positive societal impact. More details on commitments to social housing operators and customers experiencing financial difficulties are available in paragraphs 2.3.3.3.1 "Financing of local authorities, charities and the local economic sector" and 2.3.4.5.2 "Actions implemented to generate positive impacts".

This tension between reducing carbon emissions and the Group's commitment to accessibility and support for disadvantaged groups is a real strategic challenge that could lead to arbitration on a case-by-case basis when making loan decisions.

In addition, as part of its commitment to the NZBA, La Banque Postale, like all the signatory banks, has established scientifically credible low-carbon pathways in relation to its portfolios, aimed at limiting the rise in global temperature to 1.5°C by the end of the century. The efforts to be made focus on the sectors that emit the most greenhouse gases (GHG) and play a key role in the transition to a low-carbon economy. The NZBA has identified nine priority sectors: agriculture, aluminium, cement, coal, iron and steel, real estate, oil and gas, electricity generation and transport.

Among these sectors, the signatory banks must present trajectories for those to which they are most significantly exposed. This commitment complements and reinforces the SBTi commitment made by La Banque Postale in

order to provide a more granular sector-specific dimension, and an ambition to align with more demanding scenarios. La Banque Postale is therefore committed to:

- reducing indirect Scope 3 – Category 15 greenhouse gas emissions in its automotive sector investments (expressed in gCO₂eq per vehicle per kilometre) by 7% over the 2020-2030 period;
- reducing indirect Scope 3 – Category 15 greenhouse gas emissions in its aviation sector investments (expressed in gCO₂eq per passenger per kilometre) by 56% over the 2020-2030 period;
- reducing indirect Scope 3 – Category 15 greenhouse gas emissions in its cement sector (expressed in kgCO₂eq per tonne of cement produced) by 30% over the 2020-2030 period.

These pathways were established based on a sector-specific approach using the NACE codes⁽¹⁾ of the counterparties in the Corporate portfolio. La Banque Postale has developed a proprietary method based on in-depth analysis of its counterparties' climate transition plans and on the International Energy Agency (IEA) "Net Zero 2050" scenario.

For the coal sector, La Banque Postale is already in line with scientific recommendations, as it is not exposed. It is also already aligned for power generation, as the Bank only finances projects based on renewable energy.

Finally, with regard to the oil and gas sector, the policy it has implemented guarantees alignment with the +1.5°C pathway from 2030 onwards.

The first step is to establish and validate these pathways while waiting for new and more in-depth work that will enable La Banque Postale to reach its net zero emissions by 2040 target. **[E1_4_01] [E1_MDR.T_01.13] [E1_4_22]**

La Banque Postale has established its low-carbon pathways for financed emissions in the most significant scopes for which benchmark methodologies exist. This concerns real estate loan portfolios (residential and commercial), financing and investment loans to companies (excluding real estate). Large companies account for most of the emissions measured.

Retail banking technical reserves (excluding real estate), equity securities and exposures to sovereigns (sovereign bonds, technical reserves at the Banque de France and centralisation of passbook savings accounts) are currently excluded from this scope. **[E1_4_18]**

(1) Statistical Classification of Economic Activities in the European Community.

FINANCED EMISSIONS

End-December 2024 data unavailable when this document was published.

(1) La Banque Postale SA, Louvre Banque Privée, LBP L&F, LBP CF, Sofiap and Dutch portfolios.

(2) FAP (renewable energy): financing of assets and projects dedicated to renewable energies; FIM: Real estate financing for companies.

The financed emissions that La Banque Postale is able to calculate for Scope 3 Category 15 total 10,920 KtCO₂e as of 30 June 2024. 95% of these financed emissions come from its corporate portfolios (large corporates, SMEs, VSEs, commercial real estate and financing of renewable energy projects), while the remaining 5% are financed emissions linked to the retail banking portfolio, and more specifically to residential real estate.

At 30 June 2024, the total technical reserves covered by low-carbon pathways amounted to €71 billion. 79% of these technical reserves are related to the residential real estate portfolio, 11% to the commercial real estate portfolio, and 7% to the equity and bond portfolios and large corporate medium/long-term loans, while 3% are related to the asset financing portfolio and renewable energy-based projects.

Targets of La Banque Postale's subsidiaries

La Banque Postale's subsidiaries have also established reduction targets:

CNP Assurances SA and its subsidiaries have committed to reducing direct and indirect greenhouse gas emissions (Scopes 1 and 2 based on location) related to their internal operations by 50% between 2019 and 2030. This target is aligned with the IPCC 1.5° pathways.

As a member of the Net-Zero Asset Owner Alliance since 2019, CNP Assurances is committed to achieving carbon neutrality

in its investment portfolio by 2050. CNP Assurances has established decarbonization trajectories for the investment portfolio with an alignment with the 1.5 °C trajectories and specific targets for certain asset classes (equities, bonds, real estate, electricity producers) held by CNP Assurances and its French subsidiaries. CNP Assurances also aims to completely exit the coal sector by 2030 in the EU and the OECD, and by 2040 in the rest of the world.

Within its investment scope, CNP Assurances SA and its French subsidiaries aim to:

- reduce the Scope 1 and 2 carbon footprint of the directly held equity, corporate bonds and infrastructure portfolio by 53% by the end of 2029;
- reduce the Scope 1 and 2 carbon footprint of the directly owned real estate portfolio *via* club deals and the Lamartine fund by 32% by the end of 2029;
- reduce the carbon intensity of electricity producers in which they are direct shareholders or bondholders by 17% by the end of 2024.

CNP Assurances has not set itself a low-carbon pathway for the other asset classes or for Scope 3 emissions for the other companies in which it invests due to the lack of methodologies or sufficient data to process them. Nevertheless, the shareholder engagement policy covers all three scopes and covers the strategy of companies in their value chain.

LBP AM joined the Net Zero Asset Manager Initiative (NZAMi) in 2021 to align the management of its assets with a pathway for reducing greenhouse gas emissions in line with the Paris Agreement target, and aims to align its investments with a 1.5°C pathway using the IPCC P2 scenario⁽¹⁾. In 2022, LBP AM established and published an ambitious decarbonisation trajectory for the investment portfolios managed by its two management companies, LBP AM and Tocqueville Finance, including open-ended and dedicated funds for all eligible asset classes. This pathway, aiming for carbon neutrality by 2050, was extended in 2023 to La Financière de l'Échiquier, also a member of NZAMi.

The main milestones of this trajectory are:

- by 2030, alignment of 80% of technical reserves on a carbon pathway compatible with the Paris Agreement;
- by 2040, alignment of 100% of technical reserves;
- by 2050, the initiative estimates that companies will have deployed their targets, therefore enabling a transition to carbon neutrality in the economy.

The NZAMi provides for a review of the Net Zero target every five years, or in the event of a change in investment profile. The methodology used is based on the framework established by the Science Based Targets initiative for Financial Institutions (SBTi). The approach consists of measuring the share of technical reserves invested in companies whose decarbonization trajectory is validated by the SBTi.

For discretionary management, **Louvre Banque Privée's** pathway was expressed as an "implied temperature rise pathway", with a target of portfolios aligned with the targets of the Paris Agreement, i.e. a maximum increase of 1.5°C in 2040. This method was chosen in accordance with the methodologies authorised by Article 29 of the Energy-Climate law (LEC). [E1_4_01] [E1_MDR.T_01_13] [E1_4_22]

Methodological details

The starting points chosen for the various pathways were those considered to be the most relevant with regard to the date of the work to establish the pathways, the availability of data to carry out the calculations and the scenarios used. [E1_4_20]

In the event of an adjustment in the baseline value set for its targets in the coming years, La Banque Postale will specify this in its sustainability report. [E1_4_21]

Currently, La Banque Postale's decarbonisation strategy and the resulting actions are based on the new IPCC SSP1-1.9 scenario, in line with the 1.5°C target under the Paris Agreement. This scenario envisages a 50% probability of limiting the increase in temperatures to 2°C and 1.5°C by 2100 respectively, compared to the pre-industrial era, and a peak in global emissions in 2020. It therefore has a reduced financial impact. [E1_4_24]

2.2.1.4.2 Detail of decarbonization targets

Additional information on GHG emissions and the actions implemented to achieve the targets is available in Sections 2.2.1.5 "Decarbonisation levers and action plans" and 2.2.1.7 "Group greenhouse gas emissions".

Targets for reducing greenhouse gas emissions

Decarbonisation targets for La Banque Postale's **operational activities** are detailed here in the scope of SBTi commitments, which excludes the Banking Advice Line and CNP Assurances.

GHG EMISSION REDUCTION TARGET [E1_4_02]

	Reference		2023	2024	2030		Average annual target
	Year	Emissions (tCO ₂ e)	Emissions (tCO ₂ e)	Emissions (tCO ₂ e)	Emissions (tCO ₂ e)		
Operational scope							
SCOPE 1	2021	5,089	5,297	5,420	+2.3%	2,870	-43.6%
SCOPE 2	2021	1,689	1,093	840	-23%	953	-43.6%
SCOPE 3 - Partial	2021	31,026	32,050	30,471	-4.9%	23,270	-25%

La Banque Postale is making progress in reducing its greenhouse gas emissions in accordance with its targets as validated by the SBTi initiative.

Scope 2 emissions decreased by 23% between 2023 and 2024, exceeding the target for 2030. This decrease is the result of energy efficiency actions carried out with the deployment of technical building management systems, energy renovation and the supply of renewable electricity. It includes, for example, the impact of the release in 2024 of an energy-intensive 30,000 sq.m., replaced by a 10,000 sq.m. energy-efficient building for the Orléans Customer Relations and Expertise Centre.

Scope 1 emissions increased slightly in 2024 in line with the increase in vehicle emissions. The new policy concerning the vehicle fleet is gradually being implemented.

Decarbonisation targets concerning **financed activities** are expressed in intensity or in portfolio temperature. They correspond to La Banque Postale SA's SBTi pathways for the real estate sector and the corporate portfolio, and to the NZBA commitments for the automotive, aviation and cement sectors.

(1) Emissions reduction pathway to limit global warming to 1.5°C, based on a scenario focusing on sustainability as well as a shift towards sustainable and robust consumption patterns and low carbon intensity technological innovations.

GHG EMISSION REDUCTION TARGET [E1_4_02]

Scope of financed activities - Intensity targets	Reference		2023	2024		2030		Average annual target
	Year	Emissions	Emissions	Emissions	↓GHG	Targets	↓GHG	↓GHG
SCOPE 3 Real Estate Individuals sector (kgCO ₂ e/sq.m)	2022	28	27.9	28.5	+2.3%	13.16	-53%	-6.63%
SCOPE 3 commercial real estate (kgCO ₂ e/sq.m)	2022	32.6	31	29.6	-4.5%	11.41	-65%	-8.13%
SCOPE 3 automotive sector (gCO ₂ e/v.km)	2020	111	160	173	+8.13%	103.23	-7%	-0.7%
SCOPE 3 aviation sector (gCO ₂ e/p.km)	2020	143	99	103	+4.04%	62.92	-56%	-5.6%
SCOPE 3 cement sector (kgCO ₂ e/tonne)	2020	511	376	375	-0.27%	357.7	-30%	-3%

2035 targets:

For the residential real estate sector (retail customers), La Banque Postale SA submitted a new scientifically constructed pathway aligned with a 1.5°C scenario to the SBTi for validation: a 73.7% reduction in CO₂ emissions per sq.m. over the 2022-2035 period, with a crossing point of -53% per sq.m. in 2030. 2035 targets have not yet been set for the other sectors.

Development of pathways

Concerning the residential real estate scope, the work to implement the pathways carried out in 2023 in home loan portfolios, as well as the general collection of energy performance assessments when loans are granted, has led to a methodological change and better precision in the calculation of intensity and financed emissions. Technical reserves amount analysed on 30 June 2024 was 15.4% higher than on 31 December 2023. Changes in data

processing allowed for better coverage. In addition, difficult conditions in the real estate market have hampered strategic choices in favour of better energy performance assessments.

For the automotive, aviation and cement sectors, the NZBA pathways adopted by La Banque Postale SA are based on the IEA's NZ 2050 decarbonisation scenarios. The counterparties used correspond to car manufacturers, airlines and cement producers. Physical intensity data is collected as a priority from the annual reports of the portfolio companies. When this data is not available, sector-specific replacements can be used. Counterparties publish increasingly accurate data over time. Certain physical intensities published by the counterparties are higher than the sectoral averages. The physical intensity calculated on 30 June 2024 for car manufacturer and airline portfolios, up compared to 2023, remain in line with the IEA NZ 2050 sector-specific decarbonisation scenarios.

GHG EMISSION REDUCTION TARGET [E1_4_02]

Scope of financed activities - Portfolio temperature targets	Reference		2023	2024	2025
	Year	Value	Emissions (tCO ₂ e)	Emissions (tCO ₂ e)	Targets
SCOPE 3 Large corporate equities and bonds (customer Scopes 1 & 2)	2019	3.1°C	2.2°C	1.6°C	2.19°C
SCOPE 3 Medium/long-term loans to large corporates (customer Scopes 1 & 2)	2019	3.1°C	2.5°C	2.4°C	2.32°C

With regard to the portfolio temperature targets, the 2024 results are encouraging. The temperature of the portfolio for large corporate equities and bonds (Scopes 1 & 2) in 2024 is lower than the target set for 2025. Regarding the portfolio of large corporate medium/long-term loans (Scopes 1 & 2), the temperature is on the right track to reach the target of 2.32°C planned for the end of 2025.

Renewable energy targets

True to its commitment to the energy transition, La Banque Postale has been using 100% renewable electricity for all its major sites since 2015. In 2024, the share of green electricity started to grow again. This target is part of La Banque Postale's SBTi pathway, and is therefore calculated on the corresponding scope (excluding CNP Assurances and the Banking Advice Line).

RENEWABLE ELECTRICITY SUPPLY TARGET [E1_4_02]

	2022	2023	2024	2030 target
Electricity supply from renewable sources	95.2%	92%	92.5%	100%

Given its status as a mission-led company, La Banque Postale has also set a target of €5.6 billion for the financing of renewable energy projects in 2025, and made progress towards this target in 2024. Finally, regarding energy financing, La Banque Postale only finances projects based on renewable energy.

FINANCING TARGET FOR RENEWABLE ENERGY PROJECTS

	2023	2024	2025 target
Asset and Project Finance originations to fund renewable energy projects	€4,586 million	€5,039 million	€5,600 million

The 2030 target is to reduce the carbon impact by 1,732 tCO₂e compared to the 2021 base year (3,972 tCO₂e), by:

- renovating the existing real estate portfolio to reduce energy consumption (reduction of 1,212 tCO₂e by 2030), including performing energy audits, deploying the Climate and Biodiversity Impact Fund and installing the Technical Building Management System (BMS);
- efficient use to limit energy consumption (reduction of 173 tCO₂e by 2030);
- decarbonising residual consumption (reduction of 346 tCO₂e by 2030), with specific action plans for the sites with the highest emissions.

La Banque Postale, in conjunction with La Poste Immobilier, La Poste Group's real estate company responsible for the technical management of its buildings, has implemented energy saving initiatives by optimising the operation of its facilities, mainly by managing heating, air conditioning and ventilation equipment. 16 energy audits were carried out on the main Customer Relations and Expertise Centres (CRECs) in order to identify ways to optimise energy consumption with the aim of facilitating the transition to less carbon-intensive energy. Since 1 January 2022, La Banque Postale has entered into an electricity contract with certificates of guarantee of origin (electricity production from renewable energy in France) for 98% of its supply within the scope managed by La Poste Immobilier. Technical Building Management (BMS) is being rolled out on La Banque Postale's sites, with a priority on the sites emitting the most CO₂. In addition, as part of regular maintenance operations, La Banque Postale and La Poste Immobilier are systematically seeking energy performance. For example, when replacing technical equipment (mainly gas boilers), the choice is made for the less energy-intensive equivalent. The implementation of actions to improve the energy performance and efficiency of buildings will continue until 2026.

2.2.1.5 Decarbonisation levers and action plans

To achieve its decarbonisation targets, La Banque Postale and its subsidiaries, including CNP Assurances, LBP AM and Louvre Banque Privée, are implementing a decarbonisation strategy based on various levers, both for their own operations and for their Corporate and Investment Banking activities. All of the action plans will be detailed in La Banque Postale's Transition Plan, which will be available on its institutional website in 2025.

2.2.1.5.1 Operational scope

Reducing the carbon footprint of operational activities is based on targeted actions for buildings, vehicles, the digital footprint, and business travel and commuting.

The actions are driven and monitored by the Sustainability Department and implemented by the departments in question.

Buildings

La Banque Postale carries out energy efficiency actions with the deployment of technical building management systems, energy renovation (replacement of energy-intensive equipment, installation of LEDs) and the supply of renewable electricity.

Vehicles

A commitment to transition to plug-in hybrid or electric vehicles has been put in place, aiming in particular to convert La Banque Postale's entire internal fleet by 2030. In addition to the deployment of this vehicle policy, dedicated support is planned for eligible employees.

The 2030 target is to reduce the carbon impact by 1,223 tCO₂e compared to the 2021 baseline year (2,806 tCO₂e), by:

- continuing to deploy the vehicle policy for the La Banque Postale SA scope (reduction of 841 tCO₂e by 2030) with, in particular, the continuation of eco-driving training, as well as the possibility of extending the fixed compensatory allowance to company vehicles;
- deploying a vehicle policy for the subsidiaries concerned (reduction of 383 tCO₂e by 2030).

La Banque Postale is continuing to replace the vehicle fleet to reach 100% electric and plug-in hybrid vehicles in the service and company vehicle fleet.

Travel

Sustainable mobility initiatives favour public transport for business travel and offer incentives such as the sustainable mobility package for commuting. Teleworking is also encouraged.

The 2030 target is to reduce the carbon impact by 6,566 tCO₂e compared to the 2021 baseline year (26,264 tCO₂e). This target is accompanied by a modal shift target of 17% (i.e. 16,224 single-occupancy vehicles targeted), and is broken down as follows:

- the use of public transport (target of 2,298 tCO₂e reduction in CO₂ by 2030) by including park and ride subscription fees in the "soft mobility pass", or by launching discussions on the terms of additional financial incentives;
- developing the use of active modes (target of 591 tCO₂e reduction by 2030) by facilitating the purchase or rental of bicycles, including bicycle repair and maintenance costs into the "soft mobility pass", and by organising campaigns to promote cycling, including in urban areas;
- optimising motorised travel (target of 2,495 tCO₂e reduction by 2030), mainly by organising car-free days and implementing a car-sharing system between employees;
- supporting the rollout of working from home (target of 1,182 tCO₂e reduction by 2030).

La Banque Postale has been managing arrangements for business travel since 2021 in order to reduce the associated carbon footprint, and opting for remote meetings wherever possible. When business travel is

necessary, train travel (and more generally, the use of public transport) should be used over air travel. For commuting, La Banque Postale has been offering its employees the "soft mobility pass" since 2023. This is a comprehensive offer that includes compensation of 50% of the amount of the public transport subscription, the sustainable mobility package of up to €220 per year and the dissemination of useful information on commuting and employee safety. In addition, La Banque Postale's home working agreement allows employees who are eligible to benefit from 2 fixed days of home working per week in their roles, as well as a fixed rate of 10 annual floating days of home working. This measure saved an average of 6 tCO₂e per year according to the working from home survey conducted in 2023.

Digital

Digital efficiency actions are in place, in particular on the responsible design of solutions, reducing the consumption of IT architecture and increasing the reuse of equipment.

La Banque Postale aims to deploy a "responsible digital by design" strategy, which incorporates ESG from the IT consultation and tendering phase. Teams from the Bank and Network Information Systems Department (DSIBA) work with the Purchasing Department to set ESG criteria. An assessment grid of criteria is systematically included in the specifications, and the main requirements are set out in the contract.

Work is also being done on the responsible design of digital solutions to ensure that they are always useful, usable, used and reusable.

In the use phase, targeted actions are carried out to reduce the environmental footprint of workstations (efficient purchases and hardware settings), and on infrastructure to manage consumption related to data centre cooling.

Lastly, for end of life, La Banque Postale is increasing the reuse of its hardware (currently 30% of hardware is reused) by making changes to the way in which asset managers work, for example by discontinuing the destruction of hard drives. In addition, awareness-raising among IT sector stakeholders and IT users is currently being rolled out within La Banque Postale's business lines.

La Banque Postale measures and manages its digital footprint to guide the effectiveness of its actions. This footprint includes the greenhouse gas emissions related to its IT equipment, including computers, printing systems, hubs, routers, switches and other network equipment, telephony, video projection equipment and data centre hardware, and building infrastructure such as air conditioning, security and lighting.

Other levers in the operational scope

La Banque Postale has launched a responsible purchasing approach, consolidated and formalised as part of its RFAR (Supplier Relations and Responsible Purchasing) certification, which aims to reduce the negative impact of purchases by La Banque Postale and its suppliers on the environment, as well as encouraging positive impacts. La Banque Postale is also providing more detailed measurements of the carbon footprint of its suppliers, specifically targeting its 50 suppliers with the highest emissions.

The transition plan also includes additional actions for better management of the various components of the operational footprint.

The breakdown of the contributions of digital technology and responsible purchasing to decarbonisation targets in the operational scope has not yet been assessed. [E1.1.03] [E1.3.01] [E1.4.23] [E1.MDR.A.01.12] [E1.3.03] [E1.3.04]

2.2.1.5.2 Corporate and Investment Banking

The climate and sustainability commitments of the Corporate and Investment Banking portfolios are based on:

- sector-specific policies: strict exclusion policies target carbon-intensive sectors (coal, oil, gas), with clear commitments to divest by 2030;

- green financing: the development of green and impact loans, such as interest-free loans for energy renovation or impact real estate loans, supports the environmental transition while promoting social inclusion. Furthermore, La Banque Postale Group belongs to the Caisse des Dépôts Group, which has committed to a €100 billion investment in France's environmental transition over the 2023-2028 period;
- shareholder engagement: the subsidiaries, particularly LBP AM and La Financière de l'Échiquier, actively use shareholder dialogue and votes at general meetings to encourage invested companies to adopt pathways compatible with Net Zero targets;
- selection of ESG investments: the integration of environmental, social and governance criteria in investment decisions ensures alignment with decarbonisation targets. Tools such as LBP AM's GREaT methodology (see focus: *The GREaT methodology*) enable managers to align funds with the Group's targets.

The associated action plans are applied to the various activities of La Banque Postale and its subsidiaries. They are also detailed in La Banque Postale Group's Transition Plan, published in 2025. [E1.1.03] [E1.3.01] [E1.MDR.A.01.12]

Banking

RETAIL BANKING [E1_1_03] [E1_3_01] [E1_MDR_A_01_12]

Situation analysis

▷ MANAGEMENT SYSTEMS AND POLICY IMPLEMENTATION:

- Carbon footprint measurement (residential property)
- Use of the Impact Weighting Factor in the process of granting home loans to individuals
- Questionnaire to assess customer sustainability preferences
- Rules for the allocation and management of the “residential real estate” portfolio

▷ OFFERS:

- **Home loans:** impact home loans, interest-free loans, renovation loans
- **Consumer loans:** personal loans for cars and green improvements, etc.
- **Savings:** sustainable investment solutions, crowdfunding, etc.
- **Services:** assessment of the carbon weight of expenditure (Carbo), impact bank cards, etc.

2030 action plan

→ STRENGTHENING INTERNAL SYSTEMS DEDICATED TO THE TRANSITION:

- Qualification of consumer loans, according to implementation capacity
- Calculation of the carbon footprint of consumer loans and loans to very small businesses, and deployment of appropriate tools for these areas, depending on implementation capacity, to support lending decisions
- Setting up exemplary banking systems: study of the impact of virtual cards and dematerialisation of processes

→ FINANCING AND SUPPORTING THE TRANSITION FOR RETAIL CUSTOMERS:

- Offers dedicated to sustainable consumption: energy-efficiency renovations, acquisition of low-emission vehicles, etc.
- Promoting responsible savings: new range segmentation based on ESG criteria, communication of the emissions generated by savings products, support from bank advisors, etc.
- New sustainable financial products: passbook to finance impact projects

→ PROMOTING HOUSING RENOVATION:

- Extension of the renovation support program
- Partnerships with energy suppliers and facilitators to offer comprehensive financing solutions for energy renovation projects
- Study on a loan offer for the renovation of collective housing and condominiums

→ FINANCING AND SUPPORTING THE TRANSITION OF PROFESSIONALS:

- Dedicated impact account formula with additional benefits for professionals committed to sustainable practices
- Bpifrance's 'Transition' offer of medium- or long-term green loans
- Advisory service dedicated to transition initiatives and projects

CORPORATE AND LOCAL DEVELOPMENT BANKING [E1_1_03] [E1_3_01] [E1_MDR_A_01_12]

Situation analysis

▷ MANAGEMENT SYSTEMS AND POLICY IMPLEMENTATION:

- Carbon footprint measurement (commercial real estate, large corporates, asset financing and projects)
- Use of grant analysis and steering tools such as the Impact Weighting Factor
- Integrating climate issues into the construction of the offering via the ESG Checklist
- Responsible financing and investment charter, sectoral policies (exclusions)
- Rules for granting and managing the portfolios of certain business lines

▷ OFFERS:

- **Financing the transition:** impact credit, green loans, green bonds, financing of green assets and projects, equipment leasing, green property leasing, etc.
- **Investments:** green term deposits, issues of green debt securities
- **Services:** ESG consultancy, green debt structuring, assessment of the carbon weight of expenditure (Carbo), help in finding subsidies (Subzen), etc.

2030 action plan

→ ● ENSURING THE RELIABILITY AND DEPLOYMENT OF SYSTEMS FOR MONITORING CLIMATE COMMITMENTS:

- Calculation of financed emissions (more in-depth analysis of accounting methodologies and the scope of portfolios covered)
- Calculation of emissions facilitated by service activities
- Deployment and industrialisation of tools adapted to the various activities to collect more accurate data in order to improve customers' ESG knowledge (e.g. Impact Weighting Factor)
- Assessment of Company transition plans and national transition strategies, where available

→ ● DEVELOPING RULES FOR MANAGING AND STEERING PORTFOLIOS IN FAVOUR OF THE TRANSITION:

- Definition of transition criteria for granting or pricing policies
- Highlighting the impact of green bonds on Trading room investments
- Solutions for optimising and rotating low-carbon energy loan portfolios to free up cash and finance other green assets

→ ● DEEPENING AND DEVELOPING OFFERS DEDICATED TO THE TRANSITION:

- Supporting and facilitating the renovation of commercial property
- Development of a tailor-made ESG service offering with partners
- Strengthening the ESG coordination offer (structuring green loans, etc.)
- Impact factoring solution
- Development of impact banking and electronic payment services (citizen term account, etc.)
- Photovoltaic equipment leasing for the public sector

→ ● SUPPORTING EMPLOYEES:

- Review of training needs and business objectives

Private Banking

LOUVRE BANQUE PRIVÉE [E1_1_03] [E1_3_01] [E1_MDR_A_01_12]

Situation analysis

▷ **INDIRECT ASSET MANAGEMENT (Management under mandate):**

- ESG criteria taken into account in mandates under management: compliance of assets with Article 8 of the SFDR, compliance of underlyings with the Main Negative Climate Impacts, etc.
- Monitoring quantitative metrics of negative impact
- Dialogue and monitoring with issuers and producers *via* a team of ESG advisors
- Investment strategy, in particular through sectoral disengagement: selectivity policy and coal, oil and gas policy
- Citizen range: Socially Responsible Investment offering

▷ **RESIDENTIAL REAL ESTATE:**

- Alignment of the home loan lending policy with the requirements of the 2021 Climate and Resilience law, on residential property for rental use and class G EPD (commitment to carry out renovation work, etc.)

2030 action plan

→ **DIRECT AND INDIRECT ASSET MANAGEMENT (Management under mandate):**

- Examine the possibility of adding a new quantitative constraint on the percentage of aligned or non-aligned companies, which would involve progressively excluding companies whose alignment trajectory is not satisfactory
- Extend the exclusion policy to so-called “conventional” fossil fuels

→ **RESIDENTIAL REAL ESTATE:**

- Automatically retrieve EPDs, so that extractions can be made for easier portfolio management
- Recover the CO₂ emissions associated with the EPD classes, in order to be able to measure more precisely the carbon footprint associated with the new goods financed
- Integrate energy efficiency into pricing policy

Asset Management

LBP AM

Situation analysis

- ▷ **Definition of an objective** for total assets aligned with a Net Zero trajectory by 2030 (80%)
- ▷ Diversification and deployment of the objective in terms of funds: **selecting companies on a transition trajectory:**
 - Integration of the decarbonisation objective into the SRI segmentation of the fund range
 - Integration of the objective into the operational management process (*via* several types of research tools on the transition of listed and unlisted assets)

2030 action plan

→ **REGULARLY REVIEW THE TARGET OF TOTAL ASSETS ALIGNED WITH A NET ZERO TRAJECTORY BY 2030 TO REACH 100%**→ **ALIGN VOTING AND ENGAGEMENT POLICIES**, regularly updated and published to explain how they support the Net Zero objective→ **CONTINUE TO IMPLEMENT THE FOSSIL ENERGY POLICY**, published in 2021 and regularly updated in line with the objective of transitioning its outstanding loans→ **REPORT ON THE OBJECTIVE AND ITS DEPLOYMENT** (Responsible Investment Report periodic product reporting)

Insurance

CNP ASSURANCES [E1_1_03] [E1_3_01] [E1_MDR_A_01_12]

Situation analysis

▷ INVESTMENT ACTIVITIES:

- **Implementation of exclusion policies:** coal, oil and gas sectors
- **Implementation of shareholder engagement policies:** voting at General Meetings and shareholder dialogue in favour of the transition
- **Selection of investments on the basis of ESG criteria according to the type of investment:** directly held shares and bonds, listed securities funds, unlisted equity and infrastructure funds, real estate, forests
- **Green investments:** green bonds, forests, certified buildings, green infrastructure
- **Issue of a green bond in 2019 and a sustainable bond in 2023** to finance transition projects

▷ INSURANCE BUSINESS:

- **Integration of climate change into the business strategy** (market positioning, incentives, etc.)
- **Sharing of sustainability information when taking out the insurance contract and then throughout the term of the policy** (annual status report)
- **Sustainable retirement savings offer based on six pillars and ESG criteria**

2030 action plan

→ INVESTMENT ACTIVITIES:

- **Continue to update exclusion criteria** taking into account changes in climate scenarios
- Strengthen the coverage of the **calculation of financed emissions** according to the available data
- Strengthen the **integration of ESG criteria in the various asset classes**
- Continue the implementation of **work plans** adapted to each investment property
- Integrate the **analysis of transition plans** into the shareholder engagement policy of sectors with high sustainability matters
- **Set a new green investment objective by 2026**, following the achievement of the objective of €30 billion in outstanding investments in 2025

→ INSURANCE BUSINESS:

- Continue and expand the range of sustainable unit-linked products
- Gradually strengthen the sustainability of historic Euro funds
- Improve the non-financial information provided to customers about their investments

2.2.1.5.3 Support functions

All of La Banque Postale Group's support functions will be called on to support the decarbonisation efforts implemented by each activity, including the following functions: governance, human resources, finance, sustainability, risks, data and information technology, compliance, legal, regulatory monitoring, public affairs, reporting and communications. They will be asked to use their resources and skills to support the transition, and each of these functions will be required to develop its own transition plan.

Finally, awareness-raising and training initiatives for employees and stakeholders complement these levers. They aim to embed the principles of sustainability in professional behaviour and practices, contributing to the achievement of climate targets. [E1_1_03] [E1_3_01] [E1_MDR_A_01_12]

2.2.1.5.4 Contributions to decarbonisation actions

As part of the transition plan, the precise quantification of actions and associated GHG reductions remains a significant challenge beyond the operational scope. The complex and diverse nature of the projects, combined with the variability inherent to each sector and the lack of reliable data available, makes accurate estimates difficult to establish.

To date, the impact of projects is therefore analysed qualitatively, and several projects directly aim to improve the quantitative measurement of reduction levers. In this context, annual management serves as a safeguard to monitor the development of results and adjust actions to remain aligned with the medium/long-term targets. This first transition plan exercise will be updated within three years, and is intended to be improved as data and methodologies allow. [E1_3_03] [E1_3_04] [E1_4_23]

2.2.1.5.5 Financial resources related to the transition plan

The transition plan provides for projects for all of the Bank's business lines between 2025 and 2029. As budgets are drawn up annually, these projects will be integrated gradually according to their deadline. For 2025, 71%⁽¹⁾ of strategic projects have already been allocated to a budget. [E1.1.04] [E1.3.06]

The Group's ability to carry out this transition plan depends on its ability to maintain a stable supply of ESG data, to electrify its vehicle fleet and to bear the costs associated with the plan. To date, there is no warning in relation to this capacity.

The budgetary exercises to be carried out each year will make it possible to assess, at least partially, how dependent the implementation of actions is on the availability of resources (financial, human, etc.). [E1.3.05]

The financial resources allocated to the decarbonisation of our own activities are monitored for the operational scope as part of the Carbon Budget⁽²⁾ exercise conducted within La Poste Group.

For the 2025 budget, La Banque Postale Group budgeted for the financial cost associated with the implementation of its main decarbonisation levers for its operational scope: the operational GHG footprint should be reduced by 2,188 tCO₂e in 2025, for a total net CapEx/OpEx of 7.2 million euros for the Group. The full benefit of the gains in terms of GHG reduction will only be visible in future years.

The total budget of €7.2 million net for the 2025 financial year breaks down as follows:

- €10.7 million in gross CapEx/OpEx spent, including €3.1 million for CNP Assurances;
- €3.5 million in expenses avoided (sq.m. freed up at La Banque Postale).

The CapEx/OpEx breakdown is as follows:

- 69% committed to decarbonisation levers for buildings, mainly related to the implementation of the first energy efficiency actions in the La Banque Postale scope, as well as the outsourcing of CNP Assurances' IT servers;
- 31% for the implementation of decarbonisation levers on vehicles, aimed at greening vehicle fleets (service and company vehicles).

It should be noted that the real estate CapEx data dedicated to reducing the GHG footprint is based on a multi-year estimate carried out by the La Poste Immobilier teams in November 2024, then reworked in Q1 2025 as part of the more detailed 2025 work schedule.

In 2024, for the La Banque Postale scope, the resources allocated to these levers were €3.4 million for vehicles (for ordering 139 vehicles), and €5.8 million for buildings. [E1.1.04] [E1.1.05] [E1.1.06] [E1.3.06]

2.2.1.5.6 Consideration of irreducible emissions

The strategic and investment choices made today can lock in the pathway of a company's GHG emissions for years to come. The concept of locked-in emissions helps to focus on this risk by identifying future GHG emissions likely to be caused by the Company's main assets, or by products sold during the lifetime of these assets.

In seeking to apply this concept to its financial institution activities, La Banque Postale reached the following conclusions:

Within the operational scope: the energy consumption of IT servers and the depreciation of La Banque Postale's buildings generate future emissions associated with the Company's assets. However, in line with the strategic choices linked to locked-in emissions, as the operational scope constitutes less than 1% of La Banque Postale Group's carbon footprint, they are not considered as a transition risk by 2030-2050. They were therefore not quantified at Group level.

CNP Assurances has estimated locked-in emissions for its scope of approximately 2,691 tCO₂e per year related to the consumption of IT servers and the depreciation of buildings.

Concerning the portfolios of financed activities, La Banque Postale is not yet in a position to quantify the locked-in emissions associated with its portfolios for two main reasons:

- firstly, the locked-in emissions should include the locked-in emissions of portfolio companies. These are not yet available and will be published in the CSRD publications of these companies from 2025;
- secondly, the life of an asset, particularly in a portfolio of loans, is uncertain, and this volatility does not allow these loans to be considered as "locked-in". Indeed, a company or a retail customer can choose different repayment terms and can pay off a loan at any time. While it is possible to estimate the evolution of the portfolio with an average repayment term, it becomes uncertain whether a specific loan term is associated with an asset or company. [E1.1.07]

La Banque Postale Group has not, moreover, invested any significant CapEx in connection with economic activities related to coal, oil or gas.

ECONOMIC ACTIVITIES RELATED TO COAL, OIL AND GAS	Amount (in € thousands)
Significant CAPEX related to the coal sector	0 [E1.1.09]
Significant CAPEX related to the oil sector	0 [E1.1.10]
Significant CAPEX related to the gas sector	0 [E1.1.11]

(1) Figures October 2024.

(2) The Carbon Budget, which is rolled out annually, identifies all of La Poste Group's decarbonisation levers and values the emissions to be reduced annually by combining the financial resources (OpEx and CapEx) pledged by all activities committed to achieving the Group 2030 pathway. This tool was validated by the Board of Directors of La Poste Group on 13 June 2024.

2.2.1.5.7 Link with the European Green Taxonomy

In the context of the banking activity, the CapEx and OpEx related to the action plans of the Bank's transition plan are not directly affected by "the key performance indicators provided for by Commission Delegated Regulation (EU) 2021/2178". However, the actions concerning the financing and investment portfolios are reflected in the evolution of the Bank's exposures.

In accordance with the requirements of the European Green Taxonomy, La Banque Postale calculates and publishes the proportion of its exposures to activities that comply with the criteria established by the regulation, in particular the Green Asset Ratio or GAR.

These analyses are conducted based on a number of pillars, in particular on the basis of turnover and CapEx aligned with counterparties for general financing, and on an analysis of projects for specialised financing.

In line with other regulatory and internal initiatives, La Banque Postale relies on these components to strengthen its commitments to sustainable finance. Additional information on the work carried out and the quantitative indicators relating to the Green Taxonomy is available in Section 2.2.6 "European Green Taxonomy". [E1_3_07]

At 31 December 2024, La Banque Postale's regulatory green asset ratio (consolidated prudential scope) was 5.7% (€10.3 billion) based on turnover.

The GAR obtained for this financial year reflects the lack of reliable data to determine whether customers' projects are aligned with the Taxonomy.

In order to provide a more comprehensive view of the coming financial years, data collection work is in progress, in line with the work included in the Bank's transition plan.

Additional information on the GAR is available in Section 2.2.6 "European Green Taxonomy". [E1_1_08]

OBJECTIVES AIMED AT ALIGNING ECONOMIC ACTIVITIES WITH THE CRITERIA OF THE EUROPEAN TAXONOMY [E1_1_08]

2.2.1.5.8 Actions for climate change adaptation

Regarding climate change adaptation, in the operational scope, La Banque Postale is currently working with EcoAct to establish the degree of adaptability of its sites. The target is to build an adaptation plan to strengthen the Group's climate resilience based on its different geographical locations by integrating an in-depth understanding of its vulnerability to climate hazards and all regional interactions.

La Banque Postale has not yet established a policy specifically dedicated to the challenges of climate change adaptation. This is, however, part of the work carried out by Caisse des Dépôts, and will begin in 2025.

CNP Assurances is implementing various adaptation plans to reduce the risks related to climate change, in particular exposure to physical climate risk that could have consequences for human health and an increase in the loss ratios of insurance contracts. The main actions concern the reduction of the exposure to climate hazards of investments in States, companies, buildings or forests, as well as the integration of climate risks into its global protection approach *via* the management of reinsurance coverage and a specific close monitoring of changes in reinsurance treaties. Internally, climate risk is managed by regularly updating the business continuity plan to ensure resilience in the face of extreme climate events. [EI_MDR_A_01.12]

2.2.1.6 Energy consumption and mix

2.2.1.6.1 Total energy consumption

Energy consumption is reported for La Banque Postale Group and includes consumption from buildings and vehicles.

Total energy consumption from fossil sources includes natural gas, non-renewable electricity, fuel oil, propane gas, petrol, diesel and district heating. As it is not in a position to provide a breakdown by source in 2024, district heating consumption is reported as a fossil source according to the methodology agreed within La Poste Group.

Total energy consumption from renewable sources includes purchased and produced renewable electricity, firewood, steam and cooling.

This energy consumption from renewable sources represents 52% of La Banque Postale Group's energy mix, reflecting its efforts to supply renewable electricity and electrify its uses.

TYPE OF ENERGY CONSUMED OR PURCHASED AND BREAKDOWN BY SOURCE

Energy consumption and mix*	2024 (MWh)
Total energy consumption from fossil fuels	90,125 [EI_5_02]
Share of fossil sources in total energy consumption	48% [EI_5_15]
Total energy consumption from renewable sources	98,235 [EI_5_05]
o/w fuel consumption from renewable sources	2,393 [EI_5_06]
o/w consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources	95,400 [EI_5_07]
o/w consumption of self-generated non-fuel renewable energy	442 [EI_5_08]
Share of renewable sources in total energy consumption	52% [EI_5_09]
Total energy consumption	188,360 [EI_5_01]

* Total consumption of energy produced from nuclear sources is not material. [EI_5_03] [EI_5_04]

2.2.1.6.2 Energy production

Renewable energy production is now managed at La Banque Postale Group level. This energy production covers the electricity produced through solar panels on the Lemnys D and Nantes sites, as well as the production of 821 MWh by CNP Assurances, some of which is not consumed and is therefore fed back into the grid.

TYPE OF ENERGY PRODUCED	2024 (MWh)
Renewable energy production	1,086 [EI_5_17]

2.2.1.7 Group's greenhouse gas emissions

2.2.1.7.1 Greenhouse gas emissions by scope

In order to manage its low-carbon pathway, La Banque Postale Group measures the GHG emissions relating to all of its activities across its entire value chain.

Targets for the operational scope are defined based on the SBTi scope (excluding CNP Assurances, LCB and only partially taking into account the Scope 3 categories). They are therefore not detailed in the tables below, which cover the entire La Banque Postale Group scope.

The targets for financed emissions (Scope 3 Category 15) are also not detailed in this paragraph, as they are defined in terms of intensity or portfolio temperature. Information on targets is presented in Section 2.2.1.4.2 "Detail of decarbonisation targets".

The methodology used for each category is explained in Section 2.2.1.7.3 "Methodological information".

For the sake of transparency, the total financed emissions (Scope 3 Category 15) cover La Banque Postale SA, CNP Assurances, Louvre Banque Privée, as well as LBP AM and La Financière de l'Échiquier for assets under management. However, the methodologies used are specific to each entity, and are detailed in the section on methodological information, in particular concerning the portfolios of technical reserves amounts covered and the counterparty scopes taken into account.

For CNP Assurances, only Scopes 1 and 2 of counterparties are taken into account in the table below. For information, the upstream and downstream Scope 3 financed emissions for listed shares, listed corporate bonds and infrastructure is estimated by CNP Assurances at 82 million tCO₂e based on the information available from its data suppliers.

GHG EMISSIONS BROKEN DOWN BY SCOPES 1, 2 AND SCOPE 3 [E1_6_01]

GHG emissions	2023 (tCO ₂ e)	2024 (tCO ₂ e)	% 2024/2023
○ Scope 1 emissions	19,699	17,544	-11%
○ Scope 2 - location-based	N/A	5,219	N/A
○ Scope 2 - market-based	3,705	1,865	-50%
Total indirect emissions (Scope 3)	N/A	62,945,457	N/A
① Goods and services purchased	N/A	227,595	N/A
② Capital goods	N/A	84,824	N/A
③ Fuel and energy related activities (not included in Scope 1 or 2)	N/A	2,036	N/A
⑤ Waste generated by operations	N/A	1,637	N/A
⑥ Business travel	N/A	2,442	N/A
⑦ Employee travel	29,218	29,218	0%
⑮ Investments	N/A	62,597,706	N/A
of which banking scope*	N/A	10,920,000	N/A
of which insurance scope**	N/A	18,918,876	N/A
of which Wealth**** and Asset Management***	N/A	32,758,830	N/A
Total GHG emissions - location-based	N/A	62,968,220	N/A
Total GHG emissions - market based	N/A	62,964,867	N/A

Level of uncertainty

- Low: data collected on physical consumption with detailed emission factors and/or extrapolation of less than 5%
- Medium: data collected on physical consumption with average emission factors and/or extrapolation between 5 and 10%
- Strong: monetary emission factors and/or extrapolation greater than 10% and/or indirect sources (Scope 3 cat 15)

Note: The level of individual uncertainty of the emission factors according to the ADEME database is not directly taken into account in this classification, apart from the monetary emission factors.

* La Banque Postale SA / ** CNP Assurances / *** LBP AM (including La Financière de l'Échiquier) / **** Louvre Banque Privée.

In 2024, for the first time, La Banque Postale calculated an expanded scope for its operational Scope 3 emissions. This indicator is therefore more transparent and representative of actual emissions, although it does not allow for inter-annual comparability.

2.2.1.7.2 GHG emissions intensity

GROSS GHG EMISSIONS INTENSITY	2024 (tCO ₂ e/€m)
Total location-based GHG emissions in relation to income	1,532 [E1_6_30]
Total market-based GHG emissions in relation to income	1,532 [E1_6_31]
Financed emissions (Scope 3 cat 15) in relation to covered exposures - banking scope (Scopes 1, 2 and 3)	132
Financed emissions (Scope 3 cat 15) in relation to covered exposures - insurance scope (Scopes 1, 2 and 3)	399
Financed emissions (Scope 3 cat 15) in relation to covered exposures - asset management scope (Scopes 1, 2 and 3)	396

The GHG emissions intensity is calculated on the basis of the total GHG emissions presented above, divided by La Banque Postale Group's total income⁽¹⁾. The financed emissions represent a significant weighting compared to the other categories of emissions.

For a bancassurance provider, this metric must therefore be supplemented by the intensity specifically linked to the financed emissions, and which is calculated as the total financed emissions for the exposures covered.

For the banking portfolio, this intensity is calculated by including Scope 1, 2 and 3 emissions for counterparties, with the exception of exposures to residential real estate, where only Scopes 1 and 2 are considered according to marketplace practice.

For the insurance portfolio scope, the intensity is calculated by adding Scope 3 counterparty components for the purpose of comparability (Scope 3 upstream and downstream financed emissions for listed equities, listed corporate bonds and infrastructure, 82 million tCO₂e).

For the Asset Management portfolio, the intensity is calculated by including counterparty Scope 1, 2 and 3 emissions.

Due to the size of the portfolio, the intensity is not calculated for the Wealth Management activity.

The methodologies used to calculate financed emissions and in particular the hedged exposures, which serve as a reference for the intensity calculations presented above, are detailed in the methodological information below. [E1_6_32]

2.2.1.7.3 Methodological information

La Banque Postale Group's environmental **reporting scope** for the calculation of GHG emissions includes subsidiaries consolidated in the Group's financial statements and non-consolidated subsidiaries over which La Banque Postale has operational control. The scope of financial consolidation is detailed in Note 3.1 *Consolidation scope and rules* in Section 5.2 "Notes to the consolidated financial statements" of the Universal Registration Document.

In 2024, the GHG emissions of the subsidiary 115K were not included due to its small size (eight employees in flex offices) and its move at the end of 2024 to a co-working space entirely managed by La Poste Immobilier. These changes have no significant impact on the inter-annual comparability of the disclosed emissions.

The scope of emissions included in Scope 3 also changed significantly in 2024.

The methodological work carried out with La Poste Group has allowed an extension of operational Scope 3 coverage:

- extension of the scope covered for Scope 3 Category 1 (purchased goods and services) to all purchase groups;
- inclusion of emissions related to Scope 3 Category 2 (capital goods);
- inclusion of upstream emissions related to energy consumption in Scope 3 Category 3.

In addition, Categories 5 (waste) and 6 (business travel) were calculated for the first time by La Poste Group on behalf of La Banque Postale Group.

For Scope 3 Category 15 investment emissions, the consolidated data of CNP Assurances, LBP AM and Louvre Banque Privée (including La Financière de l'Échiquier) are taken into account with those of La Banque Postale SA.

These methodological changes do not allow comparability with the previous year for the categories mentioned. [E1_6_14]

The **methodology for calculating** La Banque Postale's greenhouse gas (GHG) emissions is based on the emission factors provided by La Poste Group, which are themselves based on ADEME's benchmarks. These factors are updated annually and applied to all entities to ensure data consistency and traceability across the Group.

For Scopes 1 and 2, an exception is made for CNP Assurances, which sends its emissions in tonnes of CO₂ equivalent directly to La Banque Postale Group in accordance with the carbon footprint structure. The emission factors used are those of ADEME, updated annually.

Scope 1 emissions represent direct emissions from fixed or mobile facilities located within the organisational scope. For La Banque Postale Group, these are emissions related to the fuel consumption of **vehicles** in the owned or operated internal fleet, and the energy consumption of **buildings** (excluding electricity and district heating).

For vehicle travel emissions, CO₂ emissions are calculated on the basis of the volumes of fuel consumed (gasoline and diesel). The emission factors are then applied to this consumption to establish the associated emissions. For building emissions, the consumption of natural gas, domestic fuel oil, propane gas and wood energy for heating is converted into CO₂ emissions using ADEME emission factors. For the first time, in 2024, fugitive emissions related to refrigerant leaks were also included.

Scope 2 emissions represent indirect emissions associated with the production of electricity, heat or imported steam for the organisation's activities. For La Banque Postale Group, these are emissions related to **electricity** and **district heating** consumption. Emissions related to self-generated renewable energy from solar panels on buildings are also included.

For the calculation of Scope 2 emissions according to the market-based methodology, a specific emission factor is applied depending on the source of electricity consumed. Regarding the consumption of renewable electricity, the emission factor for electricity from renewable sources is provided by the energy supplier as part of the system of guarantees of origin. If there are several energy suppliers, the emission factor is the average of the factors provided by the energy suppliers weighted according to the supplier mix. For non-renewable electricity consumption, the associated emission factor corresponds to the energy mix of the country concerned.

The calculation of Scope 2 emissions according to the location-based methodology is done by converting all electricity consumption, renewable and non-renewable, into GHG emissions using the emission factors of the countries' average energy mix.

Emissions related to district heating are calculated by applying ADEME's specific emission factor for the network in question, based on the local consumption of La Banque Postale's administrative and commercial buildings.

To estimate the energy consumption of the buildings of certain La Banque Postale entities for which this data was not available, we used a surface area-based extrapolation method. This method, established at La Poste Group level, applies only to entities located in France with a service activity. The energy consumption of buildings is thus estimated on the basis of La Poste Immobilier's energy mix per square metre.

For 2024, data has been extrapolated for the following entities:

- Django (225 sq.m.);
- Lyon Financial Centre (9,229 sq.m.);
- Poitiers Financial Centre (1,026 sq.m.).

The calculation methodology for Scope 3 emissions is detailed below in the section: *Focus on Scope 3 emissions*. [E1.6.15]

The period for collecting data on GHG emissions is identical to the operational scope sustainability reporting period. Concerning financed emissions, when the reporting date differs from 31 December 2024, this is indicated in the Scope 3 Category 15 methodological notes for the relevant entities. For this category of emissions, no significant events or changes in circumstances were identified during the time period under consideration. [E1.6.16]

Focus on scope 2 emissions - contractual instruments

In order to reduce the emissions related to its energy consumption (Scope 2), La Banque Postale Group has entered into a number of contracts for electricity from renewable sources 100% covered by the system of guarantees of origin, primarily for its Biôme and ICV B2 sites. [E1.6.19] [E1.6.23]

The GHG emissions covered by a contractual instrument correspond to the emissions from the consumption of renewable electricity purchased with guarantees of origin in relation to the total Scope 2 energy consumption.

COVERING SCOPE 2 GHG EMISSIONS USING CONTRACTUAL INSTRUMENTS

Scope 2 GHG emissions covered by contractual instruments	87% [E1.6.18]
Contractual instruments for the sale and purchase of bundled energy with attributes concerning energy generation in relation to Scope 2 GHG emissions	100% [E1.6.21]
Contractual instruments for the sale and purchase of non-pooled energy in relation to Scope 2 GHG emissions	0% [E1.6.22]

Focus on Scope 3 emissions

The Scope 3 categories of GHG emissions included in the inventory are as follows:

- Category 1: Purchases;
- Category 2: Capital goods;
- Category 3: Fuel- and energy-related activities (not included in Scopes 1 and 2);
- Category 5: Waste generated in operations;
- Category 6: Business travel;
- Category 7: Employee commuting;
- Category 15: Investments. [E1.6.27]

Some categories of Scope 3 have been excluded:

- Category 4: "Upstream transportation and distribution": work is in progress to establish the applicability of the calculation of emissions in this category to cash transportation;
- Category 8: "Upstream leased assets": at the end of the alignment workshops carried out, La Poste Group did not reallocate any emission amounts to La Banque Postale's activities in this category;

- Category 9 "Customer travel": emissions include customer travel to post offices based on an estimated share of travel related to banking transactions. This share is estimated by La Poste Group and could not be calculated in 2024;
- Category 11: "Use of products": work between La Banque Postale and La Poste is in progress on the methodological alignment of the calculation of GHG emissions associated with this category. It should be noted that the Bank's products are mainly services provided to customers and that Scope 3 Category 15 emissions are calculated;
- Category 12: "End-of-life treatment of sold products": La Banque Postale is not in a position to publish the 2024 GHG emissions associated with the end-of-life treatment of sold products. Work must be continued to produce this data, specifically in connection with the footprint of bank cards where a life cycle analysis has been carried out. The total bank card footprint is published in Section 2.1.6.1 "The impact-awareness culture at the heart of the mission-led company";
- Categories 10 "Processing of sold products", 13 "Downstream leased assets" and 14 "Franchises": these categories are not applicable to the activities of La Banque Postale Group, which sells its products to direct users, and which already records the footprint of GHG technical reserves leases granted to Business customers in Scope 3 Category 15, and whose activities do not include franchises. [E1.6.26]

Methodology for estimating Scope 3 emissions

The calculation of Scope 3 emissions has several limitations.

Emissions related to Categories 1, 2, 3, 5 and 6 are calculated at La Poste Group level and are then reallocated to La Banque Postale Group. Scope 3 emission measurement methods require the integration of assumptions, allocation keys, extrapolation and monetary factors in order to compensate for the lack of actual and operational data. This method, although accepted by the GHG Protocol, has a lower level of reliability than the use of actual data, so La Poste Group continues to work on improving the method for the coming years in order to increase the level of reliability of Scope 3 emissions.

More specifically, for each of the categories included in Scope 3:

Operational Scope 3:

- **Category 1 "Purchases"**: emissions related to purchases of goods and services correspond to emissions not included in the 14 other Scope 3 categories. Calculations are made on the basis of expenses identified via the consolidated financial statements at La Poste Group level. These expenses, expressed in euros, are grouped by purchase category so that they can be converted into tCO₂e by applying average sector-specific emission factors from the ADEME database. This methodology was applied by La Banque Postale Group for the first time in 2024. To calculate the emissions in this category, CNP Assurances breaks down its general operating expenses into 12 categories based on its Purchasing information systems, and applies the monetary emissions factors from ADEME. For this reason, the figures related to the GHG emissions estimates for this Scope 3 category may be different in the CNP Assurances sustainability report;

- **Category 2 "Capital goods"**: the data is taken from the assets recognised in the consolidated financial statements of La Poste Group for La Banque Postale Group entities. The gross acquisition value in euros of the asset is used, then, as for Category 1, these values are first sorted into the purchasing category before being converted into tCO₂e using the corresponding ADEME factor. Emissions are allocated in full to the year of acquisition of the fixed asset. CNP Assurances uses the carbon footprint methodology[©], and amortises emissions over the life of the assets, which differs from the GHG Protocol method, which does not provide for amortisation and recognises all emissions in the year of acquisition. For this reason, the figures related to the GHG emissions estimates for this Scope 3 category may be different in the CNP Assurances sustainability report;
- **Category 3 "Fuel- and energy-related activities not included in Scope 1 or Scope 2"**: emissions are calculated by applying the upstream phase of the emission factors to the Group's energy and fuel consumption;
- **Category 5 "Waste"**: emissions are calculated on the basis of the weight of waste collected by the Group. The emission factors used are those of the ADEME (average end-of-life emission factors);
- **Category 6 "Business travel"**: emissions are calculated based on data provided by travel agencies. This data relates to the kilometres travelled by employees during business trips made in France and other countries by train, plane and by car, if travelling in a short-term rental vehicle. To calculate emissions in this category, CNP Assurances uses a single emissions factor for short-, medium- and long-haul flights. For this reason, the figures related to the GHG emissions estimates for this Scope 3 category may be different in the CNP Assurances sustainability report;
- **Category 7 "Commuting"**: data on commuting is taken from the 2023 La Banque Postale Group mobility survey conducted with IFOP. This survey was sent to all La Banque Postale and Ligne Conseil Bancaire employees (30,045 employees) and recorded 9,445 respondents. The survey carried out in 2023 took into account the relocation of the CNP Assurances' head office. When calculating the commuting footprint, the ADEME emissions factors are used (updated in 2023 when necessary). For internal combustion vehicles, the same methodology as for electric mobility is applied as the emissions factor is only for the fuel item. As a result, for electric mobility such as electric bikes or scooters, the emissions factor is negligible and is set to 0. For electric vehicles, the emissions factor is only for the use phase. The modal shift assumptions, as well as the associated carbon footprint reduction targets, are consolidated on the basis of the analysis of the responses to the mobility survey and the shift potential expressed by employees, as well as on the data obtained from the mobility studies published by ADEME.

Scope 3 Category 15 Investments:

This item corresponds to financed emissions. It includes the direct and indirect emissions of La Banque Postale Group's counterparties. To date, the portfolios included in the Scope 3 Category 15 calculation for La Banque Postale SA are "residential real estate" (home) loans (excluding subsidiaries), "commercial real estate" loans and the Corporate portfolio. Retail banking technical reserves (excluding real estate), equity securities and exposures to sovereigns (sovereign bonds, technical reserves at the Banque de France and centralisation of passbook savings accounts) are currently excluded from this scope. At 30 June 2024, La Banque Postale SA calculated its financed emissions on 26% of its total technical reserves, i.e. €83 billion (see infographic *Financed emissions* in Section 2.2.1.4.1 "Presentation of decarbonisation targets").

The calculation of emissions financed by La Banque Postale SA includes Scopes 1 and 2 of the "residential real estate" and "commercial real estate" portfolios, and takes into account direct and indirect emissions in the Corporate scope when the data is available.

Scope 3 of financed emissions, i.e. Scope 3 of La Banque Postale SA's customers, which presents the highest level of uncertainty due to a higher proportion of extrapolated data, is also the one that has the most substantial weighting in the total financed emissions. By way of illustration, at 31 December 2023, the emissions of the Large Corporates scope can be divided into 18% generated by the Scope 1 and 2 emissions from La Banque Postale's counterparties, while 82% of the total of these financed emissions correspond to Scope 3 emissions from customers.

The carbon accounting of banks is standardised by the PCAF (Partnership for Carbon Accounting Financials) and by regulations (SFDR, Pillar III). The calculation formulas depend on the asset classes and are essentially composed of two factors: asset emissions and the portion attributable to the Bank (financed portion).

For the Corporate scope, La Banque Postale uses the data provided by Bloomberg, Sustainalytics and ADEME on corporate Scopes 1, 2 and 3, prioritising the use of published emissions, if there are any. In the absence of published data, emissions estimated by the data providers' models are used. Finally, if there is no other information, sector-specific PCAF emissions factors are used, subject to the availability of the NACE sector code and revenue. With regard to the real estate scope, GHG emissions are calculated based on the collected or estimated energy performance diagnostic.

To calculate the portion financed by the Bank, most standards, including the FBF, recommend using the enterprise value, which makes it the most common approach. As enterprise value is difficult to collect, revenue is currently the data used. The financed portion is therefore calculated as the ratio of exposure to the Company's revenue. For La Banque Postale SA, Scope 3 Category 15 information is calculated half-yearly. The information disclosed in this report is dated 30 June 2024.

Concerning Scope 3 Category 15, the subsidiaries apply the following methodologies:

- **CNP Assurances:** the measurement of financed emissions covers equities and corporate bonds, sovereign bonds, real estate as well as direct infrastructure.

CNP Assurances' financed emissions include:

- Scope 1 and 2 emissions for directly or indirectly held listed equities and bonds invested in the euro, capital and unit-linked portfolios;
- Scope 1 and 2 emissions for directly held infrastructure invested in the euro, capital and unit-linked portfolios;
- Scope 1 and 2 emissions for directly or indirectly held real estate assets (excluding debt) invested in the euro, equity and unit-linked portfolios;
- domestic emissions (Scope 1) for directly or indirectly held sovereign bonds invested in the euro, capital and unit-linked portfolios.

Thus, €331 billion (80%) of investments are included, of which €254 billion (60%) have available data.

Scope 3 financed emissions have many limits. Scope 3 is still not widely disclosed by issuers and is often based on estimates, introducing a significant margin of uncertainty. In addition, the same emissions are counted several times among different issuers of the same value chain, leading to an overestimation of total emissions. Scope 3 financed emissions for listed equities, listed corporate bonds and infrastructure are estimated by CNP Assurances at 82.3 million tCO₂e.

Carbon footprint of the corporate and infrastructure portfolio: The data required to calculate absolute investment emissions are Scope 1, 2 and 3 emissions data provided by S&P Trucost for listed companies, and emissions published in the annual reports for infrastructure. S&P Trucost provides data reported by companies and/or estimates.

CNP Assurances uses the latest available information. Thus, absolute emissions at 31 December 2024 are calculated based on the greenhouse gas (GHG) emissions of companies in 2023. CNP Assurances estimates the greenhouse gas emissions of the portfolio companies without restating any duplication between Scopes 1, 2 and 3, and relates them to the market value of the portfolio. The measurement is carried out on all listed shares and bonds, regardless of the method of ownership (direct or indirect).

The calculation formula used, in line with NZAOA and SFDR recommendations, corresponds to the sum of the market value of the investment over the value of the company concerned, multiplied by the Company's GHG emissions.

Carbon footprint of the sovereign portfolio: the data necessary to calculate the absolute emissions of the sovereign portfolio is the estimated domestic emissions data provided by the UNFCCC, as well as the Gross Domestic Product (GDP) by purchasing power parity of each country, as provided by the World Bank. The measurement is carried out on all sovereign bonds, regardless of the method of ownership (direct or indirect).

The calculation formula used, in line with NZAOA and PCAF recommendations, corresponds to the sum of the nominal value of the investment in sovereign gross domestic product by purchasing power parity of the sovereign, all multiplied by the sovereign's domestic GHG emissions.

Carbon footprint of the real estate portfolio: Scope 1 and 2 emissions are estimated using available information (actual consumption, energy performance assessment, location, asset type, etc.) for each asset, prioritising actual data. Estimates are made when necessary, in line with PCAF recommendations.

- **LBP AM:** to measure the financed emissions of listed assets, LBP AM uses underlying emissions data from an external data provider, MSCI. For its subsidiary La Financière de l'Échiquier, data from Carbon4Finance is used.

The share of assets eligible for this calculation is 74% for LBP AM and 92% for La Financière de l'Échiquier. Carbon intensity and carbon footprint calculations are carried out for this scope of assets in order to assess the financed emissions for each scope (1, 2 and 3).

For LBP AM, the available data is emissions calculated as of 31 December 2023.

- **Louvre Banque Privée:** for the direct securities scope, data is shared by the data provider Sustainalytics. The data is reported for most companies (from annual reports). However, Sustainalytics may estimate this value if the data is not available from reporting.

For the UCITS scope, data is collected through negative impact indicators at the end 2024, published by the management companies under the SFDR Regulation. This data is not restated by the data provider, but is instead entered directly by the asset management companies. [EI.6.29]

Use of primary data: For the entire calculation of operational Scope 3 GHG emissions for La Banque Postale Group, the percentage of emissions calculated using primary data is 2%. The categories concerned are fuel- and energy-related activities, waste generated in operations and business travel.

Concerning financed emissions (Scope 3 Cat. 15), data from different data providers is used. Details of the databases used are indicated above. [EI.6.25]

Biogenic emissions included in Scope 1, 2 and 3 GHG emissions

For the 2024 financial year, La Banque Postale Group is not in a position to quantify biogenic CO₂ emissions from the combustion or biodegradation of biomass included in Scopes 1, 2 and 3. [EI.6.17] [EI.6.24] [EI.6.28]

2.2.1.8 GHG phase-out and mitigation projects financed by carbon credits

2.2.1.8.1 Value chain projects

La Banque Postale does not support carbon absorption projects in its value chain or own operations. It only supports reduction projects via its internal call for projects known as the "Climate and Biodiversity Impact Fund". It enables employees to submit projects to reduce greenhouse gas emissions in their entities or business lines. Real estate projects (optimising the energy efficiency of buildings) and mobility projects are specific targets.

CNP Assurances has significant woodland assets, and monitors the annual carbon absorption of its forests: the principle is to estimate the organic growth of the woodland during the year and then convert this growth in biomass into absorbed CO₂. In 2024, the gross annual CO₂ absorbed by CNP Assurances' woodland assets amounted to 483,653 metric tonnes of CO₂. CNP Assurances does not use woodland for the purpose of carbon offsetting, but rather for the value of services and timber. [EI.7.01]

2.2.1.8.2 Projects outside the value chain

Since 2015, La Banque Postale has voluntarily built a "Climate + Regions" programme with two other entities of La Poste Group (the Mail Services, Parcels and Digital Services business units). It aims to support carbon sequestration and regional adaptation projects in France. This project, whose launch was supported by I4CE, led to the emergence of the Low Carbon Label, the first carbon offsetting benchmark recognised in France, with the partner CNPF (National Forest Ownership Centre). Through this programme, La Poste Group is now the leading contributor of low-carbon certified projects. On 1 June 2024, 25 low-carbon certified projects were supported, mainly in forestry methodologies.

At La Banque Postale level, the portfolio consists of 20 projects, including 10 low-carbon certified projects (certification decisions received from the Ministry). Of these 10 projects, two have already generated carbon credits and reduced emissions (verification decisions received), these projects having been supported during the structuring phase of the certification Label in 2015.

Non-certified projects are those supporting the drafting of new AML methodologies ("Hedges", which have since been recognised, as well as the "Sylviculture du Pin d'Alep" method (not recognised by the Ministry).

This portfolio currently corresponds to an estimated carbon sequestration of 11,455 tCO₂e over the life of the projects, with an average cost of €29 per tonne. The portfolio does not include any carbon reduction projects.

CNP Assurances launched the Serragem project in 2007. In 2024, it made a voluntary contribution of 9,469 tCO₂e to mitigate the effects of climate change. The project fights deforestation by replacing firewood with biomass waste to supply two ceramic factories in the city of São Miguel do Guamá, in the Brazilian state of Pará. Before its launch, the factories consumed 45,000 metric tonnes of Amazonian firewood each year to fuel their kilns. Today, these plants use the biomass of acai kernels and sawdust, which were previously a major waste problem in the region. This project has already avoided emissions of 585,959 tCO₂e over 11 years and will avoid another 309,408 tCO₂e over the following nine years. In addition to reducing GHG emissions and pressure on the Amazon rainforest, this initiative supports the local economy by creating jobs and new markets for local biomass suppliers. Serragem also implements environmental actions to reduce the impact of the ceramics industry and supports vulnerable groups through a number of social initiatives.

The purpose of this voluntary contribution is not to enable La Banque Postale to achieve its targets for reducing direct or indirect greenhouse gas emissions. [EI.7.02]

2.2.1.8.3 Project qualification

Each project selected in La Banque Postale's portfolio must be presented to a selection panel bringing together the ESG experts from each contributing La Poste Group entity. The projects are presented by partners specialised in supporting carbon contribution projects in France (EcoAct, CNPF, Société Forestière, Carbone Farmers, CDC Biodiversité) and are subject to a multi-criteria assessment, including: carbon sequestration potential (Low Carbon Label certification, Gold Standard, etc.), biodiversity benefits (biodiversity index associated with the project), socio-economic joint benefits, price per tonne of carbon, dividing the project amount between the partner and the forest owner/farmer.

CNP Assurances' Serragem reduction project complies with the Verified Carbon Standard international certification standard. [EI.7.12]

These absorption projects are based on the natural sequestration of CO₂ through the creation or reinforcement of biogenic sinks (afforestation of wasteland, post-dieback reforestation, the Arboreal City project, etc.). [EI.7.15]

CARBON CREDITS CANCELLED during the reference year

	2023	2024
Total (tCO₂e)		10,803 [EI.7.10]
<i>Share of absorption projects</i>		12.35% [EI.7.14]
<i>Share of reduction projects</i>		87.65% [EI.7.13]
<i>Share relating to the Low Carbon Label</i>	Not available	12.35% [EI.7.16]
<i>Share relating to the Verified Carbon Standard</i>		87.65%
<i>Share of projects carried out in the EU</i>		12.35% [EI.7.17]
<i>Share of carbon credits corresponding to the expectations of Article 6 of the Paris Agreements</i>		12.35% [EI.7.18]

CARBON CREDITS THAT ARE EXPECTED TO BE CANCELLED IN THE FUTURE

	Amount until 2026
Total (tCO₂e)	10,121 [EI.7.11]

Under the Low Carbon Label, carbon credits are cancelled based on receipt of letters recognising Emissions Reductions (ER) issued by the French Directorate General for Energy and Climate (DGEC), which are linked to the projects since they are they are ex-post projects. Recognition only takes place after the completion of audits at year N+5 by an external third party.

For this base year of 2024, La Banque Postale's first Low Carbon Label pilot forestry projects in France, representing 1,334 tCO₂e, are the first to be recognised and to have enforceable credits. With regard to CNP Assurances, the Verified Carbon Standard-certified Serragem project, carried out in Brazil, achieved a reduction of 9,469 tCO₂e per year.

The carbon credits that will be cancelled in the future are related to the various Low-Carbon Label absorption projects for which year N+5 audits have not yet taken place, whereby carbon credits are cancelled by recognising Emissions Reductions.

With regard to achieving the net zero emissions (NZE) target, La Banque Postale is aligned with La Poste Group's strategy. Work is currently being carried out to analyse the various scenarios and projections for achieving the ZEN by 2040. La Banque Postale is represented on the NZE Steering Committee to monitor the progress of the work. The conclusions are expected in Q1 2025, with a decision in 2025. [EI.7.20]

2.2.1.9 Internal carbon price

Since 2015, La Banque Postale has structured an internal carbon pricing mechanism with a dual ambition:

- anticipate changes in the market price that could be incorporated into climate risk management;
- contribute to the achievement of the Company's decarbonisation targets.

New work on the scope will be carried out in 2025 in order to comprehensively cover La Banque Postale's operational footprint.

The internal carbon pricing is organised around the Climate and Biodiversity Impact Fund, a voluntary and unprecedented internal system for monetising La Banque Postale's carbon footprint.

Drawing inspiration from this system, CNP Assurances set up the carbon and biodiversity fund mechanism based on an internal carbon price for the first time in 2022.

The process includes:

- an internal dimension enabling financing of renovation/energy optimisation work on buildings as well as an internal call for projects at all institutions. For these two systems, monitoring indicators are managed in order to estimate the associated economic and environmental gains. The return on investment of the projects is also analysed, which gives an annual view of the tonnes of CO₂ equivalent avoided and the euros saved thanks to the implementation of the projects;
- an external dimension enabling the financing of carbon sequestration projects in France and abroad, as well as biodiversity conservation projects. Here too, monitoring indicators are managed to measure the tonnes of CO₂ equivalent sequestered per project, the species saved or the square metres preserved. These various indicators are monitored annually and presented to the Executive Committee to justify the relevance of the system and its contribution to achieving the reduction targets.

For the first ten editions, a total financial budget of more than €3 million was used to finance:

- internal projects to reduce greenhouse gas emissions: Since the launch of the Climate and Biodiversity Impact

Fund, La Banque Postale has financed 103 internal projects aimed at reducing greenhouse gas emissions, thus avoiding more than 7,529 tCO₂e. These projects include energy efficiency renovation, sustainable development awareness campaigns, creating fleets of electric bicycles and scooters, the installation of solar water heaters and solar panels, the greening of roofs and the creation of a carpooling hub for employee commuting;

- external projects (national and international) to sequester and offset residual emissions as well as biodiversity conservation projects. Partnerships with players such as CDC Biodiversité and WWF were supported in order to structure innovative approaches to the creation of national carbon sinks. **[E1.8.01]**

The internal carbon price corresponds to a fictitious price associated with one tCO₂e. **[E1.8.02]**

The internal carbon price applied (€60) was decided by La Banque Postale's Executive Committee based on the assumptions and proposals of the Carbon Disclosure Project, the Institut Montaigne report and the Blanchard-Tirole Commission, which recommend an average price of around €65 per tCO₂e in the European financial sector. **[E1.8.05]**

The annual budget allocated to La Banque Postale's Climate and Biodiversity Impact Fund and CNP Assurances' carbon and biodiversity fund is calculated on the basis of GHG emissions multiplied by the internal carbon price:

- for the banking scope, the GHG emissions taken into account are emissions for year N-2 (emissions under the SBTi Scopes 1 and 2 pathway, respectively representing 5,278 tCO₂e and 1,876 tCO₂e; total operational emissions for Scope 3, representing 31,819 tCO₂e). This delay is due to the time required to select and complete projects.
- for the insurance scope, the GHG emissions taken into account are emissions for year N (Scopes 1 and 2 emissions, representing 1,495 tCO₂e and 276 tCO₂e, and indirect emissions related to business travel and employee commuting for Scope 3, representing 6,525 tCO₂e). **[E1.8.03]**

2.2.1.10 Anticipated financial effects of climate-related risks

La Banque Postale Group has chosen to determine the reporting deadline for this information.

However, the information relating to this disclosure requirement is already published under Pillar III in the Universal Registration Document:

- assets exposed to physical risk, assets exposed to acute physical risk before adaptation and assets exposed to chronic physical risk before adaptation: refer to the banking portfolio table – Indicators of potential climate change physical risk: Exposures subject to physical risk (model 5), in Section 6.8.8 “Indicators of potential climate change physical risk” of the Universal Registration Document;

- location of assets with significant physical risk: refer to Sections 6.8.4.2 “Measuring exposure to environmental and climate risks” and 6.8.4.2.1 “Physical risk” of the Universal Registration Document;
- total value of real estate assets by energy efficiency class: refer to the banking portfolio table – Indicators of potential climate change transition risk: loans collateralised by immovable property – Energy efficiency of the collateral (model 2), in Section 6.8.7.2 “Energy efficiency of real estate financing” of the Universal Registration Document.

2.2.1.11 Additional indicators specific to the entity

2.2.1.11.1 GHG emissions management indicators

To manage its low-carbon pathway in its operational scope, La Banque Postale specifically monitors emissions related to buildings, vehicles and digital technology.

MONITORING GHG EMISSIONS WITHIN THE OPERATIONAL SCOPE

	2022	2023	2024
CO₂ emissions from buildings	18,421	13,821	13,071
Vehicle emissions	6,158	5,540	6,338
Emissions from IT equipment and data centres	10,544	9,651	9,069

Emissions related to the vehicle fleet increased by 14% between 2023 and 2024. This change is due to the gradual implementation of the vehicle policy, which is not yet in full effect, as well as a better estimate in 2024 of the vehicle fleet taken into account.

Between 2023 and 2024, greenhouse gas (GHG) emissions related to La Banque Postale's IT infrastructure and data centres decreased by 6%. This decrease is due to a number of initiatives implemented by La Banque Postale Group:

- optimisation of data centres: lockdown of cooling areas, regulation of temperatures and optimised management of volumes and allocated spaces;
- extending the life of equipment: reusing computer equipment, primarily through donations to social and solidarity-based economy (SSE) players;

- responsible purchasing: using CSR criteria for computer equipment purchases, favouring EPEAT-certified equipment;
- awareness and training: training and awareness programmes for employees on responsible digital technology.

In addition, the transition from the “Green Argile” to the “Aguaro” measurement tool in 2024 has enabled more precise and detailed measurements to be taken, contributing to better reliability and traceability of carbon footprint data.

As part of its status as a mission-led company, La Banque Postale monitors low-carbon pathway indicators which reflect SBTi commitments within its operating scope. Crucially, ensuring that its own operations comply with these pathways helps it to contribute to combating climate change, to strengthen its responsibility towards its stakeholders and to establish its credibility as a mission-led company.

METRICS LINKED TO THE SBTi TRAJECTORY

	2023	2024	2030 target
METRICS LINKED TO THE LA BANQUE POSTALE MISSION-LED COMPANY  CO₂ emissions – SBTi Scope 1 & 2 (tCO₂e)	6,389	6,260	3,823

2.2.1.11.2 Management indicators related to impact financing

La Banque Postale Group's commitments and actions to finance environmental solutions are reflected in indicators monitored as part of La Banque Postale's status as a mission-led company, and in CNP's company purpose.

LA BANQUE POSTALE GROUP METRICS RELATED TO IMPACT FINANCE

		2023	2024	2025 target
LA BANQUE POSTALE'S MISSION-LED COMPANY METRICS	 Financing of renewable energy projects - Deployed production (in € millions)	4,586	5,039	5,600
	 % of La Banque Postale's activities covered by the IWF	64%	73%	87%
CNP ASSURANCES' COMPANY PURPOSE METRICS	 Green investment portfolio (in € millions)	27,200	29,355	30,000
	 Impact investment portfolio (in € millions)	1,600	1,740	1,000

LA BANQUE POSTALE GROUP METRICS RELATED TO IMPACT FINANCE

		2022	2023	2024
OTHER METRICS	 Financing of renewable energy projects - Annual production (in € millions)	345	868	453
	 Financing of renewable energy projects - Commitments (in € millions)	2,379	2,648	2,621
	 Green loan financing (aligned with the European Taxonomy) - Annual production (in € millions) - CLDB scope (in € millions)	1,446	1,332	1,563

In order to reduce its greenhouse gas emissions and respond to the climate emergency, France has set itself the target of achieving 40% renewable energy in its energy mix by 2030. In this context, La Banque Postale has set targets for its **financing commitments to renewable energy**, and aims to increase them to €5.6 billion in 2025. In 2024, the annual financing created in this sector was lower than the previous year, due to strong competition in the French market. The Bank has therefore adopted a cautious approach, focusing on diversification towards new technologies such as batteries, hydrogen and grid balancing, while maintaining rigorous selectivity.

In 2021, La Banque Postale launched the creation of its **Impact Weighting Factor (IWF)**, a proprietary non-financial impact measurement indicator. The IWF aims to measure the environmental, societal and regional impact, such as the carbon footprint of a project or the biodiversity impact. In 2024, 73% of activities were covered by the IWF. The target for the end of 2025 is to cover at least 87% of activities.

In 2023, **CNP Assurances** undertook to double its **impact investments** to €1 billion by the end of 2025⁽¹⁾. At the end of 2024, impact investments amounted to €1.7 billion. The progress of its **green investments**, which amounted to €29.4 billion⁽²⁾ at the end of 2024, are in line with the target set for the end of 2025 of reaching at least €30 billion in green investment technical reserves.

Because local authorities play a leading role in the environmental and energy transformation of the regions, since 2019, La Banque Postale has been offering them **green loans** intended to finance projects with a high environmental impact (waste recovery, energy renovation of public buildings, renewable energy production and clean transport). Since 2022, these green loans have been aligned with the contribution criteria of the European Green Taxonomy. As of 31 December 2024, this amount was €1.5 billion, exceeding the target set for 2025.

(1) *CNP Assurances refers to the definition of impact investments adopted in 2021 by the industry in Paris. Impact financing is an investment strategy that aims to accelerate the fair and sustainable transformation of the real economy by providing proof of its beneficial effects. It is based on the pillars of intentionality, additionality and impact measurement.*

(2) *Scope of CNP Assurances SA and its subsidiaries. The amount totalled €29.8 billion for the CNP Assurances Group scope.*

2.2.2 Preserving biodiversity and ecosystems [E4]

2.2.2.1 Material IROs related to biodiversity and ecosystems

The double materiality analysis shows that biodiversity is not material for La Banque Postale for its own operations and service activities.

Materiality for this topic only covers the financed activities: "Investment/financing of industries that exert significant pressure on biodiversity (soil degradation, pollution, pressure on ecosystems, GHG emissions, etc.)". Soil degradation includes land degradation, desertification and soil sealing, and can be caused by deforestation. [E4_SBM_3.05]

2.2.2.2 Transition plan

The consensus is confirmed on the need for financial institutions to recognise the link between climate and nature, taking into account the potential synergies and trade-offs between these two topics. Transition plans must go beyond simply incorporating nature into decarbonisation strategies, and more specifically address the transformation of operations, value chains and portfolios. The goal is to align financial flows with climate imperatives and to preserve biodiversity based on a more holistic approach.

Through its financing capacity, La Banque Postale plays a role in supporting transformative initiatives in economic sectors with a strong impact on nature (such as agriculture, chemicals and mining). To feed these sector-specific transformation plans, La Banque Postale participates alongside other financial institutions in market initiatives such as "Roquelaure Entreprises et Biodiversité⁽¹⁾", launched by the French Ministry for the Environmental Transition to implement the national biodiversity strategy (SNB).

La Banque Postale carried out an initial scenario analysis based on the recommendations of the TNFD to identify the biodiversity- and ecosystem-related risks and opportunities for 2030 and 2050. The methodology used for this scenario analysis is only qualitative, and differs from the climate stress test. Indeed, to date, there is no agreed quantified scenario concerning the evolution of nature issues, and the use of qualitative scenarios is in line with the TNFD recommendations.

In its 2024 Climate and Nature report, La Banque Postale describes how it aims to further integrate nature into its risk management processes and decision-making. This first report focuses on the Corporate and Investment Banking activities of La Banque Postale SA, and is intended to be extended to other La Banque Postale Group entities for its future publications.

La Banque Postale aims to align its climate and nature commitments to ensure consistency and compliance with the targets set by the Bank in these two areas by adopting a transition plan which encompasses these two subjects no later than 2028. [E4.1.01] [E4.1.02] [E4.1.03] [E4.1.04] [E4.1.05] [E4.1.06] [E4.1.07]

2.2.2.3 Policies related to biodiversity and ecosystems

Fully aware of the major challenges and guidelines of the Kunming-Montreal Global Biodiversity Framework (KMGBF), La Banque Postale Group is calling up all the action levers at its disposal to align its roadmap with this agreement, based on a "double materiality" approach:

- financial materiality: companies are dependent on natural capital and ecosystem services;
- impact materiality: companies' activities have an impact on nature.

(1) The second edition of "Roquelaure Entreprises et Biodiversité" in May 2024 presented the work carried out by the eight working groups jointly managed by companies that have already significantly demonstrated their commitment to the protection of biodiversity. The work aims to reduce the exposure of companies to the risks generated by the collapse of the living world, and to identify opportunities for sustainable prosperity based on a restored and preserved natural environment.

To achieve this, La Banque Postale Group has aligned itself with the **biodiversity policy of Caisse des Dépôts** which was published in December 2022 and built around four areas:

- footprint measurement and biodiversity risks, which is essential for biodiversity issues to be fully taken on board;
- reduction of direct and indirect negative impacts. As the collapse of life is the result of the impacts of human societies, reducing these impacts is a priority;
- increased direct and indirect positive impacts. It is possible to develop or contribute to positive solutions for biodiversity;
- contribution to research, training and awareness. Biodiversity issues are yet to be explored and passed on.

With regard to aspects of biodiversity more specifically related to aquatic environments (freshwater), La Banque Postale Group is also involved in the **Caisse des Dépôts Group's Water policy**.

La Banque Postale's policies and commitments

In December 2023, La Banque Postale developed **intervention principles for companies in sectors at risk of deforestation and ecosystem conversion**. These principles aim to establish a series of rules and procedures applicable to La Banque Postale's activities to accelerate the progress of its customers in the fight against deforestation. They apply to the "Large Corporates" scope of La Banque Postale's Corporate and Local Development Banking for financing and investment activities. The Group Risk Management Committee (GRMC) (of which the Chairman of La Banque Postale's Executive Board is a member) is responsible for their implementation.

La Banque Postale also relies on its **Responsible Financing and Investment Charter** to govern its loans to business customers and financing activities. Thus, it has established a discriminatory policy on investments and financing of companies where at least 20% of revenue comes from the manufacture or sale of pesticides (herbicides, fungicides and insecticides for agriculture). For more information, refer to the focus point: *La Banque Postale's Financing and Investment Charter*.

Policies and commitments of La Banque Postale Group subsidiaries

In addition to the Group approach, La Banque Postale's subsidiaries have rolled out policies in line with their specific business.

CNP Assurances participates in the work of the Institute for Sustainable Finance (IFD) on deforestation, and became a member of the Nature Action 100 investor coalition in 2023. The Sustainability Department is responsible for managing climate and biodiversity issues at Group level. This management is supported by the Climate Risk Committee, which was extended in 2021 to include risks related to biodiversity. Its target is to manage the actions put in place to integrate the risks related to climate change and the loss of biodiversity into all aspects of the business (investment, insurance, internal operations). In addition, CNP Assurances' due diligence policy takes into account biodiversity issues.

LBP AM is also a signatory of the Finance for Biodiversity Pledge, and follows its recommendations to target its biodiversity policy based on the material pressures identified during the impact analysis.

LBP AM's biodiversity policy meets 18 of the 23 targets set by the Kunming-Montreal Global Biodiversity Framework agreed at COP15 (GBF), with concrete actions for commitment, exclusion and advocacy. The biodiversity policy is updated annually, the exclusion lists have regular, predefined time periods, and reports on commitment actions are provided at quarterly internal committees.

With regard to its discretionary management activity and investments, **Louvre Banque Privée** has adopted a biodiversity strategy (notably in the context of the requirements of Article 29 of the Energy-Climate law (LEC)).

The main areas of this policy are the exclusion of activities in sectors deemed harmful to biodiversity (particularly unconventional pesticides and fossil fuels), as well as considering controversies related to biodiversity (which may lead to exclusion in the event of serious controversies). Companies' Principal Adverse Impact (PAI) performance is also monitored and integrated into the overall risk rating, therefore influencing the overall score through the exclusion rate and the SFDR rate. The implementation of this policy is the responsibility of the Director of Discretionary Management and the Director of Sustainability.

For more information on LBP AM's exclusion policy and CNP Assurances' due diligence policy, refer to Section 2.2.1.3. "Climate change mitigation and adaptation policies".
[E4_MDR_P_01_06]

Addressing deforestation, a major focus of the Group's biodiversity policy

La Banque Postale Group uses the FORESTIQ deforestation and ecosystem conversion databases to identify customers potentially exposed to high risks of deforestation, conversion or associated Human Rights violations (negative impacts on indigenous peoples and local communities).

La Banque Postale has established an engagement strategy to support its prospects, customers and issuers operating in sectors linked to deforestation, aligned with the European regulation against deforestation and forest degradation (RDUE). It reiterates the three conditions that must be met for products to be placed on the European market or exported from the European market: be "zero deforestation", be produced in compliance with the relevant legislation of the country of production, and be subject to a due diligence statement from operators and retailers.

The regulation applies to the following raw materials and some of their derivatives: coffee, cocoa, rubber, oil palm, soya, cattle and wood. All operators and traders who place, make available or export these products from the European market are covered by this Regulation.

Moreover, La Banque Postale does not lend to or invest in operators and traders of raw materials unless the company has a recognised policy in place to prevent deforestation.

Any potentially exposed customer will be subject to an in-depth assessment of risks and commitments (compliance assessment, with regard to La Banque Postale's intervention principles) by the Sustainability Department in order to confirm the level of customer exposure. This analysis will structure the approach to be adopted with regard to the customer or issuer with the Corporate and Local Development Banking large corporate teams and the trading floor teams.

La Banque Postale's intervention principles thus bring together all stakeholders directly or indirectly involved in deforestation and ecosystem conversion.

The implementation of these principles is subject to a dedicated internal procedure, formulated in documentation specifying the roles and responsibilities of each party, as well as the various stages of the procedure.

CNP Assurances also undertakes to exclude any new investment in companies operating or trading in cocoa, coffee, soya, cattle, leather, rubber trees, oil palm, wood and paper pulp which have not implemented a recognised deforestation prevention policy.

LBP AM has a cross-cutting policy consisting of excluding producers and traders of agricultural commodities with a high risk of contributing to deforestation, and who have not implemented sufficient prevention measures. Adopting a risk-based approach, this policy focuses on the first links of the agricultural value chain, with a direct link to the negative impact. [E4_2_04] [E4_2_05] [E4_2_06] [E4_2_20]

IMPACTS TARGETED BY BIODIVERSITY POLICIES

[E4_2_01] [E4_2_02]

		Biodiversity erosion vectors	Status of species	Extent and condition of ecosystems (land degradation, desertification, soil sealing)	Ecosystem services
 MATERIAL NEGATIVE IMPACT Investment/ financing of industries that exert significant pressure on biodiversity	CDC Biodiversity policy				
	CDC Water policy				
	La Banque Postale's Financing and Investment Charter	 (pesticides)			
	Group Deforestation & Ecosystem Conversion policy				
	LBP AM Biodiversity policy				
	Due diligence policy regarding negative impacts of investment decisions on CNP sustainability factors				

La Banque Postale does not have a sustainable land management or agriculture policy, but aims to work on these issues in the coming years. [E4_2_18]

2.2.2.4 Action plans related to biodiversity and ecosystems

Measuring the impacts and dependencies of the financed activities on biodiversity (La Banque Postale)

La Banque Postale measures the impacts, dependencies, risks and opportunities of its activity in relation to nature throughout its value chain to understand its relationship with living things. This is the first step in designing a robust

roadmap to reduce its impacts on natural ecosystems, by following a scientific pathway to protect and restore biodiversity, to control the risks and seize the associated opportunities in these areas.

La Banque Postale is one of the 320 global organisations (companies and financial institutions) to have adopted TNFD at an early stage, in September 2023, to have decided to anticipate the changes caused by the erosion of the state of nature and to assess how the Company could be impacted by these changes. In addition to the impact analysis carried out as part of the CSRD,

La Banque Postale carried out a more in-depth analysis of its impacts, dependencies, risks and opportunities related to nature on 39% of its financing portfolio (residential and commercial real estate, commercial, corporates and public sector and social economy), following the four steps recommended by the TNFD LEAP (Locate, Evaluate, Assess and Prepare) approach. This analysis was carried out using the Global Biodiversity Score (GBS), a tool developed by CDC Biodiversité based on the use of a wide range of input data, including economic data, inventories and physical measurements.

A combined analysis was carried out between the results of the "Locate" and "Evaluate" phases to assess the extent to which activities financed by La Banque Postale could have an impact or a strong dependency in particularly sensitive locations. In addition, sector-specific qualitative grids have been developed to establish, identify and qualify the nature-related impacts and dependencies for La Banque Postale's priority sectors. This qualitative analysis made it possible to specify the results obtained during the quantitative footprint measurement, in particular on the pressures or scopes little covered by the footprint measurement tools. This task was carried out in five sectors identified as priorities for La Banque Postale (real estate, food and beverage manufacturing, transport and warehousing, energy production and distribution, the health and pharmaceutical sector). The combined analysis of the impact, dependencies and locations of the financed activities helps to assess the risks related to nature.

Thus, activities with particularly high impacts in sensitive areas may be exposed to high transition risks. Likewise, nature-based activities which are carried out in areas in which nature is damaged face significant physical risks.

The assessment revealed that the impacts of the corporate and public sector and social economy portfolios mainly occur in the upstream value chain of the companies financed, and are therefore linked to their purchases. Terrestrial impacts are mainly due to land use and climate change, while aquatic impacts (freshwater) are due to pollution and wetland conversion. In addition, an in-depth analysis was carried out to identify the main companies contributing to the impact of the portfolio, to feed into a reflection within La Banque Postale on any engagement policies to be put in place.

Biodiversity dependencies were also assessed. Thus, 62% of the Corporate portfolio technical reserves finance direct activities that are critically dependent on at least one ecosystem service (real estate, telecommunications and construction are the main critical sectors). The most widespread dependencies in the Corporate and Public sector and social economy portfolios are water-related ecosystem services (surface water and groundwater). The highest dependency is on the ecosystem service for soil stabilisation and erosion control. These analyses confirm the priorities identified by La Banque Postale in terms of the policies implemented.

It is important to specify a few limits to the measurement of impacts and dependencies:

- retail banking direct reserves (excluding real estate), equity securities and exposures to sovereigns (sovereign bonds, technical reserves at Banque de France and centralisation of passbook savings accounts) are currently excluded, in the absence of a methodology and sufficient data to process them;
- the majority of the measurements were based on financial data. It would benefit from improved accuracy, primarily by including physical indicators specific to La Banque Postale's financing. An initial reflection was carried out on the physical indicators to be collected, and aims to have indicators for each pressure exerted on biodiversity, including climate change, in order to better manage the associated matters.

Climate and Biodiversity Impact Fund (La Banque Postale)

La Banque Postale relies on the "Climate and Biodiversity Impact Fund" (see Section 2.2.1.9 "Internal carbon price") to finance beneficial national and international projects to protect and restore biodiversity. Thus, in 2024, the Fund was supporting a project in partnership with CDC Biodiversité to promote the generation and measurement of biodiversity credits in France (Cros du Mouton site in Var). In 2024, La Banque Postale financed two voluntary restoration or rewilding units on the site for €99,600 excl. tax.

The Fund also supports the WWF France Nature Impact initiative, based on the payments for practices which benefit ecosystem services (PES) approach, combining biodiversity protection and carbon sequestration. The initiative finances field projects dedicated to the preservation, restoration and sustainable management of forests with high biodiversity value in mainland France.

In addition, all decarbonisation projects supported by the Fund pay particular attention to co-benefits for biodiversity: diversity of species for reforestation projects, proximity and preservation of water points in the forests, agroforestry and reforestation projects.

Actions of La Banque Postale Group subsidiaries

CNP Assurances includes biodiversity in the ESG filters of listed equities and bonds. In addition to climate-related matters, activities disrupting large or fragile areas, programmes put in place to protect biodiversity and land use, controversies over the use or management of natural resources, and dependency on water and the treatment of discharges into water are therefore taken into account.

Real estate has a significant impact on biodiversity, both during the construction phase and the operating phase. The CNP Assurances SA "Green Works" charter imposes rules on real estate portfolio management companies to protect biodiversity, including respect for ecosystems during the construction phase, choice of materials with a limited impact on the environment and reducing waste and water consumption. The Charter also provides for the study of technical solutions favouring plants and technical solutions that promote biodiversity, the circular economy (reuse of materials) and ecosystem services in buildings and green spaces. CNP Assurances also respects the principles of sustainable management for the 54,986 hectares of forests it owns, as defined by Société Forestière de la Caisse des Dépôts.

Externally, CNP Assurances has integrated biodiversity into its shareholder engagement policy, and more specifically in direct dialogues with the companies of which it is a shareholder: the target is to support CNP Assurances' strategy in favour of biodiversity. (including through the fight against climate change), by encouraging companies to make ambitious decisions to protect biodiversity, and to publish information on the risks related to biodiversity loss. In 2024, CNP Assurances discussed this subject with five companies, i.e. in 31% of the direct conversations it held.

CNP Assurances measures the dependency of portfolio companies on ecosystem services using the BIA-GBS methodology, Biodiversity Impact Analytics powered by the Global Biodiversity Score. This work covers 98% of the directly held equity and bond portfolio.

CNP Assurances SA and its French subsidiaries are participating in the "biodiversity marketplace initiative" launched in the spring of 2024, which brings together 11 institutional investors. Their target is to promote the development of effective methodologies for taking into account biodiversity in financial management. The ambition is to contribute to the achievement of international targets for the protection and restoration of biodiversity, and to advance all institutional investors in achieving their investment targets in favour of nature and ecosystems.

In accordance with its biodiversity policy, **LBP AM** implements a shareholder engagement action to help raise awareness and promote best practices in terms of managing issues, dependencies and impacts. It has led a number of collaborative engagement campaigns on key topics such as sustainable proteins, water management, deforestation, the use of pesticides and pollution. LBP AM also monitors the biodiversity footprint of its portfolios.

LBP AM relies on the ten people in its SRI Analysis and Research division, as well as on various specialised data suppliers, who help to conduct risk mapping and establish priority actions. In 2023, LBP AM developed a Biodiversity rating applicable to companies in all sectors.

Since 2024, **Louvre Banque Privée** has measured its biodiversity footprint using the BIA-GBS database. The methodology is being redesigned to be able to integrate UCITS.

The biodiversity footprint of the portfolio produced by BIA-GBS will enable Louvre Banque Privée to:

- identify the main pressures on its portfolio;
- identify the main contributors;
- on this basis, initiate a dialogue with these companies in relation to their action plan to manage their impact on biodiversity.

Louvre Banque Privée has allocated resources to improving this indicator management by subscribing to dedicated data subscriptions and by increasing the size of its team of ESG officers (currently five ESG officers in the discretionary management team).

In addition, since 1 January 2023, Louvre Banque Privée requires that all management mandates include biodiversity-related issues in the investment policy.

Employee awareness

The Group is raising its teams' awareness of biodiversity issues, primarily by way of a biodiversity e-learning module which has been available to all employees since February 2022. [E4_MDR_A_01_12]

Use of biodiversity offsets

La Banque Postale has not used measures to offset biodiversity loss in its action plans. La Banque Postale focuses on initiatives to reduce its environmental footprint and to promote the preservation of biodiversity. Through the Climate and Biodiversity Impact Fund, it finances projects that combine biodiversity protection and carbon sequestration. [E4_3_02]

Nature-based solutions and consideration of local knowledge

As part of the Climate and Biodiversity Impact Fund, La Banque Postale is investing in WWF France's Nature Impact initiative. This innovative Nature Based Solution⁽¹⁾ takes the form of a dedicated fund aimed at both biodiversity protection and carbon sequestration. The initiative finances projects for the preservation, restoration and sustainable management of forests in mainland France.

La Banque Postale has not yet integrated local and indigenous knowledge into its biodiversity actions. [E4_3_09]

2.2.2.5 Targets and results related to biodiversity and ecosystems

Concerning the sustainable management of forests, CNP Assurances SA and its French subsidiaries have undertaken to measure the biodiversity of their entire forest portfolio by the end of 2025 (92% of the surface area of the portfolio has been inventoried using the IBP method, developed by the National Forest Ownership Centre (Centre national de la propriété forestière – CNPF) at the end of 2024). CNP Assurances is also committed to allocating 3% of woodland to areas of older growth and natural growth by the end of 2025.

Following the exercise to measure impacts, dependencies, risks and opportunities carried out by La Banque Postale in 2023 and 2024, discussions will be undertaken to gradually establish quantified impact reduction targets. However, this will require improving the accuracy of the measurement carried out, the availability of methodologies to set targets, and access to high-quality data. [E4_MDR_T_14_19]

(1) Nature-based solutions (NBS) are actions aimed at protecting, sustainably managing and restoring ecosystems to meet societal challenges, while ensuring human well-being and producing benefits for biodiversity, according to the International Union for Conservation of Nature (IUCN).

2.2.2.6 Additional indicators specific to the entity

Biodiversity footprint measurement

The impact of **La Banque Postale**'s four portfolios on biodiversity (39% of the financing portfolio) is measured in aggregate using the Global Biodiversity Score, in MSA.sq.km, which provides an overview of the impact of La Banque Postale's portfolios and monitors the evolution of this impact.

The footprint measurement recognises two types of impacts:

- cumulative negative impacts (static), which correspond to all cumulative impacts prior to the start of the assessment period. At 31 December 2023, they represented 4,180 MSA.sq.km for land-based static impacts and 65 MSA.sq.km. for static aquatic impacts;
- periodic (dynamic) losses or gains corresponding to the impacts that occurred during the assessed period: +55 MSA.sq.km in 2023 for static land impacts.

Since 2022, **CNP Assurances** has used the BIA-GBS™ tool to measure its biodiversity footprint. At the end of 2024, it covered 99% of the directly held equity and corporate bond portfolio, which corresponds to 100% based on the data available from the data provider Carbone4 Finance. This footprint is expressed in MSA.sq.m. per thousand euros invested, distinguishing between aquatic biodiversity and land biodiversity:

- concerning aquatic biodiversity:
 - the static footprint is estimated at 3.51 MSA.sq.m. per € thousand invested,
 - the dynamic footprint is estimated at 0.05 MSA.sq.m. per € thousand invested;
- concerning land biodiversity:
 - the static footprint is estimated at 48.65 MSA.sq.m. per € thousand invested,
 - the dynamic footprint is estimated at 2.85 MSA.sq.m. per € thousand invested.

At the end of 2023, 70% of assets managed by **LBP AM** (Convertible bonds, Corporate bonds, Sovereign bonds, Equities) were covered by a Biodiversity footprint measurement, which was established at 58 MSA.PPB per € billion invested⁽¹⁾.

2.2.3 Prevent and limit pollution [E2]

Pollution does not stand out as material within the scope of La Banque Postale's own operations. The policies and actions related to pollution focus on the financed activities (downstream value chain), where this topic emerges as material.

2.2.3.1 Pollution prevention and reduction policies

Pollution is one of the five major types of pressure⁽²⁾ on ecosystems and biodiversity identified by IPBES.

The fight against pollution is part of La Banque Postale's action plan.

The corresponding policies and actions are described in Section 2.2.2 "Preserving biodiversity and ecosystems [E4]".

In addition, La Banque Postale's **Responsible Financing and Investment Charter** specifies the exclusions concerning companies in the pesticides sector. In particular, to combat chemical pollution, La Banque Postale excludes from its financing companies in which more than 20% of revenue comes from the manufacture or sale of pesticides (herbicides, fungicides and insecticides dedicated to agriculture). For more information, see focus point: *La Banque Postale's Financing and Investment Charter*.

When the management term for Société Forestière de La Caisse des Dépôts was renewed, **CNP Assurances** set out an environmental action plan and targets for the 2021-2025 period as part of a sustainable management charter for directly held forests in France. Through this charter, CNP Assurances and its French subsidiaries are committed to prohibiting herbicides and fungicides and limiting insecticides only to health emergencies, while developing

training and methodologies to achieve these targets. Pollution-related matters are also included in companies' ESG ratings for listed assets.

To combat pollution, **LBP AM** has also implemented:

- a pesticides exclusion policy;
- shareholder engagement with pig farming companies and fertiliser producers on soil pollution and the use of chemicals in farming;
- shareholder engagement with salmon and shrimp farmers on sustainable aquaculture practices, and in particular the risks of nutrient deposits related to fish feed;
- a commitment by companies in the agri-food sector to circularity and plastics;
- the GREaT rating model, which includes the subject of pollution. [E2_MDR_P_01_06] [E2_1.01] [E2_1.02] [E2_1.03]

2.2.3.2 Action plans related to the prevention and reduction of pollution

In addition to the double materiality analysis carried out as part of the CSRD, as part of the TNFD, La Banque Postale SA has also conducted a more in-depth study of the impacts and dependencies related to biodiversity using the Global Biodiversity Score (GBS), a tool developed by CDC Biodiversité. This study has assessed the dependency of La Banque Postale's portfolios on the 21 ecosystem services provided by nature, as well as their impacts on biodiversity, on land and aquatic freshwater ecosystems, with regard to four of the five pressures established by the IPBES, including **pollution**. All results are available in the

(1) The MSA.ppb is a measurement allowing the aggregation of land and aquatic, static and dynamic impacts. It aims to report on the overall impact of investments on biodiversity.

(2) These five types of pressure are: 1. changes in land and sea use (direct destruction of natural habitat); 2. the direct exploitation of certain living organisms; 3. climate change; 4. pollution; 5. invasive alien species.

2023 Climate and Nature Report. In light of this analysis, actions will be established over the coming years and included in a Nature Transition plan.

CNP Assurances takes into account pollution in the ESG filters of listed equities and bonds directly held by it or its French subsidiaries. The "Pollution/Waste" criterion of the ESG rating includes elements on air and soil pollution, with indicators on toxic emissions, electronic waste and packaging.

In addition, the implementation of the "Green Works" Charter by CNP Assurances and its French subsidiaries imposes rules on the companies managing its real estate portfolio, including respect for ecosystems during the construction phase, choice of materials which have a limited impact on the environment, and waste reduction. The Charter requires companies managing directly owned real estate portfolios to carry out work to limit pollution close to sites, reduce odours and volatile chemical pollution, and to meet their obligations regarding asbestos and lead in paint.

With regard to soil pollution, **LBP AM** expects the following measures from the companies involved:

- a plan to reduce the use or production of pesticides by 2030, in line with Target 7 of the Kunming-Montreal Global Biodiversity Framework and the European Union's "Farm to Fork" strategy to reduce the risks generated by the use of pesticides;
- a credible plan to stop the use or production of highly hazardous pesticides (HHPs) by 2030;
- reporting on the proportion of products from crops that do not use chemical pesticides, the implementation of clear communication to consumers on the presence of pesticides in their products, and awareness-raising actions on the benefits of products without pesticides;
- publication of an influence policy specifying the company's position on the use of plant protection products, and exemplary transparency on the associated advocacy practices.

On the subject of water pollution, LBP AM asks the companies it finances:

- to carry out a regular analysis of the impact of activities on the quality of local surface and groundwater;
- to implement an action plan to reduce water pollution according to best practices in the sector by prioritising sites with high water stress, including specific targets for reducing discharges and water pollution by substance and site;
- to publish indicators to monitor the achievement of these targets;
- to implement remediation plans in the event of an incident leading to the pollution of aquifers, in particular actions for decontamination and restoration or rewilding of basins, wetlands and watersheds;
- to map activities near ecosystems critical for the supply of freshwater or ecosystems with sensitive aquatic biodiversity, and to implement a plan to protect these ecosystems.

Louvre Banque Privée is also implementing actions aimed at:

- improving the quantitative management of IAP indicators (negative impacts under SFDR) in order to be able to identify the companies and management companies with the highest impacts;
- using this data to integrate the issue of pollution into the engagement policy for issuers or asset management companies. [E2_MDR_A_01.12] [E2_2_02]

2.2.3.3 targets and results related to the prevention and reduction of pollution

Following the exercise to measure impacts, dependencies, risks and opportunities conducted in 2023-2024, impact reduction targets will be gradually established. This will require improving the accuracy of the measurement, the availability of methodologies to set targets and access to high-quality data. [E2_MDR_T_14_19]

2.2.4 Preserving water and marine resources [E3]

The “Water” topic is not included in the scope of La Banque Postale’s own operations. The policies and actions related to water focus on the financed activities (downstream value chain), where this topic emerges as material.

2.2.4.1 Policies related to water and marine resources

In 2024, La Banque Postale Group, as a subsidiary, adopted the **Caisse des Dépôts Group’s water policy** to address the three major challenges it faces:

- limited and scarce water resources;
- water quality and dedicated infrastructure;
- flooding and soil sealing.

Firstly, the aim is to support the water efficiency initiatives of the various players and play its part in the national target of reducing water consumption by 10% by 2030, and secondly, to improve the quality of bodies of water by contributing in particular to the government target of preserving 100% of drinking water catchment areas by 2027 in order to achieve the targets of the Water Framework Directive⁽¹⁾.

This Caisse des Dépôts policy is presented in three main parts:

- understand the Group’s impacts and risks;
- adopt a water saving approach;
- preserve the quality of water and infrastructure.

Each of these parts includes a series of commitments, targets and associated monitoring indicators. The first works will be carried out in 2025.

The Group Risk Management Committee (GRMC) (of which the Chairman of La Banque Postale’s Executive Board is a member) is responsible for implementing this policy. [E3_MDR_P_01.06]

Understanding the Group’s impacts and risks

La Banque Postale first undertakes to identify its negative impacts and the dependency of its activities on water resources and natural freshwater ecosystems, in order to manage its related water risks and to preserve freshwater and wetland ecosystems. It has made the following commitments:

- by the end of 2025, produce a water footprint or an assessment of the dependency of water resources on water-related ecosystem services;
- by the end of 2027, carry out an initial estimate of the aquatic pollution (discharges) resulting from its operational activities or generated by the invested or financed counterparties;
- by the end of 2027, assess exposure to the risk of drought or water stress of the various financial portfolios (in French and overseas French territories, and internationally where relevant).

Contribute to the water sobriety target

In order to participate in the national effort to reduce water consumption by 10% while meeting the challenges related to the scarcity of water resources, La Banque Postale contributes to the target of water saving, and offers financing and support to contribute to modernising water and sanitation networks. It supports stakeholders and ensures the deployment of best practices in terms of water consumption. In addition, it is committed to deploying financing tools dedicated to the more efficient management of water resources.

With respect to its commitments on financing portfolios, La Banque Postale aims to:

- by the end of 2025, incorporate the general water saving target into the ESG analysis criteria, and take into account the degree of water stress in the area in which the financing is located;
- for projects located in areas of extremely high or high water stress, take into account how aligned these projects are with best sectoral practices in terms of water consumption, with the aim of not worsening the water shortage situation in the area concerned;
- deploy financing tools dedicated to more efficient management of water resources. [E3_1.01] [E3_1.05] [E3_1.06]

Preserving the quality of water and infrastructure

With the aim of preserving aquatic and wetland environments, La Banque Postale is committed to reducing its impact on ecosystems that contribute to the water cycle, to opting for nature-based solutions, and to contributing to the rewilding and restoration of these ecosystems. To do so, La Banque Postale has set itself the following targets:

- combat the pollution of aquatic environments;
- ensure the proper functioning of the major water cycle;
- avoid damaging wetland areas.

At the same time, La Banque Postale has established commitments for the financing portfolios:

- exclude any financing or investment in companies in which more than 20% of revenue comes from the manufacture or sale of pesticides;
- deploy tools to improve the quality of water resources via loans to public sanitation services or water agencies. [E3_1.04]

To date, La Banque Postale does not have a policy related to sustainable oceans and seas, but wants to work on it alongside Caisse des Dépôts in 2025, to best promote its actions at the United Nations Ocean Conference (UNOC) in Nice in June 2025. [E3_1.09] [E3_MDR_P_07.08] [E4_2.19]

(1) This Directive (WFD) had initially set a target of achieving good status of water bodies by 2015, asking States to report the achievement of this target to the European institutions (French newsletter for 2022: <https://www.eaufrance.fr/actualites/parution-de-ledition-2022-du-bulletin-rapportage>). Given the absence of a result, the European institutions have reviewed the schedule and ask the Member States to reach a good status of water bodies by 2027.

2.2.4.2 Action plans related to water and marine resources

Water is one of the environmental indicators under the **Impact Weighting Factor (IWF)**, an impact scoring tool developed by La Banque Postale in partnership with WWF France to guide financing and investment strategies (for more information on the IWF, see focus point: *The Impact Weighting Factor (IWF)*).

Since 2019, the SFIL/La Banque Postale financing system for local authorities and their groups has offered a **"green loan"** topical offer. The **"Sustainable management of water and sanitation" component** is partly dedicated to managing the small water cycle, by financing investments made by public drinking water and sanitation services.

La Banque Postale also offers a bridging loan to **pre-finance subsidies to water agencies** with the aim of securing supplies, reducing leaks in networks, reuse of treated wastewater, etc.

In addition, La Banque Postale, as part of its Climate and Biodiversity Impact Fund, **finances projects to reduce water consumption**.

Actions are also taken by La Banque Postale's subsidiaries:

- **CNP Assurances'** "Green Works" Charter requires companies managing directly owned real estate portfolios to limit water consumption and supply water that meets quality requirements;
- **LBP AM** is a member of the Valuing Water initiative, led by the NGO CERES, which raises awareness on the protection of water resources;
- **Louvre Banque Privée** is stepping up the quantitative monitoring of PAIs (adverse impacts under the SFDR), in particular "emissions to water". [E3_MDR_A_01.12]

Following the exercise to measure the impacts, dependencies, risks and opportunities on its balance sheet and off-balance sheet exposures conducted in 2023-2024, discussions will be undertaken to gradually complete the impact reduction actions. [E3_MDR_A_13.14]

Target areas exposed to water risks

As part of the 2023 Climate and Nature report, **La Banque Postale** carried out an analysis of the location of financing in 2024.

This analysis identified the activities financed by La Banque Postale which are located in sensitive areas, implying a specific risk for the activities present in these areas. These areas were identified according to several criteria, including the level of **water stress**.

The results show that the risk levels with at least two high-risk criteria cover nearly 65% of the areas financed. These areas are located in areas that are important for biodiversity, have high ecological integrity or are subject to water stress.

The analysis highlights two types of priority locations for La Banque Postale:

- those concentrating a significant portion of potential building land in areas with average overall risk, such as Île-de-France;
- those particularly important for nature, even if the financed surface area is smaller, particularly in certain locations in the South-East of France, where the overall risk is very high.

This first assessment will then make it possible to establish concrete actions to limit the impacts of the activities financed in water-risk areas.

By the end of 2027, **CNP Assurances** will map the assets of its various financial portfolios located in areas with high and extremely high water stress risk (in France and internationally). By the end of 2026, CNP Assurances will also map its sites and real estate assets in water-stressed areas (in France and internationally). This work will be carried out within the limits of the available tools and data.

Finally, **LBP AM** is raising awareness among the companies in which it invests to map out water abstraction sites and identify areas with high water stress, and to implement a study of the impact of abstraction on local populations. The actions take the form of *ad hoc commitments* with the companies most exposed to the risk. [E3.2.03]

2.2.4.3 Targets and results related to water and marine resources

Following the exercise to measure the impacts, dependencies, risks and opportunities on its balance sheet and off-balance sheet exposures conducted in 2023-2024, an analysis will be undertaken to gradually establish quantified impact reduction targets. [E3_MDR_T_14.19]

2.2.5 Promoting the circular economy [E5]

Resource use and the circular economy is a material topic through the sub-topic of waste within the scope of La Banque Postale's own operations, and for the financed activities.

2.2.5.1 Policies related to resource use and the circular economy

In 2024, La Banque Postale implemented a Resources and Circular Economy policy whose scope includes La Banque Postale SA as well as its main subsidiaries (CNP Assurances, LBP AM, La Banque Postale Consumer Finance, Louvre Banque Privée, Domiserve and Easybourse, LBP Leasing & Factoring). This scope covers the policy, actions and indicators presented in this section.

The policy is part of the general ESG approach implemented by La Banque Postale Group, and is based on the key commitment to reduce at source and optimise the use and end-of-life of the Group's resources by 2030. This policy incorporates the management of waste flows as part of a resource "life cycle" vision. It applies to the entire scope of La Banque Postale's operational activities. Financing and investment activities were considered in the drafting of this policy, but are not subject to specific targets or commitments. The policy is validated and monitored by La Banque Postale's Sustainability Department. This policy and the monitoring of the associated targets have been circulated to all interested internal contributors, and are freely circulated internally and externally on request.

The policy is broken down into roadmaps for all subsidiaries based on their operational specificities and the way in which they use resources. [E5_MDR_P_01_06]

In addition to the targets set, the Resources and Circular Economy policy supports specifiers in the systematic use of recycled resources, both for paper/cardboard and plastic and for waste electrical and electronic equipment (WEEE). All products (bank cards, for example) put into circulation by La Banque Postale are subject to an eco-design approach. This approach is reflected by prioritising recycled materials and paying particular attention to the recyclability of plastics, cardboard and computer equipment put into circulation. This eco-design approach also aims to promote renewable resources in the Group's supply policies. [E5_1_02]

As part of the management of its Corporate and Investment Banking portfolio, La Banque Postale does not have a waste management policy. This is due to the fact that there are currently no methodologies to measure the resource footprint (incoming, outgoing and waste) or to manage the waste related to these activities.

Work carried out by La Poste Group has been initiated to establish the resource footprint and associated reduction pathways at Group level. La Banque Postale has also been involved in this work. As a result, it should be possible to enhance the way in which waste impacts are reflected in La Banque Postale's Corporate and Investment Banking activities. [E5_MDR_P_07_08]

2.2.5.2 Action plans related to resource use and the circular economy

Main actions implemented

The main actions deployed under the Resources and Circular Economy policy include:

- the reduction of waste volumes and resources consumed:
 - for plastics, identifying the suppliers that consume the most and implementation of a progress plan to help them move away from the supply of plastics, integration of specific "materials" criteria during renewal consultations, awareness-raising of specifiers and buyers on these topics and the alternatives available on the market;
 - for paper and cardboard, identifying the origin of paper/cardboard waste across all activities, integration of dedicated criteria during consultations, awareness-raising of influencers and buyers on these subjects and the alternatives available on the market;
 - for electrical and electronic equipment, identifying the policies and practices in force concerning the allocation and management of IT equipment, optimisation of the IT equipment allocation process and raising awareness among all employees on the rules of use;

- end-of-life optimisation for raw and secondary materials:
 - for waste management, identifying the volume and specific nature of all waste produced on the sites, implementing the progress plan (PQSE appendix) with contracted suppliers, with the exclusion of energy and material recovery (incineration and landfill), and awareness-raising among all employees regarding on-site sorting and recovery methods;
 - awareness-raising with retail customers to limit undelivered bank cards (NPL), and with service providers in order to integrate the recovery of NPL, considering the extension of bank card validity contracts in order to limit renewals;
 - for reuse: identifying suppliers in charge of WEEE management and end-of-life management procedures, increased requirements for suppliers to implement reuse initiatives, internal and external donation process to promote reuse, carrying out a life cycle analysis (LCA), raising awareness among specifiers about reuse approaches and methods.

These actions are based on an annual roadmap specifying the methods for achieving the targets set by the policy. It is shared with the various contributors as well as with the subsidiaries of La Banque Postale. For all interested stakeholders, the roadmap is adapted to their own operational scope. The implementation and operational management of these actions are the responsibility of the Sustainability Department. The actions require prioritization in terms of human resources, and in particular a strong awareness of the main influencers. There were no financial estimates associated with the implementation of the roadmaps, as the actions did not involve a specific or measurable budget commitment. [E5_MDR_A_01_12]

La Banque Postale does not have waste management roadmaps as part of the management of its credit and investment portfolio. [E5_MDR_A_13_14]

Managing, recovering and reducing our waste

In all waste management contracts for the La Banque Postale SA scope and its subsidiaries, the waste treatment hierarchy is taken into account and reuse is systematically considered (when relevant) before recycling is implemented. The majority of waste is handled by operators that are committed to 100% recycling, such as Recygo or Les Joyeux Recycleurs. [E5_2_06]

Strengthening the circular economy

The Group's ambition through its Resources and Circular Economy policy is to go beyond the actions and partnerships already in place, primarily by more actively developing specific internal and external donation rules *via* the consolidation of a donation hierarchy shared with all entities to ensure the effective and efficient implementation of the circular economy for materials. [E5.2.08]

La Banque Postale holds discussions with institutional players such as CITEO in order to monitor the application of Extended Producer Responsibility (EPR) within its scope and to benefit from its ecosystem coordination actions. In addition, all employees are involved in awareness-raising initiatives to promote the circular economy. [E5.2.09]

Suppliers are committed and involved in these matters through annual monitoring bodies and the implementation of associated progress plans. La Poste Group's internal experts and, in particular, the Sustainability Department members responsible for managing circular economy initiatives, work with institutional stakeholders on these issues. [E5.2.10]

CNP Assurances takes into account resources and the circular economy in the ESG filters of listed equities and bonds. The non-financial rating of the companies/issuers used is based on a specific methodology that measures the commitment, responsibility, opportunities and risks for companies on four pillars, including the sustainable management of resources. The latter is studied according to four criteria, including waste, and aims to ensure that the principles of the circular economy are taken into account in the design, production and use phases of products/services to reduce pollution and promote recycling.

For real estate, ESG criteria are rolled out operationally in the real estate assets under management in the form of the so-called "Green Works" Charter, whereby the management companies of CNP Assurances undertake to carry out the work in accordance with the rules of the Charter. Issues surrounding resource use and the circular economy are included therein, including looking at, as far as possible for each operation, the option of using deconstruction processes for the reuse and recovery of materials, as well as the priority use of materials from redeployment channels, where possible.

The management companies of CNP Assurances are responsible for the risks associated with this charter. CNP Assurances expects them to manage these risks in a balanced and appropriate manner on a case-by-case basis, depending on the materiality of the matters at stake. [E5_MDR_A_01_12]

2.2.5.3 Targets and results related to resource use and the circular economy

2.2.5.3.1 Targets

A number of operational targets have been set and are managed annually by the Sustainability Department. They have been drawn up mainly based on national and European regulations (AGEC law and the law on the energy transition for green growth), and the deadline for achieving the targets has been set to 2030.

The targets include:

- on volumes of waste at source: reduce plastic waste by 50% and paper/cardboard waste by 30% across all activities;
- on the end-of-life of raw and secondary materials:
 - sort and recover 100% of waste (excluding plastic) generated on the sites, opting for recycling where possible,
 - ensure that 100% of plastic waste generated is recyclable, reusable or compostable,
 - reduce WEEE volumes by 30% (compared to 2021) and maintain WEEE recovery rates above 85%, taking into account any regulatory changes,
 - maintain a minimum second life rate of 50%, with a breakdown of one third reuse and two thirds redeployment,
 - ensure that 100% of products put into circulation are subject to an eco-design process,
 - ensure that 30% of expired bank cards put into circulation are collected and 100% of expired cards collected are recovered,
 - recover 100% of undistributed bank cards (NPL).

The base year for all of these targets is 2023, and concerns the subsidiaries covered by the Resources and Circular Economy policy. The subsidiaries eZyness, Sofiap and 115K do not have specific targets, due to their size and their limited stakes and resources related to their activities.

The Sustainability Department set these targets in collaboration with its internal stakeholders, mainly the Purchasing and Marketing Departments.

The roadmaps are monitored quarterly during dedicated steering committee meetings with the main contributors (purchasing, property managers, marketing). The achievement of the targets is assessed annually by a steering committee, at the end of the quantitative data collection campaign for the previous year.

For the subsidiaries, monitoring committee meetings are also held every quarter to monitor the implementation of roadmaps with the contributors responsible for this data. [E5_MDR_T_01_13]

La Banque Postale has not established waste management targets as part of the management of its loan and investment portfolio. [E5_MDR_T_14_19]

CONTRIBUTION OF TARGETS TO THE LEVERS OF THE CIRCULAR ECONOMY [E5_3_01]

	Circular economy levers				
	Eco design [E5_3_02]	Circular material use rate [E5_3_03]	Minimisation of primary raw materials [E5_3_04]	Sustainable sourcing [E5_3_05]	Waste management [E5_3_06] [E5_3_07] [E5_3_09]
 Reduce plastic waste by 50% and paper/cardboard waste by 30% across all activities					
Sort and recover 100% of waste (excluding plastic) generated on the sites, opting for recycling where possible					Recycling (material reuse)
Ensure that 100% of plastic waste generated is recyclable, reusable or compostable					Recycling, reuse (material reuse)
Reduce volumes of WEEE by 30% (compared with 2021)					
Maintain WEEE recovery rates above 85%, taking into account any regulatory changes					Recycling, reuse (material reuse)
Maintain a minimum second life rate of 50% with a breakdown of 1/3 reuse and 2/3 redeployment					Reuse (material reuse)
Ensure that 100% of products put into circulation are subject to an eco-design process					
30% of expired bank cards put into circulation are collected					
Collect and recover 100% of expired cards					Recycling (material reuse)
Recover 100% of undistributed bank cards (NPL)					Recycling (material reuse)

Eco-design and circular use of materials

All offers and services offered to internal and external stakeholders are subject to an eco-design approach based on the ESG project grid, an internal tool developed by the La Banque Postale Group. As part of this approach, the impact of the various projects and services implemented is analysed according to their use of non-renewable resources and the associated waste produced. [E5_3_02]

In addition, all consultations carried out by La Banque Postale's Purchasing teams take circularity into account in product design.

For IT equipment, the criteria considered in the consultations are the reparability index for each type of equipment offered, the availability of spare parts, the existence of an offer to take back the replaced or end-of-life equipment, potential support and results of the redeployment, recycling and/or destruction channels used. [E5_3_03] [E5_3_04] [E5_3_05]

Waste management

The Resources and Circular Economy policy is based on a key commitment: reduction at source of the volumes of waste produced by La Banque Postale and its subsidiaries, by distinguishing between targets according to the types of waste produced. Details of the targets are available above. [E5_3_06] [E5_3_07]

The policy and the associated roadmaps take into account the European waste hierarchy. Recycling is always preferred in the actions carried out, then material recovery, and when no alternative is possible, energy recovery associated with the end-of-life of the waste produced. [E5_3_09]

La Banque Postale Group's Resources and Circular Economy policy is not mandatory by any regulations or legislation. This voluntary approach forms part of its status as a mission-led company and reflects its commitment to responsibility across its entire scope, and to reducing all of its negative impacts. [E5_3_13]

2.2.5.3.2 Metrics

The waste generated mainly covers three specific streams: paper/cardboard, WEEE (Waste Electrical and Electronic Equipment) and non-hazardous industrial waste, in connection with the bancassurance activities of our various entities.

The priority is to support waste reuse and recycling, mainly for paper, cardboard and glass streams. The share of non-recycled waste covers waste that is reused or subject to energy recovery due to the specific nature of the flows in question (recycling channels not available) and/or contracts in place with collection and treatment service providers, and accounts for 17.6% of total waste.

TOTAL AMOUNT OF WASTE GENERATED

	Weight (tonnes)
Waste generated	1,435 [E5_5_07]

WASTE DIVERTED

FROM DISPOSAL [E5_5_08]

	Weight (tonnes)
Total waste diverted from disposal	1,325

Hazardous waste diverted from disposal	Preparation for reuse	1
	Recycling	471
	Other recovery operations	0
Non-hazardous waste diverted from disposal	Preparation for reuse	0
	Recycling	711
	Other recovery operations	142

WASTE FOR DISPOSAL

[E5_5_09]

	Weight (tonnes)
Total waste for disposal	110

Hazardous waste for disposal	Incineration	72
	Landfill	17
	Other disposal operations	13
Non-hazardous waste for disposal	Incineration	0.005
	Landfill	8
	Other disposal operations	0

NON-RECYCLED WASTE

	Weight (tonnes)	Percentage
Non-recycled waste	253 [E5_5_10]	17.6% [E5_5_11]

Due to its activity, La Banque Postale mainly generates waste paper and WEEE (Waste Electrical and Electronic Equipment). This waste is managed by entity and according to the waste hierarchy. In order to enable the effective implementation and management of reduction actions, WEEE will also be subject to a specific breakdown, prioritising computer equipment.

In addition, thanks to La Banque Postale's commitment to circular practices, 36 tonnes of electrical and electronic equipment have been reused. [E5_5_12] [E5_5_13]

TREATMENT OF WASTE ELECTRICAL AND ELECTRONIC EQUIPMENT (entity specific)

	Weight (tonnes)
Total waste electrical and electronic equipment (WEEE) (entity-specific metric)	575

Waste is broken down as follows:

- for paper: mainly office paper;
- for WEEE: mainly batteries, light bulbs, telephones and computer equipment (computers, printers, cartridges). This waste mainly contains rare metals, aluminium and plastics. An exhaustive view of the material composition of La Banque Postale's WEEE will be available at the end of the study carried out on the establishment of a Resources footprint, La Poste Group scope, including La Banque Postale.

In line with La Poste Group's position, La Banque Postale considers all WEEE to be classified as "Hazardous Waste" due to its harmful, toxic and ecotoxic properties, in accordance with Annex III of Directive 2008/98/EC of the European Parliament and of the Council on waste. [E5_5_14]

HAZARDOUS WASTE

AND RADIOACTIVE WASTE

	Weight (tonnes)
Total amount of hazardous waste	575 [E5_5_15]
Total amount of radioactive waste	0 [E5_5_16]

All of La Banque Postale's hazardous waste is WEEE. La Banque Postale does not produce any radioactive waste.

The reporting of waste data and the implementation of a circular economy approach within La Banque Postale and its subsidiaries is currently centralized and managed by the DEC teams for the entire scope. Reporting is based on feedback from each service provider in charge of on-site waste management. If the data is not available for a specific site or entity, mainly in the case of multi-occupant sites in which La Banque Postale is a minority entity, the calculation of waste volumes is done by estimation based on total volumes compared to the number of employees. [E5_5_17]

2.2.6 European Green Taxonomy

2.2.6.1 Background and regulatory requirements of the European Green Taxonomy

The European Green Taxonomy Regulation (EU) 2020/852 dated 18 June 2020 defines sustainable economic activities by establishing substantial contribution technical criteria (CCS), for at least one of the environmental and Do No Significant Harm (DNSH) targets and five other targets. In addition, the economic activity must meet Minimum Social Safeguards (MSS) criteria corresponding to compliance with international principles and conventions.

The Green Taxonomy targets

Article 8 of the Taxonomy Regulation requires the publication of indicators on how and to what extent the Bank's activities are associated with economic activities that qualify as environmentally sustainable.

Commission Delegated Climate Regulation (EU) 2021/2139 of 4 June 2021 establishes the technical screening criteria for determining the conditions under which an economic activity qualifies as contributing substantially to the first or second target without causing significant harm to any of the other four environmental targets. Similarly, Commission Delegated Environment Regulation (EU) 2023/2486 of 27 June 2023 establishes the criteria applicable to the other four targets.

This new sustainability framework is gradually being incorporated into the Bank's business model. Among other things, the framework of its green loans and green issues have been reviewed in light of these requirements. In addition, front-office teams have been made aware of

the issues and equipped to help customers ensure that their projects meet green criteria.

In line with the regulations, the Bank publishes information on the alignment of its exposures with the first two targets⁽¹⁾. We considered that the analysis of eligibility and alignment with the last four targets did not present a material issue with regard to our portfolios. We will use our best efforts to carry it out based on the data available from next year.

The results of these analyses, together with all the qualitative disclosures required by the Taxonomy Regulation, are described in this section. However, given the remaining uncertainty with regard to the interpretation of certain aspects of the Taxonomy Regulation and the unavailability of actual data to assess the degree of Taxonomy eligibility or alignment of certain assets, the information published by La Banque Postale will be further clarified in future publications.

⁽¹⁾ On 8 November 2024, the European Commission published an FAQ-style document clarifying certain provisions of the Taxonomy Regulation (EU) 2020/852. For this fiscal year, the information provided that was not already planned for production could not be taken into account due to delays. The Bank is currently reviewing its reporting process in order to incorporate this information at the next reporting date.

2.2.6.2 Alignment analysis principles

Green Asset Ratio (GAR) calculation principles

The GAR is the ratio of Green Taxonomy-aligned assets to total assets, and is the Taxonomy's key performance indicator. It identifies the proportion of the Bank's total assets invested in sustainable economic activities.

* Non-Financial Reporting Directive

Based on total assets, the assets included in the GAR's numerator are identified by applying the Green Taxonomy technical screening criteria to selected types of products and counterparties.

- The assets covered by the analysis correspond to total on-balance sheet assets minus sovereign, central bank and supranational exposures and the trading book. These covered assets represent the GAR's denominator.
- Some assets, such as exposures to companies not subject to the Non-Financial Reporting Directive (NFRD) and interbank loans, are only excluded from the numerator, such that only certain exposures are analysed for Taxonomy eligibility. Due to this difference in scope between the GAR numerator and denominator, a bank's Taxonomy-eligible asset ratio and alignment ratio will always be less than 100%. This is because the exposures concerned by

the exclusion rules will not be subjected to any alignment analysis separately from the analysis of the assets' environmental characteristics. For example, a loan to an SME for the construction of a wind farm could not be included in the GAR's numerator.

- An activity qualifies for inclusion in the alignment analysis provided that the technical criteria are specified in the regulation. Certain activities, such as farming, do not qualify as Taxonomy-eligible at this stage.
- Among the Taxonomy-eligible assets, specialised financing that meets the Taxonomy criteria is considered as aligned. Loans qualified as general purpose financing are included based on the alignment ratios published by the counterparties. An asset may only be considered as aligned with a single environmental target to avoid it being counted twice.

Green Asset Ratio (GAR) calculation principles

The Taxonomy-based analysis of a financed asset is carried out in four stages. It is applied to all assets analysed for Taxonomy eligibility as shown below:

Loans qualified as general purpose financing are included in La Banque Postale's alignment ratio based on the alignment ratio exposure amount for the financed counterparties, in accordance with the regulation.

This analysis was performed, although many methodological issues related to the interpretation of the texts remain unresolved. The Bank developed a reference framework describing the operational transposition of the Green Taxonomy's technical screening criteria. The framework was based on the interpretations and methodological positions adopted to analyse the alignment of the Bank's portfolio.

Voluntary GAR

The mandatory GAR calculation is based on a detailed analysis of each asset without the use of estimates. To provide further information, a voluntary GAR is published alongside the regulatory GAR, based primarily on estimates and a slightly broader analysis scope. The voluntary GAR also includes special purpose loans to some SMEs that constitute green loans, but are not taken into account in the mandatory GAR because SMEs are not subject to the NFRD.

The GAR is also supplemented by Table 10 of Pillar III ESG, dedicated to the Bank's green products not included in the GAR calculation (see Section 6.8.10 "Other climate change mitigation measures not covered by the European Green Taxonomy").

Specific portfolio-based alignment analysis principles for GAR calculation purposes

The following principles have been applied to determine whether affected and non-affected exposures qualify for inclusion in the alignment analysis, and their inclusion in the GAR numerator:

Type of counterparty		Principle applied	Mandatory ratio	Voluntary ratio
Households	Real estate	Assets' actual energy use (CCS) and use of a physical risk analysis model that is consistent with the Pillar III ESG model (DNSH). As the financing is carried out in France, the social guarantee base (MSS) is presumed to be respected.	✓	-
		Assets' estimated energy use obtained from an external data provider and use of a physical risk analysis model that is consistent with the Pillar III ESG model (DNSH). As the financing is carried out in France, the social guarantee base (MSS) is presumed to be respected.	-	✓
	Other (vehicle loans, home improvement loans, etc.)	Motor vehicle loans granted since 1 January 2022 and home renovation loans included in the eligibility base in accordance with regulations. Scope not analysed or specifically excluded from the alignment calculation because the loan is considered as general purpose financing based on the legal definition	-	-
Corporates	Special purpose financing	Actual data obtained from the customer	✓	-
		Estimates obtained from data providers (e.g. energy performance diagnostic) or partial analysis based solely on substantial contributions	-	✓
	General purpose financing	Collection of ratios published by NFRD counterparties	✓	-

2.2.6.3 Alignment indicators

At 31 December 2024, the Bank's regulatory green asset ratio was 5.7% (€10.3 billion) based on turnover. It mainly consists of real estate financing to households. These assets are energy efficient and meet the technical criteria of the

first environmental target of climate change mitigation. Certain general purpose financing is also included, where the counterparties' alignment indicators are available. This figure is stable compared to the previous financial statements (5.5% at 31 December 2023 and 5.9% at 30 June 2024).

The GAR obtained from this financial year reflects the unavailability of reliable data to determine whether customers' projects are aligned with the Taxonomy. The analysis was performed on a significant stock of existing technical reserves for which the necessary information was unavailable, unlike for new production, for which the data is obtained at issued.

To permit more detailed analyses in future periods, data collection efforts are being stepped up with a particular focus on real estate loans, asset financing and project financing. These initiatives are being deployed on a consistent basis, taking into account participation in all the Bank's ESG projects (Impact Weighting Factor, low-carbon pathway, Equator Principles, etc.).

At 31 December 2024, La Banque Postale's voluntary (non-regulatory) green asset ratio was 8.0% (€14.2 billion) based on turnover (2.3% voluntary component).

La Banque Postale's off-balance sheet alignment ratios are 0.0% for financial guarantees and 3.0% for assets under

management held by the Group's asset management subsidiary, LBP AM. Work is continuing with a view to providing a more comprehensive view of green assets for these activities on future reporting dates.

The tables provided for in Delegated Regulation (EU) 2021/2178 are presented below. In line with regulatory requirements, they are systematically presented twice, with exposures not allocated to companies included based on counterparties' turnover alignment ratios and then their CapEx ratios. The treatment of other exposures is unchanged. Information on insurance and asset management activities is provided in Section 2.5.1.7 - Taxonomy metrics by business segment.

To improve readability and avoid redundancy, the three tables required under both the Green Taxonomy and Pillar III ESG (Tables 6, 7 and 8) will be published only once, based on the most detailed format, which is that of the Green Taxonomy.

2.2.6.3.1 Summary of key performance indicators

The following table presents the main key performance indicators (KPIs), as calculated using the information reported in the Taxonomy tables presented in Section 6.8.9.3. "Alignment indicators".

SUMMARY OF THE KPIS TO BE DISCLOSED BY CREDIT INSTITUTIONS UNDER ARTICLE 8 OF THE TAXONOMY REGULATION

		Total of environmentally sustainable assets	KPI****	KPI*****	% coverage (over total assets)***	% of assets excluded from the GAR numerator (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the GAR denominator (Article 7 (1) and section 1.2.4 of Annex V)
Main KPI	Technical reserves of Green Asset Ratio (GAR)	10,267	5.7%	6.0%	56.0%	10.0%	44.0%
		Total of environmentally sustainable activities	KPI	KPI	% coverage (over total assets)	% of assets excluded from the GAR numerator (Article 7 (2) and (3) and Section 1.1.2 of Annex V)	% of assets excluded from the GAR denominator (Article 7 (1) and section 1.2.4 of Annex V)
Additional KPIs	GAR (flow)	679	1.7%	1.9%	30.3%	12.8%	62.3%
	Trading book*	-	-	-			
	Financial guarantees	1	0.0%	1.1%			
	Assets under management	2,099	3.2%	5.7%			
	Fee and commission income**	-	-	-			

* For credit institutions not meeting the conditions of Article 94 (1) or Article 325a (1) of the CRR.

** Fees and commissions on services other than lending and asset management.

The institutions provide forward-looking information for these KPIs, especially on the targets, and relevant explanations of the method applied.

*** % of assets covered by the KPI, compared to total banking assets.

**** based on the counterparty's turnover KPI.

***** based on the KPI of the counterparty's CapEx, except for general lending activities, for which the turnover KPI is used.

Note 1: In all the templates, blacked-out boxes must not be filled in.

Note 2: The fee and commission KPI (sheet 6) and the trading book KPI (sheet 7) only apply from 2026. SMEs are included in these KPIs only in cases where the result of an impact assessment is positive. Motor vehicle loans granted since 1 January 2022 and home renovation loans included in the eligibility base in accordance with regulations.

2.3 Social information

2.3.1 Guaranteeing favourable working conditions for all our employees [S1]

2.3.1.1 Material IROs and links with strategy and business model

2.3.1.1.1 Scope taken into account

La Banque Postale, a subsidiary of La Poste Group, is structured around a multi-business line organisation, which includes banking, insurance and asset management functions.

The workforce included in this sustainability report covers La Banque Postale Group (La Banque Postale SA and its subsidiaries).

Note on La Poste employees working for and on behalf of La Banque Postale

To develop its distribution activities, La Banque Postale relies on a network located in post offices and in remote customer relations centres (retail customers), and lastly on its business centres (professional customers).

The majority of employees in these activities working for and on behalf of La Banque Postale are employees of La Poste SA, the parent company of La Banque Postale. These employees are not part of La Banque Postale Group's own workforce. In this sustainability report, they are identified as "value chain workers": all information on these workers can be consulted in Section 2.3.2.1 "La Poste employees working for and on behalf of La Banque Postale".

The potential impacts, risks and opportunities identified for these employees working on behalf of La Banque Postale are fully integrated into La Poste SA's HR strategy, which works to prevent potential risks and to support and develop these women and men. [S1_SBM_3_01]

2.3.1.1.2 IRO relating to the Group's workforce

Various positive and negative impacts, as well as risks and opportunities, relating to the Group's workforce were identified during the double materiality analysis. Details concerning these IROs are available in paragraph 2.1.3.2 "Description of material impacts, risks and opportunities (IROs)".

The following actual and potential **negative impacts** have been identified:

- Working conditions that could harm the physical or mental health of employees (stress, burnout, musculoskeletal disorders);
- Cases of discrimination, inequality or harassment in the workplace, with negative consequences for employees;
- Deterioration in remuneration levels, the number of jobs or the type of contract leading to a decrease in the purchasing power of employees (potential impact);
- Failure to respect other work-related rights (covered by European regulations). [S1_SBM_3_03]

The following actual and potential **positive impacts** have been identified:

- Actions to promote inclusion, protection, equal opportunities, skills development and professional development of employees;
- Favourable working conditions for La Banque Postale Group employees (working hours, social dialogue, fair remuneration system, social protection, collective agreements, etc.).

Due to the market exposure and the structure of La Banque Postale Group's bancassurance activities, compliance with the rules in terms of inclusion, diversity and equal remuneration are specifically monitored to minimise the negative impacts of its activities on employees. The focus on the 'employee experience' is a key component of La Banque Postale Group's strategic plan, demonstrated by real ambition in the areas of favourable working conditions, both material and organisational and respect for diversity and inclusion in the context of a strong culture of social dialogue. [S1_SBM_3_04]

The **risks and opportunities** related to the impacts and dependencies identified are as follows:

- HR risk relating to the failure of the Group's employment, health and safety, diversity and inclusion practices;
- Development of the skills of the Company's employees promoting innovation and the creation of new products and services.

As a player in the bancassurance sector, the risks of La Banque Postale Group's health and safety practices failing remain limited. However, the business model may present risks in terms of diversity and inclusion, including wage inequalities and risks of discrimination.

La Banque Postale Group's strategy of being part of the mission-led company business model is therefore an opportunity in terms of employment, diversity and inclusion. This opportunity forms part of the 2025-2030 strategic plan, dedicated to the Company's cultural transformation. There is a special project in place to create a new managerial culture, focused on efficiency and employee well-being. [S1_SBM_3_05]

The Group has not identified any climate change adaptation risk relating to its employees. Nevertheless, the Group's transition plan, published in 2025, provides for projects for all banking business lines – including training – between 2025 and 2029. For more information on this plan, refer to Section 2.2.1 "Combating and adapting to climate change [E1]". [S1_SBM_3_06]

2.3.1.1.3 Risks of forced labour and child labour

La Banque Postale Group is not affected by the risk of forced labour or child labour due to its activities. In accordance with its Human Rights policy (presented in Section 2.3.1.2.6 "Human rights policies and measures"), it fully complies with international labour standards and ensures decent and fair working conditions.

In addition, 88% of the Group's employees are based in France and Europe, regions in which laws strictly control the risks of forced labour and child labour. [S1_SBM_3_07] [S1_SBM_3_08] [S1_SBM_3_09] [S1_SBM_3_10]

In view of the Group's banking and insurance business, there are no groups of people at greater health and safety risk due to their job. Exposure to the identified negative impacts is therefore the same for all employees. However, employees belonging to vulnerable groups, such as older

employees, ethnic minorities or people with disabilities, may be more exposed to the potential impacts of discrimination and inequality, and to the risks of failure of the Group's diversity and inclusion practices. [S1_SBM_3_11] [S1_SBM_3_12]

2.3.1.2 Employee policies

The Group is implementing robust, long-term policies to respond to the impacts, risks and opportunities identified for its employees.

All of the policies mentioned in this paragraph cover employees with permanent and fixed-term contracts with La Banque Postale UES (Economic and Social Unit)⁽¹⁾, La Banque Postale Group or, more specifically, certain subsidiaries.

SUMMARY OF LA BANQUE POSTALE SA'S HR POLICIES

(1) La Banque Postale UES is the Economic and Social Unit of La Banque Postale (composed of La Banque Postale SA and La Banque Postale Leasing & Factoring).

2.3.1.2.1 Policies regarding quality of life and working conditions

The policies presented below respond directly to positive impacts concerning favourable working conditions for the Group's own workforce, negative impacts concerning working conditions that harm the physical or mental health of employees, and risks related to the quality of life at work and working conditions of employees.

The **Quality of Work Life and Working Conditions (QWLWC) policy** has been implemented by the Human Resources Department for the companies of La Banque Postale's Economic and Social Unit (UES), and meets the following targets:

- **Define and implement a global QWLWC approach** for all stakeholders in the Company, based on the following topics:
 - **Work content:** streamlining the organisation and working methods in order to promote workload regulation;
 - **Prevention and health at work:** protecting the physical and mental health of employees;
 - **Work relations:** facilitating work-life balance;
 - tackling information overload (infobesity);
- **Create a multi-disciplinary approach to the primary prevention** of occupational risks, in order to protect the physical and mental health and safety of employees and, more generally, contribute to their well-being at work, broken down into various phases:
 - Analyse and objectify situations by relying specifically on indicators;
 - Build the approach by involving the various stakeholders;
 - Involve all stakeholders in the Company in QWLWC issues;
 - Use trial and error as part of a continuous improvement approach;
 - Monitor the actions implemented and progress made;
- **Promote good work relationships at every stage of employees' professional lives** by making integration a driver of alignment with the Company's values and culture and by ensuring a work-life balance throughout their career.

These provisions are in line with the legal and regulatory framework laid down in particular by the French Labour Code, as well as by any regulations applicable in the business segment, via the French National Collective Agreement on Banking for La Banque Postale and other branch agreements for the business segments of each entity.

After in-depth negotiations, the QWLWC agreement was signed on 11 September 2023 by three representative trade unions. The provisions are published on the intranet, and are accessible to all employees. An annual commission monitors the QWLWC agreement. This enables both the stakeholders who have contributed to its drafting and are responsible for its implementation, and the social partners, to monitor the proper implementation of the agreement.

In addition, **CNP Assurances** has a QWLWC agreement that addresses the level of employee engagement and well-being. It is therefore committed to structuring and organising diversity and inclusion initiatives and stakeholders by setting up diversity and inclusion governance at the international level, including for its subsidiaries. **[S1_L_01] [S1_MDR_P_01_06]**

2.3.1.2.2 Employee skills policy

The policies presented in this paragraph aim to reinforce the positive impacts and opportunities of upskilling employees.

The **La Banque Postale Group training policy**, implemented by the Human Resources Department, aims to contribute to the success of the Group's Strategic Plan by implementing skills development plans for employees working within or on behalf of the Group.

The training policy defines the rules relating to the development of employees' skills throughout their professional career (starting a new role, support during transformations to gain new skills and knowledge of the Company's new offers). The development of employee skills also includes continuous training, and regulatory and mandatory training (European and national regulatory banking standards, GDPR, French RGAA law).

The skills development plan is created in collaboration with La Banque Postale's business lines and the human resources teams that support them. It is validated, shared and managed with all Group departments.

The Human Resources Department therefore carries out fundamental missions for the entire La Banque Postale UES, which include: recruiting and onboarding, assessing skills, managing career paths, promoting professional development and developing potential, with the aim of being attentive to all its employees. It articulates its human resources policy around four principles:

- career management co-constructed by the company and the employee;
- compartmentalised pathways between La Banque Postale, financial services, the La Poste Network and La Poste Group;
- recruiting new talent;
- managerial development. **[S1_L_01] [S1_MDR_P_01_06]**

2.3.1.2.3 Employee Remuneration policy

Remuneration policies aim to prevent and mitigate the negative impacts of the Group regarding a potential deterioration in remuneration levels, the number of jobs or the type of contract for employees.

La Banque Postale Group's **remuneration policy** is approved by the Executive Board and the Supervisory Board and implemented by the Human Resources Director, and is based on the values of performance recognition, fairness and transparency. It meets the following targets:

- Ensure that employees receive fair remuneration for their work, based on their expertise, length of service and professional experience, taking into account market benchmarks and the need for internal consistency;
- Respect gender equality in terms of remuneration;
- Recognise long-term individual and collective performance;
- Ensure that employee behaviours are consistent with La Banque Postale Group's long-term targets; and
- Promote internal professional development and career advancement to encourage long-term commitment from employees.

The remuneration policy is published on the intranet and accessible to all employees. It complies strictly with the regulatory framework applicable to its various business segments, with labour legislation, collective bargaining agreements and various Company agreements. Each subsidiary establishes its remuneration policy by applying the guiding principles of the Group's remuneration policy, and taking into account local and sectoral regulations.

CNP Assurances' remuneration policy aims to attract, retain, motivate and recognise the contribution of employees to the Company's development. It is consistent with the strategic guidance and targets, performance and expected financial and non-financial results.

This policy is implemented by general management, managed operationally by the Human Resources Department, and supported and deployed by all managers in each CNP Group entity. It forms part of a corporate culture that ensures respect for fairness within the company and gender equality, in conjunction with the insurance market and the financial sector.

The policy is governed by labour legislation, collective bargaining agreements and various company agreements and thus ensures an adequate wage for all employees.

Each subsidiary drafts its own remuneration policy, in coordination with the CNP Assurances Human Resources Department and taking into account local regulations.

Louvre Banque Privée also has a remuneration policy and a professional equality agreement to prevent negative impacts on its employees. [S1.1.01] [S1_MDR_P_01_06]

2.3.1.2.4 Health and safety policies

The policies presented below aim to prevent and mitigate negative impacts on working conditions that could harm the physical or mental health of employees. They also relate to employee safety risks.

The **2024 annual prevention plan** presented by the Human Resources Department and validated by the Health, Safety and Working Conditions Commission (HSWCC) focuses on four areas:

- pursuing and adapting the occupational risk assessment process specific to La Banque Postale;
- analysing lost-time accidents using the "5 Whys" technique;
- continuing to make workstation adjustments requested by the occupational health office;
- raising employee awareness about road safety risks.

In addition, a **collective agreement on QWLWC** was signed by La Banque Postale UES and the social partners. The purpose of this agreement is to implement an ambitious QWLWC policy, which is an integral part of the development strategy of the La Banque Postale Economic and Social Unit (UES). Through this agreement, the companies of La Banque Postale's Economic and Social Unit wish to affirm and supplement the actions already undertaken under previous agreements (diversity and professional equality, working from home, etc.).

The other La Banque Postale subsidiaries have their own QWLWC agreement. For example, CNP Assurances has a QWLWC agreement, Louvre Banque Privée has a safety booklet and Louvre Banque Privée Immobilier Conseil has a Single Risk Assessment Document (DUERP).

The **Prevention, Health and Safety in the Workplace** process was also strengthened with the introduction of multidisciplinary assessments of the impacts of the transformation projects. Therefore, the Group has been able to proactively manage change-related risks and recommend prevention plans to support employees. Operational feedback has also been streamlined. Therefore, three national committees dedicated to the prevention of health, safety and working conditions (HSWC) were held in 2023, in addition to the committees monitoring the "*Réussir Ensemble*" (Succeeding Together) social agreement. [S1.1.09]

2.3.1.2.5 Diversity and inclusion policies and commitments

The policies presented in this paragraph respond to the positive and negative impacts and risks related to diversity and inclusion.

Policies applicable to diversity and inclusion

The **Diversity and Inclusion policy** is redefined every three years in the related social agreement. It is implemented by the Human Resources Department and applies to the entire scope and to employees of La Banque Postale UES.

The Diversity and Inclusion policy is based on the five pillars of Diversity:

- **Disability:** recruitment of people with RQTH (disabled worker) status with equal skills, and obtaining recognition of disabled worker status for our current employees;
- **Generations:** keeping older people in employment, bringing young people into the job market, intergenerational diversity;
- **Parity:** gender equality, gender balance, combating everyday sexism, equal treatment, parity of governing bodies;
- **LGBT+:** develop a respectful and inclusive working environment for LGBT+ people, with specific actions to improve their well-being and inclusion;
- **Social/Ethnic origins:** creating an inclusive collective experience to ensure fairness at all stages of employee life with the Company.

The diversity policy is built with experts, charities, the Human Resources Department and employees. It is distributed internally (on the intranet) and externally (on the website). [S1.1.10]

La Banque Postale UES' Diversity and Inclusion policy covers all the grounds for discrimination identified by law (26 listed by the legislator to date), including sex, gender, age and disability. [S1.1.11]

As part of this Diversity and Inclusion policy, the **Disability policy of La Banque Postale UES** is implemented by the Human Resources Department and defined under the sixth social agreement of 27 March 2023, based on the disability laws applicable in France. It introduces the systematic recruitment of RQTH (Recognition of the status of disabled worker) profiles, both internally and externally, with equal skills; as well as an RQTH declaration incentive programme for Company employees. The Disability policy covers the entire scope and all employees of La Banque Postale UES, as well as all banking functions. It is built with experts, external associations (in particular the AFMD: *Association Française des Managers de la Diversité, Entreprise pour la Cité*) and the Human Resources Department.

In order to combat all types of discrimination, and to promote inclusion and equal opportunities, La Banque Postale UES has demonstrated its commitment through two major social agreements signed unanimously by the Bank's social bodies: the **Disability agreement** and the **Diversity and Professional Equality agreement**. Each of these agreements – signed for a period of three years and for the sixth consecutive time – demonstrates the consistency of the Group's commitment.

CNP Assurances has its own QWLWC agreement, which aims to guarantee everyone equal treatment based on skills and performance. Similarly, in its code of conduct, CNP Assurances mentions best practices to be adopted in terms of preventing discrimination and harassment. CNP Assurances has also been a signatory of the Diversity Charter since 2006, and this long-term commitment is now part of its company purpose to take action for an inclusive and sustainable society. Since 2021, an Inclusion Committee has been set up to lead and drive the Company's overall approach in this area. It monitors and verifies the progress of the action plans and guarantees overall consistency. CNP Assurances also ensures compliance with its obligations in terms of combating discrimination, harassment and sexist behaviour through complaints mechanisms.

Louvre Banque Privée also has a company agreement on professional equality and quality of life at work. [51.1.10]

La Banque Postale SA has made commitments to the inclusion of vulnerable groups, based on:

- Two basic agreements, including a Diversity and Professional Equality agreement and an agreement on people with disabilities, which are renewed every three years;
- The implementation of a mission-led company gender parity indicator;
- Commitments in partnership with charities through charters and projects;
- A Diversity strategy shared with the Group's Executive Committee.

Strategic principles for inclusion

To implement all of these commitments, every year, La Banque Postale Group proposes a comprehensive action plan to combat all forms of discrimination and

strengthen the inclusion of all people likely to be discriminated against. Some of the flagship measures include:

- Gender parity: webinar on professional equality, conference on violence against women;
- Salary streamlining with a new remuneration package;
- Disability: Health and Disability Week (Spring) and European Disability Employment Week (November), which are two annual highlights to encourage managers and raise awareness among staff. In addition, throughout the year, ten disability officers support people with disabilities with various processes and adjusting their workstations, as well as an awareness-raising web series with a common topic each year (chronic illness/mental health/disabling diseases, etc.);
- Diversity: webinars on various topics, support for managers with inclusion situations (e.g. employee in transition; appearance of a disability, etc.), mentoring (intergenerational, female mentoring, etc.), inclusion survey and measurement (everyday sexism survey, LGBT+ survey, focus groups, etc.), sponsorship and speeches by executives on the various diversity pillars. [51.1.12]

In addition, La Banque Postale SA offers more than 30 events, workshops, webinars and conferences per year to support the cultural transformation that inclusion represents.

It runs five training courses on diversity and inclusion in conjunction with La Poste Group, one of which is mandatory, and which are available to all its employees.

Finally, La Banque Postale Group has set up reporting and whistleblowing channels for victims or witnesses of discrimination. More information on the processing of reports is available in Section 2.3.1.2.6 "Human rights policies and measures". The whistleblowing system is also described in paragraph 2.4.1.3.5 "Independence and accessibility of the whistleblowing system". [51.1.13]

2.3.1.2.6 Human rights policies and measures

Policies regarding Human rights

The Group's human rights policies aim to prevent and minimise the negative impacts and risks identified in this area.

La Banque Postale Group's commitments to respect Human Rights are part of **La Poste Group's Human Rights policy**, and apply in particular to its own workforce. This policy reiterates the adherence of La Poste Group and La Banque Postale to the United Nations Global Compact, and indicates that the Group takes as a reference framework several international agreements and commitments, including:

- the Universal Declaration of Human Rights;
- the UN Guiding Principles on Business and Human Rights;
- the Declaration and Fundamental Conventions of the International Labour Organization;
- the OECD Guidelines for Multinational Enterprises;
- the UN Global Compact.

La Banque Postale Group is therefore committed to:

- preventing all forms of human rights violations and ensuring that it is not complicit in human rights violations;
- prohibiting all forms of moral or physical violence, and more generally all forms of inhuman, cruel or degrading treatment;
- prohibiting all forms of forced or compulsory labour, child labour and human trafficking;
- prohibiting all forms of discrimination; in particular according to gender, age, state of health or disability, pregnancy, sexual orientation, nationality, social background, belonging to a particular community, political, trade union or religious beliefs;
- defending freedom of association and the right to collective bargaining;
- defending the right to adequate remuneration;
- opposing all forms of invasion of personal privacy.

La Banque Postale Group conducts its activities in compliance with the labour laws of the countries in which it operates. While local provisions are likely to limit the protection of human rights within the meaning of international standards, the Group seeks the best solutions to come as close as possible to this level of protection for its employees.

[S1.1.03] [S1.1.04]

When developing its policies, La Banque Postale Group complies with international frameworks and instruments (see Section 2.3.1.5.3 "Contribution to the Sustainable Development Goals (SDGs)" for the contribution to the United Nations Sustainable Development Goals (SDGs)).

[S1.1.07]

The Group is also committed to combating human trafficking, forced labour and child labour. These matters are specifically addressed in La Poste Group's Human Rights policy, which also applies to La Banque Postale Group.

[S1.1.08]

Human rights impact remediation process

Since La Banque Postale SA and most of its subsidiaries are located in France, they do not have a great deal of exposure to major human rights risks. However, they may face risks of discrimination and harassment requiring due diligence to ensure a good working environment.

The processing of reports from the whistleblowing system is described in Section 2.4.1.3.5 "Independence and accessibility of the whistleblowing system".

The Group has also set up a system for dealing with distressing situations at work. This system and the procedure for processing reports are described in Section 2.3.1.4 "Reporting and remediation process". [S1.1.05] [S1.1.06]

2.3.1.2.7 Social Dialogue policy

In terms of collective relations, the Human Resources Department is responsible for social dialogue, which it develops and builds with employee representatives. It organises the conditions for the exercising of trade union rights, professional elections and the functioning of employee representation bodies in compliance with the regulations in force, thus enabling employees to have a voice in Company policy. The **Social Dialogue policy** is presented in Section 2.3.1.3 "Dialogue process with employees and their representatives". [S1.1.01] [S1.MDR.P.01.06]

2.3.1.3 Dialogue process with employees and their representatives

DIALOGUE WITH EMPLOYEES AND THEIR REPRESENTATIVES [S1_2_01] [S1_2_02] [S1_2_03] [S1_2_06]

For La Banque Postale UES

The Human Resources Director is responsible for the human resources policies implemented by the Human Resources Department. It is also responsible for the proper dialogue with employees, whether direct or through representatives. [S1_2_04]

Direct dialogue with employees

For La Banque Postale Group, **daily communication** with managers and Human Resources managers, as well as employee representative bodies, play an important role in ensuring that the employee's voice is heard.

The expression of employees in their daily work is also facilitated by the employee experience policy deployed by the Human Resources Department. The whistleblowing system (system for dealing with distressing situations at work and compliance reporting system) is also a means of expression for employees taking into account their individual and collective interests. [S1_2_02]

The Group has introduced **a multi-year listening framework** that aims to place the needs and expectations of employees at the heart of its strategy. This has led to a large-scale annual **engagement survey**, managed by La Poste Group, and which covers all La Banque Postale Group employees. The survey asks employees approximately 50 questions about aspects of Strategy, Customers, Well-being at Work, Teamwork and Management. The results are taken into account by each department, which undertakes actions accordingly.

At the same time, multi-year **listening sessions** are conducted as needed. In 2024, a survey on hybrid work was launched, with more than 2,207 respondents (representing a participation rate of 59%) and specific surveys on request, including a survey conducted among CLDB employees to measure how well they had adjusted to the ongoing transformation.

Employees are also asked to participate in **dedicated listening workshops** on the transformation plan and the topic of the employee experience. Willing employees who take part in these workshops are invited to share their points of view on internal operations, their needs, as well as their ideas for improvement.

In addition, the **Glassdoor rating**, an external tool allowing employees to express their experience, is monitored by the Human Resources teams and partly feeds into the employee experience strategy.

As the effectiveness of the interaction channels is difficult to quantify, La Banque Postale has indirect feedback on them in its interactions with the Social and Economic Committee (SEC) and employee representatives. [S1_2_06]

In addition to the traditional survey formats, La Banque Postale SA sets up **focus groups** on all the emerging pillars of Diversity in order to collect opinions, facts and impressions of the relevant or related people. These focus groups are a means of formalising assessments of the current situation, and proposing or adjusting the related inclusion policies. [S1_2_07]

Employee representation at Group level

La Banque Postale Group attaches particular importance to social dialogue and employee representation. This is reflected in the presence of employee representatives at all levels of the organisation, including the highest levels.

Therefore, La Banque Postale's **Supervisory Board** includes five employee representatives, providing a wide range of viewpoints and improving the quality of discussions. Their presence sheds an internal light on social and operational realities, contributing to a strategy aligned with the long-term corporate interest. This participation also strengthens the social dimension of ESG by ensuring stakeholder representation within governance.

In addition, a **Group Committee**, made up of employee representatives of La Banque Postale's parent company and all subsidiaries with a Social and Economic Committee, meets regularly to discuss topics of strategic importance and the Group's consolidated financial statements. [S1.2.03]

Social dialogue within La Banque Postale UES

La Banque Postale UES does not have a specific global framework agreement, but it relies on **several agreements⁽¹⁾** in order to consider its employees' viewpoints:

- A collective agreement on the organisation of employee representation within La Banque Postale UES;
- An agreement on social dialogue and the exercising of the right to organise;
- An agreement on managing career paths and improving the skills of office holders.

These agreements set out the framework for employee representation within the Company as well as the framework for exercising this representation, allowing for employee interests to be taken into account. These provisions are in line with the legal and regulatory framework laid down in particular by the French Labour Code, as well as by any regulations applicable to the business segment, *via* the French National Collective Agreement on Banking for La Banque Postale and other branch agreements. They are published on the intranet, making them accessible to all employees.

For La Banque Postale UES, the **Social and Economic Committee (SEC)** guarantees the collective expression of employees and ensures that their interests are taken into account, in particular in decisions relating to the management and economic and financial development of the Company, and to the organisation of work, professional training and production techniques. It is informed and consulted on issues relating to:

- measures likely to affect the volume or structure of the workforce;
- a change in its economic or legal structure;
- employment and working conditions, in particular working hours, and professional training;
- the introduction of new technologies or any major changes in health and safety or working conditions.

It is also informed and consulted on the environmental consequences of these measures. In total, 15 SEC meetings (11 ordinary, 4 extraordinary) and 10 HSWCC meetings were held in 2024. In addition, there were 15 meetings of the SEC commissions dedicated to specific topics such as diversity and professional equality, employment, training and sustainability. In addition, work has been undertaken on ways of exercising the right to organise, and in particular on the use of remote communications tools. A monthly meeting is also scheduled with union representatives to discuss issues of collective concern or current affairs concerning employees, and on the functioning of social dialogue. [S1.2.01]

For certain types of projects, the SEC is consulted before the project is implemented by La Banque Postale.

In addition, pursuant to the law and the agreement on employee representation entered into within the Group, the consultation of the SEC on the strategic guidelines of La Banque Postale UES covers these guidelines as defined by the body responsible for monitoring, and the consequences of these guidelines within La Banque Postale UES. This consultation takes place every three years. However, in order to keep the members of the SEC informed of strategic decisions, an intermediate information point not covered by the consultation procedure is held each year. In the event of significant changes in the La Banque Postale UES strategy in the intervening period between these three years, a new consultation is set up by management. If a consultation takes place before the end of the three-year period, a new three-year cycle begins from that date.

La Banque Postale also wished to maintain **local and regional** staff representation based on an agreement to appoint local representatives (alternate SEC members) throughout the country.

The deployment of discussion workshops with elected members of the SEC and the HSWCC has enabled everyone to work together, share information and discuss certain issues. This methodology, deployed upstream from talks with the SEC/HSWCC or downstream as part of the tracking process, has helped to foster a collaborative relationship, enabling La Banque Postale to pursue its transformation in a calm and peaceful manner.

La Banque Postale and the SEC wanted to set up a **Sustainability Commission**. The SEC has therefore created a Sustainability Commission, which meets twice a year. It is made up of:

- four Mission Committee representatives, whose role is to share the Committee's progress and gather feedback from SEC representatives, particularly as part of its work to prepare the Mission Committee's annual report;
- four La Banque Postale Social and Economic Committee representatives appointed by the SEC (including its rapporteur). They respond to the positions taken by the Mission Committee and provide insight into the Group's organisation and operations. [S1.2.03]

(1) Indeed, French legislation provides a strong incentive for social dialogue.

Social dialogue at CNP Assurances

At **CNP Assurances**, two agreements were signed enabling employee representatives to fully exercise their role: the first for "constructive and effective" social dialogue and the second on the SEC. Among its actions for social dialogue, CNP Assurances is setting up a QWLWC survey that measures the level of employee engagement and well-being. [S1.2.01]

CNP Assurances has also set up a dialogue approach between employees and the Executive Committee, "Let's talk ambition" ("*Parlons ambition*"), a forum to discuss CNP Assurances Group's strategic ambition. [S1.2.03]

Social agreements on respect for human rights

In 2024, two agreements were signed on diversity and professional equality. [S1.2.05]

2.3.1.4 Reporting and remediation process

Reporting distressing situations at work

For **La Banque Postale UES**, the procedure set up by the system for dealing with distressing situations at work is conducted in compliance with the principle of the presumption of innocence, with complete impartiality and with the discretion necessary to protect each person's dignity and privacy. No information is disclosed beyond the circle of stakeholders.

Any employee who considers themselves to be a victim of harassment at work, or who is in a distressing situation that could harm their physical or mental health, has the option of **reporting** this to their manager, the occupational health service, employee representatives, harassment officers or the ethics officer (via the whistleblowing system or the social assistance service).

Distressing situations at work that may be reported include moral harassment, sexual harassment, sexist behaviour, but also any problem that causes a situation of unease, or even professional burnout.

Employees have several specific channels to raise their concerns. The Company has set up these channels, which are partially implemented by experts (SEC, contact with employee representatives, whistleblowing system, system for dealing with distressing situations at work). Reports from employees can be received by the manager, the various HR stakeholders (human resources manager, occupational health department), employee representatives, harassment officers, the social worker or by the ethics officer (directly or via the whistleblowing platform). [S1.3.02]

La Banque Postale UES ensures that its employees are informed of the existence of this whistleblowing system and how it is used, via the Group's intranet. As part of the recruitment process, all new Group employees receive a paperless copy of the Internal Rules, to which the code of conduct is attached. The latter contains detailed information on the whistleblowing channels available to them.

All information concerning whistleblowing channels is also available on the intranet site. In addition to this information, the intranet also provides details of other mechanisms such as the contacts of employee representatives and ways of reporting distressing situations at work. To increase awareness and ensure that employees can have full confidence in these mechanisms, training and communication actions are regularly organised. Since 2024, a tool called Confirmodoc has been set up to verify the distribution of the code of conduct to all employees and third parties acting for the Group. [S1.3.06] [S1.3.08]

Processing reports

Reports are processed as quickly as possible by the Group's Human Resources Department, and recorded in a dedicated register.

Upon receipt of the report, the Human Resources Department sets up a **listening phase** within 15 days. The purpose of this first phase is to identify, analyse and guide the alert in order to verify whether the system is adapted to the situation of the employee concerned.

The precautionary principle requires Human Resources managers in charge of listening to assess:

- whether the distressing situation of the person(s) requires a referral to occupational health;
- whether there is a need for any temporary measures to ensure the protection and safety of the employees involved.

At the end of the listening phase:

- if the information gathered at this stage allows the Human Resources Department to make a decision, the investigation phase as detailed below is not opened;
- if the information gathered at this stage does not allow the Human Resources Department to make a decision, the investigation phase is opened.

During the **investigation phase**, a joint steering committee is set up, composed of two representatives of the Human Resources Department, the secretary of the Social and Economic Committee (SEC) and the rapporteur of the Health, Safety and Working Conditions Commission of the SEC. This phase allows the two specialised HR contacts to investigate any witnesses or persons who can shed light on the situation, in order to identify the actions to be taken to remedy it.

In the interests of combating moral harassment, sexual harassment and sexist behaviour, the SEC and Human Resources Department contacts are responsible for guiding, informing and supporting the employees who contact them. Employees are informed of the regulations in force through information, prevention and awareness-raising actions.

At the end of any investigation phase, the Human Resources Department decides on the actions to be implemented. For example, these may include support measures provided by the Company and intended to provide medical and psychological support to the victim.

The Human Resources Department may implement a number of corrective measures:

- **Disciplinary measures:** employees are required to comply with the internal rules and the code of conduct, which specify the sanctions incurred in the event of moral or sexual harassment, and sexist or violent acts. These sanctions may go as far as dismissal for gross misconduct;
- **Measures on work organisation and processes:** if the investigation reveals problems inherent in the work organisation and processes implemented within the team, the Human Resources Department shall work with the relevant department to take any measures that it deems fit to resolve the issue. The effectiveness of the implemented measures is monitored by the Human Resources Department. [S1.3.05] [S1.4.02]

The Employee Relations Department, which is affiliated to the Human Resources Department, represents the Company and brings its policy before the employee representative bodies (Social and Economic Committee, employee representatives as a whole), and ensures the monitoring and coordination of these channels.

The system for dealing with distressing situations at work is monitored by the Human Resources Department, which records reports and ensures that the system is effectively deployed and that individual situations are dealt with. [S1.3.07]

Process for distressing situations at work in the subsidiaries

In its agreements, **CNP Assurances** describes its commitments to remedy the negative impacts on its employees, and exercises constant due diligence to prevent any risk of discrimination.

It has various specific reporting channels to collect and process any report or alert submitted by a CNP Assurances Group employee:

- Integrity Line whistleblowing system (online intranet platform): reports are collected and processed by the Group's Ethics Officer and the Head of the Ethics Division;
- Internal Social Mediation (by email or telephone): reports are processed by the Mediator *via* an encrypted file.

CNP Assurances ensures that its employees have access to whistleblowing and report processing systems.

In addition, **throughout the Group** reports can be made through line managers or human resources teams. The Group whistleblowing system is also available to all employees of the subsidiaries. [S1.3.01]

Whistleblowing system

A system for collecting and processing ethics reports is also available to all La Banque Postale Group employees *via* a specific platform. This system is described in Section 2.4.1.3.5 "Independence and accessibility of the whistleblowing system".

Information on the system is provided to employees, notably through the code of conduct. [S1.3.05] [S1.4.02]

Whistleblower protection is also in place, in accordance with the rules. [S1.3.09]

The whistleblowing system is monitored by the Compliance Department through the Ethics teams. A report on the monitoring of this system and the situations reported (anonymised) is presented to the Supervisory Board on an annual basis. [S1.3.07]

2.3.1.5 Employee action plans and resources

2.3.1.5.1 Actions implemented and resources allocated

Avoidance of negative impacts

La Banque Postale Group implements various actions to prevent or mitigate its potential negative impacts on its employees.

Working conditions affecting the physical or mental health of employees (e.g. stress, burnout, musculoskeletal disorders)

To remedy the impacts related to working conditions, an employment law division supports local HR players to take charge of all collective or individual files on all aspects of employee relations. The Life at Work division works in conjunction with the health service to identify and implement solutions adapted to the observed impacts.

The specific actions carried out in 2024 to avoid the negative impacts of **working conditions** include:

- Preventing traffic accidents;
- Preventing visual and hearing fatigue;
- Preventing a sedentary lifestyle.

Workstation adjustments were also made to prevent or mitigate musculoskeletal disorders.

The **use of work tools** and **preventing information overload** are also concerns for La Banque Postale UES. In this respect, the practices for using work tools and the information overload prevention system are available on the intranet.

These issues are particularly topical due to the increased popularity of hybrid working methods, and particularly **working from home**.

Work and meeting organisation practices, particularly in hybrid mode, are also reiterated in the new home-working agreement (renewed for three years in 2024). They will be specifically supported by managers in 2025.

As part of the roll-out of the new home-working agreement, an employee awareness campaign on the right to disconnect is scheduled, and annual reminder campaigns on taking leave are carried out each year.

The Group is also particularly attentive to the specific circumstances of **employees who are carers** and the **mental health** of employees. The opening of negotiations on measures for employees who are carers is scheduled for the beginning of 2025, and a mental health prevention programme is also being looked into for 2025.

These various actions are intended for all employees of La Banque Postale UES. As the QWLWC agreement was signed in September 2023 for a period of three years, the associated action plans will be rolled out over the same period.

La Banque Postale UES has allocated the following **specific resources** to these topics:

- There is a dedicated budget for prevention, health and safety at work. This recurring budget may be supplemented, if necessary, by any resources required to implement the annual action plan (seeking service providers with expertise in health or occupational risk prevention);
- A survey on hybrid working was also carried out in 2024 among all employees, to draw up an assessment of the home-working agreement;
- There is a special budget for workstation adjustments;
- An equipment loan (€250 every five years) is also supported by the home-working agreement, to improve working conditions at home.

Finally, to promote a culture of prevention and well-being at work, **CNP Assurances** has set up two platforms:

- The LYFE platform, which gives its employees quick access to personalised health services and content (psychological listening service, remote consultations, personalised programmes based on formal questionnaires, etc.);
- The Ulteam platform, which provides educational content on stress management, concentration and other health-related topics.

These tools offer comprehensive and personalised support.

Deterioration in remuneration levels, the number of jobs or the type of contract leading to a decrease in the purchasing power of employees

La Banque Postale Group acts to prevent the negative impact of a potential deterioration in remuneration levels, and to ensure fair remuneration for work, based on expertise, length of service and professional experience.

To this end, La Banque Postale Group prepares **internal benchmarks** and **market references** each year for all employees, provided by a firm specialising in the financial services market.

In addition, to prevent unequal remuneration, the Group trains its managers in providing **fair treatment** at all key moments in Company life, in order to prevent discriminatory decisions or behaviours.

La Banque Postale UES also guarantees a **minimum salary increase** beyond what is legally required to employees who have been on maternity or adoption leave during the year. This amount is determined based on the individual increase budgeted for in the salary policy.

Each Group entity monitors the **gender equality index** annually to address any remuneration gaps. If the gender equality index score is below 85/100, progress targets for each indicator will be calculated and disclosed. For the 2024 financial year, all La Banque Postale Group entities have an equality index greater than or equal to 92/100.

Since 2022, La Banque Postale has allocated an **overall budget** of €600,000 per year to reducing wage gaps. If a gap of more than 5% is identified, an in-depth individual analysis is carried out by the manager and the HR Department. If the gap cannot be explained by target criteria such as the level of training, responsibility, experience and length of service, skills and performance, La Banque Postale is committed to a salary review within the limit of the budget set each year as part of the mandatory annual negotiations.

CNP Assurances, which has a presence outside Europe, is particularly attentive to this issue. In particular, in countries in which salary increases are not governed by the administration of the country (State, region, etc.) or the contractual branch, CNP Assurances brings together employee representatives and management at a local level to discuss the Company's economic and financial situation, the official inflation levels and the impact on the purchasing power of employees. The purpose of these discussions is to determine the best way to maintain the purchasing power of employees while protecting the Company's economic interests.

Cases of discrimination, inequality or harassment with negative consequences for employees and non-compliance with other work-related rights (covered by European regulations)

La Banque Postale UES is committed to preventing all types of discrimination and promoting inclusion and equal opportunities, through two major social agreements: the **Disability agreement** and the **Diversity and Professional Equality agreement**. Each year, these agreements give rise to a comprehensive action plan that includes:

- Quantitative targets (disability, gender equality, generations);
- Concrete actions, such as:
 - Creating role models;
 - Creating think tank and working groups;
 - Setting up the Employee Resources Group;
- Awareness-raising and acculturation actions, joint creation workshops, webinars, etc.

To carry out these action plans, La Banque Postale relies on:

- a dedicated Diversity and Inclusion team;
- the empowerment of executives and managers through regular reporting, sponsorship actions at the Executive Committee level and identifying role models;
- entering into partnerships with leading charities on the theme of diversity in business;
- charities for resources and discussions with other companies (AFMD, *Entreprises pour la Cité*);
- associations that audit and certify actions and commitments: Diversity and Equal Opportunities Charter, signed in 2013 (*Entreprises pour la Cité*), *L'Autre Cercle* Charter for LGBT+ employees, signed in 2024, STOPE initiative (AFMD) to fight against everyday sexism, signed in 2022.

Finally, these measures and commitments are accompanied by a **prevention, alert and sanction policy**. The whistleblowing channels are clearly signposted for all La Banque Postale Group employees (practical guides, intranet, HR and managers). The Group uses a shared La Poste Group platform to submit reports, whether anonymously or not. All of these components comprise a policy which endeavours to provide the most fair and inclusive working environment possible, which is against any form of discrimination or harassment.

In addition, **CNP Assurances**, as part of its commitment to equal opportunities, has joined the PAQTE initiative (*Pacte avec les Quartiers pour Tous les Entreprises* – Pact with the districts for all companies) launched in 2018 by the French State. For this reason, CNP Assurances has set itself the target of taking on at least 200 young work-study students or interns from priority districts or who have dropped out of school between 2022 and 2025. [S1_4_01] [S1_4_09] [S1_MDR_A_01_12]

Actions to promote positive impacts

In addition to actions to limit the identified negative impacts or to remedy them, La Banque Postale has implemented actions to promote its positive impacts on its employees.

Actions to promote inclusion, protection, equal opportunities, skills development and professional development of employees

All of the actions presented above and aimed at avoiding negative impacts in the event of harassment, discrimination or inequality are also intended to generate positive impacts on inclusion, protection and equal opportunities for employees.

In addition, to promote employee skills development, the Group is committed to rolling out its **skills development plan**. In order to do so, La Banque Postale relies on an internal training organisation (École de la Banque et du Réseau) to manage the business line training programmes, led by internal resources (trainers) or, failing that, by external service providers.

Running training in-house gives La Banque Postale the ability to roll out ambitious skills development plans, which include training that meets employee expectations. The École de la Banque et du Réseau also offers a wide range of group and individual training offers to support personal development, and therefore actively helps to develop the employability of its employees within La Banque Postale but also on the market.

Favourable working conditions for the Group's own workers (working hours, social dialogue, fair remuneration system, social protection, collective agreements, etc.)

To supplement the actions carried out on remuneration, there are initiatives in place **for gender equality** (mentoring programme for women, targets for representation of women in management positions, hiring of people of the underrepresented gender with comparable skills and qualifications when the profession or department has an imbalance).

Finally, to **provide financial support for employees in difficult situations** following a medical procedure or a life-threatening accident, in addition to the social protection scheme, a social fund is planned, which will be open to all employees of La Banque Postale UES. [S1_4_03]

HR risk mitigation actions

HR risk relating to the failure of the Group's employment and employee health and safety practices.

To mitigate this risk, the Group is implementing the following actions:

- **Medical visits** are monitored on a regular basis, in collaboration with the occupational health service. An update of the Company's files by the partner health services in the regions is to be put in place;
- An **occupational health policy** has been set up with the Île-de-France (Paris region) occupational health service (SIAMT), based on the support and management services offered.

As part of the Company's transformation plan, there is a dedicated **cultural transformation** project which supports managers and employees in their work-related practices.

In addition, La Banque Postale has launched a **QWLWC project** which aims to implement measures relating to:

- defining and implementing a **comprehensive QWLWC approach** shared by all stakeholders in the Company, designating and grouping the following components:
 - work content: streamlining work organisation and working methods, promoting workload regulation, thus enabling high-quality work;
 - prevention and health at work: protecting the physical and mental health of employees;
 - work relations: facilitating work-life balance;
 - tackling information overload (infobesity);
- creating a **multi-disciplinary approach to the primary prevention of occupational risks**, in order to protect the physical and mental health and safety of employees and, more generally, contribute to their well-being at work, broken down into various phases:
 - analyse and objectify situations by relying specifically on indicators;
 - build the approach by involving the various stakeholders;
 - involve all stakeholders in the Company in QWLWC issues;
 - use trial and error and implement gradual steps as part of a continuous improvement approach;
 - monitor the actions implemented and progress made;
 - promote good work relationships at every stage of employees' professional lives by making integration a driver of alignment with the Company's values and culture, and by ensuring a work-life balance throughout their career. [S1_4_06]

Actions to develop HR opportunities

Development of the skills of the Company's employees promoting innovation and the creation of new products and services

In order to address this opportunity at **CNP Assurances**, the Company offers various career paths and training courses to strengthen business expertise, develop versatile skills and respond to priority projects. Support is based on adapted offers, professionalising systems, certifying training courses and attention to cross-functional skills (autonomy, innovation, agility). Initiatives on strategic issues (ecology, artificial intelligence, QWLWC) and individual support (mobility, coaching, mentoring) promote continuous learning, with employees involved in their development supported by trained managers.

In addition, a **Data and Artificial Intelligence training (AI)** programme is offered by La Poste and is available to all Group employees. Several training courses are available (Data Academy, *Objectif AI*, etc.) and aim to support the development of skills in this area. These training courses also aim to promote the emergence of innovative data- or AI-based projects. [S1.4.07]

2.3.1.5.2 Monitoring the effectiveness of actions

To assess the effectiveness of the actions implemented, La Banque Postale Group relies on several categories of indicators:

- the annual engagement survey (quality of life at work indicator);
- *ad-hoc* internal surveys (for example on hybrid work in 2024);
- indicators which monitor remuneration;
- annual monitoring of the social protection scheme, carried out to ensure the financial balance of the scheme and the relevance of its coverage for employees. If necessary, decisions to add or modify them may be made, in particular to ensure the regulatory compliance of the plan;
- OHS report indicators, presented quarterly to the HSWCC;
- indicators for the social agreement on disability, as well as the gap in relation to the statutory indicator;
- incidents of discrimination, harassment or sexist behaviour reported through whistleblowing channels;
- the rate of completion of medical visits for all employees (compliance).

These indicators form part of the social report.

The Supervisory Board oversees these matters through its Appointments and Governance Committee and its Remunerations Committee. In particular, it adopts and regularly reviews the remuneration practices and processes and the Group's remuneration policy, and monitors its implementation, in collaboration with the Remuneration Committee. In addition, the main social indicators, such as the results of the social survey or gender parity indicators, are presented annually to the Supervisory Board. [S1.4.04]

La Banque Postale UES decides which measures are necessary and appropriate to deal with an actual or potential negative impact on its own workforce, through strategic decisions taken by the Human Resources Department's Management Committee. These decisions are approved by the Group's Executive Committee as part of the setting of annual targets and the strategic plan. Financial items are arbitrated as part of the financial years. [S1.4.05]

The material negative impacts identified are not likely to be amplified by La Banque Postale Group's sales practices, due to the highly regulated nature of the banking services sector. On the other hand, purchasing practices can affect the safety and physical health of employees, based on the working environment made available to employees. La Banque Postale is attentive to the health of its employees, and ensures that in its purchasing practices and the specifications of the relevant purchasing categories take into account relevant criteria to meet health and safety issues.

In addition, as an employer that respects the privacy of its employees, La Banque Postale is careful not to cause any impact on its employees through the use of their data. The Group's practices in terms of data management and use reflect these considerations. [S1.4.08]

2.3.1.5.3 Contribution to the Sustainable Development Goals (SDGs)

Through its actions, La Banque Postale Group also has positive impacts on other Sustainable Development Goals.

By design, the actions carried out under S1 have an impact on good health and well-being (SDG3), reduced inequalities within the Company (SDG10), and decent work (SDG8). The actions implemented by La Banque Postale on specific themes may also have positive impacts under other SDGs selected by La Banque Postale.

For example, as part of the "All Engaged" ("*Tous Engagés*") programme, La Banque Postale offers its employees the opportunity to volunteer with charities committed to serving the environment (SDG13: Climate action) or to reducing inequalities within the French economy (SDG10: Reduced inequalities).

Through its remuneration policy, and more specifically in respect of employee savings, La Banque Postale allows employees to invest in a fund covering a large investment universe (around 25 funds), all in connection with the United Nations Sustainable Development Goals.

Lastly, under the French Mathys law (2014) on the donation of leave by employees to parents of seriously ill children and its extension to carers on 15 February 2018, La Banque Postale employees can now donate days of leave to one of their colleagues who is a carer (SDG3: Good health and well-being). In addition, La Banque Postale encourages holders of a time savings account to donate days of leave, to support a community initiative by making a one-off donation in the form of monetised rest days.

Each year, La Banque Postale publishes a booklet on its institutional website, detailing its contribution to each of the SDGs as well as the related indicators. [S1.4.18]

2.3.1.5.4 Impact of the environmental transition on employees

As La Banque Postale Group operates in the banking and insurance sector, the activities of its employees are not impacted by a significant negative impact due to the transition to a greener and climate neutral economy.

However, La Banque Postale SA has implemented several types of actions with its employees to raise their awareness and support them on these issues.

Firstly, it organises training sessions for its employees, to enable them to better understand the impacts associated with this transition on their activities or their customers.

The Bank relies on the École de la Banque et du Réseau to train and raise awareness among its employees on ESG-related topics. This training programme, known as the “Just Transition Programme”, is divided into two main courses:

- The “basic” training course:

This course aims to raise awareness of climate, societal and environmental issues, and has been available to all employees since 2022. It includes mandatory regulatory training on climate risks, an e-learning course dedicated to sustainability, participatory activities (Climate Fresco) and two topical sustainability learning cycles on eco-friendly behaviours (three topics: climate, responsible digital technology and sustainable consumption) as well as responsible finance (two topics: concept, behind the scenes);

- Specialised courses for each business line:

These courses are designed to incorporate the challenges of the just transition into the professional practices specific to each business line. They enable employees to take concrete action by adapting their practices, offers and processes. They include proficiency in commercial tools and speaking, ESG analysis of business or public sector financing files, the basics of responsible communication, a deep dive into supplier relations and responsible purchasing as well as a course on biodiversity in the financial sector.

This structured programme aims to embed ESG skills over the long term, therefore strengthening the commitment of all La Banque Postale employees.

In addition, all employees have ESG targets integrated into their remuneration packages (additional information is available in paragraph 2.1.2.5 “Alignment of remuneration with La Banque Postale’s sustainability targets”). This commitment, monitored by mission-led company indicator 1.2, also serves to raise employee awareness and ensure that employees engage with sustainability issues. **[S1_4_19]**

2.3.1.6 Targets concerning employees

2.3.1.6.1 Target setting process

Targets are set in light of La Banque Postale Group’s policies and ambitions, and its legal obligations. When targets are set in agreements signed with employee representatives, they are discussed and approved for the duration of the agreement with them. The negotiation framework (for the remuneration policy or the diversity agreement, for example) is set by the Executive Committee and negotiated by the Human Resources Department and employee representatives. **[S1_5_01]**

The La Banque Postale UES Human Resources Department roadmap, which sets out its targets and monitors their achievement, is managed through dedicated meetings of the Human Resources Department Management Committee. These meetings take place quarterly, with an annual review.

The targets set within the framework of agreements are monitored by monitoring commissions throughout the duration of the agreements.

The targets and the roadmap are shared with all employees via the intranet. **[S1_5_02]**

During the annual review of the Human Resources Department roadmap, and the setting of targets for the year Y+1, the HRD Management Committee analyses the results for the year and their underlying causes. Based on these findings, the targets are validated and adjusted where necessary. The targets set within the framework of the agreements are reviewed during the review of the agreements. **[S1_5_03]**

Group subsidiaries also set targets in line with their remuneration policy and strategic guidance. **CNP Assurances** also has human resources management targets as part of its corporate agreements and purpose. **[S1_5_01]**

2.3.1.6.2 Targets set

La Banque Postale Group has set targets with regard to the identified impacts, risks and opportunities.

Favourable working conditions for La Banque Postale Group employees (working hours, social dialogue, fair remuneration system, social protection, collective agreements, etc.) (positive impact)

Quality of life at work is measured using the QWL indicator from the annual engagement survey. All employees of La Banque Postale UES are covered. The provisions on quality of life at work are published on the intranet, and therefore available to all employees. Communication campaigns are run on different topics such as leave and the right to disconnect.

Satisfaction with working environment and conditions is measured by the QWL indicator from the annual engagement survey, and is one of the cornerstones of La Banque Postale’s HR policy.

The expected target for this **QWL indicator** is **more than 7**. The index includes all employees of La Banque Postale SA and La Banque Postale Leasing & Factoring (La Banque Postale UES).

The score for the 2024 annual survey was 7.2/10, up 0.1 point since 2023.

In addition to the engagement indicator, the overall results of the survey are proactively communicated by the Communications Department, the operational HR stakeholders and by managers.

Working conditions affecting the physical or mental health of employees (e.g. stress, burnout, musculoskeletal disorders) (negative impact)

Indeed, protecting physical and mental health is an employer's obligation to all its employees. At La Banque Postale, managers receive mandatory training on the prevention of psychosocial risks (PSR). The target to be achieved is: **100% of managers must have completed the PSR prevention training**. It covers employees with managerial responsibilities in 2024.

The occupational health and safety plan is available on the intranet. In addition, communication actions are regularly implemented with managers to raise their awareness of these issues. They are supplemented by a system for coordinating HR and managerial teams on occupational health and preventing absenteeism.

The rate of training of managers in the prevention of PSR was 85% as of 31 December 2024. Over the calendar year, the 100% coverage rate is difficult to achieve in view of the continuous flow of arrivals and departures in management roles. Nevertheless, La Banque Postale wishes to maintain this ambitious target, which it communicates regularly to its managers.

Actions to promote inclusion, protection, equal opportunities, skills development and professional development of employees (positive impact)

For diversity and inclusion, La Banque Postale has set a target for the **employment of people with disabilities** and aims to **reach or exceed the statutory rate of 6%**. The targets of the diversity and inclusion policy cover all French employees of La Banque Postale (UES), and cover the implementation of the commitments of the regulations, the Company's social agreements and the Diversity division action plan. The indicators are monitored quarterly for disability and biannually for diversity, during the monitoring committee meeting for the related social agreement.

The measurement period is that of the social agreement, i.e. three years. The expectations and indicators relating to the Disability and Diversity policy are regularly reported on the Company's intranet. This information is accompanied by awareness-raising, workshops and recurring actions on diversity and disability for all employees. Specific initiatives and events are carried out for managers and the HR department.

Disability indicators are available in Section 2.3.1.7.5 "Disability situations".

In terms of skills development, La Banque Postale has set itself the target of ensuring that **100% of its employees comply with regulatory training**. To guarantee this commitment, monthly reports are prepared and reminders are sent to employees who have not yet completed their training. In addition, each year, La Banque Postale assesses the number of employees trained (monitoring carried out in number of hours per employee). This ambition is also monitored on a monthly basis by the Supervisory Board as part of the Group's risk management.

Monthly monitoring is also carried out on all training sessions (number of training days and number of employees trained), with the aim of achieving the highest possible level of training hours per employee each year.

As part of the "six-year review", the École de la Banque et du Réseau provides the HR Department with an annual follow-up of employees who could be impacted by a lack of training, within the meaning of French law no. 2014-288 of 5 March 2014 on professional training, employment and social democracy.

In addition, the Skills Development Plan is monitored quarterly by the departments of La Banque Postale and Human Resources. The results are presented each year in the SEC, including the balance sheet for the previous year and the current skills development plan. Since 2020, these aspects have also been included in the sustainability reporting produced by La Banque Postale's departments.

In terms of diversity, as part of its mission-led company status, La Banque Postale has set itself the goal of exceeding the threshold of **43% women among strategic managers and senior executives** (target 3.1 of the mission-led company). This target covers employees of La Poste SA (Financial Services and Banking Advice Line), La Banque Postale SA and the six main subsidiaries and is monitored by the Supervisory Board.

Unlike the management bodies at the top of the pyramid, strategic managers and senior executives are not subject to regulatory measures.

At 31 December 2024, 40.5% of the Group's strategic managers and senior executives were women.

Finally, no target has been set concerning **dealing with harassment or distressing situations at work**, except for a limitation or reduction in the number of cases processed each year. Indeed, the declaration of a target to limit this number could have a negative effect on the declarations of cases. The number of these cases and their reasons are monitored on a quarterly basis.

HR risk relating to any failure of the Group's employment, health, safety, diversity or inclusion practices (Risk)

While regularly monitoring the risks identified, La Banque Postale has chosen to focus its management efforts in 2024 on two topics: health and harassment.

The identified target under the heading of health, is the **compliance rate for medical visits**. While medical visits are an obligation for all employees, the compliance rate for medical visits ensures compliance with legal obligations in terms of health and safety at work, thus preventing the risk of sanctions and litigation. It also contributes to the protection of employees' health while promoting inclusion and adjustment of working conditions to meet the specific needs of each employee. La Banque Postale aims for compliance for all staff and all types of visits for all employees of La Banque Postale UES. The compliance rate for medical visits is improving. In 2024, an outsourcing project concerning the organisation and monitoring of medical visits for La Banque Postale UES employees in the regions was carried out (implementation scheduled for December 2024). This project aims to ensure more rigorous management of medical visits in the regions.

The policy is implemented and made available through the organisation of medical visits by the health service (Île-de-France) or PrestaMed (regions), sending emails or postal notifications and information on medical visits on the Company's intranet. A communication was also launched at the start of the PrestaMed service in the regions.

La Banque Postale Group has not set a quantitative target in addition to that concerning **zero tolerance on harassment**. The choice was made to set an action target rather than a numerical target. This target is estimated to be achieved in 2024 in view of the many actions implemented on this subject. [SI_MDR.T.01.13]

Deterioration in remuneration levels, the number of jobs or the type of contract leading to a decrease in the purchasing power of employees (Negative impact)

100% of employees receive an **adequate wage**, and the majority are covered by a collective agreement setting salary scales which are more favourable than the statutory minimum wage. In addition, as part of its social dialogue, La Banque Postale opens negotiations on wage measures each year.

Regarding **remuneration inequalities** (women/men, executive salaries), no target has been set to date. However, all the measures taken aim to ensure that remuneration gaps between men and women are based on target components (level of responsibility, skills, length of service, performance, etc.).

Favourable working conditions for La Banque Postale Group employees (working hours, social dialogue, fair remuneration system, social protection, collective agreements, etc.) (Positive impact)

All La Banque Postale employees have a voice through the implementation of these regulatory provisions for social dialogue. To date, no quantified target has been set for the **quality of social dialogue**. Indeed, the quality of social dialogue is difficult to quantify. It is measured in the various surveys and through ongoing relationships with employee representatives. In addition, collective agreement monitoring commissions are organised once a year for each agreement. They monitor and manage the implementation and expected effectiveness of the actions undertaken. The meetings of the SEC, the HSWCC and the DSN allow employees' voices to be heard.

Regarding the implementation of **employee representation mechanisms**, professional elections took place in November 2023. As the term of office of employee representatives is set for a period of four years, the next elections will take place in 2027.

Regarding the adoption of a flexible work pattern contributing to a better **work-life balance and well-being** of employees, a new home-working agreement was signed on 14 November 2024, in accordance with the target set.

Satisfaction with work-life balance can be monitored through various survey-based indicators. Work-life balance and well-being at work are monitored through the survey's QWL indicator, as well as occasional internal surveys, such as the one on hybrid work in 2024.

In order to guarantee a **safe environment** for employees and to offer social benefits for employees, including social protection, all employees are covered, within the framework of public schemes or services offered by the Company, by social protection against loss of income due to illness, unemployment, work-related accidents, parental leave and retirement.

As part of the annual monitoring of the social protection plan, a social fund has been set up to compensate for benefits with no or little coverage under the plan. It should be noted that all exemptions from enrolment in the healthcare plan must be duly justified by the employee's enrolment in another plan.

Development of the skills of the Company's employees promoting innovation and the creation of new products and services (Opportunity)

No target has been set for this opportunity, as actions and targets have already been put in place for employee training and skills. The targets corresponding to these topics are described in the paragraph above concerning the positive impacts on skills development and professional development of employees. [SI_MDR.T.14.19]

2.3.1.7 Indicators relating to the Group's workforce

The workforce included in the calculation of the indicators presented in this section covers La Banque Postale Group (La Banque Postale SA and its subsidiaries). All subsidiaries within the scope of financial consolidation have been included. [SI_SBM.3.01]

The scope includes employees on permanent contracts (including civil servants employed as employees in subsidiaries), employees on fixed-term contracts and employees with other types of contracts (apprentices, professional training contracts excluding interns). [SI_SBM.3.02]

Note concerning the inclusion of CNP Assurances Protection Sociale employees

The new subsidiary CNP Assurances Protection Sociale was created by the merger of the teams of La Mutuelle Générale and those of CNP Assurances on 31 December 2024. This subsidiary was included when calculating the following indicators:

- All the characteristics of the Company's employees (SI-6 disclosure requirement), except for the indicators concerning the number of departures and the turnover rate (SI_6.11 and SI_6.12);
- Collective bargaining and social dialogue coverage (SI-8 disclosure requirement);
- Breakdown by age (SI-9 disclosure requirement);
- Adequate wages (SI-10 disclosure requirement);
- Employees with disabilities (SI-12 disclosure requirement);
- Coverage by a health and safety policy (SI-14 disclosure requirement). [SI_SBM.3.01]

Unless otherwise stated, all indicators presented below are calculated in terms of workforce as of 31 December 2024.

2.3.1.7.1 Characteristics of salaried workers

EMPLOYEES BY CONTRACT TYPE AND GENDER

La Banque Postale Group has 14,512 employees, the majority of whom are women (55%), permanent contracts (94%) and full-time employees (94%).

The workforce in "Average number of employees during the period" is also presented in the financial statements in Note 7.3 "General operating expenses including net depreciation, amortisation and impairment of property, plant and equipment and intangible assets" in Section 5.2 "Notes to the consolidated financial statements"⁽¹⁾. [S1_6_17]

Between 2023 and 2024, La Banque Postale Group's workforce increased, mainly as a result of the integration of La Mutuelle Générale, which merged with CNP Assurances to form CNP Assurances Protection Sociale.

The gradual cessation of Ma French Bank's activities had only a very limited impact on the Company's workforce, given that the Group, in accordance with its commitments, provided consistent redeployment offers to each of its employees. [S1_6_16]

The number of work-study students within La Banque Postale SA also increased significantly in 2024 (up 37%) due to efforts to increase the visibility and attractiveness of the employer brand.

NUMBER OF EMPLOYEES IN MAIN COUNTRIES [S1_6_05]

For countries representing at least 10% of the total number of employees. Note: Only the genders "Men" and "Women" are officially recognised under French and Brazilian law.

In addition, the majority of La Banque Postale Group's operations are located in France. With the exception of La Financière de l'Échiquier and CNP Assurances entities, all subsidiaries are located in France only.

La Financière de l'Échiquier operates in Europe, with 6% of its employees located outside France.

CNP Assurances has a strong international presence, with 27% of its employees located outside France. In particular, its workforce in Brazil represents more than 10% of La Banque Postale Group's total workforce.

(1) Note: as the calculation method differs between the financial statements and the sustainability report, the workforce of CNP Assurances Protection Sociale, included as of 31 December 2024, is included in the sustainability report even though it does not appear in the financial statements.

EMPLOYEES BY CONTRACT TYPE, BREAKDOWN BY REGION [S1_6_08] [S1_6_19] [S1_6_20]

STAFF ROTATION

9.4%

[S1_6_12]

1,173 [S1_6_11]
Employees
who have left
the Company*

* Employees who have moved to a role outside La Banque Postale Group to La Poste or to Caisse des Dépôts entities are included in employees who have left the Company.

The staff turnover rate of 9.4% is moderate, which represents the Group's efforts to support its employees in their careers. Of the departures recorded, 72 were La Banque Postale SA employees who had transferred to La Poste Group or Caisse des Dépôts.

Calculation methodology and background information

For La Banque Postale Group, the total workforce corresponds to the total number of employees who are natural persons (permanent, fixed-term and work-study students) active at the end of the reference period (31 December 2024).

Employees are broken down, according to the indicators, by gender (M/F), by type of contract (permanent, fixed-term and work-study contracts), by working time (full-time/part-time), by age bracket (under 30/30-50/50+) or by socio-professional category (Workers/Technicians-Supervisors-Employees/Executives).

Data is collected by each subsidiary. It is then aggregated. Checks are carried out both by the subsidiary and during aggregation in order to check the consistency of the data. [S1_6_13]

La Banque Postale Group uses the following definitions:

- The **total workforce** refers to the total number of employees (permanent, fixed-term and work-study contracts) who were actively employed natural persons on 31 December;
- The workforce is broken down by **gender** for the following categories: Women, Men, Other, Undeclared;
- The workforce is broken down by **contract type** by distinguishing between permanent contracts, temporary contracts (fixed-term contracts and work-study students) and contracts with non-guaranteed number of hours. No employee in the Group has a contract with no guaranteed number of hours;
- In the breakdown by **working hours**, work-study students are considered as full-time employees;
- The number of **employees having left the Company** during the period takes into account voluntary departures, dismissals, retirements and deaths, as well as departures to La Poste Group and Caisse des Dépôts for the La Banque Postale SA scope.

Concerning the **number of departures** and the turnover rate, only departures of employees on permanent contracts are taken into account. The following reasons for departure are included: voluntary departures (including termination of contract), departure due to dismissal, retirement or death during the period of employment.

The employee **turnover rate** corresponds to the total number of employees who left the Company at the end of the year, for the scopes under consideration. [S1_6_14] [S1_6_15]

2.3.1.7.2 Social dialogue

COLLECTIVE BARGAINING AND SOCIAL DIALOGUE COVERAGE* [S1_8_08]

* For countries or regions with > 50 employees representing > 10% of total employees.

All La Banque Postale Group employees based in France are covered by a collective agreement. Depending on the company, this is either the agreement which the employer must be covered by due to its business segment, or the which the employer applies voluntarily. Some subsidiaries have a company collective agreement.

For CNP Assurances employees located outside France, 92% of the workforce is covered by collective agreements. [S1_8_04]

All employees in France are also covered by employee representatives.

The provisions relating to the establishment of a European Works Council have only been applicable to La Banque Postale since the merger with CNP Assurances and its subsidiaries on 11 April 2023. The Human Resources Department is looking at how to develop its employee representative bodies in order to incorporate these aspects into its social dialogue. [S1_8_07]

2.3.1.7.3 Diversity

Diversity of general management

La Banque Postale Group is particularly attentive to ensuring that women are properly represented when appointing senior executives, with equal skills.

BREAKDOWN BY GENDER IN NUMBER OF SENIOR EXECUTIVES [S1_9_01] [S1_9_02]

Calculation methodology and background information

For La Banque Postale Group, the general management workforce covers senior executive positions which:

- contribute to the definition of La Poste Group's strategy;
- are generally positioned as first or second in command of the members of the Group's Executive Committee, or MDs of the largest subsidiaries;
- have the greatest challenges, the greatest complexities or are of a strategic nature essential to the Group. [S1_9_06]

Breakdown of employees by age

La Banque Postale relies on a balanced demographic structure that promotes generational diversity within its workforce. This breakdown illustrates the strong presence of employees in the intermediate age range (30-50 years old), who are often at the heart of the Group's operational and strategic activities. The proportion of young people (under the age of 30) highlights the efforts made to attract talented individuals in new generations, while employees over the age of 50 attest to the retention of expertise and experience within the Group.

BREAKDOWN OF EMPLOYEES BY AGE

Under 30 YEARS	Between 30 and 50 YEARS	Over 50 YEARS
1,915	8,346	4,251
[S1_9_03]	[S1_9_04]	[S1_9_05]

2.3.1.7.4 Adequate wages and social protection

All employees receive an adequate wage⁽¹⁾, in accordance with the standards in force, whether applicable legislation, collective bargaining agreements or applicable Company agreements. [S1_10_01]

All Group employees are covered by public schemes or benefits offered by the Company, by social protection against loss of income due to illness, unemployment, work-related accidents, parental leave and retirement. [S1_11_01] [S1_11_02] [S1_11_03] [S1_11_04] [S1_11_05]

SOCIAL PROTECTION COVERAGE

[S1_11_01] [S1_11_02] [S1_11_03] [S1_11_04] [S1_11_05]

2.3.1.7.5 Disability situations

La Banque Postale Group pays particular attention to the integration of employees with disabilities, while promoting the ability of existing employees to declare a disability should they need to do so. However, the percentage of employees with disabilities remains lower than the statutory rate.

In addition to recruitment, La Banque Postale Group ensures good working conditions for its employees with disabilities and takes specific measures to support them according to their individual needs. Such measures may include adapting the workstation, adapting working time or funding commuting (taxis).

EMPLOYEES WITH DISABILITIES BY GENDER [S1_12_02]

Calculation methodology and background information

For employees in France, the data are aggregated from the payroll file on which the recognition of the status of disabled worker (RQTH) is declared. RQTH is a French administrative statute. The RQTH gives access to employment support schemes and strengthens workers' rights.

Employees not working in France are subject to the legal definition of the notion of people with disabilities in their respective countries. [S1_12_03]

2.3.1.7.6 Training and careers

Annual employee appraisals play an essential role in career development, offering an opportunity to recognise performance, identify skills to be improved and map out career development prospects. They are a strategic driver of talent and enable employees to align their personal targets with those of the organisation.

In France, professional appraisals are a legal obligation, which is not the case in all Group countries. This regulatory difference may explain the variations observed in appraisal completion rates internationally.

The Group also provides strong communication on the importance of the appraisal to supporting the development of skills and careers.

In addition, the Group supports its employees beyond the annual appraisal. Training, in particular, is an essential driver of employee career development, enabling employees to acquire new skills, adapt to changes in the business lines and strengthen their expertise. By investing in continuous training, the Group stimulates motivation, promotes commitment and supports the professional development of its talented individuals. The training figures below exclude academic training for work-study students.

(1) An adequate wage is defined as the legal minimum wage in the country concerned.

ELIGIBLE EMPLOYEES WHO COMPLETED THE ANNUAL ASSESSMENT AND AVERAGE NUMBER OF TRAINING HOURS, BY GENDER

2.3.1.7.7 Health and safety

EMPLOYEES COVERED BY A HEALTH AND SAFETY POLICY

Almost all of La Banque Postale Group's workforce is covered by a health and safety policy.

INDICATORS RELATED TO OCCUPATIONAL ACCIDENTS AND OCCUPATIONAL ILLNESS

0 Deaths due to occupational accidents [S1_14_02]

0 Deaths due to occupational illnesses [S1_14_03]

54 Workplace accidents with lost time [S1_14_04]

2.32 Number of workplace accidents with lost time per million hours worked [S1_14_05]

0 Recordable cases of ill health at work [S1_14_06]

Days lost due to workplace accidents and deaths due to workplace accidents, occupational illness and deaths due to occupational illness

The indicators for monitoring absenteeism and accidents are monitored in accordance with the regulations imposed and updated on a monthly basis. There are no deaths due to accidents or occupational illnesses, and the number of workplace accidents with lost time per million hours worked is low compared to the French average⁽¹⁾.

(1) In France, in 2019, employees suffered an average of 21 recognised work-related accidents per million hours worked.

2.3.1.7.8 Work-life balance

EMPLOYEES ENTITLED TO FAMILY LEAVE

ELIGIBLE EMPLOYEES WHO HAVE TAKEN FAMILY LEAVE, BY GENDER [S1_15_02] [S1_15_03]

Group employees are entitled to family leave:

- Conventional maternity (100%);
- Maternity/Adoption;
- Paternity;
- Parental leave;
- Breastfeeding leave;
- Conventional maternity (50%);
- Co-parent leave (for La Banque Postale SA);
- Birth/adoption leave;
- ASA leave helping people with disabilities (for La Banque Postale SA).

The rate of "eligible" employees is calculated taking into account the intrinsic entitlement and not the existence or absence of the triggering event. Therefore, all employees are entitled to family leave if they become eligible. [S1_15_04]

La Banque Postale Group strives to support its employees in the balance between professional and personal life, by offering a framework conducive to the use of leave for family reasons. In 2024, 5.6% of the Group's total workforce took leave for family reasons, with a significant breakdown by gender: 3.8% for men and 6.7% for women.

For eligible employees only, this rate is 11.91%, of which 10.73% are men and 12.88% are women. These figures reveal an over-representation of women in the use of such leave, reflecting a persistent imbalance in the distribution of parental and family responsibilities.

2.3.1.7.9 Remuneration gap

In 2024, the overall remuneration gap between women and men was 16.7%. The remuneration gap between women and men is mainly related to the job structure: women are more represented than men at lower grade levels, while this trend is reversed at higher levels.

Motivated by the "Diversity and professional equality" agreement of 2024, La Banque Postale has implemented substantial actions to remedy this, such as ensuring gender diversity in the business lines (under-represented gender recruitment with equal skills, developing partnerships with schools and charities to develop the attractiveness of so-called "gendered" professions, and boosting the careers of women through community events (Girlz in the Bank, etc.) as well as preventing everyday sexism.

In addition to these actions, La Banque Postale allocates an overall budget of €600,000 per year to reducing unjustified remuneration gaps.

RATIO BETWEEN THE HIGHEST REMUNERATION AND THE MEDIAN REMUNERATION [S1_16_02]

The ratio between the highest salary and the median salary is 10.4, reflecting a moderation of the remuneration gap within the Group, in line with the values of inclusion and social responsibility that drive us.

Calculation methodology and background information

The gender remuneration gap compares the gross hourly remuneration paid to women during the financial year to that paid to men. This hourly remuneration includes, on an annual basis, fixed remuneration, bonuses and benefits paid, annual and long-term variable remuneration paid, excluding profit-sharing and matching contributions.

The ratio between the highest remuneration and the median remuneration compares the total annual remuneration (remuneration components mentioned above, also including profit-sharing bonuses paid as well as any matching contributions) of the person receiving the highest remuneration to the total annual median remuneration of all other employees. The employees taken into account are those with permanent or temporary employment contracts, working with La Banque Postale Group for at least three months of the financial year.

Work-study students were excluded from these calculations given that the work-study ("alternant") status is specific to France, and that work-study contracts are governed by a statutory remuneration grid and are not subject to a discretionary wage. As a result, including work-study students would mean that the analysis could not be refined.

These indicators are calculated by aggregating the indicators of CNP Assurances and those of the rest of La Banque Postale Group, in proportion to the workforce of each scope. The number of La Financière de l'Échiquier employees outside France (10) could not be included in the calculations for these indicators. [S1_16_03]

2.3.1.7.10 Severe human rights incidents

As part of La Poste Group's Human Rights policy, La Banque Postale Group is committed to:

- preventing all forms of human rights violations and ensuring that it is not complicit in human rights violations;
- prohibiting all forms of moral or physical violence, and more generally all forms of inhuman, cruel or degrading treatment;
- prohibiting all forms of forced or compulsory labour, child labour and human trafficking;
- prohibiting all forms of discrimination; in particular according to gender, age, state of health or disability,

pregnancy, sexual orientation, nationality, social background, belonging to a particular community, political, trade union or religious beliefs;

- defending freedom of association and the right to collective bargaining;
- defending the right to adequate remuneration;
- opposing all forms of invasion of personal privacy.

The Group is also committed to rigorous compliance with the obligations of the General Data Protection Regulation (GDPR). The Group conducts its activities in compliance with the labour laws of the countries in which it operates.

SEVERE HUMAN RIGHTS ISSUES AND INCIDENTS

AMOUNTS OF FINES, PENALTIES AND COMPENSATION

The Group did not report any proven severe human rights incident in 2024. [S1_17_10] [S1_17_12]

Consequently, the Group has no fines, penalties or compensation for damages resulting from incidents and complaints related to human rights. [S1_17_06]

There is no additional background information to what is written above. [S1_17_07]

2.3.2 Guaranteeing favourable working conditions for workers in the value chain [S2]

2.3.2.1 La Poste employees working for and on behalf of La Banque Postale

2.3.2.1.1 Material IROs and links with strategy and business model

Scope

Among the workers in the value chain, the workforce working for and on behalf of La Banque Postale, with a re-invoicing system by La Banque Postale for the use of La Poste's employees, is affected by the (positive or negative) impacts identified (see list of IROs in Section 2.1.3.2 "Description of material impacts, risks and opportunities (IROs)"). Indeed, these workers represent a significant part of La Banque Postale Group's value chain. As a result, they are included in the information published under ESRs 2. [S2_SBM_3_01]

This workforce consists of La Poste Group employees and civil servants. They are part of La Poste Group and are attached to the La Poste – France Télécom joint agreement for permanent, fixed-term or work-study contracts, and to the civil service status for civil servants.

They may report to a La Poste or La Banque Postale manager.

These workers carry out their role for and on behalf of La Banque Postale, for the Banking Advice Line, in post offices, for remote customer relations centres, but also within the IT teams and other head office support functions. [S2_SBM_3_02]

These workers therefore work on the sites of the Company or its parent company, but are not part of the La Banque Postale Group workforce. No specific category of worker particularly vulnerable to a material negative impact on their working conditions (due to their intrinsic characteristics or a particular context) has been identified. [S2_SBM_3_03]

Furthermore, no specific sub-group has been identified as being more likely than others to be exposed to risks of harm. [S2_SBM_3_08]

Risks of forced labour and child labour

All activities are carried out in France for these employees, and concern banking services. Therefore, there is no specific risk regarding forced labour or child labour.

These employees are also covered by La Poste Group's Human Rights policy, as detailed in Section 2.3.1.2.6 "Human rights policies and measures". [S2_SBM_3_04]

Material impacts, risks and opportunities

The material negative impact identified concerning workers in the value chain is as follows: "Negative impact in the event of poor working conditions (unequal remuneration, safety, etc.), forced labour and/or child labour within companies in the value chain of own operations and service activities".

This impact is considered material but is not widespread or systemic in the context of La Banque Postale Group. [S2_SBM_3_05]

There is no positive impact specifically identified for these workers. As La Poste is the parent company of La Banque Postale Group, the policies and actions concerning, in particular, the improvement of working conditions and combating discrimination are aligned, and La Banque Postale does not have a significant impact on the policies and actions implemented by La Poste. [S2_SBM_3_06]

In view of the significant size of the workforce dependent on La Poste Group in La Banque Postale's value chain, and the banking service missions that they provide, La Banque Postale has a functional dependency on La Poste. However, this dependency is not considered and monitored as a risk given that La Poste is the parent company of La Banque Postale. [S2_SBM_3_07]

2.3.2.1.2 Applicable policies

La Poste workers working for and on behalf of La Banque Postale are, like La Banque Postale workers, covered by La Poste's Human Rights policy. The other HR policies that cover these employees are provided by La Poste. They are aligned in terms of corporate culture with La Banque Postale's policies.

There are two agreements between La Banque Postale and La Poste concerning these workers, which ensures that all QWLWC, recruitment and training aspects are properly implemented. These agreements are regularly monitored between the two parties. To date, no specific action plan has been implemented.

The first agreement covers health and safety at work for seconded workers. La Poste employees working for and on behalf of La Banque Postale and hosted on a La Banque Postale site will be covered by this agreement, which explains their responsibilities in terms of the working environment and health and safety.

The second agreement deals in particular with workforce, recruitment and regulatory and mandatory training. [S2_MDR_P_01_06]

Human rights

The protection of these workers with regard to Human Rights is the same as that of La Banque Postale employees, as described in Section 2.3.1.2.6 "Human rights policies and measures". [S2_1_01] [S2_1_02] [S2_1_03] [S2_1_04] [S2_1_05] [S2_1_08] [S2_1_09]

La Banque Postale's code of conduct applies to all workers in the value chain (for more information, see Section 2.3.2.4 "Human Rights"). [S2_1_06]

2.3.2.1.3 Dialogue mechanisms

The point of view of La Poste employees working for and on behalf of La Banque Postale is important for La Banque Postale in order to ensure the smooth running of these activities. It is taken into account and can trigger actions when necessary. [S2_2_01]

Through the La Poste Group engagement survey, La Banque Postale is able to analyse the expectations of these groups of workers working for and on behalf of La Banque Postale, and work with La Poste to build appropriate action plans. Appraisals and professional interviews are conducted by the direct line managers of these employees, most of whom are La Poste employees themselves. If the manager is an employee of La Banque Postale, these assessments are carried out according to La Poste's rules, and within its tools.

In addition, La Banque Postale is regularly informed of any concerns expressed by the social bodies, which are managed by La Poste. Like La Banque Postale, La Poste Group complies with the rules and legal obligations associated with the implementation of adequate social dialogue. [S2_2_02] [S2_2_03]

The most senior person in charge of the interface with La Poste concerning issues related to workers in the La Poste Group value chain is the Human Resources Director of La Banque Postale Group, who sits on the Executive Committee. [S2_2_04]

The effectiveness of the dialogue with employees working in the name and on behalf of La Banque Postale is assessed indirectly, in particular through the results of the annual commitment survey conducted by La Poste.

The results of these interfaces are taken into account in the operational management of these workers when necessary. [S2_2_06]

2.3.2.1.4 Reporting and remediation process

As mentioned in Section 2.3.2.1.3 "Dialogue mechanisms", workers can raise their concerns via:

- the engagement survey, which is communicated by email to all respondents;
- the annual appraisal, which is the subject of an annual campaign and must be carried out by the manager. Its results are available to La Banque Postale's Human Resources Department when the manager reports to La Poste.

In addition, when employees report to a La Banque Postale manager, dialogue with these employees can take place *via* the manager. [S2_3_02] [S2_3_03]

Given that the annual appraisal is mandatory and that the engagement survey is extensively communicated to all La Poste employees, La Banque Postale considers that these channels of dialogue are familiar to all workers working for and on behalf of La Banque Postale. [S2_3_05]

La Banque Postale's Human Resources Department has access to the results of the engagement survey and the annual appraisals, and can therefore monitor the significant issues raised by employees working for and on behalf of La Banque Postale, and implement measures where necessary. [S2_3_04]

Significant negative impacts on workers acting for and on behalf of La Banque Postale may also be reported through the Group whistleblowing system. The processing of these reports is described in detail in Section 2.4.1.3.5 "Independence and accessibility of the whistleblowing system". [S2_4_07]

This system is open to all employees, who can use it to report alerts or ask for advice. It is accessible to all *via* a dedicated platform. [S2_3_02] [S2_3_03]

It is managed by the Compliance Department. [S2_3_04]

This system is brought to the attention of employees *via* the code of conduct. [S2_3_05]

This whistleblowing system is independent of the investigators and whistleblowers are protected. [S2_3_06]

As no significant negative impact on these workers has been identified, there is no specific procedure for correcting and verifying the effectiveness of the remedial measures taken. However, if such a case were to occur, it would of course be dealt with the necessary due diligence. [S2_3_01]

2.3.2.1.5 Action plans and resources

Actions implemented

The following negative impact is considered material for workers working for and on behalf of La Banque Postale: "negative impact of poor working conditions (unequal remuneration, safety, etc.), forced labour and/or child labour in companies in the value chain for own operations and service activities." This impact is potential.

It is the subject of actions carried out with La Poste, as part of regular meetings between La Banque Postale's HR Department and La Poste's HR Department. These actions are identified by the Human Resources Department based on the information provided *via* the dialogue channels described above, and in consultation with La Poste.

The action plans are implemented through dialogue between the HR teams at both operational and management committee levels. [S2_4_05]

The main actions carried out in 2024 are as follows:

- Collaborative work, consultation and joint decision-making on variable remuneration and workforce issues;
- A monitoring committee for niggling issues in the workplace, co-led by La Poste and La Banque Postale to identify actions to be taken in working environments.
- Changes in employee representative bodies with social dialogue managed by La Banque Postale's Human Resources Department for workers working for and on behalf of La Banque Postale (Financial Services) within the framework of La Poste's social dialogue rules. [S2_MDR_A_01.12] [S2_4_01] [S2_4_10]

The effectiveness of these actions is assessed *via* the results of the engagement survey. [S2_4_04]

Resources allocated

The resources allocated to the management of potential negative material impacts are:

- Functions in charge of interactions with La Poste;
- Hierarchical or functional management actions for employees working for and on behalf of La Banque Postale;
- Expenses related to the engagement survey (analysis of La Banque Postale's results and associated action plans). [S2_4_12]

Severe human rights incidents

No severe human rights issues concerning employees working for and on behalf of La Banque Postale were reported. [S2_4_11]

2.3.2.1.6 Targets

No specific target has been set for employees working in the name and on behalf of La Banque Postale. The potential impacts are managed by La Poste, the parent company of La Banque Postale. La Banque Postale is therefore not directly responsible for this topic. [S2_MDR_T_14_19]

2.3.2.1.7 Additional indicators specific to the entity

Characteristics of La Poste's employees working in the name and on behalf of La Banque Postale

La Poste employees working for and on behalf of La Banque Postale work for:

- the Banking Advice Line, located in post offices;
- the remote Customer Relations Centres;
- the IT teams, and other head office support functions.

These workers are essential to the proper functioning of banking services.

NUMBER OF LA POSTE WORKERS* BY COUNTRY

* Working for and on behalf of La Banque Postale.

La Poste is committed to an active gender equality policy that is fully consistent with La Banque Postale's policies.

NUMBER OF LA POSTE WORKERS* BY GENDER

* Working for and on behalf of La Banque Postale.

Calculation methodology and background information

The Financial Services (SF) and Banking Advice Line (LCB/ASB) employees are all located in France. There are no "other" and no "undeclared" gender workers because only the genders "male" and "female" are recognised under French law.

The total workforce refers to the total number of employees (permanent, civil servants, fixed-term contracts and work-study students) active at 31 December 2024 as natural persons.

The methodology for calculating these indicators is identical to that used for the indicators covering the Company's employees, as indicated in Section 2.3.1.7 "Indicators relating to the Group's workforce".

The workforce related to the service agreement between La Banque Postale and La Poste is invoiced by one entity to the other, and is recognised as an expense in La Banque Postale Group's consolidated income statement under "External services" in Note 7.3 "General operating expenses including net depreciation, amortisation and impairment of property, plant and equipment and intangible assets" in Section 5.2 "Notes to the consolidated financial statements" of the Universal Registration Document.

Collective bargaining coverage

La Poste employees working for and on behalf of La Banque Postale are covered by the joint La Poste – France Télécom agreement for permanent, fixed-term or work-study contracts.

Civil servants are part of the State civil service and benefit from representation through social dialogue under the responsibility of La Poste. They constitute the 24.2% that do not appear to be covered by a collective agreement in the diagram below:

LA POSTE WORKERS* COVERED BY COLLECTIVE AGREEMENTS

* Working for and on behalf of La Banque Postale.

Training and careers

Through the École de la Banque et du Réseau, La Banque Postale and La Poste support the skills development of La Poste workers both in terms of their banking activity and their career path. La Poste employees also benefit from the entire training offer developed by La Poste Group.

Work is also in progress to train banking advisors who are La Poste employees working for and on behalf of La Banque Postale in the marketing of green offers, when they start their roles.

ELIGIBLE LA POSTE WORKERS* WHO COMPLETED THE ANNUAL ASSESSMENT AND AVERAGE NUMBER OF TRAINING HOURS, BY GENDER

* Working for and on behalf of La Banque Postale.

Health and safety

La Poste employees remain the responsibility of their employer under QWLWC agreements. Nevertheless, when they are hosted on La Banque Postale's sites, LBP assumes its responsibility as host in terms of prevention, health and safety at work. The rules associated with this dual responsibility (host and employer) are covered by an agreement between La Banque Postale and La Poste.

LA POSTE WORKERS* COVERED BY A HEALTH AND SAFETY POLICY

* Working for and on behalf of La Banque Postale.

Work-life balance

All employees working in the name and on behalf of La Banque Postale benefit from all the specific leave determined by La Poste and in particular leave for family reasons.

LA POSTE WORKERS* ELIGIBLE FOR FAMILY LEAVE

* Working for and on behalf of La Banque Postale.

ELIGIBLE LA POSTE WORKERS* WHO HAVE TAKEN FAMILY LEAVE, BY GENDER

* Working for and on behalf of La Banque Postale.

Severe human rights incidents

La Poste Group and its subsidiaries, including La Banque Postale, comply with the Human Rights Policy. In addition, specific agreements related to the subject of discrimination allow for close monitoring and rapid resolution of incidents when they occur.

INCIDENTS OF DISCRIMINATION AND COMPLAINTS CONCERNING LA POSTE WORKERS*; AMOUNT OF FINES, PENALTIES AND COMPENSATION FOR DAMAGES RESULTING FROM INCIDENTS OF DISCRIMINATION, INCLUDING HARASSMENT AND COMPLAINTS RECORDED

* Working for and on behalf of La Banque Postale.

It should be noted that the complaints presented in the graph above are complaints received *via* La Banque Postale's communication channels. However, employees may also submit complaints to La Poste, which are not included in this breakdown.

0

Amount of fines, penalties and compensation for severe human rights issues and incidents related to La Poste workers*

2.3.2.2 Workers in the value chain

2.3.2.2.1 Material IROs and links with strategy and business model

Scope

Workers in the upstream value chain are key stakeholders for La Banque Postale. This entire population is likely to be impacted by the Group. Two main types of workers are concerned:

- Employees working on one of La Banque Postale's sites (head office, subsidiaries, post offices) but who are not part of the workforce;
- Workers working for La Banque Postale's suppliers.

The workers integrated into the Company's downstream value chain (workers of the financed companies) are dealt with in Section 2.3.2.3 "Workers in the downstream value chain".

Service providers in the building, maintenance and logistics sectors are more exposed to the potential impacts of any failure of safety rules. In addition, workers belonging to vulnerable groups (older employees, people with disabilities, ethnic minorities) are more exposed to the potential impacts of discrimination and inequality. [S2_SBM_3_01] [S2_SBM_3_02] [S2_SBM_3_03]

In order to identify these specific groups, an ESG risk rating is carried out to assess third-party suppliers. It incorporates the specific working conditions applicable to the different types of workers within the value chain, for example by differentiating between consulting services where risks are mainly related to mental load, and maintenance activities, which are more exposed to physical risks or precarious working conditions. This differentiation makes it possible to identify particularly exposed groups more precisely and to adapt prevention and due diligence measures accordingly. [S2_SBM_3_08]

La Banque Postale recognises that social factors in the value chain do not affect all workers in the same way. These risks may vary depending on the geographical location of the suppliers (for CNP Assurances in particular), the business segment and the contract type. For example, workers operating in sensitive regions may face social or safety risks at work. To mitigate these risks, La Banque Postale adopts specific clauses in contracts, targeted audits and implements a whistleblowing system. [S2_SBM_3_09]

Identified impacts, risks and opportunities

The identified material impacts on workers in the upstream value chain are as follows:

- Actual positive impacts by contributing to improving working conditions, and the protection and inclusion of workers in the value chain of own operations and service activities;
- Potential negative impacts in the event of poor working conditions (unequal remuneration, safety, etc.), forced labour or child labour within companies in the value chain of own operations (suppliers, etc.) and service activities.

La Banque Postale's responsible purchasing strategy generates **positive impacts** on workers in the value chain, as it helps to improve the working conditions of employees in its value chain. In 2022, La Banque Postale became a mission-led company, making its community foundations the key driver of its performance in support of the just transition. In this context, its business model directly interacts with six Sustainable Development Goals (SDGs), and it publishes monitoring indicators in relation to these Goals. The purchasing strategy, which takes into account the identified impacts on workers in the value chain, contributes to the achievement of these SDGs.

In addition, as a subsidiary of La Poste, La Banque Postale's business model also contributes to developing the responsible purchasing culture. Through regular interactions between La Banque Postale's purchasing function and its subsidiaries, it engages in a group dynamic to promote La Poste Group's Responsible Purchasing policy, as well as the "Supplier Relations and Responsible Purchasing" certification from La Banque Postale.

These positive impacts cover all workers in the value chain (for more information, see Section 2.3.2.1.1 "Material IROs and links with strategy and business model").

The requirement to comply with the principles of the UN Global Compact and the fundamental conventions of the International Labour Organization (ILO), as well as the introduction of CSR criteria in the selection of service providers and suppliers, contribute to the improvement of working conditions. They promote a healthy, safe and inclusive work environment. [S2_SBM_3_06]

The potential **negative impacts** identified on workers in the value chain are the result of the business model. La Banque Postale is a tertiary sector company that outsources or subcontracts a significant portion of its own operations. Being positioned in France and operating its activities mainly in France (excluding CNP Assurances), La Banque Postale mainly relies on French and European suppliers for the outsourcing of its services and subcontracting. In this context, the activity of its leading subcontractors is carried out in compliance with European labour law and the standards of the United Nations Global Compact, thereby limiting the potential of the negative impacts identified.

The management and monitoring of the Responsible Purchasing Charter targets guide La Banque Postale's purchasing strategy. For example, the environmental and social commitments made as part of La Banque Postale's mission-led company and strategic plan for 2030 led it to approve La Poste Group's Purchasing policy and to draft its "Responsible Purchasing Approach", as well as confirming its commitment to the "Supplier Relations and Responsible Purchasing (RFAR)" approach. This resulted in the signing of the RFAR charter in September 2022, while the La Banque Postale SA and CNP Assurances entities obtained the RFAR certification in September 2023. The RFAR certification process for banking subsidiaries of La Banque Postale SA will be launched from 2025.

The potential negative impacts identified are related to the following events:

- Poor application of security measures;
- Unequal remuneration (women/men, executive salaries) due to inadequate remuneration policies among subcontractors;
- Acts of discrimination;
- Forced labour or child labour. [S2_SBM_3_05]

No material **opportunities** arising from the impacts on workers in the value chain were identified.

However, two **material risks** stand out:

- Risk of financial loss due to failures in assessing La Banque Postale's partners (service providers, suppliers or distributors) in an environment shaped by the transition towards a more equitable and inclusive society (with more or less rapid regulatory changes in the face of social injustice, changes in consumer behaviour and markets, etc.);
- Termination or temporary decrease in the activity of a major service provider, supplier or distributor resulting in financial losses.

These risks are taken into account in La Poste Group's Purchasing Charter, one of the main areas of which is to limit dependency on suppliers. This Charter applies to all subsidiaries majority owned by La Banque Postale. These risks are therefore considered within the scope of own operations for a majority of the Group's entities. In addition, the ESG risks associated with products and services are included in the Group's overall risk mapping, which feeds into its strategy.

These risks are gross risks, which can arise in the event of poorly managed dependency on suppliers. [S2_SBM_3_07]

Risks of forced labour and child labour

La Banque Postale and most of its subsidiaries operate mainly in the tertiary sector in France, a country in which the risks of forced labour, compulsory labour and child labour are generally considered low.

CNP Assurances operates in the tertiary sector in France, Europe and Latin America. Although CNP Assurances' activities are concentrated in regions in which the risks of forced labour and child labour are low, the Company remains vigilant on these issues, in accordance with regulations and international initiatives in force. [S2_SBM_3_04]

2.3.2.2.2 Applicable policies

La Banque Postale Group is actively committed to the workers in its upstream value chain, in order to limit the negative impacts and develop the positive impacts that it may have on this group of people. These commitments include various policies.

The **Responsible and Ethical Purchasing Charter** formalises the commitments of La Banque Postale Group to its customers, employees, society, the regions and the planet, with the aim of it being jointly implemented by its employees, suppliers and subcontractors. This charter requires La Banque Postale Group's service providers to comply with a certain number of principles, and to ensure that the same applies to their subcontractors.

The following commitments are defined by the Charter and enable La Banque Postale to contribute to establishing good working conditions and respect for fundamental rights throughout the value chain. Suppliers therefore undertake to:

- develop management and working conditions that respect human dignity and the rights of workers, and in particular comply with the National Interprofessional Agreement of 2 July 2008 on stress at work, in order to prevent psychosocial risks;
- refrain from any form of work that, due to the conditions in which it is carried out, may be detrimental to health or safety;
- comply with legislation on the management of working hours, remuneration, training and trade union rights;
- respect the principles of the Global Compact, the eight fundamental conventions of the ILO (International Labour Organization) and the ILO Declaration on Fundamental Principles and Rights at Work, aimed in particular at combating forced labour, child labour and discrimination;
- implement all means necessary to comply with the principles set out by the Charter throughout their design, supply and manufacturing chain of the products or services they offer to La Banque Postale, including in non-signatory countries of ILO conventions in which they may be required to work.

La Banque Postale Group's Responsible Purchasing Charter is appended to and systematically included in the product and service contracts signed between La Banque Postale and its suppliers, and is accessible *via* a link in the General Purchasing Conditions shown on the back of purchase orders.

The Responsible Purchasing Charter was approved by La Banque Postale Group's Executive Committee. Its implementation and monitoring are the responsibility of the Purchasing Department.

For several years, La Poste Group has forged close relationships with stakeholders on the subject of responsible purchasing. In particular, it is an active member of the *Observatoire des Achats Responsables* (ObsAR). As a subsidiary of La Poste Group, La Banque Postale's Responsible and Ethical Purchasing Charter is a continuation of this approach.

La Poste Group's **Responsible Purchasing policy** has been adopted as a reference document by La Banque Postale.

It is based on four pillars:

- Pillar 1: Enforce and promote human rights throughout supply chains;
- Pillar 2: Reduce the negative impact of purchases and suppliers on the environment and encourage positive impacts;
- Pillar 3: Promote social inclusion and contribute, through purchases, to the development of the regional economic and social fabric;
- Pillar 4: Consolidate responsible and ethical relationships with suppliers.

To promote inclusion through its purchases, La Poste Group is looking for suppliers committed to the integration of people who are isolated from employment and contributing to the development of the regions in which they operate, particularly in vulnerable regions. The Group is committed to facilitating access to its markets for the structures involved, and encourages its suppliers to have a positive impact in terms of inclusion in their region, through their subcontracting chain.

La Poste Group's Responsible Purchasing policy is approved by the Group's Executive Committee. Its implementation and monitoring are the responsibility of the Group's Purchasing Department. Within La Banque Postale, the Purchasing Department is responsible for implementing this policy and ensuring that it is operational.

According to the international standard ISO 204001, La Poste Group defines responsible purchasing as "a purchase with the most positive environmental, social and economic impacts possible over the entire life cycle".

The principles of this policy are reiterated and supplemented in La Banque Postale Group's body of documents and contractual agreements with each stakeholder. In addition, La Poste Group's Responsible Purchasing policy is available on its website.

La Poste Group's Responsible Purchasing policy and La Banque Postale Group's Responsible and Ethical Purchasing Charter apply to the entire value chain and to all of La Banque Postale Group's purchasing activities, whether in France or internationally.

The **supplier assessment procedure** is intended to determine the rules to be followed in order to assess the risks associated with La Banque Postale Group's suppliers, and to decide on any action to be taken, whether before entering into a contractual relationship or during the performance of the contract. The Group's suppliers must be assessed to cover the risks that the relationship with them may bring in terms of:

- Financial risks;
- Risks of corruption (French Sapin II law);
- Documentary risk (French Due diligence law);
- ESG risks (French Due diligence law).

Criteria such as the supplier's financial health, dependency rate, environmental compliance and Human Rights risks are assessed.

In addition, the **Purchasing Manual** is a document for use by the Purchasing Department which will be rolled out within the Group's Purchasing teams from 2025. It presents the organisation and describes the macro-processes to be applied by Purchasing staff for La Banque Postale Group purchases. In particular, it specifies the structure of the tender assessment grid. This multi-criteria assessment approach manages the risk of financial loss related to a failure in the assessment of suppliers, service providers or distributors, in a context of transition to a more equitable and inclusive society.

All of the documents applicable by La Banque Postale Group's Purchasing function can be consulted by all employees of the Purchasing Department on the private intranet. The purchasing procedure, operating methods and models required by specifiers to apply the purchasing process are available on the public intranet. [S2_MDR_P_01_06]

2.3.2.2.3 Commitments to workers in the upstream value chain

The relationship between La Banque Postale and its suppliers, who are employers of workers in the value chain, is framed by the Responsible and Ethical Purchasing Charter between La Banque Postale and its suppliers.

Through Pillar 4 of the Responsible Purchasing policy, La Banque Postale is committed to building responsible and ethical relationships with its suppliers. In this context, La Banque Postale has therefore set up:

- a "supplier relations" Mediator in 2023, who can intervene in any disputes, including when they concern situations affecting the well-being of suppliers' workers;
- an SME Officer in 2024, whose target is to support SMEs whose workers are particularly exposed to negative impacts concerning their working conditions, and whose job description is still being developed.

The Purchasing Department is also working to integrate these points relating to the working conditions of workers in the value chain, in a more informal manner, as part of the "supplier listening" system which has been set up. In this respect, questions will be addressed during the annual interviews held, with the firms listed by La Banque Postale in the intellectual services purchasing categories.

La Banque Postale provides a [website](#) to enable the supplier and its employees to confidentially report any serious infringement of fundamental rights. Through the contracts and General Purchasing Conditions, the supplier undertakes:

- to take note of this procedure and to inform its employees of the existence of this whistleblowing system to thereby report any serious infringements of fundamental rights of which it is personally aware;
- to work with La Banque Postale in the event that a report made by one of its employees reveals that a serious violation of fundamental rights may have occurred at the service provider's premises. CNP Assurances has also set up channels enabling workers in the upstream value chain to raise their concerns, and in particular to report negative impacts (through the whistleblowing system and mediation system for suppliers). **[S2.1.03]**

2.3.2.2.4 Human rights

Applicable framework agreements

La Poste Group has adopted a **Human Rights policy** that embodies its commitments to the protection, respect and promotion of human rights in all of its activities, in its value chain, both in France and internationally. Through the responsible purchasing charters of its entities, La Poste Group acts as a responsible and ethical customer, in a shared progress approach with its suppliers and partners. La Poste and its French subsidiaries regularly sign social agreements that promote human rights with representative trade unions.

As indicated in Pillar 1 of the Responsible Purchasing Policy, La Banque Postale, like its parent company, makes strong commitments to diversity and inclusion. As such, for several years it has been working closely and sharing information with non-governmental organisations and charities. It has signed several inter-professional charters on this subject, including:

- AFMD's (French Association of Diversity Managers) StOpE initiative in 2023, which commits La Banque Postale to act against everyday sexism;
- the *L'Autre Cercle* association's LGBT+ charter in 2024, which commits La Banque Postale Group to promoting the diversity of gender identities and sexual orientations.

Policies regarding Human rights

La Poste Group's Responsible Purchasing policy and La Banque Postale's Responsible and Ethical Purchasing Charter refer to the eight fundamental conventions of the ILO and the ten principles of the United Nations Global Compact relating to business and human rights.

La Poste Group's **Responsible Purchasing policy**, validated by La Banque Postale's Executive Committee in January 2023, is based on four pillars, the first of which formalises La Banque Postale's commitment to "enforce and promote fundamental rights throughout supply chains".

As such, this pillar covers the following SDGs:

- SDG 3: Ensure healthy lives and promote well-being for all at all ages;
- SDG 5: Achieve gender equality and empower all women and girls;
- SDG 8: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all;
- SDG 10: reduce inequalities between countries. **[S2.1.05]**

In addition, La Banque Postale's commitments in terms of its suppliers' respect for human rights are included in its **Responsible and Ethical Purchasing Charter**, which is published on the institutional website. The reciprocal commitments set out in this Charter are based in particular on the fundamental principles of the United Nations Global Compact and ILO conventions in the areas of human rights, labour law, respect for the environment and anti-corruption.

Through the Charter, La Banque Postale reiterates the role of its buyers in terms of compliance with the Code of Ethics and the application of the principles of fair treatment, transparency and independence for suppliers.

Beyond the commitments relating to human rights and compliance with international standards presented in paragraph 2.3.2.2 "Applicable policies", this Charter requires suppliers to:

- Promote working conditions within the company that respect workers' rights, in particular to prevent psychosocial risks;
- Not practise any form of discrimination and promote equal professional treatment;
- Comply with all anti-corruption laws, regulations and international standards;
- Make this charter enforceable against their own subcontractors and suppliers;
- Receive external auditors responsible for verifying compliance with these principles and implement corrective actions in the event of identified shortcomings. This process has been in place since the fourth quarter of 2024.
- Take appropriate measures, in consultation with the company concerned, in the event of a report of a situation contrary to respect for Human Rights on a postal site, against a member of staff or that of an external company. **[S2.1.01] [S2.1.02]**

In its appendix, the Charter cites Convention no. 29 on the fight against forced labour and Convention no. 182 on the fight against child labour, as well as the United Nations Global Compact principles no. 4 (the elimination of all forms of forced or compulsory labour) and no. 5 (the effective abolition of child labour).

The human rights commitments of suppliers are also set out in La Banque Postale's **contractual documents** and **purchase orders**, which include a "due diligence" clause. [S2.1.05] [S2.1.08]

CNP Assurances' policies are also aligned with the United Nations guidelines on Human Rights. Through its Responsible Purchasing policy, CNP Assurances (SA and its French subsidiaries) considers respect for fundamental rights and their promotion throughout supply chains as one of its priority issues. The Company is committed to working with suppliers who comply with these principles, including:

- guaranteeing decent working conditions that respect human rights;
- ensuring transparent management of remuneration and working hours;
- encouraging access to training;
- respecting the right to organise and freedom of association.

At the same time, CNP Assurances SA strives to prevent and mitigate the risks of human rights violations. It is committed to promoting professional equality and combating all forms of discrimination.

All of these principles are included in a Responsible Supplier Charter, intended for suppliers since December 2024. In January 2025, the Responsible Purchasing policy and the Responsible Supplier Charter were translated and rolled out in CNP Assurances' foreign subsidiaries. [S2.1.01] [S2.1.02]

Supplier assessment

In order to cover the risks that La Banque Postale incurs in the context of relations with its "prospective" suppliers and its "stock" suppliers, it assesses these based on the following aspects:

- Financial risk (obligation of the French Commercial Code with regard to the abuse of economic dependency as well as the risk of supplier, service provider or distributor default); Risk of corruption (French Sapin II law) and AML-CFT;
- Documentary risk (French Due diligence law);
- CSR risk (French Due diligence law).

The assessment of suppliers is carried out with respect to prospects, before entering into any relationship with a new supplier, and updated annually for all of La Banque Postale's suppliers (except for a few specific cases specified in the "Supplier assessment" procedure). This assessment is carried out in accordance with this procedure which the Purchasing Department has put in place.

The CSR compliance risk is monitored with two matters, one of which is human rights. These matters are considered in relation to the supplier's main purchasing segment, through the risk levels observed in this segment. These indicators, in line with the AFNOR framework and rated from 1 to 4 (4 being a highly exposed segment), are transcribed into three risk levels (high, medium and low) in the supplier compliance portfolio.

CSR compliance is assessed using the AFNOR mapping for the supplier's main business segment. This is an automatic transaction performed when the supplier is integrated into the portfolio. The supplier's CSR rating is included in the supplier mapping. If the supplier is able to present a CSR assessment or certification specific to its organisation, this is included in the mapping, without modifying the initial level of CSR risk.

To go further, La Banque Postale is currently deploying the e-compliance solution set up by La Poste Group, which uses the Ecovadis CSR rating tool, supplemented by a CSR maturity questionnaire sent to suppliers under contract, suppliers under purchase orders and direct invoicing suppliers. Depending on the response to this questionnaire, a documentary or on-site audit may be launched with the supplier.

In addition, the "due diligence" clause in supplier contracts and in the General Purchasing Conditions requires the supplier to identify the risk of infringement of fundamental rights. In the event that such a risk is proven, the supplier undertakes to implement appropriate actions to mitigate it. [S2.1.04]

No case of non-compliance with these principles has been reported to date in the upstream value chain of La Banque Postale Group. [S2.1.09]

Compliance with the Group's code of conduct

The Responsible and Ethical Purchasing Charter between La Banque Postale and its suppliers also commits La Banque Postale to building an ethical and high-quality relationship with its suppliers. La Banque Postale employees are invited to consult **the Group's code of conduct**, and undertake to comply with it.

The Charter also formalises the anti-corruption commitments expected from suppliers, in line with La Poste Group's "zero tolerance" policy. In terms of ethics, La Banque Postale's code of conduct, intended for all third parties with which it does business, is available on its website. This code of conduct is included in the appendix of the contracts signed between La Banque Postale and its suppliers. [S2.1.06]

The provisions of the code of conduct are in line with applicable ILO standards. [S2.1.07]

At **CNP Assurances**, the CapEthic code of conduct sets out the principles and ethical values which apply to its senior executives, employees and stakeholders. It can be consulted on the CNP Assurances institutional website, and serves as a shared reference throughout the Group. From January 2025, the Responsible Suppliers Charter is signed by the supplier when entering into a relationship with CNP Assurances. [S2.1.06]

2.3.2.2.5 Dialogue mechanisms

As part of its ESG approach and its “Responsible Purchasing” policy, La Banque Postale ensures that the views of workers in its upstream value chain are incorporated into its decisions and activities. Regular consultations with suppliers reveal a high level of satisfaction and the absence of significant feedback on working conditions or potential impacts. As a result, no change in decisions or activities has been necessary to date. However, La Banque Postale remains committed to maintaining an active dialogue with its suppliers to identify and address any future needs, in line with its commitments. [S2_2_01]

Dialogue with suppliers is initiated before entering into a relationship with a prospect, based on supplier compliance analysis. This dialogue continues throughout the relationship between La Banque Postale and its suppliers, through:

- a compliance analysis carried out annually on the entire portfolio of suppliers who invoiced at least €10,000 over the previous year;
- all the systems in place: mediation, supplier listening and whistleblowing system. [S2_2_03]

Mediation system

In 2023, La Banque Postale set up a “supplier relations” Mediator, which can be consulted by suppliers when a real or potential impact on workers in the value chain is identified. [S2_2_01]

La Banque Postale’s supplier Mediator, who is also La Poste Group’s supplier Mediator, can be contacted by suppliers at all times via a URL. The Mediator takes part in La Banque Postale’s Responsible Purchasing Committee (ARCOM), which meets every four months. [S2_2_03]

La Banque Postale’s Mediator is fully independent. It analyses disputes impartially, proposes out-of-court solutions and publishes an annual activity report detailing trends and recommendations to prevent and resolve conflicts. The “use of the Mediator” indicator is monitored monthly in the responsible purchasing dashboard, and no use has been identified to date. [S2_2_04]

Supplier listening system

La Banque Postale interacts with workers in the value chain through representatives appointed by the supplier’s company to represent it. With them, La Banque Postale’s Purchasing Department has set up a “supplier listening” system with project management and consulting intellectual services firms.

This system promotes proactive collaboration with suppliers. A pilot programme was launched to collect their feedback in 2023 through questionnaires and annual meetings. This project aimed to assess their CSR maturity and improve practices through regular discussions, relationship committees and monitoring of key indicators (KPIs).

Since October 2024, this system has included questions relating to the systems put in place by the supplier to enable its employees to benefit from good working conditions, as well as the implementation of a whistleblowing system. [S2_2_02]

Through these interviews, the Purchasing Department collects supplier feedback on the positive aspects of the relationship, but also on areas for improvement. This approach also enables it to find out about the systems put in place by its stakeholders on various topics, including working conditions and, since October 2024, the internal whistleblowing system.

The analysis of the results of this system can, as far as necessary, serve as the basis for an appropriate action plan depending on the nature of the identified areas for improvement. [S2_2_06]

The Purchasing Department launched a questionnaire in November 2024, in order to identify whether the same type of system is in place at its suppliers of intellectual services (project management/project management assistance/consulting categories). The questions relating to the implementation of such systems are also included in the third-party audit questionnaires, which have been in place since November 2024. [S2_3_03]

The “supplier listening” system is set up annually, with the panel of intellectual services suppliers in the project management/project management assistance/consulting categories. [S2_2_03]

As specified in the “Supplier Relations and Responsible Purchasing Charter” signed by La Banque Postale in 2022, La Banque Postale’s purchasing function is responsible for the Responsible Purchasing policy, and particularly for suppliers’ compliance with the provisions set out in the contracts and in the General Purchasing Conditions. The auditor who carried out the audit for the award of the “Supplier Relations and Responsible Purchasing” certification to La Banque Postale in September 2023 approved this point, and confirmed it during the follow-up audit carried out in June 2024. [S2_2_02]

2.3.2.2.6 Reporting and remediation process

In addition to the dialogue mechanisms with suppliers described above, workers in the upstream value chain also have access to the whistleblowing system set up by La Banque Postale. This system enables them to report their concerns directly to the Group. [S2_3_02]

La Banque Postale provides access to all of these channels, (whistleblowing and supplier mediator), to any worker in the value chain, as long as they can access digital equipment. This access is in fact available via the La Banque Postale institutional website. [S2_3_03]

Whistleblowing system

The whistleblowing system set up by La Banque Postale is designed to cover all workers in the upstream value chain, whether they are the Group’s suppliers or their workers. This system is described in paragraph 2.4.1.3.5 “Independence and accessibility of the whistleblowing system”. [S2_3_02]

Workers in the value chain are informed by their employer of the existence of the whistleblowing reporting platform. Through the contract signed with La Banque Postale or via La Banque Postale’s General Purchasing Conditions, suppliers commit to becoming familiar with La Banque Postale’s whistleblowing procedure, informing their employees working with La Banque Postale of the existence of this platform, and providing them with access to this whistleblowing system. [S2_3_05]

Reports are handled by La Banque Postale's Ethics Officer who, in the event of a report relating to or originating from a supplier or one of its employees, contacts the Purchasing Director to process the report. [S2.2.03] [S2.3.04]

With regard to value chain workers or their representatives, the operational processing of the report is the responsibility of the Purchasing function for which the highest role is that of the Purchasing Director. The Purchasing Director reports to the Managing Director in charge of Finance and Strategy, who is a member of La Banque Postale's Executive Board. [S2.2.04]

In addition, whistleblowers are protected from reprisals in accordance with regulations. [S2.3.06]

Given the nature of La Banque Postale's activities, the specific risks associated with certain categories of workers remain limited. This assessment is based on the absence of structural or operational factors that would particularly expose certain categories of workers, due to the type of activity and the geographical location of the Group's activities.

Thus, the current system is considered sufficient to meet the needs of all stakeholders. By offering a secure and accessible environment to all, this mechanism helps to strengthen collective due diligence and protect the fundamental rights of workers throughout the value chain. [S2.2.07]

Report handling process

If La Banque Postale is alerted by a third-party supplier that it has caused or contributed to a negative impact on one or more workers in the value chain, it will manage the remediation of this negative impact.

To date, La Banque Postale does not have a formal written process or specific cases dealt with in the past on the subject of remedy mechanisms as part of the management of human rights incidents, as the Group has identified no proven negative impact, only potential impacts.

However, La Banque Postale is aware of the importance of being prepared to manage such incidents should they occur, and undertakes, if necessary, to implement appropriate and proportionate remedies. To do so, it will take into account best practices in terms of managing impacts on human rights and respecting the expectations of the stakeholders concerned. Lastly, in order to guarantee their effectiveness, they will be accompanied by assessment mechanisms. These would include regular monitoring processes and feedback from the relevant stakeholders to verify that the solutions provided fully meet the identified needs and contribute effectively to resolving negative impacts. [S2.3.01]

Remediation of negative impacts in the subsidiaries

At **CNP Assurances**, all buyers are trained to identify negative impacts and report them to their manager, who contacts the appropriate person according to the topic and severity of the impact. These cases are then handled by Compliance, Human Resources, Procurement or the Legal Department, which determines the appropriate actions.

When an impact is reported, the topic is analysed according to the process of the chosen channel. In all cases, the persons authorised to handle reports contact the third party that submitted the report to keep them informed of the result of the analysis. Depending on the type of concern/dispute (compliance with human rights, harassment, discrimination, pressure from management, etc.), matters are addressed internally with the relevant contacts. Meetings with stakeholders are held to review the situation and attempt to remedy it. In certain cases, CNP Assurances may use an external mediator. It will then be necessary to ensure that once remediation has been carried out, this type of impact does not occur again.

LBP AM has put in place a procedure to take the necessary actions in the event of non-compliance with its Responsible Purchasing policy, and reserves the right to terminate relationships with suppliers who do not comply with its Responsible and Ethical Purchasing Charter.

In the event of a practice contrary to this Responsible and Ethical Purchasing Charter and contrary to human rights, respect for people or the environment, LBP AM reserves the right to inform the HALDE (French Equal Opportunities and Anti-Discrimination Commission), the CNIL (French Data Protection Commission) and any other relevant institution. [S2.3.01]

2.3.2.2.7 Targets

La Banque Postale's Responsible Purchasing approach is based on targets that are regularly monitored. These targets are set as part of a three-year action plan, taking into account the material impacts identified as well as the information collected from suppliers and their employees through the dialogue mechanisms in place.

Improvements resulting from the Company's performance are presented to the Responsible Purchasing Committee. They are recorded and formalised as part of the review of the action plan, in order to set the new targets for the three-year plan. [S2.5.01] [S2.5.02] [S2.5.03]

The results of the various supplier monitoring systems are also taken into account when setting these targets.

Contributing to the improvement of working conditions and the protection and inclusion of workers in the value chain of own operations and service activities

La Banque Postale has previously set measurable targets and does not plan to set new targets for these actions, because:

- CSR criteria are included in 100% of calls for tenders;
- All supplier workers are already covered by a charter guaranteeing healthy and safe working conditions.

The effectiveness of policies related to working conditions is assessed through supplier listening questionnaires and the analysis of service providers' CSR criteria.

La Banque Postale's targets is to maintain this level of excellence by ensuring:

- 100% of workers continue to be covered by a charter promoting healthy and safe working conditions.
- CSR criteria continue to be included in 100% of calls for tender.

As part of its Purchasing policy, LBP AM has set itself the following targets:

- 2024: at least 75% of eligible suppliers⁽¹⁾ have CSR approaches that promote respect for fundamental rights;
- 2025-2026: at least 80% of eligible suppliers have CSR approaches that promote respect for fundamental rights. [S2_MDR.T.01.13]

At present, La Banque Postale cannot set quantifiable targets for the use of the *Marché de l'Inclusion* (Inclusion Market) platform, as it has only recently been launched.

However, it aims to increase its use by buyers. Monitoring is already in place:

- Occasional feedback from stakeholders is shared;
- A quantitative indicator on the use of the platform is regularly monitored via the Purchasing Department's dashboard, presented at the meetings held every four months (ARCOM).

The target is to formalise precise quantitative monitoring of the rate of use of the platform while boosting the promotion of the Inclusion Market to buyers. [S2_MDR.T.14.19]

Negative impact in the event of poor working conditions (unequal remuneration, safety, etc.), forced labour and/or child labour within companies in the value chain of own operations and service activities

Measurable targets have been set:

- 100% of workers in the upstream value chain are covered by a charter guaranteeing compliance with the principles of the United Nations Global Compact and the ILO's fundamental conventions;
- No cases of forced labour or child labour were reported in 2024. The Responsible Purchasing Charter is signed and third-party audits ensure the effectiveness of this policy.

The target is to maintain this level of ambition by:

- ensuring 100% of workers continue to be covered by a charter which respects the principles of the Global Compact and the ILO conventions;
- maintaining the total absence of workers affected by forced labour or child labour. [S2_MDR.T.01.13]

Management of financial risks related to suppliers in a context of transition to a more equitable and inclusive society

La Banque Postale does not set additional measurable targets for these actions, because:

- 100% of suppliers invoicing more than €10,000 in year N-1 and 100% of prospects are subject to an annual financial risk analysis.

These risks, including the supplier dependency rate, are rigorously monitored. If the dependency threshold (25%) is exceeded, an action plan is systematically put in place. The target is to maintain this level of rigour by:

- ensuring that 100% of suppliers remain covered by an associated financial risk analysis.
- guaranteeing that these assessments are carried out each year. [S2_MDR.T.01.13]

2.3.2.2.8 Action plans and resources

Actions implemented

Process of defining actions

La Banque Postale Group deploys a structured strategy to ensure that matters related to workers in the value chain are taken into account, based on a number of practical and coordinated actions. Through this comprehensive and consistent approach, La Banque Postale demonstrates its commitment to integrating workers' rights and conditions into its responsible purchasing processes, by meeting regulatory requirements while promoting exemplary social practices.

The Group Purchasing Department is responsible for defining this strategy. It is developed based on the negative and positive impacts identified, but also on the information collected through the dialogue mechanisms presented above. If necessary, the information can be traced back to the members of the La Banque Postale Group Executive Board.

As part of its Responsible Purchasing approach, the Purchasing Department operates on a three-year action and improvement plan, which can be reviewed during the third year.

Each action, broken down into stages, is associated with a target and a deadline. The Purchasing Department is committed to implementing the action plan presented under the "Supplier Relations and Responsible Purchasing (RFAR)" certification.

This plan, initiated in 2022, developed in accordance with the requirements of the responsible purchasing label, was validated by the Purchasing Director and audited by an independent body as part of the certification process. It runs until the end of 2025. A new roadmap will be prepared in 2025 for the 2026-2029 period. [S2.4.05] [S2.4.06] [S2.4.07]

Raising supplier awareness of CSR issues

In addition, La Banque Postale strives to raise its suppliers' awareness of CSR issues by systematically communicating its Responsible Purchasing Charter, which contains specific commitments on respect for workers' rights and social standards. This awareness-raising process continues through training or specific contractual clauses. [S2_MDR.A.01.12] [S2.4.03] [S2.4.01]

Establishing CSR criteria in the selection of service providers and suppliers

Questionnaires included in calls for tender include social criteria in the supplier assessment grids (hardware, software and intellectual services). These criteria include, for example, the training of consultants in ethics and anti-corruption, details on the CO₂ consumption of hardware and software and equipment compatibility to promote its sustainability.

These criteria have a significant weighting, i.e. at least 10% of the overall score. This measure encourages suppliers to adopt responsible practices in line with the Group's expectations. [S2_MDR.A.01.12] [S2.4.03] [S2.4.01]

(1) Suppliers selected as part of a competition or call for tenders, excluding monopolies and semi-monopolies.

Implementation of supplier audits

A rigorous control system is also in place to assess the compliance of suppliers with social regulations and commitments made.

Internal and external audits are carried out, using tools such as Provigis and Indued, to verify documentary compliance, the management of social risks and the implementation of corrective actions when necessary. These audits prevent non-compliance while strengthening relationships of trust with upstream value chain partners.

La Banque Postale uses audit firms selected by La Poste to carry out third-party audits. These audits can be documentary or on-site and cover the themes of the fight against corruption and the duty of vigilance. Above all, this enables La Banque Postale to ensure compliance with the commitments made by suppliers when the Responsible and Ethical Purchasing Charter was signed.

The preparatory phase of the third-party audit system on anti-corruption and due diligence issues was completed in November 2024. From December 2024, audits will be carried out every year. [S2_MDR_A_01.12] [S2_4_01]

Creating an inclusive working environment

Since 2024, a system has been put in place to encourage La Banque Postale buyers to consult the Inclusion Market website when sourcing. The Inclusion Market is a tool bringing together disability and integration service providers across 150 purchasing categories.

This initiative applies to supplier selection operations, which make up La Banque Postale's upstream value chain in France.

The deployment of the Inclusion Market access system was both started and completed in 2024. [S2_MDR_A_01.12] [S2_4_03]

Initiatives to promote social inclusion

In a proactive approach, La Banque Postale is also developing initiatives to promote social inclusion. For example, it actively promotes inclusive purchasing by using dedicated platforms such as the Inclusion Market, which promotes suppliers committed to social inclusion or support for people with disabilities, for consultations relating to compatible purchasing categories.

These initiatives are part of a desire to maximise social opportunities and meet the expectations of internal and external stakeholders. Finally, dialogue with suppliers is central to La Banque Postale's strategy. [S2_MDR_A_01.12] [S2_4_03]

Raising awareness among Group employees

To disseminate ESG topics within the Group, regular meetings are held between Just Transition ambassadors and the Sustainability Department. In 2023 and 2024, awareness-raising was carried out on the Responsible Purchasing approach, aimed at informing all specifiers of the CSR criteria concerning workers in the upstream value chain, in addition to the Purchasing Department. [S2_MDR_A_01.12] [S2_4_03]

Introducing an SME Officer

La Banque Postale Group is also developing a project to facilitate SME access La Banque Postale's Purchasing contacts, with an SME Officer to boost its links with SMEs. This position will be filled in 2025, and the assignment sheet is being finalised. [S2_MDR_A_01.12] [S2_4_03]

Incidents of forced labour or child labour

The documentation on responsible purchasing was updated in 2022. In 2024, the General Purchasing Conditions included new clauses relating to due diligence. Links to the whistleblowing system and the Responsible Purchasing and Ethics Charter have also been included. In addition, awareness-raising was carried out among the entire Purchasing Department.

This is a potential negative impact that did not require solutions. No one was affected by this impact in 2024. [S2_MDR_A_01.12] [S2_4_01]

Remediation of actual material impacts

No actual negative impact was reported in 2024, including no case of practices which infringe upon human rights. As a result, La Banque Postale did not need to implement remedial action plans. [S2_4_02]

Managing risks related to workers in the upstream value chain

La Banque Postale plans to update its reference documents on the management of risks related to responsible purchasing in 2025. The procedure for assessing third parties and the Purchasing Manual will be improved and distributed to the relevant stakeholders.

At least once a year, the Purchasing Department meets its Executive Committee to present an analysis of the purchasing portfolio as well as the risk map.

First of all, a risk map was drawn up, specifically identifying the risks related to working conditions and supplier compliance. This map is accompanied by specific risk sheets, which are regularly updated, which include corrective action plans and priorities defined according to the criticality of the issues identified. These tools allow the Purchasing Department to focus its efforts on the most sensitive issues, while guaranteeing a proactive response to social factors. [S2_MDR_A_01.12] [S2_4_08]

Resources allocated

The internal functions of La Banque Postale that contribute to managing impacts are the Supplier Mediator, the Ethics Officer and the Purchasing Department.

La Banque Postale uses external firms to carry out third-party audits on the due diligence component. The budget allocated to these audits is €20,000 for 2024 and the provisional budget for 2025 is €100,000.

The supplier assessment questionnaire requires the Purchasing Department's existing internal resources, estimated at half a FTE in 2024 and half a FTE in 2025. [S2_MDR_A_01.12] [S2_4_12]

Monitoring the effectiveness of actions

Responsible purchasing performance monitoring is based on a structured framework that includes the participation of upstream value chain workers or their legitimate representatives.

Each action in the Responsible Purchasing action plan is monitored using specific indicators, compiled in a Responsible Purchasing dashboard. This dashboard brings together progress on key aspects such as working conditions, respect for human and social rights, and the environmental practices of suppliers.

The results of the monitoring are presented to the Responsible Purchasing Committee every four months.

In addition, each year, an external audit assesses the implementation of the planned actions, with direct consultations with employees or their representatives, within the framework of the Responsible Supplier Relations and Purchasing (RFAR) label. In September 2023, La Banque Postale obtained the RFAR label, based on the 20400 standard. This recognition reflects its commitment to a continuous improvement approach in terms of responsible purchasing.

Employee representatives are therefore involved through regular consultations that are shared within the Purchasing Committee. These discussions help to adjust priorities and ensure that concerns are addressed. In addition, the Company promotes constructive dialogue with workers and representatives through its mediation system, ensuring that suppliers are fully heard and any disputes are resolved. [S2_4_04] [S2_5_02]

Thanks to its structured approach and practical measures, La Banque Postale guarantees that its own practices do not cause or contribute to significant negative impacts. Relations with suppliers are governed by contracts that include specific clauses on compliance with employee rights, working conditions and personal data protection. These clauses require suppliers to comply with the regulations in force, specifying that La Banque Postale undertakes not to impose commercial or contractual conditions likely to have a negative impact on workers in the upstream value chain.

Internal and external audits as well as risk mapping are implemented as part of the continuous assessment of suppliers. These measures make it possible to identify any negative impacts related to working conditions. The whistleblowing system is also available to report any incident or concern. This system is governed by strict confidentiality and data protection guarantees. [S2_4_10]

Severe human rights incidents

No human rights issues or severe incidents related to its upstream value chain were reported by the workers in the value chain or by their legitimate representatives, regardless of the channel made available to them by La Banque Postale. [S2_4_11]

2.3.2.3 Workers in the value chain

2.3.2.3.1 Material IROs and links with strategy and business model

Scope

La Banque Postale considers that all workers in the value chain may be subject to material impacts, through the financed entities or projects. [S2_SBM_3_02]

As La Banque Postale Group's financing activities are mainly carried out by the subsidiaries CNP Assurances, LBP AM and Louvre Banque Privée, the ESRS points will mainly be covered through the lens of these entities.

Description of how impacts on workers in the value chain result from, and shape, the Company's strategy and business model

The social and environmental targets enshrined in the Group's Articles of Association constitute a real governance tool for La Banque Postale, taking into account its direct and indirect societal and environmental impacts, which are reflected in its offer policy.

La Banque Postale has also defined topical commitments in terms of biodiversity, climate and human rights, which feed into its approach with regard to its own operations as well as its Corporate and Investment Banking activities. It also develops policies to control risks and principles of intervention for sectors and activities identified as high-risk in terms of exposure to ESG issues.

La Banque Postale **therefore takes into consideration the actual and potential impacts on workers in the value chain of its portfolio companies. To do this, it assesses companies and issuers** using the Impact Weighting Factor and manages ESG controversies (for more information on the IWF, see focus point: *The Impact Weighting Factor (IWF)*).

These topics are taken into consideration but do not directly shape La Banque Postale's strategy and business model. [S2_SBM_3_11]

La Banque Postale does not identify any significant opportunities arising from the impact on workers in the value chain.

The risk of financial loss related to a failure in the assessment of the Group's partners (financed activities), in a context of transition to a fairer and more inclusive society, in particular in the event of a failure in the working conditions of the companies in the portfolio, is identified as material for La Banque Postale.

This risk arises from the fact that La Banque Postale's asset management activity is not limited to a single geographic area and is multi-sectoral.

This risk is identified as material in the risk map. [S2_SBM_3_12]

Risks of forced labour and child labour

The Group has an indirect exposure to forced labour and child labour in its financed activities, primarily through its asset management portfolios. By way of example, as a management company, LBP AM invests, through various instruments, in thousands of companies, themselves belonging to many sectors and geographies, which present specific human rights risks. The risks of human rights impacts related to investment activities, including risks related to workers in the value chains of the invested companies, are therefore multiple and of variable intensity, the main risk being that an invested company causes, contributes or is linked to a critical impact on human rights. Nevertheless, in 2023, LBP AM carried out an initial mapping exercise of salient human rights risks related to investment activities, based on the recommendations of the OECD and the United Nations on the application of the UNGP and the OECD Guidelines. This analysis was disclosed, specifying in particular the methodology used and the results obtained, and is available on the LBP AM institutional website. The most critical risk identified for workers in the downstream value chain is the risk of a violation of fundamental workers' rights. [S2_SBM_3_04]

Material impacts, risks and opportunities

The main negative impacts identified in the double materiality analysis are related to possible degraded working conditions, and situations of forced labour or child labour within companies in the credit/investment portfolio. [S2_SBM_3_05]

The main positive impacts identified in the double materiality analysis are related to the improvement of working conditions, diversity and inclusion within the companies in the investment portfolio through minimum requirements, training, encouraging the signing of charters etc. [S2_SBM_3_06]

The risk of financial loss related to a failure to assess the Group's partners (financed activities), and in particular a failure in the working conditions of the companies in the portfolio, was identified as material.

For LBP AM, the risk related to invested companies' human rights practices may result in an impact on these companies (financial, legal, reputational or operational) that may subsequently have an impact on the value of the investment. Conversely, good value chain management and incorporating human rights into the Company's operational policies and procedures can reduce ESG risk, or even increase the value of the invested issuers and companies.

Louvre Banque Privée could also suffer a reputational risk (with regard to its customers) and a risk of a decline in the valuation of shares in customer portfolios. This risk is moderate because they are most often liquid securities, which Louvre Banque Privée can sell quickly in the event of an identified breach. In addition, the investable scope (large European companies/listed companies) is less exposed to the risk of breach than unlisted or non-European companies. [S2_SBM_3_07]

In 2024, as part of its Responsible Financing and Investment Charter, La Banque Postale implemented a controversy management process. La Banque Postale is therefore committed to ensuring that its business customers or prospects are not subject to severe or repeated ESG controversies. Specifically, La Banque Postale includes human rights violations and violations of fundamental rights, including those relating to work, in its definition of severe ESG controversies. The UN Guiding Principles, the International Labour Organization Conventions on fundamental principles and rights at work and the OECD Guidelines for Multinational Enterprises serve as guiding frameworks. La Banque Postale uses this reference base to identify the groups of workers who may be exposed to a higher risk of harm. Therefore, La Banque Postale pays particular attention to child labour, forced labour, migrant labour, work in conflict zones and precarious work. Human rights and workers' rights are assured without direct interaction with the at-risk parties mentioned. [S2_SBM_3_08]

La Banque Postale recognises the vulnerability of certain groups of workers in the value chain and takes into account the impacts on vulnerable workers. However, La Banque Postale has no direct impact on the workers in the value chain of the companies in its portfolio. [S2_SBM_3_09]

2.3.2.3.2 Applicable policies

La Banque Postale's Responsible Financing and Investment Charter aims, among other things, to minimise and prevent the negative impacts of degraded working conditions and cases of forced labour or child labour in portfolio companies. This Charter describes the management of ESG controversies implemented by La Banque Postale, and serves as the main tool for detecting negative impacts in the event of poor working conditions, violations of human rights and workers' rights throughout the value chain of companies in the credit and investment portfolio, for all business sectors and regions.

In addition to dealing with controversies, La Banque Postale uses an exclusion list to pay particular attention to activities that are incompatible with the targets of sustainable development, health and well-being for all. For more information, see focus point: *La Banque Postale's Financing and Investment Charter*.

CNP Assurances relies on the lists drawn up by Freedom House and Transparency International to exclude more than 100 countries posing serious problems with regard to democracy, human rights and corruption. In addition, CNP Assurances excludes companies that do not comply with the fundamental principles of the United Nations Global Compact, or are involved in the production of tobacco or controversial and prohibited weapons such as cluster munitions and anti-personnel mines, or chemical or biological weapons.

LBP AM is subject to the implementation of the European Sustainable Finance Disclosure Regulation (SFDR). Human Rights issues are integrated into asset selection through minimum sustainable investment thresholds, established for Article 8 and Article 9 products. In order to ensure that an investment contributing to a sustainability target within the meaning of SFDR does no significant harm to any socially sustainable investment target, LBP AM has established a sustainability methodology ensuring systematic verification of the issuer's human rights practices, the issuer's exposure to risks of severe human rights impacts, and the issuer's exposure to severe human rights or environmental controversies. LBP AM may exclude companies for which there is a risk related to violations of its ethical standards. This standards-based exclusion policy is applied to all LBP AM open-ended funds, as well as to all or some of the dedicated funds or funds under discretionary management according to the choice of investors, therefore preventing and mitigating the risks of negative human rights impacts in connection with its investment activities.

The ESG Charter is the cornerstone of **Louvre Banque Privée's** human rights policy and reflects its adherence to international standards in favour of a responsible value chain. Louvre Banque Privée is committed to promoting respect for human rights throughout its downstream value chain. This commitment is based on a proactive approach aimed at:

- identifying serious controversies involving portfolio companies;
- identifying companies in violation of the ten principles of the United Nations Global Compact or the OECD Guidelines for Multinational Enterprises. [S2_MDR_P_01_06] [S2_1_04] [S2_1_05] [S2_1_08] [S2_2_05] [S2_4_05] [S2_4_08] [S2_4_10]

No case of non-compliance with the United Nations Guiding Principles on Business and Human Rights or the ILO Declaration involving workers in the downstream chain has been reported to date within La Banque Postale Group. [S2.1.09]

Human rights

La Poste Group has implemented a Human Rights policy that formalises its commitments to protect, respect and promote human rights in all of its activities and within its value chain, both in France and throughout the world. This policy therefore covers workers in the downstream value chain. In addition, the Human Rights policies of CNP Assurances and LBP AM are detailed in Section 2.3.3.2.1 "Applicable policies". [S2.1.01] [S2.1.02] [S2.1.03]

Compliance with international standards

In December 2023, La Banque Postale updated its Responsible Financing and Investment Charter. Through this Charter, La Banque Postale has set up a process for managing serious and/or repeated controversies. The Charter specifies that violations of human rights and fundamental rights related to work, in particular based on the benchmarks of the United Nations Guiding Principles, the International Labour Organization Conventions on fundamental rights at work and the OECD Guidelines for Multinational Enterprises, are considered serious controversies.

La Banque Postale Group's subsidiaries are also implementing policies:

- CNP Assurances joined the UN Global Compact in 2003, and is committed to respecting the Human and Citizen Rights defined in the Universal Declaration of Human Rights;
- LBP AM has a human rights risk map and an exclusion policy;
- Louvre Banque Privée invests exclusively in France and Europe in order to reduce risk exposure;

La Banque Postale uses this reference base to identify the groups of workers who may be exposed to a higher risk of harm. Therefore, La Banque Postale pays particular attention to child labour, forced labour, migrant labour, work in conflict zones and precarious work. [S2.1.05] [S2.1.08]

2.3.2.3.3 Dialogue mechanisms

To date, La Banque Postale Group does not interact directly with workers in the value chain of its financed activities.

This is due to the diversity of investments made in thousands of companies operating in various sectors and geographies. Consequently, the human rights impacts related to these investment activities, including the risks for the workers of the invested companies, differ in nature and intensity. This complexity does not make it possible, at this stage, to set up a global interaction system adapted to all these workers. [S2.2.08]

2.3.2.3.4 Reporting and remediation process

The general approach to preventing negative impacts on workers in the value chain is mainly relevant to LBP AM. However, according to the OECD analysis⁽¹⁾, investors, even those holding minority stakes, may be directly linked to the negative human rights impacts caused by the invested companies, due to their shareholding or management of shares in said companies. In other words, in the majority of cases, the impacts of a portfolio in terms of human rights are generally "direct links" with the operations, products or services of the invested companies.

Consequently, within the meaning of the OECD Guidelines, investors are expected to take into account the risks associated with the conduct of the invested companies throughout the investment process and to provide incentives to the companies in which they invest to prevent or mitigate negative impacts. The responsibility for remedying the impacts lies with the companies that caused or contributed to the negative impact.

LBP AM uses its sphere of "influence" with companies to allow or support a remedy in the event of an actual or potential material impact, in accordance with its Human Rights policy as described in Section 2.3.3.2.1 "Applicable policies". [S2.3.01] [S2.4.07]

As a financial institution, La Banque Postale Group does not interact directly with workers in its financed activities. The relationship with these workers is therefore indirect, via the entities receiving the financing. In the absence of direct dialogue, La Banque Postale relies on the reports and commitments of the financed entities to meet this requirement. [S2.3.02] [S2.3.03] [S2.3.04] [S2.3.05]

In addition, policies are in place to prevent reprisals against employees of financed entities who use the Group's channels to raise their concerns or needs, and are detailed in Section 2.4.1.3.5 "Independence and accessibility of the whistleblowing system". [S2.3.06]

(1) OECD Guidelines for Multinational Enterprises

2.3.2.3.5 Action plans and resources

Measures and actions implemented

La Banque Postale Group as a whole implements ambitious and consistent policies to prevent, mitigate and remedy negative impacts on human rights, based on approaches adapted to its various entities. These efforts, although complementary, are adapted to the specificities of the activities of each of the subsidiaries.

For the entire La Banque Postale Group, a key cross-functional initiative is employee awareness-raising. In order to minimise and prevent the negative impacts of degraded working conditions, forced labour or child labour in the portfolio companies, La Banque Postale has designed and rolled out in 2024 an e-learning training module dedicated to human rights. This training, accessible to all employees, aims to strengthen their knowledge of fundamental human rights and specific issues such as how to combat forced labour and child labour.

La Banque Postale's subsidiaries have put in place a framework that promotes the prevention of negative impacts on the human rights of workers in the downstream value chain, which is adapted to their activity.

CNP Assurances

With regard to the shares and bonds held directly by CNP Assurances SA and its French subsidiaries, the selection of assets takes human rights matters into account by looking at the ESG ratings of companies. The ESG rating of companies and issuers is based on the GREaT methodology developed by LBP AM. This approach also looks at sustainable management of resources. Two social criteria are prioritised:

- Working conditions: ensuring that employees, subcontractors and suppliers work in good health and safety conditions;
- Human rights: ensuring that trade union freedoms and the fundamental human rights of employees, subcontractors and suppliers are respected.

LBP AM

As a subsidiary specialising in asset management, LBP AM translates these commitments through targeted practices and robust methodologies.

LBP AM's Human Rights policy is in line with international standards and European regulatory requirements, such as the SFDR, and is based on several areas:

- integration of human rights in asset management: risks relating to value chain workers are integrated into the analysis, selection and monitoring of assets using SRI rating tools. These tools assess issuers on their ability to prevent, mitigate and remedy severe human rights impacts.
- sustainability analysis methodology: LBP AM applies a methodology that systematically verifies that issuers respect human rights and are not associated with serious controversies. This methodology is aligned with the minimum sustainable investment thresholds for products classified in Article 8 and Article 9 of the SFDR.

- exclusion policy: LBP AM excludes companies associated with serious violations of fundamental ethical standards, with an extended application to its open-ended funds and, according to investors, to dedicated funds or mandates.
- shareholder engagement: LBP AM actively communicates with invested companies to encourage them to strengthen their human rights due diligence practices, in accordance with the principles of the United Nations Global Compact, the UNGP and the OECD Guidelines.

Louvre Banque Privée

For its part, Louvre Banque Privée adapts these commitments to the specific nature of its activities, primarily by integrating a strengthened qualitative analysis within its operational framework. Louvre Banque Privée relies on a framework designed to manage the material impacts, risks and opportunities related to workers in the value chain. This framework is based on:

- the use of ESG data providers to identify serious controversies and human rights violations.
- a team of internal ESG contacts (for qualitative analysis). [S2_MDR_A_01.12] [S2_4_01]

Monitoring the effectiveness of actions

The exclusion and engagement actions provided for by the LBP AM's Human Rights policy are primarily implemented through two SRI Committees:

- The GREaT Committee, which steers the cross-functional deployment of engagement and exclusion policies and decides on the implementation of the various components of the exclusion policy, in particular decision-making relating to the LBP AM's Standards policy. The GREaT Committee monitors issuers on the standards and exclusion watchlist and may, in the event of positive or negative changes, adopt escalation or de-escalation measures with the issuer;
- The ESG Committee, which brings together all members of the asset management, the SRI Solutions and the fundamental analysis teams on a weekly basis during which the following are carried out: awareness-raising and monitoring of trends, risks, salient topics and companies' human rights development;
- Prioritising and organising enhanced due diligence or engagement, in accordance with the LBP AM's Human Rights policy.

In addition to these committees, LBP AM relies on a set of tools and procedures to monitor the effectiveness of its actions. Among them, its proprietary SRI rating methodologies, which make it possible to incorporate major human rights risks into its analysis and selection of assets. These methodologies are directly integrated into the decision-making tools used by the management teams. These tools make it possible to identify, select and monitor companies and their ability to prevent, mitigate and remedy the impacts and risks of human rights impacts.

Ratings are included in the management of SRI funds according to two contribution methodologies to stock selection. These methods tend to disqualify the issuers most exposed to high-impact human rights risks, and favour those that best control their exposure to these risks:

- **Main Adverse Impacts:** The SFDR Delegated Regulation defines a list of indicators to measure the negative impacts of an issuer on environmental and social sustainability factors, known as "IAP indicators". Among these, indicators relate to respect for Human Rights and fundamental ethical standards.
- **Controversies monitoring:** Data related to data supplier controversies makes it possible to monitor issuers, in particular their ability to prevent and remedy impacts.
- **Standards watchlist:** The standards watchlist primarily includes issuers analysed by the GREaT Committee and marked for monitoring. This list allows for continuous monitoring of the issuer and the measures adopted by the GREaT Committee, as well as their effectiveness, particularly in the event of engagement with the Company. [S2_4_04]

Severe human rights incidents

As part of the implementation of its standards-based exclusion policy, in 2024, LBP AM excluded three companies due to serious violations of the fundamental rights of workers in the supply chains of the companies studied.

As part of the implementation of its engagement policy, LBP AM submitted written questions to the General Meetings of two companies, following engagement that did not sufficiently demonstrate that effective changes had been made to the policies and practices of the target

companies. In both cases, some of the issues were related to the respect of fundamental workers' rights, particularly in supply chains. Following a serious controversy affecting a group of companies in the personal care products sector, LBP AM launched an engagement campaign with the invested companies covered by this human rights risk. Several individual issuers were also subject to more robust engagement campaigns during 2024, in particular companies in the automotive and automotive components sector, to reduce the risk of severe human rights impacts on supply chains. [S2_4_11]

Resources allocated

Remediating La Banque Postale's negative impacts linked to the activities of its portfolio companies involves dialogue with customers. If a negative impact is detected through the controversy management process, La Banque Postale may ask the business customer to remedy it quickly. La Banque Postale provides a dedicated team within the Sustainability Department to put its controversy management process into operation. [S2_4_12]

2.3.2.3.6 Targets

La Banque Postale has not defined a measurable target related to the negative impacts of poor working conditions, forced labour or child labour within the portfolio companies. This would require adapted methodologies, and access to high-quality data, which are not currently available.

Nevertheless, La Banque Postale monitors the handling of controversies, and then adapts the operational implementation of the Responsible Financing and Investment Charter where necessary. [S2_MDR_T_01_13]

2.3.3 Committing to the regions and communities affected by our activities [S3]

2.3.3.1 Material IROs and links with strategy and business model

Scope

The communities likely to be affected by significant impacts related to the activity of the Group and its subsidiaries or projects financed through investment or credit activities are presented in the information published under the ESRs 2 heading. [S3_SBM_3_01]

The communities likely to be affected by significant impacts are:

- for its own operations, people close to the network, as part of La Banque Postale Group's extensive regional network and those covered by societal initiatives;
- for the financed activities, the communities, including indigenous peoples, downstream of La Banque Postale Group's value chain, which could be affected by the activity of the companies in the investment portfolio. [S3_SBM_3_02] [S3_SBM_3_03]

Material impacts, risks and opportunities

Negative impacts

The material negative impacts are related to investments in sectors with critical levels of risk, in particular in connection with operations or materials from conflict zones, risks of invasion of privacy and freedom of expression, environmental pollution, as well as impacts on health and Human Rights.

These impacts cover La Banque Postale, CNP Assurances, LBP AM and Louvre Banque Privée, which have multi-sectoral investment strategies that are diversified in terms of geographic area. The associated portfolios may therefore include companies with activities in these high-risk sectors. [S3_SBM_3_04]

Local and indigenous communities exposed to these sectors are particularly vulnerable, especially in the agri-food, metals and mining industries, as well as energy and utilities (water, gas, renewable energies). The impacts are all the more severe for populations with limited access to remedies, such as indigenous populations, women, children, displaced populations or those living in conflict or high-risk areas.

In order to prevent and minimise these negative impacts, La Banque Postale, CNP Assurances, LBP AM and Louvre Banque Privée have adopted responsible investment strategies. [S3_SBM_3_07]

Positive impacts

La Banque Postale Group's strategic priorities are aligned with those of the Caisse des Dépôts Group to which it belongs. Caisse des Dépôts Group is a major public developer of the French regions and a long-standing financier of the local public sector. It has three main targets: economic development & sovereignty (companies of all sizes, infrastructure), territorial cohesion and habitat, social cohesion and ecological transformation.

La Banque Postale's activities have positive impacts on communities. The Group's extensive network ensures a presence in the regions, providing banking access to citizens, including in rural or underserved areas.

La Banque Postale's financing activities also help support the activities of local authorities and associations through dedicated offers. La Banque Postale thus participates in the development of local projects, such as the renovation of public infrastructure, the development of local services, ecological and social initiatives and associative actions in favour of inclusion and solidarity.

Lastly, societal sponsorship also generates positive impacts. For example, the L'Envol program, run by La Banque Postale, supports the education of young people from low-income backgrounds. In addition, initiatives such as solidarity team building or the Déclic project aim to raise employee awareness, engage them in societal projects, and reinforce the Group's impact. For more information on La Banque Postale Group's actions and positive impacts, refer to Section 2.3.3.3 "Commitments to affected communities to generate a positive impact". [S3_SBM_3_05]

Risks and opportunities

The topic related to the affected communities is non-material in La Banque Postale Group's financial materiality analysis. Indeed, no significant risks or opportunities for La Banque Postale have been identified in relation to the affected communities. [S3_SBM_3_06]

No significant risk or opportunity was identified for a specific group. [S3_SBM_3_08]

2.3.3.2 Commitments to communities negatively affected by financed activities

This section reviews the negative impacts on the financed activities, particularly in relation to investments in sectors with critical levels of risk: operations and materials from conflict zones, breaches of privacy and freedom of expression, environmental pollution, impacts on health, Human Rights, etc.

2.3.3.2.1 Applicable policies

Responsible Financing and Investment Charter

La Banque Postale's Responsible Financing and Investment Charter sets out the fundamental principles that guide the Bank's lending and investment decisions. By excluding the financing of companies involved in sensitive sectors or in serious or repeated controversies on environmental, social and governance issues, it aims to protect affected communities from the negative impacts of these activities. In addition, it excludes the contribution of capital to countries where fundamental rights and international standards are not respected. For more information, see focus point: *La Banque Postale's Financing and Investment Charter*.

Human Rights Policy LBP AM

LBP AM's Human Rights policy is detailed in Section 2.3.4.3 "Dialogue mechanisms with customers and end-users". [S3_MDR_P_01.06] [S3_1.01] [S3_1.02] [S3_1.03]

CNP Assurances Human Rights policy

As part of its due diligence process, CNP Assurances has set up a mapping of the impacts in terms of infringement of human rights and fundamental freedoms, the health and safety of people and the environment as well as systems to control its impacts on its own activities, those of its suppliers and its investments.

Alignment with relevant internationally recognised instruments

As a subsidiary of La Poste Group and a signatory to the UN Global Compact since 2006, La Banque Postale upholds the principles set forth by the Global Compact on human rights, labour standards, environmental protection and anti-corruption. It undertakes to comply with the legal texts governing its activities as well as the international agreements signed by France. In this context, it considers the United Nations Guiding Principles, the ILO Conventions and the OECD Guidelines as a reference base.

The LBP AM Group is committed to respecting internationally recognised human rights in its investment activities, in accordance with the OECD Guidelines for Multinational Enterprises, the United Nations Guiding Principles on Business and Human Rights and the Ten Principles of the United Nations Global Compact. The Group's Human Rights policy mentioned above specifies and operationally translates this commitment to compliance with international standards. [S3_1.06]

No cases of non-compliance with the United Nations Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work or the OECD Guidelines for Multinational Enterprises covering the affected communities were identified in 2024. [S3_1.07]

2.3.3.2.2 Targets

La Banque Postale has not established targets to manage the material negative impacts of the communities affected by the financed activities. To date, it does not plan to set a target, as it has no direct interaction with the communities negatively affected by its financing and investments. Nevertheless, the handling of controversies is assured, which allows the impact and implementation of the Responsible Financing and Investment Charter to be scrutinised. [S3_MDR_T_14.19]

2.3.3.2.3 Dialogue mechanisms

La Banque Postale maintains regular dialogue with local authorities to better understand their challenges and adapt its solutions. The La Poste network is on the ground daily to reinforce this dialogue. The managers of the dedicated local public sector business centres and the local La Poste managers often play a bridging role between local authorities and La Banque Postale, providing:

- rapid identification of the specific needs of the regions, whether in terms of investment in public facilities, energy renovation projects or support for local economic activity;
- a close relationship which is essential to establishing lasting trust with local elected representatives and economic players.

La Banque Postale Group incorporates dialogue with stakeholders into its responsible investment strategy, drawing on the influence exerted by LBP AM on the invested companies. This approach makes it possible to address human rights issues and promote corrective actions when negative impacts are identified. However, due to the range of investments made – through various instruments and in thousands of companies operating in various sectors and regions – at this stage, there is no systematic and direct interaction with all communities potentially affected by these activities. [S3_2.08]

General approach and remediation procedures: influence with financed entities

LBP AM uses its "sphere of influence" with the companies that have been examined within the framework of the standards-based policy and for which it has been determined that engagement would be the best lever for mitigating and remedying the negative impacts related to the investment activities, as well as companies that have been subject to a review and an engagement decision by the ESG Committee.

There are multiple targets:

- assess the company's response to stopping and remedying the negative human rights impact;
- clarify LBP AM's expectations in terms of stopping and remedying impacts, and monitor the measures implemented by the company in this respect;
- support the company in the process of stopping and remedying the impacts.

In addition, the companies covered by engagement processes are expected to:

- develop an action plan to mitigate and/or put an end to the negative impacts that they have caused, to which they have contributed or to which they are directly linked through a commercial relationship;
- strive to remedy the negative human rights impacts that they may have caused or to which they may have contributed;
- actively consult affected stakeholders, or any relevant stakeholders, and have the ability to demonstrate that their action plan has been developed taking into account these stakeholders' views, concerns and needs;

- not immediately sever a business relationship in the event of a remediable negative impact, but instead seek to work with that contact towards mitigating the impact;
- strengthen their due diligence measures to prevent this impact from recurring.

LBP AM assesses the effectiveness of these approaches by monitoring the results of engagement campaigns and measuring the progress of the companies involved in the areas identified. [S3_3_10]

Channels for reporting concerns

LBP AM expects the invested companies to put in place suitable, effective and culturally appropriate whistleblowing systems to enable stakeholders, including affected communities, to report their concerns. These requirements are integrated into the engagement policies and monitored as part of the interactions with the companies in question.

For example, LBP AM has included guidelines in its oil and gas sector policy requiring companies to set up specific alert mechanisms for affected local communities. [S3_3_11]

Encouraging channels in business relationships

LBP AM encourages invested companies to establish or improve their alert and remediation mechanisms by prioritizing at-risk sectors. These expectations are discussed during direct engagements in which LBP AM assesses the implementation of due diligence by companies and their ability to meet the expectations of local communities. [S3_3_12]

Monitoring and evaluation of channel effectiveness

LBP AM monitors issues raised by engagement campaigns and stakeholder feedback through:

- analysis of the responses of the invested companies to the engagement process and the actions implemented to remedy the identified impacts;
- the publication of an annual engagement report detailing the progress made and the best practices identified.

External stakeholders, including representatives of local communities and sector experts, are regularly consulted to ensure that the mechanisms in place effectively meet users' expectations. [S3_3_13]

As a financial institution, La Banque Postale does not interact directly with the communities affected by the projects or activities financed. The relationship with these communities is mainly indirect, *via* the entities receiving the financing. In the absence of direct dialogue, La Banque Postale relies on the reports and commitments of the financed entities to meet this requirement. [S3_3_14]

In addition, policies are in place to prevent reprisals against people who use the channels to raise their concerns or needs, and are detailed in the Section 2.4.1.3.5 "Independence and accessibility of the whistleblowing system". [S3_3_15]

2.3.3.2.4 Action plans and resources

Actions implemented

According to the OECD, investors may be linked to the negative impacts on Human Rights caused by the invested companies. These impacts are generally "direct links" rather than causes or contributions. Investors are therefore expected to consider the risks associated with the invested companies during the investment process, and use their influence to encourage these companies to prevent or mitigate negative impacts. The responsibility for remediation therefore lies with the responsible companies; however, the Group engages directly with these entities to influence them.

Controversy monitoring

As part of its Responsible Financing and Investment Charter, La Banque Postale SA undertakes to verify, **before investing in** or financing a company, that the company is not involved in an ESG controversy, based on an exclusion list validated by the Controversies and Exclusion Committee. This Charter specifies that violations of human rights and fundamental rights related to work, in particular under the United Nations Guiding Principles, the International Labour Organization Conventions on fundamental rights at work, and the OECD Guidelines for Multinational Enterprises, are considered serious controversies. Controversies of this type that may potentially be detected concerning the companies in the portfolio can vary greatly in scope and nature, given La Banque Postale's exposure to a multiplicity of sectors and geographical positions.

In addition, as part of the **monitoring of financing** and investments, La Banque Postale undertakes to regularly check for potential controversies. In the event of serious and/or repeated controversies, the company in question may be excluded from future investments and existing investments. For financing activities related to existing customers, La Banque Postale may decide to no longer carry out new transactions with the customer in question and place its commercial relations with that customer under surveillance.

With regard to the shares and bonds held directly by CNP Assurances SA and its French subsidiaries, the selection of assets takes into account Human Rights issues through the ESG ratings of companies carried out by the Ostrum AM teams. The ESG rating of companies and issuers is based on the GREaT methodology, enabling a pragmatic and differentiating analysis of companies with regard to sustainable development issues (see focus point: *The GREaT methodology*). This methodology measures commitment, responsibility, opportunities and risks for companies based on four pillars, including the sustainable management of resources. This pillar is studied according to four criteria, two of which are social:

- working conditions: ensuring that employees, subcontractors and suppliers work in good health and safety conditions;
- human rights: ensuring that trade union freedoms and the fundamental human rights of employees, subcontractors and suppliers are respected.

Implementation of the LBP AM Human Rights Policy

When an **actual material impact** is identified, LBP AM implements **specific measures** to support or enable remedies. Thus, when material impacts are identified, LBP AM consults local experts, representatives of affected communities or specific stakeholders to assess the need for repairs. For example, as part of an engagement campaign related to operations in conflict areas, LBP AM worked with regional experts and directly affected people to identify reparation expectations.

LBP AM uses its influence to encourage the companies involved to put in place effective mechanisms to repair the damage caused. This includes: the implementation of **action plans to address negative impacts**, developed in consultation with the affected parties, the strengthening of company policies and practices to prevent the recurrence of impacts, and the monitoring of the steps taken by companies to ensure that the remedy is effective and aligned with the identified needs.

This approach is part of LBP AM's proactive influence approach to identify, mitigate and remedy negative Human Rights impacts based on the integration of Human Rights in the analysis, selection and monitoring of assets, the implementation of an exclusion policy and increased engagement with at-risk companies. For more information on this approach, see paragraph 2.3.2.2.4 "Human Rights".

In addition to these commitments, LBP AM participates in a set of initiatives directly related to the risks of Human Rights impacts of the companies' products and services on their customers and end-users. Among its initiatives are the Coalition for Ethical AI, the investor initiative in collaboration with Ranking Digital Rights, the initiative led by the Access to Medicine Foundation, and the at-risk chemicals investor initiative organised by ChemSec. [S3.MDR.A.01.12] [S3.1.05] [S3.4.01] [S3.4.02]

Monitoring the effectiveness of actions

The exclusion and engagement actions provided for by the LBP AM's Human Rights policy are primarily implemented through two SRI Committees:

- the GREaT Committee (see focus point: *The GREaT methodology*), which steers the cross-functional deployment of engagement and exclusion policies;
- the ESG Committee, which brings together all members of the asset management, SRI Solutions and fundamental analysis teams on a weekly basis, during which the following are carried out: awareness-raising and monitoring of trends, risks, salient topics and companies' Human Rights development. [S3.4.04]

LBP AM constantly monitors the invested companies in order to identify specific actual or potential negative impacts on the affected communities. LBP AM therefore identifies and may exclude issuers presenting critical risks of serious and/or repeated violations, and/or those subject to serious, proven and repeated controversies of the principles of the UN Global Compact, the Guiding Principles

on Business and Human Rights or the OECD Guidelines on Multinational Enterprises. This monitoring is carried out by the GREaT Committee, which bases its decisions on an assessment of:

- the severity of the impact or risks of the impact on people, the environment or the principles of good governance;
- the link between the impact and the company analysed (cause, contribution, direct link);
- prevention, cessation and remediation measures implemented by the company;
- the likelihood of future violations of standards by the company.

The final decision adopted by the GREaT Committee must aim, as far as possible, to reduce and mitigate the risks of future violations of the standards. [S3.4.05]

LBP AM has put in place a structured approach to prevent, mitigate and remedy specific material impacts on affected communities, in line with international standards such as the United Nations Guiding Principles, the OECD Guiding Principles and the Ten Principles of the United Nations Global Compact. This approach includes:

- integration of Human Rights issues into investment processes: Human Rights are integrated into the analysis, selection and monitoring of financial assets *via* an investment sustainability analysis methodology which incorporates human rights and fundamental freedoms. In order to ensure that an investment contributing to a sustainability target within the meaning of SFDR does not cause significant harm to any socially sustainable investment target, LBP AM has established a sustainability methodology ensuring systematic verification of the issuer's human rights practices, the issuer's exposure to risks of severe human rights impacts, and the issuer's exposure to severe Human Rights or environmental controversies. Human Rights are also taken into account in the GREaT methodology rolled out by LBP AM (see focus point: *The GREaT methodology*);
- the implementation of an exclusion policy related to violations of human rights and fundamental ethical standards: LBP AM may exclude companies for which there is a risk that they cause, contribute or are linked to particularly serious violations of their fundamental ethical standards;
- the implementation of an engagement policy focused on the prevention, mitigation and remedy of negative human rights impacts: LBP AM undertakes to conduct active engagement with the invested companies to encourage and support them in the implementation of Human Rights due diligence and managing their impact on people. It therefore conducts regular and consistent bilateral or collective dialogue with companies. It aims in particular to strengthen understanding of Human Rights issues, to warn of systemic risks that companies may face and to promote compliance with the ten principles of the United Nations Global Compact, the UNGP and the OECD Guidelines. [S3.4.06]

As an asset management company, LBP AM does not interact directly with the communities affected by the activities of the companies in which it invests. However, it is committed to using its sphere of influence with the invested companies to support the remediation of significant negative human rights impacts, in accordance with the OECD Guidelines and the United Nations Guiding Principles on Business and Human Rights (UNGP).

As explained above, LBP AM requires invested companies to **consult affected stakeholders** in an appropriate and effective manner in order to understand their needs and expectations, **set up whistleblowing and complaints systems** which are accessible and culturally appropriate to enable communities to report impacts, and demonstrate that recourse mechanisms are aligned with international standards, including the UN Guiding Principles and the OECD Guidelines.

In particular, LBP AM has required companies operating in sensitive areas to implement mechanisms adapted to the local communities affected. As part of engagement campaigns related to operations in conflict areas, LBP AM asked the companies involved to actively consult the affected parties and demonstrate the effectiveness of their recourse mechanisms. [S3_4_07] [S3_4_10]

Resources allocated

LBP AM devotes significant and structured resources to integrating Human Rights issues, particularly those involving affected communities, into its investment activities. This commitment is based on clear processes, dedicated teams and well-defined governance aimed at preventing, mitigating and remedying potential negative impacts.

- Dedicated team and specialised expertise:
 - the Human Rights policy is developed and implemented by the SRI Solutions team, composed of ten experts, including a lead expert specifically in charge of Human Rights. This team works in coordination with the members of the management, fundamental analysis and commercial teams, as well as with the Risk Department and CSR managers.
- Tools and methodologies:
 - LBP AM uses SRI rating tools incorporating salient human rights issues to analyse, select and monitor assets,
 - guides relating to risk mapping and the salient issues identified are made available to employees to help them better understand Human Rights risks and incorporate them into their investment decisions. [S3_4_12]

No cases of serious Human Rights incidents concerning the affected communities were reported in 2024. [S3_4_11]

2.3.3.3 Commitments to affected communities to generate a positive impact

This section reviews the positive impact of the La Banque Postale Group in connection with its societal sponsorship actions, its regional network and the financing of local authorities. This positive impact is generated:

- on the financed activities: La Banque Postale plays a key role in the financing of local authorities and associations, and thus contributes to developing the regions and creating social value;
- on its own operations and service activities: La Banque Postale acts directly through societal sponsorship initiatives and its dense regional network, thus using its presence throughout the country to provide support to local communities. [S3_4_03]

2.3.3.3.1 Financing of local authorities, associations and the local economic sector

La Banque Postale, through the Corporate and Local Development Banking (CLDB), implements strategic initiatives and concrete actions aimed at maximising positive impacts for the affected communities and is committed to local authorities and associations.

La Banque Postale maintains its ties with local public-sector players, notably through its Local Finance Steering Committee, composed of elected representatives, former members of parliament and experts. This Committee has a forward-looking, observatory and advisory role: risk assessment, monitoring, proposing new services, etc.

La Banque Postale remains a true partner to the social and solidarity economy: one in every ten associations is a customer of La Banque Postale. Its advisors work in business centres throughout the territory, supporting 4,000 of the main associations, which are foundations and associations in the health sector, educational institutions, charitable associations and social-purpose organisations.

Launched in 2020, La Banque Postale's "advance on subsidy" offer allows associations to benefit from advance cash flow while waiting for the actual payment by the national public authorities. Thanks to this offer, they can continue to develop, finance their needs and support their public interest missions.

In 2022, La Banque Postale innovated by developing green and social solutions supporting projects related to responsible real estate or promoting access to essential life services such as health, education or housing through accessible social loans of €50,000 and more.

In 2023, to meet the challenge of donations, a major issue for the sector, La Banque Postale has developed a new "donation collection" offer to boost associations' online collections through a comprehensive process for the donor.

It has forged more than a hundred partnerships with associations or foundations recognised as being in the public interest, such as the French Red Cross or the Hospitals Foundation, to support them in their actions.

Aware of the challenges of the sector, La Banque Postale has set itself the goal of supporting associations in their efforts towards a just and sustainable transition. [S3_4_03]

Financing of local authorities: supporting regional development

La Banque Postale has a 25% market share in financing awarded to French local authorities.

La Banque Postale provides a comprehensive offering, ranging from cash flow and investment management (open payment solutions or OAT government bond purchases, etc.) to short- and long-term banking and bond financing solutions.

- **Responsible financing** banking offering.
- Range of **social loans** for local authorities.
- Subzen, a **grant-seeking** and grant-management support service to optimise funding plans for local authorities.

In addition, La Banque Postale, through its Corporate and Local Development Banking (CLDB), actively supports local authorities (municipalities, departments, regions) by offering them strategic financing to modernize their essential infrastructures and strengthen their resilience. These actions aim to maximise the positive impacts for the regions and their populations while promoting the ecological transition.

Modernisation of public infrastructure: financing of projects to renovate schools, modernise municipal facilities and improve public transport.

Sustainable mobility: support for low-carbon public transport projects such as electric buses and trams, improving cycling infrastructure to promote soft mobility.

Energy transition: support for energy renovation projects for local administrative buildings; financing of renewable energy solutions such as the installation of solar panels or wind farms.

Reduction of regional divides: directing financing to rural or remote areas to bridge regional disparities. [S3_4_03]

Financing of local public sector players: supporting essential services

In addition to local authorities, La Banque Postale supports other key players in the local public sector to provide essential services to populations.

Hospitals and medico-social establishments

- Ségur de la Santé Plan: financing of projects to modernise public hospitals and health institutions to ensure better access to care, particularly for vulnerable populations.
- Infrastructure development support for nursing homes and other public and private non-profit healthcare institutions.

Social housing

As a leading bank for social housing players, with 8 social housing operators out of 10 as partners, La Banque Postale offers complete solutions for rent collection and reconciliation of receipts, and dynamic cash investment vehicles over short-, medium- and long-term periods, together with responsible financing for the production and renovation of housing. This innovative financing helps to meet the growing need for affordable and sustainable housing and positions La Banque Postale as the second largest commercial bank in the market.

Associations

La Banque Postale finances the activities of associations in the areas of social inclusion, health and social protection. [S3_4_03]

Responding to the specific needs of the regions

La Banque Postale offers structured financial tools adapted to the specificities and diversity of the projects carried out by local authorities and the local public sector:

- **real estate leasing:** financing of public facilities such as schools, hospitals or cultural centres;
- **furniture leasing:** financing of professional equipment for local authorities or public institutions, meeting specific operational needs;
- **factoring:** solution to improve the cash flow of local players, allowing them to manage their financial flows with more flexibility;
- **asset securitisation:** activating loan portfolios to free up financial capacity and enable local players to reinvest in their priority projects. [S3_4_03]

Supporting local elected officials and regional public servants

La Banque Postale regularly provides regional elected officials and public servants with its expertise in local finances through documents and conferences. In addition to its traditional publications such as its "Note de conjoncture" update on local finances or its "Financial insights" in partnership with associations of elected representatives, every year La Banque Postale offers a tool called "DOB" (budget policy direction debate), a tool to help prepare local authority budgets. It consists of an analysis of the finance law, supplemented by a selection of information and graphs useful for the preparation of their budget.

In 2024, La Banque Postale was invited to present a study of its "Regional Access" collection, dedicated to local authority cash flow, at the French Congress of Mayors. This is a particularly pertinent topic in the context of rate increases. In partnership with I4CE (Institute of the Economy for the Climate), it carried out an overview of the economic and budgetary challenges of the financing of climate action by local authorities in the context of updating the National Low-Carbon Strategy (SNBC), and identifying decarbonisation levers for the regions. Individual studies can also be carried out at the request of local authorities with significant budgets.

Finally, also in 2024, La Banque Postale published the third part of a study conducted in partnership with the Fédération Hospitalière de France on the topic of public hospital investments (burden of hospital debt in 2022 and public real estate portfolio in 2023). [S3_4_03]

2.3.3.3.2 Regional network

La Banque Postale, through its integration within La Poste Group, plays a role in maintaining the regional network of essential services in France. By relying on a dense network of post offices and retail outlets, La Banque Postale ensures proximity to residents, local authorities and economic players, particularly in small municipalities. This regional network is a strategic asset for meeting the needs of populations far from urban centres and for supporting local authorities in their development projects.

A direct impact on small municipalities

The La Poste network, which has thousands of post offices and branches throughout the country, guarantees universal access to banking and postal services, even in rural and remote areas. In collaboration with La Banque Postale, this regional network contributes to:

- preventing “banking deserts” by ensuring continuity of service in areas in which there are no other financial institutions;
- supporting local initiatives by facilitating access to financing for environmental transition, regional planning and essential infrastructure projects (schools, hospitals, social housing, etc.);
- supporting financial inclusion by offering solutions adapted to the needs of residents and local authorities, such as loans at controlled rates or inclusive banking products.

Synergy between La Banque Postale and La Poste

This collaboration enables La Banque Postale to draw on the expertise and presence of the postal network to maximise its positive impact. For example, post offices are becoming contact points to raise awareness among local elected representatives of the sustainable financial solutions offered by La Banque Postale.

The regional coverage assured by La Banque Postale and the La Poste network embodies a strong commitment to small towns and rural areas. By maintaining a constant dialogue with local authorities and adapting its services to the specific needs of each region, La Banque Postale actively contributes to financial inclusion and sustainable development, thus strengthening its role as an essential partner of local authorities. [S3.4.03]

2.3.3.3.3 Societal sponsorship

“L'Envol” programme

Through its L'Envol programme, La Banque Postale implements practical actions which have positive impacts on society. This program, intended to support around a hundred young people from modest backgrounds each year, reflects the Company's commitment to social inclusion and educational success.

This is a support system intended to support young people from modest backgrounds over a period of three to eight years. It aims to promote their academic success, their social inclusion and their access to higher education through personalized monitoring, mentoring and educational opportunities.

The young beneficiaries of the Envol program regularly interact with the association's monitoring officers and

La Poste Group's volunteer sponsors. These interactions, which can be remote or face-to-face, make it possible to meet their specific needs and foster a bond of trust. The Deputy General Manager of Envol is responsible for supervising interactions. The effectiveness of interactions is assessed annually *via* satisfaction questionnaires, the results of which are analysed to improve the program.

For the Envol program, La Banque Postale is mobilising the following resources:

- an annual budget of €2 million, which the Group allocates to the association;
- number of hours of working time devoted to community outreach:
 - 439 hours in 2023,
 - 4 FTE employees and a work-study student from La Banque Postale made available to the association.

MicroDon

La Banque Postale, through its subsidiary MicroDon, promotes “embedded” giving by offering simple and effective solutions to support community causes:

- **rounding up at check-outs:** this system enables customers of partner retailers to round up their purchases to the nearest euro, with the cents being donated to associations. Since it was created, more than €47.7 million has been raised through this programme;
- **deduction from remuneration:** employees of partner companies can donate a small amount of their net wages each month to associations, to create a community-focused culture;
- **donation of time:** the scheme promotes skills-based sponsorship and volunteering by allowing employees to devote part of their working time to association projects.

These initiatives have a strong impact on community activity and demonstrate La Banque Postale's commitment to responsible and community-based finance.

The Group's other commitments to charities

La Banque Postale is also a committed partner in the non-profit sector and the structures of the social and solidarity economy (SSE). With 150,000 customer associations nationwide, it has one in ten associations as customers. La Banque Postale also plays a major role in promoting giving through its subsidiary MicroDon. It actively supports emblematic national initiatives such as the Téléthon, Breast Cancer Awareness Month and the “Pièces Jaunes” operation, and works closely with leading associations such as Secours Populaire, the French Red Cross and the Fédération des Banques Alimentaires.

Thanks to bodies such as Alliance Dynamique and the Club de l'Initiative contre l'Exclusion Bancaire (Initiative Against Banking Exclusion think-tank), La Banque Postale works with others to create innovative solutions on social issues such as community causes, banking inclusion and budgeting education. Since 2021, its partnership with the WWF has supported its decarbonisation ambitions and the development of sustainable solutions. Finally, it builds a relationship of trust with consumer associations, meeting with them regularly to strengthen its action in favour of mutual aid and social inclusion. [S3.4.03]

2.3.3.4 Additional indicators specific to the entity

2.3.3.4.1 Monitoring indicators for impact finance commitments

The origination of loans to local authorities, the social sector, health, associations and local economic operators forms part of the Group's commitments to supporting the regions. These operators play an essential role in combating inequality by promoting access to essential life services, and by deploying the just transition in all regions.

There are also two sub-indicators to monitor community loans for social housing, health and associations, and the local economy. These community loans include green loans allocated to projects consistent with the Taxonomy, social loans and impact loans.

All these indicators showed improvement between 2023 and 2024, and the annual origination of loans to local authorities exceeded the 2025 target.

LA BANQUE POSTALE GROUP METRICS RELATED TO IMPACT FINANCE

		2023	2024	2025 target
LA BANQUE POSTALE'S MISSION-LED COMPANY METRICS	 Annual loan premium income with local authorities (in € billions)	4.5	5.8	4.5
	Of which green and social loans (in € billions)	1.6	1.87	1.1
	 Annual loan premium income in the social housing, healthcare and non-profit sectors (in € billions)	1	1.53	2.5
	Of which sustainability loans (in € billions)	0.4	0.71	0.3
	 Annual loan premium income in the local economy sector (in € billions)	1.9	1.94	2.4
	Of which sustainability loans (in € billions)	0.5	0.32	0.3

2.3.4 Acting in the interest of our consumers and end-users [S4]

2.3.4.1 Material IROs and links with strategy and business model

Scope

All customers and end-users, whether natural or legal persons (individuals, companies, local public entities), likely to be affected by material impacts related to the activities of La Banque Postale Group (financing, insurance, investment, banking services) are covered by the information disclosed under ESRS 2. [S4_SBM_3_01]

Within the scope of banking services, all retail customers are also the end-users of the banking products and services and insurance products sold by La Banque Postale Group. Thus, the material impacts concern:

- all customers who would be affected by incidents affecting the protection of personal data, including in the event of data leaks or customer service failures;

- "vulnerable" customers (young or elderly, experiencing financial difficulties, with disabilities or with a low level of financial education), who benefit in particular from the inclusive offers, accessibility of bancassurance services and the responsible marketing practices offered by La Banque Postale Group.

Within the scope of credit and investment activities, all users of the goods and services of the financed operators are likely to be affected by material impacts. Consequently, the material impacts concern the users of the goods and services of the financed operators in the event of the financing of activities that are detrimental to the health or safety of consumers. [S4_SBM_3_02]

All of La Banque Postale Group's customers are exposed to negative impacts on privacy, for example in connection with the sensitive private data that they have communicated for bancassurance services (banking secrecy and GDPR compliance).

The positive impacts in terms of responsible commercial practices, inclusive offers and accessibility to bancassurance services concern vulnerable customers who benefit more from these offers and services. [S4_SBM_3_03]

Material impacts, risks and opportunities

The **negative impacts** identified are one-offs.

- In the scope of service activities (banking and insurance services), the material negative impact identified is as follows: negative impact in the event of a data leak or cybersecurity incident. This impact is due to the fact that the service activities are aimed at individuals, whose personal data is particularly sensitive.
- In the scope of the financed activities (credit and investment), the material negative impact identified is as follows: negative impact in the event of financing of activities undermining the safety and/or health of consumers.

Indeed, the diversity of the companies and sectors in which the Group invests, as well as the disparities in health and safety standards and regulations in the various countries, create a complex value chain that is difficult to monitor with any level of detail. The Group's responsible investment strategies aim to limit these impacts. [S4_SBM_3_04]

La Banque Postale Group's service activities, in particular banking and insurance services, generate **positive impacts** in terms of customer service, accessibility of bancassurance services and protection of customers' financial security. La Banque Postale Group provides a wide range of sustainable and inclusive products and ensures the sustainability of its business practices. This applies to all of its customers, and in particular to vulnerable customers.

Indeed, the (financial and physical) accessibility of bancassurance services, as well as support for vulnerable customers, are at the heart of La Banque Postale Group's strategy, and are part of the continuity of its accessible banking mission (presented in 2.3.4.5 "Action plans and resources"). In addition, by being part of the large public financial division within the Caisse des Dépôts Group, La Banque Postale attaches particular importance to regional development and the end-users of projects financed in this context. Its particular positioning with local public players and its regional network help to generate positive impacts for users. Innovative offers are designed to meet the specific needs of this clientele. [S4_SBM_3_05]

The following **risks**, related to impacts and dependencies on customers and end-users, have been identified in the scope of banking services:

- abusive commercial or marketing practices leading to risks of non-compliance and reputational damage;
- risk of financial loss due to failure to apply the Group's customer protection practices, or weaknesses in these practices;
- risk of financial loss related to a failure in the assessment of La Banque Postale's partners in a context of transition to a fairer and more inclusive society;
- risk related to customer service failures.

In addition, no material opportunity for the Company has been identified in this scope. [S4_SBM_3_06]

La Banque Postale pays particular attention to vulnerable customers, and this topic is monitored by the Supervisory Board. It communicates with the affected stakeholders to strengthen its understanding of the risks related to the banking exclusion of specific types of consumers and end-users.

In particular, La Banque Postale Group has created the "Club de l'Initiative contre l'Exclusion Bancaire" (Initiative Against Banking Exclusion think-tank), which brings together social, non-profit and banking players who share this commitment, in order to meet the needs of customers experiencing financial difficulties. These discussions give the Group a detailed understanding of the challenges faced by vulnerable customers. They may be particularly affected by abusive sales or marketing practices, as well as failures in customer protection or customer service.

In 2024, La Banque Postale is also the only bank in France in charge of a banking accessibility public service mission. [S4_SBM_3_07]

The risks concerning customers and end-users are not limited to these categories, however, and may cover all customers and end-users, regardless of their situation. [S4_SBM_3_08]

2.3.4.2 Policies related to consumers and end-users

2.3.4.2.1 Applicable policies

La Banque Postale, a major international financial player and a mission-led company since 2022, places its customers at the heart of its model. Building on its civic vocation, it pursues ambitious social and environmental targets to promote a fair and accessible transition for all. Through its various entities, in particular CNP Assurances, LBP AM, Louvre Banque Privée, Retail Banking and La Banque Postale Consumer Finance, La Banque Postale Group has implemented specific policies aimed at maximising positive impacts for its customers while reducing the risks related to the security and confidentiality of their data.

Customer service, banking accessibility, accessibility of insurance services, protection and financial security of customers (Positive impact)

Focus on customers' interests

La Banque Postale places the interests of its customers at the heart of its commercial strategy. This commitment is governed by the **Ethical code of conduct**. Updated in 2024, it reiterates the principles of fairness, transparency and accountability. The Code applies to all Group entities and guarantees that all products and services offered meet the real needs of customers and comply with the regulations in force, and that employees act without any conflict of interest and systematically prioritise the interests of customers.

It is available to all employees on the Group's intranet. A public version is also available to all on the La Banque Postale Group website.

CNP Assurances' code of conduct also covers customer protection and respect and ethics in business conduct. Specifically, it embeds the Company's principles concerning the protection of customers' interests and business practices.

Protect vulnerable customers

La Banque Postale takes action to protect the 1.7 million customers experiencing financial difficulties, primarily through its "Simplicité" account package and the "Atout Simplicité" programme for difficult times. In addition, 1.2 million customers fall within the scope of accessible banking, in line with the Bank's status as a mission-led company. This mission is based on the universality of the *Livret A* passbook savings account (more details are available in paragraph 2.3.4.5.2 "Actions implemented to generate positive impacts").

La Banque Postale Consumer Finance (LBP CF) has adopted an **internal policy for managing vulnerable customers**, released in December 2024, which governs the practices and processes to detect and support these customers. The initiatives include increased vigilance in the granting of loans, the prevention of over-indebtedness and offers adapted to vulnerable populations.

These commitments are documented in the La Banque Postale Group's 2024 mission report, which illustrates the Group's efforts to promote banking and social inclusion.

La Banque Postale designs accessible and inclusive products to meet social and regional challenges. With regard to banking accessibility, there are offers adapted for vulnerable customers, with transparent prices and educational tools to strengthen the understanding of financial products. For the accessibility of insurance services, CNP Assurances undertakes to offer insurance solutions that are accessible and adapted to the specific needs of its customers, by contributing to their social protection. Details of these offers can be found in Section 2.3.4.5 "Action plans and resources".

Negative impact in the event of a data breach or cybersecurity incident.

Risks related to cybersecurity and personal data protection are considered critical, as they could compromise the confidentiality and security of customer information.

La Banque Postale's **IT Systems Security policy** provides a structured response to these challenges. It is based on an ISS Reference Framework, which includes the General ISS Policy, charters of obligations for employees and thematic policies specifying the security requirements of information systems. These policies are updated annually and validated by the Group Risk Management Committee.

As a bancassurance institution and in accordance with the various legislation in force, La Banque Postale Group's priorities include protecting personal data, complying with banking secrecy and tackling fraud.

The **data protection policy** focuses on confidentiality, fairness and access to information for clients. It is governed by the Ethical code of conduct, which specifies the obligations of employees in terms of professional secrecy and data processing. In the event of a data leak, procedures for detection, notification to the CNIL and corrective measures are systematically applied.

CNP Assurances applies the principle of **Privacy by Design**, incorporating risk analyses from project design, with measures to prevent data breaches and rigorous monitoring of incidents by the Compliance Department.

Louvre Banque Privée, through its internal **code of conduct**, adopts policies to guarantee the confidentiality and security of its customers' data. The application of the GDPR is accompanied by policies on the management of consent and the retention period of data. In addition, regular audits are carried out by the Legal Department and the Compliance Department to ensure the effectiveness of the systems in place.

Negative impact in the event of financing of activities which undermine the safety and/or health of consumers (Negative impact)

Through its **Socially Responsible Investment Charter (SRI)**, LBP AM undertakes to exclude from its financing any activity that has a significant negative impact on the health and safety of consumers. This charter sets strict criteria to avoid supporting sectors or companies whose practices could harm consumers, such as the production or distribution of products dangerous to public health or activities that do not comply with international regulations on safety of products or environmental, social and health impact.

In addition, LBP AM incorporates in-depth ESG due diligence processes to assess the risks associated with financed projects, particularly in terms of violations of consumer rights or non-compliance with regulations. These practices aim to reduce the risk of controversy and strengthen the positive impact of investments by directing financial flows to companies and projects that promote responsible and sustainable consumption.

Louvre Banque Privée has developed an exclusion policy for directly invested securities that covers several specific segments. These are primarily sector-specific exclusions extended to activities that are either controversial or not in accordance with international conventions or national regulatory frameworks:

- hazardous chemicals: companies that generate more than 10% of their revenue by producing pesticides;
- pornography: companies that generate more than 10% of their revenue from the pornography or adult entertainment services sectors;
- controversial weapons: companies that generate more than 5% of their revenue from arms and that are involved in controversial weapons;
- gambling: companies that generate more than 10% of revenue from gambling services or products;
- tobacco: companies that generate more than 0% of revenue from tobacco production. [S4_MDR_P_01_06]

The various risks identified are effectively managed by being integrated into the Group's risk matrix and included in the corresponding reduction action plans. As a result, special attention is paid to each risk identified, ensuring proactive and rigorous management. Internal procedures are in place to ensure compliance with the regulations in force, although there is no dedicated policy for them. [S4_MDR_P_07_08]

2.3.4.2.2 Respect for Human Rights

As a subsidiary of La Poste Group, a signatory to the UN Global Compact since 2006, La Banque Postale upholds the principles set forth by the Global Compact on Human Rights, labour standards, environmental protection and the fight against corruption. It undertakes to comply with the legal texts governing its activities as well as the international agreements signed by France. In this context, it considers the United Nations Guiding Principles, the ILO Conventions and the OECD Guidelines as a reference base. As part of its Responsible Financing and Investment Charter, La Banque Postale undertakes to verify, before investing or financing, that the company in question is not involved in an ESG controversy, and especially one concerning a Human Rights violation. For more information, see focus point: *La Banque Postale's Financing and Investment Charter*.

For details on the LBP AM Human Rights policy, please refer to the paragraph on *Applicable policies*. [S4.1.02] [S4.1.03] [S4.1.07]

Human Rights remedies

LBP AM uses its sphere of influence with companies to allow or support a remedy in the event of an actual or potential material impact caused by an invested company, or to which an invested company has contributed, in accordance with its Human Rights policy and its Engagement policy. Additional information is available in Section 2.3.2.2 "Workers in the upstream value chain". [S4.1.05]

Compliance with international standards

As a sustainable bank, La Banque Postale is a signatory to seven international agreements. These partnerships strengthen its positioning as a responsible player on social and environmental issues. [S4.1.06]

2.3.4.3 Dialogue mechanisms with customers and end-users

On a day-to-day basis, interactions with customers take place directly within the network, either through complaints channels or through surveys.

For end-users of invested companies, particularly in the case of LBP AM, interactions are indirect through legitimate representatives. [S4.2.02]

Customer advice

La Banque Postale coordinates a "customer council", which is a body representing so-called "individual" customers. As a partner of the Executive Committee, the Customer Council is composed of 16 members who reflect the diversity of the Bank's customers and the French people. It is called upon three times a year to collect customer opinions on projects intended to improve the offer, the quality of service or the customer experience.

This Customer Council is supplemented by regular customer round tables held at the Customer Relations and Expertise Centres (CREC), which focus on specialised areas such as Real Estate Loans, Protected Adults and Specialised Savings. These bodies make it possible to discuss face-to-face with customers about their lived experience and adjust the local arrangements for their

care. Their expectations which do not fall within their scope of intervention are compiled and reported at the national level for analysis and consideration. [S4.2.01] [S4.2.02] [S4.2.03] [S4.2.04] [S4.2.05]

The voice of the customer

La Banque Postale carries out numerous studies to regularly collect the views and expectations of its Retail Banking customers. The main "Voice of the Customer" study, carried out by BVA Insight, measures La Banque Postale's performance in terms of customer experience compared to its competitors. Each year, it interviews retail bank customers from a representative national sample of French people. The surveys are carried out throughout the year, and the results are published quarterly. This benchmark is supplemented by post-contact surveys (online banking, customer call centre, post office advisor, reception in the Commercial Centre) and by interim surveys measuring the level of satisfaction for key steps (account opening, granting a home loan, the underwriting of an insurance product or filing a claim).

The results of these studies are made available to the managers of the Customer Relationship Management teams. They are then shared by managers with their teams in order to implement corrective actions. This data is included in monthly and quarterly dashboards made available to the management bodies of both La Banque Postale and La Poste Group in order to monitor the effectiveness of the actions implemented with regard to the chosen strategic priorities. Finally, all of these systems are supplemented by an approach to resolve "irritants" (frequent nagging issues that irritate customers and employees and lead to a worse experience). The progress of the treatment of these irritants is communicated via the platform, in governance bodies and by an internal communication plan. [S4.2.01] [S4.2.02] [S4.2.03] [S4.2.04] [S4.2.05]

Dialogue with business customers

Currently, for Corporate and Local Development Banking, there is no satisfaction survey for business customers. La Banque Postale is working on several projects to measure and monitor customer satisfaction. [S4.2.01] [S4.2.02] [S4.2.03] [S4.2.04] [S4.2.05]

A project is underway for Corporate and Local Development Banking to formalise a procedure for centralising business customer complaints. [S4.2.07]

Dialogue provided by CNP Assurances

CNP Assurances also incorporates the perspectives of customers and consumers in the improvement of its activities and services. A customer dashboard is periodically presented to the Executive Committee in order to manage customer satisfaction indicators. These indicators measure the quality of service (telephone accessibility, complaint processing times and decision-making times for all customer journeys) and the perceived quality (Net Promoter Score (NPS)), which measures customer loyalty based on how likely they are to recommend the products and services, and Customer Effort Score (CES), which measures the effort made by customers to obtain a response to their request).

To measure customer satisfaction, since 2015, CNP Assurances has used questionnaires sent by email to measure customer satisfaction, and since 2022, some customers are asked about their overall satisfaction twice a year. [S4_2.01] [S4_2.02] [S4_2.03] [S4_2.04] [S4_2.05]

CNP Assurances has also created the "You & Us" online community in France to better understand the uses and expectations of prospects and customers. This "You & Us" digital platform is thus a privileged and direct space for exchanges, making it possible to involve customers in a variety of projects in order to make them actors in the evolution of offers and services. The platform is structured around discussion forums on various topics (digital uses, lifestyles), thematic workshops for co-creation of products and their pathways connecting the Company's customers and employees, and online surveys to identify the first trends.

CNP Assurances does not use legitimate representatives or trusted intermediaries for interactions with customers. CNP Assurances uses indicators such as the NPS and the CSAT (Customer Satisfaction Score, which measures overall customer satisfaction). Systems for contacting customers who have expressed dissatisfaction in their response to a survey are then rolled out in France and abroad. [S4_3.02]

Dialogue provided by LBP AM

As an asset management company, LBP AM cannot interact directly with the end consumers of the companies in which it invests. However, the perspectives of stakeholders, including end-users, are taken into account in the establishment and monitoring of its Human Rights policy, and in its engagement activities with the companies involved.

LBP AM consults with external stakeholders to raise its employees' awareness of the risks related to the rights of consumers and workers in the value chains of the companies involved, to refine the analysis of the risks or controversies related to the products or services of the companies involved, and develop sectoral tools or policies adapted to specific challenges.

LBP AM also participates in sectoral initiatives such as the Ranking Digital Rights (RDR), the Coalition for Ethical AI and the Access to Medicine Foundation. This enables it to feed into its engagement policies with companies on issues affecting end users. [S4_2.01] [S4_2.02] [S4_2.03] [S4_2.04] [S4_2.05]

Dialogue provided by Louvre Banque Privée

For its part, Louvre Banque Privée has tools for dialogue with consumers and users, such as an annual satisfaction barometer, which can be quantitative or qualitative, depending on the year. It provides key information on customers' main concerns. [S4_2.01] [S4_2.02] [S4_2.03] [S4_2.04] [S4_2.05]

Louvre Banque Privée has not implemented specific measures for consumers and end-users likely to be particularly vulnerable to the impacts and/or to be marginalised. These vulnerable consumer profiles are less frequent due to the focus on wealth management. [S4_2.06]

Dialogue with customers experiencing financial difficulties

Understanding the exposure to banking exclusion risks for consumers and end-users with particular characteristics is informed by dialogue with the relevant stakeholders. With this in mind, La Banque Postale has created an "Initiative Against Banking Exclusion Think-tank" (see Section 2.3.4.1 – Material IROs and links with strategy and business model).

In Retail Banking, a spot NPS has been in place for the past year for customers experiencing financial difficulties. It measures the satisfaction of the customers supported by the L'Appui banking and budget platform by telephone interview.

As far as accessible banking customers are concerned (holding a *Livret A* passbook savings account and carrying out many cash transactions at the counter), La Banque Postale is currently trialling a satisfaction measurement system for customers carrying out cash transactions at the counter via a QR Code in selected post offices throughout the country. At the end of the tests, this system should be rolled out in September 2025.

In addition, La Banque Postale Consumer Finance (LBP CF) sends a letter to customers classified as "vulnerable", inviting them to contact the Support division if they feel the need. They can then re-express their specific concerns or needs.

The support division is a team dedicated to helping La Banque Postale Consumer Finance's vulnerable customers. Its role is to analyse the customer's situation with them and identify whether the vulnerability is short-term or permanent, with the aim of providing the most appropriate solution. The solutions provided are varied: carrying out management actions, moral support or providing information on structures that can help vulnerable customers (CRESUS, Banque de France, social worker, etc.). [S4_2.06]

2.3.4.4 Reporting and remediation process

In the event of a negative impact, La Banque Postale has several departments tasked with providing solutions to customers.

LBP Consumer Finance

La Banque Postale Consumer Finance's Customer Relations Centre handles complaints from customers or third parties made by telephone, and refers dissatisfied customers to the Complaints Department for follow-up by letter. Complaints are subject to regular reporting, particularly during the Quality Committee meetings, and an analysis of any shortcomings they raise is carried out in order to provide a solution. [S4_3.01]

Retail Banking

For its part, Retail Banking has a department dedicated to handling customer complaints, facilitating the continuous improvement of complaints processing methods and managing processing times. [S4_3.01]

Customer concerns and needs are raised via the specific channels made available to them. Retail Banking customers can use call centres, online banking, social media, the Commercial Banking Line face-to-face and remotely (via La Banque Postale Chez Soi), or communicate with customer service advisors at Business Centres. [S4_3.02]

The Supervisory Board and the Risk Committee carry out the annual regulatory monitoring of complaints. [S4_3.04]

Insurance

In addition to the pre-existing reporting and complaints systems (online complaints forms, email, phone, social media, etc.), CNP Assurances relies on consumer or government organisations in the Brazilian market, such as *Reclame Aqui*, *Procon* and *consumidor.gov*.

In 2024, Caixa Seguros Holding reviewed the service processes of *Reclame Aqui*, the largest complaints website in Latin America. The service has been brought in-house, prioritising quality and agility with the addition of WhatsApp to expand interactions and encourage positive customer reviews. Thanks to this system, CSH has achieved the RA1000 quality certification, the platform's maximum approval, having obtained the best rating in the insurance sector. CSH was also nominated for the *Reclame Aqui* award in 2024. [S4_3.01] [S4_3.02]

LBP AM

LBP AM has a Complaints Management policy which is available on the website. Several channels are made available, in particular *via* the account manager and the generic customer service address. [S4_3.02]

Communication on the channels available to customers

La Banque Postale relies on its France-wide network to ensure that its customers are aware of all of the communications channels. With more than 17,000 retail outlets, including 7,000 post offices, it has a strong network to support all of its markets. For business customers, 43 Corporate and Local Development Banking business centres are spread across mainland and overseas regions. This structure enables customer service advisors to be based near to their customers to ensure that they are satisfied with the service. Customers who wish to file a complaint can do so by contacting Customer Service, which will explain the procedures related to their complaint. Customers may also record their complaint using a dedicated form available on the Bank's website. [S4_3.03]

Request management

Requests from Retail Banking customers are processed every day by triage teams, who ensure timely response to emails and letters sent to La Banque Postale's various processing departments. When targets are not met, the departments in question readjust their processing priorities to reduce delays. At the same time, drafting committees ("Footprint Labs") are held to assess the relevance of the responses provided and whether they are in line with the Bank's relationship charter. More specifically, La Banque Postale's Complaints Department ensures compliance with customer response times at 10 days, 35 days and 60 days. It monitors the main complaints filed and analyses their root causes for discussion with the business lines, and processing of these causes. It also cross-references this information with the expectations of customer claimants expressed during the barometer dedicated to this activity to improve the methods for handling and processing complaints. Where appropriate, when the differences and customer issues are significant, progress projects are implemented to improve the quality of care. The "Power to be a Driver of Solutions" (PEPS) continuous improvement approach is now in place in all Customer Relations and Expertise Centres and their respective departments.

A team was also set up to analyse customer journeys and recommend improvements to the business lines. The approach relies on the direct involvement of employees to improve customer relations and develop the resulting quality standards. It always begins with a dedicated collection of customer opinions.

Finally, the quality of service indicators (telephone accessibility, post-contact NPS) are monitored by managers, enabling them to react quickly in the event of a discrepancy. [S4_3.04]

Consumers and end-users of Corporate and Local Development Banking are aware of the procedures for reporting and processing complaints. If in doubt, they can contact their business advisor or Customer Services, as well as dedicated experts (flow management, investments, etc.), who are available to listen to their concerns and meet their needs. [S4_3.05]

A whistleblowing system

In addition and in accordance with the law on the duty of vigilance, the entities of the La Banque Postale Group have set up a whistleblowing system that is open to consumers and end users. This system is described in data point 2.4.1.3.5 "Independence and accessibility of the whistleblowing system". [S4_3.06]

Cybersecurity

A process for managing security events and incidents has been deployed within La Banque Postale Group. This process is described in the Topical Security Policy entitled "Managing Security Events and Incidents". The challenge is to ensure that the method of identifying events and breaches related to information security allows corrective action to be implemented as soon as possible, as well as the implementation of a consistent, efficient and tracked approach to the processing of events and incidents related to information security.

The treatment of ISS threats and vulnerabilities aims to take into account security notifications as soon as possible in order to categorise them with regard to their impact on the La Banque Postale Group's IS and provide an appropriate response.

This system is based on two main focus areas: an "anticipation" focus, with the implementation of external monitoring/IS security monitoring systems; as well as a "reaction" focus to respond to IS security events/incidents in order to minimise their potential impact.

For cases that require it, the management of security events may be based on the La Banque Postale Group's crisis management process, depending on their criticality.

La Banque Postale Group has put in place a crisis management procedure for ISS/cybersecurity incidents. It is intended to establish the organisation, roles, responsibilities, process and principles of governance as part of the implementation of the incident and crisis management system applicable to the Group's ISS.

Feedback and lessons learned are analysed for each significant security incident. Where applicable, action plans are established and monitored.

2.3.4.5 Action plans and resources

2.3.4.5.1 Actions taken to address negative impacts

Description of actions

La Banque Postale and its subsidiaries, including CNP Assurances and Louvre Banque Privée, have implemented action plans to manage risks related to privacy and cybersecurity, which are recognised as potential material negative impacts. These issues, which are essential to preserve the relationship of trust with customers, are addressed through structured strategies, dedicated governance systems, and specific actions aimed at guaranteeing the protection of personal data and preventing cybersecurity incidents.

Cybersecurity risk management

Cybersecurity strategic plan (2021-2027)

La Banque Postale has drawn up an ambitious cybersecurity strategic plan for the 2021-2027 period, including 50 key projects. This plan is based on two major targets:

- identify cybersecurity threats: a security incident monitoring and detection centre provides permanent oversight to quickly detect cyberattacks and respond to them effectively;
- develop and deploy safeguards: tools and protocols are implemented to protect customer information and personal data from unauthorised access.

Cybersecurity incident management

In the event of a threat or incident, a dedicated crisis unit assesses the situation and decides on immediate measures, such as total or partial lockdown of the information system. Eradication actions are then implemented, followed by a post-incident analysis to identify the causes and prevent recurrence. A notification is made to the competent authorities if necessary, in accordance with the regulations in force.

Team training and awareness

A proactive fight against fraud is carried out by a dedicated team through preventive measures and regular training for employees. The teams are thus made aware of the risks of fraud and trained regularly to identify risky behaviours. These actions make it possible to strengthen cybersecurity skills within the field and head office teams.

Protection of personal data

La Banque Postale guarantees rigorous management of personal data, in accordance with the GDPR, based on:

- the principle of Privacy by Design, which incorporates data protection into the design of products and services;
- dedicated tools, such as the customer dictionary and the marketing plan, to personalise communications and avoid mass campaigns, thus boosting customer satisfaction and confidence;
- specific training on GDPR (see Section 2.3.1.2. "Employee policies"), which raises employee awareness of confidentiality and data protection requirements.

Commitments of La Banque Postale Group subsidiaries

CNP Assurances adopts a proactive approach with a Privacy by Design policy, which includes privacy risk analyses from the launch of new projects as well as technical and organisational measures to secure personal data against any unauthorised access or processing.

Louvre Banque Privée applies data confidentiality policies (see Section 2.3.4.2.1. – Applicable policies), supervised by its Legal Department and Compliance Department, including managing customer consent, limiting the data retention period and regular audits to guarantee the application of data protection policies.

Governance and regular audits

Every year, La Banque Postale updates its security policies, validated by the Group Risk Management Committee. These policies include:

- the General Information Systems Security (ISS) policy;
- the topical security policies, which specify the requirements applicable to all Group entities;
- regular internal audits to assess the compliance and effectiveness of protection measures. [S4_4_01] [S4_4_02]

Monitoring the effectiveness of actions and allocated resources

To monitor and assess the effectiveness of actions for consumers and end users, La Banque Postale relies on a set of indicators to measure the impact of its systems, in particular on the most vulnerable populations. These indicators are presented in Section 2.2.1.1.1 "Additional indicators specific to the entity".

In addition, La Banque Postale has set up a monthly committee to monitor and manage incidents related to Online Banking and the Mobile App in order to ensure reliable service adapted to the expectations of end users. This committee identifies any issues, prioritises their resolution, and ensures continuous improvement of the customer experience. [S4_4_04]

2.3.4.5.2 Actions implemented to generate positive impacts

La Banque Postale Group is committed to generating positive impacts for its customers by placing their needs at the heart of its priorities. La Banque Postale acts to offer quality customer service, guarantee banking accessibility and insurance services for all, as well as to ensure the protection and financial security of its customers.

Provide access to bancassurance services to all

Guaranteeing access to bancassurance services for all is at the heart of the La Banque Postale Group's DNA. This is reflected in its banking accessibility mission, as well as the design of accessible bancassurance products and services, in order to meet the needs of as many people as possible. La Banque Postale also implements specific actions for vulnerable people and ensures its local proximity, a factor of trust with its customers. [54_4_03]

Accessible banking mission

La Banque Postale, the custodian of the banking accessibility mission entrusted by the State, guarantees universal and non-discriminatory access to essential banking services for vulnerable populations.

The *Livret A* savings account is at the heart of this mission, offering an accessible and free product to all natural persons who request it, based on the principle of universality. La Banque Postale must comply with specific obligations, such as:

- any natural person must be able to open a *Livret A* savings account. In practice, the specific focus is on households with low incomes or in a precarious situation and certain eligible legal persons;
- the option to make withdrawals and deposits from €1.50, available in all authorised post offices;
- authorised transfers for welfare benefits and deductions for low-cost housing, taxes, and essential bills (water, gas, electricity, telecommunications);
- additional free services (transfers to the current account of the holder or their legal representative, cheques and withdrawal cards which can be used within the La Banque Postale network).

This mission guarantees access to banking services for 1.2 million customers excluded from traditional banking services, and therefore contributes to their social and financial inclusion.

Access to products and services

La Banque Postale is first and foremost committed to guaranteeing access to products and services that provide basic banking services and finance essential needs, while meeting the specific needs of the most vulnerable populations.

In addition, work has been carried out to simplify the contractual documents in order to ensure a better understanding of the offers by customers.

Banking and insurance products

La Banque Postale has a specific offer, the *Simplicité* low-cost account option, designed for the 1.7 million customers experiencing financial difficulties, which limits the costs of banking incidents and is linked to monitoring indicators (e.g. cap of €1,500 on annual fees).

CNP Assurances, as a player in inclusive insurance, offers accessible solutions to vulnerable populations. By way of illustration, in 2024, CNP Assurances had 14 products which improve access to insurance for vulnerable groups. At the end of 2024, 828,000 policyholders were covered by these products.

In partnership with ATD Fourth World, CNP Assurances offers an affordable funeral insurance solution for people in vulnerable situations, covering up to €2,500 in costs. In Latin America, where the illness or death of a loved one can exclude families already experiencing financial difficulties, microinsurance packages have been created to protect low-income families against financial risks related to illness, death or certain types of property damage. In Italy, insurance provides low-income retirees with access to consumer credit, without changing the duration of the credit, and limiting repayments to 20% of the monthly pension.

CNP Assurances is also committed to making insurance more understandable and accessible to its customers. Since the beginning of 2024, a dedicated governance has overseen the use of clear language in contractual, management and commercial documents. In 2024, 24% of management letters sent were reviewed to use plain language.

The distribution of insurance products is facilitated through various channels, such as post offices in France and lottery points in Brazil, making services accessible even in remote areas.

Credit

La Banque Postale offers various consumer loans:

- loans adapted to young people, such as the "one-euro-a-day driving licence loan" or the Student and Apprentice Loans, to promote the financial independence of young people;
- personal microloans, offered in partnership with associations such as the CCAS and Restos du Cœur, to finance projects promoting social reintegration;
- professional microloans intended for small businesses, craftspeople, traders or micro-entrepreneurs who do not have access to traditional financing. It is a means of combating unemployment and social exclusion that allows business creators to sustain their activity and encourages project leaders to get started;
- the temporary personal loan, adapted to the needs of temporary workers;
- financing solution in three instalments with the Django application, based on open banking analytics.

In addition, La Banque Postale offers several types of home loans, such as home loans without personal contribution, to promote access to home ownership for vulnerable or low-income households, or social home loans to facilitate access home ownership for low-income families.

Protecting vulnerable customers

As a socially responsible bank, La Banque Postale is committed to protecting all of its customers, including the most vulnerable, through specific systems and services.

ASSISTANCE TO PEOPLE EXPERIENCING FINANCIAL DIFFICULTIES [S4_4_03]

La Banque Postale and CNP Assurances are implementing specific measures to protect customers in vulnerable situations:

- L'Appui, a free banking and budget support service that has supported more than 330,000 people since 2013. Advisors analyse the situation of customers and propose appropriate solutions, such as microloans or reduced bank fees;
- educational tools such as "BCV" (High Speed Budget) or the "Dilemma" game to raise awareness of budget management;
- employee training, with increased awareness to detect and respond effectively to situations of vulnerability;
- for several years now, CNP Assurances has offered pooled long-term care contracts. The peculiarity of these so-called pay-as-you-go contracts is their maximum accessibility, as they are included in the health insurance contracts offered to employees by our partner mutual insurance providers. This system covers the long-term care risk, without medical screening, for all members of Group who are policyholders (only risks that have already occurred are excluded). Pricing is based on the entire population covered and on wide age brackets, so that premiums are affordable and within reach of as many people as possible. This type of scheme therefore guarantees a basic level of protection against loss of autonomy, with monthly payments ranging from €100 to €500.

In addition, there are special services for specific groups:

- the Youth Pass (Wizbii), a platform offering 10 non-financial services to 15-29 year olds, such as job searches, financial assistance and support for academic success;
- advice for protected adults, with a specific inter-bank payment offer;
- We Tech Care, a digital inclusion plan to support customers unfamiliar with digital tools;
- the right to be forgotten for cancer victims and the Family Help guarantee to support relatives of sick children, two initiatives by CNP Assurances, which is committed to pushing the boundaries of insurability;
- accessibility for people with disabilities by providing automated teller machines adapted for people with reduced mobility and the visually impaired.

Finally, in accordance with the regulations relating to the payment of death lump sums, CNP Assurances undertakes to pay the capital of a life insurance contract to the various designated beneficiaries in the event of death within a maximum period of 30 days from receipt of the complete file.

Regional proximity for access to services

La Banque Postale Group is committed to ensuring that its services are close to its customers, even in the most isolated areas. Therefore, its dense regional network allows everyone to easily access essential banking and insurance services, regardless of their location.

With more than 7,000 retail outlets, La Banque Postale guarantees geographical accessibility, including in rural areas and priority neighbourhoods, thus offering a genuine regional network.

CNP Assurances also acts to make its products accessible, in particular for vulnerable populations. In France, the distribution of products in post offices and lottery points has been set up, facilitating access for people far from traditional circuits. In Latin America, life and health microinsurance is distributed through the *Correios* postal network in Brazil. [S4_4.03]

The ESG checklist: responsible products “by design”

In order to ensure the systematic integration of ESG criteria in the design of its products, La Banque Postale introduced an ESG checklist in 2008, revised in 2021 to align with new CSR challenges.

The ESG checklist assesses offers and products in terms of their contribution to the customer experience and satisfaction, as well as to the just transition. It is mandatory at Product Review Committees.

This checklist, developed in collaboration with Utopies and WWF France, is based on two major pillars: on the one hand, leadership in the customer experience and satisfaction, which includes clarity of offers, customer satisfaction (service and journey), traceability and improvement of the user journey; on the other hand, the civic ambition for the just transition, which aims to reduce inequalities, encourage virtuous ecosystems and promote customer citizenship and responsibility.

Enabling customers to play a role in the just transition

La Banque Postale enables its customers to actively contribute to the just transition by developing and promoting products that take into account ESG or positive impact criteria.

ESG assessment of offers

Committed to the just transition, La Banque Postale takes ESG criteria into account in the design of its product and service offerings.

The ESG checklist assesses each product on a basis of 100 points. Products that achieve a score of more than 50 points are labelled “community-friendly”. In 2024, 30% of the offers examined by the committee obtained this label, broken down as follows: 20% for Retail Banking, 25% for CLDB and 100% for the Transaction Banking scope. The target is to reach 80% of sustainable products by 2025.

In 2024, throughout the design phase of the impact card offer, the checklist was used to identify and improve the environmental aspects related to the offer.

To ensure the effectiveness of these actions, La Banque Postale monitors an annual indicator of the proportion of new citizen-certified offers. The results are published each year in the mission-led company report and certified by an independent third party.

Presentation of impact offers

In addition to banking accessibility and the consideration of ESG criteria, La Banque Postale is developing impact financial products aligned with its just transition mission.

La Banque Postale offers a range of loans to small professionals, such as the Créa-Sol program, which offers financing adapted to social entrepreneurs, making it possible to support local projects with a sustainable impact.

Loans are also granted to retail customers, such as the Green Vehicle and Green Works personal loan, to support green projects, including home energy improvements and electric vehicle purchases. The *Avance Rénovation* (PAR) loan finances energy efficiency work, and the impact real estate loan is designed to finance acquisition or renovation projects that meet strict environmental criteria.

Lastly, La Banque Postale offers an impact banking offer. For example, the impact bank card makes it possible to contribute to the energy renovation of the French real estate portfolio, particularly thermal strainers, while taking part in the preservation of biodiversity. [S4_4.03]

No cases of severe Human Rights incidents concerning consumers and end-users were reported in 2024. [S4_4.11]

2.3.4.6 Consumer and end-user targets

2.3.4.6.1 Targets

The Group's targets related to consumers and end-users are managed through La Banque Postale's mission-led company indicators (for example, the NPS of customers experiencing financial difficulties) and CNP Assurances' company purpose (for example, the number of products improving access to insurance for vulnerable groups).

By managing these targets, the Group can identify its performance progress in terms of customer satisfaction, service accessibility and customer protection.

For example, the Bank's performance in providing community-based financing allows better support and guidance for business advisors on supporting their customers, and more specifically in adjusting commercial targets for this purpose.

CNP Assurances has a number of indicators which reflect customer satisfaction:

- the Customer Effort Score (CES) measures the effort made by customers to obtain a response to their request;

- the Net Promoter Score (NPS) allows the Company to measure the likelihood that its customers will recommend its products or services to others, thus providing a direct indication of customer loyalty to the brand;
- finally, the Customer Satisfaction Score (CSAT) measures the level of customer satisfaction with the products and services offered, providing an overview of perceived performance.

The targets for La Banque Postale's mission-led company indicators and CNP Assurances' company purpose are presented in Section 2.3.4.7 "Additional indicators specific to the entity". [S4_MDR.T_01.12] [S4_5.04]

La Banque Postale is trialling some indicators for potential negative impacts such as cybersecurity impacts, or impacts related to the information or security of consumers and end-users. It does not wish to disclose these indicators for confidentiality reasons. [S4_MDR.T_13.14]

2.3.4.6.2 Involvement of consumers and end-users in the establishment and monitoring of targets

La Banque Postale Group indirectly involves its consumers and end-users in setting and monitoring targets, in particular

through its status as a mission-led company, which incorporates commitments aligned with societal expectations, such as banking and social inclusion. In addition, as a player with a public service mission, the Group acts within the framework established by the State, which plays a central role in guiding its activities in the service of the general interest. [S4_5.01] [S4_5.02] [S4_5.03]

2.3.4.6.3 Consideration of international standards

La Banque Postale Group incorporates into its activities and commitments the main international standards, such as the United Nations Guiding Principles on Business and Human Rights, the ILO standards, and the UN Sustainable Development Goals. [S4_5.05]

2.3.4.7 Additional indicators specific to the entity

2.3.4.7.1 Indicators related to the impact of offers

The indicator of the number of new offers identified as sustainable using the ESG checklist shows a decrease in 2024 compared to 2023, from 39% to 30%, even though the target is set at 80%.

LA BANQUE POSTALE GROUP METRICS RELATED TO IMPACT FINANCE

		2023	2024	2025 target
LA BANQUE POSTALE'S MISSION-LED COMPANY METRICS	Proportion of new offers identified as sustainable using the ESG Checklist	39%	30%	80%

2.3.4.7.2 Banking inclusion indicators

STEERING METRICS FOR BANKING AND INSURANCE INCLUSION

		2023	2024	2025 target
LA BANQUE POSTALE'S MISSION-LED COMPANY METRICS	Change in NPS among financially vulnerable customers	(1)	3	9
CNP ASSURANCES' COMPANY PURPOSE METRICS	Number of products or partnerships that improve access to insurance for vulnerable populations	9	14	15

The indicators linked to La Banque Postale Group and CNP Assurances' company purposes are in place to manage their commitment to service accessibility.

Specifically, the NPS of customers experiencing financial difficulties saw a significant improvement between 2023 and 2024. However, the target⁽¹⁾ has not been achieved. Indeed, the NPS is carried out cold and it is difficult to measure the quality of support provided by La Banque Postale,

because customers experiencing financial difficulties are strongly influenced by the economic situation. The Group is, however, implementing an ambitious action plan for this support.

Furthermore, the number of products improving access to insurance for vulnerable populations has almost reached the target set for 2025.

STEERING METRICS FOR BANKING AND INSURANCE INCLUSION		2022	2023	2024
OTHER METRICS	Number of customers supported by L'Appui*	30,121	33,595	42,209
	Percentage of consumer loans less than or equal to €1,500	4.8%	5.7%	5.7%
	Percentage of home loan borrowers earning less than 2 minimum wages per month	17.6%	17.1%	19.4%
	Percentage of Livret A accounts with a balance of less than €100	46.6%	46.4%	46.9%
	Number of Simplicité account option users	287,663	400,490	418,840

* Refer to the elements relating to banking accessibility in the "Actions implemented to generate positive impacts" section of ESRS S4 for more information.

L'Appui is a specific La Banque Postale system that supports customers experiencing financial difficulties. Between 2023 and 2024, the number of people supported has increased significantly. This change should be put into perspective given the deterioration of the economic situation.

Concerning the other indicators aimed at making La Banque Postale's services more objectively accessible:

- the share of consumer loans less than or equal to €1,500 remained stable at 5.7%, and the share of borrowers with an income of less than 2x the minimum wage per month in home loans increased (up 13%). This reflects La Banque Postale's constant commitment to supporting low-income households or borrowers of small amounts by offering affordable financing solutions;
- the high proportion of Livret A savings accounts with amounts of less than €100 (a slight increase to 46.9%) is fully in line with La Banque Postale's accessible banking mission;

- finally, the unchanged number of Simplicité Account holders indicates that this offer continues to play an essential role in the Bank's mission, which is to equip the most vulnerable customers with an initial banking set-up that they can upgrade should their financial situation improve. Against a difficult economic backdrop, the stability of the number of holders of this Simplicité account reflects the deployment of La Banque Postale's commitments as a bank dedicated to serving the community. While new customers have requested this offer, this is offset by others who have moved on to account packages with more extensive services.

2.3.4.7.3 Personal data protection indicators

The percentage of employees trained in GDPR includes all employees recorded in the workforce of the relevant entities at the end of the calendar year who have completed the training during the last two years. Indeed, the training is valid for two years.

The percentage of employees trained in GDPR is up across the entire scope.

PERCENTAGE OF EMPLOYEES TRAINED IN GDPR	2022	2023	2024
Percentage of La Banque Postale SA employees trained in GDPR	84%	93%	98.1%
Percentage of CNP Assurances SA employees trained in GDPR	87.8%	87%	90.7%
Percentage of La Poste employees* trained in GDPR	92%	77%	88.7%

* La Poste employees working for and on behalf of La Banque Postale (Banking Advice and Financial Services Line).

(1) This target is updated annually and is taken from the average of all of La Banque Postale's NPS scores. The figure shown in the target corresponds to the level of achievement expected for 2024, and will change in 2025. This target is updated annually and is taken from the average of all of La Banque Postale's NPS scores. The figure shown in the target corresponds to the level of achievement expected for 2024, and will change in 2025.

2.3.4.7.4 Indicators related to the accessibility of services

La Banque Postale ensures that its services are physically accessible through post offices. La Poste is particularly committed to building a strong presence throughout the

country, with accessible locations for people with reduced mobility. In this respect, special attention is paid to the accessibility of automated teller machines (ATMs) for people with reduced mobility and for the blind and visually impaired.

METRICS FOR MANAGING THE ACCESSIBILITY OF SERVICES FOR PEOPLE WITH DISABILITIES

	2022	2023	2024
 Percentage of automated teller machines (ATMs) accessible to people with reduced mobility	98%	98%	98%
 Number of deaf and hearing impaired customers assisted by Deafi*	8,328	6,888	6,044
 Percentage of automated teller machines accessible to the blind and visually impaired	100%	100%	100%

* Customer assistance is available in French sign language for the deaf and hearing-impaired. This service can be accessed via labanquepostale.fr and the Deafi mobile app.

2.4 Governance information

2.4.1 Ensure ethical and responsible business conduct [G1]

2.4.1.1 Corporate culture

La Poste Group's values, shared by La Banque Postale, guide the Group on a day-to-day basis. They include accessibility, fairness, consideration, proximity, openness and a sense of service. They lead to the fight against exclusion by promoting banking accessibility and inclusion, proximity and regional development, thanks to an accessible and responsible offer, and to reinforcing the relationship of trust with customers. The code of conduct, which sets out the Group's rules of good conduct, fully reflects these values.

As a bancassurance provider and a mission-led company since 2022, La Banque Postale includes this commitment in its Articles of Association and in all of its activities (additional information is available in Section 2.16.1 "The impact-awareness culture at the heart of the mission-led company"). [G1_1_01]

As a player in a highly regulated sector, it complies with the most rigorous ethical and regulatory standards. The Code of conduct, prefaced by the Chairman of the Executive Board, is widely distributed and is a reference for all employees. They confirm their understanding using the "Confirmodoc" tool, an automated process guaranteeing the adoption of the ethical principles. This document is appended to the Internal Regulations and is given to each new employee, as well as being available on the La Banque Postale intranet. It is regularly reviewed, and submitted to the Supervisory Board for approval.

CNP Assurances, a subsidiary of La Banque Postale, has its own business conduct policies, which are formalised in its own code of conduct. Its company purpose, enshrined in its Articles of Association, is worded as follows: "As a responsible insurer and investor, driven by the community values of our Group, we work with our partners to create an inclusive and sustainable society, providing solutions to as many people as possible to protect and support them on their chosen paths." These commitments reflect the responsibility of CNP Assurances in its business segment, while being consistent with the Group's values. A secure whistleblowing platform is also available to report any breaches of the values and principles. [G1_MDR_P_01_06]

2.4.1.2 Political, financial and in-kind contributions from influence activities

Lobbying activities are overseen by the Chief Risk and Compliance Officer and the General Secretariat of the Financial Conglomerate, who is also a member of the Executive Board. [G1_5_01]

The Group's risk management framework stipulates that political parties and candidates are not eligible for funding. As a result, no financial or in-kind political contributions were made in 2024. [G1_5_02] [G1_5_07]

POLITICAL CONTRIBUTIONS

Geographic area	Type of recipient/beneficiary	Financial political contributions made (in € thousands)	Political contributions in kind (in € thousands)
World	All contributions	0 [G1_5_03]	0 [G1_5_06]

In 2024, La Banque Postale and CNP Assurances SA presented their positions to public authorities, either directly or by contributing to market lobbying, on several European issues that have been the subject of proposals for regulations or directives:

- transposition of the Basel 3 agreement (CRR3 regulation and CRD6 directive): defend the ability of banks to finance the economy, in particular local authorities and strategic investments;
- revision of texts on bank crisis management and deposit insurance (CMDI): protect equal treatment between credit institutions, with regard to the conditions of access to resolution tools and the requirements for holding instruments eligible for resolution;
- Retail Investment Strategy (RIS): preserve the feedback mechanism for advice that is accessible to all, and guarantee the proportionality of governance, products and tests with the customer, and benchmarks as non-public oversight tools;
- proposal for a regulation on access to financial data (FiDA): clarify the scope, strengthen the security and sequencing of the opening up of data, due diligence points concerning consumer protection, the risk of demutualisation and European sovereignty;
- digital euro and legal tender of the euro: prevent risks to financial stability, have a holding ceiling consistent with cash usage, specify the remuneration model and distribution methods;
- payments (proposal for a PSD3 directive and PSR regulation): better manage reimbursement criteria in the event of identity theft;
- Artificial Intelligence Act: precisely define AI and its associated statistical techniques, and define an appropriate scope of high-risk AI, prepare codes of conduct and guidelines for the Commission, develop harmonised technical standards;
- draft revision of the Sustainable Finance Disclosure Regulation (SFDR): simplify disclosure requirements, clarify key concepts and adjust categories according to management strategies, ensure consistency with the Taxonomy Regulation, consistency with the Corporate Sustainability Reporting Directive (CSRD), in particular on sector-specific standards for insurance and financial reporting standards (XBRL);
- Corporate Sustainability Due Diligence Directive (CS3D): implement La Poste Group's system and risk analysis methodology and contribute to its due diligence plan, to ensure that parent companies and initiating companies comply with the French Due Diligence law;
- revision of the Solvency II Directive: consider climate issues (integration of climate risks in the ORSA), simplify reporting, support low risk profile criteria.

In France, La Banque Postale's direct or indirect lobbying mainly focused on the proposed law on inheritance banking fees, in order to ensure the consistency of the planned threshold for free payments and the classification of complex inheritances with considerable human resources used. [\[G1_5_09\]](#)

Compliance with transparency rules

La Banque Postale complies with the rules of transparency. It is registered in the European Transparency Register under number 667676145713-34 and in the French directory of interest representatives of the High Authority for Transparency in Public Life (HATVP).

CNP Assurances Holding is registered in the European Transparency Register under number 019519094351-45. CNP Assurances SA is also registered in the French directory of interest representatives of the High Authority for Transparency in Public Life (HATVP). [\[G1_5_10\]](#)

Supervisory Board members from the public administration

The Head of the audit and accounting division of the French State Investment Agency (*Agence des Participations de l'Etat* – APE) at the French Ministry of the Economy, Finance and Industrial and Digital Sovereignty sits on the Supervisory Board of La Banque Postale SA as a representative of the French State.

In addition, pursuant to the provisions of Article 15 of Order no. 2014-948 of 20 August 2014 on the governance and transactions involving the capital of companies with public participation (by reference to Article 10-1 of Law no. 90-568 of 2 July 1990 on the organisation of the public service mission of La Poste and France Télécom), a Government Commissioner attends the meetings of the Supervisory Board and its specialised committees in an advisory capacity. [\[G1_5_11\]](#)

Participation in organisations representing the Group's interests

La Banque Postale SA is a member of the French Banking Federation (FBF) as a credit institution. Similarly, as an investment firm, it is a member of the French Financial Markets Association (AMAFI).

LBP CF and LBP LF are members of the ASF (French Association of Financial Companies).

LBP AM is registered with the Paris Trade and Companies Register and pays a fee to the French Financial Markets Authority (*Autorité des marchés financiers* – AMF), its supervisory authority. LBP AM and La Financière de l'Échiquier are members of the French Asset Management Association (AFG).

CNP Assurances is a member of France Assureurs (French Insurance Federation), which represents the insurance industry in France before national, European and international public authorities, institutions and administrative and market authorities. [\[G1_5_12\]](#)

2.4.1.3 Business conduct commitments

2.4.1.3.1 Role of governance bodies in business conduct

The governance bodies ensure the implementation of an effective anti-corruption system, which is managed by the Compliance Department.

Specifically, the Supervisory Board promotes and implements the code of conduct aimed, in particular, at preventing, detecting and managing conflicts of interest as well as acts of corruption and influence peddling within the Company.

The Risk Committee examines the corruption risk management strategy, the structure of the anti-corruption system, and the monitoring of actions within the Group,

receiving regular reports on the deployment, corrective actions and assessments of the system. The Executive Board, which is responsible for implementing measures to prevent and detect corruption, meets every two months as part of an internal control body that addresses issues related to the Group's anti-corruption compliance. The information shared during the meetings of this body includes a report on alerts and significant information feedback and their processing, action plans and their monitoring as well as an assessment of the effectiveness of the system as a whole. [G1_3_03]

2.4.1.3.2 Prevention and detection of corruption and bribery

La Banque Postale, a subsidiary of La Poste Group and a signatory of the United Nations Global Compact since 2003, applies a strict anti-corruption and influence peddling policy, in accordance with the French Sapin II law and international standards. This policy is based on La Poste Group's principles: "Everyone's concerned – Everyone's vigilant – Zero-tolerance".

All Group entities deploy a code of conduct that defines ethical expectations and a zero-tolerance policy in terms of corruption. This code is accompanied by an internal whistleblowing system accessible to all employees. The secure and confidential reporting system makes it possible to report facts or situations at risk anonymously or by name. Each entity is responsible for adapting this system to its specific needs.

A corruption risk map is implemented within each entity to identify and prioritise risks, and is regularly updated. It is presented annually to the Supervisory Board.

Accounting controls are implemented to ensure that the books, records and accounts are not used to conceal acts of corruption or influence peddling. In the event of an anomaly, the findings are analysed by the dedicated teams and, if necessary, brought to the attention of the Ethics Officer and the Executive Board.

La Banque Postale Group is strengthening this system with training actions adapted to the level of employee exposure. All entities are covered and deploy an *ad hoc* system. CNP Assurances, for example, places particular emphasis on raising awareness among teams about gifts, invitations, facilitation payments and conflicts of interest. LBP AM focuses on the training of exposed managers and staff, while La Financière de l'Échiquier extends its programme to its international offices located in Switzerland, Spain, Germany and Italy. Each organisation ensures that the systems are applied operationally, in

compliance with local and international regulations. The systems, validated by the governing bodies, aim to provide employees with the necessary tools to identify situations of corruption or influence peddling in their activities. [G1_3_01]

La Banque Postale informs its workforce of the existence of these policies via the code of conduct, appended to the Internal Rules, which is provided to new employees and available on the La Banque Postale intranet. Communication and awareness-raising actions are carried out periodically, particularly for Group employees. In addition, a new tool, Confirmodoc, was introduced in 2024 to ensure that the code of conduct is made fully available to La Banque Postale employees or those acting for and on behalf of La Banque Postale. [G1_3_05]

2.4.1.3.3 Business conduct indicators

No convictions for corruption, payments or bribery were recorded in 2024.

CONVICTIONS FOR CORRUPTION OR BRIBERY

Number of convictions for violations of anti-corruption and bribery laws	0 [G1_4_01]
Amount of fines for violation of anti-corruption and bribery laws	0 [G1_4_02]

2.4.1.3.4 Actions related to the fight against corruption and bribery

Corruption risk mapping makes it possible to define action plans to mitigate the major or critical risks identified. In 2023 and 2024, the main actions implemented concern the strengthening of control systems, the development of policies and procedures related to the whistleblowing system, conflicts of interest and the promotion of the whistleblowing system.

Other action plans are still being defined. They relate in particular to the extension of the control system, in particular to human resources or conflicts of interest, the dissemination of procedures to assess third parties and the strengthening of anti-corruption accounting controls.

In September 2024, a new plan was launched to formalise a sponsorship policy, roll out a beneficiary assessment tool and enhance the conflict of interest declaration completed by managers.

All initiatives aim to strengthen the fight against corruption, with completion expected by 2025. [G1_MDR_A_01_12] [G1_4_03]

2.4.1.3.5 Independence and accessibility of the whistleblowing system

WHISTLEBLOWING SYSTEM [G1_1_02]

A system that **contributes to the respect of the ethical and deontological commitments of La Banque Postale** (including the fight against corruption) and **meets the requirements relating to the duty of vigilance**

Presentation of the whistleblowing system

The whistleblowing system for processing reports was set up by La Poste and rolled out to La Banque Postale Group. This common platform is accessible to all La Banque Postale entities. Each corporate entity is responsible for processing the alerts received within its scope. The Group Ethics Officer has an overview of all reports within the Group scope.

This system reflects the Bank's commitment to maintaining ethical and rigorous governance while benefiting from La Poste Group's shared infrastructure.

It enables any person concerned to report behaviour contrary to the Group's values or reprehensible acts, in accordance with the Sapin II law and the requirements of the duty of vigilance. It is accessible to internal employees (employees, interns and work-study students) and to third parties (specifically service providers or suppliers).

This system is based on a secure platform hosted by a third-party provider, the Whistleblowing Centre, guaranteeing the confidentiality of exchanges and the protection of whistleblowers. The access procedures are detailed in the Group's code of conduct, available in internal and public versions. Training and awareness-raising campaigns are regularly organised for Group employees to ensure a clear understanding of the system and encourage its use.

At CNP Assurances, in addition to the Group system, this system takes the form of the CNP Integrity Line online whistleblowing platform, which is available 24 hours a day to any third party in the Group, wherever they are located. Each alert filed via this platform is subject to a report, which is sent immediately to the Managing Director when the seriousness of the events warrants it. Once the investigation of the file is completed, a response is provided to the whistleblower within a reasonable period of time not exceeding three months after the acknowledgment of receipt, provided that all the necessary information has been provided. In the event of a complex alert requiring in-depth investigations, this period may be extended. [G1_1_02]

Processing of alerts and independence of investigators

Reports received via the platform are entrusted to the Investigations Department, which reports to the Fraud Management Department. Following analysis, a report may lead to an investigation by an independent team. Interviews may be organised with the employees implicated or witnesses of the facts. At the end of the investigation, a confidential report is prepared. This independent department is responsible for conducting target and rigorous surveys. [G1_1_08]

A three-level process guarantees the integrity of the investigations: the investigators collect and analyse the reported facts; a contact or deputy manager verifies the results obtained; finally, the head of the department validates the conclusions.

The interviews conducted as part of the surveys respect the principles of confidentiality and fairness. At the end of each investigation, a confidential report is drafted and sent to the competent departments, which is managed in accordance with La Banque Postale's ethical standards. [G1.3.02]

In addition, from 2024, a unit check of alerts recorded on the platform is set up by the Ethics Officer, who reports on these aspects to the governance and to the Supervisory Board of La Banque Postale. [G1.3.03]

Protection of whistleblowers

Whistleblowers benefit from comprehensive protection against retaliation, in accordance with the Sapin II law. Their identity, as well as that of the persons concerned or third parties mentioned in the alerts, is strictly confidential.

La Banque Postale Group's commitment to compliance with the provisions of the law on the protection of whistleblowers is formally expressed through a "procedure for collecting and processing La Banque Postale reports" available to all employees.

No disciplinary, discriminatory or punitive action, such as dismissal or demotion, may be taken against those who have used the system to raise concerns. In addition, La Banque Postale has introduced specific policies to protect these individuals, guaranteeing them a safe environment free from pressure.

Therefore, the "Reporting User Guide" specifies the provisions put in place to protect whistleblowers from any reprisals that may be taken against them following the processing of the report. These provisions relate to:

- guaranteeing the confidentiality of the report, the facts reported and all the information collected, as well as the identity of the originator of the report, the persons targeted and any third parties mentioned;
- protecting whistleblowers against reprisals, in particular disciplinary or discriminatory measures (direct or indirect): "The good faith of the whistleblower exempts them from any disciplinary sanction, even if the facts subsequently appear inaccurate or would not result in any action";
- prohibiting any obstruction of whistleblowers by any measure whatsoever. Anyone who obstructs would be subject to sanctions.

In the event of a report in good faith, no sanction may be applied, even if the reported facts are not proven or do not give rise to action. Finally, any attempt to obstruct the process or unauthorised disclosure of confidential information is subject to sanctions. These measures reflect the Group's commitment to an ethical and protective framework. [G1.1.05]

La Banque Postale Group is subject to Directive 2019/1937 and has associated policies and procedures in place to protect whistle-blowers. [G1.1.12]

2.4.1.3.6 Raising employee awareness of business conduct

La Banque Postale Group employees receive training on ethics matters when they first join the Group and then throughout their careers, through regular training campaigns on the rules of good conduct. Upon arrival, new employees receive an induction booklet and a copy of the code of conduct. Training sessions are carried out regularly and awareness-raising and communication initiatives are implemented on these topics. For example, the employees of Louvre Banque Privée and CNP Assurances deploy mandatory and regulatory training (Anti-Money Laundering and Countering the Financing of Terrorism (AML-CFT), etc.) which is regularly monitored. Mandatory training at CNP Assurances must be carried out at least every two years, and the completion rate is monitored by the Compliance Department in conjunction with the Human Resources Department. [G1.1.10]

These awareness-raising and training actions are essential because all functions of the Company, with the exception of executive assistants and general services, regardless of the hierarchical level, are considered to be highly exposed to the risks of corruption and bribery, including members of governing bodies. [G1.1.11]

Employees of La Banque Postale Group and its entities are made aware of ethics, professional conduct and the fight against corruption as soon as they join and throughout their careers. Training covers the key principles and rules in operation at the Group and La Poste, *i.e.* respect for customer needs, banking secrecy and data confidentiality, prevention of conflicts of interest, and compliance with rules on using information systems. In 2024, the e-learning course on ethics and anti-corruption was deployed for all employees of La Banque Postale Group as well as the people working for and on behalf of La Banque Postale. Some 99% of this target population had completed the programme by 31 December 2024.

A new training course entitled "Regulations: adopting the rules and procedures on ethics, anti-corruption and influence peddling" was launched in April 2024. Lasting 1 hour and 15 minutes, it replaced the two previous training sessions "Regulations: ethics and anti-corruption" and "Regulations: anti-corruption for the most exposed employees".

The training covers the following topics:

- anti-corruption, definition and challenges, corruption and influence peddling: differentiation and scenarios;
- anti-corruption system: enforcement, confidentiality and professional secrecy: identifying and managing conflicts of interest, whistleblower rights.

The e-learning course on ethics and anti-corruption is intended for the employees of La Banque Postale Group as well as the people working under the name of and on behalf of La Banque Postale. It allows all employees and managers to understand how ethics, anti-corruption and influence peddling works in reality, by being trained to the highest level. As of 31 December 2024, 94% of the target trainees were compliant with these regulations.

Awareness-raising and communication operations run hand in hand with training as such. Ethics and anti-corruption officers relay these actions across their respective areas. La Banque Postale's Head of Ethics also sits on various bodies (managerial communities, Executive Committees, special audit training, subsidiaries).

At CNP Assurances, anti-corruption training has been mandatory and has been included in a compliance training program since 2019. This training programme consists of two modules: a first instilling an anti-corruption and influence peddling culture, and a second on managing corruption risks related to activities, including the purchasing component.

LBP AM employees receive training on the French Sapin II law, while La Financière de l'Échiquier employees receive initial training, and special training every five years. [G1_3_06]

Since 2022, a programme consisting of several modules spread throughout the year has been offered to Supervisory Board members, including specific ESG training. Other training courses are also provided, in particular on corporate culture. [G1_3_08]

TRAINING OF AT-RISK FUNCTIONS

Percentage of employees considered to be in 'at-risk' functions (LBP SA scope)	99% [G1_3_07]
---	-------------------------

All La Banque Postale SA employees, with the exception of executive assistants and general services, are considered to be in at-risk roles. As a result, they are required to complete anti-money laundering and financing of terrorism training every two years.

PERCENTAGE OF EMPLOYEES TRAINED IN ANTI-MONEY LAUNDERING AND ANTI-TERRORIST FINANCING [G1_3_07]

	2022	2023	2024
Percentage of employees trained in anti-money laundering and anti-terrorist financing (LBP SA scope)	97%	95%	98.7%

2.4.1.4 Commitments to suppliers

2.4.1.4.1 Supplier dependency management

In order to guarantee a balanced relationship with its suppliers, La Banque Postale takes great care to avoid any situation in which its suppliers are dependent on it.

In terms of a "dependency rate", La Banque Postale has set 25% as the alert threshold, above which it sets up a special monitoring system to raise supplier awareness of this situation. This rate was set to avoid abuse of a dominant position. La Banque Postale is therefore trying to find a fair balance between this rate and ensuring that its contracts are open to SMEs.

Buyers are made responsible for these situations of dependency at all stages of the purchasing process, in particular with the application of anti-corruption commitments/pillars, the AFNOR sectoral analysis and the regulatory and financial risk documentary analysis.

Various actions can be taken when the dependency rate is high:

- dependency warning mail: email sent to inform the supplier and ask them to diversify, particularly if La Banque Postale knows that orders are one-off or that the contract will not be renewed;
- supplier tracking with regular reviews to monitor the situation;
- supporting and searching for other potential customers for the supplier.

Finally, if the relationship has to be terminated, it is planned according to a schedule defined with the supplier (the period of notice being prorated according to the duration of the relationship). [G1_2_02]

2.4.1.4.2 Management of supplier payment terms

Since 2022, La Banque Postale has been a signatory of the Supplier Relations and Responsible Purchasing charter with several La Poste Group entities. The Group undertakes to comply with ten commitments, including the guarantee of a responsible financial relationship with its suppliers.

As part of the signing of the Supplier Relations and Responsible Purchasing Charter (RFAR) and its certification in September 2023, CNP Assurances has undertaken to implement a progress approach in its relations with suppliers by introducing a culture of dialogue and mediation.

In 2024, La Poste Group formalised its Responsible Purchasing policy, which applies to La Banque Postale, based, among other things, on La Banque Postale's commitment to prevent late payments, particularly with regard to micro-enterprises and SMEs (small and medium-sized enterprises). [G1_2_01]

The Purchasing Department takes into account the risks it incurs in various aspects in its relationship with its suppliers: with respect to the Company itself, with respect to non-compliant suppliers, as well as in the context of consultations for the outsourcing of services. In line with its responsible purchasing approach for 2023-2025, a three-year improvement plan has been set out, making compliance with payment deadlines a priority for the Group. The risk of non-compliance with supplier payment deadlines is also included in La Banque Postale's risk mapping, with a follow-up of the action plan presented every six months to the Finance and Strategy Department's Risk and Compliance Committee.

Since 2021, a monthly dashboard has been set up to manage supplier payment terms. This monitoring makes it possible to address potential sources of delay, manage billing disputes and raise supplier awareness of the risks of late shipments. The subject has also been included in the individual targets of Purchasing Department employees.

La Banque Postale pays particular attention to its suppliers, which are small and medium-sized enterprises (SMEs). An SME officer has been appointed to manage the improvement of payment terms for SMEs. Moreover, in February 2025, La Banque Postale's Purchasing Department supplemented its payment time dashboard with an indicator specific to SMEs. It will be integrated from March 2025 with monthly monitoring.

In addition, as part of the RFAR certification process, since 2023 La Banque Postale has appointed an internal "Supplier Relations" Mediator, who reports to the Responsible Purchasing Committee (ARCOM) three times a year with any supplier referrals and complaints. No referrals were reported by the Mediator in 2024. [G1.2.02]

2.4.1.4.3 Payment practices with respect to suppliers

La Banque Postale has chosen to calculate the average invoice payment time in relation to the number of invoices. Indeed, this method is more representative of the situation of small companies (particularly SMEs) than an average in relation to the invoice amount. The average payment period remained stable between 2023 and 2024.

PAYMENT PRACTICES

	Average number of days
Average payment term	51.6 [G1.6.01]

The Group's standard payment terms (in number of days) by major supplier category are as follows:

- suppliers at 10 days: mainly the charity sector and administrations, which account for less than 1% of invoices;
- suppliers at 20 days: mainly the production and distribution of electricity, gas, steam and air conditioning and the collection, treatment and distribution of water and the collection and treatment of wastewater, which account for less than 1% of invoices;
- suppliers at 30 days: mainly the social and medical sectors, which account for around 15% of invoices;
- suppliers at 45 days: mainly the temporary employment sector, which accounts for around 15% of invoices;
- suppliers at 60 days: this covers all other categories of purchases, which account for around 70% of invoices. [G1.6.02]

PAYMENT PRACTICES BY TYPE OF SUPPLIER [G1.6.03]

Corporate category	Invoices paid on time
SME	81.2%
ISE	84%
Large corporates	80.5%
Not specified	69.8%

Invoices paid on time to ISEs improved by 2 points and those paid to unspecified category companies were up by 4.8 points compared to 2023. The percentage of invoices paid outside the payment deadline is explained by:

- the supplier's failure to comply with invoicing procedures (non-compliant invoices, invoices sent too late, wrong issue date, etc.);
- the specifier's failure to comply with procedures (not receiving invoices on time);
- technical errors (inability to formalise and effectively monitor proven disputes in La Poste's IS): therefore, these invoices are not cancelled out when calculating payment terms.

In addition, suppliers without a specified category account for 6.5% of the total number of invoices.

LATE PAYMENTS RESULTING IN LEGAL PROCEEDINGS

Number of legal proceedings on late payments	0 [G1.6.04]
--	----------------

No legal proceedings were recorded for 2024. This information was confirmed by La Banque Postale's Mediator.

Methodological information and background information

The **average payment period** represents the average number of days required to settle supplier invoices. The date of issue of the invoice corresponds to the date of the document.

The average payment period is calculated using the following formula:

$$\frac{\sum(\text{payment date} - \text{issue date})}{\text{Total number of invoices}}$$

The scope covered includes La Banque Postale SA and six of the main subsidiaries, whose data was deemed usable following checks and controls (completeness and consistency of the data). The subsidiaries selected are: CNP Assurances SA, LBP AM, La Banque Postale Consumer Finance, Louvre Banque Privée, Louvre Banque Privée IC and Ma French Bank.

For 2024, the results are calculated over 11 months (from January to November) supplemented by an extrapolation for the 12th month based on the average of the first 11 months.

For the CNP Assurances SA scope, the average payment period by number of invoices was estimated based on the average payment period by invoice amount; the ratio used for this estimate is that of La Banque Postale SA's scope.

The **percentage of invoices paid on time** is broken down according to the categories of supplier companies:

- Small and Medium-sized Enterprises (SMEs);
- Intermediate-Sized Enterprises (ISEs);
- large corporates;
- company category unspecified.

Each invoice is checked to identify whether the payment was made in accordance with the contractual commitment. The ratio between the number of invoices passing this check and the total number of invoices is then calculated.

The scope of analysis covered is the scope of La Banque Postale SA and five of its main subsidiaries. The subsidiaries selected are: LBP AM, La Banque Postale Consumer Finance, Louvre Banque Privée, Louvre Banque Privée IC and Ma French Bank. This scope represents approximately 80% of the number of invoices issued within the scope of analysis of the average payment period⁽¹⁾.

For 2024, the results are calculated over 11 months (from January to November) supplemented by an extrapolation for the 12th month based on the average of the first 11 months. [GL_6_05]

2.4.1.4.4 Integration of ESG criteria in the selection and monitoring of suppliers

CNP Assurances France has formed a partnership with Ecovadis, which carries out an assessment of its main suppliers on environmental, social and ethical issues. Its foreign subsidiaries (Argentina, Brazil and Italy) deploy policies in this area, with procedures specific to their geography.

La Banque Postale must ensure that social, societal and environmental criteria relating to the service being purchased are included in the consultation requirements and during the supplier selection process. Each product/service purchasing segment is screened against specific, tailored CSR criteria. Depending on the purchasing category, environmental and social concerns usually represent 10% of the overall weighting when assessing tenders. This approach is based on an AFNOR sectoral mapping methodology. The choice of supplier is governed by internal rules, in particular to guarantee equal treatment, and is validated by the Purchasing Manager and the specifying business line. La Banque Postale also ensures that the requirements of the specifications remain accessible to VSEs and SMEs.

In addition, the Responsible Purchasing Charter promotes the definition of responsible purchasing (sustainable procurement) according to international standard ISO 20400¹, a benchmark standard on this subject, as "procurement that has the most positive environmental, social and economic impacts possible over the entire life cycle". The Group's approach is to look for suppliers who offer services and products that meet these requirements, in a partnership approach with all stakeholders.

The choice of supplier is also governed by internal rules and justified in a document "Presentation report" which is validated by the Purchasing Manager and the specifying business line. The operating methods also define supplier notifications before and during calls for tenders.

La Banque Postale is not subject to public procurement and is therefore free to weight its coefficients. But as a subsidiary of La Poste, it has written all the appropriate procedures to show its commitment to equal treatment. All buyers are made aware of equal treatment: in fact, the choice of supplier is traced in the presentation report, a mandatory document accompanying any new contract.

Once all bidders have submitted their bids, a multi-criteria analysis of supplier bids is carried out, to guide the choice of the supplier who will be selected to carry out the outsourced service. As specified above, this multi-criteria grid includes social and environmental criteria. Given the financial value of the project, the criticality and sensitivity of the service, the recommended choice will be submitted for approval to the governance bodies specified above.

The progress of the entire tender process is reported in a presentation report prepared jointly by the buyer and the business line specifier in charge of the project, and approved by their respective line manager(s). Purchasing employees and specifiers are trained in this process, which is described in the Purchasing Manual and the purchasing procedure.

When entering into the contract, the "Responsible and Ethical Purchasing Charter between La Banque Postale and its suppliers" and the "code of conduct" are included in the appendices to the contract, and must therefore be accepted by the supplier for each new contract.

La Banque Postale regularly includes new paragraphs in its contract templates and General Purchasing Conditions (GPCs) concerning compliance with regulations and environmental and social issues, the possibility of audits and its ability to terminate the relationship in the event of non-compliance. [GL_2_03]

(1) The invoice framework includes all invoices paid during the analysis period, regardless of the date on which they were recorded in the accounts (including years prior to 2024), excluding La Poste Group invoices and credit notes, direct debit invoices, proven disputes (invoices blocked at the request of the business line (code B) and invoices blocked at the request of the fund (code A)) and debtor suppliers for the whole of 2024.

2.5 Notes to the sustainability report

2.5.1 Tables on the European Green Taxonomy

2.5.1.1 Assets included in the GAR calculation

This table shows the information used to calculate the GAR, by type of product and counterparty. The alignment of these exposures with the Taxonomy's criteria is presented primarily on the basis of the targeted environmental target.

Based on turnover

- Banks with a non-EU subsidiary are required to provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU Taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions are required to disclose a separate GAR for non-EU exposures on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations.
- For motor vehicle loans, only those exposures generated after the date of application of the disclosure are included.

- Banks with a non-EU subsidiary are required to provide this information separately for exposures towards non-EU counterparties. For non-EU exposures, while there are additional challenges in terms of absence of common disclosure requirements and methodology, as the EU Taxonomy and the NFRD apply only at EU level, given the relevance of these exposures for those credit institutions with non-EU subsidiaries, these institutions are required to disclose a separate GAR for non-EU exposures on a best effort basis, in the form of estimates and ranges, using proxies, and explaining the assumptions, caveats and limitations.
- For motor vehicle loans, only those exposures generated after the date of application of the disclosure are included.

2.5.1.2 GAR sector information

This table shows banking book exposures to sectors covered by the European Green Taxonomy, with the counterparty's economic activity or the activity concerned by the project financed by the Bank identified by the relevant NACE code. Exposures to NACE sectors for which the required level of granularity is not available internally are included on the last row of the tables.

Based on turnover

- The assignment of a counterparty to a NACE sector is based exclusively on the nature of the immediate counterparty. The classification of the exposures incurred jointly by more than one obligor is done on the basis of the characteristics of the obligor that was the more relevant, or determinant, for the institution to grant the exposure. Information by NACE code for exposures incurred jointly by more than one obligor is disclosed on the basis of the characteristics of the obligor that was the more relevant, or determinant. Information by NACE code is disclosed with the level of disaggregation required in the template.

2.5.1.3 GAR Technical Reserves

Based on the information presented in Section 2.5.1.1, the Bank indicates in these tables the ratio of Taxonomy-aligned assets to covered assets.

Based on turnover

GAR TECHNICAL RESERVES KPI

		a	b	c	d	e	f	g	h	i	j	k	l	m	
		Disclosure reference date T													
		Climate change mitigation (CCM)					Climate change adaptation (CCA)			Water and marine resources (WMR)					
		Proportion of total covered assets funding Taxonomy-relevant sectors (Taxonomy eligible)					Proportion of total covered assets funding Taxonomy-relevant sectors (Taxonomy eligible)			Proportion of total covered assets funding Taxonomy-relevant sectors (Taxonomy eligible)					
		Proportion of total covered assets funding Taxonomy-relevant sectors (Taxonomy aligned)					Proportion of total covered assets funding Taxonomy-relevant sectors (Taxonomy aligned)			Proportion of total covered assets funding Taxonomy-relevant sectors (Taxonomy aligned)

Note:

- This template discloses the GAR KPIs on the technical reserves of loans, calculated based on the data disclosed in template 1 on covered assets, and by applying the formulas proposed in this template.
- Information on the GAR (Green Asset Ratio of "eligible" activities) is accompanied by information on the proportion of total assets covered by the GAR.

- Credit institutions can, in addition to the information included in this template, show the proportion of assets funding Taxonomy relevant sectors that are environmentally sustainable (Taxonomy-aligned). This information would enrich the information on the KPI on environmentally sustainable assets compared to total eligible assets.
- Credit institutions replicate this template for information based on turnover and CapEx.

2.5.1.6 Nuclear and fossil gas-related activities

2.5.1.6.1 Nuclear and fossil gas-related activities [Template 1]

This table shows the Bank's exposures to companies operating in nuclear and gas-related activities.

La Banque Postale is exposed to gas and nuclear activities through general purpose financing to companies in these sectors. The main companies financed in this regard are committed to the low-carbon pathways of the Science Based Targets initiative (SBTi).

In addition to this qualitative table, Delegated Regulation 2022/1214 on nuclear and fossil gas activities also provides for the publication of quantitative indicators detailing the Taxonomy alignment of the Bank's exposures to these activities.

Row	Nuclear energy-related activities	
1.	The undertaking carries out, funds or has exposures to the research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	YES
2.	The undertaking carries out, funds or has exposures to the construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	YES
3.	The undertaking carries out, funds or has exposures to the safe operation of existing nuclear installations that produce electricity or process heat, including for the purpose of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	YES
Fossil gas-related activities		
4.	The undertaking carries out, funds or has exposures to the construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	YES
5.	The undertaking carries out, funds or has exposures to the construction, refurbishment and operation of heat generation facilities that produce heat/cool and electricity using fossil gaseous fuels.	YES
6.	The undertaking carries out, funds or has exposures to the construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	YES

2.5.1.6.2 Taxonomy-aligned economic activities (denominator) [Template 2]

This table presents the amounts and proportions of the GAR's denominator represented by Taxonomy-aligned activities referred to in Sections 4.26 to 4.31 (nuclear and gas) of Annexes I and II of Delegated Regulation (EU) 2021/2139.

Based on turnover

Row	Economic activities	Amount and proportion					
		CCM + CCA		Climate change mitigation (CCM)		Climate change adaptation (CCA)

2.5.1.6.5 Taxonomy-non-eligible activities [Template 5]

This table presents the amounts and proportions of the GAR's denominator covered by Template 1 activities that are Taxonomy-non-eligible in accordance with Sections 4.26 to 4.31 (nuclear and gas) of Annexes I and II of Delegated Regulation (EU) 2021/2139.

Based on turnover

Row	Economic activities	Amount (in € millions)	Percentage
1.	Amount and proportion of economic activity referred to in row 1 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.26 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	-	0.0%
2.	Amount and proportion of economic activity referred to in row 2 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.27 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	3	0.0%
3.	Amount and proportion of economic activity referred to in row 3 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.28 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	14	0.0%
4.	Amount and proportion of economic activity referred to in row 4 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.29 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	0	0.0%
5.	Amount and proportion of economic activity referred to in row 5 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.30 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	-	0.0%
6.	Amount and proportion of economic activity referred to in row 6 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.31 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	-	0.0%
7.	Amount and proportion of other Taxonomy-non-eligible economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	87,587	48.6%
8.	Total amount and proportion of Taxonomy-non-eligible economic activities in the denominator of the applicable KPI	87,603	48.6%

Based on CapEx

Row	Economic activities	Amount (in € millions)	Percentage
1.	Amount and proportion of economic activity referred to in row 1 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.26 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	-	0.0%
2.	Amount and proportion of economic activity referred to in row 2 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.27 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	81	0.0%
3.	Amount and proportion of economic activity referred to in row 3 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.28 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	9	0.0%
4.	Amount and proportion of economic activity referred to in row 4 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.29 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	0	0.0%
5.	Amount and proportion of economic activity referred to in row 5 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.30 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	-	0.0%
6.	Amount and proportion of economic activity referred to in row 6 of Template 1 that is Taxonomy-non-eligible in accordance with Section 4.31 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI	-	0.0%
7.	Amount and proportion of other Taxonomy-non-eligible economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	86,829	48.2%
8.	Total amount and proportion of Taxonomy-non-eligible economic activities in the denominator of the applicable KPI	86,919	48.3%

2.5.1.7 Taxonomy indicators by business segment

The FAQs of November 2024 introduce a requirement for financial players to publish key performance indicators (KPIs) for all their business segments, including asset

management, insurance and investment, in addition to their main banking activity. La Banque Postale Group publishes this information for its material business segments.

2.5.1.7.1 Focus on asset management

As part of the Taxonomy reporting, the asset management subsidiary of La Banque Postale LBP AM carries out an alignment analysis of its portfolios. The results are published in Section 6.8.9.3.6 Off-balance sheet exposures.

At 31 December 2024, this ratio was 3.0%, with a contribution of 0.6% from debt securities and 2.4% from equity instruments.

2.5.1.7.2 Insurance business

Insurance business are included in the Group indicators through the equity-accounted shares of subsidiaries.

Additional insurance-specific indicators are presented below. They are of two types:

- non-life insurance underwriting indicators;
- indicators relating to investments in the Group's euro and unit-linked savings portfolios.

In accordance with European Commission communication C/2024/6691 of 8 November 2024 on the interpretation and implementation of certain legal provisions of the delegated act relating to the information to be disclosed under Article 8 of the Taxonomy, CNP has also chosen to publish a combined key performance indicator (KPI), the results of which are presented below:

	Alignment with Taxonomy
Key performance indicator based on turnover	3.0%
Key performance indicator based on CapEx	4.1%

For more information, please refer to CNP Assurances Group's CSRD report.

Underwriting indicators

Underwriting KPIs measure CNP's participation in the adaptation target through its non-life insurance business. By design, they are relatively comparable to the KPIs of non-financial activities.

At 31 December 2024, the results on alignment are as follows:

Metrics	Value at end-2024 on the scope of CNP Assurances Holding and its subsidiaries
TAXONOMY-RELATED UNDERWRITING INDICATORS	
Taxonomy-aligned non-life gross written premiums as a proportion of total non-life gross written premiums	0.7%

The calculation of underwriting KPIs is based on the following methodology:

- the eligible gross written premiums mentioned above that adhere to the technical criteria for substantial contribution to climate change adaptation, DNSH (Do No Significant Harm) and minimum safeguards are considered as aligned. For compliance with the minimum standards in social and governance matters, CNP Assurances and its subsidiaries adhere to these requirements by

implementing appropriate procedures to identify, prevent, mitigate or remedy the actual or potential negative impacts associated with their operations and value chain;

- in France, the proportion of aligned premiums corresponds to natural disaster cover for motor and homeowner insurance policies.

Please refer to CNP Assurances' CSRD report for more details on the methodology and results.

Investment indicators

The investment KPIs aim to measure the proportion of CNP Assurances' investments allocated to economic activities compliant with the Taxonomy on the targets of climate change adaptation and mitigation in terms of

turnover and capital expenditure. They illustrate the way in which the insurer contributes to the reorientation of capital towards more sustainable activities.

At 31 December 2024, the results on alignment are as follows:

Metrics	Value at end-2024 on the scope of CNP Assurances Holding and its subsidiaries
TAXONOMY-RELATED INVESTMENT INDICATORS	
Technical reserves investments in Taxonomy-aligned economic activities (premium income) as a % of total investments excluding sovereign bonds	3.3%
Technical reserves investments in Taxonomy-aligned economic activities (investment outlay) as a % of technical reserves investments as a % of technical reserves investments excluding sovereign bonds	4.5%
All investment KPIs relate to the Group's euro and unit-linked portfolios, and their calculation is based on the following methodology: technical reserves investments, excluding sovereign bonds, correspond to investments of the insurance business investments net of derivative liabilities, and cash and cash equivalents, as presented in the IFRS consolidated balance sheet of the CNP Assurances	
Group, plus IFRS unrealised gains on investment property and held-to-maturity (HTM) securities, less investments in sovereign entities; sovereign bonds, including green or sustainable bonds, are not considered eligible for the Taxonomy. Green or sustainable bonds are not treated differently from other bonds.	

For equities and bonds issued by non-financial sector companies held directly or *via* funds, the rules applied for the calculation of each KPI are as follows:

Eligible and/or aligned	Equities and corporate bonds up to the percentage of their turnover or their CapEx corresponding to eligible economic activities and/or aligned with the Taxonomy (first two targets only).
Non-eligible	Equities and bonds up to the percentage of their turnover or their CapEx corresponding to economic activities not eligible for the Taxonomy (first two targets only).
Non-aligned eligible	Equities and bonds up to the percentage of their turnover or their CapEx corresponding to eligible economic activities not aligned with the Taxonomy (first two targets only).

- equities and bonds issued by financial sector companies are considered invalid at the end of 2024 due to the unavailability of KPIs on the 6 environmental targets, in accordance with Communication C/2024/6691 of 8 November 2024 of the European Commission.

For the buildings held by CNP Assurances SA and its French subsidiaries, the rules applied to calculate each KPI are as follows:

Eligible	Properties held for operating or investment purposes
Aligned	Properties held for operating purposes, or for which the Taxonomy criteria are met (climate change mitigation target)
Non-aligned eligible	Buildings held for operating or investment purposes for which the Taxonomy criteria are not met.

For the forests held by CNP Assurances SA and its French subsidiaries, the rules applied to calculate each KPI are as follows:

Eligible	Forests held for exploitation or investment
Aligned	Forests held for exploitation or investment for which the Taxonomy criteria are met (climate change mitigation target)
Non-aligned eligible	Forests held for logging or investment purposes for which Taxonomy criteria are not met.

Please refer to CNP Assurance's CSRD report for more details on the methodology and results.

2.6 Cross-reference tables

2.6.1 Coverage of disclosure requirements

DISCLOSURE REQUIREMENT ⁽¹⁾		MAIN PARAGRAPHS ON THE SUBJECT ⁽²⁾
ESRS 2: General disclosures		
BP-1	General basis for preparing sustainability report	▸ 2.1.1.1. Reporting scope
BP-2	Disclosures in relation to specific circumstances	▸ 2.1.1.2. Calculation methods and details of published metrics ▸ 2.1.1.3. Changes compared to previous statements ▸ 2.1.1.4. Disclosures incorporated by reference
GOV-1	The role of the administrative, management and supervisory bodies	▸ 2.1.2.1 Role of governance in managing ESG impacts, risks and opportunities ▸ 2.1.2.2 Skills and expertise of the Supervisory Board on sustainability matters ▸ 2.1.2.3. Management and supervisory bodies
GOV-2	Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies	▸ 2.1.2.4. Sustainability matters taken into account by governance bodies
GOV-3	Integration of sustainability-related performance in incentive schemes	▸ 2.1.2.5. Alignment of remuneration with La Banque Postale's sustainability objectives
GOV-4	Statement on due diligence	▸ 2.1.2.6. Due diligence procedures
GOV-5	Risk management and internal controls over sustainability reporting	▸ 2.1.2.7. Risk management and internal control
SBM-1	Strategy, business model and value chain	▸ 2.1.3.1. Group business model and value chain
SBM-2	Interests and views of stakeholders	▸ 2.1.3.1. Group business model and value chain

6.8 Environmental, social and governance (ESG) risks

6.8.1 Definition of ESG risks

6.8.1.1 General definitions

ESG factors include all environmental, **social and governance issues** that may have a negative or positive impact on the financial performance or solvency of a company, entity, sovereign or individual.

From a regulatory standpoint, ESG risks correspond to the negative impact of ESG factors on the financial performance or solvency of a financial institution due to the current or prospective effects of these factors on the institution's counterparties or assets. The ESG risks represent the risks of losses generated by climate and environmental events, social and societal developments or governance failures affecting La Banque Postale's internal operations or its businesses.

ESG risk management is based on a national and European regulatory framework that is in the process of being developed. The European Central Bank (ECB) guide, published in November 2020, sets out the supervisory expectations for the management and reporting of climate and environmental risks. It is supported by the European Banking Authority (EBA) Report on ESG Risk Management and Supervision dated June 2021.

In addition to these regulations, there are two main reporting requirements:

- the European Green Taxonomy Regulation (EU) 2020/852 of 18 June 2020, which is designed to facilitate sustainable investment by defining a common classification system for sustainable economic activities. The related transparency requirements and environmental targets are set out in a series of delegated regulations. In accordance with the regulatory requirements, La Banque Postale has, for the first

time, calculated its Green Asset Ratio (GAR) at 31 December 2023. This exercise will be done annually under the regulatory requirements of the taxonomy and half-yearly under the Pillar III ESG requirements (see Section 6.8.9 "Inputs in the calculation of the green asset ratio");

- implementing Regulation (EU) 2022/2453 published in the Official Journal of the European Union on 19 December 2022, which describes the Pillar III disclosure requirements for ESG risk. La Banque Postale underwent this regulatory exercise for the first time on 31 December 2022. This exercise has since been repeated every six months, with the publication of this qualitative report accompanied by a quantitative exercise covering physical risk and transition risk. The results of this exercise are presented in this chapter (see Sections 6.8.7 "Indicators of potential climate change transition risk", 6.8.8 "Indicators of potential climate change physical risk" and 6.8.10 "Other climate change mitigation measures not covered by the European Green Taxonomy").

In addition to European regulations, French regulations also cover social and governance issues. This mainly concerns business ethics regulations (duty of care, Sapin II law, etc.) and the code of governance of listed companies, published in 2020 by the French Association of Private Companies.

ESG risk may be identified as a risk category in its own right or as a factor affecting traditional risk categories (credit risk, market risk, operational risk, liquidity risk, etc.) through different transmission channels, as shown in the dedicated paragraph in Section 6.1 "Summary of risks". The chains of transmission should therefore be differentiated according to the asset class concerned.

Chains of transmission of ESG risk to the Bank's portfolios

* Operational expenditure.

More generally, ESG risks are analysed according to the double materiality principle:

6.8.1.2 The different types of risks

6.8.1.2.1 Environmental risks

Climate change and environmental degradation affect economic activities and threaten financial stability. The related **environmental risk** may result in losses arising from the impact of these changes on La Banque Postale's counterparties or its assets.

A distinction is also made between climate risk and nature risk.

6.8.1.2.1.1 Climate risk

Climate change refers to variations in temperature and weather conditions over a long period of time. They may be natural or man-made. Since the 19th century, observed climate change has been directly linked to human activity and the massive use of fossil fuels (coal, oil and gas), which are highly emissive.

The main consequences of climate change as currently observed are droughts, floods, water shortages, fires, melting ice caps, rising sea levels, storms and declining biodiversity.

Climate change leads to structural changes, which in turn affect economic activities and the financial system:

- **physical climate risk** corresponds to the financial effects of climate change (increased occurrence of extreme weather events and gradual climate change). The effects may be direct (loss of productivity, damage to physical assets) or indirect (impact on supply chains).

Physical risk may be described as:

- acute when it results from extreme events (drought, floods, storms), or
- chronic when it results from gradual changes (rising temperatures, rising sea levels, water stress, biodiversity loss, land use change, habitat destruction, resource scarcity);
- **transition climate risk** corresponds to the direct or indirect financial loss that may be incurred by La Banque Postale as it transitions to a low-carbon business model (abrupt change in the climate-related regulatory framework, technological advances, market developments).

A common indicator of climate risk is the emergence of stranded assets in portfolios. Stranded assets are assets that may decrease in value or generate a lower-than-expected return at some time prior to the end of their economic life due to regulatory, technological or market developments that are in turn linked to the occurrence of a physical or transition climate risk.

La Banque Postale has identified several asset classes that may become stranded assets in the medium to long term:

- loans and investments already in La Banque Postale's portfolios that are not aligned with current sector policies;
- financing of projects or counterparties whose activity is significantly threatened by the occurrence of a physical or transition risk.

6.8.1.2.1.2 Nature risk

According to the Taskforce on Nature-related Financial Disclosures (TNFD)⁽¹⁾, nature can be defined through a construct of four realms: Land, Ocean, Freshwater and Atmosphere. It consists of two elements. The first concerns environmental assets, i.e. living and non-living natural areas

(forests, wetlands, agricultural areas, etc.) that are at the origin of the ecosystem services that provide benefits to businesses. The second concerns biodiversity, which is an essential feature of nature. Biodiversity is key to maintaining the quality, resilience and quantity of ecosystem assets and providing the ecosystem services on which businesses and society depend.

Nature risks are the potential threats to an organisation that result from its dependence and impact on nature. They are analysed according to the double materiality principle, distinguishing between:

- **dependency risk**: an organisation may be more or less dependent on one or more ecosystem services for the operation of its business processes. Any deterioration of these ecosystem services would expose the organisation to risk. These risks may be linked to a physical risk;
- **impact risk**: an organisation's activity may cause changes in the state of natural capital. These changes may be positive or negative and direct, indirect or cumulative. They may be linked to a transition risk.

In the case of biodiversity, the following systemic risks exist alongside the physical and transition risks:

- **risk of ecosystem collapse**: risk of a critical natural system ceasing to function (tipping point reached, causing ecosystem collapse at the geographical or sector level);
- **global risk**: risk associated with the fundamental impacts of nature loss on the levels of transition risk and physical risk in one or more portfolios;
- **contagion risk**: risk of financial difficulties experienced by one or more financial institutions due to nature risks spreading to the entire financial system.

6.8.1.2.2 Social and societal risks

La Banque Postale is also exposed to risks arising from social and societal issues.

The EBA defines social factors as all social issues that may positively or negatively affect the financial performance or solvency of an entity, a sovereign or an individual. There are many social factors. They may concern the rights, well-being and interests of individuals and communities, or inequality, health, inclusion, labour relations, occupational health and safety, human capital and community issues. Social risk is the risk of a negative financial impact on La Banque Postale stemming from the current or prospective impacts of social factors on its counterparties or assets. In relation to La Banque Postale's businesses, social risk may refer to the failure of the Group's practices in terms of employment, employee health and safety or the protection of personal data.

Societal risk is the risk of financial losses arising from more or less rapid regulatory changes introduced in response to social injustice, changes in consumer behaviour or market developments.

(1) The TNFD is a working group launched in July 2020 to help companies and financial institutions measure, monitor and disclose their nature-related risks. Four partner and co-founding organisations are leading the initiative: the United Nations Development Programme (UNDP), the United Nations Environment Programme Finance Initiative (UNEP FI), the World Wildlife Fund and Global Canopy.

6.8.1.2.3 Governance risks

The EBA defines governance factors as all issues relating to measures, rules, decision-making bodies, information and supervisory processes that may have a positive or negative impact on the financial performance or solvency of an entity, sovereign or individual. Governance factors cover governance practices (leadership and executive remuneration, audits, internal controls, tax avoidance, board independence, shareholder rights, corruption and other compliance issues), as well as how companies or entities incorporate environmental and social factors into their policies and procedures. Governance risk is the risk of any negative financial impact on La Banque Postale stemming from the current or prospective impacts of governance factors on its counterparties or assets. Within the framework of La Banque Postale's businesses, it concerns the risk of financial losses and/or reputational

damage resulting from the failure of the rules and procedures to manage, administer and control the Group in accordance with sound governance principles.

La Banque Postale makes a distinction between:

- the risk of financial loss due to failure to take into account environmental and social risks in the Group's strategy and organisation;
- image and reputational risks related to the failure of La Banque Postale to meet its commitments resulting from poor implementation of the strategy decided by the Group and its subsidiaries, and deficiencies in the control processes ensuring its correct implementation;
- the risk of damage to La Banque Postale's reputation as a result of its involvement in social conflicts or environmental controversies.

6.8.2 ESG risk governance

ESG organisational structure & risk management

Following its designation as a mission-led company in February 2022, La Banque Postale has embedded ESG principles more deeply in its governance. Its Articles of Association now include environmental and social targets to support the just transition and help mitigate ESG risks.

The Supervisory Board and the Executive Board place considerable emphasis on ESG risks when it comes to defining La Banque Postale's strategy, operating targets and risk management framework. The Executive Board and the Supervisory Board receive regular briefings on La Banque Postale's ESG risk exposures and take these issues into account in their decisions. Lastly, regular reports are sent to the Executive Committee and the Group Risk Management Committee (GRMC).

The Sustainability Department, which reports directly to the Chairman of the Executive Board, is responsible for overseeing the operational roll-out of the strategic plan's ESG aspects. The head of the department sits on the Executive Committee and is a member of La Banque Postale's existing bodies. The department helps to ensure that ESG factors are fully taken into account by La Banque Postale's various entities.

Since 2020, ESG risks have been incorporated into La Banque Postale's risk governance, in particular by creating a department dedicated to the management and coordination of all ESG-based initiatives. In order to encourage their inclusion in all of the Group's risk control and management systems and ensure that they are managed efficiently, they are covered by the existing organisations and bodies. The principles applicable to La Banque Postale Group's Risk Appetite Framework are therefore also applicable to the management of ESG risks.

ESG risks are identified in the same way as other risks in the bank's risk mapping and their management is integrated within the management bodies to guarantee their supervision (RAS, RMOP, RMR).

The Group Risk Department, based on the regulations in force and external and internal expertise (Sustainability Department), defines a general framework and submits it for approval to the Executive Board and the Supervisory Board (definition of the ESG risk management policy and specific risk management rules). All the documentation, standards and methods produced within La Banque Postale to identify, measure and manage ESG risks are subject to the Risk Organisation's validation process (Group Risk Management Committee, Risk Management Rules Validation Committee, etc.).

The Group Risk Department, in particular its ESG Risk unit, verifies the proper implementation of the level 2 ESG risk management framework, performs studies and analyses to obtain assurance that the level of exposure to ESG risks is acceptable and complies with the commitments given by La Banque Postale, and reports on this work to La Banque Postale Group's Executive Board and Supervisory Board. It coordinates and harmonises work on the risk management framework with the subsidiaries and within the Group.

The Group Compliance Department (GCD) helps to monitor Social and Governance risks, in particular by identifying and assessing compliance and reputational risks, setting up risk management frameworks, producing Compliance procedure manuals and performing compliance checks. The GCD is also in charge of La Banque Postale Group's compliance system, the target of which is to guarantee compliance with the regulations covering in particular: money laundering and financing of terrorism; fraud, bribery and corruption; customer protection; provision of investment services and mandatory regulatory training.

In addition to the various departments responsible for identifying and managing ESG risks, all Group employees are made aware of these issues, including general management. Several training courses are offered. Employees have access to modules on climate and environmental risks developed by La Banque Postale's Group Risk Department, the "Climate Fresk" created for all employees to provide them with a better understanding of climate change and its impact on the Group, and specific training courses developed for the sales teams.

The subsidiaries of La Banque Postale Group align their ESG risk management frameworks with that of La Banque Postale, while adapting it to the specific features of their businesses. The subsidiaries contribute to the Group's consolidated reporting system and to the construction of a harmonised system. Group steering committees are planned for specific factors such as implementation of the European Green Taxonomy.

6.8.3 Risk identification and assessment

ESG risks raise unprecedented challenges and issues for all participants in the financial system. La Banque Postale is very committed to the just transition and places the control of these risks at the top of its priorities. The first step in developing and deploying an effective risk management framework consists of identifying the risks.

The identification of ESG risks is the result of comprehensive monitoring of La Banque Postale's external environment (regulatory, legislative, economic, etc.), its business portfolio and internal functioning (financing, investments, internal processes, etc.), as well as its strategic guidelines. The latter take into account the guidelines of civil society, in particular those of non-governmental organisations specialising in the subject.

In particular, the climate risk factor must be identified before lending decisions are made, in order to anticipate the possible effects of climate change on the future of the business, customer solvency or mortgages or other forms of loan collateral. La Banque Postale's lending commitments are designed to steer financing towards sectors and activities that are less exposed to ESG risks. For example, in order to increase the asset portfolio's

resilience to transition risk, La Banque Postale is helping to finance the energy transition, focusing exclusively on renewable energy projects and imposing an outright ban on the financing of new fossil fuel projects.

6.8.3.1 Links between the different types of risks

La Banque Postale has designed an assessment matrix for the categories of existing risks (credit, market, operational, etc.) with regard to climate risks, taking into account three time horizons: short term (1 to 3 years), medium term (4 to 10 years) and long term (more than 10 years).

This assessment represents the residual impact of climate risks after taking into account the risk mitigation system put in place, on the scope of La Banque Postale's banking exposures.

The assessment of the climate factor impact takes into account the diverse nature of La Banque Postale's businesses. For the assessment of exposure levels, account is taken of the exposures' contribution to the Bank's total balance sheet and their inherent vulnerability to climate risks.

Risks identified by La Banque Postale	Physical risks			Transition risks		
	Short-term (<3 years)	Medium term (>4 and <10 years)	Long term (>10 years)	Short-term (<3 years)	Medium term (>4 and <10 years)	Long term (>10 years)
Credit and counterparty risks	●	●	●	●	●	●
Strategic and business risks (including reputational risk)	●	●	●	●	●	●
Market risks and asset/liability management risks	●	●	●	●	●	●
Liquidity risks	●	●	●	●	●	●
Operational risks (including legal)	●	●	●	●	●	●

● Low impact There is a link between climate risk factors and business risk. The materialisation of these factors may result in a deterioration in the level of risk, estimated to be low, in the business area concerned.	● Medium impact There is a link between climate risk factors and business risk. The materialisation of these factors may result in a deterioration in the level of risk, estimated to be medium, in the business area concerned.	● High impact There is a link between climate risk factors and business risk. The materialisation of these factors may result in a deterioration in the level of risk, estimated to be high, in the business area concerned.	● No impact No relationship between business risk and the climate factor (no risk concerned in the analysis).
--	--	--	---

The implementation of appropriate responses to the impact of ESG risks on the existing risk themes is based on dedicated risk management frameworks:

- **strategic risk:** La Banque Postale has identified ESG factors as a major issue and has incorporated them directly into its current strategic plan (in the sustainability dimension). Placing ESG risks in a dedicated category of the risk map highlights their priority status. ESG risk mapping is also based on the systems in place for managing compliance and reputational risks, as well as on the new product approval process;
- **operational risk:** La Banque Postale has identified a strong correlation between ESG risks and operational risks. The Group's ESG risk map is based to a large extent on the existing operational risk management framework, particularly for the management of physical risk (exposure of La Banque Postale's buildings to the risk of flooding under a once-in-a-hundred-years flood scenario) and social risk (consideration of HR issues);
- **credit risk:** La Banque Postale is continuing to incorporate ESG risk factors into its credit risk management framework. Significant efforts have been made to ensure that ESG factors, and an environmental, regional and inclusion impact rating, are taken into account in the loan approval process. For example, energy performance diagnoses are included in the criteria for granting real estate loans and new loans to companies in the fossil fuel (coal, oil and gas) and aviation sectors are subject to strict criteria. A training programme for all credit risk analysts is also being developed. The aim is to enable credit analysts to add a dimension to their classical financial research, by giving them the knowledge needed to perform a critical analysis of ESG issues;

- **market risk:** La Banque Postale's sector risk management policies are taken into account in the investment process and the carbon footprint/intensity of the trading books is calculated quarterly to control their exposure to transition risk;
- **liquidity risk:** At this stage, La Banque Postale's liquidity profile and the management system put in place to control this risk (Internal Liquidity Adequacy Assessment Process – ILAAP) are designed to enable the Group to cope with various liquidity stress scenarios linked directly or indirectly to climate risk (for example, the materialisation of a hazard on assets, the occurrence of defaults linked to physical risk, immediate or gradual stranded assets, massive withdrawals linked to reputational issues). La Banque Postale considers that its liquidity buffer is correctly calibrated to absorb climate risk, given the severity of the scenarios used for modelling purposes.

6.8.3.2 ESG risk map

The ESG risks are identified and broken down in La Banque Postale Group's risk map in order to provide an overall view and ensure that all these risks are comprehensively managed at the level of the financial conglomerate. The ESG risk map is updated annually to assess its criticality using a common rule applied to all risk categories across the Group. Criticality is determined by combining impact and frequency measurements. It is assessed on a scale of 1 to 4 (minor, moderate, major and critical).

Since 2022, the risk-mapping process better incorporates the social, societal and governance dimensions of ESG risk. This integration into the mapping is based in particular on existing risk themes in terms of operational and strategic risks and allows the homogeneous assessment of their materiality within the Group. In 2023, biodiversity risks were added to the environmental risk map. Given the now-visible and measurable effects of climate change, regulatory expectations in this area and La Banque Postale Group's strong commitment to helping combat global warming, the criticality of ESG risk is qualified as "major".

ESG risk is presented as a separate category in the Group's risk map; it includes the following risks:

ESG risks			
ESG risk corresponds to the risk of an adverse financial effect on the institution arising from the current or future impact of environmental, social and governance factors (ESG) on its customers/counterparties or its invested assets.			
Risk families	Definition	Risk handling	Tracking indicators ⁽¹⁾
1. Environmental risks			
Financial risks generated by an institution's exposure to customers/counterparties or invested assets that may be affected by environmental factors or contribute to their adverse effect, or climate change or other forms of environmental damage			
1.1. Physical climate risks	Risks linked to the financial effects of climate change (such as increased extreme weather events and gradual climate change) and environmental degradation (such as air, water and land pollution, water stress, biodiversity loss and deforestation).	Section 2.2 Environmental information	Exposure of the real estate trading book to physical risks ⁽²⁾ Proportion of mortgage trading book consisting of properties highly exposed to flood risk
1.2. Climate transition risks	The risk of financial loss that an institution may incur, directly or indirectly, as a result of the process of adapting to a low-carbon and more environmentally sustainable economy. It may arise, for example, from the relatively abrupt adoption of climate and environmental policies, technological progress or changes in market sentiment and preferences.		Reduction in Scope 1 and 2 GHG emissions Level of portfolio alignment with the SBTi pathway Net exposure to fossil fuelsECB climate stress test
1.3. Physical nature risk	Physical nature risk is the risk of financial loss that La Banque Postale may incur due to a deterioration of the natural environment, including direct damage to assets, the loss of ecosystem services that play a critical role in production processes or disruption of supply chains. The loss may be caused by a one-off event (acute risk) or gradual transformations over time (chronic risk).		
1.4. Transition nature risk	Transition nature risk is the risk of financial loss that La Banque Postale may incur as a result of the transition to a nature-positive economy that penalises the institution's adverse effect on the natural environment (major political, legal, technological or commercial changes). It may take different forms including reputation, compliance, litigation or stranded asset risks.		

ESG risks

ESG risk corresponds to the risk of an adverse financial effect on the institution arising from the current or future impact of environmental, social and governance factors (ESG) on its customers/counterparties or its invested assets.

Risk families	Definition	Risk handling	Tracking indicators⁽¹⁾
2. Social and societal risks⁽³⁾			
Risk of an adverse financial effect on an institution arising from the current or future impact of social factors on its customers/counterparties or its invested assets.			
2.1. Social risks (employment and employee health and safety practices)	HR risk relating to the failure of the Group's employment and employee health and safety practices.	Section 2.3.1 Guaranteeing favourable working conditions for all our employees Section 2.3.2 Guaranteeing favourable working conditions for workers in the value chain	Quality of life at work (QLW) monitoring indicator ⁽²⁾ Proportion of employees trained on psycho-social risks ⁽²⁾ Gender equality index ⁽²⁾
2.2 Risk of customer protection failures or weaknesses	Risk of financial loss due to failure to apply the Group's customer protection practices or weaknesses in these practices.	Section 2.3.4.6 Targets relating to consumers and end-users	
2.3 Risk of customer and stakeholder assessment failures	Risk of financial loss due to failures in assessing La Banque Postale's partners (customers and suppliers) in an environment shaped by the transition towards a more equitable and inclusive society (with more or less rapid regulatory changes in the face of social injustice, changes in consumer behaviour and markets, etc.).	Section 2.3.2 Guaranteeing favourable working conditions for workers in the value chain Section 2.3.3. Committing to the regions and communities affected by our activities	
3. Governance risks			
Risk of an adverse financial effect on an institution arising from the long-term strategic issues facing customers/ counterparties and other players			
3.1 Risk of failures in the internal governance of La Banque Postale Group	Risk of failures or weaknesses in the execution of the Group's strategy due to inefficiencies within the management body (excessively slow reaction times, failure to make decisions, etc.) or deficient reporting and whistleblowing processes (incomplete committee structure, lack of transparency, etc.).	Section 2.4 Governance information	Percentage of women managers and strategic executives, percentage of women on the Executive Committee and the Supervisory Board ⁽²⁾ Proportion of commitments under supervision and control Attendance rates at meetings of La Banque Postale Group/CNP Assurances Supervisory Board/ Board of Directors and their committees ⁽²⁾ Percentage of new annual offers identified as sustainable using the ESG checklist ⁽²⁾

(1) Indicators used in La Banque Postale's risk map.

(2) Indicators integrated into La Banque Postale's Risk Appetite Framework.

(3) The risk rating is calculated at the level of operational risks, not ESG risks.

6.8.4 Measuring and monitoring the balance sheet impact of ESG risks

6.8.4.1 Measuring exposure to ESG risks

In order to manage ESG risks, La Banque Postale has defined several metrics at different levels of the organisation, covering both its operational scope and its banking businesses.

The non-financial rating indicator has been incorporated into the risk appetite framework since 2021. As La Banque Postale's target is to remain the leader in terms of non-financial performance, it is expected that its ratings in this area will reflect this ambition and that, on average, La Banque Postale will be in the top percentile in the various agency rankings.

The impacts of climate change and any failure to manage the related risks may generate a reputational risk for La Banque Postale. This risk is addressed at Group level as part of the strategic and business risk-mapping process. It includes the risks associated with all actions that may have a direct or indirect impact on the Group's reputation among the public, its shareholders, supervisors or the market.

In addition to these global indicators for measuring ESG risks, La Banque Postale has developed specific indicators for monitoring climate risks on the one hand, and social and societal risks on the other. The calculation of these indicators is based on methodologies defined by La Banque Postale, based in particular on the regulations in force, best market practice and the data available to date. Estimates have been calibrated to optimise the coverage of certain banking books when data is lacking or is of poor quality. The methodologies, data and assumptions used are subject to a process of continuous improvement, with the aim of achieving the most accurate calculations and assessments possible.

These indicators are presented below.

6.8.4.2 Measuring exposure to environmental and climate risks

6.8.4.2.1 Physical risk

Climate change exposes La Banque Postale to physical risks, both directly as a company, and indirectly through the counterparties (companies and individuals) that it finances.

Two indicators are used to monitor these risks:

- **exposure of La Banque Postale's buildings to the risk of flooding under a once-in-a-hundred-years flood scenario:** This indicator, monitored as part of the Group's operational risk-mapping process, measures the exposure of La Banque Postale's main buildings to the risk of flooding under a once-a-century flood scenario. Models are used to assess this physical risk more effectively and ensure that La Banque Postale will not be exposed to any business continuity risk;

- **exposure of the real estate trading book to physical risks (flooding):** This indicator measures the exposure of the buildings financed by La Banque Postale to the risk of flooding (legal and natural persons), identifies the assets most at risk and defines the management strategy to be adopted if necessary. 95% of residential real estate trading books are in France. In 2024, 2.6%⁽¹⁾ of the assets were subject to the risk of flooding, of which 63% were assets located in Île-de-France, and 5% in the Indre et Loire region.

A more general measurement of La Banque Postale's exposure to physical risks (floods, forest fires, storms, clay soil shrink and swell, drought/heat waves, increased rainfall) due to its lending activities was carried out for the corporate and real estate trading books (see Section 6.8.8 "Indicators of potential climate change physical risk").

6.8.4.2.2 Transition risk

La Banque Postale uses five indicators to measure its exposure to transition risk:

- **level of alignment with the SBTi (Science-Based Targets initiative) low-carbon pathway:** La Banque Postale is committed to reducing its direct and indirect greenhouse gas emissions by 2030, in line with its SBTi pathway commitments. The gap between the expected pathway and the actual reduction achieved by La Banque Postale is measured annually;
- **financed emissions:** this indicator measures the proportion of greenhouse gas emissions financed by La Banque Postale (Scope 3). The methodology uses data published by La Banque Postale's customers and external data providers, and sector estimates based in particular on the emissions factors produced by the international Partnership for Carbon Accounting Financials (PCAF) initiative⁽²⁾. At 30 June 2024, the financed emissions calculated for La Banque Postale's corporate and real estate trading books (approximately 74% of the total banking book was covered by the indicator) represented 10,920 ktCO₂⁽³⁾;
- **sector-specific exposures:** La Banque Postale assesses its net position in the coal, oil and gas sectors in accordance with its climate policies for these sectors. Gross exposure corresponds to La Banque Postale's outstanding loans to companies on the reference lists in the identified sectors. Net exposure corresponds to gross exposure adjusted for the exceptions mentioned in the relevant sector-specific policies (for the coal sector: adoption of a credible, detailed public coal exit strategy per asset, in line with the targets of the Paris Agreement; for the oil and gas sector: adoption of a robust transition plan for exiting the oil and gas sector before 2040 (e.g. SBT commitments). La Banque Postale is committed to having zero net exposure to the fossil fuel sector by 2030. La Banque Postale has already almost met this target, since its net exposure to fossil fuels represented 0.005% of its corporate trading book in the last quarter of 2024;

(1) Data calculated annually.

(2) Partnership for Carbon Accounting Financials.

(3) Data calculated annually.

- **rate of alignment with the European Green Taxonomy:** by calculating its green asset ratio under the European Green Taxonomy, La Banque Postale ensures that its lending and investing activities contribute to the climate transition, and that the green assets represent a sufficiently large proportion of the Group's total assets to fulfil its commitments and strategic targets. In 2024, La Banque Postale's European Green Taxonomy eligibility ratio and alignment ratio were 51.35% and 5.7%, respectively (5.7% under the mandatory approach plus an additional voluntary component of 2.3%, i.e. 8.0% in total) – see Section 6.8.9 “European Green Taxonomy alignment indicators”. Very little data is currently available concerning the alignment with the European Green Taxonomy of counterparties' assets and the projects financed. Data availability should improve with each successive calculation exercise and as all economic players become more proficient in applying the Taxonomy. Work is also underway to establish systems for the collection of customer data. In addition, the remaining uncertainty with regard to the interpretation of certain regulatory provisions should gradually be resolved, allowing La Banque Postale to further clarify its disclosures in future publications. These disclosures will systematically take into account changes in the applicable standards and the interpretations adopted by the market, the Group and its subsidiaries.

All of these indicators are included in a dashboard and regularly reported to the Group Risk Management Committee.

6.8.4.3 Measuring exposure to social and societal risks

La Banque Postale ensures compliance with its commitments to its customers and employees by integrating the analysis of the materiality of social risk into the risk mapping. In this respect, the bank also incorporates a certain number of social and societal indicators into its risk appetite framework. These risk factors are closely linked to the Bank's operational and compliance risk management frameworks.

Social risks are covered for the most part by the “employment practices and occupational health and safety” operational risk family.

Societal risks are closely linked to the “customer, product and sales practices” operational risk family, which also includes non-compliance risks.

La Banque Postale includes the following indicators in its risk appetite framework:

- **customer satisfaction score:** the customer satisfaction score is obtained through a survey carried out as part of the “La Voie du client” system. It allows a comparison to be made with other market players. This indicator is integrated into the strategic and business risk monitoring system. In 2024, the overall customer satisfaction score for La Banque Postale was 7.5/10, with an NPS up 2 points compared to 2023 (see Section 2.1.3.1 Group business model and value chain);

- **gender equality index:** this indicator enables La Banque Postale to measure its performance in relation to its gender equality targets. The index is calculated by taking into account the gender remuneration gap, the gender gap in individual remuneration increases, the gender gap in promotions, the percentage of female employees who received a remuneration increase in the year they returned from maternity leave, and the number of employees of the under-represented gender among the ten highest paid employees (see Section 2.3.1.4 “Action plans and resources dedicated to the management of impacts, risks and opportunities for employees of the Group”). For the 2024 financial year, all entities of the La Banque Postale Group have an equality index greater than or equal to 91/100. In order to provide attractive career development opportunities for both men and women, enhance the internal social climate and offer employees a better work-life balance, since 2022, social and societal risks have been addressed in more detail in La Banque Postale's risk management operational policy.

6.8.4.4 Measuring exposure to governance risks

Governance risk has also been incorporated into La Banque Postale's risk appetite framework. Governance risk is closely linked to the “customers, products and sales practices” operational risks family, which also includes non-compliance risk, and is therefore covered by the operational and non-compliance risk management framework.

La Banque Postale includes the following indicators in its risk appetite framework:

- **percentage of women on the Executive Committee and the Supervisory Board:** La Banque Postale is committed to promoting parity within its teams and at general management level. A monitoring indicator has been defined to facilitate monitoring of this commitment. The indicator is calculated annually. In 2024, women represented 50% of the Supervisory Board;
- **percentage of offers labelled “socially responsible”:** an offer is labelled as “socially responsible” if it fulfils a minimum number of criteria on the ESG checklist developed by La Banque Postale in order to classify the offers proposed to its customers. This checklist ensures that all new products are screened for ESG risks and impacts. In 2023, 39% of offers were labelled “socially responsible”. The target is to achieve 80% of sustainable products by 2025 (see Section 2.3.6.2 Developing our positive impacts on our consumers and end-users).

The target is to reach 80% of sustainable products by 2025.

Governance risk has also been addressed in La Banque Postale's risk management operational policy since 2022.

6.8.4.5 Incorporation of short-, medium- and long-term effects of the environmental and social factors and associated risks into the Bank's risk management framework

An ESG Risk Management Policy has been defined by the Group Risk Department in order to monitor these risks over different time horizons. In accordance with the double materiality principle, the target is twofold: to control the impact of climate change on La Banque Postale's businesses and to control La Banque Postale's impact and that of its businesses on the environment and the transition to a more sustainable economy. Remedial plans are defined to control identified potential impacts. ESG risk measurement and assessment is based on existing measurement systems, but also on dedicated systems for quantified risks.

These may take the form of sector-specific policies, reviews and adjustments of La Banque Postale's internal processes, or stronger control and monitoring arrangements. In this respect, La Banque Postale has defined its sectoral policies to phase out coal, oil and gas by 2030. Added to this are the principles for the Bank's involvement in the financing of the aviation sector, adopted in 2022, enabling it to define its financing and investment policy in this key transition sector. In 2023, La Banque Postale adopted a policy to govern the financing of companies whose activities give rise to a deforestation risk.

Provisions:

In 2024, La Banque Postale includes provisions relating to climate risks. These provisions were defined in addition to the sectoral provisions already in place by addressing two main portfolios:

- transition risk on the corporate portfolio, in particular by assessing the impact of an increase in carbon prices on the solvency of counterparties;
- physical risk of flooding on the retail customers real estate loan portfolio and the impact that it may have on expected recoveries in the event of litigation.

These assessments will be refined and supplemented at each closing of financial statements and as the system matures.

Scenario analyses and stress tests:

La Banque Postale participated in the two climate stress test exercises conducted respectively by the French Prudential Supervision and Resolution Authority (ACPR) in 2020, and by the ECB in the first half of 2022. These exercises highlighted the impacts of the risks concerned over different time horizons (short and long term).

The pilot climate stress test exercise conducted by the ACPR between July 2020 and April 2021 provided La Banque Postale with its first opportunity to measure the Group's transition risk and physical risk by economic sector and over a long period (30 years). The target was to raise awareness of climate risk among financial institutions and – for the first time – to measure their vulnerability to this risk (impact on credit risk, market risk and sovereign risk).

This exercise was subsequently followed and supplemented by an exercise carried out by the ECB for the year 2022. The aim of this exercise was to assess the level of preparedness of European banks in the face of climate risks through a qualitative questionnaire, quantitative reporting and a scenario analysis exercise. La Banque Postale was assessed on its internal stress-testing system, its exposure to carbon-intensive sectors (measured in terms of revenue) and its ability to cope with climate shocks according to several scenarios (NGFS transition scenarios⁽¹⁾, severe drought and flooding).

Based on the results of these exercises, La Banque Postale's overall performance is in line with the average for euro zone banks. Its portfolio's exposure to the most carbon-intensive sectors is limited and its concentration on the most carbon-intensive firms is low. This exercise collected and structured additional data on the climate risk exposure across different time horizons and scenarios, as well as raised awareness and structured the processes in place.

An internal stress test framework has been developed by La Banque Postale, capitalising on the experience acquired during these exercises, in order to measure the impacts of the climate risk on its business model and study its resilience. By projecting over a horizon of one to three years on a constant balance sheet basis, the analysis covers both Retail and Non-Retail credit portfolios and results in a sensitivity impact on provisions. La Banque Postale aims to roll out this exercise over a period of more than 10 years in 2025.

Ad hoc sensitivity scenarios were also developed to assess the materiality of the climate risk in terms of market risk and operational risk.

The analysis of the market exposures applies the short-term (three years) NGFS disorderly transition scenario and covers outstanding bonds, cash and non-consolidated equity investments. The assumption of this disorderly short-term transition aims to reflect market risk and capture potential shocks.

The operational risk scenarios examine the climate risk in terms of business continuity, reputational risk and liability risk. Their target is to estimate the impact of a probable and significant crisis on La Banque Postale's activities, making it possible to cover the different types of impact: physical risks with the 100-year Seine flood scenario and transition risk with the green laundering scenarios. The assumptions of these scenarios deliberately target a strong shock over a limited time horizon (one year) and are used to calibrate the bank's insurance coverage needs (Seine flood).

The data, combined with the ESG risk management work, provided a basis for incorporating climate issues in the Bank's Internal Capital Adequacy Assessment Process (ICAAP) and led to an increase in the coverage of climate risks by capital. They are also used in the context of risk management: in the mapping of climate risks and the work to produce the materiality matrix. These exercises are part of La Banque Postale's overall approach to identify strategic levers for the decarbonisation of its loan portfolios in order to ensure compliance with its trajectories.

(1) Network for Greening the Financial System.

6.8.4.6 Activities, commitments and exposures that help to mitigate social and environmental risks

All of La Banque Postale's businesses are conducted in strict compliance with the Sustainable Finance strategy defined at Group level in order to ensure that social and environmental risks are mitigated. As a mission-led company, La Banque Postale is committed to:

- transforming the bancassurance model by leveraging its environmental, social and regional impact culture;
- developing and promoting products and services that meet environmental, social and regional challenges;

- advancing best practices and regulatory standards in the bancassurance sector through the Bank's best-in-class actions.

In its Articles of Association, La Banque Postale has adopted a company purpose that includes a commitment to take into account the social and environmental impacts of its businesses. Several indicators have been or are in the process of being developed to enable the Mission Committee to regularly monitor performance in relation to this commitment (see Section 1.5.3 A mission-led company: three statutory targets, consistent with the Group's strategic plan and civic foundation).

6.8.5 Incorporation of ESG risks into the banking model

6.8.5.1 Internal strategy for taking ESG issues into account

Remedial plans are drawn up to control the potential short-, medium- and long-term impacts of the identified risks on La Banque Postale's business. These remedial plans may take the form of sector-specific risk management policies, reviews and adjustments of the Bank's internal processes, or stronger control and monitoring mechanisms.

La Banque Postale incorporates climate and environmental risks into its strategy and model through its numerous commitments: Principles for Responsible Banking, Finance for Biodiversity Pledge and its low-carbon pathways. It is the first European bank and one of the first three in the world to have adopted SBTi-approved pathways for aligning its portfolios with the Paris Agreement. These pathways enable the Bank to identify its most carbon-intensive exposures and to deploy action plans. More specifically, approval of these pathways represents a commitment by La Banque Postale to:

- reduce its Scope 1 and 2 GHG emissions over the 2019-2030 period (emissions from the Bank's vehicle fleet and some buildings);
- continue to source 100% of its electricity from renewable sources;
- reduce its indirect Scope 3 GHG emissions (mainly related to the real estate trading book);
- continue to only finance energy projects based on renewable energy;
- align the temperature of its corporate equity and bond portfolio from +3.1°C in 2020 to 2.2°C in 2025 (Scopes 1 and 2) and from 3.2°C in 2020 to 1.9°C in 2025 (Scopes 1, 2 and 3) (according to the "Temperature Scoring" method developed by SBTi); and
- align the temperature of its long-term corporate trading book from 3.1°C in 2020 to 2.3°C in 2025 (Scopes 1 and 2) and from 3.1°C in 2020 to 2.1°C in 2025 (Scopes 1, 2 and 3) (see Section 2.2.1.4 "Climate change mitigation and adaptation targets").

La Banque Postale also takes into account the ability of its counterparties to mitigate the risks related to environmental factors by integrating an analysis of the climate risk affecting counterparties from the granting phase and during the annual review of loans. This analysis takes into account customers' gross exposure to climate factors but also their ability and strategy to cope with them, in particular through decarbonisation commitments and the implementation of mitigation and adaptation measures. This analysis methodology is gradually being rolled out within the bank's various activities. The Bank's materiality analysis tools also take into account customers' low-carbon pathways and their level of impact *via* the Impact Weighting Factor (IWF) score.

Counterparty governance is an integral part of the management of La Banque Postale's governance risks, in particular through the Disputes and Exclusions Committee. This Committee is responsible for handling disputes classified according to three levels of severity and for monitoring the application of decisions. The committee's decisions have a direct impact on the business relationship with the counterparties concerned.

In addition, La Banque Postale has adopted sector policies in order to direct its financing in accordance with its commitments and ambition. For example, in the coal and oil and gas sector.

Coal Policy

The target of La Banque Postale's Coal Policy is to define the principles to be applied in order to fulfil its commitment to completely exit the coal sector by 2030.

La Banque Postale undertakes not to finance/invest in coal mining companies, coal plant operators and other coal-related businesses – and to divest its interests in any such businesses – in accordance with the criteria described in the Risk Management Policy – Coal Sector. An exception applies if any company concerned has adopted a credible public coal exit strategy, presented asset by asset, that is consistent with the goals of the Paris Agreement.

Oil and Gas Policy

The target of La Banque Postale's Oil and Gas Policy is to define the principles applicable at the level of La Banque Postale to fulfil its commitment to exit the oil and gas sectors by 2030. The commitment concerns companies that do not have a robust transition plan to exit these sectors before 2040.

To fulfil this commitment, La Banque Postale undertakes to, in accordance with the criteria set out in the Policy:

- not finance any energy projects based on oil and gas;
- no longer provide financial services (credits, account keeping, payment media, factoring facilities, etc.) and to manage any existing loans and services on a runoff basis;
- not to invest and to divest any interests in these companies by 2030 at the latest.

The remuneration policy is another lever for taking social and environmental risks into account in the Bank's model. La Banque Postale is committed to offering a fair remuneration scheme that gives all employees a stake in the Bank's performance and its contribution to sustainable development. The top-up coefficient used to determine the total budget for individual variable remuneration for employees is set annually by the Executive Board, in particular according to La Banque Postale's non-financial performance over the past year. Since 2022, the individual variable remuneration of strategic and senior executives (including the members of the Executive Committee and the Development Committee) and all employees has been aligned with at least 40% of non-financial targets including, in particular, targets related to community engagement (follow-up of training on sustainable development topics or integration of a non-financial issue that is particularly significant for the operational scope concerned, for example). With regard to the collective variable remuneration of all employees, La Banque Postale has set up a profit-sharing agreement enabling them to be linked to non-financial results. The Group non-financial criterion, which accounts for 25% of the total, corresponds to the positioning of the weighted average of La Banque Postale's ratings in the rankings of the ESG rating agencies on the environmental, societal and governance pillars. A budget has been allocated to reducing the remuneration gap between men and women in comparable professional roles (see Section 2.4.2.3.2 "Gender equality").

6.8.5.2 A range of products and tools that take ESG issues into account

In order to achieve these ambitious targets, the Sustainability Department, supported by the Group Risk Department, is responsible for steering the operational implementation of the strategic plan's overall sustainability aspects and specific ESG aspects, by helping the business lines to deploy an appropriate offer.

La Banque Postale is developing new banking products and tools. To this end, it is working on the construction of a socially responsible offering on all banking products to support its customers towards the just transition (see Section 2.3.6.2 "Develop our positive impacts with consumers and end-users"). The offers are being eco-designed with the

help of specific indicators. The ESG checklist ensures that ESG issues are taken into account in the design of all the Bank's products. The checklist is a mandatory document to be submitted to the Product Review Committee for all new products. It measures how the offer helps customers move towards the just transition (by reducing inequalities, promoting a more virtuous ecosystem, measuring positive and contributory impacts, making customers more socially responsible) for all products marketed.

Use of the Impact Weighting Factor (IWF) is strengthening analysis of the environmental and social impact of originated loans. Since the beginning of December 2023, all impact home loan products incorporate IWF scores. This score is also integrated into the granting process for specialised financing for legal persons (asset, project and real estate financing) (see Section 2.1.3.1 "The Group's business model and value chain").

Lastly, a carbon impact measurement tool developed in partnership with the start-up Carbo and incubated by Platform58 is now offered to all customers, allowing them to measure the impact of their transactions and purchase carbon offsets, if appropriate, through the Carbo app and the online bank.

With regard to the product line-up, La Banque Postale has developed a comprehensive range of financing solutions for home insulation projects. These include Prêt Avance Rénovation, which combines climate action with social inclusion.

Additionally, an impact consumer finance solution, the first of its kind on the market, offsets the use of the goods. La Banque Postale also offers solidarity savings products that allow customers to use their savings to finance charities or social and solidarity economy enterprises.

For companies or local authorities, La Banque Postale offers green loans dedicated to environmental projects and impact loans whose interest rate is indexed to non-financial performance.

Lastly, La Banque Postale, through its asset management company La Banque Postale Asset Management, offers a range of socially responsible investment (SRI) products to investors wishing to reconcile sustainable development and performance potential. To this end, it has developed its own GREaT methodology (see Section 2.1.2.7 "Due diligence procedures").

6.8.6 ESG risk monitoring and reporting

6.8.6.1 Risk monitoring

Internal control and monitoring of ESG risks within La Banque Postale is based on the three lines of defence model.

First line of defence

Primary responsibility for ESG risk management lies with the Group entities, whose managers are responsible for implementing a risk management framework that complies with internal and external requirements. In addition, each employee provides assurance that risks are properly managed at their level through their knowledge, experience, judgement and compliance with their entity's rules. The Sustainability Department, supported by the Group Risk Department, is also responsible for steering the operational implementation of the ESG aspects of the strategic plan. As a result, the business lines' operational departments and the ESG experts constitute the first line of defence.

Second line of defence

The Group Risk Department, in particular its ESG Risk unit, verifies the proper implementation of the level 2 ESG risk management framework, performs studies and analyses to obtain assurance that the level of exposure to ESG risks is acceptable and complies with the commitments given by La Banque Postale, and reports on this work to La Banque Postale's Executive Board and Supervisory Board. It also oversees the coordination and harmonisation of work on the risk management framework with the subsidiaries and within the Group. The Group Compliance Department (GCD) supports the monitoring of Social and Governance risks (please refer to Chapter 3 on governance for more details).

Third line of defence

The Internal Audit Department acts as the last line of defence by performing periodic controls on all of the Group's entities. The system is described in La Banque Postale Group's Periodic Controls Charter. ESG risks are an integral part of the Internal Audit Department's audit programme.

6.8.6.2 Reporting

ESG risks are included in the commitments covered by La Banque Postale's risk appetite framework and are therefore reported internally on the dashboard submitted to the Group Risk Management Committee. These reports provide information on La Banque Postale's exposure to physical and transition risks based on the indicators put in place. In addition, La Banque Postale's portfolios are analysed to assess and manage the Bank's exposure to ESG risks on a consolidated basis. Lastly, specific analyses of the Bank's portfolios may be carried out from time to time in response to specific information needs.

In addition, external publications are communicated by La Banque Postale in accordance with regulatory requirements to guarantee the transparency of its activities and exposure to ESG risks. La Banque Postale also participates in market exercises conducted by the supervisory bodies and also by the banking sector (stress tests, portfolio alignment measurement exercises, etc.), and reports the results as required.

Access to data is crucial to the production of all these reports. To carry out these exercises, La Banque Postale relies on various external suppliers to obtain sufficient and reliable information. An ESG platform project has been launched to centralise all ESG-related data and ensure that it is used consistently.

6.8.7 Indicators of potential climate change transition risk

This section covers the tables required under Pillar III ESG disclosures. The format and content of the tables correspond to the templates for ESG disclosures set by the regulator. The information presented was based on the Bank's own interpretation of the regulations, but was also benchmarked against the French financial markets in order to strive for maximum consistency regarding the data included and thereby promote transparency and comparability between different institutions.

To meet all such requirements, the Bank was compelled to make estimates and assumptions in order to compensate for the lack of data and the absence of common standards for certain concepts. The methodology used is explained and any estimates used have been specified for each of the following tables.

6.8.7.1 Credit quality of exposures by sector, emissions and residual maturity

The purpose of this table is to assess La Banque Postale's transition risk exposure to non-financial sector companies. They provide information about loans and advances, and debt and equity instruments. The main points analysed are firstly the quality of the portfolio and the proportion of companies that would be excluded from the Paris-aligned Benchmark, per sector and sub-sector. In the interests of consistency, exposures without an associated NACE code have been included in total "Exposures to other sectors (NACE codes J, M to U)".

The environmentally sustainable exposures (column c) and the financed greenhouse gas emissions (columns i, j and k) will be reported later in keeping with the implementation timeline provided for in the regulation.

Companies excluded from the Paris-aligned Benchmark

This reporting aims in particular to highlight La Banque Postale's exposure to companies whose activities are not compatible with the Paris Agreement (excluded from the Paris-Aligned Benchmark). This exclusion is based on data relating to the share of sectoral revenues of non-financial sector companies as specified in points (d) to (g) of Article 12.1 and Article 12.2 of the Climate Benchmark Standards Regulation (Delegated Regulation (EU) 2020/1818)⁽¹⁾.

Due to the absence of a reference list or precise data that would allow these companies to be clearly identified, La Banque Postale has developed a methodology that comes close to meeting this target and is identifying these companies in two stages:

- the first stage consists of identifying the companies whose business is mentioned in the delegated regulation, based on its sector identifier (NACE code) and on the companies listed in the "Global Oil & Gas Exit List" (GOGEL)⁽²⁾ or the "Global Coal Exit List" (GCEL)⁽³⁾ published by the Urgewald NGO. The sectors identified are: extraction, distribution and refining of hard coal and lignite; extraction, distribution and refining of oil fuels; extraction, manufacturing and distribution of gaseous fuels; and electricity generation;
- the second stage consists of excluding from the pre-selected companies those companies with a low-carbon pathway approved by the Science Based Targets (SBTi) initiative, or whose main activity is the production of electricity from renewable energy sources.

Thus, this methodology makes it possible to identify a total exposure to companies excluded from the Paris-Aligned Benchmark of €411 million. On the other hand, the amount of sustainable exposures, i.e. aligned with the European Green Taxonomy, amounts to €498 million.

Greenhouse Gas (GHG) emissions financed

In accordance with the regulations, this table shows the greenhouse gas emissions financed in metric tons of CO₂ equivalent, estimated or collected directly from counterparties. To do this, the bank relied on emissions data collected directly from several data providers or estimated using emissions factors based on economic activity, in accordance with the PCAF database.

The share of emissions attributable to La Banque Postale is calculated by dividing the gross exposure by the Company's turnover (allocation factor).

At 31 December 2024, the GHG emissions financed by La Banque Postale under ESG Pillar III amounted to 2.97 million metric tons of CO₂e, including 2.24 million tons from Scope 3 of the companies financed. These figures are stable compared to 30 June 2024.

6.8.7.2 Energy efficiency of real estate financing

The purpose of this table is to assess the exposure of La Banque Postale's real estate financing portfolios to transition risk. The analysis here is based on energy performance labels and the energy consumption of each property.

This table covers all real estate financing granted by La Banque Postale to retail and business customers. In order to reflect the specific features of the real estate finance market in France and to ensure consistency of treatment with European Green Taxonomy reporting data, the Bank decided to go beyond EBA requirements and to consider real estate financing regardless of the type of guarantee, and not only mortgages (including loans guaranteed by *Crédit Logement*). This represents a total of €85 billion.

The energy performance labels were obtained from three different data sources:

- some energy performance labels were obtained when home loans were granted or recovered by performing reconciliations with the ADEME energy performance diagnosis database⁽¹⁾;

- other energy performance labels were obtained from a data provider and estimated using machine learning techniques;
- an energy performance proxy for new properties financed after 2012 that comply with RT 2012 or RE 2020⁽²⁾.

At 31 December 2024, the energy performance labels were:

- obtained for 40% of residential real estate and 9% of commercial real estate;
- estimated for 45% of residential real estate and 27% of commercial real estate.

In all cases, the buildings' energy use expressed in kWh/year was estimated from collected Energy Performance Diagnostics or estimated.

It should be noted that the energy performance breakdown figures were stable between 31 December 2023 and 31 December 2024 in terms of the labels obtained.

(1) French Environment and Energy Management Agency.

(2) Thermal Regulation RT 2012 and Environmental Regulation RE 2020.

6.8.7.3 Sector-specific low-carbon pathways

As a member of the Net Zero Banking Alliance (NZBA), La Banque Postale has established low-carbon pathways for several priority sectors such as car manufacturing, air passenger transport and cement production due to their GHG emission intensity and their materiality in the Bank's portfolio. Within this framework, this table presents the Bank's physical intensities by sector, based on the alignment metrics defined by the International Energy Agency (IEA). It also assesses the gap between the current value of these metrics and the projections for 2030 based on the scenario proposed by the IEA (IEA NZ2050). Only the priority sectors defined by the Bank are included in this EBA table and the results are calculated on an annual basis to 31 December 2023. The intensity metrics have been collected via external databases or estimated.

a	b	c	d	e	f	g
Sector	NACE sectors (at least)	Gross carrying amount of the portfolio (in € millions)	Alignment parameter	Reference year	Distance from the IEA ZEN 2050 scenario, in %*	Target (reference year + 3 years)
1 Electricity	2351, 2352, 511, 5110, 29, 291, 2910	-	-	-	-	-

8 Chemicals	2351, 2352, 511, 5110, 29, 291, 2910	-	-	-	-	-

* Distance to 2030 milestones in the ZEN 2050 scenario, in percentage points (for each parameter).

6.8.7.4 Exposure to the world's top 20 polluters

The purpose of these reports is to identify La Banque Postale's exposure to the world's top 20 carbon-intensive firms. These reports cover the non-financial sector companies financed by La Banque Postale. They provide information about loans and advances, and debt and equity instruments. In total, the scope covered represents over €31 billion.

To date, there is no common or reference list enabling these companies to be identified. The list adopted by La Banque Postale for the period ending 31 December 2024 is the one proposed by the Climate Accountability Institute⁽¹⁾.

On the basis of this list, only one company has been identified in La Banque Postale's portfolio, for an exposure of €43 million, representing 0.14% of the assets covered by the analysis. Of this total, €42.8 million are aligned with the European Green Taxonomy (financing for energy transition and renewable energy projects), including €0.02 million within the meaning of the mandatory ratio.

Between 30 June and 31 December 2024, La Banque Postale's exposure decreased (by around 20%).

6.8.8 Indicators of potential climate change physical risk

For Pillar III ESG reporting purposes, the analyses underpinning the assessment of physical risk cover La Banque Postale's corporate trading book and real estate trading books (residential and commercial real estate).

In light of the IPCC's⁽¹⁾ recommendations on physical risks to infrastructure,⁽²⁾ the physical risk categories considered for these reports are as follows:

Extreme events	Chronic physical risks
Flooding	Increased temperature
Forest fires	Increased rainfall
Storms	Drought
Clay soil shrink and swell	Heatwaves

La Banque Postale relied on external data to assess the physical risk.

- Concerning loans to corporates other than financial sector entities:
 - 87% of the trading book was covered by physical risk data based on a cross-analysis of the borrowers' geographical location and the vulnerability of their business sector;
- Concerning real estate loans, the analysis was based on local physical risk scores covering:
 - 94% of the residential real estate trading book,
 - 79% of the commercial real estate trading book.

At 31 December 2024, La Banque Postale was exposed to physical risk on **5.9% of its total exposures**, including:

- 12.3% of its exposures to non-financial sector companies;
- 4.7% of its exposures to residential real estate;
- 0.1% of its exposures to commercial real estate.

These figures are stable compared to those in the financial statements of 31 December 2023 and 30 June 2024.

6.8.9 Taxonomy-related information

In accordance with the regulations, La Banque Postale calculates and publishes the results of its eligibility analysis and alignment with the targets of the European Green Taxonomy.

The Taxonomy-based analysis of a financed asset is carried out in four stages:

- (i) identification of assets eligible for one of the targets of the taxonomy;
- (ii) identification of assets contributing to one of the eligible assets ("CCS");
- (iii) identification of assets not harmful to one of the other five targets ("DNSH"); and
- (iv) identification of assets meeting the minimum social guarantee criteria ("MSS").

These four steps make it possible to calculate the Bank's Green Asset Ratio (GAR), the target of which is to quantify a proportion of "sustainable" assets by comparing the amount of aligned assets to the amount of the Bank's hedged assets. At 31 December 2024, La Banque Postale's GAR was 5.7% in terms of turnover and 6.0% in terms of CapEx. It mainly consists of real estate financing to households.

The mandatory GAR calculation is based on a detailed analysis of each asset, without the use of estimates. To provide further information, a voluntary GAR is also calculated, using estimates and a slightly broader analysis scope.

At 31 December 2024, La Banque Postale's voluntary green assets ratio was 2.3%, i.e. 8.0% in terms of turnover and 8.3% in total CapEx.

La Banque Postale's off-balance sheet alignment ratio is 3.2% in terms of turnover and 5.7% in terms of CapEx for the share of assets under management. It mainly consists of assets under management held by the Group's asset management subsidiary, LBP AM. It is 0% for financial guarantees.

La Banque Postale's alignment ratio includes the results of CNP Assurances' taxonomy analysis using the equity method. The latter amounted respectively to 3.3% in turnover (4.5% in CapEx) and 0.7% for investment and underwriting activities.

Very little data is currently available concerning the alignment with the European Green Taxonomy of counterparties' assets and the projects financed by the Bank. Data availability should improve with each successive calculation exercise and as all economic players become more proficient in applying the Taxonomy. Work is also underway to establish systems for the collection of customer data.

In addition, the remaining uncertainty with regard to the interpretation of certain regulatory provisions should gradually be resolved, allowing La Banque Postale to further clarify its disclosures in future publications.

These disclosures will systematically take into account changes in the applicable standards and the interpretations adopted by the market, the Group and its subsidiaries.

For more information, please refer to Section 2.2.6 of this document.

SUMMARY OF KPIS OF EXPOSURES ALIGNED WITH THE TAXONOMY (TEMPLATE 6)

	KPI			% coverage (over total assets)*
	Climate change mitigation	Climate change adaptation	Total (climate change mitigation + climate change adaptation)

6.8.10 Other climate change mitigation measures not covered by the European Green Taxonomy

The purpose of this table is to present the initiatives launched by La Banque Postale in response to climate change that are not covered by the European Green Taxonomy. These initiatives concern the bond portfolios and the corporate and retail trading books that contribute to mitigating transitional and physical climate risk.

This table covers assets which the Bank has internally classified as green or sustainable for other purposes (green bond framework, green products, Banque de France regulatory reporting on the use of regulated savings, etc.). The first half of the table lists green bonds acquired from third parties, while the second half lists lending associated with products such as Eco-PTZ housing

loans and energy renovation loans. In addition, in this table La Banque Postale also includes financing for real estate assets that comply with Thermal Regulation 2012 (RT 2012) or Environmental Regulation 2020 (RE 2020) but are not included in the GAR calculation. The green or sustainable products offered by the Bank to its customers are described in Chapter 2 of this document dedicated to non-financial information.

Overall, at 31 December 2024, €11 billion of La Banque Postale assets were identified as having a green target, excluding those present within the mandatory ratio of the European Green Taxonomy.

OTHER CLIMATE CHANGE MITIGATING ACTIONS THAT ARE NOT COVERED IN REGULATION (EU) 2020/852 (TEMPLATE 10)
